EXHIBIT 20

(Referred to on pp. 626 and 636, pt. 15, June 24, 1949)

W. P. PAYNE CO.,  
PLUMBING AND HEATING CONTRACTORS,  
Van Nuys, Calif., January 27, 1949.

The Honorable CARL HINSHAW,  
*Representative of Twentieth District, California,  
House of Representatives, Washington, D. C.*

DEAR MR. HINSHAW: It is with some hesitancy that we come to you with our problem, realizing the pressure which you are under in so faithfully discharging your duties as our Representative in Washington. Yet, we feel that you may be in a better position to render us service and possibly suggest a course of action in the matter which we wish to present to you.

In order that you may have as thorough a background as possible of our situation, I will outline briefly the events leading up to the problem on which we are asking your advice.

The W. P. Payne Co. entered into a plumbing contract as a subsubcontractor in connection with housing at the Hanford Works in September, 1947. During our operations at that time, we became acquainted with several Atomic Energy Commission and General Electric Company officials, among whom was Mr. Carlton E. Shugg, who is now Deputy General Manager of the Commission in Washington. Through these acquaintances we learned that the Commission and General Electric Company were thinking very seriously of making changes in their operational set-up, particularly concerning the plumbing and heating services within the town site of Richland.

There were several reasons why these changes were being considered. One of the most pressing was the fact that the plumbers and steam fitters working

in the Richland area were being paid travel time and expenses, which amounted to approximately \$3,000.00 per day. It was felt this expense could be eliminated if the changes contemplated were made.

In February, 1948, the W. P. Payne Co. organized a subsidiary known as the Richland Plumbing and Heating Co., a Washington corporation, for the express purpose of operating within the Richland area of the Hanford Works.

On March 5, 1948, we submitted a proposal to the General Electric Company for the operation of such a facility, to which we received a reply on March 12, 1948. As you will notice, in the attached letter of proposal which we submitted to General Electric Company, it was proposed that we would lease certain property consisting of a quonset hut in a certain group of warehouses.

Before our lease agreement was entered into, and at Mr. Shugg's suggestion, it was requested that we change our location to larger quarters, which would be more suitable, in Mr. Shugg's opinion, for our operations. This was done without any further communication. The lease agreement which we entered into with the Commission and General Electric Company was dated the 26th day of March, 1948. As you will notice by the speed with which these communications took place, it is apparent that time was the essence of this transaction.

Throughout our conversations with certain employees of the General Electric Company, it was brought out that it was the intent of the General Electric Company to give up the plumbing and heating maintenance of facilities within the Richland area because of the unreasonable expenses involved through their own management. Also the establishment of a plumbing and heating business within the Richland area would eliminate the necessity of them paying travel time, as mentioned previously, to the plumbers and steam fitters. These officials realized that there would be very little business on which a plumbing and heating business could survive within the Richland area unless the work was provided by the General Electric Company. It was with this thought in mind that a purchase order contract was awarded to us on which we were to begin operation April 1, 1948.

The foregoing actions and conversations outlined above led us to the conclusion that we would be justified in continuing our plans in the Richland area which consisted of the erection and equipping of a complete plumbing and heating service shop. We have built a steel building 30 feet by 100 feet, at a cost of approximately \$25,000.00, on the land covered by our lease agreement. We have supplied it with tools and other equipment necessary to maintain our proposed operations. Our investment in this set-up to date is approximately \$45,000.00. Although we have done a very small amount of work of our own procurement, as yet nothing has been forthcoming from the General Electric Company as outlined in our talks.

Several times during the construction of our building, verbal inquiry was made concerning the possibility of our being ready for full operation on specific dates. The only formal reply to these inquiries was made on June 7, 1948, a copy of which is attached. Also attached is a résumé of our conversations held with General Electric officials, which was made up by our Manager, Mr. E. T. Coppin. This also may be of interest to you. To further complicate matters, Mr. C. D. Barker, Labor Relations Manager of General Electric Company, sent a letter to the local Plumbers and Steam Fitters Union, stating that a business had been established within the territory of Richland and that effective April 1, 1948, no further travel time or expense allowance would be paid to the plumbers and steam fitters. This letter of Mr. Barker's caused much commotion among the labor unions. However, no strike was called and a new agreement was eventually reached which eliminated the travel expenses paid to the plumbers and steam fitters. With their purpose accomplished in this matter and no further need of a plumbing service in Richland or in connection with this plant, we were placed in the position of being established with very little, or nothing to do.

You will notice from the letters attached, it was suggested that we contact Mr. Schlemmer, the Project Manager for the AEC, concerning our situation. A conference was held with Mr. Schlemmer in his office in Richland on January 10, 1949, at which time it was brought out that both AEC and G. E. felt the Richland Plumbing and Heating Company should have been doing all of the plumbing and heating contract work in the Richland area whether or not they would have realized a profit on the work performed.

Working within the Richland area is an extremely expensive operation and the majority of the outside contractors working within that area complete their

work at a very small profit, if any, and more often at a loss. We cannot afford to do work for less money than it costs us regardless of other situations. However, Mr. Schlemmer agreed to make an investigation of our situation and the circumstances under which we were brought into the Richland area and make a report before February 10.

We are attaching copies of our communications with General Electric Company so that you will have a more complete picture of our situation.

Mr. Hinshaw, we realize that the possibility of your doing anything for us in this matter may be very limited. However, because of your many years of experience in connection with such matters, we feel that you will be able to advise us as to a course to follow in the solution of our problem. We are not asking for any free ride or favors. We feel that if the AEC or G. E. officials are not going ahead with their original line of thinking, for which purpose we were given an opportunity to come into Richland, and if their purpose was to eliminate the \$3,000-a-day expenses which they were paying to the plumbers and steam fitters, we at least should expect to be reimbursed for our capital expenditures made to the property.

The facts as stated and the accompanying correspondence may not be enough to give you the complete details but I am sure that it will give you enough to see the position in which we find ourselves and will enable you to advise a course of action.

May we again thank you for the help and assistance which you have given us.

Sincerely yours,

W. P. PAYNE Co.,  
W. P. PAYNE, *President.*

#### RECAPITULATION OF CONVERSATIONS WITH GENERAL ELECTRIC OFFICIALS

##### *About May 20, 1948*

Conversation with Mr. Poe of G. E. Facilities Department near the Richland Hardware Store. Mr. Poe stated that General Electric was definitely planning to stop maintenance and repair calls to Richland homes on July 9, 1948. He wondered if we would be ready. I assured him that we would. He requested a letter to the effect that we would be ready by July 1. (See letter.)

##### *About June 4, 1948*

Mr. W. P. Payne and I called on Col. Barker in his office. We discussed the labor situation and Col. Barker suggested that we run an open shop. Mr. Payne said he was reluctant to do this because it might have serious effects on his California operations. We requested that Col. Barker help us get houses for our men which would indicate to Vincent Larish that General Electric Company was sincere in their plans to employ a regular plumbing and heating company to do some of the maintenance work in the village. At the time we talked with Col. Barker he said that the need for housing for our men could be justified because there would be emergency calls during irregular hours which our men would have to take care of, therefore, it was necessary that houses be made available to them. Several days later I called C. W. Weeks and he informed me that two houses were being made available to us for our men. Two houses were made available to the Richland Plumbing and Heating Co. on June 8, 1948.

##### *About June 15, 1948*

Talked with C. Lang & J. Heffner about maintenance work, in Mr. Heffner's office. We discussed the approximate amount of work involved which was then being done by General Electric Company but which they wanted to release as soon as they could. This work involved unstopping drains, repairing faucets, etc. It was pointed out by Mr. Heffner that General Electric would continue to do all service work on water mains, breaks in sewer lines, etc. Both Mr. Lang and Mr. Heffner stated that General Electric wanted to get rid of the house and facilities maintenance as soon as possible because they did not have enough men to handle the job and they did not want to hire more men. Mr. Heffner also stated that a program of publicity would have to be worked out to tell the people of Richland that they would have to pay part of the maintenance cost on the houses in which they lived.

*About June 22, 1948*

Mr. Payne and I talked with Mr. Pederson of General Electric Company. Mr. Pederson assured us that the maintenance on houses and village facilities was being discontinued by General Electric Company and the people would have to take care of plumbing difficulties themselves. Mr. Payne asked if special arrangements could be worked out for collections. Mr. Pederson said we would have to work out our own methods of collections and that we could employ any legal means that is used elsewhere. He also stated that because of the wording in the lease agreement with the tenants, an addenda would have to be worked out which would make the tenants responsible for plumbing maintenance instead of General Electric Company. Mr. Pederson said that Mr. Carl Weeks was working on the lease change and would put it into effect very shortly.

*About July 15, 1948*

E. T. Coppin talked with Mr. Pederson about village maintenance. Mr. Pederson said that they had run into some difficulties because of the lease to the tenants. He suggested that I see J. Heffner about it. Mr. Coppin talked with Jack Heffner about when the maintenance work on houses would be discontinued by General Electric Co. and he said it couldn't be before September 1, 1948, because changes had to be worked out in the lease by the legal staff before the announcements could be made. Announcements were to be made in the local paper that certain phases of maintenance were to be discontinued. Mr. Coppin told him that we planned to start an advertising campaign about the same time.

*August 4, 1948*

E. T. Coppin talked with Jack Heffner about when the village maintenance work would be turned loose and he said he didn't know at that time because they had enlarged their plan to include many other things and they wanted to complete the plan and announce all of the changes at the same time. He said the lease changes, etc., were in the hands of the attorneys but no word had been received as to how it would be handled. E. Richmond, the city manager, came in about that time and they walked up the street together. He said he didn't think that they could get the details worked out until about October 1. Mr. Richmond stated that he was sure that by October 1, their plans would be completed, the announcements would have been made in the papers and that we could figure on maintenance work after that date.

*About August 13, 1948*

Mr. Payne and Mr. Coppin talked with Mr. Frank Creedon about doing the maintenance work at North Richland. He seemed very interested in a proposal which would include the plumbing, heating, refrigeration, and air conditioning maintenance of the North Richland construction camp. He requested that we talk to his assistant, Mr. J. W. Kelley. Thereafter several proposals were made to Mr. Kelley and Mr. Creedon, all of which were rejected.

*About September 11, 1948*

Mr. Payne and Mr. Coppin met with Mr. Richmond in his office (Saturday morning), to discuss the release of village maintenance work by General Electric Company. He stated that G. E. and AEC officials were very anxious to be relieved of the maintenance work, however, he stated they were working out a program which would increase rents and pass certain charges for maintenance and operations of the village on to the people. He was not sure when the program would be completed. He stated that rapid strides were being made in the necessary paper work, lease changes, etc., so he felt sure the completed program would be in effect soon.

*About September 15, 1948*

At a meeting in Mr. Richmond's office, with Mr. Richmond, Mr. Heffner, Mr. Binns, Mr. Payne, and Mr. Coppin, we brought out the fact that the delay in the release of maintenance work by General Electric Company was causing serious financial difficulties for the Richmond Plumbing and Heating Company. Mr. Richmond pointed out that they were experiencing more delays than they had anticipated because the legal department had not completed working out a proper lease for the tenants. He stated that there was no reason why maintenance work in the village facilities, which would include all stores, gas stations, schools, churches and other public buildings, other than those offices, shops, and warehouses which are occupied by General Electric Company, should not be turned

over to Richland Plumbing & Heating Company immediately. Mr. Payne proposed that we enter into a cost-plus-fixed-fee contract with General Electric Company on this work from the present date until General Electric Company had completed their studies and programming and were ready to actually shift the maintenance load to the tenants. Mr. Richmond instructed Mr. Heffner to prepare a scope of work which would include the plumbing and heating maintenance on all village facilities, schools and churches, and have it ready by the following Tuesday morning, September 21, 1948, at which time the same people would meet in Mr. Richmond's office to go over the scope of work and discuss a fee for this work. Mr. Richmond and Mr. Heffner said it would be a great help to General Electric Company to get rid of this work because their maintenance crews were about 60 days behind in their work.

#### *About September 21, 1948*

At a meeting in Mr. Richmond's office with Mr. Richmond, Mr. C. W. Weeks, Mr. H. A. Root, Mr. Jim Delong, Mr. Jack Heffner, Mr. Binnes, Mr. Payne, and Mr. E. T. Coppin, a detailed discussion was held about the plumbing and heating maintenance of the village facilities. Mr. Heffner presented the results of a survey of maintenance work on commercial facilities, schools, clubs, churches, etc., which gave a complete list of maintenance calls and the time spent on repair. From this survey it was determined that a 10- or 11-man crew would be required to do this work. Mr. Heffner pointed out that his office would have to have an inspector who could inspect the work of our men to be sure it was up to the standards required by General Electric Company. Mr. Root pointed out that there would have to be some bookkeeping procedure worked out so that his department could make the proper charges. Mr. Heffner also stated that it would be necessary that we keep complete maintenance records of all motors, compressors, and other mechanical equipment. Mr. Richmond stated that these questions which were raised were details which could be worked out by the parties involved. Mr. Richmond also stated that General Electric Company was planning on making a change in the maintenance set-up in North Richland and that he might be able to work something out with Mr. J. Kelley which would include the mechanical maintenance of Richland facilities, schools, churches, and clubs and everything in North Richland. The meeting broke up with the assurance from Mr. Richmond that a cost-plus-fixed-fee contract would be worked out on the maintenance of mechanical equipment, plumbing, and heating between General Electric Company and the Richland Plumbing and Heating Company; when final arrangements had been made we would be notified. The contract was to run only until General Electric Company had worked out the details of their new leases and then the responsibility for mechanical maintenance would be shifted to the facility operators.

At least once each week from September 20 until November 29, Mr. Richmond has assured me that he was working on the problem and felt sure that something could be worked out. He said Mr. Kelley had proposed that General Electric Company perform their own maintenance in North Richland and had proposed that they hire 400 employees in all crafts, to do the job.

#### *November 27, 1948*

On November 27, a meeting was held in Mr. Richmond's office with Mr. E. Richmond, Col. Barker, Henry Thurston, Mr. W. P. Payne, and Mr. E. T. Coppin. Mr. Payne started the discussion by stating that the maintenance work which General Electric Company had proposed for the Richland Plumbing & Heating Company had not started, that he had invested \$50,000.00 in improvements and materials for the company and he would like to know what the present planning was so he could plan accordingly. Mr. Thurston said that Mr. Shugg had originally planned to pass the maintenance cost on to the tenants but that he was not familiar with the situation at this time. Col. Barker stated that he had seen our proposal for the maintenance work of North Richland and it was too high. He also stated that he did not know what it included or the basis of the proposal. Mr. Richmond presented the conclusions of the rent survey which had been conducted and explained what their planning was for the future. He said that at present General Electric Company planned to continue to service the tenants with all types of maintenance service, but that the rents would be raised to pay for these services. No indication was given that they planned to make any changes in their present methods. Mr. Richmond requested that Mr. Payne and Mr. Coppin meet in his office with Mr. Heffner and Mr. Bergdahl on Monday, November 29, 1948.

November 29, 1948

At a meeting in Mr. Richmond's office with Mr. Payne, Mr. DeLong, Mr. Blum, Mr. Bergdahl, Mr. Heffner, and Mr. Coppin, the situation was very bluntly stated by Mr. Heffner which is as follows:

"The present plumbing, heating and mechanical maintenance work could be broken down in four categories:

1. Normal plumbing maintenance to dwellings in Richland, which are being serviced by General Electric Company employees and would continue to be serviced by General Electric Company employees as far as they could see now.

2. General Electric Company was attempting to sell the installed equipment, which is now owned by the government, to the facilities' operators. When this was accomplished the operators would make their own arrangements for maintenance. They had been working on this plan for several months but hadn't sold any yet so it was hard to tell when this would be completed. This plan would not include selling the structure or the plumbing and heating, so General Electric Company would continue to service this part of the property.

3. New business establishments which were coming in were being constructed under contract and we were at liberty to work with any contractor in the area on that work.

4. From time to time the General Electric Company might have small jobs which they couldn't do with their present crews; they would be happy to work with us on these things when they came up.

Mr. Heffner further stated that their crews were getting more efficient all the time and they figured that they could do the work more economically than we could.

Mr. Payne and Mr. Coppin pointed out that this new plan was a complete reversal of previous statements and that it put the Richland Plumbing and Heating Company in a very rough spot because we had purchased tools and parts for maintenance work in accordance with General Electric Plans of going out of the maintenance business. Mr. Heffner stated that he was not aware that any firm commitments had ever been made along those lines.

Mr. Blum stated that he was not aware of the plans of the high General Electric officials when the Richland Plumbing and Heating Company was given its franchise. All he knew was that instructions were given to him to secure a plumbing and heating company to come into Richland as soon as possible.

(Signed) E. T. COPPIN,  
General Manager, Richland Plumbing & Heating Co.

P. O. Box 684,  
Richland, Wash., March 5, 1948.

Mr. R. J. PEDERSON,  
Chief Supervisor, Commercial Facilities, General Electric Co.,  
Richland, Wash.

DEAR MR. PEDERSON: In reply to your request for a proposal to operate a plumbing and heating facility in Richland, Wash., we are submitting the following information, which, we hope, will meet with your requirements.

The W. P. Payne Co., a California corporation, is the successor of the plumbing and heating business which was established by Mr. W. P. Payne in 1935. We are at present operating in the States of Washington, Arizona, and California, specializing in the repair, maintenance, and new construction fields, with an average of 150 employees. We are a member of the State Association of Master Plumbers of both Washington and California, as well as of the cities of Pasco, Kennewick, and Los Angeles.

The W. P. Payne Co., as of December 31, 1947, had an operating capital of \$55,339, and a net worth of \$78,284.

On February 3, 1948, the Richland Plumbing and Heating Co., a Washington corporation, was formed as a wholly owned subsidiary of the W. P. Payne Co., for the purpose of operating a plumbing and heating facility at Richland, Wash., with a capital of \$50,000.

The Richland Plumbing and Heating Co., proposed to rent from General Electric Co. the Quonset hut located in the group of warehouses south of Lee Boulevard, with necessary yard space, for the sum of \$30 per month; such rent to include the furnishing of 110-volt and 220-volt, 3-phase power, sewer and water

lines to within 5 feet of the building, and fencing of the necessary yard space. The Richland Plumbing and Heating Co. will provide the necessary sanitary facilities. Also, a telephone is to be made available to this firm at its own expense.

As soon as a site is available, Richland Plumbing and Heating Co. would prefer to erect its own building and shops.

The Richland Plumbing and Heating Co. proposes to provide the Richland area with complete services for the installation, repair, and maintenance of plumbing, heating, air conditioning, refrigeration, and sewer and water supply systems at the lowest possible prices consistent with good business. Also we will carry a complete stock of the mentioned supplies for sale at retail. We have on the site at the present time approximately a \$15,000 inventory of supplies, four completely equipped trucks, necessary shop equipment, and an adequate number of qualified employees.

Housing facilities would not be required by us for the management of this company as the company owns housing in Kennewick. However, housing for the other employees would be required. Dormitories or barracks undoubtedly would be satisfactory.

Should this proposal be accepted, we would be able to begin operations immediately upon notice.

For reference as to labor relations, may we suggest Mr. Vincent Larish, business representative, plumbers' union, Pasco, Wash. Other references: Mr. E. T. Coppin, General Electric Co., Richland, Wash.; Hughes & Co., Spokane, Wash.; Richland Branch, Seattle First National Bank, Richland, Wash., and California Bank, Van Nuys, Calif.

We wish to thank you for the opportunity of submitting this proposal and wish to assure you that should we be privileged to serve the community of Richland, we will do everything possible to render service of which you will be justly proud.

Very truly yours,

RICHLAND PLUMBING & HEATING Co.,  
(Signed) W. P. PAYNE, *President.*

GENERAL ELECTRIC Co.,  
*Richland, Wash., March 12, 1948.*

RICHLAND PLUMBING AND HEATING Co.,  
*Richland, Wash.*  
(Attention: Mr. W. P. Payne.)

GENTLEMEN: You may consider this as a letter of award for the operation of a plumbing and heating facility in Richland, as outlined in your letter of March 5, 1948, with the understanding that you will execute an operating agreement with us. Such agreement will contain conditions and terms that are usually included in an agreement of this type, as indicated in attached exhibit "A."

It is our understanding that you are prepared to start operation of this facility immediately, and we shall be glad to discuss further details with you early next week.

Very truly yours,

(Signed) R. J. PEDERSON, *Realty Division.*

---

RICHLAND PLUMBING & HEATING Co.,  
*P. O. Box 684, Richland, Washington, June 7, 1948.*

Mr. R. J. PEDERSON,  
*Chief Supervisor, Commercial Facilities,*  
*Richland, Washington.*  
(Attention: Mr. Poe.)

GENTLEMEN: In response to your verbal request of June 5, we are pleased to assure you that the Richland Plumbing and Heating Company will be open for business on or before July 1, 1948, and will be able to handle any normal or emergency business which may be required.

Unfortunately the construction of our building has been delayed but every effort is now being made to expedite the construction of our shops and we feel sure they will be ready in time.

We appreciate your interest in our welfare and are looking forward to pleasant relations with your office.

Very truly yours,

RICHLAND PLUMBING & HEATING Co.,  
(Signed) E. T. COPPIN, *General Manager*.

AUGUST 23, 1948.

GENERAL ELECTRIC COMPANY,  
*Construction and Design Division, Richland, Washington.*  
(Attention: Mr. S. R. Kelly.)

GENTLEMEN: In reply to our conversation of Monday, August 16, 1948, and at your suggestion, we are submitting a proposal for the maintenance and repair of the plumbing, steam distribution, sewers and water-distribution systems within the construction camp area (3000) located at North Richland, Washington.

We propose to furnish the services outlined above in the following manner: Provide sufficient plumbers and steam fitters to adequately maintain and repair the systems as break-downs and accidents occur. The hours will be arranged so as to have an adequate force on hand 24 hours per day seven days per week. These men will be provided with tools and equipment necessary to make replacements and repairs.

Our plan is to use a minimum number of employees with adequate supervision and planning to keep the costs as low as possible. We would employ two inspectors who would make continuous surveys to locate minor faults or defects and have them repaired before they became serious or caused unnecessary delays in service. This preventive maintenance will help to reduce costs. The inspectors will also meet the journeymen on any emergency job to check it and determine the exact work to be done. We believe this method will help to eliminate needless work and unnecessary use of materials.

Our plan for reimbursement for this work would be to charge direct costs plus a percentage for overhead and profit. Direct costs would include the actual cost of the direct labor, labor taxes, labor insurance and material including freight. Direct labor would be the journeymen, foremen, inspectors, office personnel for other than regular working hours or workweek and one supervisor. Overhead costs would include the use of trucks, tools, warehousing, general insurance, general office expense, the 2% gross business rent that we must pay to General Electric Company and other overhead items. We believe that this plan would be most efficient to handle and would provide the least chance for misunderstanding.

Under this plan it would not be necessary to have only certain men and equipment assigned to this particular project, and when there was not sufficient work to have them standing idly by; but it would enable us to move them around for various other work. As the need arose a large crew could be moved into the area to meet any emergency. This would also allow for the most efficient use of equipment.

The scale of overhead and profit percentages which we propose is as follows:

1st \$10,000.00 of direct costs.....	25% per month
2nd \$10,000.00 of direct costs.....	22% per month
3rd \$10,000.00 of direct costs.....	20% per month
4th \$10,000.00 of direct costs.....	19% per month
All over \$40,000.00 of direct costs.....	18% per month

After paying all expenses including the 2% gross business rent these percentages will leave a profit of  $3\frac{1}{2}\%$  to  $1\frac{1}{2}\%$  on the gross amount received. These profit percentages we feel are fair and reasonable considering the amount of the capital investment required to carry on such a project.

May we take this opportunity to thank you for the privilege of submitting this proposal. It may be that while this proposal may not fit entirely into the rules and regulations under which we must work, we may be able to change and modify it to meet those conditions. If there is any clarification needed or other discussion desired please feel free to contact us.

Very truly yours,

(Original signed by) RICHLAND PLUMBING AND HEATING Co.  
E. T. COPPIN, *General Manager*.

ETC/rbw.  
lj.

SEPTEMBER 14, 1948.

Subject: Maintenance of Plumbing and Heating 3000 area.

GENERAL ELECTRIC COMPANY,

*Richland, Washington.*

(Attention: Mr. Frank Creedon, Manager of Design &amp; Construction Div.)

DEAR SIR: We have reconsidered our recent proposal relative to the maintenance of the plumbing, heating, ventilating, and air conditioning of the 3000 area and wish to make the following revised proposal:

The Richland Plumbing and Heating Company will do all of the maintenance work on the Plumbing, Heating, Refrigeration, Ventilating, and Air Conditioning of the 3000 area on a cost-plus-fixed-fee basis under the following conditions:

General Electric Company to furnish the necessary shop space and office space.

General Electric Company to furnish the necessary transportation, maintenance and operating cost of all transportation.

General Electric Company to furnish the necessary tools and equipment including office equipment and supplies.

All the material and replacement parts to be drawn from General Electric stores on store orders.

Cost for labor, clerical, and administrative personnel, taxes and insurance and all other costs to be reimbursed by General Electric Company.

The 2% Operator's Franchise fee to be considered a direct cost and made reimbursable or to be excluded from the franchise requirement. This amount is not to be deducted from the fee.

Based on the Engineer's Estimate that the maintenance work in the North Richland area will amount to \$500,000.00 per year, our proposed fee for the supervision and responsibility for the work would be \$30,000.00 per year, payable in monthly payments of \$2,500.00 per month. If the cost of the work exceeds the estimated \$500,000.00 per year we would gladly negotiate a reasonable additional fee for all work costing over \$500,000.00 per year.

Inasmuch as this is a locally established shop, no payment of travel time will be required. This will be a considerable saving to the government. Based on a 5-day week, with a crew of 40 men, the saving in travel time alone would amount to \$32,760.00 per year. If this company is awarded a contract every effort will be made to increase the operating efficiency and to reduce the cost to the government in every way. We are sure that a sizable saving can be made to the government over and above the saving in travel time.

This company has been established to serve the plumbing, heating, and ventilating needs of both Richland and North Richland. If we are awarded a cost-plus-fixed-fee contract for the maintenance work in the North Richland area we propose to operate that as a separate operation from the Richland shop so that we would not be barred from taking contract work in the Richland area. We would gladly cooperate with General Electric officials in developing operating and accounting procedures which might be required to meet the AEC regulations. Inasmuch as the maintenance work of the 3000 area is not sufficient gross business for the company, it would be necessary that we be allowed to take contracts in the area.

The suggested terms and conditions in this letter are made without knowledge of the operating requirements of the General Electric Co. If any of the conditions are in conflict with your operating or contract regulations we stand ready to cooperate with you in any way to work out details of a contract agreement.

We wish to express our appreciation for the kind consideration you have shown us in the past and we hope to be of service to you in the future.

Very truly yours,

RICHLAND PLUMBING AND HEATING Co.,

**MAINTENANCE OF PLUMBING AND HEATING—CONSTRUCTION CAMP**

GENTLEMEN: Your proposal dated September 14, 1948, for the maintenance of plumbing, heating, ventilating, and air conditioning of equipment in the 3000 Area has been carefully reviewed.

We note that owing to the fact that the expected dollar value of this contract, should it be awarded to your company, is not sufficient to maintain your operations in this area, you wish to reserve the right to bid on lump-sum contract work as well.

We believe that for a number of reasons such an arrangement is not practicable. As a matter of general policy no fixed-fee contractor operating here has been permitted to accept lump-sum contracts also. The establishment of separate shops and separate accounting for the two classes of work would not satisfactorily meet our objections.

We appreciate the interest which you express in offering to carry on this work, but for the reasons stated above we are obliged to decline your offer.

Yours very truly,

(Signed by) FRANK R. CREEDON,  
*Manager, Design & Construction Divisions.*

SEPTEMBER 28, 1948.

**GENERAL ELECTRIC COMPANY, Richland, Washington.**

(Attention Mr. Earl Richmond, City Manager.)

GENTLEMAN: As a result of the meeting which was held in your office this morning concerning the mechanical maintenance of certain facilities and buildings in the Richland Village, and as requested by you, we are herewith submitting a proposal of a fee for the furnishing of management on our part to adequately provide the above-mentioned service.

As suggested in the meeting we are submitting this proposal of a fee on a monthly basis, however, it is understood that the minimum period will be six months, any extension beyond that time, providing all conditions remain the same, will be based upon the same fee. We propose a fee of \$1000.00 per month.

During our discussion, the possibility of our assuming the mechanical maintenance of the construction camp in North Richland was brought out. We believe that it would be advantageous and much more economical to the General Electric Company, and to the Government, to handle these two fields of work under one agreement. By such an arrangement the number of employees required could be minimized by proper and adequate planning of the work. Should the Construction and Design Division see fit to coordinate these two projects, we would propose to handle both projects for an aggregate fee of \$2500.00 per month providing that the total annual cost did not exceed \$500,000.00. Should the cost exceed the amount we feel that an adjustment in the fee should be negotiated. May we point out that, should we be awarded this work, the saving of the amount paid to the plumbers in travel time in the North Richland area would exceed the proposed fee. It is also understood that this proposal does not include the 2% gross business fee which the Richland Plumbing and Heating Company pays to General Electric Company. If such fee is to be paid it will be considered as a direct cost.

May we take this opportunity of thanking you for the courtesies you have extended to us and we wish to assure you that we stand ready and willing to cooperate in any manner whatsoever.

Very truly yours,

RICHLAND PLUMBING AND HEATING CO.,  
(Signed) E. T. COPPIN, *General Manager.*

DECEMBER 14, 1948.

Mr. CARLTON E. SHUGG,  
*Production Manager Atomic Energy Commission,  
Washington, D. C.*

DEAR MR. SHUGG: It was quite disappointing to us to hear of your leaving the Hanford Works. However, we are certainly happy to know of your promotion, and we wish you the best of success in your new position.

It is with reluctance that I come to you with our problem. However, I believe that you are the only one who can give us any information on the subject. You undoubtedly recall the negotiations between our Company and the General Electric Company concerning the establishment of a plumbing shop in Richland, which took place last March. At the time of our negotiations, we were considering establishing our shop in the two Quonset hut buildings off Lee Boulevard. After a discussion with you and at your suggestion, this site was changed to our present site at Spengler Road and Stevens Drive. At the time this change was made, you felt that the location off of Lee Boulevard would not be adequate for our operation.

We have improved the property at our present location by some \$35,000 and have set up an organization capable of handling any type of work. At the time of our discussion with you and other AEC officials and General Electric Company, it was thought that General Electric Company would eventually give up their maintenance plumbing and heating which they were furnishing free to the tenants of the project, and this would become available to us working directly for the tenants. Also there were other discussions concerning the traveling time, etc., being paid to the plumbers.

We went along on the assumption that some of this work would be made available to us. We realize that the pressing issue at the time was the payment of traveling expenses to the plumbers. Now that this has been settled and the purpose for which we were brought is accomplished, it seems as though we are to be left out on a limb as General Electric Company has no intention, at this time, of giving up any of its work in connection with the plumbing and heating in the Richland area. We are not in a position to maintain an organization such as we have established at Richland without work for them to do.

We are not asking any favors of you, Mr. Shugg, but the thing that we would like to know is whether there is anyone now at Richland who was engaged in these discussions to whom we might talk concerning this matter, as both you and Mr. Lauder, who were familiar with this, are now gone.

We are left in the position where our landlord is our chief competitor, and we cannot long survive in this condition. If such is going to be the case, we will have to move out of Richland.

I am extremely sorry to have bothered you with this problem; however, I hope that you can give us some information and some guidance in a course which we should follow to secure some of this work. Any light you can shed will be greatly appreciated.

Very truly yours,

RICHLAND PLUMBING & HEATING Co.,

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington, D. C., December 17, 1948.*

Mr. W. P. PAYNE.  
*P. O. Box 684, Richland, Washington.*

DEAR MR. PAYNE: I have your letter of December 14 and have gone over it in some detail with Mr. Walter J. Williams who, as director of production, is the Washington official directly in charge of the Hanford area. I explained our original conversations to him and the fact that Mr. David Shaw was familiar with them in general.

Mr. Williams will look into the matter and will undoubtedly contact Mr. Schlemmer, the present Hanford AEC man.

I am sorry to hear that the rapid progress for which we hoped has not taken place.

Very sincerely,

(Original signed by) CARLETON SHUGG,  
*Deputy General Manager.*

## ATOMIC ENERGY PROJECT

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington, D. C., December 20, 1948.

In reply refer to: P: WJW.

Mr. W. P. PAYNE,

*President, Richland Plumbing and Heating Co.,  
Stevens Drive and Spengler Road, P. O. Box 684, Richland, Wash.*

DEAR MR. PAYNE: Your letter of December 14, addressed to Carlton Shugg, has been referred to me for handling.

After receiving your letter, I talked to Fred C. Schlemmer, Manager of Hanford Operations, and his deputy, David Shaw, by telephone, and discussed your problem. I understand that certain plans are now in progress which might make your position more favorable. I was informed that you have been given a chance to bid on all plumbing work, but that your bids on the majority of these jobs have been high.

I suggest that you contact Mr. Schlemmer or his deputy, who, being at the site of operations, are in the best position to settle your problem. I have written to Mr. Schlemmer enclosing a copy of your letter of the fourteenth.

Very truly yours,

(Original signed by) WALTER J. WILLIAMS,  
Director of Production.

lj.

JANUARY 24, 1949.

Mr. WALTER J. WILLIAMS,

*Director of Production, United States Atomic Commission,  
Washington, D. C.*

DEAR MR. WILLIAMS: As per your suggestion of December 20, I had a conference with Mr. Schlemmer at Richland, on January 10, 1949, at which time we went into the complete details concerning the matters of the Richland Plumbing and Heating Co.

Mr. Schlemmer assured me that he would have a complete report on the matter in our hands not later than February 10, 1949.

I wish to take this opportunity to personally thank you for the interest which you have taken in this matter and hope that everything may be solved to our mutual satisfaction.

Sincerely yours,

RICHLAND PLUMBING & HEATING CO.,  
W. P. PAYNE, *President.*

WPP: lj.

JANUARY 24, 1949.

Mr. CARLTON SHUGG,

*Deputy General Manager, Atomic Energy Commission,  
Washington, D. C.*

DEAR MR. SHUGG: The interest which you have shown in our problem is most gratefully appreciated. The matter was taken up with Mr. Schlemmer on January 10, 1949, at which time I went over the matter in complete detail. Mr. Schlemmer has promised to have a complete report in our hands by February 10, 1949.

Sincerely yours,

RICHLAND PLUMBING & HEATING CO.,  
W. P. PAYNE, *President.*

WPP: lj.

HOUSE OF REPRESENTATIVES,  
Washington, D. C., February 4, 1949.

Mr. CARLTON E. SHUGG,

*Deputy General Manager, Atomic Energy Commission,  
Washington, D. C.*

DEAR MR. SHUGG: My friend and constituent, Mr. W. P. Payne, of the plumbing and heating company which bears his name, one of the leading contractors in that field, has written to me and enclosed a file of memoranda and correspondence concerning the establishment of his company of a subsidiary known as the Rich-

land Plumbing and Heating Co., in connection with the Hanford Works of the Atomic Energy Commission.

It would appear from the correspondence and memoranda that the Richland Co., was established largely pursuant to the encouragement of the Commission and the General Electric Co., as the Commission's operating contractor at Richland, and that the principal reason for such encouragement was that the Commission, through its contractors, the General Electric Co., was having to pay something like \$3,000.00 per day for transportation and other charges to outside plumbing contractors.

It appears also that upon the establishment of the Richland Co., the local contractors and the unions, whose members they employed, agreed to waive the transportation and other charges, thereby saving the Commission and the Government approximately \$3,000.44 per day, at which point employment of the Richland Co., as subcontractors to the General Electric Co., in the maintenance of facilities and in the awarding of construction contracts was no longer to be considered except as their bids might be lower than the outside companies. It appears also that the General Electric Co., decided to do its own plumbing and heating maintenance work with its own employees, and that as the Richland Co., was holding itself out to do this work on a cost-plus basis, that they could not be considered in the awarding of bids on a lump-sum basis, and/or vice versa as the case might be.

Obviously, the establishment of the Richland Plumbing and Heating Company made it possible for the Commission and the Government to save \$3,000.00 per day or thereabouts, and that the continuation of that Company or the establishment of a similar organization by some other agent, is to the advantage of the Government and the Commission. However, the W. P. Payne Company has now invested the sum of \$45,000.00 including the building of a building at a cost of \$25,000.00 on land leased to them in the Richland Warehouse area and the use of this investment at the present time is practically nil.

I understand that you are entirely familiar with the circumstances, having been in charge of the work at Richland and Hanford for the Commission before your present appointment in Washington.

I would like to know your reaction to this situation and what, if anything, you propose to do about it.

Sincerely yours,

CARL HINSHAW, M. C.

---

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, February 24, 1949.

In reply to refer to : PCO : CAT

Honorable CARL HINSHAW,

*House Office Building, Washington 25, D. C.*

DEAR CONGRESSMAN HINSHAW: Reference is made to your February 4, 1949, letter, in which you describe the problem faced by Mr. W. P. Payne, owner of the Richland Plumbing and Heating Company at Richland, Washington. I understand that you discussed this matter briefly with Mr. Fred Schlemmer, Manager of Hanford Operations Office, during the open hearing of the Joint Committee on Atomic Energy held on February 17.

On January 10, 1949, Mr. Schlemmer met with Mr. Payne and Mr. E. T. Coppin, his resident manager, and discussed possible arrangements by which the Richland Plumbing and Heating Company could increase its volume of business in Richland.

At the conclusion of this meeting, Mr. Schlemmer indicated that the Company's representative would be contacted again and that it was expected that a mutually satisfactory arrangement could be worked out.

On January 24, 1949, Mr. Payne addressed a letter to Mr. Walter J. Williams, Director of Production, Atomic Energy Commission, Washington, D. C., confirming the fact that he had met with Mr. Schlemmer, and thanking Mr. Williams for assisting in arranging for the meeting.

We shall keep you informed of any further developments in this case.

Yours very truly,

CARLETON SHUGG,  
*Deputy General Manager.*

3-15-49: Copy mailed Mr. Payne.

W. P. PAYNE Co.,  
PLUMBING & HEATING CONTRACTORS,  
Van Nuys, California, March 21, 1949.

Honorable CARL HINSHAW,  
House Office Building, Washington 25, D. C.

DEAR MR. HINSHAW: The interest which you have shown and the help which you have given in connection with our problem at Richland, Washington, is greatly appreciated. However, at the present time matters in Richland stand as they were the first time I wrote you.

On March 7, 8, & 9 our counsel, Mr. Donald A. Odell, and I were in Richland at which time several conferences were held with Mr. Schlemmer, of the AEC, and Mr. Earl Richmond, City Manager of Richland. Nothing definite came of these conferences except that we were requested to submit certain information in connection with proposed work. This information was submitted on March 9th.

I gathered from the transcript which you sent on February 22 that Mr. Schlemmer felt that the problem would be settled immediately, however, after talking with the Richland Plumbing and Heating Company today I learned that as yet they have heard nothing from the AEC or the General Electric Company.

Since I wrote you January 27 it has been necessary for us to advance another \$5,000 to the Richland Company and our operation losses are about \$2,000 per month. This we cannot continue.

I am leaving for Richland Wednesday, March 23, to see if anything can be done immediately. If the situation appears hopeless, it will be necessary for us to cease operations March 31 and take our chances on saving some of our investment. In the meantime I will keep you informed on any further happenings.

May I thank you again for your help and consideration.

Sincerely,

W. P. PAYNE,  
President, W. P. Payne Co.

WPP: EM.

MAY 2, 1949.

GENERAL ELECTRIC COMPANY,  
*Richland, Washington.*

(Attention: Mr. Forrest Baker, Chief Accounting Officer.)

**GENTLEMEN:** In connection with our previous negotiations to terminate our contracted agreement with General Electric Company, entered into March 12, 1948, to maintain plumbing and heating facilities as outlined in our letter of March 5, 1948, we are submitting our subcontractors termination claim for reimbursement.

Our claim amounts to \$96,570.55. We will be willing to bid \$2,977.00 for the inventory and various fixed assets acquired to enable our company to comply with the contract. Our net claim for reimbursement of losses, costs, and expenses through April 30, 1949, amounts to \$93,593.55.

Our liabilities which are now outstanding and long overdue are as follows:

Accounts payable for supplies, materials, etc.....	\$55,239.51
Salaries and wages.....	14,936.96
Manager's 3 yr. contract termination.....	27,200.00
Other sundry liabilities accrued since March 30, 1949 (estimated, subject to correction).....	3,500.00

Total liabilities to be paid from reimbursed costs..... 100,876.47

Our accounting records are maintained at Stevens Drive and Spengler Road, Richland, Washington. These records will be available for your inspection at any time in substantiation of the above claim.

Our auditor, Messrs. Blight & Wheeler, certified Public Accountants, 756 South Broadway, Los Angeles, California, have assisted us in preparing this claim.

Yours very sincerely,

RICHLAND PLUMBING AND HEATING Co.,  
By W. P. PAYNE, *President*.

WPP/rbw.

GENERAL ELECTRIC COMPANY,  
*Richland, Washington, May 3, 1949.*

RICHLAND PLUMBING AND HEATING COMPANY,  
*P. O. Box 684, Richland, Washington.*

(Attention: Mr. W. P. Payne, President.)

**GENTLEMEN:** This will acknowledge receipt of your letter dated May 2, 1949, in which you submit a claim for \$93,593.55. You state that this claim is in connection with negotiations to terminate a contract agreement with General Electric Company entered into March 12, 1948, to maintain plumbing and heating facilities as outlined in your letter of March 5, 1948.

I have reviewed your letter dated March 5, 1948, and our reply dated March 12, 1948, together with the definitive agreement which resulted from this exchange of correspondence and conversations which took place prior to its execution. The definitive agreement to which I refer was executed April 8, 1948, became effective March 26, 1948, and by its terms (Paragraph 21) contains the entire understanding between the parties. I find nothing in this document which would serve as the basis for a claim by Richland Plumbing and Heating Company against General Electric Company as set forth in your letter of May 2 and it, therefore, is denied.

Very truly yours,

(Signed) F. E. BAKER, *Department Comptroller*.

HOUSE OF REPRESENTATIVES,  
Washington, D. C., May 3, 1949.

MR. CARLTON SHUGG,  
Deputy General Manager, Atomic Energy Commission,  
Washington, D. C.

DEAR MR. SHUGG: I have a letter from Mr. W. P. Payne, President of the W. P. Payne Company, recounting the meeting he had with Mr. Williams and with you, and then recounting his contacts with Mr. Schlemmer and his Assistant, Mr. Travis, upon his return to Richland. It appears that everyone in Richland except Mr. Schlemmer saw no reason why a negotiated contract could not be entered into immediately with the General Electric Company for the performance by the Payne Company of certain work at Richland. Mr. Schlemmer said, however, he would approve no such contract until after the receipt of competitive bids.

I now quote to you briefly from Mr. Payne's letter:

"Mr. Hinshaw, we feel that we have done our best to assist and help the government and the General Electric Company in their problems at Richland. We feel that the General Electric Company appreciates the help and the assistance which we have given them. However, in their attempts to help us out of our peculiar situation they have been met by the refusal of the Commission representative to go along. Both Mr. Richmond and Mr. Prout have spent much of their valuable time trying to solve our problem and we greatly appreciate it. However, under the circumstances, we cannot continue our operation at Richland any longer. We have a little work on hand that will require about sixty days for completion. When this is done, we are withdrawing and hope that we can find some way of salvaging some portions of our investment at Richland which now stands in the neighborhood of \$60,000.00."

Having watched this situation grow to its present culmination and knowing many of its antecedents, it would seem to me that if the policy of the Commission is to be continued in the manner which has produced these results, that the Commission's policy would not be in the public interest. It would appear to me

further that some definite steps should be taken to establish a definite policy in respect to private organizations such as the W. P. Payne Company, for otherwise the Commission cannot expect that service and supply organizations such as that Company will be willing in the future to run the risk which the W. P. Payne Company is suffering. I am sure that you understand the situation.

In the meantime, in view of the encouragement given by the Commission to the W. P. Payne Company in creating its establishment at Richland, it would appear to me simple justice that the Commission should do everything within its power to save that Company from loss upon its investment at Richland.

As you know, there are several other matters of concern in connection with the Hanford Works, including the concern of the several local School Boards outside of the Government premises, and in view of all of the circumstances concerning the AEC's operations at Hanford, perhaps our Committee should make an investigation in order to assist the Commission in determining the proper policy.

Sincerely yours,

CARL HINSHAW, M. C.

---

W. P. PAYNE CO.,  
PLUMBING AND HEATING CONTRACTORS,  
Van Nuys, Calif., April 25, 1949.

HON. CARL HINSHAW, M. C.

*New House Office Building, Washington 25, D. C.*

DEAR MR. HINSHAW: I wish to express my appreciation to you and your staff for the courtesies shown me during my recent visit in Washington. I am sorry I was unable to see you after my meeting with Mr. Shugg and Mr. Williams of the AEC on Friday morning. It was their suggestion that I be in Richland Monday to see if we could get our problem settled at the earliest possible date.

I met with Mr. Williams about 8:30 Friday morning and went over with him in complete detail our problem at Richland. He appreciated our position and felt that something should be done for us. About 9:00 or 9:15 Mr. Shugg joined us and we went over the events leading up to the establishment of our company at Richland and Mr. Shugg admitted that he had possibly done a little high-pressure selling and in his enthusiasm had possibly made some commitments which he should not have made. However, he also felt that there was an obligation to our company and that although he was 3,000 miles away from the project he felt that there was something that could be done or some way in which we could be awarded a contract to help us out of our situation but the details would have to be worked out at Richland.

Mr. Shugg and Mr. Williams explained to me the policies and anticipated policies of the Commission concerning the operation of the project towns and pointed out that at Richland the General Electric Company was hired to operate the town under contract and that the Commission was not in a position to tell a contractor what to do. I pointed out that the General Electric Company and the Richland Plumbing and Heating Company had come to an agreement concerning work to be done and the means of handling it but these propositions were turned down by the AEC when submitted for their approval as is necessary under the terms of the contract between the General Electric Company and the AEC.

Mr. Williams agreed to call Mr. Schlemmer and talk to him concerning our situation. I saw Mr. Williams again about 1:30 Friday afternoon at which time he told me that he had talked to Mr. Schlemmer and I believe also his assistants, Mr. Shaw and Mr. Travis. He suggested that I contact Mr. Schlemmer on Monday at Richland. This I agreed to do.

Upon my arrival in Richland Monday I tried to contact Mr. Schlemmer but was informed that he would be tied up for the next two or three days as Mr. Lillenthal was in town and it would be impossible for him to conveniently see me. I talked with Mr. Earl Richmond, of the General Electric Company, who is City Manager and also the gentleman with whom we have had all of our recent negotiations, and told him of my meetings in Washington with Mr. Shugg and Mr. Williams and of their feeling in our situation. He saw no reason why a contract could not be entered into immediately on a negotiated basis. He conferred with Mr. George Prout, manager of the Hanford Works for the General Electric Company and they were both in agreement concerning a contract. Mr. Richmond made his recommendation to Mr. Travis, Mr. Schlemmer's assistant, who was also in accord with the plan and agreed to take it up with Mr. Schlemmer immediately. This was done on Tuesday morning and Mr. Schlemmer said that he would approve

no such contract until after the receipt of competitive bids. Getting the work out for competitive bids would possibly require six or eight weeks and then possibly another like period of time for contract negotiations.

Mr. Hinshaw, we feel that we have done our best to assist and help the government and the General Electric Company in their problems at Richland. We feel that the General Electric Company appreciates the help and the assistance which we have given them. However, in their attempts to help us out of our peculiar situation they have been met by the refusal of the Commission representative to go along. Both Mr. Richmond and Mr. Prout have spent much of their valuable time trying to solve our problem and we greatly appreciate it. However, under the circumstances, we cannot continue our operation at Richland any longer. We have a little work on hand that will require about sixty days for completion. When this is done we are withdrawing and hope that we can find some way of salvaging some portions of our investment at Richland which now stands in the neighborhood of \$60,000.00. The more I see of the AEC and the General Electric Company operation at Richland the more I am inclined to agree with Senator Harry Cain that a Congressional investigation is needed to see just what is going on.

Mr. Hinshaw, I wish to thank you for your personal interest in our problem and wish to assure you that we of the Payne Co. stand ready and willing to assist you in any manner.

Sincerely,

W. P. PAYNE,  
*President, W. P. Payne Co.*

WPP: EM.

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., June 3, 1949.*

In reply refer to: PCO:CAT.

Honorable CARL HINSHAW,  
*House Office Building,  
Washington 25, D. C.*

DEAR CONGRESSMAN HINSHAW: This is in reference to your letter of May 3, 1949, concerning a communication received by you from Mr. W. P. Payne, President of the Richland Plumbing and Heating Company, and expressing the view that the Commission should do everything within its power to save the company from loss upon its investment at Richland.

Upon receipt of your letter, we requested the Manager, Office of Hanford Operations, to furnish us with information with regard to this matter. The information received is summarized below.

An award of a contract for operation of a plumbing and heating facility at Richland was made to the Richland Plumbing and Heating Company on March 12, 1948, on the basis of bids received on March 5, 1948. In recommending that the award be made to this company, the Commission's prime contractor, the General Electric Company stated that the Richland Plumbing and Heating Company required no assurance of a guaranteed contract for maintenance or other type of work and would take its chances in getting any work which might become available. The award was based upon rental by the Richland Plumbing and Heating Company of two Quonset huts in the light industrial area at a rate of \$30.00 per month. The Company, however, stated in its bid proposal its preference to erect its own building and shop as soon as a site was available. It is probable that the undersigned, who was the Manager of Hanford Operations at the time, did encourage the Company to invest in a permanent facility, but only on the grounds that general prospects of business in Richland appeared promising. Similar encouragement was and is given other business ventures as the Commission is engaged in a positive program to encourage establishment of privately financed business ventures in the community. In accordance with established policy, however, no commitment or guarantee of any future contract for the furnishing of services is made under these circumstances.

The formal agreement, which was entered into between the General Electric Company and the Richland Plumbing and Heating Company on March 26, 1948, provided for ground space for construction by the Richland Plumbing and Heating Company of its own building and for payment by the Company of a rent of 2 percent of its gross sales with a minimum guaranteed rent of \$50.00 per month. The Company thereafter erected a building upon the land thus made available and started business as a normal private plumbing shop, obtaining some small amount of local business.

Subsequently, by letter of December 14, 1948, to the Deputy General Manager of the Commission, Mr. Payne stated that, during the period of negotiation leading up to construction of the Richland Plumbing and Heating Company of its own building, it was understood that the General Electric Company would eventually cease to provide maintenance plumbing and heating services which it was then furnishing to tenants under rental agreements and that work would thus become available to the Richland Plumbing and Heating Company under arrangements directly between it and the tenants. The letter further stated that such work had not materialized and that, if such work were not made available, the Company would have to move out of Richland. We are informed, in this connection, that considerable amount of plumbing and heating work was let by various contractors and builders during the first several months after the Company began business in Richland and it is understood that the Company was an unsuccessful bidder with respect to some of this work. We are further informed that the transfer to tenants of certain maintenance responsibilities will probably take place on July 1, 1949.

Mr. Payne's letter did not state that any promise had been made that the Richland Plumbing and Heating Company would receive from the Commission or the General Electric Company any contract or subcontract relating to the furnishing of services. Moreover, to the best of our knowledge, no commitments or promises were made at any time to the Richland Plumbing and Heating Company that it would receive any such contracts or subcontracts. Nevertheless, upon referral to it of Mr. Payne's letter, our Office of Hanford Operations held a number of conferences with respect to negotiation of a subcontract under which the Richland Plumbing and Heating Company would furnish certain maintenance services then being furnished by the General Electric Company. We are informed by Mr. Schlemmer that, rather than being opposed to negotiation of such a contract, he was instrumental in pressing for its negotiation and that he called several conferences in an effort to get both parties together in the matter since the prices initially quoted by the Richland Plumbing and Heating Company were considerably higher than the costs of the General Electric Company for the same work. While the negotiations were being conducted, other plumbing contractors in the surrounding towns expressed interest in bidding on any maintenance work that was under consideration for subletting. We are also informed that it was the combined judgment of the Atomic Energy Commission and General Electric Company staffs as soon as it was learned that there were other plumbing contractors interested in bidding, that competitive bids should be invited in line with the policy of inviting competitive bidding where practicable. The General Electric Company was so advised on April 14, 1949.

On May 2, 1949, Mr. Payne presented a letter to the General Electric Company which stated in substance that in connection with previous negotiations to terminate the Richland Plumbing and Heating Company contract with General Electric, the company was submitting a termination claim in the amount of \$93,593.55. The General Electric Company replied by letter of May 3, 1949, denying the claim on the ground that there was nothing in the correspondence, conversations, or contractual documents which served as a basis for a claim.

In view of the foregoing, it appears that the difficulties of the Richland Plumbing and Heating Company stem primarily from the fact that the anticipated transfer of certain maintenance responsibilities to tenants did not materialize as rapidly as the Company had hoped and from the fact that, in the interim period, the Company apparently failed to obtain enough work from private sources through competitive bids or other means to make its venture sufficiently profitable to date. However, it does not appear that any promise or commitments were made by the Commission or its representatives which brought about these difficulties. Furthermore, the Commission representatives explored the possibility of subletting certain work to the Company, but upon learning of the interest expressed by other contractors with respect to such work, determined that competitive bids should be invited.

Your letter also refers to the concern of several local school districts located in the Hanford area. The Commission has extended considerable aid to these school districts. In a recent letter to Senator Warren Magnuson, a report was given of the Commission's activities with regard to these school districts. A copy of this letter to Senator Magnuson is attached for your information.

Sincerely yours,

CARLETON SHUGG,  
Deputy General Manager.

Enclosure: Cpy. ltr. to Senator Magnuson.

(Referred to on p. 676, pt. 16, June 28, 1949)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington, July 1, 1949.

Mr. WILLIAM L. BORDEN,  
Executive Director, Joint Committee on Atomic Energy,  
Washington, D. C.

DEAR MR. BORDEN: In accordance with the request of Senator Hickenlooper, appearing on page 676 of the printed hearings, the following materials are submitted for the record:

(a) Analysis of Payments to the Zia Company by Fiscal Years for the Period April 1, 1946, through May 31, 1949.

(b) Salaries Paid Major Executives by the Zia Company.

(c) Reimbursement for Zia Company Officers.

Sincerely yours,

C. SHUGG,  
(For Carroll L. Wilson, General Manager).

Enclosures: As above.

## (C) REIMBURSEMENT FOR ZIA COMPANY OFFICERS

With a single exception, the Zia Company is not reimbursed for salaries or administrative overhead to cover any of its corporate officers. Mr. W. A. Kelecher, a Corporate Officer of the Company is occasionally employed as legal counsel on cases involving workmen's compensation claims. Through June 30, 1949, Mr. Kelecher has been paid \$630.50 for this work by the Company and the Company has been reimbursed by the AEC. This work has been on seven cases and in each case the assignment has been approved by AEC's coordinator for the Zia contract prior to the work being done.

EXHIBIT 22

(Referred to on p. 680, pt. 16, June 28, 1949)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., July 8, 1949.

Mr. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy,*  
Washington, D. C.

DEAR MR. BORDEN: At the hearing on June 28, 1949, Senator Millikin asked for the amount of our total investment in housing at Oak Ridge. This request appears at page 680 of the printed hearing. This is partially the subject of an analysis now being prepared, covering all facilities owned by AEC. Until this analysis is completed the only figures available are contained in estimates made by the Office of Community Affairs at Oak Ridge for purposes of explaining to residents the need for and effect of the recently announced rent adjustments.

The total capital cost of 9,098 housing units at Oak Ridge except hutments, dormitories, and farm houses is estimated at \$40,594,679. Obsolescence is estimated at \$5,661,448. Thus original cost less obsolescence is \$34,933,231. This figure does not reflect deductions for depreciation.

No figure is presently available for hutments, dormitories, and farm houses, since the studies pertaining to the new rent policy did not encompass these buildings. The figures on these as well as other buildings will, of course, be made available to the Joint Committee when the current analysis is concluded.

Sincerely yours,

By C. SHUGG,  
For CARROLL L. WILSON,  
General Manager.

(See also Exhibits 16 and 35)

(Referred to on p. 709, pt. 16, June 28, 1949)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., July 20, 1949.

Mr. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy,*  
Washington, D. C.

DEAR MR. BORDEN: At the hearings before the Joint Committee on June 28, 1949, Mr. Hinshaw requested information concerning the firmness of the supply of natural gas to Oak Ridge.

I am attaching a memorandum on this subject which I believe will give Mr. Hinshaw the information he wanted.

Sincerely yours,

CARROLL L. WILSON, *General Manager.*

Enclosure.

**MEMORANDUM COMMENTING ON QUESTIONS RAISED BY MR. HINSHAW ON OAK RIDGE GAS SUPPLY AT JUNE 28 HEARING**

At the hearings before the Joint Committee on June 28, 1949, Mr. Hinshaw requested information concerning the firmness of the supply of natural gas to Oak Ridge.<sup>1</sup> Mr. Hinshaw expressed particular concern over the apparent lack of any commitment, or guarantee, obligating suppliers of the East Tennessee Natural Gas Company to furnish to East Tennessee the gas needed at Oak Ridge.

1. At the time the Atomic Energy Commission entered into the contract with the East Tennessee Natural Gas Company on June 19, 1948, for the delivery of natural gas to Oak Ridge, East Tennessee held a contract with the Tennessee Gas Transmission Company (TGT) which provided that TGT would supply East Tennessee's entire natural-gas requirements in a service area which included Oak Ridge.

On July 1, 1948, TGT wrote East Tennessee confirming the application of the requirements contract to East Tennessee's requirements for supplying natural gas to Oak Ridge. The letter stated in part:

"We understand that the Oak Ridge area is located within the service area covered by the requirements gas-sales contract dated September 6, 1946, in which we are the seller and you, by assignment from Tennessee Natural Gas Lines, Incorporated, dated the 21st day of April 1947, have become the buyer. We agree to sell and deliver to you the 60,000 MCF per day of contracted demand first above-mentioned, for consumption in said Oak Ridge area under said requirements gas-sales contract between us, and only proviso being that satisfactory authorization of the necessary facilities and said sale and delivery can be obtained. Accordingly, we will apply forthwith to the Federal Power Commission for such authorizations."

Article III of the contract between East Tennessee and the Commission provides:

"This agreement shall obligate the Gas Company to sell and be ready at all times, commencing with the day of initial delivery, to deliver to the Government the contracted demand and the Government shall have the right to purchase and receive from the Gas Company up to the contracted demand."

2. The contract obligation of East Tennessee to supply gas to the Commission, and the obligation of TGT to supply the necessary gas to East Tennessee, were both contingent upon securing authorization from the FPC. Both contracts, however, provided that due diligence should be exercised to secure the necessary authorization. Thus the contract between East Tennessee and the Commission provided:

"The Gas Company shall apply for promptly and use due diligence (a) to obtain all necessary materials and authorizations for the construction of the facilities and for the purchase of a supply of natural gas necessary to enable it to deliver to the Government at the Points of Delivery, defined herein, the volume of natural gas contemplated by this agreement, and (b) to secure such certificates, licenses, or permits as may be found necessary to authorize the sale and delivery to the Government of said volume of gas. When requested by the Commission, and to the extent that the Commission may require, the Gas Company shall submit to the Commission adequate information concerning the status of its undertakings under this paragraph."

3. Section 7 (e) of the Natural Gas Act of 1938 provides that a "certificate shall be issued to any qualified applicant \* \* \* if it is found that the applicant is able and willing properly to do the acts and perform the services proposed \* \* \*". In accordance with this provision the FPC looks carefully into the gas supplies available to certificate applicants where those supplies affect the ability of the applicant to render the proposed services. Pursuant to their contracts East Tennessee and TGT applied to the FPC for certificates of convenience and necessity in the summer of 1948. The proceedings on the two applications were consolidated, and hearings were begun on March 9, 1949. On May 3, 1949, the FPC granted certificates to East Tennessee and TGT authorizing natural

<sup>1</sup> See p. 709, pt. 16, printed hearing of June 28, 1949.

gas service to Oak Ridge.<sup>3</sup> In the opinions handed down with its orders granting the certificates the FPC discussed the matter of gas supplies available to TGT at length. In its opinion on the application of TGT it said:

"Authorization of a sufficient part of the remaining facilities subject to TGT's pending amended application in G-962 to supply up to 60,000 MCF per day of natural gas to East Tennessee for service to the Atomic Energy Commission at Oak Ridge is required by public convenience and necessity. However, a certificate for such facilities can be issued here by the Commission only if the facts before us warrant finding that TGT, by reason of the additional gas reserves and supply available under the activated gas-purchase contracts presented prior to our September 29, 1948, order, possesses a sufficient natural gas supply reasonably adequate to meet the input requirements of the additional facilities to be authorized for supplying natural gas for East Tennessee's Oak Ridge pipe line.

"On the basis of the actual additional gas that TGT would require to operate its system with the additional facilities hereinafter authorized by this order, TGT will need to purchase, on a daily and annual basis, lesser volumes of gas than the minimum volumes TGT has shown, at the previous hearings herein, may reasonably be expected to be available to TGT under the aforementioned activated 20-year contracts covering reserves and purchases from the Bay City, East Bay City, Lucky, Frelsburg, and New Ulm gas fields. Substantial evidence is of record respecting the reserves of gas committed and available to TGT under the mentioned contracts and in the fields named. From the facts and record before the Commission it is reasonable to conclude that TGT has shown it has commitments, separate from and in addition to those considered as basis for the certificates heretofore issued by the Commission to TGT, for a supply of gas reasonably adequate for meeting the demands not exceeding 60,000 MCF per day authorized herein to be sold and delivered to East Tennessee for resale to the Atomic Energy Commission. By our December 7, 1948, order herein we have already authorized the necessary lateral transmission pipe lines for connecting these new sources of gas supply."

Moreover the issuance of the certificates adds the sanctions of the Natural Gas Act to the remedies available to the Commission under its contract with East Tennessee to enforce delivery of gas to Oak Ridge. Section 7 (b) of the Natural Gas Act of 1938 provides:

"No natural-gas company shall abandon all or any portion of its facilities subject to the jurisdiction of the Federal Power Commission, or any service rendered by means of such facilities, without the permission and approval of the Commission first had and obtained, after due hearing, and a finding by the Commission that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity permit such abandonment."

4. Mr. Hinshaw also expressed concern that the Texas Railroad Commission might curtail the delivery of natural gas from the Texas fields to TGT to an extent that would curtail the delivery of gas to Oak Ridge. While the Commission has no absolute assurance that the Texas Railroad Commission will not constrict the production and delivery of natural gas from Texas fields, the probability of such an occurrence interfering with the delivery of gas to Oak Ridge seems unlikely. As was brought out at the hearings before the Federal Power Commission, TGT has contracts for supplies of natural gas in over 70 separate fields in the Texas and Louisiana coastal area. It seems unlikely that gas production in Texas would be so constricted that sufficient gas for Oak Ridge would not be available from some of these fields at all times.

Moreover the present problem of the Texas Railroad Commission seems to be to develop uses for gas being produced to prevent its wastage. For example recently the Texas Railroad Commission has cut off production of gas in certain Texas fields to prevent its being wasted by flaring. Apparently the effect of the actions of the Texas Railroad Commission will be to increase considerably the supply of gas available to pipeline companies such as TGT. In this connection the discussion in *Sterling Oil and Refining Co.*, 218 S. W. (2d) 415 (1949) may be of interest. Incidentally, the annual reports of TGT indicate that TGT was able to double its purchases of natural gas in the Texas and Louisiana coastal area during the period 1945 to 1948.

<sup>3</sup> Rehearing was denied on June 29, 1949.

<sup>4</sup> Findings and order of Federal Power Commission in Docket G-962, May 3, 1949, pp. 5-6.

5. Mr. Hinshaw also stated at the hearings on June 28, 1949:

"There is no showing that performance and payment bonds as required by the AEC General Manager's Bulletin GM-108 have been waived in the interest of the United States. Such bonds are required under GM-108 where the amount of the contract is in excess of \$2,000, and this contract is very much in excess."

GM-108 "Contract Bonding Requirements on New Construction Contracts" dated September 21, 1948, provides that performance and payment bonds must be furnished before any prime construction contract is entered into on a lump sum or a unit price basis where the amount of the contract is in excess of \$2,000. The same provision applies to lump sum and unit price subcontracts to cost-type prime contracts for construction where the total cost of the subcontract is in excess of \$2,000. The contract between AEC and the East Tennessee Natural Gas Company is not a construction contract, but is a supply contract for the purchase of natural gas. The bonding requirement under GM-108, therefore, does not apply.

7. J. C. Treadwell and Geo. Goldstein, New York, N. Y.	Rental survey of Oak Ridge Housing.	4/48 to 7/48....	20,000.00	Used as a basis for increasing rental schedules and adjusting services by the Commission.
	Survey of Guest House and Theatre Operations.	10/48.....	9,000.00	Used by the contractor and Commission with the approval of the Commission in establishing proper arrangements for Guest House and theatre operations.
8. Skidmore, Owings & Merrill.	Preparation of a Master Plan for the development of the City of Oak Ridge.	7/47 to 12/48...	97,000.00	Is being used to guide development of the City of Oak Ridge.
9. Glenn H. Boyer.....	Population survey in the City of Oak Ridge.	6/48 to 7/48....	2,197.20	To provide statistical information for Master Plan of Oak Ridge.
FISCAL YEAR 1949				
1. Drake, Startzman, Sheahan & Barkley, New York, N. Y.	Survey of Warehousing.	8/48 to 10/48...	16,860.05	Used to effect a consolidation and realignment of warehouse operations.
2. E. N. Hay Associates, Philadelphia, Penna.	Job evaluation for Roane-Anderson Company.	Continuing started 10/48.	14,230.81	To be used to relate salary and wage schedules of employees to work being performed and to form a basis for reassignment of personnel to the position for which best qualified.
3. J. L. Jacobs & Co., Chicago, Ill.	Recommendations for incorporation of Oak Ridge.	7/48 to 5/49....	31,542.23	Used as a basis for planning the incorporation of the City of Oak Ridge.

<sup>1</sup> In case of continuing contracts, total cost represents cost to date.

**Reed-Cochran survey.**—Dr. Lowell Reed is vice president of the Johns Hopkins University and the organizer of medical statistics in this country. Dr. Cochran is professor of biometrics (biological and medical statistics at Johns Hopkins University School of Public Health). These men and their assistants have studied existing medical records at Oak Ridge and advised us as to the feasibility of a comprehensive record survey which would be aimed at increasing our information as to the health of workers in atomic energy projects. The survey revealed that the wartime records were inadequate for such a study and has advised a pilot study with the existing records. The survey was made on an actual expense basis without fee. Travel and per diem for the three men making the survey totaled \$969.20.

**Rorem surveys.**—Dr. Rufus Rorem is director of the Philadelphia Hospital Services and has had a great deal of experience in hospital administration. During the days of the Manhattan Engineering District, hospitals were estab-

lished at Oak Ridge, Los Alamos, and Hanford which operated at a heavy deficit requiring considerable subsidy by the Atomic Energy Commission with a desire to effect better hospital management, less subsidy, improved community medical care and preventive medicine. Dr. Rufus Rorem has studied the medical care programs at Oak Ridge and Los Alamos. As a result of the Oak Ridge study, it is estimated that the Commission will save approximately \$300,000 on hospital subsidy and a similar amount is envisaged at Los Alamos. At the latter facility he has also made valuable recommendations as to hospital construction which will effect a considerable saving.

The Oak Ridge survey was conducted and the report submitted on a contract basis for \$3,500 plus per diem and travel costs. The Los Alamos survey now in progress is at a contract rate of \$2,500, plus per diem and travel.

## EXHIBIT 26

(See also Exhibits 19 and 31)

(Referred to on p. 751, pt. 17, June 29, 1949)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., July 7, 1949.Honorable BRIEN McMAHON,  
Chairman, Joint Committee on Atomic Energy,  
Senate Office Building, Washington 25, D. C.

DEAR SENATOR McMAHON: This will transmit to you the summary salary data requested by Senator Knowland in the hearings on June 29, 1949. This request appears at page 751 of the printed hearings. For the convenience of the Committee we have also included a summary of the data previously submitted on employees receiving \$14,000 per year or more.

In connection with the preparation of this information, it was discovered that a change is necessary in the table recently submitted showing contractor personnel receiving salaries of \$14,000 or more per year. Under General Electric Co. at Hanford on that table, W. R. McKenna and R. C. Stanton are shown as receiving basic salaries of \$11,520 plus bonuses of \$3,440 each. These two employees have recently received salary changes due to a reduction in working hours and now receive basic salaries of \$9,600 instead of \$11,520 as previously reported. For this reason, they have been included in the attached table and it is requested that they be removed from the table that was submitted June 24, 1949.<sup>1</sup>

Sincerely yours,

C. SHUGG,  
(For) CARROLL L. WILSON (General Manager).

Enclosures: (Salary Data (3)).

### EXHIBIT 27

(Referred to on p. 751, pt. 17, June 29, 1949)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington, D. C., July 7, 1949.

MR. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy, Washington, D. C.*

DEAR MR. BORDEN: At the hearing on June 29, Senator Knowland requested that the Commission supply information relating to the number of holders of AEC fellowships who have not yet completed and returned the non-Communist oath. This request appears at page 751 of the printed hearing. The NRC has furnished us the following information:

The notifications were mailed to all fellows on June 1, 1949.

Out of 497 fellows all but 21 had signed and returned the form of the oath as of Friday, July 1, 1949. Of these 21, 19 had simply not been heard from. Of the remaining two, one has refused to sign, and has been notified of the cancellation of his fellowship; one refused to sign and has resigned.

Of the 19 who have not yet returned the form, some appear to have changed their address. In such cases, a new notification has been sent to the professors under whom the fellows are to work.

No follow-up letter was sent by NRC and no dead line for the signing of the oath was established. It should be pointed out, however, that NRC will grant no payments to a fellow who has not returned the oath.

Sincerely yours,

CARROLL L. WILSON, *General Manager*

### EXHIBIT 28

(Referred to on p. 755, pt. 18, June 30, 1949; see also pt. 17, June 29, 1949, pp. 737-743)

ATOMIC ENERGY COMMISSION,  
Washington, D. C., July 8, 1949.

MR. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy,*  
*Washington, D. C.*

DEAR MR. BORDEN: At the hearing on June 29 Senator Hickenlooper requested that the Commission supply figures showing the cost of maintenance and operation of the rail facilities operated by Southern Railroad and Louisville and Nashville Railroad at Oak Ridge. This request appears at page 755 of the printed hearings.

Attached is a summary statement of the type of work performed and payments made therefor by the Commission to the Southern Railroad and the Louisville & Nashville Railroad. These statements were prepared at Oak Ridge and show a breakdown for operation and maintenance in the three Fiscal Years 1947, 1948, and 1949, as well as estimates for Fiscal Year 1950.

Sincerely yours,

(Signed) CARROLL L. WILSON, *General Manager*.

Enclosures (2) :

Statement re Sou. R. R.

Statement re L. & N. R. R.

**DATA ON COST OF RAILROAD OPERATION FOR OAK RIDGE FACILITIES CONNECTING THE LOUISVILLE AND NASHVILLE MAIN LINE AT ELZA, TENN., FOR FISCAL YEARS 1947, 1948, 1949, AND 1950**

**TYPE OF CONTRACT AND SERVICE**

During Fiscal Years 1947 and 1948 there was a cost-plus-overhead type of contract wherein the Louisville and Nashville Railroad was reimbursed actual cost of labor used in the operation and maintenance plus overhead allowance of ten percent (10%) on labor cost and fifteen percent (15%) on those materials and supplies furnished by the contractor; services to be furnished by the contractor were—

(a) Maintain in satisfactory condition road-beds and track structures (bridges, trestles, culverts) ;

(b) Operate Government-owned diesel locomotives (locomotives maintained by Government) ;

(c) Perform switching services for main connection, Elza, Tenn., to Y-12 area, sidings of the Clinton National Laboratories and the Town Site (and spurs, sidings, etc., thereon) ;

In Fiscal Year 1949 contractor provided under the same type contract all services above and in addition thereto assumed the responsibility for the maintenance of the Government-owned diesel locomotives. Negotiations were concluded on June 24, 1949, wherein the Louisville and Nashville Railroad leases five and thirty-six hundredths (5.36) miles of Government-owned trackage for maintenance and operation as a commercial railroad facility for the convenience of Oak Ridge, the Commission and its contractors and in addition thereto will maintain and operate approximately ten and twenty-one hundredths (10.21) miles on a fixed-unit-price type contract (not reimbursable cost-plus-fixed-fee contract).

*Cost of services*<sup>1</sup>

	Operation	Maintenance <sup>2</sup>	Total
Fiscal year 1947.....	\$65,868	\$96,313	\$162,181
Fiscal year 1948.....	70,759	125,737	196,496
Fiscal year 1949.....	81,590	111,115	192,705
Estimate, fiscal year 1950.....	46,769	29,327	76,096

<sup>1</sup> Figures do not include the following items which were furnished by the Government: Fiscal year 1947—\$48,534 for materials, \$47,094 for diesel locomotive maintenance; fiscal year 1948—\$72,459 for materials; \$26,909 for diesel locomotive maintenance; fiscal year 1949—\$23,789 for materials; locomotives maintained by the contractors and included in the figures for fiscal year 1949.

<sup>2</sup> Greater share of maintenance costs are to be attributed to rehabilitation program involving the replacement of ties, rails, and ballasts installed during the period of construction of the gaseous diffusion plant.

**VOLUME OF WORK**

During Fiscal Year 1947 there were handled by the contractor 7,017 in-bound cars of freight; Fiscal Year 1948—5,883 cars; Fiscal Year 1949—6,327 cars; the estimate of Fiscal Year 1950 does not exceed the 1949 experience.

**MAINTENANCE PROGRAM**

When the contractor assumed operation in July 1946 the railroad was in need of rehabilitation due to deferred maintenance and to the inadequate quality of materials available during construction; the contractor was instructed to place the railroad in good operating condition; replacement of sixty percent (60%) of

the ties was recently completed together with the installation of five (5) miles of new one hundred (100) pound rail and accessories and the rehabilitation of nine (9) miles with used rail; ballast has been cleaned or replaced and necessary changes in grade and alignment has been made.

**DATA ON COST OF SERVICES RENDERED BY SOUTHERN RAILROAD TO THE ATOMIC ENERGY COMMISSION, OAK RIDGE, TENNESSEE, FOR FISCAL YEAR: 1947, 1948, 1949, AND 1950**

**TYPE OF CONTRACT AND SERVICE**

Cost-plus overhead type contract wherein Southern was reimbursed actual cost of labor and material used in operation and maintenance plus overhead allowance of 10% on labor cost and 15% on materials and supplies furnished by contractor with total overhead limit of fifty thousand dollars (\$50,000) per year; services to be furnished by contractor are

(a) Maintain in satisfactory condition road-bed and track structure (bridges, trestles, culverts);

(b) Repair and maintain Government-owned locomotives;

(c) Perform switching service from main connection, Blair, Tennessee, to the K-25 area (and spurs, sidings, etc., thereon);

*Cost of services <sup>1</sup>*

	Operation	Maintenance <sup>2</sup>	Total
Nine months, fiscal year 1947-----	\$37,211	\$68,818	\$106,029
Fiscal year 1948-----	49,010	104,240	153,250
Fiscal year 1949-----	55,770	104,501	160,271
Estimate, fiscal year 1950-----	63,000	105,000	168,000

<sup>1</sup> Figures do not include the following: Fiscal year 1948—\$26,803 for procurement and installation of crossing signals to eliminate need for crossing watchmen (which represents a \$15,000 annual savings); also \$60,030 in the way of services and supplies furnished by the Government in the way of fuel oil, ties, roundhouse maintenance, etc.; fiscal year 1949—\$40,050, new 100-pound rail procurement and \$55,301 in the way of services and supplies furnished by the Government; fiscal year 1950—does not include any new rail procurement or services and supplies furnished by the Government.

<sup>2</sup> Greater share of maintenance costs is to be attributed to rehabilitation program involving the replacement of ties, rails, and ballasts installed during the period of construction of the gaseous diffusion plant.

**VOLUME OF WORK**

During the nine months in fiscal year 1947 there were handled by the contractor 7,429 in-bound cars containing 393,737 tons of freight; in fiscal year 1948, 10,381 cars were handled by the contractor with 550,193 tons of freight; and in fiscal year 1949 there were 11,143 cars handled by the contractor with 590,379 tons of freight; the estimate for fiscal year 1950 exceeds the actual experience for prior fiscal years.

**MAINTENANCE PROGRAM**

When the contractor assumed operation in October 1946 the railroad was in need of rehabilitation due to deferred maintenance and to the inadequate quality of materials available during construction; the contractor was instructed to place the railroad in good operating condition; replacement of ties through the system was recently completed and replacement of two (2) miles of badly worn main line rail is now in progress, with an additional three (3) miles to be installed; ballast has been cleaned or replaced and necessary changes in grade and alignment have been made.

## LIST OF SURVEYS AND STUDIES FOR RAW MATERIALS OPERATIONS

1. Ore-purchasing program study under contract with American Smelting and Refining Company, New York, N. Y., at a total cost of \$3,844.52. This contract was to provide for a study and written report and recommendations based on the study with respect to:

(a) The most effective means for carrying out, in the "Plateau Area" of the states of Colorado, Utah, Arizona, and New Mexico, a program for the procurement of uranium-bearing ores by the Commission, through the contractor as agent;

(b) A plan for the administration of such a program by the contractor, including estimates of its cost, the number of persons required, and necessary facilities;

(c) Prospective price schedules, transportation arrangements, weighing, sampling, and assaying procedures.

2. Survey of management and maintenance contractor, Walker-Lybarger operations, under a sub-contract with Ernst and Ernst, Chicago, Ill., at a total cost of \$5,500. The purpose of this study was to improve and strengthen the management and maintenance contractor's system of purchasing, finance, accounting, and the management and maintenance of the Commission's housing and other buildings and facilities in the Colorado Plateau area. This survey has been completed and is now being placed into effect.

## OFFICIAL TRAVEL OF DAVID E. LILIENTHAL, CHAIRMAN, UNITED STATES ATOMIC ENERGY COMMISSION

April 21-22, 1947:

Oak Ridge, Tennessee:

Met with Oak Ridge officials.

Addressed Oak Ridgers—High School Auditorium.

Met with safety officials.

Visited plant sites.

Accompanied by Miss M. J. Brown, Secretary.

May 1-2, 1947:

New York City:

Conferred with United States Representative, United Nations Atomic Energy Commission.

Addressed 75th Anniversary Dinner—Popular Science Monthly.

Accompanied by Mrs. Lilienthal (at her own expense).

May 26, 1947:

Chicago, Illinois:

Conferred with officials of Argonne National Laboratory.

Addressed Inland Press Association Luncheon.

Unaccompanied.

June 2-3, 1947:

New York City:

Met with Atomic Energy Commission Officials of New York Office.

Met with United States delegate and staff of United Nations Atomic Energy Commission.

Addressed United Nations Atomic Energy Commission.

Addressed Dutch Treat Club luncheon.

Met with group of radio men.

Unaccompanied.

August 7-26, 1947:

Los Alamos, Berkeley, Hanford:

Commission visited Atomic Energy Commission installations at Los Alamos, Berkeley, and Hanford.

Attended numerous Commission conferences with Atomic Energy Commission and Contractor Officials.

Attended meetings of the Commission.

Attended three-day meeting with directors of research from the national laboratories, some members of the General Advisory Committee, and Atomic Energy Commission Director of Research and Director of Military Application.

Accompanied by Commissioners Pike, Strauss, Bacher, Maymack; G. Lyle Belsley, Secretary of the Commission; Joseph Volpe, Associate General Counsel (joined group at Hanford); Dorothy Maszk, Secretary; Roger Warner, Director, Division of Engineering; James Fisk, Director, Division of Research and General McCormack, Director, Division of Military Application (last two joined group at Berkeley); and Mrs. Lilienthal (at her own expense) as far as Berkeley.

September 8-9, 1947:

New York City:

Miscellaneous business appointments.

Accompanied by Mrs. Lilienthal (at her own expense).

September 20-23, 1947:

Chicago; Crawfordsville, Indiana; Lafayette & Greencastle, Indiana:

Conferred with Officials of University of Chicago.

Conferred with President and Faculty of Purdue University.

Made address at Wabash College sponsored by Chamber of Commerce, City and County Schools, Service Clubs, Farm Bureau, Parent Teachers Association, Churches and Government officials.

Addressed DePauw University student body.

Accompanied by Bryan LaPlante, Representative, Washington Security Office and Mrs. Lilienthal (at her own expense).

October 21-22, 1947:

New York City:

Met with United States delegate to United Nations Atomic Energy Commission.

Met with members of Social Science Research Council.

Addressed New York Herald Tribune Forum.

Unaccompanied.

November 28-29, 1947:

Chicago, Illinois:

Conferred with President and Officers of University of Chicago.

Addressed American Education Fellowship.

Attended Atomic Energy Commission Industrial Advisory Committee meeting.

Unaccompanied.

December 2-3, 1947:

Atlantic City, New Jersey, and Philadelphia, Pennsylvania:

Addressed Nuclear Energy Luncheon of American Society of Mechanical Engineers.

Gave Howard Drowley Memorial Lecture, University of Pennsylvania.

Addressed Sunday Breakfast Club, Philadelphia.

Accompanied by Bryan LaPlante, Representative, Washington Security Office.

**December 16, 1947:**

Chicago, Illinois:

Met with Officials of the American Farm Bureau.

Addressed American Farm Bureau.

Met with Atomic Energy Commission and Argonne Officials.

Accompanied by Bryan LaPlante, Representative, Washington Security Office.

**January 19, 1948:**

Albany, New York:

Addressed Annual Convention, New York State Publishers Association.

Accompanied by Bryan LaPlante, Representative, Washington Security Office.

**February 5-6, 1948:**

New York, New York:

Addressed Radio Executives Club Luncheon.

Saw Judge Robert Patterson.

Conferred with Officials of General Electric.

Met with several representatives of the press and radio.

Accompanied by Mrs. Lilienthal (at her own expense).

**February 27, 1948:**

Princeton, New Jersey:

Conferred with Chairman of General Advisory Committee and Dr. Albert Einstein.

**March 18, 1948:**

Boston, Massachusetts:

Addressed Boston Chamber of Commerce.

Met with Harvard University Faculty Members.

Visited Massachusetts Institute of Technology.

Accompanied by Bryan LaPlante, Representative, Washington Security Office.

**April 19, 1948:**

Cambridge, Massachusetts, and Manchester, New Hampshire:

Conferred with the President of Harvard University.

Visited Dean Griswold, of Harvard Law School.

Addressed meeting of Manchester Union Leader Forum.

Accompanied by Bryan LaPlante, Representative, Washington Security Office.

**April 25-May 1, 1948:**

West coast:

Visited officials and facilities of Radiation Laboratory at Berkeley.

Met informally with group of San Francisco bankers and industrialists.

Conferred with President and officials of University of California.

Conferred with officials of California Institute of Technology.

Unaccompanied.

**May 19-21, 1948:**

New York, New York:

Met with United States delegate to United Nations Atomic Energy Commission.

Addressed Calvin Bullock Forum.

Addressed Council on Foreign Relations.

Conferred with President and Officers of Union Carbide and Carbon Corporation.

Accompanied at Council on Foreign Relations meeting by Mr. Joseph Volpe, Jr., Associate General Counsel.

**June 1, 1948:**

Gettysburg, Pennsylvania:

Addressed Gettysburg, Pennsylvania, High School Graduates.

Accompanied by Mrs. Lilienthal (at her own expense), and Bryan LaPlante, Representative, Washington Security Office.

**June 8, 1948:**

Boston, Massachusetts:

Visited Tracer Laboratory.

Conferred with President and officials of Massachusetts Institute of Technology.

Visited Watertown project with Dr. A. M. Gaudin.

Accompanied by Bryan LaPlante, Representative, Washington Security Office.

June 28, 1948:

Chicago, Illinois:

Conferred with Argonne National Laboratory Officials.

August 21, 1948:

New York:

Commission Meeting No. 190.

In company with Commissioners Sumner T. Pike and Robert Bacher, attended and addressed opening of Atomic Energy Exhibit at New York Golden Jubilee Celebration.

October 1, 1948:

Chicago, Illinois:

Conferred with officials and staff of Argonne National Laboratory.

Addressed Executives Club of Chicago.

Unaccompanied.

October 7-9, 1948:

New York City:

Addressed Publishers Luncheon Club.

Conferred with Atomic Energy Commission Officials, New York Office.

Conferred with United States delegate to United Nations Atomic Energy Commission.

Accompanied by Mrs. Lilienthal (at her own expense), and Edward Brosnan, Representative, Washington Security Office.

November 3-9, 1948:

Chicago, Illinois; Des Moines, Iowa; Cincinnati, Ohio:

Conferred with Argonne National Laboratory Officials.

Conferred with Officials of Iowa Farm Bureau Federation.

Addressed Iowa State Education Association.

Chicago, Illinois:

Conferred with officials and visited Laboratory at Ames, Iowa.

Met with scientific personnel of the Laboratory.

Conferred with Iowa State Faculty and Administrators.

Participated in "Man and the Atom" Exhibit in Cincinnati.

Conference on an Advisory Board appointment.

Conferred with Mayor of Cincinnati.

Accompanied by Edward Brosnan, Representative, Washington Security Office; part way by Mrs. Lilienthal (at her own expense), and from Cincinnati to Washington by Frances Henderson, Assistant to the Chairman.

November 11-12, 1948:

Philadelphia, Pennsylvania:

Conferred with Chairman of the Personnel Security Review Board.

Accompanied by Edward Brosnan, Representative, Washington Security Office.

November 19-21:

Boston, Massachusetts:

Addressed New England Council.

Conferred with several New England industrialists.

Accompanied by Mrs. Lilienthal (at her own expense), and Edward Brosnan, Representative, Washington Security Office.

November 30 to December 1, 1948:

Columbus, Ohio:

Conferred with President and faculty of University of Ohio.

Conferred with President of the Ohio State University.

Conferred with officials of Ohio Farm Bureau.

Addressed Ohio Farm Bureau.

Accompanied by Edward Brosnan, Representative, Washington Security Office, and Mr. Morse Salisbury, Director, Division of Public and Technical Information.

December 15-18, 1948:

St. Louis, Missouri; Denver, Colorado; Chicago, Illinois:

Visited Mallinkrodt Chemical Plant, St. Louis, and conferred with President and Officers of same.

Conferred with Officials of Monsanto Chemical Company.

Meeting with mining group in Denver.

Addressed Denver Rotary Club.

Conference with Colorado State and local officials.

Visited Argonne National Laboratory.

December 15-18, 1948—Continued

St. Louis, Missouri ; Denver, Colorado ; Chicago, Illinois—Continued

Accompanied by Mr. Joseph Volpe, Jr., Associate General Counsel ; Mr. John Gustafson, Director, Division of Raw Materials ; Mr. Shelby Thompson, Chief, Public Information Branch ; Mr. W. Kelley, Manager, New York Office (to St. Louis) ; Mr. Edward Brosnan, Representative, Washington Security Office, and Mrs. Lillenthal (at her own expense).

January 6-8, 1949 :

Oak Ridge, Tennessee :

Met with Atomic Energy Commission personnel at Oak Ridge.

Addressed Oak Ridgers at High School Auditorium.

Visited Laboratories.

Accompanied by Mr. Edward Brosnan, Representative, Washington Security Office.

January 15-16, 1949 :

Rochester, New York :

Visited Atomic Energy Commission Project at University of Rochester.

Visited Cyclotron.

Addressed meeting sponsored by Temple B'Rish Kodesh and University of Rochester.

Accompanied by Mr. Edward Brosnan, Representative, Washington Security Office.

January 30 to February 1, 1949 :

Princeton, New Jersey :

Conferences with Chairman of the General Advisory Committee, General Manager, and Messrs. Harry Winne, Charles Thomas, Chester Barnard.

Accompanied by Mr. C. L. Wilson, General Manager and Mr. Edward Brosnan, Representative, Washington Security Office.

February 6, 1949 :

Philadelphia, Pennsylvania :

Gave Commencement Address at Lehigh University.

Conferred with Trustees of Lehigh University.

Unaccompanied.

March 19, 1949 :

Oak Ridge, Tennessee :

Attended Opening of Town.

Unaccompanied.

March 21, 1949 :

Schenectady, New York :

Visited Sacandaga Site.

Visited Knolls Laboratory.

Visited General Electric Research Laboratory.

Visited Peek Street Laboratory.

Conferred with General Electric Officials.

Accompanied by Frances Henderson, Assistant to the Chairman ; Dr. George Weil, Chief, Reactors Projects Branch, and Mr. Edward Brosnan, Representative, Washington Security Office.

March 30 to April 4, 1949 :

New York City :

Met with Atomic Energy Commission Officials of the New York Office of Operations.

Visited Brookhaven National Laboratory.

Conferred with Brookhaven Officials.

Addressed Brookhaven employees.

Visited Hospital facility.

Accompanied by Mr. Edward Brosnan, Representative, Washington Security Office, and Mrs. Lillenthal (at her own expense).

April 15 to 26, 1949 :

Oak Ridge, Tennessee ; Hanford, Washington ; Chicago, Illinois :

Conferred with Manager of Oak Ridge Operations.

Conferred with Atomic Energy Commission and General Electric Officials at Hanford.

Conferred with Columbia River Basin District Directors re Wahluke Slope.

April 15 to 26, 1949—Continued

Oak Ridge, Tennessee; Hanford, Washington; Chicago, Illinois—Continued  
Addressed Washington State College in Pullman.  
Addressed University of Washington, Seattle.  
Met with group of business and civic leaders, Seattle.  
Conferred with State officials of Idaho on Arco Reactor Site.  
Met with Officials of Argonne National Laboratory, Chicago.  
Met informally with group of Chicago businessmen.  
Accompanied by Mr. Edward Brosnan, Representative, Washington Security Office (all the way), and Frances Henderson, Assistant to the Chairman (to Hanford).

May 30, 1949:

New York City:

Conferred with officials of prospective contractor.  
Accompanied by Mr. C. L. Wilson, General Manager, and General James McCormack, Director, Division of Military Application.

---

### EXHIBIT 31

(See also exhibits 19 and 26)

(Referred to on p. 832, pt. 21, June 8, 1949)

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington, D. C., July 8, 1949.*

HON. BRIEN McMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR McMAHON: This will transmit to you the revised data concerning employees of the Atomic Energy Commission and its contractors who receive payments of \$10,000 to \$14,000 per year in accordance with telephone requests of July 5, 1949.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
CARROLL L. WILSON, *General Manager.*

Enclosure: Salary data (2).

*Contractor employees who receive payments of \$10,000 but less than \$14,000 per year*

Contractor	Type of contractor	Name of employee	Employee's title	Salary	Date of information
American Smelting & Refining Co. Argonne National Laboratory	Supply	Martin N. Gaines	Project director	\$10,000	June 29, 1949
	Research and development	H. Etherington	Division directors:	12,600	Do.
		Harvard Hull	Naval reactor:	12,500	Do.
		L. Marinelli	Remote control:	12,500	Do.
			Associate director: Health physics

		T. L. Shipman	Health division leader	12,000	Do.
		George Cranow	Theoretical physicist	12,000	Do.
		Dan Froman	Assistant director	11,540	Do.
		D. P. MacDougall	Division Leader GMX	11,280	Do.
		Stanlaw Ulan	Mathematician	10,740	Do.
		R. C. Smith	Assistant director for classification and security	10,504	Do.
		Alvin Graves	J-division leader	10,080	June 30, 1949
		G. B. Thomas	Director industrial relations	10,000	Do.
		C. C. Luebbeigh	Staff pathologist	10,000	Do.
		C. K. Weidner	Chief engineer	10,920	June 28, 1949
University of Chicago	Construction	H. A. Blair	Project Director	12,000	Mar. 31, 1949
University of Rochester	Research	A. C. Reiss	Project manager	10,000	June 30, 1949
Urban, Smyth & Warren Co.	Construction	F. J. McKenna	Assistant resident project manager	10,400	June 28, 1949
Voorhees, Walker, Foley & Smith	Architect-engineer	C. P. Roberts	Chief engineer	10,400	Do.
		Mr. Record	Project architect	10,400	Do.
		H. H. Dean	Technical supervisor	10,400	Do.
Westinghouse Corp.	Research and development	A. J. Bruckert	Chief field representative	10,168	June 30, 1949
		R. A. Rowan	Manager of engineering	12,000	June 28, 1949
		W. E. Shoup	Director of research	12,000	Do.
		S. Siegel	Manager, research subdivision	10,800	Do.
		W. A. Johnson	do	10,200	June 30, 1949
		William Oakes	Assistant surgeon	10,450	June 28, 1949
Zia Co.	Community operation and maintenance	John Powers	Medical director	10,000	June 30, 1949
		Loren Blaney	do	10,000	Do.

In addition to the above, the following employees of AEC contractors who cannot be identified in this list receive payments of \$10,000 but less than \$14,000 per year: Project supervisor, \$10,344; research specialist, \$10,260; chief of operations, \$11,960; construction manager, \$12,000; chief engineer, \$10,000.

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., July 18, 1949.

Mr. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy,*  
*Congress of the United States, Washington 25, D. C.*

DEAR MR. BORDEN: This is in response to your letter of July 8, 1949, requesting, on behalf of Senator Hickenlooper, a list of all commission personnel by title and name who receive salaries of \$8,500 but less than \$10,000 per year.

The requested list, covering the 131 employees in this category, is enclosed.

Sincerely yours,

CARROLL L. WILSON, *General Manager.*

Enclosure: Salary data (2).

*AEC employees who receive salaries of \$8,500 but less than \$10,000 per year*

## EXHIBIT 32

(Referred to on p. 873, pt. 21, July 8, 1949; pp. 894 and 899, pt. 22, July 11, 1949)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., July 13, 1949.

HON. BRIEN MCMAHON,  
Chairman, Joint Committee on Atomic Energy,  
Senate Office Building.

DEAR SENATOR MCMAHON: We have noted upon review of the record at the present hearings that there has been what might appear to be an inconsistency in the statements made as to the number of times there have been dissenting votes on action taken by the Atomic Energy Commission.

In order to clarify this point, we are forwarding to you for insertion into the record the following summary of the dissenting votes that have been recorded in the Commission minutes.

Since the Atomic Energy Commission assumed responsibility for administering the provisions of the Atomic Energy Act of 1946, over 500 formal decisions have been made. Of these, it will be noted from the attached summary that there were dissenting votes as to action taken in connection with five separate areas, and that within these five areas, there were 12 specific instances in which a dissenting vote was recorded.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
(S) David E. Lilienthal,  
DAVID E. LILIENTHAL, *Chairman*.

Enclosure: Summary of Dissenting Votes.

#### DISSENTING VOTES RECORDED IN COMMISSION MINUTES

1. *Personnel Security Clearance*.—At Meeting 87 on July 29, 1947, the Commission received the report and recommendations of an *ad hoc* panel (Judge Charles S. Desmond, Chairman; John Lansdale, Jr., and Rear Admiral Sydney Souers) on a clearance case. Commissioners Lilienthal, Pike, and Waymack voted to accept the recommendation of the panel to grant clearance and Commissioner Strauss dissented. Mr. Bacher was not present.

2. *Foreign Distribution of Radioisotopes*.—a. At meeting 95 on August 19, 1947, the Commission approved the program for foreign distribution of radioisotopes. Commissioners Lilienthal, Pike, Bacher, and Waymack voted in the affirmative and Commissioner Strauss in the negative.

b. At Meeting 227 on December 21, 1948, the Commission approved inclusion of Finland in the program for foreign distribution of radioisotopes. Commissioners Lilienthal, Pike, Bacher, and Waymack voted in the affirmative, Commissioner Strauss in the negative.

3. *Foreign Ore Purchases*.—a. At Meeting 222 on December 8, 1948, the Commission approved instructions to the staff with regard to extension of foreign purchasing arrangements for uranium ore. Commissioners Pike, Bacher, and Waymack voted in the affirmative, Commissioner Strauss in the negative. Mr. Lilienthal was not present.

4. *Export Control*.—a. At Meeting 169 on April 28, 1948, the Commission approved four licenses for export of high energy accelerators. Commissioners Pike and Waymack voted in the affirmative and Commissioner Strauss in the negative. Mr. Lilienthal and Mr. Bacher were not present.

5. *Technical Cooperation*.—a. At Meeting 184 on July 8, 1948, the Commission approved specific topics for technical cooperation within the area of Fundamental Properties of Reactor Materials. Commissioners Lilienthal, Pike, and Waymack voted in the affirmative and Commissioner Strauss in the negative. Mr. Bacher was not present.

b. At Meeting 227 on December 21, 1948, the Commission approved certain topics for technical cooperation within the area of General Research Experience with Low Power Reactors. Commissioner Strauss dissented and the four other Commissioners voted in the affirmative.

c. At Meeting 228 on January 4, 1949, the Commission approved a proposal regarding restatement of the area concerned with Natural Uranium Reactors.

Commissioners Lillenthal and Bacher voted in the affirmative and Commissioner Strauss in the negative. Mr. Pike was not present.

d. At Meeting 231 on January 13, 1949, the Commission approved a proposal under the area concerned with Research Uses of Radioisotopes and Stable Isotopes. Commissioners Lillenthal, Pike, and Bacher voted in the affirmative and Commissioner Strauss in the negative.

e. At Meeting 251 on March 9, 1949, the Commission approved certain discussions under the area covering Fundamental Properties of Reactor Materials. Commissioners Lillenthal, Pike, and Bacher voted in the affirmative and Commissioner Strauss in the negative.

f. At Meeting 251 on March 9, 1949, the Commission approved a proposal concerning the area covering Research Uses of Radioisotopes and Stable Isotopes. Commissioners Lillenthal, Pike, and Bacher voted in the affirmative and Commissioner Strauss in the negative.

g. At Meeting 275 on June 1, 1949, the Commission approved certain visits in the areas of Health and Safety, Research Uses of Isotopes, and Extraction Chemistry with Commissioners Lillenthal and Pike voting in the affirmative, Commissioner Strauss in the negative, and Commissioner Smyth abstaining. Commissioner Dean was not present.

---

## UNITED STATES ATOMIC ENERGY COMMISSION

STATEMENT BY CARROLL L. WILSON, GENERAL MANAGER, ON MEETINGS OF ATOMIC ENERGY COMMISSION AND VARIOUS MEANS BY WHICH THE COMMISSION KEEPS INFORMED ON ACTIVITIES AND MAINTAINS EFFECTIVE DIRECTION OF THE PROGRAM

### I. FORMAL MEETINGS

Since the Commission's organization approximately 275 formal meetings have been held at which matters were brought to the Commission for formal action.

In one year alone, 1948, 438 papers were submitted to the Commission by the General Manager requiring action.

### II. INFORMAL MEETINGS

A very large number of informal meetings, executive sessions, and conferences with the staff have been held by the Commission since its organization.

### III. SPECIFIC MEANS BY WHICH THE COMMISSION KEEPS INFORMED ON ACTIVITIES AND MAINTAINS EFFECTIVE DIRECTION OF THE PROGRAM

1. Systematic *weekly oral reports* from staff divisions at regular Commission meetings.

2. Systematic *monthly written reports* consisting of approximately 50 pages containing a summary of activities and progress from all divisions. The report includes a tabulation of the status of all principal construction projects.

3. *Quarterly Progress Reports* to the Joint Committee on Atomic Energy. A Top Secret Report emphasizing program progress and including production and construction charts, reviewed by the Commission before transmission to the Committee.

4. *Semiannual Report to the Congress*.—These reports, whose extent and detail has been constantly increasing, are submitted to the Commission in the draft stage, revised in accordance with the suggestions and recommendations of the Commission, and resubmitted for approval before transmission to the Congress.

5. *Budget*.—The budget for each fiscal year is considered on several occasions by the Commission—in preliminary form before submission to the Bureau of the Budget, before submission to the Congress, and at the time of the budget hearings.

6. *Special Staff Reports*.—The scope of such reports prepared by the staff on particular problems varies greatly. Recent reports include an extensive review of the beryllium production situation; the extensive survey of the raw materials problem; study of accounting procedures.

7. *Special Consultant and Advisory Reports*.—These include such reports as that of the Industrial Advisory Group the Lexington Project, a survey of the possibilities of nuclear power in aircraft prepared by a group under the direction of Dr. Charles Whitman of MIT; the Patents Report.

8. *Regular Staff Information Papers.*—In one year alone, 1948, over 500 papers were submitted for the information of the Commission. These included: progress reports on the status of contract negotiations, reports on local operating problems or accidents, reports on selection of key personnel, reports on conferences with other government agencies or outside groups on such matters as insurance rates, etc., relationships between the Commission and state and local governments, current labor problems.

#### IV. REGULAR MEETINGS WITH STATUTORY GROUPS

1. Meetings with the President.
2. Meetings with the Joint Committee on Atomic Energy and other committees of Congress.
3. Regular monthly meetings with the Military Liaison Committee. This is in addition to the close day-to-day staff relations between the MLC and the Commission.
4. Attendance at meetings of the General Advisory Committee which meets approximately every two or three months for three or four days with one session customarily set aside for a Joint Committee-Commission discussion. The Committee makes a regular report including recommendations for Commission consideration following each meeting.

#### V. MEETINGS WITH ADVISORY GROUPS, SPECIAL PANELS, AD HOC GROUPS, WHICH ONE OR MORE COMMISSIONER MAY ATTEND, SUCH AS—

1. Attendance at meetings of the Advisory Committee on Biology and Medicine which meets one week-end approximately every two months.
  2. Radioactive Waste Disposal Conference.
  3. Personnel Security Review Board.
  4. Meetings with Managers of Operations.
  5. Meetings with the President's Labor Commission.
- The agendas for many of these meetings are submitted and discussed in advance by the Commission. Following the meetings, reports are frequently submitted to the Commission.

#### VI. VISITS TO THE FIELD

In the course of the year practically all installations are visited by at least one member of the Commission at which time the Commissioners have an opportunity for first-hand discussion and survey of problems at hand.

#### VII. MEETINGS WITH OTHER AGENCIES OF THE GOVERNMENT

These include meetings with the Bureau of the Budget, Department of Justice, National Military Establishment, the Department of State, and the Department of Commerce.

#### VIII. FORMAL MEETINGS WITH OFFICIAL VISITORS FROM ABROAD

The Joint Committee is generally familiar with the nature of these visits.

#### IX. MEETINGS WITH OUTSIDE GROUPS

The demand for consultation and information from the Commission by professional, technical, business, and other groups is very great. Only a small portion of these requests can be met, but each of the Commissioners has taken on the job of giving some portion of his time to such activities. Commissioners meet with and address a wide range of groups throughout the country: business, medical, scientific, engineering, educational.

#### X.

Between members of the Commission and the staff, there are constant, continuous, informal contacts and consultation on the whole range of activities and problems of the Commission.

JULY 11, 1949.

## UNITED STATES ATOMIC ENERGY COMMISSION

## THE ATOMIC ENERGY COMMISSION PRODUCTION PROGRAM 1947-49

(Statement by Walter J. Williams, Director of Production)

The size and scope of the American atomic energy enterprise is determined by the amount of plutonium and uranium-235 that is produced. These fissionable materials are the essential ingredients both of atomic weapons and of the nuclear reactors from which the peacetime benefits of atomic energy will accrue.

The production of these materials is a huge, complex, and still largely pioneer undertaking. It encompasses a vast range of industrial and research operations, beginning with the search for raw uranium ore and ending with the refinement of uranium-235 and plutonium.

When the Commission assumed responsibility for the national atomic energy program in January 1947, many of the original production facilities, built to serve a short-term emergency purpose had deteriorated or had already been made obsolete by the advance of nuclear science and technology. For a period of more than a year, while the future of the atomic enterprise was under discussion, the Manhattan Project had necessarily continued to operate existing production equipment, making only the necessary replacements, additions, and improvements.

The Commission, therefore, had the job of placing this whole production program on a sound, long-term basis. It had to take immediate steps to improve those processes and facilities that could be improved, to abandon those processes and facilities that had become obsolete, and to lengthen the life of some critical installations even though they had already served their original purpose. In addition, it faced a large-scale job of permanent construction to meet the continuing and growing need for fissionable materials. For the first time, economy, maximum yield, and durability were important considerations in atomic energy installations.

After two and one-half years of Commission stewardship, it can be stated that the production program is in good shape. The production of fissionable materials is now at its highest level in history. More uranium-235 and plutonium are being produced in the same facilities at less cost per gram than ever before. There are now under construction new and more efficient facilities that will greatly increase the present output and cut costs.

To indicate the progress that has been made and the future developments that are expected, we propose to review in turn the production of raw materials, feed materials, uranium-235 and plutonium, and then to consider certain associated activities including construction, source and fissionable material accountability and export control.

## RAW MATERIALS OPERATION

The primary object of raw materials operations is to supply uranium for the production of fissionable material. Requirements of uranium ore to meet production schedules have been met so far. The future can be faced with optimism.

Foreign supplies of uranium from Canada and the Belgian Congo which constitute the bulk of our total supply are covered by negotiated contracts.

During the past two and one-half years, the Commission has given constant attention to arrangements which would increase the amount of uranium obtained from foreign producers. Excellent cooperation has been developed among the governments concerned. In 1947 and 1948, actions were taken through the Combined Policy Committee of the United States, the United Kingdom and Canada, which substantially increased the supply of uranium for the United States during 1948 and 1949. These actions, coupled with other developments, have assured the United States of a continual, secure and adequate supply of uranium from abroad. This contrast with the situation of early 1947 when the supply of this material, without which there could not be an atomic energy industry, was very marked.

At the time the Commission assumed the responsibility for the atomic energy program, there existed no domestic production of uranium. The wartime plants of the Manhattan District on the Colorado Plateau had been dismantled after extracting the uranium contained in tailings piles accumulated over the years by the vanadium industry. Less than 30 percent of domestic vanadium plant capacity was in use. The Commission launched a domestic program 14 months ago which

has resulted as of this date in the production of uranium from three of the five existing vanadium plants in the area. A fourth plant will begin operation in September and the fifth plant is now being readied for operation next year. A five-year guaranteed price was established by the Commission for uranium-vanadium ores. This and other acts of the Commission have resulted in the establishment of a healthy, growing mining industry as is apparent from the rate of ore deliveries and increasing mining activity. Ore production in this district has nearly tripled during the past year and is increasing.

A 10-year guaranteed minimum price was also established by the Commission for higher grade (pitchblende) types of ores, and a discovery bonus of \$10,000 was established for the discovery and production of such high-grade ores from new deposits. These actions and the similar actions taken by the Canadian Government with whom we have a very friendly working relationship on such matters has resulted in a great surge of prospecting activity on the North American continent. Although recent new ore discoveries in the United States have been principally of carnotite type ores on the Colorado Plateau, there have been published reports from Canada of important discoveries of high-grade deposits. The similar and coordinated actions taken by the United States Atomic Energy Commission and the Atomic Energy Control Board of Canada have resulted in a gratifying response from private industry in both countries which is exercising its initiative and ingenuity under a profit incentive in this business as in other businesses. We have arranged matters so that security is safeguarded while industry functions in a reasonably normal way with a diminishing amount of red tape.

In collaboration with the United States Geological Survey, the Atomic Energy Commission planned and is carrying out a comprehensive examination of virtually every rock formation in the country, mine and smelter products, gas and oil wells, and other places where uranium might occur. This work has shown enormous tonnages of very low-grade materials which could be utilized in the future to sustain—though at increased costs—an atomic energy program for military purposes if lower cost uranium ceased to be available. Coordinated with this exploration program is a considerable program of research and process development under contract with some of the best research and industrial groups in the United States to determine the cheapest, most efficient methods of recovering uranium from all sources of available supply.

Other activities of the raw materials program relate to supplies of other materials like thorium and beryllium which have use in atomic energy. Whereas these activities are in some measures similar in character to activities relating to uranium, they are wholly subordinate in importance and volume.

We are making our operations more efficient, lowering costs, accounting more strictly for the uranium ores, and in general placing the raw materials side of the program on a sounder business basis. Now that we have turned from an emergency type of operation into one of continuing long-term operation, increasing improvements in this regard can be and are being accomplished.

Our operations are still far from perfect. We have suffered the inevitable consequences of trying to get programs launched and production going in a hurry in order to meet production schedules. All operations whether in government or in private industry suffer higher costs under such conditions. We are not wholly satisfied with what we have accomplished, but we are making satisfactory progress toward an efficient economic operation. There can be no question but that the Commission's raw materials program has strengthened national security.

#### FEED MATERIALS OPERATIONS

After uranium ores and concentrates have been acquired, they must be processed through many stages into feed materials of a high degree of purity before they can be used in the uranium—235 and plutonium production plants at Oak Ridge and Hanford. Much progress has been made in this stage of the production chain since January 1947, in efficiency of operations, in reduction of costs, and in reduction of health hazards. Examples of the progress made to date are:

a. The per pound cost of all intermediate and finished uranium feed products has decreased substantially. Decreases range from 12 percent to 82 percent, with the average decrease amounting to about 31 percent; that is, we are now paying 69 cents for the same amount of finished feed products that formerly cost \$1. This has been accomplished in spite of rising prices generally.

b. The over-all average yield of finished uranium produced from a given amount of raw ore has improved 5 percent since January 1947.

c. Yields from the scrap recovery program have also improved 5 percent. Under this program, waste and scrap materials of all types averaging less than 1 percent uranium are sent to special recovery facilities.

d. Changes in plant facilities and operating techniques have substantially reduced hazards to the health of workers in and residents near the feed materials plant.

e. Sizable stock piles of intermediate products and finished feed have been established which will assure the production of fissionable materials should there be disruption in the production of feed.

f. Stock piles of uranium ore, located during the war at one potentially vulnerable location, have been dispersed to a number of locations.

g. A new process technique for the production of green salt, an intermediate material in the production of feed for both Hanford and Oak Ridge, has been proved successful in pilot plant operation. By this process—the cost of green salt including a five-year amortization of invested capital—will be reduced 65 percent.

h. A new process for the production of hexafluoride feed for Oak Ridge has been taken successfully through the pilot plant stage. When the process is in operation, the cost of hexafluoride—including a five-year amortization of equipment costs—will be reduced 60 percent. This process and the new green salt process incorporate features which will reduce industrial hazards to a minimum.

i. A good supply of the many critical materials other than uranium and uranium products which are essential to the atomic energy program has been assured.

j. A new Commission laboratory has been established at New Brunswick, N. J., to give precise assays of raw and feed materials. The new laboratory assures improved analytical control of chemical specifications, provides the Atomic Energy Commission with accurate figures upon which payments for raw materials are based, and furnishes precise, basic figures for use in the system of accounting for the source and fissionable materials at each stage of processing.

#### PRODUCTION OF URANIUM-235—OAK RIDGE

At Oak Ridge, where uranium-235 is produced, the record of the Commission and the operating contractor, Carbide and Carbon Chemicals Corporation, is one of continuous progress in reducing costs, improving plant efficiency and increasing production. Certain important facts may be stated without violating security requirements. Specifically:

a. The total number of employees engaged in production at Oak Ridge has been reduced from about 11,400 at the start of 1947 to 4,700, an over-all reduction of 6,700. This was accomplished despite the fact that additional operations, requiring approximately 500 employees, have been undertaken at Oak Ridge since 1947. Therefore, on a comparative basis, it can be said that the actual reduction in personnel performing the same operations in 1947 has been approximately 7,200, or 63 percent.

b. Numerous mechanical improvements, some of which were mentioned in the Fifth Semiannual Report to Congress, have been made which are resulting in annual savings of several million dollars and at the same time in increased production.

c. As a result of reductions in operating personnel and mechanical improvements, the Commission is currently producing about twice as much uranium-235 per dollar spent on operating costs as was produced in the beginning of 1947. This has been accomplished during a period when the average wage rates for all plant employees, converted to an hourly basis, increased 23.6 percent—from \$1.46 to \$1.81.

d. The Commission has continued studies for further improvements in the separation of uranium-235. One result of these studies is a currently planned addition to the gaseous diffusion plant which will further increase production at a further decrease in unit cost even on the basis of amortizing the capital investment within a ten-year period.

#### PRODUCTION OF PLUTONIUM—HANFORD

When the Commission accepted stewardship for the Nation's atomic energy program, key plutonium production facilities at Hanford had served their wartime objective and were rapidly deteriorating. The remaining future usefulness of these facilities was in serious question. At the same time, new production

goals made necessary more plutonium than had ever been produced during the war.

To satisfy this need, the Commission started at once to build both new and replacement facilities, restore existing facilities, and stop the rapid deterioration of the existing facilities. This program, carried out by the operating contractor, the General Electric Company, added up to one of the largest development, engineering and construction programs ever undertaken during peacetime.

Much has been accomplished in the two and one-half years since January 1947. The following advances are submitted as examples:

a. New and replacement reactors are nearing completion and repairs have been made on the old units without interrupting production.

b. Methods have been devised to extend indefinitely the life expectancy of the existing production facilities.

c. The expanded production goals are being attained and productivity at present is higher than at any time in the project's history.

d. New chemical separation processes were being developed, and a scheme was devised to utilize more efficiently the valuable uranium feed.

e. As a result of increasing the efficiency of production operations, the Commission is producing about 40 percent more plutonium per dollar spent on operating costs than was produced in the beginning of 1947.

f. As a result of new developments it has been possible to defer indefinitely over \$150,000,000 worth of construction that was considered essential in 1947 to keep the program going and to meet the new goals.

g. New operations, such as the program to be carried out in the new and unique 234-5 facilities, are being conducted at Hanford with only a slight increase in operating personnel.

#### ACCOUNTING FOR SOURCE AND FISSIONABLE MATERIALS

An effective system of accounting control is one of the several main safeguards against the loss or misappropriation of uranium and plutonium, the basic materials of the atomic energy industry. The other safeguards are (1) an effective system of physical protection, which includes such things as fences, guards, and plant design; (2) a program for screening and examining personnel to insure that only trustworthy and loyal individuals have access to the material or to areas where the material is stored or processed. All of these safeguards are necessary; no one is adequate alone.

One of the primary purposes of materials accounting is to provide a check on the effectiveness of physical and personnel security. Physical protection alone tends to prevent losses, but it does not necessarily show whether losses do occur, or if so how much material has been lost. Materials accounting is also necessary to show precisely how much material is on hand to aid in determining the efficiency of production processes.

Since it took over the atomic energy program in January 1947, the Commission has been making a determined effort to set up an effective system of materials accounting control. I believe that important strides have been made in this direction. Possibly the best illustration of the effectiveness of our present system is the fact that relatively minor discrepancies in the uranium inventories have been discovered and investigated. If the accounting system had not been effective, these amounts would have gone unnoticed. With an industrial operation so large and so complex as the atomic energy program, we would have cause for being suspicious of any accounting system that did *not* show minor discrepancies from time to time.

The job of developing an effective materials accounting system is a difficult one. It is much more than just a matter of records; it is equally a matter of precise material measurements. Unless the records reflect actual measurements, they are of little or limited value. The development of effective measurement techniques has meant the development of methods for keeping track of such critical materials as uranium and plutonium while they are being combined chemically with other substances and being processed as gases, solutions, or solids through many stages of refinement, a large number of them so hazardous to workers that they have to be done under remote control.

In some instances, it has not yet been possible to develop methods of sampling and analyzing the material which will yield the desired precise figures needed for accountability. For example, the exact fissionable material content of some items, say, bomb parts, cannot be accurately determined without destroying the

part—a thing that is obviously senseless. In other instances the high radioactivity of the material may preclude measurement by normal methods or may require that measurements be deferred for a period of time. In such instances it is necessary to rely heavily on physical safeguards, approximate analyses, weighing and counting. While adequate for a normal industry, these do not satisfy the stringent materials accounting requirements which we have set for ourselves. Problems such as this are being worked on vigorously and will be solved in time. However, progress in the atomic energy program will continue to present new and complex problems in the field of source and fissionable material accountability.

Although completely satisfactory measurement methods and inventory procedures have not yet been developed in all instances, a comprehensive system has been put into effect since January 1, 1947. Much remains to be done; however, much has been and is being accomplished.

#### COMMUNITY OPERATIONS

Along with the plants which were producing fissionable materials the Commission inherited two Government-owned war-built communities. These were and are necessary adjuncts to the production plants, providing housing for plant workers. One community at Oak Ridge, Tenn., had a population of 42,000 in January 1947. This population has been reduced to approximately 36,000 today. The other community, Richland, Wash., had a population of 13,815 on January 1, 1947, which has been increased to about 21,000 as of the present time.

These communities were not normal in any sense of the word. Many of the structures were temporary; commercial and recreation facilities were the minimum required to provide inhabitants with only the essential day-by-day services.

The work being carried on by the community operation units in early 1947 included many activities which are not found in a normal community. For example, at Oak Ridge, while the community itself occupies an area of only 9,000 acres, the community operations unit was responsible for all maintenance and operations outside the production plant fences, covering an area of roughly 55,000 acres. At Oak Ridge the Commission inherited some 10,000 dwelling units, only 3,500 of which could be considered even semipermanent, along with 1,757 trailers, 60 temporary dormitories, a warehousing operation scattered over a large area in 32 separate units ranging from warehouses to barns, and many million dollars' worth of surplus material and equipment which were the remains of the huge construction program at Oak Ridge.

The Commission recognizes that its primary purpose as defined in the Atomic Energy Act is something other than the operation of communities. Community operations require a great deal of effort by the Commission and its staff, probably detracting to a disproportionate degree from the really major problems of continuing production and moving forward in the development of atomic energy. However, these towns were essential to production operations and probably will continue so for a considerable period of time. Accordingly, the Atomic Energy Commission has embarked on a broad program aimed at (1) consolidating, rehabilitating, replacing, and expanding the housing, schools, hospitals, and business centers in the communities; (2) developing a pattern of community organization appropriate for long-term operation; (3) developing programs and policies to promote progress, insofar as such progress is practicable in a Government-owned town, toward normal community standards, living conditions, and government; (4) reducing community operating costs.

This can't be done in a hurry. Even given time, it is not easy to do. Solutions must be found for very complex problems of human relations, legislation, personal freedom and rather extensive capital investment. The present situation can be summed up as follows:

##### *At Oak Ridge*

a. School plant, and facilities for fire and police protection have been completely overhauled.

b. 1582 permanent housing units to replace temporary units are under construction. Plans have been completed for rehabilitation or replacement of the balance of the temporary units.

c. Trailers, construction camps, and temporary dormitories have been removed; a total of over 2,000 temporary structures have been disposed of.

d. Announcement of adjustments to bring rents more nearly in line with those in surrounding communities has been made.

e. AEC and contractor personnel required to operate the town have been reduced since January 1, 1947, by 40 percent. Examples of reductions effected in the period July 1, 1948, to May 30, 1949, by the Commission and its principal contractors are as follows:

	July 1, 1948	May 30, 1949	Percent
Roane-Anderson.....	3,193	1,598	50
Municipal employees (paid through Roane-Anderson).....	508	305	39
American Industrial Transit.....	430	296	31
Atomic Energy Commission.....	196	71	64

Similar personnel figures for employees engaged in operation of the hospital, schools, and L. & N. Railroad, the balance of community operations, are as follows:

	July 1, 1948	May 30, 1949	Percent
Hospital.....	345	253	26
Schools.....	656	679	14
L. & N.....	66	60	9

<sup>1</sup> Increase.

Only about 36 percent of this community management personnel is engaged in the normal activities of city government. The remainder perform functions relating to real-estate management, public utilities operations, warehousing, maintenance and procurement activities, which in a normal community would be carried on by private construction, electrical, plumbing, real estate, fuel, and other concerns.

f. Community warehousing has been reduced from 32 units to 9 units, from 400,000 square feet to 200,000 square feet; employees from 365 to 128.

g. Participation by residents in community affairs has increased considerably. Oak Ridge has an elected Town Council, a Recreation and Welfare Council, and numerous other civic organizations. The hospital has recently been converted from a Government to a privately sponsored nonprofit operation.

h. A program of selling land to church groups for church and school purposes has been initiated. To date two sites have been sold to church groups; thirteen additional sites will be sold shortly to other church groups.

i. Approximately 20 acres of land for an armory site is being transferred to the State of Tennessee.

j. Studies have been initiated to determine the feasibility of incorporating Oak Ridge.

#### *At Hanford*

a. An 18.5 percent reduction from 809 to 659 has been made since 1948 in the number of personnel required to administer community operations. In fiscal year 1949 the cost of these operations was \$2,670,000, a reduction of over 20 percent from 1948 despite a population increase in this period of 7 percent.

b. 1,857 dwellings have been added, bringing the total number to 5,777.

c. Two more schools have been constructed, for a total of seven.

d. A Town Council has been elected and is meeting regularly with representatives of community management. Civic, professional, and social organizations have increased from 115 to 207 since 1947.

e. Two churches have been built at church expense and eight additional sites have been leased to church groups for this purpose.

f. As at Oak Ridge, announcement of rent adjustments to levels approaching those prevailing in surrounding communities has been made.

The Atomic Energy Commission would be most happy if these communities could immediately be converted into normal towns in the true sense, freeing the Commission of the responsibility for their operation. We hope eventually to do this. We cannot predict when that will be because we must retain control over occupancy of housing in these communities as long as such control is necessary to secure and retain people required for operation of the production plants. In

the meantime, even though retaining this basic control, we hope to continue toward normal conditions in these towns although we recognize that we will never completely reach this objective as long as ownership and control of facilities rests with the Federal Government.

#### CONSTRUCTION

On January 1, 1947, the Atomic Energy Commission found itself faced with the need for undertaking a peacetime construction program of almost unparalleled magnitude; a program which involved many complex and unique facilities requiring solving of significant engineering and development problems and which in the aggregate was estimated to exceed more than one billion dollars. Typical of the problems facing the Commission were:

- a. The rehabilitation and expansion of virtually every plant engaged in the processing of raw uranium ore into feed materials for the fissionable materials production plants; and the elimination of health hazards throughout the industry.
- b. Replacement of plutonium production facilities which were deteriorating.
- c. The expansion of plutonium production facilities to meet increased military requirements.
- d. The development of new chemical processes and the construction of new processing plants.
- e. Complete replacement of the jerry-built technical plant facilities at Los Alamos laboratory together with the dispersion of production operations from Los Alamos involving acquisition of new sites and erection of new plants.
- f. Construction of the Brookhaven National Laboratory.
- g. Reconstruction of the Oak Ridge National Laboratory.
- h. The building and housing of nuclear accelerators at Berkeley.
- i. Construction of the Argonne National Laboratory at a new site.
- j. Construction of additional housing and community facilities at Hanford and Los Alamos.
- k. The replacement of temporary, substandard community and housing facilities at Oak Ridge, Hanford, and Los Alamos.

The program has gone through many changes involving both cutbacks, such as that made possible by extending the life of the Hanford piles, and the addition of new projects not contemplated at the time of the original appraisal, such as the proposed reactor proving ground in Idaho and the proposed new addition to the gaseous diffusion plant at Oak Ridge. Today the construction program accomplished since January 1, 1947, by the Commission and currently programmed is estimated at \$1,300,000,000.

At the time of the transfer of responsibilities from the Manhattan Project, a very minor part of this program had been initiated. Construction was proceeding at a rate of expenditure of about \$1,700,000 per month. Obviously, at such a rate the program could not have been completed for many years and certainly not by the time that many of these urgently needed facilities were required. Therefore, it was necessary within a very short period to organize and get this program under way. The urgency and speed precluded leisurely planning or formulation of completed drawings and specifications before undertaking construction.

Since taking over the atomic energy construction program, the Commission has increased the rate of construction to the point where the average monthly rate of expenditure during the calendar year 1948 was \$25,000,000, compared with the \$1,700,000 figure at the beginning of 1947. This rate is continuing during 1949. Of the \$1,300,000,000 program, work is under way on projects which will cost more than \$700,000,000 upon completion.

---

#### UNITED STATES ATOMIC ENERGY COMMISSION

##### THE SECURITY PROGRAM, 1947-49

(Statement by Carroll L. Wilson, General Manager)

When the war ended and voluntary censorship of press and radio no longer applied, atomic energy was one field in which secrecy still had to be maintained.

Aside from the obvious facts that two A-bombs had been dropped in Japan and that through magnificent scientific and engineering feats, industry under military guidance succeeded in building the atomic weapon, little was known to the general public about atomic energy. Locations of major installations were announced by the Manhattan Engineer District because they could not be kept secret any longer. But technical know-how was a closely held secret. It still is. So are production rates and stock-pile figures.

This imposes on a democratic system an unusual situation. The McMahon Act itself recognizes this in establishing a special Joint Committee of the Congress as liaison, not only for the public, but for other Members of the House and Senate.

The burden of carrying security responsibilities in the field of protecting installations, technical processes and clearance of employees and workers of contractors may be measured to some extent by the fact that security matters were considered by the members of the Commission at 151 of its 262 formal meetings between January 1, 1947, and April 28, 1949.

Throughout all phases of its security program the Commission maintains very close relations with the Federal Bureau of Investigation. Under the McMahon Act it is the responsibility of the FBI to make full background investigations of individuals who are being considered by the Commission for security clearance, and to report to the Commission the results of these investigations. It is also the responsibility of the FBI to investigate all violations of the McMahon Act; and with the FBI's assistance the Commission has developed instructions to its field installations (GM-11 and Security Letter No. 1, both set forth in the Appendix to this statement) concerning the prompt reporting of cases to the FBI. In addition, the FBI is actively concerned with the evaluation of information that might indicate possible danger to Commission installations. As part of the close working relationship between the Commission and the FBI, there has been full and complete discussion with the FBI on matters of interest to them. There is daily contact with the FBI liaison representatives on matters of mutual interest; and reports are transmitted daily between the two organizations. Every effort has been made to cooperate fully with the investigative agents in the field and with the superiors at FBI headquarters. Similarly the FBI has been extremely helpful to the Commission in the exercise of our important and difficult security responsibilities.

Of the Commission's own 4,700 employees, 20 percent are engaged full time on security duties ranging from the clearance of AEC and contractor workers to guarding vital shipments of material from one part of the United States to another.

About 9 percent of the personnel of the Commission's operating contractors devote full time to the discharge of their responsibility for the security of materials, components, documents, factories, warehouses, laboratories, offices, safes, vaults—in all, some 1,300 locations in the United States alone.

In taking over responsibility for the atomic energy enterprise, the Commission was confronted with a tremendous problem not only in obtaining experts qualified to handle technical and scientific jobs, but in setting up administrative machinery for clearing them. In addition, the law provided that the 26,879 persons held over from the Manhattan District on AEC and contractor pay rolls had to be reinvestigated and a determination made by the Commission of their eligibility for clearance.

The measure of this task is represented by the fact that requests for personnel clearances jumped from the rate of 2,000 a month in February 1947 to 8,000 a month by July 1947. The 8,000 cases per month was the maximum the Federal Bureau of Investigation could at the time process for the Commission. From January 1, 1947 to April 30, 1949, 141,469 individuals were processed to the FBI for investigation for AEC clearance.

Representatives of the Commission discussed the problem of security investigations with the Attorney General and the Director of the FBI in December 1946, before the atomic energy program was transferred to the Commission. We have established a clearance procedure which provides maximum security for the program and still guarantees to employees the right of appeal. An employee of the Commission or of a contractor is entitled to a hearing when his loyalty, character, or associations are challenged. Administrative procedure calls for a local board of three persons to review his case. On appeal by the employee from an adverse recommendation, the case may be carried to the Personnel Security Review Board prior to determination by the General Manager of the Commission.

On January 20, 1948, the Commission appointed a Personnel Security Review Board with the Honorable Owen J. Roberts, former Associate Justice of the United States Supreme Court as Chairman. The Board was named to assist in developing policies, procedures, and standards for dealing with the clearance of AEC and contractor employees as well as to make recommendations on individual cases. When the Board completed its work it recommended establishment of a permanent Personnel Security Review Board. The Commission named Charles Fahy, chairman; Arthur S. Flemming and Bruce D. Smith to the new Board in March, 1949. The functions of the present Board are to review and recommend action on individual security cases and to advise the Commission on procedures and standards in handling such cases.

As the record of the Commission and its contractors shows, those persons needed for their technical and scientific knowledge, engineering, and other specialized abilities have an exceptionally good record of loyalty, character, and associations.

There have been and will continue to be demands in the program which cannot be met by waiting for full investigation of persons who can for example expedite production, research, or weapons tests. Full clearance investigations and determination of eligibility take two to three months and in some situations emergency clearances must be used. It should be emphasized, however, that emergency clearances are based on a careful evaluation of the character and reputation of an individual and the results of an FBI fingerprint and file check. If the FBI check does not reveal any derogatory information—and the FBI has rather complete records of persons suspected of disloyalty to the United States—and other information is favorable, we grant the clearance. Simultaneously a full FBI investigation is made of the individual.

You are acquainted with the record of emergency clearances which were presented to the Joint Committee a few days ago. It shows that this clearance procedure provides adequate protection in the cases where it is required.

During the war, the very existence of the atomic energy project had been an official secret. It was then reasonable and possible to follow security procedures which are quite different from those required today. For additional assurance of secrecy, many suppliers, manufacturers, and other facilities in the program, were not even listed in central files. As a result, in many cases, no security safeguards existed for protecting many key plants, nor were personnel at such plants cleared, although they were working with secret data. In 1947, an inventory of all activities was, therefore, necessary in order to determine which involved a security interest and, therefore, required protective measures.

As of January 1, 1947, the Manhattan District had a master record of 729 locations throughout the country which were considered as requiring safeguards, and at which security programs were in effect. During 1947, as the result of study and analysis by Commission representatives of the actual security exposure at unrecorded, undercover operations, it was found that 632 additional locations required such safeguards. Of these, 227 were involved in production, fabrication research or development for Los Alamos, the focal point of the atomic weapons program.

Perhaps the most serious situation which required prompt attention in 1947 was the concentration and lack of adequate protection for the stockpile of plutonium and uranium 235, bomb components and nuclear material. The major share of the nation's stockpile of these weapons and strategic materials was concentrated in a single geographic location in vulnerable storage structures which were poorly protected and lacked reliable communications or effective plans for safeguarding in case of emergency.

The Commission took immediate action to disperse such materials in more secure storage while the design and construction of bomb-proof, underground vaults were being completed. As we have reported to the Joint Committee, these storage facilities incorporate protective devices to meet any contingency.

Some hazards still exist in war-built, congested and inflammable structures, but the permanent construction program will remove this type of hazard and guarantee full protection for the projects now housed in temporary facilities.

Security is not limited to fixed locations. It extends to protection of a variety of classified materials and equipment including components of atomic weapons as they are transported by rail, air, water, and highway. These shipments include normal uranium in compositions ranging from ore to refined metal, separated fissionable material, bomb components, and other materials and equipment unique to the atomic energy program. The magnitude of the protection job

involved is indicated by the fact that such shipments approximate 2,000,000 ton-miles per month and involve several hundred individual shipments per month. Since January 1, 1947, there has been no known instance of loss or compromise in transit of this heavy volume of secret and strategic material.

Soon after the war, troop demobilization made the emergency defense plants for atomic energy installations obsolete. The Commission took this matter up with the Department of Defense and surveys of key installations were made by the Army and Air Force to afford full protection in any emergency. Direct liaison between the Security Division and the military was established for this purpose. In addition thorough studies of sabotage vulnerability were made at each installation.

The Commission arranged with the FBI for the organization of special squads of FBI agents at Hanford, Los Alamos, and Oak Ridge. Agents selected by FBI headquarters have been given special instructions by technicians and scientists in the program to increase the protection of the installations. Thus FBI agents are alert to warn us of sabotage or espionage attempts and are better able to evaluate information that might indicate possible danger to atomic energy facilities.

Another important security program is the control and accountability for classified documents. Here again there was no complete inventory when the Commission took over although hundreds of thousands of classified documents were in existence. The first job was to set up regular inventories of such documents throughout atomic energy plants and laboratories and a check system of accounting for them.

This problem grows daily. For example approximately 10,000 documents move from one installation to another each month. And every month 10,000 new classified documents are originated.

Substantial progress has been made in establishing controls, setting up an accountability system and developing inventories. This job is not finished and we are still working hard on it in every office throughout the country where classified documents are used.

## UNITED STATES ATOMIC ENERGY COMMISSION

### THE RESEARCH PROGRAM

(Statement by Kenneth S. Pitzer, Director of Research)

Physical research in the national atomic energy program serves two purposes: (1) Finding basic facts about the nature of the atom and its nucleus, and the behavior of the particles which compose it; (2) finding facts which will lead to solutions of the problems of putting atomic energy to work. The research seeking basic facts underlies future practical development and application of atomic energy. This work is for the most part nonsecret. The research designed to solve current problems of development is in the main secret.

In the great atomic energy laboratories at Oak Ridge, Argonne, Brookhaven, Berkeley, and Ames and in smaller installations throughout the country, the ideas for improving the present production processes for fissionable materials, reactors and weapons are tested and developed. In these laboratories, research is done on such problems as the following:

- a. How can uranium be extracted cheaply from ores containing only a few ounces of uranium per ton?
- b. How can present methods of separating isotopes of uranium and other elements be improved?
- c. What construction materials will stand up under high temperatures and intense radiations present in reactors producing useful power?
- d. Can reactors be built to produce fissionable material faster than they consume it? If so, how?
- e. How can the various materials present in uranium or plutonium or thorium, after treatment in a nuclear reactor, be sorted out from one another?
- f. How can dangerously active waste products be concentrated and stored or safely disposed of?
- g. Can cheap, light shields be developed which will safely contain the dangerous radiations from a reactor?

From the nature of these questions, it is clear that many of the answers must, at least for the present, remain secret?

Roughly two-thirds of the 96 chemical elements are metals, yet we normally use only a handful—many of these known from ancient times. In the development of atomic energy we expect metallurgists to play an extremely important part. They are investigating, for example, the metals with low melting points—bismuth, sodium, potassium, gallium, lead—to use in place of water or steam to take out the usable heat from power reactors. Much work has been done with the metal zirconium, which appears promising as a reactor structural material. Thorium found in nature is mixed with a number of other unusual metals, known as rare earths. Chemical separation processes are extremely involved. Recently, we have found a simple nonchemical process for taking out rare earths that saves up to a dollar a pound in purification of thorium.

As stated in the beginning, in addition to research on such practical questions as these, the major Commission laboratories and dozens of other laboratories, either under direct contract or under the joint program with the Office of Naval Research, carry on a large volume of exploratory unclassified, basic research related to atomic energy. This research is needed to gain better understanding of the materials, the processes and the forces involved in the atomic energy enterprise.

For example, the atomic nucleus itself is very poorly understood—nobody knows for sure what is in it or what makes the parts stick together or how they move about inside. Each kind of nucleus—and there are about 1,000 different kinds—presents its own mysteries, which are being tackled by study and experiment.

Recently scientists at Los Alamos and Argonne succeeded in liquefying helium 3, which we believe has the lowest boiling point of any material. In nature helium 4 is a million times more plentiful than helium 3. Pure helium 3 can be made in atomic energy laboratories in fair-sized quantities for experimental purposes. Its boiling point is less than three degrees above absolute zero.

At the Radiation Laboratory, Berkeley, scientists have created mesons using the great 184-inch cyclotron. Mesons are particles intimately connected with the forces holding the atomic nucleus together. The Japanese physicist, Yukawa, had to invent them to complete his mathematical description of nuclear forces. Later scientists occasionally found them in matter which was bombarded by enormously energetic cosmic rays. Now we can make them in abundance and under controlled conditions in the laboratory where they can be studied intensively.

How do you measure research results? What units do you use? Can you buy research, like pork chops, across the counter? How much do you get, or should you get, per dollar spent?

Eventually, of course, research progress is measured in better, cheaper goods, lives saved, higher standards of living, and, in this industry, in more effective weapons of war.

The difficulty of measuring research on a day-to-day basis is that end products of research are ideas—ideas that may be expressed in 5 or 6 or a dozen pages. Sometimes a slim report is the only tangible product resulting from the expenditure of hundreds of thousands of dollars.

Perhaps I can best explain the nature and importance of basic research by an example. In March 1939 the Physical Review carried a 39-line letter under the modest title "Further Observations on the Splitting of Uranium and Thorium." It was signed by three young scientists from the Carnegie Institution in Washington. Two were Americans, one was Chinese, a fellow of the China Foundation. At this time scientists everywhere knew about fission. They knew that a uranium atom hit by a neutron would break into two fragments, releasing large amounts of energy, and releasing also several free neutrons which in turn could cause fission in neighboring atoms. The contribution of the three young scientists was this: They observed that not all free neutrons emitted during fission came off at the instant of fission. In a small percentage of cases there was a time lag, up to a half-minute or longer, before the last of the free neutrons was emitted. These were called delayed neutrons.

The 39-line letter simply reported one more small fact to add to general knowledge of the fission process. This was the result of basic research—a product of man's desire to know more about the world.

Within three years the Manhattan Engineer District was spending over a billion dollars to build the great plutonium plant at Hanford, Washington. Control of the plutonium-making reactors, one of the key installations of the bomb project, depends largely on delayed neutrons. Today the Commission is well

started on a new reactor-building program with a view eventually to releasing nuclear power for ships, aircraft, and commercial uses. Here again, control of the reactors depends upon delayed neutrons.

In recent issues of the Physical Review, from one-third to one-half of all research reported, is supported in whole or in part by the Atomic Energy Commission. Similarly, the Commission supports research reported in the chemical journals, the metallurgical journals, and journals devoted to geology, biochemistry, and many other fields. At this point we cannot tell which of these projects will pay off, which will be the "delayed neutrons" of the future.

Of one thing, I am certain, however. The time-lag between discovery and exploitation is being shortened. The Commission is equipped to follow leads immediately. The facilities and the laboratories and the manpower are available to develop a fundamental discovery, to run it through the pilot stage and into production.

The end of the war and the transfer a little later from Manhattan Engineer District to the Atomic Energy Commission naturally created instability and loss of morale through no fault of anyone. Although I was not immediately associated with the atomic energy program, like most American scientists, I was well aware of these difficulties. In January of this year when I joined the Commission staff as Director of the Division of Research and visited the various establishments I was greatly impressed at the improvement of morale and the degree of integration attained.

The Manhattan Engineer District employed 7,100 scientists and technical people. By July 1947 nearly 5,500 of these had left the program although about 500 have since returned. At present about 6,500 scientists and technicians are employed, of whom 2,100 were with the Manhattan District during the war, about 1,400 were employed after the war but before July 1947, and about 3,000 have been employed since July 1947. Although the Commission has retained a valuable core of the original wartime scientific and technical population it has been necessary to do large-scale recruiting to staff laboratories to their present strength. Large numbers of able scientists and technicians have joined this enterprise when employment opportunities elsewhere were almost unlimited.

At Brookhaven National Laboratory the conversion of an army camp to a research establishment is essentially complete. The new reactor is nearly ready for use. The three billion electron volt proton accelerator—the cosmotron—is under construction. The laboratory staff is nearly at full strength.

Applied research at the Oak Ridge National Laboratory relates to the chemical engineering side of production work. A strong biology division has been established. The entire site has been renovated. The Laboratory staff is strong and the morale is high.

In addition to its central position in the reactor program, the Argonne National Laboratory has made great contributions recently to fundamental physics and chemistry.

At the Radiation Laboratory, Berkeley, the 184-inch cyclotron—the largest accelerator now in operation—is doing pioneer research studies utilizing particles having energies up to several hundred million electron volts. An enormous 6-billion volt machine is under design, and a quarter-scale model has operated successfully.

At the Ames Laboratory, Ames, Iowa, the program of research in metallurgy, chemistry, and physics is yielding exceedingly valuable results.

The joint program with the Office of Naval Research to assist private research now includes some 60 projects in over 50 institutions. In March 1949, the Commission began direct support of basic research in physical science in non-Governmental institutions. Contract negotiations are either complete or in progress for about 40 proposed projects.

The Commission established in 1948 a program of research fellowship awards. This fellowship program has already been discussed in detail in the hearings before the Joint Committee.

By the end of May 1949, 6,284 shipments of radioisotopes had been made to more than 1,000 users in 300 institutions in 41 states and territories, and 690 shipments of stable isotopes had been made to 192 institutions in 33 states and territories. By April 1949, 28 foreign countries had made arrangement for receiving radioisotopes and 513 shipments had been made to 21 countries.

The General Advisory Committee at its meeting on April 6 and 7, 1949, reviewed in some detail the status of two of the largest of the laboratories of the Commission, the Oak Ridge National Laboratory and the Argonne National Laboratory.

The General Advisory Committee reported to the Commission that: "We had a most instructive and gratifying day with the Directors of the Argonne National Laboratory and Oak Ridge National Laboratory. We were throughout favorably impressed by the reports they gave, both as to fundamental research and as to the important development projects for which the Laboratories are responsible. These programs seem to us sound, well balanced, and well conceived. The evidence of the Directors' reports reflects a high morale and a good sense of direction in the Laboratories. We believe that the Laboratories and the Commission are to be congratulated on this state of affairs."

JULY 11, 1949.

## UNITED STATES ATOMIC ENERGY COMMISSION

### FINANCIAL MANAGEMENT

(Statement by Paul M. Green, Controller)

The financial records of any business enterprise are the means by which management and stockholders are able to gauge the economy of operation and the extent of profit or loss. Financial records and accounts are therefore an indispensable guide to management and are a measure of the success or failure of an enterprise in our competitive economy.

The Atomic Energy Commission does not have profits or losses measurable in dollars and cents as that measure is traditionally used in private industry. Yet it does have compelling interest in and need for using basic materials economically, operating at the lowest costs and controlling the direction of effort, as determined by the yardstick of dollar expenditures. This requires the kind of financial controls customarily found in industry.

Appraisal of financial management in the Commission should properly consider three aspects: First, the financial problems encountered by the Commission when it took over from the Manhattan District; second, what the Commission has done to overcome these problems and to meet recognized standards of sound financial management; third, what remains to be done and what the Congress and the public can expect in the form of further improvements in financial control.

#### WHAT WAS THE FINANCIAL SITUATION CONFRONTING THE COMMISSION WHEN IT TOOK OVER FROM THE MANHATTAN DISTRICT?

My remarks concerning the Commission's financial inheritance from the Manhattan District are solely to describe the background in which the AEC has been trying to bring about financial control. They should not be construed as reflecting critically upon the manner in which the Manhattan District operated. The weapon—not the expense—was properly the primary consideration during the war. For this reason financial controls as a tool of management were largely lacking in the Manhattan District. There was, for example, no coordination between property records, fiscal accounting and budgeting. In the main, Manhattan District financial management was aimed merely at justifying the reimbursement of expenditures made by cost-type contractors, in conformity with law and Government regulations.

Upon taking over, the Commission therefore found that it had acquired little in the way of accounting. Moreover, there were very few accountants on the staff. The principal contractors generally followed different methods of accounting, and integrated financial reporting was lacking. The generally unbusiness-like character of the Manhattan District financial records and accounts has, of course, been recognized by the Congress.<sup>1</sup>

<sup>1</sup> In connection with the First Deficiency Appropriation Bill, 1948, the House Committee on Appropriations reported as follows concerning the Manhattan District, "Time was of the essence, and business details and economy gave way to speed and the essentials of an unexplored scientific field. As a result, the accounting records and business arrangements for management of towns, etc., taken over by the Commission from the War Department were in such condition as to give the Commission an exceptionally poor basic program on which to work" (Report No. 1618, page 2, House of Representatives, 80th Congress, 2nd Session).

## WHAT HAS THE COMMISSION DONE TO ESTABLISH SUITABLE FINANCIAL MANAGEMENT?

The first task the Commission had, financially speaking, was to make a thorough inventory of the accounting practices being followed by the principal cost-type operating contractors. To assist in doing this the Commission, after consultation with the Comptroller General of the United States, obtained the services of five independent public accounting firms. On the basis of their findings and recommendations, the Commission determined that the primary objective should be to convert the inadequate bookkeeping into a new financial control system of an industrial-governmental type. This would necessarily have to combine the merits of industrial-type accounting and auditing practices with the special requirements of Government budgetary and fiscal procedures. The reason for combining these approaches to financial control is obvious when it is recognized that most of the Commission's operations are carried on, within the scope of Commission-approved programs, by industrial and educational contractors and that their reimbursements for expenditures are derived from Congressional appropriations, subject to Federal fiscal procedures.

The welding of industrial-type accounting and auditing with Government budgetary and fiscal procedures on the scale required for the Commission's operations is something new. There is little precedent to provide guidelines. Nevertheless, the goal is sound and it is being accomplished. Close cooperation from the General Accounting Office, and their full support and encouragement, have greatly speeded our progress. These are some of the concrete things that have been done over the last two years to reach our objective:

a. *The Commission has established an integrated system of financial accounts for its major cost-type contracts.*—This is akin to a parent company's consolidating the financial accounts of its subsidiaries so the over-all picture can be shown without any duplication of record keeping.

b. *A comprehensive public accounting type audit of major cost-type contractors has been instituted in place of the former detailed audit of all disbursement vouchers.*—This broader audit, which is like the audit used in industry, permits more emphasis on a review of the contractors' internal controls and performance, thereby providing the Commission with the information needed for more effective management controls over its contractors' activities.

c. *The Commission has established an accounting system that effectively relates property and financial records.*—Thus, changes in the value of inventories or capital assets can be properly reflected in the financial accounts used for general management purposes.

d. *The Commission has established a uniform system of accounting for operation of the three towns.*—It is now possible to evaluate the comparative operating costs of the towns.

e. *The Commission has substantially improved the method of presenting budget estimates and is initiating a cost-based budget for fiscal year 1951.*

These are the major, immediate steps that have been taken. Many other things of substantial importance have also been done.

## WHAT REMAINS TO BE DONE TO PROVIDE IMPROVED FINANCIAL MANAGEMENT?

Our goal has not yet been reached. One important remaining step is to complete a comprehensive accrual accounting system. This will permit the preparation of balance sheets and financial operating statements of a modern industrial type.

Another important step is to perfect cost accounting as an integral part of the over-all financial accounts. When fully developed the cost system will provide periodic cost comparisons in terms of particular plants, processes, functions, products and organizational units. It will furnish financial controls over inventories and capital equipment and will provide current cost data for management purposes and for preparing budget estimates.

In the field of financial management the Commission has come a long way since the days of the Manhattan District. We expect improvements to follow to insure further that the taxpayer's dollar invested in the enterprise is used economically and in the best interest of the country.

## UNITED STATES ATOMIC ENERGY COMMISSION

(Statement by Carroll L. Wilson, General Manager, on Commission Policy and Organization)

During the Hearings held before the Joint Committee last February on the Contract Policy of the Commission, I presented a statement to this Committee which explained in general terms the Commission's views on the manner in which a major part of its business should be conducted, and I should like now to insert that statement in this record. It is as follows:

The joint committee has requested that a part of this afternoon's hearing be devoted to a discussion of the Commission's contract procedures and practices. The Commission welcomes this opportunity for such a discussion. As you know, we have from time to time, in our reports to the Congress as well as in other published statements, referred to the central role which contractors occupy in the atomic energy program. We believe that it is important for the public generally and for American business to know and to understand the policies which we are following.

It will be helpful, I think, to begin by stating in somewhat general terms the Commission's views on the manner in which a major part of its business should be conducted.

The Atomic Energy Act of 1946 left it to the Commission to determine, in the light of experience and prevailing circumstances in each case, whether its installations should be directly operated by the Commission or whether they should be operated by private contractors or organizations in accordance with the practice which had been initiated by the Manhattan District.

The Commission has been of the view—and we believe this view is amply supported by our 2 years of experience since we succeeded to the responsibility of the atomic energy enterprise—that we should develop as fully as possible the method of operating through contractual relations with private organizations. We have recognized that the high relative significance of weapon production and the necessary secrecy of large parts of the atomic energy program involve the danger that only limited scientific, technical, and managerial resource will be available to this most urgent new atomic energy enterprise. Such handicaps must be minimized and overcome if this country's rapid progress in the field of atomic energy is to be assured. Accordingly the Commission has looked to the basic policy of contractor operation as a means of developing wide and alert participation in the program by a growing number of private organizations, both academic and industrial.

By pursuing a basic policy of obtaining contractor-operators the Commission has been able to draw upon the technical and administrative talents of a broad sector of the American economy. Operation of our plants and laboratories through established independent contractors not only gives to the atomic energy program substantial benefits from accumulated experience and established facilities; it also enlists the interest and the support of industry and universities for future private development. It has been our conviction that if atomic energy is to become a generic part of the American scene it should have its roots deep in the institutions which are so productive a part of American progress in science and technology.

To make full use of this industrial and university talent and know-how and to encourage the wide participation which is so necessary, the Commission believes that it must give the contractors a real job to do, and keep an appropriate balance with respect to such activities of the Government as are necessary to assure proper accountability and results.

These are general objectives of the Commission's program.

The identities of the contractor-operators at the Commission's major facilities are of course well known to the members of the joint committee. At Oak Ridge the production and the laboratory facilities are operated by the Carbide & Chemicals Corp., while the Roane-Anderson Co. is the principal contractor for town operations. Up on Long Island, the contractor-operator for the Brookhaven National Laboratory is Associated Universities, Inc., a nonprofit corporation organized by nine of the leading universities in northeastern United States. In Chicago area the Argonne National Laboratory, operated under contract by the University

of Chicago, is made up of 30 participating universities from the Middle West. At Hanford and at Schenectady, critical production and research operations are carried on pursuant to a contract with the General Electric Co. At Los Alamos our contractor for the laboratory and its weapon work is the University of California, while a number of town and services functions are performed by Zia Co. The Mound Laboratory at Miamisburg, Ohio, is operated by Monsanto Chemical Co. You will recall that many of the activities carried on at these major installations are described in some detail in the unclassified fifth semiannual report which the Commission made to the whole Congress on January 31.

The contracts covering each of these operations are cost-type contracts under which the Government reimburses the contractor for its actual costs and expenses of operations, plus in some cases a fixed fee. Because of the complexities of the operations, and the many uncertainties as to what the actual costs will turn out to be over an annual period no matter how carefully plans are made in advance, it has not been feasible for the work to be done except under a cost-type contract. Contracts provide for programs of work established by the Commission pursuant to its general budgetary programs. These work programs are reviewed by the Commission from time to time, and altered and changed in the light of changing circumstances, by the Commission at specified intervals, so that the work to be done by the contractor can be mapped out and planned in advance. Subject to controls, such as in the fields of costs and security, it is the desire and intention of the Commission to give encouragement to the exercise by the contractor of its own initiative and ingenuity, so that the atomic energy program will really have the full benefits of high caliber management and know-how.

For the successful conduct of the plant operations carried on at the Commission's major installations, there is required a very large amount of supporting contract activity, both through prime contracts and subcontracts. Continued conduct of research programs must be assured. Necessary raw materials must be obtained for both research and production purposes. Plants and laboratories must be built. Machinery must be installed, some of it of a high order of complexity. Supplies and materials (off-the-shelf items, as well as items especially adapted to the atomic energy program) must be procured. Public-utility services, such as gas and electricity, and rail, truck, and air transportation, must be contracted for. Necessary community and housing facilities must be provided.

Day-by-day supervision and guidance of these activities is essentially the responsibility of the field offices of the Commission. The Commission has felt that the atomic energy enterprise requires broad delegation of responsibilities and authority to the managers of its field offices, who work closely with the organizations carrying on important work and who are responsive to the every-day realities of the operation. Five offices of operations have been established. One is at New York, which has as its primary function the preparation of feed materials for the plants, but in addition administers other types of contracts, including the contract with Associated Universities, Inc., for operation of the Brookhaven National Laboratory. The second office is at Hanford, where the major task is the production of plutonium. The third office was set up at Los Alamos, which, as you know, is the center of weapons work. The fourth is at Chicago to administer the contract for the Argonne National Laboratory and to serve likewise for the research activities at Ames, Iowa, and Berkeley, Calif. The fifth is Oak Ridge.

Each of these five offices has become a fully integrated organization, with considerable self-sufficiency for handling the extensive business operations, and for providing technical supervision of the activities in its area. Under our reorganization placed in effect last September, each of these five field offices reports directly to the director of one of the program divisions in Washington. The basic programs are developed and reviewed by the program divisions in Washington, subject to the review of the Commission. Within the scope of the approved programs it is the job of the field offices to enter into the contracts necessary to give these programs effective implementation. The extent of the contractual authority delegated to the five field managers varies because of differing situations; it is \$2,000,000 for New York and Chicago, \$3,000,000 for Los Alamos, and \$5,000,000 for Hanford and Oak Ridge. Naturally, the local manager is required to bring to the attention of Washington for review and approval all new or unusual types of contractual

transactions. Moreover, in actual experience there is a broad and very wholesome practice of consultation and interchange of views between the staff in Washington and the staffs in the field offices on problems which arise in connection with the execution and administration of contracts.

In addition to determining the general scope of the programs, it is our objective to provide from Washington the standards and the policies, and in some cases the procedures, which will form the bases for action to be taken by the field offices. For example, we have recently adopted a contract manual to cover the letting of contracts for engineering and construction services. A copy of this manual has previously been furnished to the joint committee, and our director of production, Mr. Walter J. Williams, will later discuss in more detail its objectives and its provisions. I mention it now because it is illustrative of the kind of guidance which, on the basis of experience, we think the Washington office of the Commission can properly furnish to the field offices.

A large proportion of the Commission's prime contracts, especially those relating to the procurement of supplies and special materials, are executed and administered by our New York office. To the extent that it is practicable and is consistent with security requirements, such contracts are let by competitive bidding on a lump-sum or unit-price basis. At the same time, as I am sure you will understand, there are situations where it is necessary for the contract to be entered into on some other basis. Mr. Wilbur E. Kelley, the manager of New York operations, will describe for you in some detail the contract practices and procedures followed in that office. In many ways these practices and procedures will be illustrative of those followed at our other field offices.

It will also be helpful, I think to have a description of our procedures and practices with respect to research contracts. You will recall that by the Atomic Energy Act the Commission is directed to exercise its powers in such manners as to assure the continued conduct of research and development activities of private or public institutions or persons, and also to assist in the acquisition of an ever-expanding fund of theoretical and practical knowledge in such fields. Our research program, both in the physical sciences and biology and medicine, is on a country-wide basis. Some of the fundamental research is carried out through contracts supported jointly by the Commission and the office of Naval Research. Our Deputy Director of Research, Dr. Ralph P. Johnson, is prepared to describe to you the methods of selection of research projects and the objectives which the Commission hopes to attain through its contract-research program.

In connection with our research program, I should like to stress the fact that at our three national laboratories—Argonne, Brookhaven, and Oak Ridge—we have made arrangements which assure a very broad degree of regional participation by the institutions located in the areas. Moreover, in the case of the Knolls Atomic Power Laboratory, now under construction at Schenectady, our contract with the General Electric Co. contains provisions which will permit other industrial participation at the laboratory when it is completed.

Indeed, as I indicated at the outset, much of our planning is directed to broadening the basis of participation of industrial and educational institutions in the atomic energy program. The Commission is convinced that the vigorous progress of the program depends on the sustained interest, the participation and the contributions of the large number of persons, corporations, and institutions whose joint effort has in the past given America her scientific and industrial strength. It was for that reason that the Commission, in October 1947, appointed the Industrial Advisory Group, from which we requested advice on the most effective means of increasing the extent to which American industry might participate in atomic energy development. The report of the Industrial Advisory Group, you will recall, was submitted to the Commission in December 1948. It contained many helpful suggestions, and exemplified the extraordinary cooperation which the Commission is receiving from groups of leaders and experts in a variety of fields who are anxious to help in making possible the speedy progress of the Nation's atomic energy program.

It has been a source of great encouragement to note that in recent months more firms have entered atomic energy work on a straight investment and risk basis. This is true in several fields—first, the manufacture of com-

pounds containing radioisotopes for use in research and processing work; second, the mining, milling, and processing of uranium ores into high-grade concentrates; and third, the manufacture of instruments for detecting radiation.

The Du Pont company, which performed the great feat of the wartime construction and operation of the Hanford installation, has recently undertaken to make a complete survey of chemical-process problems involved in plutonium manufacture—a field in which there will already be found working several major industrial concerns, such as Blaw-Knox, Dow Chemical, General Electric, Kellogg, Monsanto, and Standard Oil Development Corp. Also, within the past 2 months, the Westinghouse Electric Corp., has undertaken the construction of test models on reactors for driving ships.

As the atomic energy program expands, we are utilizing an increased number of organizations, both large and small. The number of our prime contractors is in the hundreds and the Commission is making every effort to make industrial and scientific participation on as widespread a basis as possible.

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., July 27, 1949.

Mr. WILLIAM L. BORDEN,  
Executive Director, Joint Committee on Atomic Energy,  
Washington, D. C.

DEAR MR. BORDEN: As was indicated in a recent telephone conversation with Mr. Bergin, there is forwarded for insertion into the record of the July 11 hearings (page 899 of the printed hearing) a copy of a statement on the Atomic Energy Commission Security Program 1947-49. Also forwarded is a copy of that part of a statement of the General Advisory Committee which relates to that Committee's view on the Commission's fellowship program.

Sincerely yours,

CARLETON SHUGG,  
Deputy General Manager.

Enclosures:

Statement on AEC Security Program, 1947-49.  
Statement from GAC on Fellowship Program.

STATEMENT FROM THE GENERAL ADVISORY COMMITTEE TO THE ATOMIC ENERGY  
COMMISSION REGARDING THE FELLOWSHIP PROGRAM

With regard to the proposals that have arisen in connection with the AEC's fellowship program, the following statement, which was drafted by two members of the subcommittee on research, was unanimously approved by the GAC as an expression of its views:

Our intention in recommending that a fellowship program be set up by the AEC was to implement one of the purposes of the Atomic Energy Act, section 3 (a), "to assist in the acquisition of an ever-expanding fund of theoretical and practical knowledge in such fields." The fellowship program, as it has been arranged by the AEC, assists young men and women of unusual abilities in the physical and biological sciences to devote themselves for a period of a year or more exclusively to specialized study and research.

The end results of this program are: specific scientific knowledge in the public domain and, as has been so successfully demonstrated in the past by the National Research Council fellows, the nation gains a pool of highly trained scientists of immeasurable benefit to the public welfare. The influence of these men and women in promoting the health and growth of our sciences in all fields of scientific endeavor, in medicine, in technology, in the physical and biological sciences, has contributed largely in putting this country in a position of world leadership.

We understand that proposals have been put forward that would require all holders of AEC fellowships to be cleared after an FBI investigation. We should like to register our strong disapproval of any such procedures. Admittedly, the tensions of the times and the secret nature of the atomic energy work require elaborate checks for all who have access to classified material. But to carry over the same security concepts to holders of

fellowships who will in no way have access to secret or confidential information seems to us both unwise and unnecessary.

It is clear that these requirements of FBI investigation of prospective holders of AEC fellowships would be to extend still further the area of federal interference with the private lives of citizens. We use the word "interference" advisedly, for it is evident that the type of questioning of friends, relatives, and acquaintances required by the investigative procedures of the FBI do constitute an encroachment on the private affairs of many people. To repeat, we grant this to be necessary in these times in those cases where persons are to be employed on secret government matters. But we are horrified by the prospects of moving this whole semi-police apparatus into the realm of youth. We believe that the reputation of many young people of the country might be adversely impaired by rumors growing out of such a system of investigation of prospective fellowship holders. Older people can see in proper perspective calls from FBI agents, they can answer questions about acquaintances without feeling that the man being investigated is under suspicion. But young people of university age are likely to react quite differently. An atmosphere of suspicion and uncertainty is likely to be generated by the activities of federal agents among many groups of friends in colleges, universities, and in local communities. In short, the results of requiring investigations of candidates of fellowships will have serious repercussions throughout the country; it will almost certainly have a serious adverse affect on both the atmosphere of our educational institutions and the outlook of one age group of the entire nation.

Against the evil effects which we believe will probably follow the adoption of the proposals for FBI clearance of AEC fellows, let us place the possible gains. Let us admit that without such clearance an occasional clandestine member of the Communist party might receive a fellowship. But even the proponents of the proposals do not contend that security will be thereby endangered, for the holder of the fellowship has no privileges in regard to classified information. If after completing his studies the fellow wishes to work for the government he will be subjected quite properly to a thorough check which will reveal his affiliations if he is a Communist and he will be rejected. At the worst the government will have then spent its money on a man who cannot be used for the furtherance of the national security. It should be noted in passing, however, that as a purely financial matter the amount of money thus wasted on the occasional awarding of a fellowship to a member of the Communist party would be more than offset by the additional expenses required for FBI clearance of prospective fellowship holders. But leaving aside the question of cost to the government, we submit the risk that a very few Communists may receive training though an open and uninvestigated fellowship program represents a negligible loss, as compared to the bad effects on the spirit of our nation which would result from a further extension of counterespionage methods to those of college age.

JULY 11, 1949.

#### UNITED STATES ATOMIC ENERGY COMMISSION

##### MEDICAL EFFECTS OF ATOMIC BOMB EXPLOSIONS

(Statement by Dr. Shields Warren, M. D., Director of Biology and Medicine)

At the Joint Congressional Committee's hearing on Thursday, July 7, 1949, the Chairman of the Committee, at the suggestion of Congressman Price, requested that the Atomic Energy Commission prepare and present at a later hearing a summary of what may be publicly stated about the medical effects of atomic bomb explosions.

Several agencies and numerous medical men and biologists have studied this matter. Medical effects of the explosions over Hiroshima and Nagasaki were first studied by the Joint Commission of Medical Officers of the Army, Navy, and Manhattan District; later by the United States Strategic Bombing Survey. Now,

and for some time past, further studies are being carried out by the Atomic Bomb Casualty Commission of the National Research Council whose work is financed by the Atomic Energy Commission. Data have been gathered also on effects at the Bikini explosions and the after effects at Alamogordo. The Commission is financing studies of these and related problems by the Los Alamos Scientific Laboratory, the Argonne and Oak Ridge National Laboratories, the University of California both at Berkeley and Los Angeles, the University of Rochester, University of Chicago, University of Tennessee, University of Southern California, Western Reserve University, Harvard University, Cedars of Lebanon Hospital, University of Kansas, University of Virginia, University of Denver, Washington University, Columbia University, University of Oregon, University of Michigan, University of Washington, College of Physicians and Surgeons (New York), and New York Post Graduate Hospital. The progress of these studies is carefully reviewed by the Advisory Committee for Biology and Medicine as well as by the staff of the Division of Biology and Medicine.

Of the results so far obtained in these studies, some are classified and cannot be publicly stated. There is, however, a considerable body of fact on medical effects of atomic bomb explosion which is unclassified or has been declassified. It has appeared piecemeal, in individual documents, which are listed at the conclusion of this statement.

Few if any of these have had wide circulation among the general public or even the professional public. My colleagues and I have compiled the salient points of the nonsecret literature on the subject into a summary which has been examined by the Declassification Branch of the Commission, found to contain no restricted data, and authorized for issuance by the Commission. It is as follows:

The effects of an atomic bomb vary with the method of explosion, but there are three basic types of injury produced: mechanical, from the blast effects; thermal, from the radiant heat of the burst and from the fires burning in the wreckage; and radiation, from the radioactivity released by the burst.

Hiroshima, Nagasaki, and the first Bikini test may be taken as typical of an explosion in air. At Hiroshima and Nagasaki a majority of the deaths and injuries resulted from blast effects due to the collapse of buildings and to falling debris. Many additional casualties resulted from burns, flash or secondary, incurred in the fires that raged after the explosion. Fifty to 60 percent of the casualties were due to blast effects and flame burns, 20-30 percent to flash burns and 15-20 percent to ionizing radiation. However, had there been protection from blast and fire, nearly as many people would have died from radiation effects alone. This is explained by the fact that death was officially attributed to the most obvious cause, either blast or burns. For instance, an individual crushed by falling concrete after being seriously burned was classed as a blast casualty, although the amount of ionizing radiation received would undoubtedly have resulted in death at a later date had not the blast or burn injuries proved fatal.

Perhaps the most readily understandable way of describing the effects of atomic explosions is to use zones bounded by concentric circles whose center is the point of explosion. The effects in these zones depend somewhat on local factors, and change gradually rather than abruptly.

#### EFFECTS WITHIN A HALF-MILE RADIUS OF GROUND ZERO

Within a half-mile radius of the ground point directly under a bomb (ground zero) similar to those used against Japan and detonated at a similar height in the air the following will occur. The explosion of the bomb creates blast pressure which will demolish all structures not of reinforced concrete or steel construction within this area. In well-constructed buildings of the latter type, structural damage of 70 percent or less will occur, accompanied by severe damage to windows, partitions, walls and contents. Persons not sufficiently protected by shelter able to withstand this amount of blast would undoubtedly be killed by falling buildings or flying wreckage.

Intense thermal energy generated by the explosion would likewise cause fatal burns to unprotected persons and would start fires in the wreckage.

The explosion of an atomic bomb results from the sudden simultaneous rupture of the nuclei of the atoms of the element composing the bomb. This releases an enormous store of energy as invisible radioactive waves or particles which are highly destructive to living tissues. The various particles and rays differ in their ability to penetrate objects, such as lead or concrete, and in their ability to penetrate the body. However, the quality of their effect on the body is the same. From the standpoint of quality of effect they are similar to the X-rays used widely in the treatment of disease.

Because of the concentration of radiation within this area, nearly everyone not protected by earth, steel or thick concrete will die. This does not mean instantaneous death, but the most serious cases would succumb from within a few hours to 4 to 5 days after exposure. A second group would develop susceptibility to infection due to the destruction of their white blood cells and would die from 4 days to 6 weeks after exposure. Another group would incur multiple hemorrhages and die within 2 to 8 weeks from this cause.

Radiation destroys white blood cells and bone marrow and injures the intestines. These injuries cause decrease in white blood cells with attendant susceptibility to infection, progressive anemia, increased bleeding tendencies, nausea, vomiting and bloody diarrhea. However, individuals vary in their sensitivity to radiation—thus, a dose fatal to one might only make another sick.

Other observed effects of radiation from bomb explosions on the human organism, are as follows:

Exposed expectant mothers who were within this area died.

There is no present evidence of alteration in female reproductivity.

As to male sterility, the male testicle is more exposed to radiation because of its position and covering than is the female ovary, and its cells are more easily damaged. There was evidence of diminished reproductivity for a period of 3 months in males who were within 1 mile of the explosion point. In the male, the sterilizing dose of radiation is very near the fatal dose.

Hair loss usually began about 2 weeks after the explosion and was largely restricted to the scalp hair. The survivors have shown regrowth of the hair.

#### EFFECTS WITHIN AREA ONE-HALF TO ONE MILE FROM GROUND ZERO

Structural damage due to blast and fire would be general within this area, with residential buildings almost completely destroyed, and only fire- and shock-resistant buildings immune to any appreciable extent. Casualties from attendant types of injury, flame burns, blast effects and trauma due to falling debris, flying glass, etc., would consequently be prominent.

Flash burns to a severity of second or third degree would be incurred by those persons not protected. Minimal protection from clothing or other sources serves to reduce drastically this type of injury.

Injury from ionizing radiation also is serious for exposed individuals. As the distance from the explosion point increases, however, shielding becomes more effective due to the lessening of energy of the rays and their dispersal and absorption.

#### EFFECTS WITHIN AREA ONE TO ONE AND ONE-HALF MILES FROM GROUND ZERO

Blast damage would be extensive for residential structures. Fire damage would be extensive in inflammable areas. Both types of damage are dependent upon terrain factors; as in the case of Nagasaki, steep hills act to delimit sharply the effects of blast and fire. Secondary injuries would be correspondingly decreased under such conditions. They remain fairly prominent in this area, in the absence of protection by natural or artificial barriers.

Flash burns could also be expected at this distance.

Radiation could be expected to be very prominent among the causes of injury up to approximately  $1\frac{1}{4}$  miles, from ground zero, above which distance such cases drop off sharply.

#### EFFECTS WITHIN AREA ONE AND ONE-HALF TO TWO MILES FROM GROUND ZERO

At Hiroshima the average limit of general structural damage was roughly at the outer edge of this zone. The delimitation of fire damage coincides to a certain extent with this boundary, but in specific locations may be divergent, depending upon existing wind and climatic conditions.

Flash burns will be incurred, although not of as great severity in this area.

Radiation sickness induced by the explosion would decrease markedly in this area, although a small number of recorded cases of such sickness were incurred at this distance at Hiroshima and Nagasaki.

#### EFFECTS WITHIN AREA TWO TO TWO AND ONE-HALF MILES FROM EXPLOSION POINT

Structural damage due to blast and fire is appreciably lessened in this zone, with resultant decrease in secondary injuries such as flame burns and mechanical trauma. (The maximum distance of recorded structural damage from ground zero at Hiroshima was 4.1 miles.)

The outer limit of this zone apparently marks the end of the danger zone for flash burns. However, second and third degree burns are possible even at this distance.

Radiation injury would be minimal in this zone, and probably would not be produced above this distance save in isolated cases.

#### RESIDUAL RADIOACTIVITY

The residual material deposited from an airburst atomic explosion will vary according to the height at which detonation occurs. In a burst fairly close to the ground, as at Alamogordo, a crater was produced which contained considerable radioactive material. This contaminated area was quite small.

The Japanese detonations occurred at much higher altitudes with no craters or serious ground-shock resulting, and with no serious amount of radioactivity remaining as residue. Experience following both explosions demonstrated that no harmful residue was present. Persons who had not been exposed to the blast entering the areas immediately after detonation and remaining for extended periods of time incurred no radiation injury.

The radioactive elements from such a burst are carried into the stratospheric and substratospheric levels in a circumscribed cloud which arises to 30,000 to 60,000 feet and is rapidly diluted. There may be a fall-out from this cloud as it moves away with the prevailing winds. This occurred in an area near Nagasaki so that detectable amounts of radiation were emitted. There was, however, no evidence of injury to exposed individuals. The possibility of radioactive fall-out applies also to explosions closer to the ground, i. e., within a few hundred feet.

#### UNDERWATER DETONATION

In an underwater explosion the problem of widespread damage from blast effects and heat does not apply, being muffled by the water, but, in contrast to a high air explosion, residual radioactivity is of considerable concern. While the gamma rays and neutrons are virtually all absorbed by the water surrounding the bomb, the radioactive fission products are carried aloft in the water comprising the column and cloud.

When this column descends, it spreads radioactive materials over the surrounding area. Also, rain from this mist and the cloud will disseminate the dangerous materials over an extensive area, depending on wind direction and velocity. Roughly, the lethal area may extend one-half mile upwind and 2 or more miles downwind. Dangerous concentration would result over a much larger area.

Since the radioactive material consists of a number of elements which emit radiation for periods of time varying from fractions of a second to thousands of years, the danger exists of these radioactive elements damaging human tissue through external or internal action.

The type of radiation they produce varies considerably. It may be alpha particles which are highly damaging, but are fortunately unable to penetrate; it may be beta particles which are less damaging and only superficially penetrating; and finally, it may be gamma rays which are highly penetrating, but relatively the least damaging.

With available instruments it is possible to detect the presence of these elements and so prevent external over-exposure to their emitted radiation. However, of serious concern is the possibility of accidental introduction into the body of an element which would lodge there for a period of time and emit radiations which would destroy tissue or induce formation of a cancer.

Assuming that it is necessary for persons to be within a contaminated area, what are the possibilities of these radioactive elements gaining entrance to the body? There is the possibility of their being swallowed with food or from contact with hands which have become contaminated. Fortunately, the more dangerous elements such as plutonium, are not absorbed in any considerable degree after being swallowed, but are carried off by the bodily processes.

Also, there is the possibility of entry by a cut induced by a contaminated instrument or the like. While fortunately there has been little opportunity to study this problem, apparently there is little danger from these materials.

#### ATOMIC BOMB CASUALTY COMMISSION

Delayed effects in those exposed to the Japanese atomic bomb explosions have not been found by the examinations of the Atomic Bomb Casualty Commission

of the National Research Council. This study, supported with funds furnished by the Commission, has especially searched for effects which were anticipated by some observers. These studies will continue over a number of years, however, and we will from time to time report on them. To date they have developed no evidence of increased incidence of any disease, including cancer.

EXHIBIT 34

(Referred to on p. 894, pt. 22, July 11, 1949)

[From First Report of the Secretary of Defense, National Military Establishment, 1948]

## MILITARY LIAISON COMMITTEE

Since the explosion of two atomic bombs over Japan, atomic energy has become an increasingly important factor to the security of the United States. Therefore, when the Atomic Energy Act of 1946 transferred primary responsibility for many atomic energy activities from the military to a civilian commission, a safeguard was inserted in the act to insure that the armed forces should have a voice in a field vital to the national defense. The Military Liaison Committee was established by the act to obtain this safeguard.

The Military Liaison Committee operated initially under a charter signed by the Secretaries of War and Navy on January 17, 1947. Until September 18, 1947, when the armed forces were placed under the National Military Establishment, the committee consisted of three representatives from the War Department and three from the Navy Department with one of the former, an Army Air Forces general officer, designated as chairman.

Even though the passage of the National Security Act of 1947 had no direct effect on the functions or responsibilities of the committee as assigned by law, it was apparent that the Military Liaison Committee should be adapted to the changes in the organization of the top military structure.

Both the organization and the functions of the committee were revised to reflect the reorganization of the national military structure. A civilian chairman was appointed, and was given the additional function of Deputy for Atomic Energy Matters to the Secretary of Defense. This concentration of the two functions in one individual does much to insure coordinated effort in the atomic energy program of the National Military Establishment. In addition, the military membership of the committee was revised so as to provide two members from each of the three services, and these members were empowered to act for their services in matters affecting the over-all National Military Establishment program.

In addition to the committee's functions prescribed by the Atomic Energy Act of 1946, a new charter was provided on April 12, 1948, which materially broadened its responsibilities and increased its powers as an executive and advisory agency for the Secretary of Defense. Under this charter the committee advises the Secretary of Defense on all atomic energy matters, acts as his agent in coordinating the National Military Establishment atomic energy program, and continuously surveys the activities of other Government agencies to determine whether such activities are in consonance with the interests of national security.

Since its reconstitution, the effectiveness of the committee has steadily increased and it has been and continues to be active in providing the closest possible integration of atomic energy activities within the National Military Establishment as well as between it and the Atomic Energy Commission. The highly classified nature of many of the committee's most important activities prevents their being discussed in this report.

Close-working relationships have been established by the committee with the Joint Chiefs of Staff, Munitions Board, Office of Civil Defense Planning, the Armed Forces Special Weapons Project, and the Atomic Energy Commission. Effective coordination of atomic energy matters among the services is enhanced by the present practice of having military members of the committee occupy principal atomic energy staff positions within their respective services. In addition, the senior Army member of the committee is the Chief of the Armed Forces Special Weapons Project, and one Navy and one Air Force member of the committee act as Deputy Chiefs of the Armed Forces Special Weapons Project.

The committee, with the addition of prominent scientific and industrial members, functions as the Committee on Atomic Energy of the Research and Development Board. This arrangement, whereby one committee serves in two closely allied capacities, results in a saving of key personnel. In this particular case, the arrangement serves also to establish a unity of purpose in the research programs in the Atomic Energy Commission and the National Military Establishment by having the same group of individuals working closely with both programs.

A committee known as the Combined Policy Committee was established in August 1943, composed of representatives of the United States, United Kingdom, and Canada, and having as its purpose the provision of general guidance to the atomic energy projects of these countries. The passage of the Atomic Energy Act of 1946 required a review of the wartime cooperation between these three governments. Recognizing the mutual benefits derived from cooperative effort during the war, the three governments are now continuing a program of technical cooperation under the general direction of the Combined Policy Committee, and the Military Liaison Committee is kept currently advised of these activities.

The work of the Military Liaison Committee consists largely of day-to-day review and evaluation of measures, policies, and activities of Atomic Energy Commission agencies and of military agencies concerned with atomic energy. During the past year, effort has been devoted to establishment of procedures for the continuous flow of required information between the Commission and appropriate agencies of the National Military Establishment. It is believed that a steady improvement in the mutual exchange of information is being effected.

In the past year the committee has visited many field installations of the Military Establishment and of the Atomic Energy Commission, including Oak Ridge, Hanford, and the Radiation Laboratory at Berkeley. In addition, individual committee members keep themselves intimately familiar with those Atomic Energy Commission activities with which they are primarily concerned. These visits have proved to be of great value to the committee in insuring a continuing clear understanding of the magnitude and scope of activities in the still relatively new field of atomic energy.

The past year has seen appreciable progress in the development of improved atomic weapons. The committee actively participated in preparations for the tests at Eniwetok and in the establishment of both present and future military weapon requirements.

Acting in its capacity as a committee of the Research and Development Board, the committee has sponsored a long-range study of the national atomic energy program to define further long-range military requirements. After its final review and approval this study should serve as a guide in plotting the direction of atomic energy activities.

The committee has undertaken a review of the organizational structure and functions of agencies within the National Military Establishment concerned with atomic energy, and has recommended changes which will improve the effectiveness of military consideration of problems related to atomic energy.

In order to insure that the Nation is kept ready for any emergency involving atomic warfare, the committee for the past several months has been working toward bringing up to date surveys of the over-all requirements of the Nation in the event of such an emergency.

#### SPECIAL WEAPONS

The Armed Forces Special Weapons Project is noteworthy as a unified interservice agency, in which representatives of the Army, Navy, and Air Force are assigned to jobs on the basis of their knowledge and abilities, with little or no reference to the uniform they wear. Its successful operation makes it a pilot model for the success of further unification measures in the National

**Military Establishment.** The requirements of security preclude a complete discussion of the organization.

The Armed Forces Special Weapons Project was established early in 1947 as a joint Army-Navy organization. Upon passage of the Unification Act its organization was broadened to include equal participation by the Air Force.

The project originally assumed responsibility for carrying on those military service functions of the Manhattan Project retained by the armed forces when the over-all atomic energy program was transferred to the Atomic Energy Commission. The program includes training of special personnel, military participation in the development of atomic weapons of all types, and coordination of joint radiological safety measures. It has also carried on certain special tasks for the Research and Development Board, the Joint Chiefs of Staff, and other interservice agencies.

It is the link between the Atomic Energy Commission and the armed forces in carrying on actual operations in the atomic energy field. The Atomic Energy Commission has its legal functions with respect to the control and manufacture of fissionable material and atomic weapons and the conduct of research relating to these activities. The Special Weapons Project is responsible for supporting the National Military Establishment in atomic weapon operations, assisting in research, participating in the determination of requirements of the armed forces, and then processing those requirements. It provides technical assistance to the various planning agencies in the Military Establishment.

The Chief and two Deputy Chiefs of the project are selected one each from the Army, Navy, and Air Force by mutual agreement of the Chiefs of Staff of the Army and Air Force, and the Chief of Naval Operations. The principal field installation is Sandia Base at Albuquerque, N. Mex.

Members of the group played important roles in the atomic weapons tests conducted in the Pacific in early 1948. The Radiological Safety Group, charged with the vital task of health safety throughout the Eniwetok tests, was directed and largely staffed with project personnel. In addition, about 40 percent of the joint civilian-military technical staff of the task force, concerned with the actual test operations, were permanent military members of the Special Weapons project. Working in close cooperation with the civilian scientists who carried out the tests for the Atomic Energy Commission, these men made contributions which proved the soundness of the training doctrines followed within the Military Establishment.

The project also has been charged with completing the residual functions of Joint Task Force ONE (JTF-1) and Joint Task Force SEVEN (JTF-7), the combined organizations of the armed forces engaged in the Bikini and Eniwetok weapon tests, respectively. These residual functions include preparing and publishing technical and operational reports; cataloging and distributing official photographs; and replying to general and scientific inquiries.

It is the coordinating agency for the military services in radiological defense training. The training program pursued is continuously reviewed and modified to anticipate changing requirements in this relatively new phase of the atomic energy field. Curricula in existing and proposed service schools involved in this training likewise are subject to continuous revision. Great emphasis has been given to the medical aspects of radiological defense. The project has been instrumental in organizing training courses in both civilian educational institutions and military schools to further this program. Within the limitations imposed by the shortage of trained personnel and the security requirements of the Atomic Energy Act of 1946, substantial progress has been made in this training, and increasing numbers of medical and line officers have completed courses of instruction in those parts of the field pertaining to their specialties.

A radiological defense manual for official military use has been distributed within the armed forces. This volume provides the fundamentals of nuclear and radiation theory, basic to indoctrination and training. A second classified volume is being prepared covering the technical, operational, and organizational phases of radiological defense, incorporating data resulting from the operational tests. The staff works closely with the Office of Civil Defense Planning, providing assistance and advice on organization and training in radiological defense.

The project also coordinates research for the military on such items as radiological instrumentation, and the protection and decontamination problems involved in radiological defense.

The original staff consisted of Manhattan District personnel who were not required for temporary service by the Atomic Energy Commission. Since that

time, participation in the project has been a matter of gradual assignment of personnel of the Navy and Air Force to augment the original Army group. Current plans provide that the largest share of personnel will hereafter be drawn from the Air Force. Organization throughout the project is composite. For example, one division is headed by a Navy captain, an Air Force colonel is his deputy, and three assistants are Army officers.

### EXHIBIT 35

(See also exhibits 16 and 24)

(Referred to on p. 897, pt. 22, July 11, 1949)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., August 2, 1949.

Mr. WILLIAM L. BORDEN,  
Executive Director, Joint Committee on Atomic Energy,  
Washington 25, D. C.

DEAR MR. BORDEN: Enclosed are articles from the Commission's contract with the East Tennessee Natural Gas Co. which set out the obligations of East Tennessee to deliver natural gas to Oak Ridge. We would appreciate your adding these provisions to the material we already have forwarded to you on this matter by letter of July 20, for insertion in the record of the hearings.

Sincerely yours,

CARLETON SHUGG, *Deputy General Manager.*

Enclosures: Articles I, II, and III of East Tennessee Contract.

ARTICLES I, II, AND III—CONTRACT NO. AT-40-1-GEN-244—EAST TENNESSEE  
NATURAL GAS COMPANY

#### ARTICLE I—SCOPE

1. The Gas Company shall apply for promptly and use due diligence (a) to obtain all necessary materials and authorizations for the construction of the facilities and for the purchase of a supply of natural gas necessary to enable it to deliver to the Government at the Points of Delivery, defined herein, the volume of natural gas contemplated by this agreement, and (b) to secure such certificates, licenses, or permits as may be found necessary to authorize the sale and delivery to the Government of said volume of gas. When requested by the Commission, and to the extent that the Commission may require, the Gas Company shall submit to the Commission adequate information concerning the status of its undertakings under this paragraph.

2. Upon the receipt by the Gas Company of authorizations therefor, deemed requisite and satisfactory by it, the Gas Company shall proceed with due diligence to construct the necessary facilities for its performance hereunder as expeditiously as practicable. When requested by the Commission, the Gas Company shall submit to the Commission written progress reports covering the construction of said facilities.

3. Upon the issuance of authorizations deemed requisite and satisfactory to the Gas Company for the construction of the requisite facilities and for the purchase and sale of the volumes of natural gas and natural gas service contemplated by this agreement, and upon the completion of the construction of such facilities so as to enable the Gas Company to deliver to the Government said volume of natural gas, the Gas Company shall be ready to sell and deliver to the Government, at the charges provided in Article IX hereof, a contracted demand of 60,000 MCF of gas per day.

4. The Government shall use due diligence (a) to secure necessary materials and (b) to construct or cause to be constructed the facilities necessary to enable it to receive gas by the time the Gas Company is prepared to deliver gas hereunder.

5. After completion of construction of the Government facilities and commencing with the initial delivery of natural gas hereunder, the Government may purchase and receive a contracted demand of 60,000 MCF of gas per day, and shall pay the Gas Company therefor at the charges provided in Article IX hereof.

6. Notwithstanding the provisions of paragraphs 1 and 2 of Article IX hereof,

the Demand payments and Commodity Payments therein provided for shall become applicable on the day specified in a written notice given by the Gas Company to the Commission at least thirty (30) days prior to the said day, provided that on the day so specified the Gas Company is actually ready to commence delivery of gas hereunder at the rate of 60,000 MCF of gas per day. In such event the specified day shall be deemed to be the day of commencement of delivery, and of initial delivery, of natural gas to the Government hereunder. The Gas Company shall give such notice as soon as practicable and, except with the prior written consent of the Commission, shall not make deliveries from its said facilities to any other customers prior to the said specified day.

#### ARTICLE II—TERM : TERMINATION FOR CONVENIENCE : AND OBLIGATION OF FUNDS

1. This agreement shall be effective on the date hereof first above written, and shall continue in effect for a period of twenty (20) years from the day of initial delivery of gas hereunder unless it otherwise expires or is terminated as herein provided.

2. The Commission may, at any time, upon at least twelve (12) months' prior written notice to the Gas Company, terminate this agreement after the initial delivery of gas hereunder.

3. Notwithstanding any other provisions of this Article and regardless of cause, this agreement shall expire upon the happening of the first of following events, (a) when and if the application of the Gas Company for the certificate of public convenience and necessity requisite to enable it to construct the necessary facilities for performance hereunder is finally denied, (b) when and if the Gas Company notifies the Commission in writing that it deems the certificate of public convenience and necessity issued to it to be unsatisfactory, (c) when and if construction of such facilities has not been substantially completed within two years after the Gas Company gives written notice to the Commission that the certificate of public convenience and necessity issued to it is deemed to be satisfactory, or (d) on June 30, 1952 or such substituted later date as the Commission, from time to time, may designate by written notice to the Gas Company, unless the Gas Company is actually ready to deliver 60,000 MCF of gas per day hereunder on or before such stated date or such later date, as the case may be. The Gas Company shall, upon receipt of said certificate of public convenience and necessity, promptly notify the Commission in writing whether or not it deems the same satisfactory unless the Commission consents in writing to a later notification.

4. The Commission has initially obligated for this agreement from obligational authority available to the Commission the sum of Four Million Four-Hundred Thousand Dollars (\$4,400,000.00). The Commission will for each Government fiscal year, beginning with the fiscal year in which gas is initially delivered hereunder, review and revise this obligation to provide for estimated payments hereunder for that fiscal year, in addition to the variable charge set forth in paragraph 5 of Article IX. It is understood that, except to the extent of the initial obligation of Four Million Four-Hundred Thousand Dollars (\$4,400,000.00) and any subsequent obligations, all payments under this agreement are subject to the availability of appropriations for this purpose.

#### ARTICLE III—CHARACTER OF SERVICE

Natural gas delivered by the Gas Company to the Government under this agreement shall not be subject to curtailment or interruption except that caused by force majeure and deliveries hereunder shall have priority over all other deliveries made or to be made by the Gas Company for industrial use. This agreement shall obligate the Gas Company to sell and be ready at all times, commencing with the day of initial delivery, to deliver to the Government the contracted demand and the Government shall have the right to purchase and receive from the Gas Company up to the contracted demand. Such deliveries of gas shall be as nearly as practicable at uniform hourly rates of flow and in uniform daily amounts, but on account of variations deemed for purposes of this agreement to be due to the inability of the Gas Company to maintain more precise control, daily deliveries shall be subject to an allowable variation of not more than ten percent either above or below the scheduled daily delivery, and total deliveries in any month of the calendar shall be subject to an allowable variation of not more than five percent above or below the average scheduled daily delivery multiplied by the number of days in said month.

## APPENDIX 2

## OFFICIAL CORRESPONDENCE RELATING TO THE INVESTIGATION

(The letters below represent official correspondence relating to the investigation which does not appear elsewhere in the record.)

UNITED STATES ATOMIC ENERGY COMMISSION,  
May 25, 1949.

Honorable BRIEN MCMAHON,  
Chairman, Joint Congressional Committee on Atomic Energy,  
Washington, D. C.

DEAR SENATOR MCMAHON: A full, compete, and speedy report on the charges that the United States atomic energy program is virtually a failure is a matter urgently necessary; the investigation initiated by the McMahon Committee and to be carried out by it is welcomed.

The charges by Senator Hickenlooper of "incredible mismanagement," "misplaced emphasis," and "maladministration" involve nothing less than the security of this nation and the peace of the world.

If it is true that the atomic energy program is in an almost bankrupt condition, then this Nation, far from being the custodian and trustee of a substantial stock pile of atomic weapons, and in a favorable production situation, is in a sadly weakened condition. If this were true it is difficult to imagine any single fact more disturbing to the peace of mind of the people of the country or to the security of the world's democracies.

The facts on this crucial test of our stewardship can be readily established.

That in an enterprise requiring the services of some 60,000 human beings there have been mistakes and errors goes without saying; this has been freely admitted. Working with the atom does not make human beings perfect and beyond error. For these errors and mistakes the Commission has and will continue to accept full responsibility. The failure to follow explicit Commission regulations in the matter of the uranium oxide at the Argonne Laboratory in Chicago is such an instance. In handling of many thousands of tons of crucial materials, in various forms, the Commission and its contractor-employees have sought and will continue to seek to improve on methods of accountability, that will keep the element of human fallibility at a minimum: no system can eliminate the human factor entirely.

Among the hundreds of decisions of policy thus far made by the Commission, and those that will be made in the future, there are many the soundness of which is and will be subject to differences of judgment among equally sensible men. Such a case is that concerning scholarships for nonsecret study, awarded by the National Research Council of the National Academy of Sciences as contractor for the Commission. The policy of the Council and the Commission has in the past ten days been changed to meet the objections, on public policy grounds, strongly expressed by members of the Congress. But the difference was one of judgment on which equally patriotic and reasonable men could have and do entertain differing views. The export to scientists abroad of isotopes, announced by the President in September 1947, is another instance. This was done upon the unanimous recommendation of distinguished advisors to the Commission. There are bound to be cases of underestimating of construction costs by contractors of the Commission in connection with urgently needed facilities of a wholly new kind. These are properly subject to criticism. But they were common experience during the war and today in industry generally.

The Joint Committee on Atomic Energy of the House and Senate was established by the McMahon Act to review and consider, among other things, differences of judgment on policy, and to receive and consider and appraise the rate of progress or lack of progress in the substantial work of this project—one of the largest enterprises and most complex in history. Numerous reports, largely secret or top secret, and frequent hearings, conferences, and staff liaison have made your Committee essentially—and rightly so—a continuous Congressional investigating Committee.

The test of whether there has been and is "incredible mismanagement" and a grave situation in this country's atomic energy program can be made a quite specific test, or series of tests. The country, I suggest, is entitled to and will want to know the answers to such specific questions as the following, among

others, and we welcome the decision of your Committee to proceed to the making of such analysis and report.

(1) Has the Commission failed in its stewardship at a time of great tension, in its obligation paramount to all others, i. e., the production and improvement of these complex scientific weapons? What is the state of our atomic weapons—the order of magnitude of the stock pile; the improvements made in the past two and a half years in new weapon design? What has been the progress in the past two and a half years of our stewardship? What is the progress today in still further improvements; and the quality of personnel and the morale of those engaged in this work?

(2) How about production of fissionable materials—the essential ingredients of atomic weapons? Is it on a secure basis? What situation did the project face concerning disruption of production and how successful were the steps taken to overcome them? We assert, and our reports to you have made clear, that production is now at the highest level in history, with the same facilities; that new facilities are approaching the production state.

(3) How has basic and applied research progressed since the Commission took responsibility—and where was it when the Commission took over?

(4) How about security?

What was the state of physical protection of plants when the Commission took over? Has this improved, and in what ways?

What about security of secret documents—what was the situation when the Commission began, and what is it today?

What about accountability for source and fissionable materials? What was the situation in 1947? What is it today?

(5) What about the investigation and clearance of personnel—what was the situation, and what is it today?

There are many other areas of inquiry that your Committee will engage upon, in addition to those carried on by it continuously as a regular practice in the past.

But the chief question I believe is this: Is this country weak today in atomic weapons and materials, and in their production and improvement, as implied by the broad and grave charges leveled against the Commission?

It can be stated categorically that the record in this respect is a proud one. It is one to give great reassurance to the peoples of the world who, as of this hour, rely upon the strength of the United States of America.

In order that the fears and misapprehensions on this score may be settled beyond peradventure and as promptly as it is possible, it is urged that the Joint Committee call before it immediately not only the Commission, its staff, its principal industrial and university contractors, but also other citizens of the highest renown and technical standing, including the distinguished members of the General Advisory Committee and other advisory groups, for their testimony and appraisal. In this way the dangerous cloud of uneasiness resulting from these charges will be dispelled.

Sincerely yours,

DAVID E. LILIENTHAL,

*Chairman, United States Atomic Energy Commission.*

DEL: mjb.

---

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., June 4, 1949.

HONORABLE BRIEN C. McMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR McMAHON: The Atomic Energy Commission this week transmitted to the Joint Committee on Atomic Energy the FBI investigative reports made to this Commission on most of the individuals listed by Senator Hickenlooper. The remainder will be transmitted under separate cover.

Most of these investigational records have previously been examined by the Joint Committee or its staff and have been constantly available to it and to its staff; many have previously been discussed in extensive sessions of the Committee. In fact, ten of the cases on the list were fully discussed in an executive session of the Joint Committee as long ago as November 28, 1947. Access at this time to these files could have been had without the public request made for them at the hearing by simply sending for them in accordance with the usual practice of the Joint Committee in obtaining such files.

It is, of course, true that the Commission can give full information in public hearings on the Commission's personnel security system, including general security standards and criteria and procedures for administrative review of individual cases. This we are prepared to do. We note, however, from press accounts that Senator Hickenlooper proposes in future open hearings to bring up and discuss the security status of certain individuals in the atomic energy program.

We believe that the greatest care is required in connection with any public discussion of individual cases in order to assure complete fairness to individuals and in order to avoid serious adverse consequence to the morale of all the people engaged in the atomic energy program. The difficulties of attracting and retaining competent people to which Senator Hickenlooper referred in his statements on last Wednesday are, of course, greatly increased if people in the atomic energy program run a risk of undeserved injury to their good names which cannot be immediately redressed.

The use of the contents of these files, in open hearings, directly or by indirection, raises questions of procedure and of just plain human fairness. These are questions that go very deep. Your Committee has made it abundantly clear that in pursuing its constitutional and statutory functions it does not intend to depart in any way from those fundamental decencies in the protection of the integrity of the individual which are so large a part of the American tradition of fair play and constitutional government.

The dangers of discussing so-called derogatory information cases in open hearings is not overcome by avoiding the name of the person. During the course of the open hearings before the Joint Committee on Atomic Energy this week, reference was made on several occasions to the personnel security status of several individuals who are or have been in the atomic energy program. As a matter of fact, a description of the place where a person is employed, the kind of work he is doing, and other such information, even though the person is not named, may identify a person as fully as if he were named. Furthermore, such a practice may have even more serious consequences because vague clues as to the identity of an individual may give rise to widespread speculation with a consequent spread of uneasiness and fear throughout the project and thereby injury to the interests of this country.

Any fair and adequate appraisal of whether a person should or should not be employed in the atomic energy program must include a careful analysis of many factors such as an evaluation of the reliability of the "derogatory" or unfavorable information regarding the person, the exact job the person is doing or has done, and how long the person has been engaged in the program. These cases are usually complex and must be viewed in the light of the total relevant information—including the elementary justice of hearing the individual's own side of the story. The investigative reports of the FBI are the foundation upon which the AEC personnel security system is based. As the FBI itself has pointed out, there are grave dangers in relying only on selected excerpts from FBI reports quoting anonymous persons. This danger, of course, is magnified when these excerpts are used in a public hearing.

As you know, the Commission has always made available to the Joint Committee upon request the personnel security files of all persons employed in the program for study and scrutiny by the members and by designated members of the staff of the Joint Committee. Indeed, as requested by the Committee, every step taken in some of the cases listed by Senator Hickenlooper was reported in detail to the Joint Committee last year. This close relationship has not been, in any way, disturbed by the President's directive of March 13, 1948, prohibiting the delivery of personnel security files to congressional committees by executive agencies without prior approval of the President. In fact, as you know, the Atomic Energy Commission at the time this directive was issued worked out special procedures with the Attorney General whereby the Joint Committee, provided strict confidence is maintained, continues to receive, upon request, the personnel security files, including the investigative reports, of any person in the atomic energy program.

The security of this country, that is to say, its basic strength, depends upon maintaining inviolate those fundamental decencies in protection of an individual's good name that have taken so many weary years to secure and safeguard. Security of the Nation is not only a matter of investigations and "clearances", of fences and guards, but of a tradition and practice, a regard

for the protection of the rights of individuals, even against the Government itself or its most powerful officials and legislators.

We know that your Committee is full aware of the serious dangers we have mentioned and are confident that you will insist upon complete adherence to procedures that assure fair play.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
DAVID E. LILIENTHAL, *Chairman*.

DEL: mjb.

---

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington D. C., June 6, 1949.*

HON. BRIEN C. MCMAHON,  
*Chairman, Joint Committee on Atomic Energy,*  
*Washington, D. C.*

DEAR SENATOR MCMAHON: As we stated in our letter of June 4th, we believe that the greatest care is required in any public discussion of individual cases not only in order to assure complete fairness to an individual, but also in order to avoid serious adverse consequences to morale of all the people engaged in the atomic energy program. As we said, the difficulties of attracting and retaining competent people in the atomic energy program are, of course, greatly increased if people in the program run a risk of undeserved injury to their good names which cannot be immediately redressed.

Although Senator Hickenlooper stated this morning that he had no intention of identifying any individual, his inquiry referred to a so-called "Case A" in such specific terms as to identify clearly the individual in question. Senator Hickenlooper described the position of the individual in a way which makes his identity unmistakable to the many persons within the Commission's organization who are acquainted with the responsibilities which that individual discharges.

We wish to emphasize the adverse effects which we believe such a course may have on the atomic energy program if the matter is dropped at this point. Even though Senator Hickenlooper's statements referred particularly to the procedures followed in the case, they have inevitably caused unwarranted reflection on the decision that was rendered, and on the personnel security review program as a whole. The Commission is sure the Joint Committee will agree that, under these circumstances, a full and open hearing on the case, including the procedures followed, is required not only by elementary considerations of fairness and decency, but also by the welfare of the atomic energy program which requires that these matters be accurately understood. The Commission agrees with the statement that you made this morning that one-eighth of a hearing in public in a case of this nature is no hearing at all; unfortunately, the one-eighth which has now been heard in public can only lead to distortions and misunderstandings of the real facts.

We think the record in this case will serve the useful purpose of giving a clear and concrete example of the Commission's personnel security procedures and will thus contribute to the fuller understanding of these procedures. It also illustrates the view which the Commission has had for some time and has been attempting to express to the Joint Committee both previously and during the course of these hearings—namely that personnel security cases present many novel and complex problems of procedure as well as of substance, and that these problems require the most careful consideration of the entire course of events and the entire record in any given case. The record shows how necessary it is to recognize that charges are not to be confused with evidence, which in this case showed the charges to be utterly without foundation. A review of the record in this case will demonstrate the high degree of care that was exercised throughout the entire proceeding in order to assure not only that the individual was fairly treated but that the common defense and security of the country was protected in the fullest possible measure. After a lengthy hearing, in which many witnesses testified, the local board set forth its findings of fact and its conclusions in a detailed memorandum. The Joint Committee will recognize, we are sure, that full consideration of the case requires that the entire record, including the findings by this local board, should be fully examined in public hearing. The entire record, including the FBI investigative reports, the transcript and the local board memorandum, have been previously made available to the Joint Committee.

The Commission accordingly suggests that it is in the public interest that this case be fully explored in open hearing before the Joint Committee at the earliest opportunity. While normally the Commission would not favor any discussion in public of a particular security case, it is our view that to protect the atomic energy program and to make it better understood the discussion which Senator Hickenlooper initiated this morning should not now be left in mid-air.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
DAVID E. LILIENTHAL, *Chairman*.

---

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., June 14, 1949.*

HONORABLE BRIEN McMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
United States Capitol, Washington, D. C.*

DEAR SENATOR McMAHON: Several times during the present hearings reference has been made to the procedural difficulties arising from the fact that there is no adequate notification to the Commission of the nature of the charges being brought against it. This lack of notification has been of two kinds—notification as to the detailed basis for the comprehensive charges that have been made, and notification as to the subject matter to be covered at each day's hearing.

As to the first, the Commission was charged as long ago as May 22 with "incredible mismanagement," "maladministration," "equivocation," "misplaced emphasis," and "waste." Since that time a number of specific areas of Commission activity have been the subject of public hearing. It is not, however, yet clear in what respects the management and administration, the systems, the procedures, and the controls are being attacked as inadequate. It is not clear, for example, whether the charges against the Commission in the field of several specific aspects of security represent anything more than disagreement with the exercise of the Commission's judgment in administering the Atomic Energy Act. Nor is it clear, for example, whether the broad charges relate to the Commission's policy of carrying out its major programs through private contractors—or whether, as a further example, the charges relate to the Commission's policy of labor relations in atomic energy plants.

We consider it very important that the Commission be notified not only of the specific subject matter to be discussed but also be notified as to what part of its management, structure, and practices are being condemned. In our opinion the existing procedures place the Commission in a position which has little precedent in government proceedings or courts of justice. Grave and comprehensive charges have been made against the Commission, and yet from day to day it is in ignorance of the basis for the particular charges that are presented in public hearings.

As to the second aspect of this problem, which relates to the lack of adequate advance notification of the subjects to be covered at each day's hearing, there is involved much more than a problem of determining staff attendance. The present lack of notification places the Commission at a serious disadvantage in responding to the charges.

Furthermore, certain of the charges have involved the operations of the Commission's contractors. Under existing procedures these contractors cannot be present at the time charges are publicly made which go directly to their competence and effectiveness. Also because in many cases they are the only ones with detailed knowledge of the facts in question, charges have been left hanging in the air for several days which might otherwise have been cleared up in a short time if the Commission had been notified and could therefore have called them to Washington ahead of time. For example, without prior notice, questions were asked on June 6 about a directive issued by the Austin Company in connection with its work for the Commission at the Argonne National Laboratory. After this hearing we requested contractor representatives to come to Washington and on June 8 a full explanation of the directive was given to the Committee by Mr. Charles K. Weldner, Project Engineer of the University of Chicago, supervising the work of the Austin Company.

An additional problem arises in connection with discussions of personnel security cases where the only complete personnel security files containing the relevant FBI reports have been transmitted by the Commission to the Joint Com-

mittee. In these instances the Commission should have sufficient advance notification of the cases to be discussed to permit us to recover the files from the Committee for detailed study prior to the hearing.

For these reasons we respectfully request in the interests of a fair, orderly, thorough, and expeditious examination of the charges against the Commission, that detailed agenda of the specific subjects to be covered be made available to the Commission at least forty-eight hours in advance of the hearing. We recognize that in some cases events may occur which make it necessary to change the agenda. However, if this procedure were established, we are convinced that the public interest would be served.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
DAVID E. LILIENTHAL, *Chairman*.

---

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., June 15, 1949.*

HON. BRIEN MCMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
U. S. Capitol, Washington, D. C.*

DEAR SENATOR MCMAHON: We have been informed by Dr. W. H. Zinn, Director of the Argonne National Laboratory, that representatives of the Joint Committee have requested that he appear and testify tomorrow regarding the misplaced uranium at that laboratory.

We understand from Dr. Zinn that he will have with him a large number of his assistants in order to be as fully responsive to the questions of the Joint Committee as possible. We would like to point out, however, that there are certain matters regarding the missing uranium upon which neither Dr. Zinn nor representatives of the Commission can fully testify because certain phases of the investigation of the missing uranium were under the direction of the Federal Bureau of Investigation. For example, the FBI conducted the investigation in regard to the fingerprints on the bottle.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
DAVID E. LILIENTHAL, *Chairman*.

---

### APPENDIX 3

(The material contained in this appendix comprises letters, press releases, and statements submitted by members of the Joint Committee on Atomic Energy.)

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., July 14, 1949.*

HONORABLE BRIEN MCMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
Senate Office Building.*

DEAR SENATOR MCMAHON: At the hearing of June 24, Senator Hickenlooper stated "My record shows that January 1, 1947 to September 22, 1948, Kruger received \$2,252,343.31 in architect fees" (page 643). Later in the morning the Chairman of the Joint Committee referred back to this figure (page 660).

This letter is written to correct the impression that may have been left by the testimony that the figure of \$2,252,343.31 represents fees or profits to the W. C. Kruger company. The figure given by Senator Hickenlooper represents total payments to the Kruger company between the two dates on lump-sum and unit-price contracts. These payments represent the total price of the work. Any profit accruing to the Kruger company is the difference between the payments and the costs incurred by Kruger.

Subsequent to September 22, 1948, additional payments in the sum of \$242,572 were made to Kruger for further work performed under these lump-sum contracts. In addition a partial payment remains to be made for work performed under one or the lump-sum contracts. The amount of this payment is now being

negotiated with Kruger. These payments, of course, include the total price of work performed and not merely profit.

We would appreciate it if this letter were made a part of the record of the current hearings.

Sincerely yours,

CARROLL L. WILSON, *General Manager.*

---

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
July 27, 1949.

Mr. TOM J. McGRATH,  
*General Counsel, Fuels Research Council, Inc.,  
324 Shoreham Building, Washington 5, D. C.*

DEAR MR. McGRATH: Your letter of July 20 requests a hearing on behalf of certain clients on H. R. 5147.

Since no such hearing is now scheduled by the Joint Committee on Atomic Energy, to which this bill was referred, I am taking the liberty of including your letter in the appendix to the hearing on the Atomic Energy Commission. You will recall that the subject matter of your letter came up for discussion at these hearings.

Sincerely yours,

BRIEN McMAHON, *Chairman.*

---

FUELS RESEARCH COUNCIL, INC.,  
Washington 5, D. C., July 20, 1949.

Honorable BRIEN McMAHON,  
*Chairman Atomic Energy Committee,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR McMAHON: Under date of June 29, 1949, I wrote you on behalf of certain clients requesting a hearing on H. R. 5147. In that letter I called attention to the fact that claims had been made that the installation of natural gas for boiler fuel as the Oak Ridge plant of the Atomic Energy Commission would result in a saving of \$1,250,000 per year. In connection with that matter I stated, "While this may have been substantially true at the time that the Atomic Energy Commission contracted for a supply of natural gas, reductions in the price of coal have since materially decreased, if not entirely wiped out savings that might otherwise have accrued."

At the request of the Atomic Energy Committee bids have recently been furnished covering a future supply of substantial quantities of coal for the Oak Ridge plant. One of the bids filed by one of the largest and most substantial of the southern coal producers offered coal conforming with the required specifications at \$4.50 per ton delivered at the plant. To this must be added, according to the testimony of Mr. Walter J. Williams, Director of Production for the Atomic Energy Commission, 24c per ton for handling and firing, making a total cost of placing the coal under boilers of \$4.74 per ton. The specifications call for coal possessing a calorific value of 13,200 Btu per pound. On this basis coal can be used as a fuel at a total cost of 17.95c per million Btu. The equivalent cost for gas would be 21.75c.

The bid to which I referred calls for the delivery of 10,000 tons of coal per day which would equal approximately one-half of the total coal requirements for Oak Ridge plant. I do not have the exact figures for other bids which were submitted, but it is reasonable to assume that they would approximate \$4.50 per ton. In order to approximate a break-even price as between coal and natural gas for an additional 10,000 tons per day, it would be necessary that the price of coal delivered plus handling would aggregate \$6.50 per ton. It will therefore be seen that coal at present prices can be purchased for the Oak Ridge plant at substantially lower cost than natural gas can be obtained for the same purpose.

If and when the hearing is held on H. R. 5147, we will be prepared to present figures showing what the total cost of the coal supply would be as well as an exact figure as to what the saving would be based upon the total coal requirements of the Commission.

There has also come to my attention through the medium of a press release excerpts from a statement purportedly filed with you by Mr. Wade V. Thompson,

president of East Tennessee Natural Gas Company, in which he is reported as stating that the Oak Ridge line will serve customers other than the Atomic Energy Commission. This statement cannot be accepted as categorically correct. It is subject to a number of speculative contingencies. The original plan of East Tennessee was to extend the pipe line beyond Oak Ridge in a northeasterly direction 137 miles to Bristol, Tennessee with a lateral line to Johnson City, Tennessee. The Tennessee Gas Transmission Company which proposes to supply gas for East Tennessee Natural Gas Company has a service agreement with East Tennessee which limits the former's obligation to supply gas for a certain defined area in eastern Tennessee. While this area includes the Oak Ridge plant, it does not include Bristol or Johnson City nor, in fact, any communities of substantial size east of the Oak Ridge plant.

Tennessee Natural Gas Company has up to the present time refused to sell gas to East Tennessee for the Bristol-Johnson City area. As a matter of fact its contract with East Tennessee has recently been modified so as to place a limitation upon quantities of gas to be served to East Tennessee for transportation in its presently authorized facilities. Such limitation can only be exceeded if East Tennessee makes a request two years in advance for additional quantities of gas, and then only if the Tennessee company has gas available to increase this service.

The present demand on the Tennessee company's line as well as its disclosed plans for expansion into other areas make it very doubtful that that company will ever agree to serve gas for the Oak Ridge line in excess of the amounts presently contracted for. There are no communities within the economically feasible serving distances along the proposed Oak Ridge line.

I am merely giving you a sketchy outline of the conditions and will be prepared to elaborate on them in greater detail if a hearing is granted. I repeat that I believe that the findings of your committee that the substitution of gas for coal at Oak Ridge will be contrary to the broad public interest are fully justified. I believe that your committee would be interested in knowing all the facts concerning this proposal so that necessary legislative steps may be taken to safeguard the public. I reiterate my request that we be granted a hearing on H. R. 5147.

Respectfully yours,

TOM J. McGRATH, *General Counsel.*

---

1205 GEORGE WASHINGTON WAY,  
Richland, Washington, August 30, 1949.

Senator BRIEN McMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
Washington, D. C.*

DEAR SENATOR McMAHON: I have just read the reports on the recent hearings before your Committee. Questions asked of others regarding my salary at Oak Ridge, Tennessee, and my background were inadequately answered.

My salary with Stone and Webster Engineering Corporation at Oak Ridge was \$35,000 per year, plus \$1,800 per year living expense. Both amounts were nonreimbursable.

I attended Massachusetts Institute of Technology for three and one-half years, at which time I left to enter the Army during World War I. I have been continuously engaged in engineering and construction activities since the close of World War I.

I performed the following work during the recent war. All of these tasks were unsolicited on my part. Attached are letters of commendation pertaining thereto:

1. In charge for the War Department of construction of the Munitions and Chemical Warfare Plants program (over four billion dollars).

Letter from General Leslie R. Groves, dated October 21, 1942.

Letter from General E. Reybold, dated October 12, 1942.

2. In charge of construction of the Synthetic Rubber plants program (about \$750,000,000).

Letter from William Jeffers, dated September 14, 1943.

Letter from Bradley Dewey, dated September 11, 1945.

3. General manager in charge of construction of Atomic Bomb Plant for Stone & Webster at Oak Ridge, Tennessee (over \$400,000,000).

Letter from Colonel K. D. Nichols, dated August 6, 1945.

4. Citation accompanying Award of the Medal for Merit by the President of the United States.

5. Since November 1, 1947, Manager, Design and Construction for General Electric Company at Hanford, Washington, Atomic Energy Works. (About 300 million dollars).

Sincerely yours,

(S) Frank R. Creedon.  
FRANK R. CREEDON.

CE 201 (Creedon, Frank R.) SPEKK.

OCTOBER 21, 1942.

Mr. FRANK R. CREEDON,  
*War Department, Office of the Chief of Engineers,  
Washington, D. C.*

MY DEAR MR. CREEDON: I cannot begin to tell you how much I regret your departure from the Office of the Chief of Engineers, despite the fact that I know that it is to the best interests of the United States that you be released in order that you may be free to insure the satisfactory completion of the rubber program.

The War Construction Program is well along towards completion, and it can now be carried on successfully, although not so easily, without your help. Your handling of over \$4,000,000,000 worth of construction in the Ordnance and Chemical Warfare programs involving the most complicated problems of engineering, procurement and construction, has been eminently satisfactory. I have always placed the utmost confidence in you, and you have never disappointed me. Your success has undoubtedly been enhanced by the organization serving under you. There is no question but that this organization, both as to the original selection of the personnel and as to its efficient operation, is distinctly your handiwork.

Your attention to duty, your good judgment and sound engineering and your diplomatic handling of the many difficult situations we have had to meet is fully recognized. May I assure you again how much I appreciate your personal loyalty to me during the last two strenuous years. You and your organization have rendered the United States a noteworthy service, and one of which you can and should always be proud.

Sincerely,

(S) Leslie R. Groves,  
LESLIE R. GROVES,  
*Brigadier General, Corps of Engineers,  
Deputy Chief, Construction Division.*

OCTOBER 12, 1942.

Mr. FRANK R. CREEDON,  
*Office, Chief of Engineers,  
Washington, D. C.*

DEAR MR. CREEDON: I am informed of the request of F. H. A. for your transfer, and of your desire to withdraw your letter of resignation, dated September 29, 1942, and to accept such transfer, effective October 31, 1942, in view of the approaching completion of the munitions plants construction program and your desire to find service in some other part of the war effort where the need is greater. This office will accede to your wishes and interpose no objections to such transfer.

Your immediate chief, Colonel F. S. Strong, head of the Operations Branch, Construction Division of this office, had by indorsement recommended the acceptance of your previously submitted resignation with regret and had stated in his indorsement that "Mr. Creedon's services as Chief of the Munitions Plants Section have been outstanding. To him and his able assistants is due great credit for the successful prosecution of this very important phase of the construction program."

I concur fully in Colonel Strong's expression, not only of regret of your leaving our organization, but of the outstanding services you have rendered in the organization and operation of the Munitions Plants Section of this office. Your direct superiors as well as other members of the organization of the Office of the Chief of Engineers who have come into contact with you and your assistants have all spoken to me of the highly efficient conduct of the operations of your Section, and I am aware that much of this efficiency has been due to your own experience

and ability in selecting and inspiring your competent assistants and in organizing and administering your work, to your tact and diplomacy in representing this office in its relations with the Ordnance Department and Chemical Warfare Service, and to the tireless effort you have given to driving your part of the construction program to the earliest possible conclusion.

You will leave this office with the admiration, respect and best wishes for your future career of every member of our organization who knows you and your work.

Very truly yours,

(S) E. Reybold,  
E. REYBOLD,  
Major General,  
Chief of Engineers.

W. M. JEFFERS,  
President, Union Pacific Railroad.

SEPTEMBER 14, 1943.

(Personal.)

Mr. FRANK R. CREEDON,  
Room 4153, New Municipal Building,  
300 Indiana Avenue NW, Washington, D. C.

DEAR FRANK: Now that I have returned to my desk in the Union Pacific Headquarters Building, and am back doing the job that I know best, viz., rail-roading, I can look back and more clearly evaluate the great job you have done in the synthetic rubber program.

I never claimed any knowledge of chemistry or of chemical engineering, in fact I have never assumed a speaking acquaintance with either, but I do claim to have some knowledge of construction; and so I can say with a great deal of emphasis that you and your organization did the greatest job of construction that I have ever seen. Your knowledge of details, your ability to get right to the point and also to maintain the sustained drive is, of course, the answer.

In expressing my thanks and appreciation for a job well done I want to tell you also how much the close association with you and your organization has meant to me during the past year. It has been my privilege down through the years to have been associated with some real men, and, at the moment I can think of no one that quite approaches the stature of Frank Creedon.

I hope that our paths will cross often, and that in the years to come I will be privileged to meet up with you frequently.

Remember me affectionately to your fine wife.

With all good wishes.

Sincerely,

(Signed) WM. JEFFERS.

BRADLEY DEWEY,  
President.

DEWEY AND ALMY CHEMICAL COMPANY,  
Cambridge, Mass., September 17, 1945.

Mr. FRANK CREEDON,  
Office of War Mobilization and Reconversion,  
The White House, Washington 25, D. C.

DEAR FRANK: The time has come when I want to put on paper to you my appreciation of the wonderful part you have played in this war.

To start off with you built the plants that gave the Army the powder to shoot with. Then you built the synthetic rubber plants that let the military and essential civilian population stay on wheels. And to cap the climax you stepped into the breach when everything was going to pot and built the plant that made possible the bombs that finished off Japan.

Many men have saved a life or many lives. Some have received no reward. Others have been highly publicized. Your contributions have not only saved hundreds of thousands of lives but have truly saved the country. I glory in having known you and in the attitude with which you have placed the good of your country ahead of everything else in every one of your duties. Good luck to you.

Best regards.

Very sincerely yours,

(Signed) Bradley.  
BRADLEY DEWEY

## ATOMIC ENERGY PROJECT

ARMY SERVICE FORCES,  
UNITED STATES ENGINEER OFFICE, MANHATTAN DISTRICT,  
August 6, 1945.

Mr. FRANK CREEDON,  
601 19th Street NW, Washington, D. C.

DEAR MR. CREEDON: With the mutual congratulations and general all-round excitement caused by the announcement of the dropping of the first atomic bomb on Hiroshima, comes the realization that the Manhattan District owes much to many persons for their outstanding work which made the announcement possible.

Among those persons, you come first to my mind. We can never thank you enough for stepping in and putting your shoulder to the wheel at the time when our most important vehicle was bogged down in the mud of disappointment and despair. Your ability to take control of a complicated job, apparently hopelessly behind schedule, with difficulties apparently unsurmountable to your predecessors, to revitalize it and get it back on schedule was an inspiration to us all.

Please accept my personal thanks for your contribution to the Manhattan District project.

Sincerely,

(Signed) K. D. NICHOLS,  
Colonel, Corps of Engineers, District Engineer.

---

CITATION TO ACCOMPANY THE AWARD OF THE MEDAL FOR MERIT TO  
FRANK R. CREEDON

FRANK R. CREEDON for exceptionally meritorious conduct in the performance of outstanding service to the War Department, in brilliant accomplishments involving great responsibility and technical construction ability in connection with the development of the greatest military weapon of all time, the atomic bomb. As Project Manager directing construction of one of the largest and most vital plants for the production of material for use on this project during a crucial stage of the program, between 1944 and 1945, his driving force and energy, his technical experience and skill, his diplomatic handling of difficult situations, and his unswerving devotion to duty contributed immeasurably to the attainment of the objective. Mr. Creedon's accomplishments reflect great credit upon himself and upon the military service.

HARRY S. TRUMAN.

JANUARY 12, 1946.

---

CITY OF KNOXVILLE, TENNESSEE,  
August 31, 1949.

HON. BRIEN MCMAHON,  
United States Senator, Senate Office Building,  
Washington, D. C.

DEAR SENATOR MCMAHON: Enclosed herewith is a resolution adopted by the Council of the City of Knoxville expressing full confidence in David E. Lilienthal, and commending him for his leadership and executive ability as former Chairman of the Tennessee Valley Authority, and as present Chairman of the Atomic Energy Commission.

This resolution was spread on the minutes of the Council on August 30, 1949.

Yours very truly,

J. W. Elmore, Jr.,  
J. W. ELMORE, JR.,  
Mayor.

[Resolution No. 1679]

A RESOLUTION EXPRESSING FULL CONFIDENCE OF THE COUNCIL OF THE CITY OF KNOXVILLE IN DAVID E. LILIENTHAL, AND COMMENDING HIM FOR HIS LEADERSHIP AND EXECUTIVE ABILITY AS FORMER CHAIRMAN OF THE TENNESSEE VALLEY AUTHORITY, AND AS PRESENT CHAIRMAN OF THE ATOMIC ENERGY COMMISSION

Whereas it appears that David E. Lilienthal, Chairman of the Atomic Energy Commission, is being investigated by certain members of the Congress of the United States regarding his management of the atomic energy program, and

Whereas David E. Lilienthal served with the Tennessee Valley Authority from June 3, 1933, until October 28, 1946, at which time he was appointed to his present position, and

Whereas David E. Lilienthal is a former resident of the City of Knoxville and the City of Norris, Tennessee, and much beloved and respected by his fellow citizens, and

Whereas under the direction and guidance of David E. Lilienthal, the Tennessee Valley Authority was greatly expanded and converted to fulfill its national defense function during war years, and

Whereas the Tennessee Valley Authority has proved itself in control of water in the rivers, upbuilding of the soil and forest, industrial development, and providing electric power for peacetime and defense purposes, and

Whereas the Tennessee Valley Authority, with its dams, lakes, flood control and electric power, has helped make this part of our great nation a better and happier place in which to live and work, and

Whereas much of the success of the Tennessee Valley Authority and the Atomic Energy Commission can be attributed to the leadership and executive ability of David E. Lilienthal, and

Whereas it is desired that this sentiment of the Council of the City of Knoxville be conveyed to Harry S. Truman, President of the United States; Senators K. D. McKellar and Estes Kefauver of Tennessee; Representative John Jennings, Jr., of the Second Congressional District of Tennessee; Senator Brien McMahon, Chairman of the Senate Atomic Energy Commission, and David E. Lilienthal: Now, therefore, be it

*Resolved by the Council of the City of Knoxville:*

SECTION 1. That this Council express full confidence in David E. Lilienthal, and commend him for his leadership and executive ability as former Chairman of the Tennessee Valley Authority, and as present Chairman of the Atomic Energy Commission.

SEC. 2. That a copy of this resolution be forwarded to the persons named in the preamble and spread on the minutes of the Council.

J. W. ELMORE, Jr.,  
*Presiding Officer of the Council.*

\_\_\_\_\_, *Recorder.*

[From the office of Senator Brien McMahon. For immediate release, Wednesday, May 18, 1949]

The Joint Committee on Atomic Energy has gone over with the Atomic Energy Commission and staff the matter of the reported loss of enriched uranium oxide at the Argonne National Laboratory.

The facts reported by the Commission at this time show that this shortage of uranium oxide was first discovered by the Laboratory on February 8, 1949. The item missing was a small container of uranium oxide which had been produced by oxidation, or burning, or machine turnings from a bar of uranium.

This is an important point because it indicates the care which must be taken with all the process residues. Machine turnings, scraps, waste, sweepings, drainings and all forms of residues from machine and chemical operations, are collected and treated to recover and reuse the uranium. The small container of oxide was to have been sent to a vault for safekeeping. It was recorded as being part of a shipment to the storage vault on September 16, 1948 when a section of the laboratory was moved. When the material in this shipment was to be used again, one container containing approximately one ounce of U-235 in uranium oxide was missing. This was determined on February 8, 1949.

The Laboratory started a search for this material and, being unable to find it, notified the Commission representatives at Chicago on February 14. An intensive investigation was begun at that time into the handling of the receptacle prior to its placement in the safe. When the container itself was not found, the FBI was notified on March 28.

In the meantime the Commission reports samples were taken from all the containers for residues in the section of the laboratory where the material had been used. The samples had to be purified, concentrated and put into the pile and tested in order to determine the presence of U-235. The container which was thus found to contain some of this material was sent to Oak Ridge for detailed analysis. A preliminary report by the Commission shows that six-sevenths of the missing material was contained in this drum.

The Commission is continuing analysis and tests to eliminate doubts as to the identity of this material. The Commission reports, however, that the degree of enrichment permitted identification of the material since there was no other material of this exact composition in the laboratory. While the analyses and investigation are not complete, it appears from the report of the Commission that the material was not surreptitiously removed from the premises. The FBI has indicated that in its opinion no espionage is involved in this case. As matters stand now, one-seventh of an ounce of material is not accounted for. A seventh of an ounce of U-235, should it not be accounted for, would be of value in chemical and physical research. However, it is of no value for use in an atomic weapon.

The investigation is continuing and the Joint Committee is determined to get a full and satisfactory accounting of this matter, particularly with respect to the accounting system which would permit such a situation to develop.

The Chairman of the Joint Committee was notified of the shortage on April 27 in a Top Secret report. Action by the Committee was deferred pending completion of the FBI investigation and submission of a final Commission report.

---

[From the office of Senator Brien McMahon. For release upon delivery, Thursday, May 19, 1949]

STATEMENT BY SENATOR BRIEN MCMAHON IN UNITED STATES SENATE, MAY 19, 1949

Mr. President, yesterday afternoon, a three-hour session was held by the Joint Committee on Atomic Energy with the members of the Atomic Energy Commission and its staff, relating to the loss of some uranium-235 in the Argonne Laboratories in Chicago.

At eight o'clock last night I issued a statement which I ask to be printed at this point in my remarks. The statement was a report to the people of the United States of the facts as given to us by the Atomic Energy Commission. I now call particular attention to the fact that I stated that it was my intention to conduct a most searching and intensive investigation of their report and every aspect of this matter as quickly as possible.

Quite frankly, there are several aspects of the matter with which I am not satisfied and which obviously need vigorous attention. Members of the staff of the Joint Committee have been and are now engaged in gathering first-hand facts on this matter. Some of the staff are now in the field.

When our investigation is completed, it is my belief that open hearings on the matter should be held. The matters developed in the executive session were largely not of a secret nature. This is the Public's business and we must, as the watch-dog Committee of the Congress, keep the public informed as to the true facts on the management of the Commission. Obviously, this does not include information which must be kept secret in the interest of national security.

The Committee will meet in executive session on Monday, and at that time, I intend to take up with the Committee the matter of holding public hearings.

With regard to the matter of one Freistadt, who was heard by the Committee yesterday, it is, I think, the unanimous opinion of the Joint Committee on Atomic Energy that public funds should not be used to make gifts to members of the Communist Party. It is quite possible that Freistadt is not the only case, and I propose to see to it that we shall continue our investigation until we become satisfied that there are no Communists in the Atomic Energy program.

---

[Statement from the office of Senator B. B. Hickenlooper, May 22, 1949. For immediate release]

In the national interest the time seems to have come for some plain talk about the Atomic Energy Commission. The AEC is now staggering under daily disclosures of evidence of incredible mismanagement; the Joint Congressional Committee is about to begin a series of public hearings which could turn into a carnival of confusion; so, as a senator who has devoted most of the last three years to this subject, I feel it my duty to speak plainly before major damage may be done to our atomic energy establishment and to the principle of civilian control.

On the matter of the missing uranium the facts are:

1. A container of about 9 or 10 ounces of uranium oxide enriched with 32 grams of uranium 235 was discovered missing at the Argonne National Laboratories, Chicago, on February 8, 1949.

The AEC Chairman, David E. Lilienthal, has attempted to minimize this quantity. He has sneered at the nation's "four-gram jitters." The truth is that for research in the field of weapon development this is a vast quantity of this precious material. Dr. Allan Nunn May, the British scientist, drew a ten-year prison sentence for stealing one one-thousandth of a gram of U-235; and we began building Hanford before we had as much as is still missing.

2. The AEC, in direct violation of its duty, did not notify the Federal Bureau of Investigation of this loss until March 28, 1949.

Mr. Lilienthal has declared that there was no suspicion of theft or espionage. This is completely untrue. The FBI was called in *only* because there was suspicion of theft and espionage; and though the trail was completely cold, the FBI made its investigation on the assumption of theft and espionage.

3. The AEC did not notify the chairman of the Congressional Committee until April 27, 1949, though the law requires that such notification be made immediately.

4. When this loss was reported publicly on May 17, 1949, by the New York Daily News, Mr. Lilienthal replied that the loss was trivial and that it was being partially recovered from "waste."

There is no satisfactory evidence to support this claim. It is true that some U-235 is being recovered from waste—this is a process which goes on constantly—but there is no satisfactory evidence that what is now being reclaimed is, indeed, from the missing parcel.

We have no conclusive evidence that a theft has been committed; but neither do we have conclusive evidence that a theft has not been committed.

What makes this situation deeply disturbing to me and other colleagues is this: We have learned from the records that there are numerous persons employed on our atomic projects who have strong communistic leanings. We have urged Mr. Lilienthal to adopt a realistic attitude toward these dangerous persons, but he has not been responsive to our urgings. And if two-thirds of a pound of uranium compound can disappear without either the FBI or the Joint Committee being notified for six weeks, how can a responsible member of Congress have any confidence in Mr. Lilienthal's management?

In the matter of the fellowship program the situation is this:

Tomorrow Dr. Isidore S. Edelman, a 29-year-old scientist, will appear before the Congressional Committee to try to salvage his career. He is, no doubt, a brilliant young man; and the publicity given him is tragic to himself, perhaps even to the nation. But this is a tragedy which must be laid at Mr. Lilienthal's door.

Dr. Edelman had earlier applied for work in the AEC laboratories but the AEC's own security department ruled that he could not be cleared for access to restricted atomic information. When Mr. Lilienthal insisted in the face of this report on awarding Dr. Edelman a fellowship, the Joint Committee warned him that he was being unrealistic and unfair.

A student or his wife having been attracted by Communism does not render him ineligible for public education in America. It doesn't render him ineligible for aid from private foundations. But because of the realities of our time, because there is a Communist conspiracy against democracy and peace in the world, it does render him ineligible for education in the atomic field at Government expense.

Because of this reality, Mr. Lilienthal was urged to approve no student for an AEC fellowship until the applicant had been given an FBI investigation. Mr. Lilienthal flatly refused to admit even the propriety of investigation; and Dr. Edelman's tragic experience is the result of this doctrinaire obstinance.

It is my hope that after Dr. Edelman's appearance the necessity for making public spectacles of Mr. Lilienthal's mistakes will be eliminated. I hope that the AEC will quietly cancel all fellowships of students who cannot qualify as good security risks.

Public hearings should, of course, be afforded those persons involved who themselves insist on it.

In addition to these two highly publicized flascos by Mr. Lilienthal and the AEC, in my opinion there is now perhaps even more serious evidences of maladministration. Our atomic program is suffering from equivocation, misplaced emphasis, and waste. There are a number of important problems the solution of which requires administration through the chairman of the AEC, which is competent, realistic, and courageous.

It is my considered opinion in the light of the record of the past 2 years, that the interests of the Nation can best be served by the President's requesting the resignation of Mr. Lilienthal.

MAY 22, 1949.

## STATEMENT BY DAVID E. LILIENTHAL, CHAIRMAN, UNITED STATES ATOMIC ENERGY COMMISSION IN REPLY TO SENATOR HICKENLOOPER

When the Atomic Energy Commission assumed its responsibility 2½ years ago, the atomic weapons position of this country was nothing less than tragic. Continuity of production of fissionable materials was threatened. The morale of scientific forces was at a very low ebb. No real inventory of fissionable materials or of secret documents existed. The state of physical security was defective. The crucial supply of raw materials was tenuous.

Today, the Project requires continual improvement, of course, but the United States of America now has a substantial stock pile of atomic weapons, including those of new design. The production of atomic materials has been made secure and very greatly increased. The raw materials supply situation has been vastly improved. Business accounting methods have been installed and secret documents and fissionable materials inventories developed. The morale of scientific talent has been restored. Development of peacetime applications has made a favorable beginning.

The Joint Congressional Committee on Atomic Energy has had reported to it by the Commission at frequent intervals during the past 2½ years, largely in secret and top secret reports, the full story of the substantial progress of this country in atomic energy. By reason of these reports, the Committee knows of this Nation's preeminence in the world today. The sole exception to this reporting is in the number of weapons, which information, at the Committee's own request, is not supplied to it. This information is, of course, reported to the President and the Joint Chiefs of Staff.

The accomplishment of this advance in this period of time is the answer to Senator Hickenlooper's vague and ungenerous indictment.

---

[From the office of Senator Brien McMahon. For immediate release, May 25, 1949]

Senator Brien McMahon, Chairman of the Joint Committee on Atomic Energy, announced today the appointment of Dr. Ernest Thiele, Assistant Director of Research of the Standard Oil Company of Indiana, to act as the Committee's Consultant in the matter of the reported loss of U-235 at the Argonne National Laboratories in Chicago.

Dr. Thiele will make an independent survey of the scientific data which has been presented, and will be presented to the Committee, relating to this loss.

The officials of the Argonne Laboratory, headed by Dr. Zinn, have assured the Committee that the material that has been recovered at Oake Ridge from a waste container is the missing material, with the exception of one-eighth of an ounce.

Dr. Thiele will check on the investigation and render an independent report to the Committee as to his conclusions on the matter.

Dr. Thiele has been for 24 years a member of the Research Staff of the Standard Oil Company of Indiana. He was graduated with an A. B. degree from Loyola in 1916. He received a Bachelor of Science degree in chemical engineering in 1919 at the University of Illinois. In 1923, he was awarded a Master of Science degree by the Massachusetts Institute of Technology, and a Doctor of Science degree by the same University in 1925.

Senator McMahon stated that he believed Dr. Thiele to be an outstanding scientist and a man of distinguished accomplishments in the field and that his independent judgment will be extremely valuable.

Dr. Zinn, when he testified before the Joint Committee, heartily endorsed the suggestion that an independent effort be called in—so that the American people could be absolutely certain that the situation had been properly and completely investigated.

---

LETTER FROM SENATOR BRIEN MCMAHON, CHAIRMAN OF THE JOINT COMMITTEE ON ATOMIC ENERGY, TO SECRETARY OF DEFENSE LOUIS JOHNSON, AND REPLY FROM SECRETARY JOHNSON TO SENATOR MCMAHON

JUNE 2, 1949.

The honorable the SECRETARY OF DEFENSE,  
Washington.

MY DEAR MR. SECRETARY: In connection with the current investigation of the Atomic Energy Commission, it has been alleged that the Armed Forces are some-

how involved. According to these allegations, the Armed Forces desire military control of atomic energy and they are dissatisfied with present guiding civilian principles.

I just want to ask whether or not there is any truth in these allegations. Your comments would be very much appreciated.

Sincerely yours,

(S) BRIEN McMAHON, *Chairman.*

JUNE 6, 1949.

HON. BRIEN McMAHON,  
*United States Senate, Washington 25, D. C.*

MY DEAR SENATOR: This will reply to your letter of June 2, 1949, asking me to comment on the report that the Armed Forces desire military control of atomic energy and they are dissatisfied with present guiding civilian principles.

The Military Establishment has not attempted, and will not attempt, to take atomic energy away from civilian control and turn it over to the military. We have had no desire to handle the matter. We have none now. We want none of it in the future. We have plenty of jobs of our own to handle. I intend to see to it that this attitude is maintained by the Military Establishment.

It may interest you to know that in his Annual Report to the President and the Congress, Secretary of Defense Forrestal went on record to this same general effect. At page 16 of his report, he said "I want to record my personal satisfaction with the existing statute governing matters in the field of atomic energy, and to express my pleasure, also, at the way in which relationships between the National Military Establishment and the Atomic Energy Commission are being conducted."

With warm personal regards, I am,  
Sincerely yours,

(S) LOUIS JOHNSON.

UNITED STATES DEPARTMENT OF COMMERCE,  
NATIONAL BUREAU OF STANDARDS,  
*Washington 25, June 8, 1949.*

HON. BRIEN McMAHON,  
*United States Senate, Washington, D. C.*

DEAR SENATOR McMAHON: I see by the morning paper that reporters asked you whether I have asked to appear before the Joint Committee on Atomic Energy of the Congress in connection with current hearings on the work of the Atomic Energy Commission. The matter was brought up in connection with the statement that Senator Frank Graham, of North Carolina, made such a request. As you know, Senator Graham and I have in common the fact that Mr. Lilienthal testified that we were cleared by the Atomic Energy Commission for access to restricted data after the Commission received adverse recommendations about us from its own staff.

I think you know my general position. It is that of complete willingness to cooperate fully with your committee. Therefore, if your committee feels that that there is any way whatever that I can be helpful please let me know. On the other hand, I am not asking to be called up because your committee has a very full schedule and I am myself heavily loaded with urgent scientific work.

It is a matter of public record that I have been subjected to unfair attacks since the spring of 1947. A particular one of these was fully analyzed in a speech before the House of Representatives by Congressman Chet Holifield (Cong. Rec., July 22, 1947). Later I was made the subject of a special report of a subcommittee of the House Committee on Un-American Activities released to the press on March 1, 1948. This report was also fully analyzed in a speech by Congressman Chet Holifield (Cong. Rec., March 9, 1948).

The files of your committee will show that within a few days after March 1, I wrote a letter to Senator Bourke B. Hickenlooper, who was then chairman of the Joint Committee on Atomic Energy, urging that a full investigation be made since atomic energy matters were involved. I took this letter to Senator Hickenlooper personally and spent about an hour discussing it with him. Since I never heard anything more about the matter from him, I think it was fair for me to assume that the committee, or least its chairman, Senator Hickenlooper, felt satisfied that there was no need to investigate further so far as my own case is concerned.

This is all the more so since so many members of that committee know me personally from the daily intimacy of the many meetings in the spring of 1946 when I had the honor of serving under you as scientific adviser to the Senate Special Committee on Atomic Energy of the Seventy-ninth Congress.

Several months later (on July 15, 1948) the Atomic Energy Commission made public a statement clearing me for access to restricted data in the matters falling within its jurisdiction. This statement is to be found in the Congressional Record but I do not have the exact reference at hand. So far as I know, this public action of the Atomic Energy Commission received no adverse comment from the Joint Committee on Atomic Energy or its chairman, Senator Hickenlooper.

Until a week or two ago I had not known that the Atomic Energy Commission had received an adverse recommendation from its staff. I have not the slightest idea therefore what kind of false accusations or malicious gossip led the staff to such an error of judgment. I do know that the members of the Atomic Energy Commission staff did not communicate with me in any way to give me a chance to reply to the allegations which led them to take the step they did. I think that this was not a good procedure, but I do not criticize the Atomic Energy Commissioners themselves for that.

Allow me to congratulate you on the care and thoroughness with which you are handling the present hearings. You are already aware of the fact, from our long association together while working on the legislation for the Seventy-ninth Congress, that I have some scientific and administrative background in atomic energy matters. If there is any way whatever that I can again be of help to your committee, please feel free to call on me.

With sincere best regards,

Sincerely,

E. U. CONDON, *Director.*

[Letter from Senator Brien McMahon, Chairman of the Joint Committee on Atomic Energy, to Secretary of Defense Louis Johnson, and Secretary Johnson's reply. For release Sunday morning, July 10, 1949]

JUNE 14, 1949.

The honorable the SECRETARY OF DEFENSE.

MY DEAR MR. SECRETARY: The Joint Committee on Atomic Energy has asked me to write you regarding photographs of atomic energy installations contained in two publications: (1) The Fifth Semiannual Report of the Atomic Energy Commission to Congress, and (2) an article entitled "The Atom and the Businessman" which appeared in the January, 1949, issue of Fortune magazine.

The Committee seeks an answer to such questions as the following: Does the National Military Establishment regard publication of the pictures as a security breach? Do your experts on target analysis and photo reconnaissance feel that damage may have been done to the United States? Have responsible generals or admirals expressed concern, prior to the present date, regarding the pictures? Was the Military Liaison Committee consulted, formally or informally, before publication? Has the National Military Establishment communicated with the Commission, formally or informally, with respect to any of the photographs? How do the pictures released by the Manhattan Engineer District bear upon the situation? Is it felt that damage to security, if any, accrued at the time they were released, or did separate damage accrue with publication of the Fifth Semiannual Report and the Fortune article?

These questions are not intended to be inclusive but merely to suggest the kind of information in which the Joint Committee is interested. Your comments will be greatly appreciated.

I am sending a copy of this letter to Mr. William Webster, Chairman of the Military Liaison Committee, and to Mr. David E. Lillenthal, Chairman of the Atomic Energy Commission.

Sincerely yours,

(S) BRIEN MCMAHON, *Chairman.*

THE SECRETARY OF DEFENSE,  
Washington, June 21, 1949.

HONORABLE BRIEN MCMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
United States Senate, Washington, D. C.*

MY DEAR SENATOR: I have your letter of June 14, 1949, regarding the photographs of atomic energy installations which appeared in the Fifth Semiannual

Report of the Atomic Energy Commission to the Congress and those pictures which appeared in the January 1949 issue of Fortune Magazine.

In order to place this matter in proper perspective, I should like to make several general observations at the outset. From a strictly military point of view, the release of any material (written or pictorial) which, either alone, or in conjunction with other material, makes publicly available any information of military significance not heretofore published, runs the danger of causing some harm from a security standpoint. The extent of such harm may vary in given cases from insignificant to extremely serious, and reasonable men may frequently differ as to the extent of harm, if any, in a particular instance. Moreover, in reaching a decision as to a specific release, the possibility and degree of such harm must always be balanced against the importance of keeping the public and the Congress as fully informed as possible on vital matters affecting the national security. Turning now to the photographs in question, I am of the opinion that their publication caused no significant harm, although it is true that at the time of publication some senior officers expressed deep concern. This concern was greatly lessened when it was learned that, in most part, republication only was involved.

Arrangements have been made with the Atomic Energy Commission to insure that in the future new photographs which show major atomic installations will be submitted to the National Military Establishment for military clearance prior to public release. I can assure you, however, that the National Military Establishment will, in reviewing such submissions, be as liberal as possible within such limits as are imposed by the interests of national security.

The photographs you mention were not specifically cleared with the Military Liaison Committee prior to publication, although nearly all of these pictures or similar ones had previously been released for publication and had been widely published. Some of the pictures used in the Fifth Semiannual Report and in Fortune appeared in the Princeton edition of the Smyth Report in 1945. Others have appeared in various scientific journals and newspapers during and since the Fall of 1945. However, the Atomic Energy Commission has been informed that the National Military Establishment is concerned over the possibility that pictures of this sort could result in an improper exposure of significant information.

You ask whether any responsible officers have expressed concern over the publication of these pictures. I referred to this matter at the end of the second paragraph but believe I should expand upon it here. It is only fair to say that in any case of this sort opinions shade over a very wide range and this one is no exception. Many officers hold the view that the Congress and the United States public are entitled to all possible information even at the risk of infringement upon security considerations and believe that these particular pictures were proper subjects for release. Other officers believe that once approved for release and very widely published, a subsequent issue is of no import. Some able officers feel that pictures such as these should never be released at all; still others even believe that despite extremely wide public circulation, photographs of his type should not be republished. In any event, however, the Atomic Energy Commission and I are in agreement that only information and photographs which do not jeopardize security will be released for publication in the future.

With kind regards, I am

Sincerely yours,

(S) LOUIS JOHNSON.

---

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C.

[Information for the press, No. 190. For immediate release, Tuesday, June 14, 1949]

Press dispatches today have carried statements concerning the costs of a facility constructed at Hanford Works at Richmond, Washington, by the General Electric Company for the Atomic Energy Commission. The Commission and the General Electric Company feel that facts pertinent to a consideration of the statement should at once be made public.

The original General Electric estimate of cost of this project made in December 1947, was \$6,255,000 for a facility which when completed will probably cost in the neighborhood of \$25,000,000. The original estimate was necessarily tentative because there were no detailed plans available at that time. Construction work was undertaken without awaiting completion of design because

the facility is of urgent importance to the national defense. In it is to be carried on the final refining and fabrication of plutonium metal.

Because of the great urgency of the project, construction was begun as soon as the design was started. Drawings were put into construction immediately upon their individual completion. This involved much doing over and undoing which is typical of this emergency method of operation and was fully realized at that time.

It is common knowledge that where speed is essential there must be some sacrifice in terms of cost.

As the project went forward, considerations of safety brought about changes in design. Plutonium is a deadly material. The General Electric Company and the Commission have modified the design of this plant to assure safety not only of the workers engaged in processing the material in the plant but also of people and animals even at considerable distances from the plant.

Design changes were made not only for safety but also to insure more dependable and continuous production of higher quality materials. These added to the cost.

The validity of these costs can be judged properly only in the light of the circumstances in which they were incurred. The overriding consideration was earliest possible completion of this vital installation because of its relation to the results of the 1948 Eniwetok tests. A part of it will be in production on June 27 and the remainder will be completed as rapidly as possible.

Taken as a whole, the record of design and construction at Hanford postwar, the Commission and the General Electric Company believe is a good one and should be laid before the American people. This can be done without disclosing secret information.

At Hanford between July 1, 1947, and April 30, 1949, 65 major construction projects were undertaken and have been completed or are in their final stages. The initial estimated cost of these projects was \$230,602,000. The presently indicated actual cost will be \$237,162,000, an overrun of approximately 3 percent in spite of increased costs of material and labor and necessary revisions in the original plans and the haste with which the work was done.

This construction program not only included piles for producing plutonium, chemical separation plants, and laboratories, but also houses, schools, sewage and water systems, a temporary village to house construction workers, etc., essential auxiliaries to the carrying on of the production work. In a program of this magnitude it is not at all uncommon to have projects which substantially exceed their estimated costs along with those that are completed for less than their estimates.

Another Hanford project in which there was a big percentage of overrun was the Junior High School where the original estimate was \$1,786,000 and the final cost approximately \$3,800,000. The original estimate was made before designs were at all complete and contemplated a conventional high school of 86,000 square feet of floor area. As finally completed, the school contains approximately 101,000 square feet, and provides facilities to adapt the building for use not only as a Junior High School but for many community activities for which Richland did not have other available and adequate facilities. Nevertheless the company and the Commission are of the opinion that the costs of school have proven to be high.

Both the Commission and the General Electric Company have for months been critically examining experience in construction projects to find ways of reducing costs and bringing estimates closer into line with final expenditures. Detailed reports on the matter have been made both by the staffs of the Commission and the Company. Some problems of cost estimating and controls have been overcome. However, if the Company and the Commission had waited to solve these problems before going ahead with the work on the plutonium fabricating facility, it would today be many months away from production. Rushing the work on this facility, though expensive, was the only choice consistent with the security of the United States.

---

[Statement by Senator Brien McMahon, chairman, Joint Committee on Atomic Energy, June 17, 1949. For immediate release]

The Joint Committee on Atomic Energy briefly discussed Mr. Price's belief that the article in Nation's Business for June 1949, written by William B. Huie entitled "Is The A-Bomb Secure," contained matter which breached security.

The Committee took note of the fact that Mr. David S. Teeple's name was contained in this article and was read into our record by Mr. Price yesterday. At the time, Mr. Price stated that he did not intend to cast any reflection on Mr. Teeple who, at the present time, is on leave as an inspector for the Air Force for the purpose of assisting Senator Hickenlooper in the preparation of his presentation of his charges against the Atomic Energy Commission.

Mr. Teeple was for two years the Deputy Director of the Joint Committee's staff under Senator Hickenlooper's chairmanship.

The Committee has authorized me to state, after hearing from Mr. Teeple, that it has full confidence in Mr. Teeple.

---

[Statement of Senator Brien McMahon, Chairman of the Joint Committee on Atomic Energy, June 23, 1949. For immediate release]

Today the testimony which the Joint Committee heard regarding the uranium inventory at Oak Ridge, Tennessee, is being published—in as much detail as national security permits.

This testimony suggests the difficult and complex problems involved in keeping track of the materials used in our atomic energy program.

As regards the production facility concerned in the present case, eighty people are employed to do nothing except analyze and account for materials. They conduct more than 2,000 separate analyses and weighings to arrive at their inventory figures. In each of these 2,000 analyses and weighings, there is an experimental error, over and above the process losses which inevitably occur in each phase of the manifold production operations.

The printed testimony states the precautions taken to protect our supplies of uranium. There are numerous fence barriers and barriers within barriers. There is the procedure for passes and identity cards. There are the armed guards and the regular lie-detector tests.

To prevent uranium dust from escaping through the air, there are electrical precipitators in the ventilating system. To be sure that nothing is thrown away, the production facility in question has no drains and no waste outlets. Every byproduct of production, whether in liquid, gaseous, or solid form, is analyzed for uranium. Each employee wears special clothing which is later burned so that any uranium adhering to it may be recovered. Such are a few of the elaborate safeguards now in effect.

I want to point out that so far as the present case is concerned, the FBI has been consulted and has stated that it believes its investigation must be delayed until after further inventory analyses have been made.

The Joint Committee will continue to follow this matter with meticulous attention.

---

[From the offices of Senator Brien McMahon, Chairman of the Joint Committee on Atomic Energy. For Monday, July 11, release]

The Joint Committee on Atomic Energy has received from its expert consultant, Dr. Ernest W. Thiele, a final report of his investigation into the circumstances surrounding the misplacement of approximately one ounce of uranium-235 in a glass container from the Argonne National Laboratory, and its reported recovery in a salvage can. Dr. Thiele is assistant director of research for the Standard Oil Company of Indiana.

Dr. Thiele has devoted several weeks of his time to interviewing personnel, visiting the Argonne and Oak Ridge laboratories, and scrutinizing all pertinent inventory, transfer, and analysis documents which pertain to this reported loss.

Dr. Thiele submitted a nineteen-page classified report to the Joint Committee, but the following is his own unclassified summary of this report:

"After a careful survey of the data (including analyses recently completed) relating to the disappearance of a jar of uranium enriched in the fissionable isotope, uranium-235, at the Argonne National Laboratory, I have reached the following conclusions:

"There can be no reasonable doubt that the enriched material detected by Argonne in the can of ordinary uranium scrap is the material which was in the missing jar.

"A perfectly accurate determination, either of the amount of uranium in the containers or the fraction of that uranium which was uranium-235, is not possible; there is always a margin of uncertainty in analytical work. The weight of

analytical evidence indicates that the amount of uranium-235 in the missing jar was between 30.3 and 31.7 grams (slightly more than an ounce). Similarly, the evidence indicates that the amount of uranium-235 in the enriched material found in the scrap uranium can was between 29.0 and 31.1 grams. Since these figures overlap, it follows that the best available data do not indicate the loss of any uranium, by theft or otherwise, but neither do they exclude the possibility that some small amount may have been stolen. The attendant circumstances make it extremely unlikely that any was stolen. The remaining uncertainty cannot be substantially reduced by any further measurement.

"The original report of a discrepancy of  $3\frac{1}{2}$  grams arose from an erroneous analysis of the amount of uranium-235 in the scrap uranium can. This analysis showed a content of uranium-235 lower than the correct value by about one-twentieth to one-tenth of 1 percent."

---

[Statement of Senator Brien McMahon, August 25, 1949. Immediate release]

On July 8, more than a month and a half ago, I wrote to all the members of the Joint Committee on Atomic Energy and asked that, if they had in mind any witnesses whom the Committee should call regarding the investigation of the Atomic Energy Commission, please to notify me. The next day I wrote Senator Hickenlooper requesting that he advise me as to matters which he desired to take up in executive session—and also asking whether or not he desired to examine any additional documents to be furnished by the Commission. To date I have received no reply letters.

More recently, the Joint Committee has held six meetings in executive session for the purpose of discussing personnel security cases; and at five of these, including the one today, a quorum was not present.

On August 2, after the second meeting at which a quorum failed to appear, I wrote all the Committee members and called their attention to this fact—saying in addition that it was obviously necessary to complete the investigation. On August 12, after three meetings without a quorum, I again wrote all members and included the following statement:

"\* \* \* I am sending you herewith a group of summaries of the FBI files and other relevant material relating to personnel security cases \* \* \* It was the opinion of those present this afternoon that each Joint Committee member should read the summaries, if he so desires, and be prepared at a meeting scheduled for next Thursday afternoon, August 18, at two o'clock, in Room 48-G, to make such comments as he wishes. The thought is that, in this way, we may be able to bring the matter of personnel security cases to a close during Thursday's session. If you desire to see the original files on any particular case, they can be delivered to your office."

On August 19, after the fourth meeting had taken place without a quorum, I once again wrote all the members, as follows:

"\* \* \* I am, of course, still aware of the pressing business which militates against attendance, but I do think that the time is rapidly approaching—in fairness to those who have attended, and in fairness to the Commission personnel \* \* \*—when we must either be in a position to do business on the personnel security cases or else declare that this matter, the last item on the agenda of our investigation of the Atomic Energy Commission, is terminated.

"Accordingly, after consultation with the members present yesterday, I am scheduling a meeting for next Tuesday night, August 23, at seven o'clock. A night session impressed us as desirable because at that time we could be fairly sure of avoiding conflict with other legislative affairs. Unless the Committee members, by their presence, indicate that they wish the hearings to continue, I don't see how, under the circumstances, I can help concluding that they have nothing more to pursue and that consequently they wish the investigation to be considered closed—in which case I will make an announcement to this effect."

The Joint Committee has, in all, devoted upwards of ten meetings to problems growing out of personnel security. Of 34 cases brought specifically to the Committee's attention, 14 or more have been discussed in considerable detail, and much additional meeting time has been spent considering the standards that should be applied in evaluating the Commission's personnel security decisions. Even further, summaries of all the 34 specific cases have been made available to individual Committee members for some time.

I feel that the Committee, as regards personnel security cases, has already done its job and done it thoroughly. Moreover, in the investigation as a whole, the Committee has spent nearly three months and has held 44 separate sessions—representing more than 120 hours of work and more than 15 full work days.

Except at recent meetings, when lack of attendance indicated recognition that all significant matters had previously been covered, the Committee members have worked diligently and conscientiously to make the investigation full, fruitful, and just. I want to express my appreciation of this contribution, made at a time when competing demands upon the members' attention have never been more pressing.

I believe that, in accordance with the principles which I enunciated at the start of the investigation, all parties concerned have had complete and fair opportunity to develop the facts and to present their respective cases.

Under all the circumstances—particularly in light of my August 19 letter, in light of the fact that the Committee has already laboriously explored personnel security problems, and in light of the further fact that most House members will be away from Washington beginning next week—I consider the Committee's investigation of the Atomic Energy Commission to be closed. Those present at the meeting today unanimously concur in this view. Of course the Committee will continue to perform its regular watchdog functions under the McMahon Act.

The Committee's immediate task, however, is the writing of a report to Congress on the investigation.

#### APPENDIX 4

##### ANALYSIS OF PRESS AND RADIO STATEMENTS REGARDING THE ISSUES INVOLVED IN THE INVESTIGATION INTO THE POLICIES AND ADMINISTRATION OF THE UNITED STATES ATOMIC ENERGY COMMISSION FOR THE PERIOD OF MAY 7 THROUGH JULY 31, 1949

The following is an analysis of press and radio statements, disseminated through leading metropolitan newspapers and broadcasting stations, regarding the issues involved in the investigation into the policies and administration of the United States Atomic Energy Commission. The press analysis is based on a review of 56 leading newspapers throughout the country during the months of May, June, and July.

The designation "pro" has been used to indicate substantial agreement with Senator Hickenlooper on a specific issue. The designation "con" has been used to indicate disagreement with Senator Hickenlooper and defense of Mr. Lilienthal on a particular charge. Articles or broadcasts which merely report the news have been listed as "news only."

Issues	Pro	Con	News only
Fellowships (favoring FBI investigations of all students, or at least loyalty oaths)			
AEC investigation:	4	33	38
General charges	40	141	197
Security	17	15	24
Lost uranium	4	13	25
Military control	6	12	9
Waste	17	12	19
Foreign shipment of isotopes	4	10	8
Town management	0	1	1
Total	162	237	321
Total number of items listed			720

*Analysis of public opinion regarding the issues involved in the investigation into the policies and administration of the Atomic Energy Commission*

Date	Issues	News items	Editorial	Columns	Radio	Pro	Con	News only	Sources quoted :
May 7	Fellowships requiring FBI investigation for all fellows.				X	X			AEC charged with not handling fellowship program properly and an investigation of the whole program is to be expected (Fulton Lewis, Jr., MBS).
May 10	Fellowships				X	X			Continuation of criticism of AEC's administration of the fellowship program (Fulton Lewis, Jr., MBS).
May 11	do				X	X			Do.
May 13	do				X	X			Do.
	do						X		Sees possibility of dilemma if FBI investigations are required (Edward R. Murrow, CBS).
	do						X		Thinks the Hans Freistadt case was an error and that there will be red faces at AEC over it; generally the program is well administered (Leif Eld, NBO).
	do	X						X	Senator Hickenlooper states his intent to seek a revision of the Atomic Energy Act if Communists are not denied grants (Baltimore Sun; New York Times; New York Herald Tribune; Washington Post; Spargo; Washington Times-Herald; Greene; Philadelphia Inquirer; New York Post; New York Journal American, May 12; Washington Star; New York Sun).
May 14	do	X						X	Senator McCarran advocates cutting off AEC funds unless Communists are barred from fellowship grants (New York Times; Washington Post).
	do	X						X	Senator Russell says he will support any move in the Senate Appropriations Committee to cut funds if AEC doesn't bar Reds (New York Sun; Washington Star).
	do	X						X	Story regarding Senator Hickenlooper's desire to have the Act changed if AEC doesn't bar Communists (New York Herald Tribune; Washington Times-Herald).
	do		X				X		(Washington Post.)
	do		X			X			(Washington Star.)
	do		X				X		(New York Times.)
May 15	do	X						X	Continuation of story re: movement to change the law if Communists are not barred from fellowships (New York Herald Tribune; Washington Times-Herald; Washington Star; New York Times; Baltimore Sun; Philadelphia Inquirer).
May 16	do				X	X			Continuation of theme (Fulton Lewis, Jr., MBS).
May 17	do	X			X	X		X	Criticizes Mr. Lilienthal on this issue (Earl Godwin, ABC). Mr. Lilienthal and Dr. Richards questioned in open hearing admit "mistake" in the Freistadt case, but are opposed to FBI investigation of all students (Washington Post, Mary Spargo; Baltimore Sun, Short; New York Times, H. B. Hinton; New York Herald Tribune, McConnell; Washington Times-Herald, Stephenson; Philadelphia Inquirer).

May 21	Investigation, general	X						X	Senator Smith (Wisconsin) sends wire to President Truman asking resignation of Mr. Lillenthal because public has lost confidence in his administration (New York Journal American).
	Investigation and fellowships							X	Reports that GOP will try to keep alive the "soft policy" toward Reds by administration until after the primary elections (Washington News).
	Fellowships			X		X			Denounces award of fellowship to Freistadt (New York Sun, Daniel Boone May 20).
	do			X		X			Feels a dangerous trend in requiring of FBI checks but says that some measure of protection is necessary (C. P. Ives, Baltimore Sun, May 23).
	do		X			X			Criticizes Mr. Lillenthal for defending the giving of a fellowship to a Communist. (New York Journal American).
	Investigation, security		X			X			Cites loss of U-235 and fellowship policy as reasons for a full-scale investigation of the over-all security policy of the AEC (Philadelphia Inquirer).
	Fellowships					X			Granting a fellowship to a Communist is equal to subsidizing Soviet Russia (New York Times, H. Adler. Letter to editor.)
May 23	do	X						X	AEC announces that loyalty oaths and anti-Communist affidavits will be required of all present and future holders of fellowships (New York Times, New York Herald Tribune, Washington Star, Washington Post, Washington Times-Herald, Baltimore Sun, Philadelphia Inquirer, New York Mirror).
	Investigation, general	X						X	Senator Vandenberg doubts that Mr. Lillenthal is doing the best possible job; if his name was up for Senate confirmation now the Senator might not be for him (Washington Star, Martin Hayden).
	Lost uranium	X						X	JCAE met in secret session to discuss lost uranium; committee to hear from three staff investigators and from AEC officials (New York Journal American, Washington Post, May 21, Washington Times-Herald, May 20).
	do	X						X	AEC issues statement that it is routine for security officers to take slugs of uranium to check how well security regulations are working; regulations were tightened after the test (New York Times, Washington Times-Herald, May 21).
	Fellowships		X				X		Stresses the fact that scholarship holders have no access to secret data and that if "propaganda against Communists" is to be included in the criteria, it must be done so as not to frustrate the program of scientific inquiry" (Washington Post).

Investigation, general.	X								Investigation is a "new campaign" to "get" Mr. Lillenthal who is one of the Nation's ablest public servants (New York Post).
Lost uranium.	X								Case still involves some "murky" details that should be cleared up but ridicules alarmists. Fear and suspicion will increase until we have international control (Washington Star).
Investigation, lost uranium and fellowships.			X						Sees no connection between the loss of the U-235 and the granting of fellowships; sees a blend of motives in the investigation, politics and a long-standing hostility toward Mr. Lillenthal and AEC among the military (Elmer Davis, ABC, May 20).
Investigation, general.			X						The vigor with which charges against Mr. Lillenthal are pressed suggests an attempt to shake his position as Chairman, at the very least (R. C. Hottelet, CBS, May 20).
Fellowships.			X						Thinks Senator McMahon is firing before he sees the target in questioning Dr. Isidore Edelman before the JCAE; notes that no Senator has yet expressed concern about what the scientists can contribute to American welfare—only about what scientists think politically (Eric Sevareid, CBS, May 20).
Lost uranium.			X						Senate Members feel that Mr. Lillenthal doesn't reveal a deep interest in the loss of a few ounces of U-235. Cites report that he objected to being quizzed by FBI; hopes the welfare of Nation will be better assured as a result of the investigation (Edwin Hill, ABC, May 20).
do.			X						Observes that the uranium loss is being used as a means to discredit civilian controls and returning it to the military (Robert Lewis, CBS, May 20).
Investigation, general.	X							X	Senator Hickenlooper issues formal designation, charging Truman ask Mr. Lillenthal's removal. (New York Herald-Tribune, C. Jones, Philadelphia Inquirer; New York Mirror; Baltimore Sun, Washington Post; New York Times, C. Krumpholtz).
Fellowships.	X							X	Writer sees dangerous effects that might result from Government interference in education (Baltimore Sun, C. P. Jones).
do.								X	Olga, wife of German scientists brought to United States also of Dr. Joliet-Curie in answer to those who denounce the selection of Hans Freistadt for a fellowship (Washington Post, G. Levy. Letter to editor.)
do.							X		Argues against the granting of scholarships to avowed Communists (New York Herald-Tribune, M. K. Epstein. Letter to editor.)
do.			X					X	Senator Saltonstall disapproves of granting fellowship to Hans Freistadt; thinks AEC program should be kept as quiet and secret as possible (Meet the Press, MB, May 20).

May 23	Investigation, general				X		X		Predicts that AEC will be cleared of charges, but that Mr. Lilienthal will resign; predicts the establishment of a more powerful Commission composed of military members with a civilian Chairman (Dannon Walker, MBS, May 22).
May 24	Lost uranium and investigation, general issues.	X						X	Senator McMahon announces that an independent scientific expert has been engaged to check AEC's report of the loss of uranium at Argonne; mismanagement charges to be brought up in full committee hearings; Dr. Edelman testifies before committee (Baltimore Sun, Philip Potter, Philadelphia Inquirer, N. Gregory, New York Times, H. B. Hinton, Washington Post, Mary Spurge, New York Mirror, Fred Mullein, New York Herald-Tribune, D. McConnell; Washington Times-Herald, New York Post, May 23; Philadelphia Bulletin, May 23; New York Sun, May 23; Washington News, May 23; New York Journal American, May 23; Washington Star, May 23).
	Fellowships	X						X	Hans Freistadt states that he is willing to take an oath of loyalty to the United States but will not renounce his membership in the Communist Party (New York Herald-Tribune).
	Investigation, general; fellowships.			X			X		Denounces JCAE and Appropriations Committee for investigation and for requesting FBI check on students (Daily Worker, R. F. Hall).
	Investigation, general.		X				X		Criticizes Senator Hickenlooper for demanding Mr. Lilienthal's resignation; warns against joining forces with military who are seeking control of the AEC work (Washington Post).
	do		X				X		Considers the grave seriousness of the charges and feels that true information can't be obtained unless whole program and evaluation of progress is made clear in meetings (New York Times).
	do		X			X			Accuses Mr. Lilienthal of political finagling and that his removal will benefit the politics of the country (Washington Times-Herald).
	Fellowships		X			X			Welcomes the AEC statement that loyalty oaths and anti-Communist affidavits will be required of all present and future fellows (Philadelphia Bulletin, May 23).
	Investigation, general.		X				X		Commends Senator Vandenberg for his withholding of final judgment until testimony is heard; calls attention to weaknesses in Senator Hickenlooper's case against the AEC (New York Herald-Tribune).

do.	X			X		Charges should be looked into seriously but feels that, so far as the public can see, the charges made are not of great importance (Baltimore Sun).
do.				X		Criticizes Mr. Lillenthal and states that he has demonstrated his total unfitness for the job he holds (Washington Post, B. C. Moise. Letter to editor.)
Fellowships.					X	Such action will impoverish the whole educational system (New York Herald-Tribune, Fleming. Letter to editor.)
do.				X		Criticizes Mr. Lillenthal on fellowship policy (New York Sun, May 23, G. Adams, letter to editor).
Lost uranium, fellowships.	X		X	X		General criticism of Mr. Lillenthal on counts of lost uranium, fellowships, etc. (Fulton Lewis, MBS, May 23).
Investigation, general.			X		X	Hopes that if there is to be an investigation of the administration of AEC that it will be a real one, not a lot of charges and countercharges (Edward R. Murrow, CBS, May 23).
Fellowships.			X		X	Whole issue will wind up as a contest between Mr. Lillenthal and those in Congress who opposed him (Robert Lewis, CBS, May 21).
Investigation, general.	X				X	Sees Senator McMahon in the middle of the whole affair; statements about issues have been oversimplified (Hartford Courant, May 22).
do.		X			X	Issues of lost uranium and fellowships are minor in themselves but points the question of how to safeguard the public safety under the present secrecy policy, (Wall Street Journal, Vermont Royster, May 23).
Fellowships.				X		Criticism of the AEC stand on fellowships (Los Angeles Times, May 17).
do.	X			X		Criticism of statement by Dr. Robert Oppenheimer in defense of the grant to Freistadt (Dallas News, May 19).
do.	X			X		Thinks it is time that CAE should investigate the infiltration of Communists into AEC program (Spokane Spokesman-Review, May 19).
do.	X			X		Loyalty oaths alone may not uncover the really dangerous subversives. (Christian Science Monitor, May 20).
do.	X				X	No danger in granting Freistadt a fellowship, as no secret work is involved (Louisville Courier-Journal, May 20).
do.	X			X		Says that the general public feels that Freistadt is unfit for a fellowship grant (Detroit News, May 20).
Investigation, general.	X				X	Senator Hickenlooper may have gone to extremes in his demands, but recent events have raised some doubts regarding the administration of the AEC (Washington Star).
do.	X				X	Investigation may be delayed until the JCAE finishes its survey of missing uranium and the fellowship program (Washington Star, O'Leary).

May 26.	Investigation, general.	X						X	Investigation stems too much from political reasons according to belief voiced in Washington (Christian Science Monitor, May 24).
	do	X						X	Reports announcement of VFW Post No. 8892, Maynardville, Tenn., that it will endorse in full the demand for Mr. Lillenthal's resignation (Knoxville Journal, May 22).
	do		X				X		Senator Hickenlooper's charges lack open-mindedness and condemn in advance of receipt of facts (Raleigh News and Observer, May 22).
	do		X				X		Joins Senator Vandenberg in view of reserving judgment until facts are in (Hartford Courant, May 24).
	do		X			X			Feels that those who supported Mr. Lillenthal at first would not do so now; thinks President Truman is "dull" on him too (Knoxville Journal, May 24).
	Fellowships		X			X			Even though there may be encroachment on education, Communists should not be given awards (Hartford Courant, May 20).
	Lost uranium		X				X		Criticism of the New York Daily News for rushing into print story of the loss (Providence Journal, May 20).
	Fellowships		X				X		Feels that Hans Freistadt is entitled to the award; political and religious views should not enter into decision (San Francisco Chronicle, May 20).
	do		X			X			Denounces award to Hans Freistadt; feels that that and loss of U-235 will make public demand Mr. Lillenthal's scalp (Omaha World-Herald, May 21).
	Investigation, general		X			X			Feels Mr. Lillenthal is not a safe man for AEC leadership (Knoxville Journal, May 22).
	Fellowships		X				X		Supports Mr. Lillenthal's warning of danger that lies in Federal control of education (Christian Science Monitor, May 24).
	do		X			X			Objects to granting of fellowships to Communists (Los Angeles Times, May 20).
	do		X			X			Feels the issue will lead to clarification of AEC spending policies (Knoxville Journal, May 23).
	do						X		Outright defense of Mr. Lillenthal's views here (Washington Post, M. Walker, letter to editor).
	Investigation, general					X			Urges Mr. Lillenthal's removal from office (Knoxville Journal, May 22, G. B. Houk, letter to editor).
	do	X						X	Indications are that Mr. Lillenthal will offer as his defense comparison of AEC under civilian as compared with military control (Washington News, May 26; Washington Star, May 26).

do	X					X	Thinks Senator Vandenberg is right in asking that investigation call for complete inquiry to assess AEC's responsibilities in past and determine future policies (Washington News, May 25).
do		X				X	Thinks Mr. Lillenthal is the man to keep on the job; constant check and balance provided by JCAE will be help to him (Washington Star, May 25, David Lawrence).
do						X	Correspondent casts a vote of complete confidence in Mr. Lillenthal (Washington News, May 25; letter to editor, A. Needham).
do						X	Defense of public officials and criticism of those who drive them to despair (Washington News, May 25, letter to editor).
do	X					X	Senator Hickenlooper still ready to back up his charges against Mr. Lillenthal; the President warns against hysteria whenever the word "atom" is mentioned; Senator Cain introduces a bill to return AEC to military control (New York Herald Tribune, J. E. Warner; Baltimore Sun, P. Potter; New York Times, H. B. Hinton; New York Sun, May 26; New York Post, May 26; Washington News, May 26; Washington Times-Herald, F. Holeman and Jarry Greene; New York Mirror, James Lee; Washington Post, Mary Spargo; New York Journal American, May 26, Frank B. Allen; Washington Star, May 26, J. A. O'Leary).
Fellowships	X					X	76 members of the Cornell University Association of Scientists send message to Senator McMahon opposing the requiring of political affidavits for fellowships (Washington Post; New York Herald-Tribune; New York Sun, May 26).
do	X					X	Reports the receipt by Senator McMahon of telegram from the executive committee of the American Institute of Physics opposing loyalty pledges and anti-Communist affidavits for fellows in nonsecret fields (New York Times).
Investigation, general		X				X	Declares Mr. Lillenthal should never have been confirmed in the first place (New York Journal American, May 26, George R. Brown).
do		X				X	Denounces Mr. Lillenthal's administration and wonders why he is allowed to stay when men like Forrestal are forced out of Government (New York Journal American, May 26, Leslie Gould).
do		X				X	Thinks Mr. Lillenthal is big enough for the job; feels that if he is ousted because of petty charges, it will be a departure from our traditions of freedom and life (New York Post, May 26, Samuel Gratton).
do		X				X	Accuses Mr. Lillenthal of turning AEC into a "meeting place for the comrades" (New York Journal American, May 26, Frank Conruff).

May 27.

Date	Issues	News items	Editorial	Columns	Radio	Pro	Con	News only	Sources quoted
May 27	Investigation, general			X		X			Claims that treatment of General Groves was scandalous; Mr. Lillenthal wanted the job and Mr. Acheson helped him get it; now Senator Hickenlooper and Senator Vandenberg are forced to change their views on him (Washington Times-Herald, George Sokolsky).
	do		X			X			Criticizes AEC for laxness in administration; and the JCAE for being weak in its surveillance of AEC (New York Journal American, May 26).
	do		X					X	Investigation will be of value if they stick to management of AEC; useless if they inject partisan politics (New York Times).
	do		X				X		Feels Senator Hickenlooper has retreated somewhat in his original charges; criticizes Senator Cain's bill; calls for more public information of Atomic Energy matters (New York Herald Tribune).
	do		X				X		Praises Mr. Lillenthal's letter to Senator McMahon; hopes investigation will serve to restore sense of balance on Hill; questions Mr. Strauss' statement on shipment of isotopes (Washington Post).
	Investigation, fellow-ships						X		Criticism of Senator Hickenlooper for keeping quiet about whole program when he knew of many things during his chairmanship (Washington Post, Scheer, letter to editors).
	Investigation, general						X		Praises Mr. Lillenthal's administration of AEC; believes attacks threaten real achievement of AEC (New York Times, Messrs. Bainbridge, Birch, Kistiakowsky, Ramsey, Zacharias, Harvard and MIT facilities, letter to editor).
	do				X			X	Notes anger of Senators McCarran and McKellar over AEC investigation story being beamed over voice of America; maintains that it was a defense of Mr. Lillenthal (Fulton Lewis, Jr., MBS, May 26).
	do				X			X	Expects President Truman to defend Mr. Lillenthal; points out that military control question was one to be expected (Leif Eid, NBC, May 26).
	do				X			X	Senator Hickenlooper says that AEC program is progressing well but that dislike for Mr. Lillenthal's policies motivated his charges (Robert McCormack, NBC, May 26).
	Investigation, military control				X		X		Commends President Truman's defense of Mr. Lillenthal; believes Senator Cain's bill to turn over AEC to military is an indication of the real reason for the investigation (Richard Eaton, WOOK, May 26).

Investigation, general.					X					X	Notes that President Truman had statement on Mr. Lillenthal already and read it upon questioning (Frank Bourgholtzer, NBC, May 26).
do.					X					X	Thinks Mr. Lillenthal will keep his job and that AEC will remain in civilian hands; rules will be changed (Gabriel Heater, MBS, May 26).
Investigation, military control.					X				X		Doubts if Senator Cain's bill will be passed; feels that AEC investigation has now settled down to whether the atom is Republican or Democratic (Earl Godwin, ABC, May 26).
Investigation, general.					X					X	Claims Senator Hickenlooper is not quarreling with the progress of AEC but only with Mr. Lillenthal's policies; says that some military people still are trying to regain some phases of the work (Eric Sevareld, CBS, May 26).
do.					X					X	Hopes Senator McMahon will keep promise that investigation will remain cool and open-minded; agrees with Hanson Baldwin that public and Congress must not depend too much on the bomb (H. R. Baukhage, ABC, May 26).
do.					X					X	Reports that many feel that Mr. Lillenthal is public-power-minded and AEC may be another TVA in that respect (Bill Shade, CBS, May 26).
Investigation, military control.					X					X	Thinks Senator Cain's bill brings into open the fight between the military and civilian for control of AEC; agrees with Senator McMahon that all phases of the AEC's work must be reviewed; questions Senator Hickenlooper's motives (Elmer Davis, ABC, May 26).
Fellowships.				X				X			Thinks it is startling that Freidrich was given the award; reviews his testimony before JOAE (Los Angeles Times, May 22, Bill Lantry).
Investigation general.			X						X		May 22, Bill Lantry has done a splendid job (Louisville Courier-Journal, May 24).
do.			X				X				If confidence is to be maintained in AEC then adequate steps to correct any deficiencies in AEC must be taken (Cleveland Plain Dealer, May 25).
do.			X						X		Agrees with Senator Vandenberg that a "complete inquiry" should be made in justice to Mr. Lillenthal and the public (Boston Herald, May 25).
do.			X				X				Outlines Mr. Lillenthal's viewpoint and policies as revealed by his testimony before the Senate committee (Memphis Commercial-Appeal, May 20).
do.			X				X				Feels that secrecy isn't security and that the investigation may prove a boon to the public's understanding of the AEC (Christian Science Monitor, May 25).
Fellowships.			X				X				Denounces National Research Council for granting fellowship to Haus Freistadt (Pocatello Tribune, May 22).
Investigation general.			X				X				Claims dissatisfaction with AEC is so general that a thorough investigation is in order (Omaha World-Herald, May 23).

May 27	Investigation, military control.	X				X			Leading Republican and Democratic leaders have come out in opposition to Senator Cain's bill (Washington News, May 27).
	Investigation, general.	X					X	X	JCAE meets in Star, J. A. O'Leary.
	do			X					Claims that had Senator Hickenlooper pressed the Act and closely examined the policies of Mr. Lillenthal on security etc., he would not now be so far out on a limb (Washington News, Peter Edson).
	do			X				X	Thinks this is a way to let the people know something about the AEC and that JCAE should not rest until all information has been placed before the people (Washington Star, Thomas Stokes).
	do						X		Debounces those who are making bitter attacks on Mr. Lillenthal (Washington Star, letter to editor).
	do		X				X		Thinks fairness demands that Mr. Lillenthal be given the kind of investigation he has requested (Washington Star).
May 28-30	do	X						X	Senator Hickenlooper states that he wants to confront Mr. Lillenthal in public hearings with specific evidence in supporting his charges (New York Post, May 29; Washington Post, May 29; New York Herald Tribune, May 29; Washington Star, May 29; New York Times, May 29; New York Mirror, May 28; New York Journal American, May 29; Baltimore Sun, May 29; Washington Times-Herald, May 29; New York Journal American, May 27; Philadelphia Inquirer, May 29; New York Journal American, May 28).
	Investigation, waste.	X						X	JCAE unanimously adopts report criticizing certain aspects of natural gas pipeline to Oak Ridge, Tenn. (Baltimore Sun, May 28; Potter; Washington Post, Mary Spargo; Philadelphia Inquirer, May 28; Washington Times-Herald, May 28; New York Herald Tribune, May 28; New York Times, May 28; New York Sun, May 27).
	Investigation, security.	X						X	Mr. Lillenthal has given JCAE information as to security of atomic energy under military; Senator Johnson and Senator Knowland insist that has nothing to do with the investigation (Washington Post, May 29; Washington News, May 28; New York Journal American, May 29).
	Investigation, general.	X						X	Sees many factors in the investigation; military versus civilian; Mr. Lillenthal's personality, etc. (New York Times, May 29; H. B. Hinton).

Fellowships.....	X								X	Association of Oak Ridge Scientists write to Senator McMahon in opposition to the requiring of clearance for fellowships (Baltimore Sun, May 30; New York Times, May 30; New York Herald Tribune, May 30). Graduate students of Princeton University join protests against loyalty clearance for fellows (New York Times, May 28). Thinks that the investigation will boomerang: it has given AEC the chance to tell the public about AEC's total record (New York Herald Tribune, May 28, Joseph Alsop).
do.....	X								X	Mr. Lillenthal's error was in placing academic freedom above faith in America (Washington Times-Herald, May 29, George Sokolsky).
Investigation, general.....									X	Mr. Lillenthal has what it takes to weather the storm; he has a deep unshakable faith in American democracy (Washington Star, May 28, Lowell Mellett).
Fellowships.....										AEC's accounting system for uranium, etc., beats United States minis' systems; MED had no such security regulations (Washington News, May 28, Peter Edson). Doubts if Mr. Lillenthal will break under this new attack (New York Mirror, May 28, Walter Winchell).
Investigation, general.....	X								X	Challenges those who oppose the loyalty checks (Baltimore Sun, May 30, C. P. Ives).
Fellowships.....	X									Investigation and other hysteria rests on theory that so long as we have secrets we are safe (New York Times, May 29, Hanson Baldwin).
Investigation, security.....	X								X	Criticizes AEC for order requiring oaths and anti-Communist affidavits for fellowship grants (Daily Worker, May 30, Peter Stone).
Fellowships.....									X	Mr. Lillenthal has a philosophy which prevents his becoming discouraged; points out that AEC's real function is fostering public knowledge (New York Times, May 28, feature article, R. L. Duffie).
Investigation, general.....									X	Denounces the whole idea of military control (Washington Star, May 28).
Investigation, military control.....										Believes it is a good thing JCAE is investigating AEC and it may bring to public mind that secrecy doesn't make us secure (Philadelphia Bulletin, May 27).
Investigation, security.....									X	No sound basis for the current investigation of AEC; objects to FBI checks on fellows (New York Herald Tribune, May 30, letter to editors).
Investigation, general, fellowships.....									X	Scores Members of Congress for attacks against AEC without first knowing facts (Washington Post, May 30, Gillette, letter to editors).
Investigation, general.....									X	Contents that investigation is only a smoke screen to get atomic secrets out of Mr. Lillenthal is an able man (Washington Post, May 28, A. Williams, letter to editors).
do.....									X

May 28-30..	Fellowships.....					X			Criticizes Mr. Lillenthal for approving fellowship to Hans Freisladt (New York Herald Tribune, May 30, Frank Fox letter to editors)
May 31.....	Investigation general.....	X						X	Chairman Lillenthal accuses Senator Hickenlooper of an attempt to arouse fear; Senator Hickenlooper in reply says Mr. Lillenthal is commenting on evidence not yet produced (New York Herald Tribune; New York Times; Washington Post; Washington Times-Herald; Philadelphia Inquirer; Baltimore Sun)
	do.....	X						X	Some senators state that they don't believe the whole controversy between Senator Hickenlooper and Mr. Lillenthal can be aired in public (Philadelphia Bulletin, May 30; Washington Star, May 30)
	Fellowships.....			X			X		Deplores fear that has developed since the war and contends that we must concede the right of the Government to impose political restrictions on grants (Washington Post, Marquis Childs)
	Investigation, military control.....			X		X			Contends that the replacing of General Groves with Mr. Lillenthal was an error (Washington Times-Herald, George Sokolsky)
	Investigation general.....			X		X			Feels that JCAE can render a real service through investigation even though all phases cannot be held in public (Philadelphia Bulletin, May 30, Ernest Lindley)
	do.....			X				X	Sees no reason why Mr. Lillenthal should not receive a prompt hearing (New York Mirror, Walter Kiernan)
	do.....		X				X		Lost uranium and fellowship errors hardly measure up to a charge of "incredible mismanagement" (New York Times)
	do.....		X			X			Feels that Communists have infiltrated AEC under Mr. Lillenthal and that he should be removed from office. (New York Mirror)
	do.....				X	X			Mr. Lillenthal's efforts to have JCAE compare AEC now with MED has failed. General attack upon Mr. Lillenthal (Fulton Lewis, Jr., MBS May 30)
	do.....				X		X		Feels that secrecy item is overdue in AEC, but scientists like Mr. Lillenthal and are willing to work for him (Kaltenborn, NBC May 30)
	do.....				X			X	Feels that scientists dwell in a world of their own (Edwin C. Hill, ABC, May 30)
	do.....			X	X		X		Says that many believe the effort against Mr. Lillenthal is one to discredit civilian control of atomic energy (Jack Beal, ABC, May 29)

June 1.....	do.				X		X			Feels that AEC merits serious criticism but fears that more harm than good may result from "meet-ax" tactics (Christian Science Monitor, May 26; R. Drummond). Reports that President Truman feels Mr. Lillenthal has embarrassed the administration with the loss of uranium and the fellowship grants (Rochester Democrat-Chronicle, May 26; Vern Croop).
	do.	X						X		Recalls that Senator Bridges predicted that those who voted for Mr. Lillenthal's confirmation would regret it (Boston Herald, May 26; W. E. Mullins).
	do.	X			X					Doesn't believe that mistakes warrant the charges made against Mr. Lillenthal (Wall Street Journal, May 27).
	do.			X				X		Feels the charges demand a sweeping investigation and that world conditions do not warrant wholesale security regulations (Providence Journal, May 28).
	do.			X				X		Regardless of what has been said, AEC has brought about far more efficiency and less confusion than MED (Raleigh News-Observer, May 28).
	Fellowships.			X						Supports Mr. Lillenthal's warning against control of education (Christian Science Monitor, May 23).
	do.			X			X			Commends JCAE and Senate Appropriations Committee for stand on fellowships (Spokane Spokesman Review, May 23).
	Investigation, general.	X							X	JCAE meets in secret to discuss Senator Hickenlooper's charges (Washington Star and Washington News).
	Fellowships.			X			X			Criticism of fellowship grant to Communist (Salt Lake City Tribune, May 21).
	do.			X			X			Policy of AEC on fellowships was naive and feels an investigation is in order (Memphis Commercial-Appeal, May 25).
	Investigation, general	X							X	Hearings open: Senator Hickenlooper says it will take him several days to develop evidence (New York Herald Tribune, Washington Post, Spargo; New York Times, Morris; Baltimore Sun, Knighton; Washington Star, May 31; New York Sun, May 31; Washington Times-Herald, Greene; Philadelphia Inquirer, D. Rockwell; Washington News, May 31; New York Journal American, Allen, May 31).
	Fellowships.	X							X	Reports Representative Dondero's remarks on the floor re fellowships (New York Mirror, May 31).
	do.	X							X	Executive Committee, Princeton University Association of Scientists, oppose FBI checks of fellows (New York Times).
	Investigation, general.				X			X		Thinks Mr. Lillenthal brought it all on himself (New York Sun, May 31, Dave Boone).
	do.				X			X		Deplores the issues; feels that Mr. Lillenthal has done a brilliant job (New York Post, May 31, Samuel Grafton).
	do.			X					X	First requirement is that investigation be fairly conducted else great harm may be done (Philadelphia Inquirer).

June 1.....	Investigation, general		X					X	Fears political squabble when, if properly done, the investigation could do a great deal of good (Washington Post).
	do.		X				X		The worst that can be said is that AEC made 2 mistakes; fears that the investigation may turn into a "get Lillenthal" case (Denver Post, May 26).
June 2.....	do.	X						X	AEC investigation gets under way. Turn-over of personnel taken up (Washington Post, Spargo; Washington Times-Herald, Greene; Philadelphia Inquirer, Rockwell; New York Post, June 1; Van Devander; Philadelphia Bulletin, June 1; Washington Star, June 1; Washington News, June 1; Daily Worker, June 1; New York Journal American, June 1; F. Allen).
	do.			X			X		Doubts that investigation will bring out enough facts on which to base an opinion; discusses William Bradford Huie's article (Washington Post, Marquis Childs).
	do.			X			X		Whole AEC program must be examined and if Senator Hickenlooper accuses without proof JCAE must intervene (Christian Science Monitor, May 31, R. Drummond).
	Investigation, lost uranium.			X			X		Questions whether U-235 was stolen; notes that Commissioner Strauss is on close terms with Senator Hickenlooper (Atlanta Constitution, May 30, F. Allen).
	Investigation, general		X				X		Investigation thus far has not proven any charges; Senator Hickenlooper approved of AEC as late as last January (Washington Post).
	do.		X				X		Maintains that serious damage can be done by bringing into the open small errors (Christian Science Monitor, May 31).
	do.		X					X	Hopes that investigation will be based on facts (St. Louis Post Dispatch, May 27).
	do.		X				X		Denies accusations against Mr. Lillenthal (Hartford Courant, May 27).
	do.				X			X	Representative Melvin Price on press interview states that the issue involves return to military control (Capitol chamber, CBS, June 1).
	do.			X				X	Didn't get very far the first day (Lief Eld, NBC, June 1).
	do.			X				X	As investigation is being handled in press, accusation is converted (Edward Davis, ABC, June 1).
	do.			X				X	Appears that it will be a long and bitter struggle (Bill Hunter, MBS, June 1).
	do.			X				X	Thinks Reeses, Drummond's story in Christian Science Monitor is the best résumé of the whole AEC story (Richard Eaton, WOOK, June 1).

do	X							X	Sees a conflict between the executive and legislative branches of the Government in the investigation (San Francisco Chronicle, May 29).
do	X							X	Executive committee of North California Chapter Federation of American Scientists, declare that investigation is an effort to discredit civilian control (Rochester Democrat-Chronicle, May 10).
do								X	Welcomes President Truman's statement that it is time to stop the atomic hysteria (Raleigh News and Observer, May 28).
do								X	President Truman has committed himself to full support of Mr. Lillenthal no matter how investigation turns out (Los Angeles Times, May 28).
do							X		Thinks evidence is against Mr. Lillenthal (Omaha World-Herald, May 28).
do									Thinks that Mr. Lillenthal is accused of things that were policy under MED (Louisville Courier-Journal, May 31).
do								X	Weapons of war being used against AEC; real issue is return to military control (Grand Junction Sentinel, May 27).
do								X	Agrees with Mr. Lillenthal in asking for a full study (El Paso Times, May 27).
do								X	Regrets that politics has been injected into affair (Spokane Spokesman-Review, May 28).
do							X		Says list of questions presented by Mr. Lillenthal shows he is trying to evade the issue (Schenectady Gazette, May 28).
Investigation, ost uranium.							X		Commends New York News for breaking the story and putting AEC on the spot (Omaha World Herald, May 28).
Investigation, military control.								X	Denounces any such proposal as military control (Portland Oregonian, May 28).
Fellowships							X		Regrets that Mr. Lillenthal had not required oaths from the beginning (Boise Statesman, May 31).
do								X	Thinks AEC is unwise in reversing policy on fellowships (Memphis Commercial Appeal, May 29).
do								X	Thinks loyalty oaths are absurd, since no Communist would hesitate to sign such oaths (Los Alamos Skyliner, June 2).
do							X		Supports Senator Hickenlooper's stand on the fellowship question (Omaha World Herald, May 30; Dayton News, May 30). 2 letters to editors.
do	X						X		All 10 letters object to educating Communists with AEC funds (Providence Journal, May 30; St. Louis Post Dispatch, May 28; San Francisco Chronicle, May 28, May 27; Detroit News, May 30; Denver Post, May 28). 10 letters to editors.

June 2	Fellowships	X					X		Agrees with Chronicle on its defense of granting fellowship to Hans Freistadt (San Francisco Chronicle, May 27). Letter to editor.
	Investigation, general, personnel	X					X		Cites Civil Service Commission figures on turn-over of personnel in departments; AEC's turn-over slightly below the average (New York Times (James Reston)).
	Investigation, general		X				X		Investigation should go beyond loss of uranium and the fellowship error to be of any benefit (New York Times).
	Investigation, security	X						X	Senator Hickenlooper accuses AEC of mass emergency clearances (Washington Star).
	Investigation, general	X						X	AEC to give all data requested by the JCAE (Washington News).
June 3	do.	X						X	Bottle in lost uranium case recovered; Senator Hickenlooper continues charges against Mr. Lillenthal (New York Times (J. D. Morris); Baltimore Sun (L. Potter); New York Herald Tribune (J. E. Warner); New York Mirror (L. Schloss); Washington News, June 2; Washington Times-Herald (Holzman and Green; Washington Post (Mary Spargo); New York Journal American (F. B. Allen); Washington Star (J. A. O'Leary, June 2).
	do.			X			X		Rebuts Senator Hickenlooper's conduct of investigation (Washington Post) (Alsop).
	do.			X			X		Senator Hickenlooper is using the investigation as campaign material for next year (New York Post, June 2, Van Dusen).
	Investigation, military control			X				X	Says Representatives Cole and Elston are trying to reinstate military control (New York Mirror, Drew Pearson).
	Investigation, general			X			X		Deplores insinuating stories and charges against Mr. Lillenthal and other public men (Washington News, June 2, Eleanor Roosevelt).
	do.			X			X		Thinks Mr. Lillenthal is a patient man and anyone else would "drop one on his enemies" (New York Mirror, W. Winchell).
	do.		X				X		Thinks Senator Hickenlooper is giving too many evidences of his own "incredible mismanagement" (New York Herald Tribune).
	do.			X	X				AEC in for a change in policy if not personnel; Senator Hickenlooper well on his way to making a case (R. Harkness, NBC, June 2).
	do.			X	X		X		Feels that the Jules went out of the investigation with the news that the uranium bottle is found (Elmer Davis, ABC, June 2).
	do.								

do.					X				X	Investigation not living up to its advance billing (Alder Eid, NBC, June 2).
do.					X				X	Describes the scene in room where hearings are going on (H. R. Baughage, ABC, June 2).
Investigation, security					X					Feels Mr. Lilienthal has the better definition of security—being concerned with the wider security of bomb production (Eric Sevareid, CBS, June 2).
Fellowships				X				X		Scientists not entitled to grants unless they are loyal (Louisville Courier-Journal, June 1, E. K. Lindley).
Investigation, general									X	Criticism of Senator Hickenlooper for making charges without producing full evidence (Raleigh News & Observer, June 1).
Investigation, lost uranium.				X				X		Demands immediate removal of Mr. Lilienthal (San Francisco Chronicle, June 1).
Investigation, security				X				X		Warns against too much dependence on security and military control (Providence Journal, June 1).
do.				X				X		Hopes the real of secrecy will be removed (Hartford Courant, June 1).
Fellowships				X				X		Demolishes grants to Communists (Knoxville Journal, June 1).
do.				X						Demo Hays grants to Communists (San Francisco Chronicle, May 2, May 28, 2 letters to editor).
do.								X		Upholds such grants (San Francisco Chronicle, May 28; 2 letters to editor).
do.								X		Opposes fellowships to Communists (Raleigh News & Observer, May 27; letter to editor).
do.									X	Compares views of Post and the ones expressed by M. Childs (Denver Post, May 28; letter to editor).
Investigation, security									X	Senator Hickenlooper says he will soon take up the question of Communists in AEC (Washington News).
Investigation, general				X				X		Deplores "police-state" atmosphere of investigation (Washington Star, (Stokes).
Investigation, personnel.				X				X		Much of turn-over due to restricted budget, not AEC's policy (Washington News, Peter Edson).
Investigation, general								X		Commends AEC for fighting back (Washington Star, letter to editor).
Investigation, military control.								X		Criticizes Star editorial for denouncing Senator Olin's bill (Washington Star, letter to editor).
Investigation, general									X	Senator Tydings says investigation has proven nothing so far (Washington Post, June 6).
do.				X					X	Senator Hickenlooper to resume his charges (New York Times, June 6; New York Herald Tribune, June 6).
do.				X					X	Chairman McMahon says investigation may prove the need for reversal on policy of secrecy on stock pile, etc. (Baltimore Sun, June 5; New York Herald Tribune, June 5; Washington Times-Herald, June 5; Washington Post, June 5; Washington Star, June 5; Philadelphia Inquirer, June 5).

June 4, 5, and 6	Investigation, lost uranium.	X						X	Senator Hickenlooper tells press that possibility of espionage cannot be discounted (New York Times, June 4; Washington Star, June 4; Washington News, June 4; Washington Post, June 4; Philadelphia Bulletin, June 4; Philadelphia Inquirer, June 4; New York Mirror, June 4; Baltimore Sun, June 4; Washington Times-Herald, June 4; New York Herald Tribune, June 4; New York Post, June 5; New York Sun, June 4; New York Journal American, June 4).
	Investigation, security.	X						X	Chairman McMahon tells press that one Communist, employed by MED, was not detected until AEC took over; Senator Hickenlooper says he will go into it further (Washington Times-Herald, June 3; Washington News, June 3).
	Investigation, general.	X						X	Discusses political, economic and military factors involved in the investigation (New York Times, June 6) (C. Phillips).
	.do.	X						X	Senator Hickenlooper's case is collapsing; Mr. Lillenthal's answers appear to have satisfied majority of members. (New York Post, June 3; Van Deventer).
	.do.	X						X	Dr. E. U. Condon thinks Mr. Lillenthal has done a fine job, (Washington Post, June 4).
	Investigation, general and fellowships.	X						X	Atomic Scientists, Inc. of Chicago express grave concern over pressure exerted by congressional Members on Mr. Lillenthal and object to loyalty oaths and anti-Communist affidavits, (New York Times, June 4).
	Fellowships.	X						X	Association of Brookhaven Scientists oppose FBI checks on fellows (New York Times, June 6).
	Investigation, general.			X			X		Discusses investigation; says Senator Hickenlooper has failed to prove his charges (Philadelphia Bulletin, June 4, M. K. Whiteleather).
	.do.			X			X		Belittles Senator Hickenlooper's handling of investigation (Washington Star, June 4, Lowell Mollett).
	Investigation, security.			X		X			Denounces AEC General Manager's statement that two "bad risks" were given jobs (New York Sun, June 3, Dave Boone).
	Investigation, general and military control.			X				X	Although denial has been made that certain elements in Congress wants to return AEC to military control, Senator Cain has introduced a bill to do just that (New York Mirror, June 5, Walter Winchell).
	Investigation, security.			X				X	Says Senator Hickenlooper will cite one of Mr. Lillenthal's women assistants as a red (New York Mirror, June 6, W. Winchell).

Investigation, general.	X								Senator Hickenlooper has failed to prove his charges thus far. Says he should get down to cases at once, else JCAE must act to restore faith in AEC (Philadelphia Inquirer, June 5).
Investigation, lost uranium.	X								Finding of bottle indicates that this caused undue alarm; cautions that AEC must guard against further losses (Washington Post, June 5).
Investigation, general.	X								Senator Hickenlooper has failed to prove charges: will be on the spot if he insists that a comparison of M&D and AEC is not important (Washington Star, June 4).
Investigation, personnel.	X								Compliments Senator Hickenlooper for bringing out personnel security matters; urges measures to keep people in the Government (Philadelphia Inquirer, June 5; New York Post, June 5).
Investigation, general.				X				X	Discusses the effects of investigations on Government personnel (C. Collingwood, CBS, June 5).
do				X				X	Discusses unseen political and military motives back of the investigation (G. Bancroft, CBS, June 4).
do				X				X	Senator Hickenlooper has not yet produced any real evidence, while proceeding is a let-down (J. Beall, ABC, June 5).
do				X				X	Order that AEC furnish its records to Senator Hickenlooper proves a Republican-Democratic coalition hostile to Mr. Lillenthal (Minneapolis Tribune, June 1).
do	X							X	Investigation continues; stated it may prove to be good for AEC. Charges and the public (Providence Journal, June 2, F. W. Collins).
do	X							X	Consider AEC hearings the "best show in town." Representative Jackson says the whole thing is "silly and ridiculous." AEC takes it seriously (Rochester Democrat-Chronicle, June 2).
Investigation, military control.	X							X	Criticizes the proposal to return AEC to the military (Denver Post, May 31).
Investigation, general.	X							X	Investigation might be worth while but this one may prove to hamper the whole AEC project (Salt Lake City Tribune, May 31).
do	X								Sees strong evidence of mismanagement in evidence thus far presented (Omaha World-Herald, June 1).
do	X						X		Hopes politics will be kept out so that real worth will result (Minneapolis Tribune, June 1).
Investigation, general security.	X							X	Fact that hundreds of scientists were turned down as bad risks more to be deplored than the fact that a few were left in AEC (Dallas News, June 1).
Investigation, security								X	Senator Knowland questions AEC's security work at Argonne, etc. (Washington News, June 6).

July 7	Investigation, general	X						X	Inquiry halted over JCAE dispute as to whether or not security cases may properly be discussed in public (Washington Post; Washington Times-Herald; New York Times; New York Mirror; Washington News, June 6; New York Journal-American, June 6; Washington Star, June 6; New York Sun, June 6; New York Herald Tribune).
	do	X					X		Senator Hickenlooper's charges have collapsed so badly he is being deserted by other Republicans (New York Post, June 6, Van Devanter).
	do			X			X		Senator Hickenlooper's charges based on pretty "flimsy stuff" but criticizes Mr. Lillenthal for appeasing reactionaries (Daily Worker, R. Hall).
	do		X					X	Calls for JCAE to get on with the investigation (Washington Post).
	Investigation, general military control		X			X			Criticism of Mr. Lillenthal; asks for the abolishment of AEC and return to military control (New York Journal American, June 6).
	Investigation, general							X	Regardless of motives in the charges, it must not be overlooked that Mr. Lillenthal's success with TVA earned him enemies in private power industry (New York Herald Tribune, letter to editor).
	do							X	Trappings of hearings impede the wise conduct of the case (New York Herald Tribune, letter to editor).
	do				X			X	Thinks the hearings will run for some time; General Groves could be heard on MED (Elmer Davis, ABC, June 6).
	do				X			X	Wonders how hearings will be conducted in view of security cases (Bill Shadel, CBS, June 6).
	do			X				X	Wonders why Senator Hickenlooper is taking such a political risk; Mr. Lillenthal a clever man well versed in defense (Chicago News, June 4, Fleeson).
	do			X				X	Feels that the disagreement between Senator Hickenlooper and Mr. Lillenthal is a matter of a difference of opinion (Louisiana Times, June 2, Bill Henry).
	do		X					X	One outcome of investigation will be that Mr. Lillenthal will never be confirmed again (Knoxville Journal, June 6).
	Investigation, security		X						Congress should lay down the basic security rules since AEC has been careless (Los Angeles Times, June 2).
	Investigation, general		X			X		X	Investigation should help to inform public; AEC has been neglecting to do so (Spokane Spokesman-Review, June 1).
	Investigation, security		X			X			AEC has been careless on security matters (Knoxville Journal, June 4).

Investigation, general.	X					X		Senator Hickenlooper's appearance in headlines will result in his being remembered for this (Portland Oregonian, June 2).
do.	X					X		Criticizes President Truman for his statement on investigation; those who are attacking Mr. Lillenthal may only be interested in the welfare of the country (Reno Gazette, May 31).
do.	X							AEC's work should be reviewed but deplores attack on AEC and scientists' loyalty (Santa Fe New Mexican, June 1).
do.	X						X	Mr. Lillenthal will weather the storm as he has other vicious attacks against him (Louisville Times, May 25).
do.	X							Commends Senator McMahon for confining hearings to questions at hand as to efficiency of AEC (Providence Journal, June 5).
Investigation, security.	X						X	If AEC Commissioners fail to keep better checks, we had better replace them with better men (Boise Statesman, May 31).
Investigation, general.		X						JCAE meets to decide on procedures (Washington Star, June 7; Washington News, June 7).
Investigation, security.			X					Newspaper men could not print name of case A since, under the law, it is a violation of security (Washington News, F. Othman).
Investigation, general.		X						JCAE still discussing procedure for discussing security cases (Baltimore Sun; Philadelphia Inquirer; Washington Post; Washington Times-Herald; Washington Star, June 7; Washington News, June 7; New York Times; New York Herald-Tribune; New York Journal American, June 7; New York Sun, June 7; Philadelphia Bulletin, June 7).
do.		X						Case A may ask a hearing on his own. His name is known since information given has identified him (New York Post, June 7; Van Deventer).
do.	X						X	Terms investigation a "tragic farce," "three-ring circus" (New York Herald Tribune).
do.	X							Points up controversy between executive and legislative branches of Government as seen in use of secret files (Washington Times-Herald).
Investigation, general (letter to editor).							X	Defense of Mr. Lillenthal (Washington Post).
Investigation, security (letter to editor).								Burden of proof in case A is with Senator Hickenlooper; AEC should reserve right to see all the evidence (New York Times).
do.			X				X	Claims that Mr. Lillenthal injected additional evidence into case A and then blamed Senator Hickenlooper for method of procedure (Fulton Lewis, Jr., MBS, June 7).

June 11-13	Investigation, general.	X					X		"Not proven" is best Senator Hickenlooper can hope for; better understanding of AEC program may result (New York Herald Tribune, Werner, June 12).
	Investigation, security.	X						X	Senator Hickenlooper insists he will bring into open "derogatory information" on at least a score of AEC employees (New York Post, Van Devanter, June 9).
	Investigation, general.	X						X	Senator Tydings feels Mr. Lillenthal has done a good job in many respects but has been careless in safeguarding AEC secrets (Washington Post, June 13; Baltimore Sun, June 13).
	do	X						X	Senator Hickenlooper has lost political prestige in Iowa over AEC hearings (Washington Post, John Ball, June 13).
	Investigation, fellow-ship.	X					X		Loyalty of Hans Freistadt upheld (Daily Worker, June 12).
	Investigation, general.			X			X		Attempt to "A-X" Mr. Lillenthal has blown up; he may resign at end of his term (New York Post, Robert Allen, June 12).
	Investigation, isotopes.			X		X			Articles Mr. Lillenthal for shipment to Norway (New York Sun, Dave Boone, June 10).
	Investigation, general.			X			X		Senator Hickenlooper sorry he ever started it—has tried to urge Senators McMahon and Vandenberg to "get him out of it" (New York Mirror, Walter Winchell, June 13).
	do			X			X		Mr. Lillenthal has made some "border line" judgments, but that "national security obsession" is cause of investigation (New York Herald Tribune, Joseph Alsop, June 13).
	do		X				X		Senator Hickenlooper should know when he is licked (New York Post, June 10).
	Investigation, military control.		X				X		Secretary Johnson's statement most reassuring (New York Times, June 11).
	do		X				X		Agrees with Secretary Johnson but feels that Secretary should state that Army can't have custody of bombs either (Washington Post, June 11).
	Investigation, general.		X					X	Deplores congressional investigations but it should shed much-needed light (Philadelphia Inquirer, June 13).
	Investigation, fellow-ships.					X			In letter to son writer explains why he opposes fellowship for Communists (New York Herald Tribune, June 12) (letter to editor).
	Investigation general.							X	Only thing that will be gained is that Senate will be more careful in confirming appointees in future (Washington Times-Herald, June 12, letter to editor).

do.				X				X		Senator Hickenlooper says his charges are a result of a culmination of complaints—denies leaks to press (Meet the Press—MBS, June 10).
do.				X						Says Commissioner Strauss intends to resign due to his opposition to AEO policies (Danton Walker, MBS, June 12).
do.				X						Praises Senator McMahon for his handling of hearings (Richard Eaton, WOOK, June 10).
do.			X							Discusses problems of hearings—"Arabian Nights" atmosphere—etc. (Christian Science Monitor, R. L. Stout, June 9).
do.		X								American Legion Post No. 2, Knoxville, prepares resolution asking for Mr. Lillenthal's resignation (Knoxville Journal, June 8).
do.			X					X		Senator Hickenlooper making little progress; wonders how his charges can be proved unless stock-pile data is released (Denver Post, Barnet Nover, June 7).
do.			X						X	Believes hearings based on attitudes more than fact; Senator Hickenlooper hopes to prove that secrets are not properly guarded (Los Angeles Times, June 5, Bill Henry).
do.						X			X	Is AEO a dumping ground for politicians? How are AEO contracts let? (Wall Street Journal, June 9).
do.						X			X	Believes Senator Hickenlooper will have election troubles because of AEO probe. (Omaha World-Herald, June 8).
do.								X		Balities charges made by Senator Hickenlooper (Louisville Courier-Journal, June 9).
do.								X		Ridicules Senator Hickenlooper's "ranting around Capitol Hill." (Boston Herald, June 9).
Investigation, military control.								X		Approves of Secretary Johnson's stand on issue. (St. Louis Post Dispatch, June 8; Providence Journal, June 9).
Investigation, general.								X		Says Senator Hickenlooper is not willing to measure AEO efficiency by private industry standards—his charges won't stick if measured thus. (Grand Junction Sentinel, June 6).
do.		X							X	Dr. J. R. Oppenheimer defends Mr. Lillenthal and AEO Administration on all counts. (New York Herald Tribune; New York Times; Washington Times-Herald; New York Mirror; Philadelphia Inquirer; Washington Post; Baltimore Sun; Philadelphia Bulletin, June 13; Washington News, June 13; New York Sun, June 13; New York Journal American, June 13).
do.								X		Discusses hearings—contends AEO can't do a good job if always called on to deny some new allegation, etc. (New York Herald Tribune, Walter Lippmann).
do.									X	Believes Mr. Lillenthal will be "impressively cleared" of all charges. (New York Times, Arthur Krock.)

June 16	Investigation, general			X			X		Defends Mr. Lillenthal; observes that attacks on him haven't been successful (Atlanta Constitution, Ralph McGill).
	do	X				X			Claims Senator Hickenlooper has been "gagged" whenever he tried to submit real evidence (Chicago Tribune, June 14).
	Investigation, security		X					X	Considers the problem of the use of FBI files in this and other cases. What will the result be? (Raleigh News and Observer, June 13).
	Investigation, waste				X		X		Testimony regarding purpose of plant at Hanford has backfired on Senator Hickenlooper, so far as waste is concerned (Richard Harkness, NBC, June 15).
	Investigation, general				X		X		Evidence thus far has proven nothing (Elmer Davis, ABO, June 15).
	do					X			Criticizes cartoons in paper depicting Senator Hickenlooper in an unfavorable manner (Des Moines Register, June 13, letter to editor).
June 17	do						X		Praises cartoon regarding Senator Hickenlooper; feels they "hit the spot" (Des Moines Register, June 13, letter to editor).
	Investigation, lost uranium	X						X	Dr. Walter H. Zinn testifies regarding the loss of uranium (Washington News, Washington Star).
	Investigation, waste			X				X	Discusses testimony of Dr. Winne of General Electric, and Mr. Lillenthal regarding increased construction costs at Hanford (Washington News, Othman).
	Investigation, general	X						X	Observes that bystanders feel that the investigation has played itself out (Dayton News, June 14).
	Fellowships	X				X			AEC was advised a year ago to require FBI clearance on fellows, but did not heed such advice (Rochester Democrat-Chronicle, June 15).
	Investigation, general		X				X		Senator Hickenlooper has made no headway in proving charges (Raleigh News and Observer, June 15).
	Investigation, security		X				X		Claims that the incidents of which Senator Hickenlooper is making so much are "routine" even in such agencies as AEC (Detroit News, June 14).
	Investigation, waste	X						X	Senator Hickenlooper says he will give evidence of waste at Oak Ridge, Los Alamos, and Hanford (Washington News, Washington Star).
	Investigation, general			X				X	People in Senator Hickenlooper's home town are puzzled at his head-hunting (Washington Star, Stokes).

Investigation, lost uranium.	X							X	Dr. Zinn testifies regarding the uranium loss (Washington Post; New York Herald Tribune; Baltimore Sun; New York Times; Washington Star, June 16; Washington News, June 16; Philadelphia Bulletin, June 16; New York Sun, June 16).
Investigation, general.	X							X	Cites strict regulations which govern the shipment of isotopes to refute impression that shipments can be made capriciously (Philadelphia Bulletin, June 16; Marshall).
Investigation, isotopes.								X	Cites Dr. Oppenheimer's testimony that refusal to ship isotopes to foreign countries would force them to produce isotopes independently and that they might outstrip us in this field (New York Post, S. Grafton).
AEC investigation, waste in using gas at Oak Ridge.	X							X	Commissioner Pike defends the use of natural gas at Oak Ridge, etc. (Washington Times-Herald; New York Herald-Tribune; Washington Post, Mary Spargo; Baltimore Sun; Philadelphia Inquirer; New York Times; New York Sun, June 17; Washington Star, June 17; Washington News, June 17).
AEO investigation, general.	X							X	Senator Hickenlooper states another week will be sufficient to complete his case against AEC; personnel cases to be reviewed in secret sessions (Washington Star; Philadelphia Inquirer; New York Journal American; New York Post, June 19).
AEO investigation, waste.							X		Thinks that charges of waste at Hanford plant may not seem so great to the public in comparison to the cost of the first bomb (Baltimore Sun).
AEC investigation, general.							X		General Groves supports investigation of AEC program if any Member of Congress is even doubtful of its efficient operation; cites danger to our future if AEC is taken out of the scope of congressional investigation (New York Mirror). (Feature story).
Fellowships.	X							X	Objects to any sort of political screening of fellowship students (Washington Post, Hechinger).
AEO investigation.								X	Questions the procedure employed by Senator Hickenlooper in borrowing Messrs. Teepie and Rhodes, former JCAE staff members, in this investigation (Washington Post, Drew Pearson).
Investigation, general.	X							X	Senator McMahon suggests that if size of bomb stock pile was made known, the JCAE could better determine whether the AEC is guilty of Senator Hickenlooper's charges (New York Times). (Feature story).
Investigation, isotopes.								X	Denies the shipment of radioactive isotopes (Baltimore Sun).
Investigation of AEC, waste.	X							X	Reports that Senator Hickenlooper will quiz Mr. Lillenthal on use of "secret fund for counterespionage at Los Alamos" for entertainment purposes (Washington Times-Herald).
Investigation of AEO.	X							X	Notes that most columnists label charges against Mr. Lillenthal as irresponsible (Salt Lake Tribune, June 14, John Barden).

Date <sup>1</sup>	Issues	News Items	Editorial	Columns	Radio	Pro	Con	News only	Sources quoted <sup>2</sup>
June 20	Investigation		X				X		Criticizes Senator Hickenlooper's "fishing expedition" against AEC; thinks JCAE should first sift facts and then hold hearings if evidence warrants them (Christian Science Monitor, June 19).
	Investigation, waste		X			X			Denounces Mr. Lillenthal's statement that "national security" warranted the costs at Hanford (Knoxville Journal, June 18).
	Investigation					X			Claims investigation proves that AEC is not in good hands and that Senator Hickenlooper is not conducting a smear campaign (Milwaukee Journal, June 18, E. J. Miltimore, letter to editor).
	Investigation, waste				X		X		Thinks AEC has right to go ahead with pipe line. (Elmer Davis, AEC, June 17).
June 21	do	X						X	Mr. Lillenthal expresses fear that AEC program will be slowed down by excessive criticism of costs of construction at installation; Dr. Winne and Commissioner Pike testify at the JCAE hearing (Baltimore Sun, New York Times, New York Herald Tribune, Washington Times-Herald, Philadelphia Inquirer, Washington Star, June 20).
	Investigation, security	X						X	Senator Hickenlooper charges that September 1948 Scientific Bulletin contained a digest of AEC security files similar to ones he was denied use of in open hearings (Washington Star, June 20, J. A. O'Leary, Philadelphia Inquirer, Dorothy Rockwell).
	Investigation, general			X		X			Claims that public understanding is that Congress should keep a check on public officials and expenditures; that the AEC investigation is merely routine and not a smear campaign (Washington Times-Herald, George Sokolsky).
	Investigation, security		X				X		Contends that the FBI and not the Congress should investigate, William Bradford Huie's article in the Nation's Business for possible security leaks (Louisville Courier-Journal, June 18).
	do		X			X			Cites the "security" obsession which surrounds the hearings and warns against letting "secrecy" become a sacred word (Providence Journal, June 18).
	Investigation, general		X			X			Maintains that average citizen expects the AEC to be responsible to the people through the Congress, and expects the JCAE to keep a check on the policies and operation of the AEC (Spokane Spokesman-Review, June 16).
	Investigation, waste				X	X			Views with alarm Mr. Lillenthal's statement that criticism of the cost of construction may "inject a note of caution in the whole atomic energy program" (Fulton Lewis, MBS, June 20).

*Analysis of public opinion regarding the issues involved in the investigation into the policies and administration of the Atomic Energy Commission—*

Date	Issues	News items	Editorial	Columns	Radio	Pro	Con	News only	Sources quoted:
June 22	Investigation, lost uranium.		X				X		Criticizes Senator Hickenlooper for continuing to insist that espionage is a possibility in the case of the missing Truman. Hopes that other JCAEC members will join Dr. Zinn in labeling this new as "fantastic" (Raleigh News and Observer, June 17).
	Investigation, waste.		X			X			Claims that Senator Hickenlooper has proven his charges of "rags" and extravagance, and that the Commission should be made accountable to the people and the Congress (Reno Gazette, June 18).
	Investigation, general.		X				X		Thinks Senator Hickenlooper's loud noises as voiced in hearings increases hysteria; welcomes President Truman's calm comments (Dayton News, June 17).
	do.		X				X		Discounts charges against Mr. Lillenthal and AEC; advises people to disregard the hue and cry and base decisions on the facts that will come out of it all (Atlanta Journal, June 15).
	do.		X				X		Defends Mr. Lillenthal; declares that if he is forced out of office, it will be most difficult to get able men to take positions at AEC (Birmingham Age-Herald, June 15).
	do.					X			Belittles Mr. Lillenthal; points to his work at TVA (Knoxville Journal, R. I. Green, letter to editor).
	Investigation, lost uranium.			X			X		Notes denial of AEC that uranium is missing at Oak Ridge; states that the headlines on this story apparently came from the "less responsible press" (Eric Sevareid, CBS, June 21).
	Investigation, waste.			X			X		Asks whether it is the business of AEC to make bombs as fast as it can; or wait until it can perform such work with complete advance plans and at less expense. Which is better? (Elmer Davis, ABC, June 21).
June 23	Investigation general.	X						X	William Bradford Huie charges that Mr. Lillenthal consumes loyalty with security risks and that he is not "fit for the job" (Santa Fe New Mexican, June 17).
	do.	X					X		Supports Mr. Lillenthal and feels he has done a good job (Des Moines Register, June 19, 3 letters to editor).
	do.	X				X			Calls for more men like Senator Hickenlooper to expose blunders of public men (Des Moines Register, June 19, letter to editor).
	Investigation, waste.	X						X	Cites Senator Hickenlooper's statement that he will discuss waste at Los Alamos at meeting today (Washington News).

Date	Issues	News items	Editorial	Columns	Radio	Pro	Con	News only	Sources quoted :
June 25	Investigation, general	X				X			Notes that Fulton Lewis broadcast says letter of resignation of Dr. C. W. J. Wende appears to substantiate some of the charges made by Senator Hickenlooper (New York Journal American, June 24).
	Fellowships	X						X	National Research Council handling AEC fellowships, considers proposal to screen supervisors for loyalty as well as the students. AEC orders NRC to drop 1 supervisor who was dismissed from MED in 1945 for "indiscretion" (Washington News).
	Investigation, waste			X		X			Continues discussion of residential repair costs at Los Alamos (Washington News, Fred Othman).
	Investigation, general, towns		X				X		Feels that there may be some modicum of truth in Senator Millikin's accusation of "fascistic" operations of towns by AEC—JCAE should be a real watchdog instead of either a "poodle" or a hound of the chase" (Washington Post).
June 26	Investigation, general			X			X		Senator Hickenlooper's trial of Mr. Lillenthal is fast becoming Mr. Lillenthal's trial of Senator Hickenlooper (New York Post, Arthur Schlesinger).
June 27	Lost uranium	X						X	Believes that the furor over missing uranium at Oak Ridge can be traced to the sale of uranium nitrate about 6 months ago—claims such was sold but doesn't know to whom (Knoxville Journal, June 22, Cecil Jones).
	Investigation, town management	X						X	Observes that current investigation brings up the question as to whether AEC should be operating the towns at all: AEC inherited this burden; never asked for it; but can see no reason for its continuation (Providence Journal June 23, F. W. Collins).
	Investigation, general		X			X			Commends General Groves for statement that JCAE is only doing its duty (Knoxville Journal, June 23).
	Investigation, waste		X			X			Criticizes Mr. Lillenthal for supporting the policy of "reckless spending and damn the costs" on the theory that restrictions will slow up the project (Knoxville Journal, June 22).
	do				X	X			Debunks the idea that increasing costs at Hanford are due to isolation, etc. Contends that there is no reason why AEC towns can't be operated like any other town (Fulton Lewis, Jr., MBS, June 24).
	do				X		X		Senator John McClellan assumes that AEC was not investigated by the Hoover Commission because of secrecy of work; sees no reason why expenditures of AEC should not be scrutinized (Meet the Press, MBS, June 24).

JCAE investigation to resume June 28; wonders if Senate Appropriation Committee's plan to add a "rider" to budget bill will raise a question of jurisdictional procedures (Washington Star, June 27).  
 Reports that communists in Washington are fed up with the atomic and Communist jitters which they think underlie the AEC investigation (Pocatello Tribune, June 21, John Barden).  
 Scores W. B. Huie for his article attacking Mr. Lilienthal and accepts Dr. J. Robert Oppenheimer's view that AEC has done a good job (Santa Fe, N. Mex., June 23).  
 Shipment of isotopes in violation of act must be serious charge made against Mr. Lilienthal (Knoxville Journal, June 26).  
 Scores AEC's reckless spending (Hartford Courant, June 26). (Letter to editor).  
 Cites Senator Hickenlooper's statements in speech in Iowa that he has AEC "out of the run"—regulations are being tightened since his investigation started. Defends "spot-check" hiring in much the same fashion as was done under military control when situation demanded it (Elmer Daily AEC, June 27).  
 R. W. Cook, acting manager at Oak Ridge, replies to Senator Hickenlooper's charges that too much money is being spent to operate the town. States that cost of producing U-235 has been halved in 2 1/4 years and that production of isotopes has been increased 600 percent (Baltimore Sun, P. Potter: Washington Star, June 28; Philadelphia Inquirer: New York Herald Tribune; New York Times, J. D. Morris, SP; Washington Times-Herald).  
 Senator Hickenlooper states at a news conference in Des Moines that "substantial evidence of mismanagement" has already been proven; more to come (Philadelphia Inquirer, June 28).  
 Hans Freistadt says he will go to court to hold AEC fellowship unless he can secure other funds to pay costs of education (New York Herald Tribune).  
 Iowa editors held news conference at Des Moines with Democratic farmers and agreed that Senator Hickenlooper is making a bad impression among home folks by attacking AEC (Washington Post, Drew Pearson).  
 States that President Truman has ordered Democratic National Committee to get Senator Hickenlooper's scalp "at all costs" for smearing AEC (Philadelphia Inquirer, June 28, Drew Pearson).

June 29	Investigation, general	X						X	Discusses manner in which questions which "almost strike sparks" arise out at the hearings (Christian Science Monitor, Marian Roth, June 24).
	Investigation, isotopes	X						X	Dr. Wm. F. Sauer, Yale faculty member, says he can see no connection between work with isotopes and the A-bomb (Hartford Courant, June 27).
	Investigation, waste		X			X			There is no more excuse for waste in AEC than in any other agency; presents criticism of waste at Hanford (Portland Oregonian, June 22).
	Investigation, general		X				X	X	Contends that Senator Hickenlooper hasn't presented any important charges and has been the cause of wasting time and money (St. Louis Post-Dispatch, June 26).
	Investigation, security					X			Official Mr. Linnenthal for suggesting that FBI check W. B. Huie's article for security breaches (Reno Gazette, June 21).
	Investigation, general		X					X	Thinks the investigation may result in reintroduction of bill vetoed last year to have Members of the Commission and General Manager investigated by FBI (El Paso Times, June 24).
June 30	Investigation, waste	X						X	Senator Wherry thinks that AEC is acting "Holler than Thou" and recommends cutting fund (Washington Star, June 29).
	do			X		X			Discusses the cost of concrete slabs for garbage cans at Oak Ridge (Washington News, Fred Othman).
	do	X						X	R. W. Cook, acting manager of Oak Ridge, says that he is proud of the job AEC management has done there.
	Investigation, security	X						X	Advises public to get real facts (New York Journal American).
									AEC discloses that only 37 of 4,095 who were granted emergency clearances were later dismissed. Senator Hickenlooper demands lists of trips taken by Mr. Lillenthal at Government expense (Washington Post; Washington Times-Herald; New York Herald-Tribune; New York Times).
	Investigation, general	X						X	Dr. J. Robert Oppenheimer states in an interview that the investigation may crystallize opinions, but doubts that it will do anything to improve the Commission; may make it clear in one's mind what is important and really worth fighting for (San Francisco Chronicle, June 23).
	Investigation, isotopes			X			X		Discusses use made of isotopes and rules laid down by the AEC for all purchasers (New York Journal American, Inez Hobbs, June 29).

July 2	Fellowships	X						X	Emergency Committee of Atomic Scientists curtail their activities in order to avoid taking a stand on fellowship question (Washington Post; Washington Star; New York Herald Tribune; Baltimore Sun).
	Investigation, general		X				X		Questions Fulton Lewis' statement that no one has anything against Mr. Lillenthal and that they just want to see if he is doing a good job (New York Post, July 1).
July 3	do	X						X	Observers feel that Senator Hickenlooper has hardly proved his charges (Philadelphia Inquirer, F. G. Hyde).
	Fellowships	X						X	Altho Haus Frieftadt has received notice that his grant has been revoked, he says he will continue to attend classes (Philadelphia Inquirer).
July 5	Investigation, general	X						X	Mr. Lillenthal to open his defense against charges made by Senator Hickenlooper on Wednesday. Scientists to be called (New York Herald Tribune; Washington Times-Herald; New York Times; Philadelphia Inquirer).
	do		X					X	Thinks that congressional investigations benefit democracy but there should be a change in the manner in which they are conducted (Washington Post).
	do	X						X	Dr. R. W. Burnett, AEC consultant, says that the way Senator Hickenlooper and JCAE are conducting the investigation is 'shoddy and dangerously stupid' and military influence can be seen in the whole thing (Minneapolis Tribune, June 29).
	Investigation, isotopes		X			X			Commends Commissioner Strauss on his stand regarding isotopes (Los Angeles Examiner, June 21).
	do		X				X		Denounces "outburst" over shipment of isotopes (Santa Fe New Mexican, June 27).
	Investigation, waste		X			X			Cites costs of bus service at Oak Ridge and wonders how many more such cases have been uncovered (Cleveland Plain Dealer, June 26).
	Investigation, general			X			X		Recalling that Senator Hickenlooper feared hearings would turn into a 'carnival of confusion' as his reason for asking the President to demand Mr. Lillenthal's resignation, points out that it is not Mr. Lillenthal's mistakes that have proven to be the public spectacle (Elmer Davis, ABC, July 4).
	do			X				X	On Meet the Press, Senator Millikin refuses to say whether charges have been proved against AEC (MBS, July 1).
	do						X		Attacks Senator Hickenlooper for taking up so much of the AEC's time and doubts if this is the best way to promote good management (Washington Star, Lowell Mellett).

July 6.....	Investigation, security.....	X						X	Editorial objects to General Groves' suggestion that FBI be given direct charge over security of the A bomb (Washington Post).
	Investigation, waste.....	X					X		Opposes Representative Kilday's suggestion that act be amended to require congressional approval for projects over a certain amount. Objects to telling stock-pile size (Phoenix Republic, June 28).
	do.....	X						X	Agrees with Senator Hickenlooper on costs of running towns (Chicago Tribune, July 1).
	Investigation, general.....		X					X	Senator McMahon states he wants to look into relations between AEC and the military; will call William Webster, chairman of MLC; AEC will not present Mr. Webster's testimony as defense against Senator Hickenlooper's charges (Washington News, July 1).
July 7.....	do.....		X					X	Reports that Mr. Lillenthal is now replying to Senator Hickenlooper's charges in open hearings. Scientists are to be called to testify (New York Herald Tribune; Washington Times-Herald; Washington Post; New York Sun, July 6; New York Times; Philadelphia Inquirer; Baltimore Sun; Washington Star, July 7; Washington News, July 6; New York Journal-American, July 6).
	Fellowships, security.....					X			In reporting that Henry J. Taylor has been denied a visa to Czechoslovakia suggests that Czech reporters probably could get a free tour of A plants and maybe even a follow-up (Fulton Lewis, MBS, July 6).
	Investigation, general.....	X					X		Agrees with Mr. Lillenthal that results of atomic production are relevant to charges made against him, and that from his testimony results are impressive (Washington Post).
	Investigation, waste.....		X					X	Reports story of Senator McMahon's introduction of bill to curb spending of AEC and factors involved in that procedure (Hartford Courant, July 3; R. D. Byrnes).
	Investigation, general.....		X					X	Senator Hickenlooper has been stymied in his attempt for sensational disclosures by the skillful questioning of Senator McMahon as to how much can be disclosed (Des Moines Register, July 4).
	Investigation, waste.....		X					X	Senator Hickenlooper reads letter from Louis H. Goetz, former employee of Argonne Laboratory, in which he charges waste in construction of the laboratory (Spokane Spokesman-Review, June 30).
July 8.....	Investigation, general.....		X					X	General McCormack tells JCAE that bomb production is now on a stable basis; there's a complete model change since MED days and bottlenecks have been broken since AEC took over (Washington Star, July 7; Baltimore Sun; Washington News, July 7; Philadelphia Bulletin, July 7; New York Journal-American, July 7; Wall Street Journal; Washington Post; New York Times; Washington Times-Herald; New York Herald-Tribune; Philadelphia Inquirer; New York News).

July 8	Investigation, general				X	X			Contents that Mr. Lillenthal has not answered specific charges. Continuation of previous broadcast. (Fulton Lewis, MBS, July 7.)
	do	X						X	Partial reprint of Fulton Lewis broadcast criticizing Mr. Lillenthal for not answering specific charges (New York Journal-American, July 7).
	do			X				X	Notes General Groves defense of Senator Hickenlooper's charges; says Groves was brought to Des Moines to bolster Senator Hickenlooper's position politically (New York Post, July 6; R. S. Allen).
	do		X				X		Thinks that AEC in telling JOAE that atomic bomb production has increased, was using it as a defense of its efficiency; writer feels that such judgment is correct; also scores secrecy regarding size of stock pile (Wall Street Journal).
	do						X		Thinks the perfecting to be done is needed in JOAE not AEC (Christian Science Monitor, July 2), letter to editor.
	do				X		X		Jack Beall, ABC, July 6 interviewed Dr. Bachar. Dr. Bachar again expresses belief that AEC program is going along very well.
	do				X	X			Continuation of his criticism of Mr. Lillenthal (Fulton Lewis, MBS, July 7).
	Investigation, waste				X			X	Feels it would be a pity if legislation introduced to curb expenditures would make AEC timid; Dr. Bachar's statement re reactor tests stations will only serve to "whet" the appetites of the anti-Lillenthal crowd (Elmer Davis, ABC, July 7).
	Investigation, general				X		X		Thinks Hickenlooper has "stymied out pretty badly" in trying to prove his charges (Geo. Hicks, NBC, July 6).
	do				X		X		Thinks AEC's received two-way boost by Senator McMahon's statement that the arsenal was empty when AEC took over and by Dr. Bachar's defense of AEO procedures, etc. (Morgan Beatty, NBC, July 7).
	do			X				X	Can't foresee end of hearings; some observers feel Senator Hickenlooper won the first bout on "points." (Washington News, July 8, Peter Edson).
July 9-10	do	X						X	Dr. Enrico Fermi testifies that results in the AEO project during the past 2½ years are far better than was expected. Members of GAC and LAC testify at the hearings. (Washington Star, July 8; Washington Post, July 9; New York Times, July 9; New York Herald-Tribune, July 9; New York Sun, July 7; July 8; New York Journal,

**American, July 8; Washington Times-Herald, July 9; Philadelphia Bulletin, July 8; and July 9; Philadelphia Inquirer, July 9.**

Inquirer, July 9:  
says certain observers think Senator Hickenlooper has won the battle; AEO presenting testimony of scientists to prove AEO program is successful. (New York Times, July 10, J. D. Morris).

times, July 10; *D. McArthur*, senator McCauley makes public letter from Secretary Johnson re the publication of pictures by A.E.C. New York Herald Tribune, July 10; Washington Post, July 10; Washington Star, July 10; New York News, July 10; Baltimore Sun, July 10; New York Times, July 10; Washington Times-Herald, July 10; Philadelphia Inquirer, July 10).

quirer, July 10).  
discusses the fallacy that secrecy means security etc.  
(Feature article New York Times, July 11, Hanson  
Baldwin).

**Dr. Hugh C. Wolfe defends Mr. Lillienthal on all counts; considers him as high type of public servant. Report of an interview with Dr. Wolfe. (Feature article New York Daily Mirror).**

Post magazine section, Wamby Bald.) Reports on despite strong defense of AEC legislation has been introduced to curb spending; reviews testimony (New York Herald-Tribune, July 10).

(New York Herald-Tribune, July 10).  
be sought curbing on spending wise; but warns that secrets must be safeguarded (Philadelphia Inquirer July 10).  
contrasts the coverage given Senator Hickenlooper's charges as compared to that given to present defense by AEO (New York Post July 8)

(New York Post, July 8).  
r. Thiele submits his report on loss of uranium—unlikely  
that theft was involved (Baltimore Sun; Washington  
Times-Herald; Philadelphia Inquirer; Washington Post;  
New York News, July 11; New York Times; New York  
Herald-Tribune).

**Herald-Tribune.)**  
 All that Senator Hickenlooper has accomplished is to tar  
 AEC by innuendo and constitute a risk to research  
 (St. Louis Star Times—reprinted in Raleigh News and  
 Observer of July 6).

Observer of July 6).  
Senator McMahon hopes to complete open hearings today and get under way with secret part of investigation (Washington News)

Washington News).  
EC testifies that it was decided and upheld by Attorney General Clark that the law permitted emergency clearances (Baltimore Sun; Philadelphia Inquirer; Washington Post; New York Herald-Tribune; New York World Telegram, July 11; New York Post, July 11; Washington Star, July 11; Philadelphia Bulletin, July 11).

Star, July 11, Finaquelina Bureau, July 11).  
announces the "whispering and hinting" that is going on  
about AEO even though the charges have not been  
proven (Washington Post, Marquis Childs).

July 12	Investigation, lost uranium.		X				X		Says in view of Dr. Thiele's report this issue can now be "laid to rest" (New York Times).
July 13	Investigation, general						X		AEC will profit by hearings, Senator Hickenlooper and Bureau of July techniques have been hurt (Philadelphia Bulletin).
	do			X				X	Claims that one anti-illithal Member of Congress may ask to have writers for pulp science magazines investigated to see where they get the information (New York News, D. Walker).
	Investigation, lost uranium.		X				X		Comments on Senator Hickenlooper's unwillingness to accept Dr. Thiele's report on this issue; AEC will profit by hearings (Washington Post).
	Investigation, general		X				X		Thinks Senator Hickenlooper's charges stemmed from bitterness over loss of chairmanship; he has done AEC and Nation a service since hearings have proven a remarkably good administration at AEC (Raleigh News and Observer, July 8).
	Investigation, waste					X			Claims there were millions of feet of surplus lumber after completion of school at Hanford (Spokane Spokesman Review, July 5, letter to editor).
July 14	Investigation, general	X						X	Discusses plan of JCAE for handling personnel security cases (New York Herald Tribune; New York Times).
	Investigation, lost uranium		X				X		Terms the issue the New York News' "Great Atomic Scare" (New York Post, July 13).
	Investigation, general military control		X					X	Believes AEC investigation should be called off since Mr. Lilienthal's comparison of his administration with MED may revive the issue of civilian versus military control (Providence Journal, July 10).
July 15	Investigation, rules for general	X						X	Senator Lucas testifies on resolution he is sponsoring for changing the rules of investigations; Senator McMahon approves of same; says such procedures were observed in the current AEC hearings in order to prevent a Roman holiday (Washington Post; New York Times).
	Investigation, general		X				X		Lauds Mr. Lilienthal for stressing continued development and accumulation of atomic weapons as a peace and security measure. Such statements made at AEO hearings (Milwaukee Journal, July 9).
	do						X		Accuses the Des Moines Register of aiding and abetting Senator Hickenlooper's "smearing campaign against Mr. Lilienthal" (Des Moines Register, July 12, letter to editor).

July 16-18.....	Fellowships.....	X							X	Washington Association of Scientists assails Senator O'Mahoney's rider to the appropriation bill requiring FBI investigation of all fellowship students (Washington Star, July 17).
	Investigation, waste.....	X							X	Senator McMahon states that as a result of discussions between JCAE and AEC, he does not expect to take immediate action on his bill to require committee approval of authorization for AEC budget but that he does expect to get it to the floor before the Independent Offices Appropriation bill (Hartford Courant, July 14).
	Investigation, general.....			X					X	Observes that 23 days of public hearings on charges of "incredible mismanagement" has produced little to support Senator Hickenlooper's charges; hearings closed and other matters to be discussed in secret sessions (Chicago Sun-Times, July 14, Carleton Kent).
	Investigation, security.....				X				X	Belittles the idea of giving FBI the job of passing on the loyalty of AEC employees; sees it as an effort to smear AEC (Dayton News, July 12).
July 19.....	Investigation, general.....	X							X	Representative Jackson says there is no basis for Hickenlooper's charges of "incredible mismanagement," and that United States is extremely fortunate that the atomic energy business is in such capable hands (Spokane Spokesman-Review, July 12).
	.....do.....	X							X	Terms AEC investigation a "tiresome one-man show" by Senator Hickenlooper, and asserts that he is only seeking to build a case for his reelection in 1980 (Cleveland Plain Dealer, July 17, Campbell Rogers).
	Fellowships.....	X							X	Discusses the attitude of educational and scientific organizations regarding the adopting of requirement of full FBI investigations of fellowship students (Minneapolis Tribune, July 15, Nat Finney).
	Investigation, general.....				X				X	Thinks AEC's "housekeeping arrangements" and expenses should be subject to congressional scrutiny, but contends that secret projects, etc., should not be a matter of discussions since nothing is a secret long after the close of a meeting (Providence Journal, July 16).
July 20.....	Investigation, waste.....	X							X	East Tennessee Natural Gas Co. says that its pipe line at Oak Ridge will give double assurance of unbroken production in case of war (New York Herald Tribune).
	Fellowships.....	X							X	Federation of American Scientists announces that 15 national organizations oppose the rider requiring a full FBI investigation on all fellowship students.
July 21.....	.....do.....								X	FBI investigation of full FBI investigation of all fellowships students (Washington Post).
	Investigation, general.....	X							X	States that although the hearings have cleared the air on some things and brought a lot of information into the open, it has done much to lower the morale of the whole project, especially in the installations outside of Washington, and has made AEC problems more difficult (Minneapolis Tribune, July 18, Nat Finney).

July 22	Investigation, general		X				X		Denounces Senator Hickenlooper and contends that United States is fortunate that the Commission has done a great task well. Joins Washington Post in hope that AEC will now be relieved of constant, aimless harassment (Dayton News, July 18).
	do			X				X	Investigation changed the plans of Mr. Lillenthal to resign in May; feels he has successfully warded off the unsustained charges made by Senator Hickenlooper. Mr. Lillenthal will probably resign later and it will be difficult to find an able man willing to take over. Report of the JCAE is in doubt since Republican members will sign only a report carrying criticism of Mr. Lillenthal's administration (Washington Post, Marquis Childs).
July 23, 24, 25	do	X						X	Commissioner Pike, in an address at Bowdoin College, Brunswick, Maine, says that relations between AEC and JCAE are nearing "something like a crisis." Discusses the issues (Washington Star, July 22; Washington News, July 22; New York Times, July 23; New York Herald Tribune, July 24).
July 26	Investigation, general				X			X	Mr. Lillenthal will resign this year but not until after AEC has been given a clean bill of health (Danton Walker, MBS, July 24).
	do				X		X		Comments on Pike's speech: feels that "crisis" is more or less past since the investigation has petered out and is now at the point where it is more past than present (Richard E. Wolk, July 22).
	Fellowships				X			X	Discusses the whole issue of FBI investigations of all fellows under the AEC fellowship training program (Albert Warner, MBS, July 22).
	Investigation, general		X			X			Comments on Pike's speech, seeing in it his belief that AEC should be given a black check with no questions asked. Feels it is a continuation of the administrative philosophy that started about 1933 and has grown stronger through the years (Knoxville News-Sentinel, July 23).
	do			X				X	Mr. Lillenthal not yet "out of the woods." There is a growing tension within the JCAE (Washington Star, Dorothy Flesoon).
July 27	Investigation, waste and town management.	X				X			Discusses the town management situation at Richland; maintains that all businessmen pay a stiff percentage of gross sales to GE and AEC (Chicago Tribune, July 24, Seymour Korman).

July 29.....	Investigation waste....	X	.....	.....	.....	.....	.....	.....	.....	X	Reprint of article in the Times-Independent of Moab, Utah, which charges that AEC is indulging in lavish and wasteful spending at the Monticello mill. Cites charge that telephone calls between the mill and the AEC office in Grand Junction sometimes last all afternoon and cost as much as \$50 each (Grand Junction Sentinel, July 24).

APPENDIX 5

REPORT AND APPRAISAL OF THE CARMICHAEL SCHOOL, RICHLAND, WASHINGTON, TO THE JOINT COMMITTEE ON ATOMIC ENERGY, SENATOR BRIEN MCMAHON, CHAIRMAN

(Prepared by Ernest J. Kump & Mark Falk, Consulting Architect and Engineer, San Francisco, California, August 6, 1949)

I. PURPOSE

This report and appraisal was initiated by telephone instructions from Mr. William L. Borden, Executive Director of the Joint Committee on Atomic Energy to Mr. Ernest J. Kump on July 14, 1949.

<sup>1</sup> Listed by order in which the greater number of letters received.

It is the objective of this report to evaluate in general whether the cost to the government of the Carmichael School, Richland, Washington, was justified with respect to quality and scope of the facilities that were finally realized; and to determine as far as possible the methods and conditions under which the work was executed.

## II. DESCRIPTION OF THE PROJECT

The project in general consisted of the planning and construction of a junior high school facility for approximately 650 students. The project is located in the Richland School District in the town of Richland, State of Washington. Its purpose is to serve the educational housing needs of the students of junior high school level in Grades 7, 8, and 9 in the southern half of the village.

The school is a one- and partial two-story building of steel and reinforced concrete construction located on a sloping site of approximately 25 acres bounded by Thayer Avenue and Lee Boulevard in the town of Richland.

The project contains approximately 14 classrooms, 9 special or vocational rooms, cafeteria, gymnasium, auditorium, study hall, offices, toilets, and apartment facilities.

## III. SOURCE OF DATA AND MATERIALS

The materials, information and data upon which this report is based were obtained during a visit of a representative of this office to Richland, Washington, from July 20, to July 25, 1949, and from the office of Mr. Elmer Breckner, Assistant Superintendent of Public Instruction of the state of Washington at Olympia on July 26, 1949.

It is entirely possible that, as a result of this preliminary study, additional information and data may be produced or developed which may modify or effect the conclusions reached on the basis of presently available information.

A preliminary examination of the building was made on Thursday, July 21, 1949, by the writer, accompanied by J. E. Travis, W. P. Cornelius, N. G. Fuller of the Atomic Energy Commission and Superintendent of Schools, P. A. Wright of Richland. The superintendent of schools furnished the writer with a master key to the building and a careful examination of all spaces in the building was made on Sunday, July 23, 1949.

Additional information of a general character pertaining to the project and not a matter of record was obtained in conferences and conversations with the officials named below.

The principal officials contacted and through whom the bulk of the material was obtained were:

J. E. Travis, Assistant Manager, Atomic Energy Commission, Richland.

W. P. Cornelius, Chief, Construction and Maintenance, Atomic Energy Commission.

N. G. Fuller, Chief, Community Management Division, Atomic Energy Commission.

J. R. Rue, Assistant to the general manager, General Electric Company, Budget and Expense Control.

C. F. Barnes, Supervisor of Community Activities, General Electric Company.

Clinton Henning, Division Engineer, General Electric Company.

David Checkley, Project Manager, J. Gordon Turnbull, Inc., and Graham, Anderson, Probst & White, Inc., Architects.

F. E. Baker, Comptroller, General Electric Company.

Mallis, DeHart & Hopkins, Architects, Seattle, Washington.

P. A. Wright, Superintendent of Schools, Richland, Washington.

Dr. A. R. Sandin, Assistant Superintendent of Schools, Richland, Washington.

Thor Hauff, President, Richland Board of Education.

Elmer Breckner, Assistant Superintendent of Public Instruction, State of Washington, Olympia, Washington.

Dr. Cleve O. Westby, Building Specialist, State Department of Education, Olympia, Washington.

Mr. Sincock, Building Specialist, State Department of Education, Olympia, Washington.

Source materials provided for study by the foregoing officials included:

1. Plates of the Master Plan for the Village as completed by the Turnbull organization.

2. Enrollment data, tables and graphs from the School Department.

3. Statement of project costs from General Electric Company accounting department.

4. A copy of the General Electric Company Realty Board's report.

5. Data on school costs from the State Department of Education.

6. Detailed analysis of square footages and costs from Mallis, DeHart & Hopkins, School Architects, Seattle.

7. Photostatic and typewritten copies of programs, letters memoranda pertaining to planning and construction of the project from various General Electric departments and offices.

8. Rules and Regulations of the State Board of Health relating to school sanitation.

9. Extracts from the Project Proposal pertaining to Robert Gray Junior High School (Renamed the Carmichael School).

10. Construction History from the project manager of the Turnbull organization.

11. Wage escalation data from General Electric accounting department.

12. Photostatic copies of communications from the Richland School Board and the State Department of Education relative to the project.

13. The Architectural Planning Program for the new North Junior High School, Richland (Chief Joseph Junior High).

14. Complete set of progress photographs taken during the construction of the building at about monthly intervals.

15. Set of "as built" plans for the building.

16. A copy of Vol. I, "Report of Cooperative Educational Planning Project, Richland Public Schools" made by the School of Education of the State College of Washington.

Data furnished was assumed to be valid, reliable, and accurate. No investigation or audit was made at this time to determine the accuracy or completeness of data furnished and the conclusions of this report are based on the assumption that all information furnished was complete, valid, and reliable.

#### IV. CHRONOLOGY OF PRINCIPAL EVENTS AND DECISIONS

September 26, 1946: Communication from R. H. Fergin, then Superintendent of Richland Schools, to C. F. Barnes, Superintendent of Community Activities for General Electric Company entitled "Building Needs for September 1947."

This communication suggests that "It may be found advisable to build two junior high schools" and makes an enrollment estimate of 786 for September 1947 in a 3-year junior high school.

November 29, 1947: Communication from C. F. Barnes to F. W. Wilson, Superintendent of Design and Construction Department. Subject: "Schools—Revised building requirements for 1947 junior high school. \* \* \* Description of facilities requested."

Briefly this communication sets up the requirements for a single large junior high school for 1,000 students, proposed to be located just north of the high school.

January 1947: G. A. Pehrson & Associates, Architects, of Spokane, Washington, retained to prepare designs, drawings and specifications for large central junior high school to house 1,000 students. General Electric Company was to do mechanical and electrical, but this was later turned over to Pehrson and an adjustment in fixed fee made.

March 24, 1947: Contract by and between the Richland School Board and the School of Education of the State College of Washington entered into for a survey of the Richland public schools. Made by a staff of 34 persons, the survey report consists of two volumes covering the organization, administration, instructional personnel and buildings. Emphasis was placed on recommendations for a long-term plan of improvement.

May 2, 1947: Letter from Dr. Zeno B. Katterle, Director of the Survey, indicating that the recommendations of the survey would be to provide two junior high schools housing a maximum of 800 pupils each. It was then apparent from their careful enrollment estimates that a single junior high school could not be expected properly to house all pupils in grades 7, 8, and 9 who would present themselves for admission.

Summer 1947: The prospect of a village population of 25,000 established with reasonable certainty. The necessity for two junior high schools was thus established.

Completion of the first group of 500 new housing units followed by early 1948 completion of Hudson houses (450 units) and completion of the A. & J. group of 900 units in the spring of 1948 fixes the scope and pattern of community growth.

September 1947: J. Gordon Turnbull, Inc., and Graham, Anderson, Probst & White, Inc., retained on a joint venture basis to prepare a Master Plan for Richland (including schools) at an estimated fee of \$50,000.

November 20, 1947: Because of its apparent urgency the Turnbull organization submitted a rough draft preliminary analysis of the school section of the Master Plan, independently arriving at the same conclusions as the Washington State College survey group relative to the untenability of the assumption that a single junior high school would be adequate. Recommended two junior high schools as shown on the plate "Junior and Senior High Schools" of the Master Plan.

December 7, 1947: Stop work order on the Central Junior High School was issued to G. A. Pehrson and Associates, of Spokane, abandoning further work on the single large centrally located junior high school. Negotiations to determine the amount due ensued and a final settlement reached June 7, 1948, for \$45,000. Design work was estimated to be 79 percent complete at that time.

December 1947: J. Gordon Turnbull, Inc., and Graham, Anderson, Probst and White, Inc., retained at a fixed fee of \$758,133 for 59 items of design and engineering work, including the new South Junior High School at a fixed fee of \$68,204.

December 10, 1947: C. F. Barnes, General Electric Company Superintendent of Community Activities, transmitted to the Turnbull group an amended copy to the original November 1946 list of requirements for the 1947 junior high school. The amendment consisted of marginal notes and deletions of facilities on the original list. This list, together with the portions of the Washington State College survey relating to buildings, were the material upon which the Turnbull group based preliminary sketches for the school.

December 31, 1947: First preliminary site use plan and preliminary floor plans submitted by the Turnbull group.

January 13, 1948: Preliminary plans consisting of minor revisions of December 31 sketches approved by W. P. Cornelius, Chief of Construction and Maintenance, Atomic Energy Commission.

January 10-15, 1948: Contact made with the State Department of Education as represented by Elmer L. Breckner, Assistant Superintendent in Charge of Administration and Finance; Dr. Cleve O. Westby and Mr. Sincok, school building specialists in that department. Under dates of January 12, 13, 14, 15 and 16th detailed suggestions for modifications in the plans were submitted by the State Department of Education. Under date of February 3, 1948, the Richland School District, through its Superintendent R. H. Fergin in a communication to Mr. C. F. Barnes of General Electric Company stated, "The school board is desirous that these recommendations be followed insofar as they can be incorporated within the existing over-all plan." The extent to which this was done is discussed elsewhere in this project.

March 9, 1948: The Architect-Engineer was directed to follow as a general guide the specifications for the Shoreline Junior High School, Seattle, Washington, and was furnished a copy by C. F. Barnes.

March 26, 1948: Submission of the official "Project Proposal" containing a description of existing facilities and an explanation of their inadequacies, a description of the proposed work, advantages to be gained, time required to complete the work after authorization and an estimated cost. The time required was estimated at 10 months and the cost \$1,786,000.

April 3, 1948: Modified preliminary working drawings and complete outline specifications approved by the General Electric Company Design Section.

April 5, 1948: Atomic Energy Commission authorization of \$1,786,000 for the project, as requested in the Project Proposal. (NOTE.—Ten months after this authorization would be February 5, 1949.)

April 15, 1948: Preliminary working drawings estimated to be less than 40 percent complete, approved by the Atomic Energy Commission local office.

April 23, 1948: Cost-plus-fixed-fee contract awarded to the McNeill Construction Company of Los Angeles. Fixed fee of \$80,000 includes an item of \$60,485 for the Carmichael School.

May 13, 1948: Construction work actually started, with a directive completion to have the plant ready for use September 1, 1948, and physically complete February 1, 1949. Approximate time from May 13 to September 1 is 3½ months.

May 13, 1948: Structural steel order placed with Judson-Pacific.

June 19, 1948: Steel sash ordered from Truscon, Los Angeles. Final deliveries of steel sash were not made until January 26, 1949.

July 1, 1948: New superintendent of schools, P. A. Wright, took office.

September 1948: Accounting procedures relative to allocation of General Electric overhead and distributives changed to require allocation to current projects instead of accumulation until the end of the whole construction programs. This added \$738,611.00 to the charges against the Carmichael School.

October 1, 1948: Project Memorandum No. 877 signed by F. R. Creedon establishing January 24, 1949, as the completion date for the Carmichael School (also called the Robert Gray Junior High School).

February 28, 1949: School district occupied portions of the north, south, east and west wings, excepting the auditorium, music rooms, cafeteria, home economics rooms and the shops.

April 8, 1949: Gymnasium turned over to the school.

April 21, 1949: Kitchen and cafeteria put into operation. Home Economics and shops not used by the school during the spring term.

June 3, 1949: School closed for summer vacation.

June 8, 1949: General Electric Company Realty Board report on the Carmichael School transmitted to Mr. G. R. Prout, Vice President, Nucleonics Department, Richland.

July 20-27, 1949: Field work of this report.

August 1949: J. A. Terteling & Sons have a contract to surface drives, walks, parking areas, outdoor basketball and tennis courts and to install irrigation piping to permit grounds development scheduled for execution this month. Grounds virtually unusable until this work is done.

#### V. COST OF THE WORK

1. *Costs.*—Latest information on the costs of the project is dated June 30, 1949, and was furnished by F. E. Baker, Comptroller, General Electric Company Nucleonics Department, Richland. Data is summarized as follows:

	Expended	Commitments	Total
<b>A. Engineering and design:</b>			
General Electric.....	\$3, 900		\$3, 900
Turnbull & Associates.....	63, 770	\$4, 434	68, 204
Design overhead.....	292		292
Total design cost.....	67, 962	4, 434	72, 396
<b>B. Direct construction costs:</b>			
Grading and roads.....			149, 508
Permanent junior high buildings.....	2, 332, 756	102, 041	2, 434, 797
Permanent utilities.....	54, 939		54, 939
Temporary construction.....	31, 453		31, 453
Other direct costs.....	66, 842	510	67, 352
Total direct construction costs.....	2, 635, 498	102, 551	2, 738, 049
<b>C. Overhead:</b>			
Overhead and distributives.....	738, 611		738, 611
Equipment usage.....	174, 175		174, 175
	912, 786		<sup>1</sup> 912, 786
Total construction cost.....	3, 548, 284	102, 551	3, 650, 835
Total project cost.....	3, 616, 246	106, 985	3, 723, 231

<sup>1</sup> The overhead charged to the project by General Electric Company reflects a reduction of \$187,010 entered as an adjustment as directed by Atomic Energy Commission and accounts for previous figures approximating \$3,900,000 as the total project cost.

There seems to be considerable difference in the computation of square footage of the Carmichael School as made by different authorities. Many of the differences are explainable by what is or is not included as usable square footage. The 101,000-square-foot figure used by General Electric includes pipe tunnels, pump rooms, transformer vaults, exterior porches, furred spaces, mezzanine mechanical rooms, and even an allowance for the conduit under the building. If such non-

habitable spaces are excluded from the computation as is the usual practice in this area a more realistic figure for the square footage as customarily calculated is in the neighborhood of 90,000 square feet.

A detailed take-off of areas by Mallis, DeHart and Hopkins, Architects of Seattle, Washington, made at the request of the Richland School District gives the usable square footage as a basis for estimating purposes as 89,610 square feet.

*Cost per pupil and per square foot, Carmichael School, Richland, Washington*

	Cost	Number of square feet	Cost per square foot	Design, number of pupils	Cost per pupil
Based on total construction cost.....	\$3,650,835	101,000	\$36.24	650	\$5,615.00
Based on direct construction cost.....	2,738,049	101,000	27.11	650	4,212.00

As will be noted in the above schedule of costs the square footage of 101,000 as used by the General Electric Company is the basis for determination of square-foot costs. If this were reduced to 90,000 square feet, which would probably be more accurate, the square-foot costs shown above would be increased by approximately 10%.

The per pupil housed figure of approximately \$5,615 is more than double the State average for junior-high-school construction during this same period, as noted elsewhere in this report, as is the approximate cost per square foot. Even if one uses the direct construction cost only as shown in the table above, the figure of \$4,212 per pupil housed which is \$27.11 per square foot average cost still approaches double the current costs in the same State.

No detailed analysis or audit was attempted as to whether the cost data furnished was accurate and whether the money was actually expended for work on this particular project. This was not possible within the limit of time afforded for this preliminary report, nor do we believe the cost would justify it.

However, it is our opinion there is little question that the moneys allocated to the project were actually expended for materials, labor, and overhead in this work.

The high cost can be fully accounted for. It is unquestionably the result of conditions created by the manner in which the project was planned, managed, and constructed. The relation of conditions, premises, and policies to the cost is fundamental. It is difficult to determine accurately expenditures inherent in the processes and policies followed, or to assign them to a specific policy decision. However, their effect in the aggregate can be determined fairly well. Such a determination is made later in this report.

#### VI. COMPARATIVE ESTIMATES OF COST

In attempting to determine a reasonable estimate of the fair value of the project it is possible to take many approaches. For the purposes of this report two methods were used. The first is based on the over-all cost per pupil housed from information furnished by the State Department of Education of the State of Washington. The second method used is based upon the cost per square foot determined by investigation of costs of buildings constructed or planned for construction in the State of Washington together with the experience of this firm for schools of a similar nature constructed in the State of California.

*Cost data from Washington State Department of Education.*—Dr. Cleve O. Westby of the Washington State Department of Education under date of July 8, 1949, transmitted the following information by memorandum:

"Cost per pupil for junior high school construction: Only five junior high school buildings were undertaken during the period (1947 to 1949). The average cost per pupil to be housed, including the cost to date and the estimated cost to complete, is \$2,077.35, which does not include the cost of site, site development, or equipment. These are estimated to average \$155 per pupil, making a total per pupil cost for junior high schools of \$2,232.35."

The above average does not include the costs of the Carmichael School, as it was not constructed with State aid or supervision.

*Average cost per pupil, five junior high schools, State of Washington*

	Cost	Number of square feet	Cost per square foot	Design, number of pupils	Cost per pupil
Evergreen Junior High School near Vancouver.....	\$671,308	44,750	\$13.00	405	\$1,657.55
East Wenatchee High School, Wenatchee.....	494,374	38,650	13.50	351	1,408.47
Highline Junior High School, Puget Sound.....	1,385,068	116,520	11.90	675	2,051.95
Jane Addams Junior High School, Seattle.....	2,606,853	156,740	16.60	1,200	2,320.00
Central Valley Junior High School, Spokane.....	731,692	63,975	11.50	432	1,693.73

NOTE.—This does not include the cost of site, site development, or equipment usually furnished by the school district. These are estimated to average \$155 per pupil housed.

The following is a tabulation of three large junior high schools in the State of Washington of a comparable scope and quality. The architects for these projects are Mallis, DeHart, and Hopkins, of Spokane, who furnished us with the following information:

*Cost data from Mallis, DeHart & Hopkins, architects, Seattle*

Name of school	Cost	Number of square feet	Cost per square foot
Northeast Junior High School, Seattle, Washington.....	\$1,983,194	159,219	\$14.20
Chief Joseph Junior High School, Richland School District.....	1,648,000	114,534	14.39
Woodrow Wilson Junior High School, Shoreline School District, Seattle, Washington.....	2,250,000	160,719	14.00
Average cost per square foot.....			14.30

<sup>1</sup> This is based on the architect's estimates for this project which has not been constructed as yet.

In our judgment the average cost per square foot for schools of comparable quality constructed in the State of California would be approximately \$18.00.

An average of the square foot costs for California and the State of Washington gives an amount of \$16.15. For purposes of estimation of a fair value of the direct construction cost of the Carmichael School, this figure was arbitrarily increased in the amount of 20% to take care of the unusual construction conditions in Richland, giving a final figure for evaluation purposes of \$19.40 per square foot.

For comparative costs on a per pupil basis, we have also increased the Washington State average figure 20% for reasons stated above, giving a final figure for evaluation on this basis of \$2,492.82 not including site development and equipment.

To obtain a total construction cost figure it is necessary to add to the above unit costs an item for site development. Accounting procedures for allocation of costs as between site and building vary greatly. It is our experience, however, that site development work on a site of average difficulty rarely exceeds 10¢ per square foot of site area. The allowance for site development costs furnished by the Washington State Department of Education is given at \$155.00 per pupil housed, which if increased by the 20% differential for Richland, would amount to approximately \$186.00 per student.

By the use of the square foot unit costs above and allowing \$19.40 per foot for building and 12¢ per square foot for 25 acres of site work, the appraised fair value of the construction cost would be \$1,959,400 for buildings and \$130,780 for site for a total construction cost of \$2,090,180.

The use of per pupil housed unit costs as applied to the design capacity of 650 produces an appraised fair value of \$1,620,303 for the building and \$124,900 for site development, for a total construction cost of \$1,745,203.

As is to be expected the estimate based on square footage is higher than that based on a per pupil housed basis. This is explainable in part on account of the method of computation of square footage which was used by General Electric and which is probably of the order of 10% high.

Averaging the costs arrived at in the two different methods above gives a fair value estimated construction cost of the Carmichael School of \$1,917,692. The previously quoted Statement of Costs for this school as furnished by the General Electric Company on June 30, 1949, gives as the total construction cost, including

site work and overhead, but excluding design costs as \$3,650,835. The excess cost to the Government is therefore computed at \$1,733,143.

The excess cost to the Government of \$1,733,143 is in the main ascribable to the conditions under which the building was built and to the policies followed in planning and executing the construction. It would be difficult, if not impossible, to apportion this overage among the various factors that caused it. The list below of the principal factors is arranged approximately in the order of the extent to which, in our opinion, they caused the excess costs.

1. Management of the project through General Electric Company rather than the School Board.
2. Inadequate allowance of time for planning and programming.
3. Inadequate allowance of time for construction.
4. Inordinately high overhead costs.
5. False start on the large Central Junior High School.
6. Adoption of the Cost-plus-fixed-fee method of contracting.
7. Proceeding without completely developed plans.
8. Ineffective participation of the State authorities.
9. Difficulties inherent in the site selected.
10. High costs for use of government-owned equipment.
11. Community use features peculiar to the project.
12. Authorized wage increases during construction.
13. Labor conditions peculiar to the area.
14. Excessive number of change orders.
15. Difficulties in securing materials and equipment when needed.
16. Climatic conditions during construction.
17. Complexity of the site use plan and building design.
18. Establishment of overtime work week.
19. Approval of special expediting costs.
20. Costly development of utilities, sewers, irrigation conduit.

#### VII. DETERMINATION OF NECESSITY FOR THE PROJECT

The necessity for the school project evidently was first brought to the attention of the government by a memorandum entitled "Building Needs for September 1947" dated September 26, 1946, signed by R. H. Fergin, Superintendent of Schools, Richland School District. This requested among other things the construction of one or two junior high schools based on an enrollment estimate for September 1947 of 786 in the three year junior high school grades. In addition a schedule of necessary rooms and facilities was included. The question as to the necessity for one or two junior high schools was left open.

We found no evidence of a basis or method that was used for determining that one junior high school was to be built rather than two as suggested by the Superintendent. Apparently this decision was made without proper study and documentation of the problems and needs of the district. Due to this action considerable time, approximately eight months, was lost for planning and construction of the type of project which was ultimately decided upon. Also, additional loss was entailed in costs incurred for architect-engineering services abandoned as a result thereof.

In January 1947 General Electric Company retained G. A. Pehrson & Associates, Architects of Spokane, Washington, to prepare designs, drawings, and specifications for a large central junior high school to house 1,000 students. Under this arrangement General Electric Company was to do the design of the mechanical and electrical work, which was later turned over to the Pehrson firm and an adjustment in the fixed fee made.

The School Board, evidently not satisfied and also concerned with the obscurity of general policies to be followed for housing, teaching, and administration of the Richland School District, entered into a contract on March 24, 1947, with the School of Education of the State College of Washington for a survey of the Richland public schools covering organization, administration, instructional personnel and buildings. Emphasis was placed on recommendations for long-term planning of building improvements. This report was exceptionally well done and very thorough in its scope.

On May 2, 1947, a preliminary report from the Washington State College survey staff indicated definitely that a single junior high school would have to be of excessive size if it were to house adequately the then apparent enrollment.

Realizing the urgency of the matter, since steps had been taken for the design of a large central school, Dr. Zeno B. Katterle, Director of the Survey, forwarded a letter to the District on May 2, 1947, apprising it of the fact that a single junior

high school could not be expected to properly house all pupils in grades 7, 8, and 9 who would present themselves for admission.

In substantiation of the above information, early in the summer of 1947 it was apparent that the prospect of a village population of 25,000 was established with reasonable certainty and by inference the necessity for two junior high schools was indicated.

In the summer of 1947 also occurred the completion of the first group of 500 new housing units, followed by early 1948 completion of the Hudson houses, 450 units. The completion of the A. & J. group of 900 units occurred in the spring of 1948. This definitely fixed the scope and pattern of community growth.

Apparently without taking this information into regard the General Electric Company continued to proceed with the plans and design for a single centrally located junior high school, which policy was eventually discarded in favor of two junior high schools in December 1947.

In September 1947 J. Gordon Turnbull, Inc., and Graham, Anderson, Probst & White, Inc., were retained on a joint venture basis by General Electric to prepare a complete master plan for the town of Richland including schools at an estimated fee of \$50,000. This study, as can be seen, was started subsequent to the award to the Pehrson firm for plans for a large central junior high school.

Because of its apparent urgency, due to outside information being brought to bear on the problem, the Turnbull organization was asked to submit a rough draft and preliminary analysis of the school portion of their study. And it appears that in said draft which was submitted on November 20, 1947, this organization arrived at the same conclusion as the Washington State College group, that is, that a single junior high school would be inadequate and that their recommendation would be two junior high schools for the district.

Apparently sensing an error in the policy of one central junior high school, from information furnished by the school district and others, the General Electric Company issued a stop work order to G. A. Pehrson & Associates of Spokane abandoning further work on the single large junior high school. It is rather obvious from the vacillation manifested in the determination of the correct policy that a total of approximately eight months were lost for the proper planning and construction of the project, which also influenced seriously other policies concerning the work.

At the present time the enrollment in the first three grades of the Richland School totals 1,790 children. Two years from now the present fifth, sixth, and seventh grades will constitute the junior high school enrollment. At the present time there are 1,356 children in those three grades. Enrollment figures of this character have been continuously available to management.

As of May 1949 there were 432 seventh graders, 361 eighth graders and 333 ninth graders enrolled in the Richland schools for a total of 1,126 in the three junior high school grades. It is obviously impossible to house 1,126 junior high school children in a building designed for 650. The school authorities are planning to attempt to house on an emergency basis some 850 to 900 of these junior high school age children in Carmichael Junior High School building. As early as September of 1946 the enrollment per grade in all grades below the fourth exceeded 350 children.

If the children now enrolled in grades five, six, and seven stay in Richland for the next two years the capacity of both the Carmichael School and the new North Junior High School will have been reached.

If the schools of Richland are not to find themselves continually in difficulties requiring urgency measures for correction, a great degree of foresight in meeting school needs should be incorporated into planning and management.

Some basic policy assumptions relative to the stability, permanence and growth of the Village must be adopted as the basis for adequate advance planning. That these assumptions may prove later to have been incorrect is not of great importance. They can be changed. In the making of planning premises which vitally affect the schools the Board of Education and its administrative officers should be permitted to participate fully and effectively.

The situation calls for long-range planning and for foresight in meeting school needs, so that situations of urgency which are apparently being used to justify the cost plus fixed fee contract for the Carmichael School do not recur time after time.

#### VIII. GENERAL ADMINISTRATION OF THE WORK

As far as we are able to ascertain, the general policy for all activities concerned with the Hanford Project on which the Carmichael School is located is the following:

The Atomic Energy Commission acts in the capacity of a general policy making and supervisory group over the activities of the General Electric Company, who in turn are prime contractors responsible for the construction, operation, and management of all facilities and work within the project.

The government through the Commission is vested with the authority for constructing and providing school facilities in such an area if justified. These facilities are turned over to the school district for operation.

In order to construct a school project of the type built in Richland two practical courses to be followed for execution of the work were open to consideration by the Atomic Energy Commission. In the one case it was possible to elect the General Electric Company to be prime contractor and responsible for construction of the project, or in the other case it was possible for the Commission to allocate the funds to the local school district and authorize it to take the necessary steps to construct the school.

It appears that the dominant reason for assigning the work to General Electric was that in the opinion of the Atomic Energy Commission by adopting this method the project could be completed at a much earlier date.

The Commission was aware of the fact that under the first policy for constructing the school, using the General Electric Company as prime contractor, was involved additional overhead and distributive costs to General Electric Company over and above that which would be required under the second method mentioned—or through the school district as contracting agency. In the case of the Carmichael School this added an amount of approximately \$738,611.00 of overhead to the total cost of the project which otherwise would not have been incurred. This is one of the major items contributing to the excessive cost of the project.

The General Electric Company for all practical purposes, it appears, was given the authority to act as prime contractor, administrator, contracting agency and manager on behalf of the Atomic Energy Commission for the execution of the Carmichael School Project.

In this instance it is interesting to note that in contrast to the policy followed in the general administration and construction of the Carmichael School that the second junior high school which is now in the process of planning has been entirely changed. The Atomic Energy Commission has placed the responsibility for administration and construction of the new North Junior High School squarely in the hands of the local school board. The Commission in this case is apportioning to the school district a sum of money equal to the average cost per pupil for housing junior high school students in Washington State. This sum of money, which is approximately  $1\frac{1}{4}$  million dollars, is to be administered and handled by the Richland School Board and the administrative officers selected and paid by the school district. The General Electric Company will for all practical purposes have nothing to do with this new project. It is our opinion that had this process been followed in connection with the Carmichael School the results would probably have been far different both as to the planning of the school itself and as to the costs of the project.

The Atomic Energy Commission has budgeted directly to the local Board of Education a sum of approximately \$1,750,000 based upon the average cost in the State of Washington to house junior high school pupils in new plants.

The School Board is administering the program through its regular staff, and has selected an experienced specialist in school architecture to work with them in programming, planning, designing and supervising the erection of the needed educational facilities. Close cooperation with the State Department of Education will be maintained. The work will be put out to open competitive bidding in the usual manner. It is planned that the buildings will be substantially complete and ready for occupancy by September 1950—approximately 20 months after beginning the planning. About half of this time will be spent in planning and about half in actual construction. When this new project has been completed the effectiveness of the policies followed can then be adequately judged in relationship to those followed in the case of the Carmichael School.

#### IX. PREPARATION OF PLANS AND ESTIMATES

The original site of approximately 15 acres for the Central Junior High School between Long Avenue and Stevens Drive was determined by joint action of the Atomic Energy Commission and the General Electric Company. Although this project was not constructed, the area of this site was not adequate for a school of the size proposed relative to what is considered good planning standards.

The first contract for engineering services for plans for a junior high school for the Richland School District was entered into in January 1947 with G. A. Pehrson & Associates, Architects, of Spokane, Washington. Under the original proposal with Pehrson, General Electric was to do the design of the mechanical and electrical work. However, this was later turned over to Pehrson and an adjustment made in his fixed fee.

The communication which follows hereafter, dated November 29, 1946, from C. F. Barnes, Director of Community Activities for General Electric, to F. W. Wilson, Superintendent, Design and Construction Department, outlines the program of requirements given G. A. Pehrson & Associates, architects, as a basis for designing an abandoned Central Junior High School.

NOVEMBER 29, 1946.

To: F. W. Wilson, Superintendent Design and Construction Dept.

Subject: Schools—Revised building requirements for 1947—Junior High School—Description of facilities requested.

The following information is to be considered as a supplement to the Inter-Office Memo to you on this subject under date November 14, 1946. This information is not to be considered as the total requirements or recommendations. It is assumed that the responsibility rests with architect to provide for such installations as are required by State and Project fire, safety and public health regulations and that the building will be in keeping with accepted educational standards.

**Location.**—It is recommended that the Junior High School be constructed on the west plot of ground between Swift Blvd. and Knight Street at Stevens Drive.

**Size.**—Provide sufficient facilities to permit the administration of an approved Junior High School educational program for 1,000 pupils including such facilities which can be used jointly for Junior High and Senior High classes and community functions. Within this building provide for the administrative offices of the School District.

**Building requirements.**—The following items should be given consideration in the execution of plans and specifications for the new Junior High School. The approximate size of rooms and the estimated number of pupils to be assigned to each room is given below. In considering the purpose for which the room is intended in relation to its location the architect can determine the exact dimensions of the various rooms.

1. Adequate fire breaks in attic properly sealed with protected doorway.
2. Adequate safety protection (switches at equipment) for ventilation and exhaust equipment in attic.
3. Proper construction details at joint of roof rafters with fire wall. So that break wall will not be toppled in event of failure of wooden members.
4. Proper blocking off between first and second floors at fire walls to agree with fire regulations.
5. Panic hardware, fire alarm and detector system, usable scuttle doors to half basement or to attics.
6. Provide approved type fire walls, fire doors, and fire hose and extinguisher recesses and outlets.
7. Provision of three compartment sinks in kitchens—also approved type of standpipe overflow drain in sinks.
8. Use of sanitary floor covering and work counter tops in food preparation areas.
9. Grease filters in hoods over stoves and forced ventilation on same with steam douse in event of fire.
10. Install suction type exhaust system through ducts located in attics for all rooms including lavatories.
11. If heating circulation system is to attic, proper fireproofing of ducts and airways in attic.
12. Check of heavy equipment footings to provide adequate support. (Experience has recently revealed a very inadequate condition in the commercial laundry water softener room. Two units each weighing 11,000 pounds when operating full, were supported on a 4" concrete slab without reinforcing.)
13. Elimination or reduction of noise factor.
  - a. Acoustic cellotex ceilings.
  - b. Heavy, close fitting classroom doors.
  - c. Linoleum, cork, or other material on floors.
  - d. Proper location of shops, cafeteria, music rooms, and gymnasiums apart from recitation classrooms.

14. Provide adequate classroom and office lighting. (Indirect or fluorescent type lighting recommended.)
15. Utilize available steam from central heating plant. (Radiant type floor heating recommended.)
16. Install recessed metal student book and clothing lockers in halls (1,000).
17. Provide adequate hot water; kitchen (170 degrees), showers (140 degrees) and wash rooms (140 degrees).
18. Install central control loud-speaker system similar to that installed at high school. (Used in place of room telephones intercommunication system) and for recorded programs, radio programs, and announcements to one or several rooms and for events in one or both gymnasiums.
19. Install adequate master keyed "pick-proof" lock system on all doors and panic hardware where required.
20. Install venetian blinds on all windows. Also install adequate locking devices on all windows. (Slide windows with glass deflectors preferred.)
21. Be careful to provide adequate surface drainage away from building. (We are still putting in drainage structures and grading programs to eliminate pockets around school building, which could be eliminated in this new building by getting the building floor level up sufficiently.)
22. Pop valves to outside properly guarded.

### *Building requirements*

- Classrooms (approximately 24' x 32') : 28 to 35 pupils. These rooms may vary in size from 22' to 24' wide and 32' to 36' long with the provision that sufficient window space be installed with resulting adequate light for corridor side seats. Install closets with book shelving in rear of each room, approximate size 4' x 12'. Equip 3 of these rooms to close off all light in order that motion pictures may be shown.----- 20
- Home Economic rooms (approximately 24' x 50') : 24 to 28 pupils. These 2 rooms may vary in size but space must be provided for 7 model kitchens per room and for adequate space for demonstration and instruction. The rooms are to be used for cooking instruction, meal planning and home care instruction. The 2 rooms are to be connected with a model kitchen including standard cabinets and equipment which can be used by both rooms.----- 2
- Clothing rooms (approximately 24' x 40') : 24 to 28 pupils. These 2 rooms are to be used for sewing and textile instruction. A home type laundry should be installed between the 2 clothing rooms including facilities for laundry, pressing, and dressing. (Provide storage space for each room) ----- 2
- Commercial rooms (approximately 24' x 36') : 28 to 32 pupils. These rooms are to be the standard classroom type and will be used for typing, bookkeeping and stenography instruction. (Provide closets with book shelving in rear of each room) ----- 3
- General Science rooms (approximately 24' x 40') : 28 to 35 pupils. These rooms are to be used for general science and biology instruction. Provision should be made for the installation of a demonstration table with sufficient plumbing and outlets in each room. Equip these 2 rooms to close off all light. (Provide storage space for each room) ----- 2
- Art room (approximately 28' x 40') : 28 to 32 pupils. This room will be used for instruction in painting, drawing, ceramics, and other art work. Provision should be made for the installation of sinks for cleaning materials and hands. Adequate storage space should be provided for projects including cabinets for drawing boards and cupboards for models and other art projects. Provision should also be made for the installation of a 220 volt ceramics kiln.----- 1
- Dramatics room (approximately 24' x 50') : 35 to 50 pupils. This room will be used for debate, public speaking and play rehearsals. A platform 10' deep should be installed at the far end of the room with a small dressing room with hall entrance to platform. Equip this room to close off all light.----- 1
- Music rooms (approximately 24' x 50') : 35 to 50 pupils. These rooms will be used for choral, orchestra and band instruction. 2 practice rooms (approximately 10' x 18') and 1 instrument storage room 18' x 18' should be located between these 2 music rooms, off a hallway connecting the 2 music rooms and with direct exit to the main corridor. These rooms should be sound proofed.----- 2

Wood-working shop (sufficient size for 24 pupils) : This room will be used for the instruction in the use of wood-working tools and the production of wood projects. Provision should be made for storage space for tools, lumber, and unfinished projects. A separate safety type paint room is also required.

Metal shop (sufficient size for 24 pupils) : This shop will be used for instructing in the use of metal working tools and in the construction of metal projects. Provide the necessary power installations to operate equipment satisfactorily and the necessary sinks and safety showers as required resulting from the use of acids. Provide for storage space for raw materials and unfinished projects.

Auto Mechanic shop (sufficient size for 24 pupils) : The auto mechanic shop will be used to instruct pupils in the theory of operation and maintenance of auto and airplane motors. Provide the necessary utility installations and safeguards that are required for such a shop. Provide for storage space for raw materials and unfinished projects.

Radio and Electric shop (sufficient size for 24 pupils) : The radio and electric shop will be used to instruct pupils in the theory of operation and maintenance of radios and electric appliances. Provide the necessary utility installations and safeguards that are required for such a shop.

Mechanical Drawing and Graphical Art shop (approximately 24' x 32'), 24 pupils: Provide required electrical outlets for drafting tables. Adequate storage space should also be provided for 150 student drawing boards.

Shop Library and Demonstration room (approximately 24' x 32'), 24 pupils: This room will be used for demonstration. Equip same to close off all light in order that motion pictures may be shown. Provide shelving for shop library.

NOTE.—The above rooms are to be equipped with adequate blackboard, eraser troughs, bulletin boards, and electric outlets.

Library (approximately 24' x 60'), 150 pupils: Provide stock room (approximately 12' x 26') adjoining work room 12' x 13' and librarian's office and conference room approximately 12' x 13'. Install necessary shelving in stock room including standard checkout desk and return slot. (Provide glass windows between office and library).

Cafeteria (350 minimum seating) : Provide for cafeteria-type distribution of service for food and self-service dish-return servidore. Provide adequate space for utilities for kitchen including large storeroom located on service drive and provided with a loading platform for receiving foods and supplies.

Physical Education room (approximately 36' x 60'), 20 to 24 pupils: This room is to be used for corrective exercises, boxing, wrestling and tumbling. Provide an adjoining trainers room and storage space for athletic equipment and first-aid supplies including rubbing table, single shower, toilets and wash basin. Provide blackboards and bulletin boards in this room.

Girls' Gymnasium<sup>1</sup> (standard high school basketball court size without bleachers, and girls' shower room).

Boys' Gymnasium<sup>1</sup> (standard high school basketball court size with bleachers for 1,500, and boys' shower room).

Swimming pool (regulation size high school pool) : This pool should be located in such a way that the regular shower rooms can be utilized for dressing purposes.

<sup>1</sup> It is recommended that the boys' gymnasium be constructed with bleachers on three sides seating 1,500 (650 on each side and 200 on far end) and that the girls' gymnasium be raised approximately 4 feet above the boys' gymnasium floor on one end of the boys' gymnasium in order that this may be used as a stage for assemblies and large school and community functions. Provision should be made for storage of chairs under girls' gymnasium floor in order that the seating capacity can be increased to 2,500 for stage performances. A boys' gymnasium canvas floor covering would have to be provided. Provide track on girls' gymnasium ceiling for the installation of stage cyclorama and divider for the 2 gymnasiums (either folding doors or reinforced anchored curtains). Each gymnasium and shower room should be equipped with full-length lockers for 100 pupils and basket or box-type lockers for 300 additional pupils. Toilet facilities should be provided in each locker room.

Junior High School Administrative and other rooms:

Principal's office (10' x 12')-----	1
Counselors' offices (boys' and girls' guidance) (10' x 12')-----	2
Administrative office (24' x 24') including storage room and vault (12' x 12')-----	1
Public Address and Broadcasting room (including visual education storage space) (10' x 12')-----	1
Duplicating and Mimeographing room (10' x 12') (with shelving)-----	1
Text Book Storage room (with adequate shelving) (12' x 12')-----	1
Building Supply room (janitor's) (10' x 12')-----	1
Conference rooms (for student, faculty and parent use) (12' x 12')---	2
Teachers' rest room (female) (12' x 12')-----	1
Teachers' rest room (male) (12' x 12')-----	1
Girls' lavatories (similar to high school)-----	4
Boys' lavatories (similar to high school). One large lavatory should be located near the shops-----	4
Girls' first aid room (similar to high school)-----	1
Boys' first aid room (similar to high school)-----	1
School District Administrative Offices:	
Superintendent's office (12' x 12') (with exits to waiting room and corridor)-----	1
Conference room (next to Superintendent's office) (12' x 12')-----	1
Administrative Assistant's office (12' x 12')-----	1
Curriculum Directors' offices (10' x 12')-----	2
Visual Aid Directors' offices (with storeroom, 10' x 12')-----	1
Business office (24' x 24') (including large vault room for permanent schools records, (12' x 12')-----	1
Visiting Teachers' offices (10' x 12')-----	2
Receiving room (large storeroom for equipment and supply control)—approximately 24' x 50'—located next to service drive with loading platform-----	1

C. F. BARNES.

CFB : hsf.

NOTE.—These suggestions are offered to you so that you may pass them on to the architect as you see fit with the understanding that the architect still has the responsibility of providing your office with a complete set of plans and specifications. It is felt that rather than wait and review the preliminary plans and specifications and then make suggestions, we might better list what we can pull out of past experience at this time so as to contribute to a complete job.

It has been our experience that, with preliminary suggestions and with review of preliminary plans and specifications, there always remains in a new building certain minor things which are not covered. Would it be possible for you to set aside a small percentage for contingencies so that, upon completion of the contract, what small items necessary, can be completed without resorting to "field change requests" or equivalent provision of funds?

J. S. McMAHON.

After it was determined that a change of policy concerning the number of junior high schools for the Richland School District was necessary, a stop work order for architectural services on the Central Junior High School was issued to Pehrson on December 7, 1947.

It appears that the General Electric Company was not satisfied with the services of the Pehrson organization and therefore the firm of J. Gordon Turnbull, Inc., and Graham, Anderson, Probst, and White, Inc., was retained to prepare plans for the new project under a policy of two junior high schools. After a settlement of claims, Pehrson was paid a lump sum of \$45,000 for services rendered for plans for the abandoned Central Junior High School.

Site location for the new junior high school under the new policy was determined as a result of the studies of the Washington State College Survey Committee and the Turnbull group in cooperation with the Atomic Energy Commission and the General Electric Company. The site is located between Thayer Avenue and Lee Boulevard in the southern area of Richland, Washington. From information taken from the plot plan of the drawings, it consists of approximately 25 acres. This, by the way, seems to be at variance with statements in the reports of the General Electric Company which mentions this area as being approximately 30 acres. Verification of this discrepancy was not gone into by our firm.

It appears that the site was selected on the basis of criteria of walking distances and central location to the school population to be served. In these respects it was adequately considered and well located.

There seems to persist general misstatements of the basic nature of the site before its development in some of the literature that exists concerning the investigation of this project.

The following is offered to clarify the matter. Basically the site was in two general levels. The higher level was a strip approximately 300 or more feet wide and 1,000 feet long parallel to Thayer Drive. This higher bench was separated from the lower bench of the site by a relatively steep embankment. The lower portion of the site was formerly subject to occasional flooding and is the area upon which the playground is developed. The irrigation ditch that traverses the site ran along the slope connecting the two general levels of the site. The final site use plan determined upon required that the site be redeveloped into a sloping type of site in which the original two general levels were largely obliterated by extensive grading operations. A considerable loss of level area was involved in the grading plan as finally executed.

The actual start of architectural programming and planning for the Carmichael school as finally determined started with the retention of the firm of J. Gordon Turnbull, Inc., and Graham, Anderson, Probst, and White, Inc. They were retained for this work in December 1947, and it was included among 59 items of design and engineering work to be done by this firm. The fee for the 59 items of engineering work consisted of a lump sum of \$758,133 of which \$68,204 was for planning the Carmichael school.

The decision of the management to include the school work in the projects to be handled by the Turnbull organization undoubtedly influenced the results, the progress, and the costs of the school project. The school project was given to the Turnbull group along with 58 other projects for a total of approximately \$240,000,000 of construction cost.

Under this circumstance it is almost inevitable that the school project competed within the Turnbull organization for planning time and for the talent of the organization. Normally it is the policy of the school boards in school building projects to select architects whose specialty is school design and who are thoroughly familiar with the conditions and regulations of the State in which the work is to be done. Familiarity with the educational planning premises in general use in the State and the basic nature of the educational program is of material assistance to the Architect in expediting the work.

In a letter to F. W. Wilson, Design Superintendent, Mr. C. F. Barnes, Supervisor of the Community Activities Division of General Electric, has this to say, "It is assumed that the responsibility rests with the Architect to provide for such installations as are required by State and Project fire, safety, and public health regulations, and that the building will be in keeping with accepted educational standards."

For a program of requirements for the Carmichael school the Turnbull firm was given the original program outlined above for the abandoned Central Junior High School, which program was revised by marginal notation and contained among other things approximately the following facilities:

Classrooms .....	13	Art room .....	1
General science rooms .....	2	Physical Education directors' offices .....	2
Mechanical drawing room .....	1	Check room .....	1
Home economic room (clothing) ..	1	Boys' shower room .....	1
Home economic room (cooking) ..	1	Girls' shower room .....	1
Home economic room (lecture) ..	1	Memo room .....	1
Woodworking shop .....	1	Boys' toilets .....	3
General purpose shop .....	1	Girls' toilets .....	3
Cafeteria and kitchen .....	1	Men teachers' room .....	1
Corrective room (physical education) .....	1	Women teachers' room .....	1
Gymnasium .....	1	Library .....	1
Classroom — Audio-Visual and broadcasting room .....	1	Nurses room .....	1
General office with principal and vice-principal office .....	1	Boys' Counselor room .....	1
Study hall .....	1	Girls' Counselor room .....	1
Auditorium .....	1	Storage and equipment room .....	1
		Book store room .....	1

We were unable to determine to what extent the Superintendent of Schools, school board, and other local agencies were permitted to cooperate in the preparation of the program of building requirements for the school.

In our opinion, the program used as a basis for designing and planning the Carmichael school facilities was insufficient. The architect was asked to plan the Carmichael School on the basis of a program of room spaces which was compiled for use primarily for a large Central Junior High School. In addition we were unable to discover any material which indicated to the architect the nature of the curriculum which the proposed junior high school was to accommodate, nor the material relating to student load in specific spaces, nor a statement of desired relationships of the major elements and general teaching spaces.

The shortcomings of the building which will appear with use are in part ascribable to the lack of adequate documentation of the educational program which the proposed building was to house.

It appears that the plans were accepted by management with little suggestion for change and with little questioning as to whether or not the plans and designs were such as adequately to house the educational program to take place within the school. Contributing to this condition undoubtedly is the fact that most of the plans and designs and specifications were prepared in the Cleveland office of the architect and were not readily available to either the board or to management as they were being developed.

The first preliminary site use plan and floor plan were submitted by the Turnbull group on December 31, 1947, barely 30 days after the notice to proceed. On January 13, 1948, preliminary plans including minor revisions of the December 31 sketches were approved by W. P. Cornelius, Chief of Construction and Maintenance of the Atomic Energy Commission. On Page 136 of Volume I of the Washington State College Survey report there is a very pertinent statement concerning time for planning the Richland School. It states, "Under no conceivable circumstances should the studies for the junior high schools be rushed. Working drawings and construction may be rushed *at added cost* but rushing studies can only result in a low-grade product."

In spite of this caution the Turnbull organization submitted preliminary plans after less than 30 days of study. For all practical purposes the plans for the building as eventually developed were crystalized by the 15th of January 1948.

It is apparent through a survey of the correspondence and a study of the circumstances that the State Department of Education and the specialist advisors in school design of that department had little influence on the basic planning of the building. Preliminary plans were presented to that department on or about January 10, 1948, after all the major features of building including the site use plan has been fixed and determined. The only opportunity for the State authorities to influence design was in the shifting about of certain spaces within a predetermined framework of the building itself.

Mr. Elmer L. Brickner, in a letter dated January 12, 1948, suggested eight significant and important improvements in the design of the building which, in our opinion, would have markedly increased its educational effectiveness. Only one minor improvement among the eight suggested was actually incorporated into the building.

The State Department of Education letter of January 14, 1948, as followed by a letter of January 16 and supported by the School Board's letter of February 3, contains 27 significant and basic recommendations which were not incorporated into the plans.

It must be concluded then that basically the influence of the State Department of Education was insignificant. As a matter of policy, to limit the participation of the State Department of Education to relatively unimportant details is to neglect a source of extensive experience in school design and planning which could have improved markedly the effectiveness of the building and perhaps reduced its cost. Nothing beyond the preliminary plans was submitted to the State Department of Education.

After the approval of the preliminary plans the Turnbull group prepared an estimate of cost for the work. The estimated cost for construction of the buildings was \$1,488,000. In addition was included \$149,000 for contingencies, \$74,500 for field expense and supervision, and \$74,500 for engineering and design, making a total of \$1,786,000.

The architect was given specific instructions in writing from the General Electric Design Division that his estimates for the cost of the proposed school should be

based "on normal practice and on normal procedures." The estimates which the Turnbull organization submitted to the Design Division were so based and in comparison with average normal costs of comparable schools in the State of Washington were apparently soundly made.

On March 26, 1948, the "Project Proposal" was submitted to the Atomic Energy Commission outlining the needs for the project together with an estimated cost of \$1,786,000 and ten months for the time required to complete the work after authorization.

It is difficult to understand why the cost estimates so prepared by the architect under specific direction should not have been modified and supplemented by additional information when they were submitted as part of the official project proposal requesting funds for the project. Those responsible for the preparation of the project proposal can be assumed to have known that the conditions under which the building was to be constructed were not normal conditions and that in all likelihood a cost-plus-fixed-fee contract would be entered into. Also that the overhead of the General Electric Company would of necessity in some manner be accounted for. The figures given in the project proposal were in that respect unrealistic and have been responsible for creating an unfavorable impression concerning the cost of the facility.

On March 9, 1948, C. F. Barnes, Director of Community Activities for General Electric Company, furnished a copy of the specifications for the Shoreline Junior High School in Seattle, Washington, to the architect-engineer who was directed to follow these as a general guide in the preparation of the working drawings for the Carmichael School. On April 3, 1948, modified preliminary work drawings and complete outline specifications were approved by the Design Section of General Electric Company and on April 5, 1948, authorization was received from the Atomic Energy Commission of \$1,786,000 for the work as requested in the project proposal.

On April 15, 1948, preliminary working drawings estimated to be less than forty percent complete were approved by the local office of the Atomic Energy Commission and a cost-plus-fixed-fee contract was awarded on April 23, 1948, on the basis of these plans to the McNeill Construction Company, of Los Angeles. The fixed fee for the Carmichael School was approximately \$60,485.

The Design Department of General Electric estimates that the plans for the Carmichael School were 38% complete when construction began. This office is unable to determine the quality and thoroughness of the preparation of the working drawings for the project when the work was awarded and they were 40% complete; however, examination for the final drawings for the work provided us indicates that they were well executed.

It must be said that proceeding without completely developed working drawings and specifications was a very vital factor in creation of excessive costs for the work. It is difficult to determine to how great an extent this affected the final cost encountered; however, in our opinion, it must have been considerable. The necessity for taking this action in view of the facts is also questionable. In addition, proceeding with uncompleted working drawings unquestionably created most of the additive change orders required for construction of the project. As well as additional costs involved, this procedure undoubtedly imposed serious restrictions on the detailed planning of the building itself and tended to crystallize the arrangement of spaces and the internal planning of the building before such factors were ready to be definitely established. This undoubtedly would tend to give the school district a school plant that is less desirable than it might have been.

#### X. QUALITY OF DESIGN AND MATERIALS

The choice of structural materials for the building, consisting of reinforced concrete and structural steel, Robertson steel panels for roof and wall systems, and tile interior partitions does not appear to be inordinate for the design of a building of this character. Possibly some savings could have been effected in the use of less expensive nonfireproof materials but it is questionable whether this would have been justifiable.

In a cursory examination of the basic design for the building itself it appears that in general the concept is somewhat complex. There are many floor and roof levels, projections and complicated details. However, most of these can be attributed to the insufficient study at the preliminary stages resulting in the final concept of the plan of the buildings in its relation to the site.

The site and its physical problems, consisting of extreme changes of slope and an irrigation ditch crossing it, provided difficult structural problems and added materially to the cost of the building.

In general it appears that the solution of the structural details, in view of the problems presented by the basic plan adopted as a scheme for the project, were solved reasonably well.

There is little question that a change in the fundamental arrangement of the plan of the building could have realized a substantial saving in structural costs over the design as finally determined. This, of course, could not have been done by the architect without more time having been allotted for the study of the preliminary plans with this objective in mind.

In retrospect it appears that the buildings could have been planned to have been accommodated on the upper level of the site without the necessity of constructing the east wing of the building over the irrigation ditch and creating so many different levels in this portion of the building. This, however, again, as indicated before, goes back to preliminary planning.

The buildings themselves could possibly have been designed considerably simpler with fewer breaks, differences in roof levels, floor levels, etc., however, considering the short time in which the architect-engineer was allowed to study the design of the buildings it was reasonable to consider that the working drawing design could be justified. In general the details of the building considering the problem appear reasonable.

It is difficult to say that the structural design of the Carmichael School as conceived could not be justified in relation to the value inherent in a more or less fireproof type of structure for a public building, and also from the point of view of maintenance, depreciation, and public safety.

The mechanical and electrical work does not appear to be particularly well conceived and unquestionably could have been simplified with some saving in cost.

The excellent class of structural materials used in the building notwithstanding, it is safe to say that the basic concept of the design, and the plan of the structure with relation to the site, were the largest factors contributing to the excessive cost of the building.

A general examination of the materials and finishes used in the building was made on the site and a study of the plans undertaken to determine the quality levels of finish materials employed. These were found to be as follows:

Exterior finishes employed most generally were unplastered architectural concrete and exposed steel panel siding, painted. Interior finishes of several types were used.

In the gymnasium unfinished concrete, concrete block painted, concrete block plastered and glazed tile were used in the spaces where the various finishes were suitable and in accordance with accepted practice.

The classrooms generally had plastered walls and acoustic plastered ceilings. Corridors generally had glazed tile wainscoting with plaster above on the walls. The foyer and the auditorium wainscot were in panels of scored fir plywood.

Classroom and corridor floors of concrete are covered with asphalt tile flooring of standard grade. Quarry tile floors are used in the foyer and in the entries and in the cafeteria kitchens. The stage floor and the gymnasium floor is standard maple flooring as customarily used for this purpose. The floor of the auditorium where seating is installed is bare concrete. Ceramic tile floors were used in toilets and similar rooms.

Extensive use of solid birch doors and door trim was made, as well as for the chalkboard and tackboard trim and the window sills. Cabinet work generally was of fir, painted, and some of it of rather low quality. The hardware generally was of good quality, with the exception of hardware used on some of the fir cabinet work, which was of inferior quality.

Standard quality plumbing fixtures were used, floor mounted toilets rather than the more expensive wall hung type being used throughout. Standard flush valves were employed, not the more expensive marine type sometimes specified where exceptionally rugged valves are desired.

The materials and equipment used on the stage were of standard average quality. The lighting equipment was rather meager and only four spare battens were provided.

As far as completeness is concerned the materials and equipment furnished by the contractor were those usually included in a general contract. Moveable equipment such as desks, seating, furniture, chairs, work benches, art tables, and so on were furnished by the school district. It is inaccurate to say that

the building was turned over to the school district completely equipped and ready to operate.

All rooms are provided with cabinet work under the sill of the window side of the wall, partly consisting of open shelving and partly consisting of plywood radiator enclosures. This cabinet work is of fir, painted, with linoleum tops and aluminum edging strip and could be considered to be of average quality.

Chalkboards provided were of the manufactured type known by the trade name of Sterling Lite-Site board, of good quality. Tackboards and pinning strips and map rails were the standard materials usually used in schools. If anything, the total amount of chalkboard and tackboard provided is on the low average side as compared to that provided in a good quality modern school.

In general it does not appear that there is anything unusual in the quality level of the finish materials of this school. There is no justification for alleging that it is a "luxury" school or that it is "gold plated." The balance between high-cost items, average-cost items, and low-cost items is not at all out of the ordinary, and certainly not such as would justify assigning higher unit costs on that basis alone.

Details for the design of the site work were not particularly expensive considering all the factors involved. However, the necessity for grading the site in the manner required by the basic plan made this work considerably more expensive than would be normally expected for a school project of this type.

The site is also very highly developed from the point of view of the numerous walks and curbs provided, paving areas, and other items installed in this portion of the work relative to what is ordinarily furnished for the average school. It could not be said that this is wasteful or unjustifiable, whereas it would tend to give the impression of a larger unit cost for the project when considered as part of the whole.

The necessity for putting the irrigation ditch in a conduit, while an extremely expensive item of cost, could not have been solved in any other manner without impairing seriously the safety and use of the site for school purposes. This item of cost, in fairness to the project, could not properly be considered a part of the usual cost connected with school building projects of this nature and should be considered separately as such.

#### XI. EDUCATIONAL EVALUATION OF THE SCHOOL PLANT

*Implications of the general scheme.*—In general it is considered best practice so to plan the use of a site as to group the standard classrooms and heaviest concentrations of student load more or less centrally. About this central core of load the facilities carrying lighter pupil loads and subject to intermittent use are placed peripherally. With this concept in mind it does not appear reasonable to place the auditorium and the cafeteria, relatively lightly loaded activities subject to intermittent use, in the heart of the plant and to group classroom wings radially around them.

The lobby or foyer of the auditorium is the main traffic crossroads of the school. To attempt to shut the auditorium off for community use during the time school was in session would be impossible. The study hall, library, and seven of the classrooms are west and south of the foyer and the remainder of the classrooms east and north of it.

The traffic-flow pattern of the school is further complicated by the differing levels of the plant, which require extensive vertical circulations. Practically speaking, the plant is on three levels, the gym floor the lowest, the ground floor of the east wing second, the upper floor of the east wing and the remainder of the facilities on the third level. It is not apparent that minimizing travel distances or vertical circulation was given great weight in fixing the plan, perhaps because of lack of time to study the problem. Educationally this makes for a plant which is difficult to supervise, in which long passing times will be required between classes, and one which contains many stair wells and corners in which students can get "lost."

It is difficult to understand the necessity for the variety of basic planning concepts of the various parts of the plant. The north wing is of the single, loaded corridor type with bilateral lighting, principal window orientation east. The south wing is of the double, loaded corridor type with unilateral lighting, principal window orientations east and west, single story, with corridor monitor. The east wing is two-story, double-loaded corridor, principal window orientations north and south, with no outside lighting for the lower-floor corridor.

Undoubtedly the schools in Richland, as elsewhere, supply the major part of community-use facilities for the village. The policy to allow such community use to dictate certain features of the design may account in part for certain of the principles followed in site utilization as well as for some of the features of the building itself. This is particularly true of the parking area on the upper level of the site. This parking area accommodates some 275 cars, and a parking area is undoubtedly necessary when one considers the community uses of the plant as well as the lack of suitable street-parking areas in the residential areas just west of the school plant.

In all probability the stage of the auditorium and perhaps the lobby and the cafeteria are somewhat more elaborate than would have been required for purely school use.

Apparently a great deal of weight was given in the plan for use of the site to getting the gymnasium on a lower level and close to the playground area, and with this as an objective the solution is satisfactory. It should be considered, however, that no particular disadvantage is attached to placing the gymnasium at a different point in the total travel from classroom to field via the gymnasium locker rooms.

The whole plan is generous in the amount of available site area devoted neither to buildings nor to facilities which can be used for educational purposes. Following is a table of some of such spaces:

Space	Approximate size	Area in acres
Northwest corner lawn area.....	220 x 210	1.06
Area southwest of library.....	180 x 220	.91
Area between north wing and gymnasium.....	190 x 210	.92
Slope southeast of buildings between parking lot and field, including service drive.....	200 x 700	3.21
Area devoted to the parking lot.....	370 x 460	3.90
Total.....		10.00

While it is inevitable that adequate areas must be allowed for set-backs, landscaping, service roads, and slopes for the achievement of differences in level, if adequate time had been available to the Architect for site planning in relation to plant location and spaces, it might have been possible to reduce the total of such areas without interfering with the educational usefulness of the facility. One way in which this might have been accomplished, for example, is to have placed facilities requiring service drives on the periphery of the plant, near the street. Another would be to have made the slope between changes in level much steeper, or to have used terraced parking spaces to achieve changes in level.

One important aspect of the determination of the value of a school is the extent to which it will adequately accommodate the educational processes which it is proposed will take place within it. Of necessity this evaluation is based upon some concept of the Junior High School curriculum, and while no two Junior High Schools have identical courses of study, there is a commonly accepted basis of standard practice. A portion of the educational process takes place in regular "academic" classrooms and the remainder in specially designed and equipped rooms such as shops, homemaking rooms, libraries, music rooms, laboratories, gymnasias, outdoor physical education facilities, auditoriums, and the like.

The Carmichael building contains 13 "academic" or regular standard classrooms of which 7 are in the south wing and 6 in the east wing. With minor unimportant variations these classrooms are practically identical in lay-out, equipment, and size. All are approximately 24 x 40 feet in size and equipped with the necessary shelving, storage closet, sink and drainboard, chalkboards, tackboards, map rail, and bookcases. Fluorescent lighting of a high level, germicidal lamps, special chalkboard lighting, venetian blinds, drapes for darkening, and unilateral daylighting from continuous windows characterizes all rooms. These classrooms are consistent with good practice in school design and should provide all that is necessary in the environment to permit high quality teaching.

*West wing.*—The west wing contains the following principal spaces: The auditorium and its auxiliaries, including a stage approximately 25 x 64 feet; a music department under the stage with main rehearsal room 30 x 36 feet, and four smaller practice rooms; a library 24 x 42 with small workroom; a study hall 24 x 82, and a small student store.

The main floor of the auditorium is adequate to seat the student body of the school under normal conditions; however, it will not seat all that it is planned to accommodate at the school this fall, upwards of 850 students. There is sufficient space at the front of the auditorium to accommodate an average school band or orchestra.

The stage is adequate for most school needs. For purely school purposes, however, the value of the very high loft is questionable. The use of this sort of equipment by inexperienced school children involves a certain amount of accident hazard, which must be guarded against. The stage lighting equipment is quite limited in scope, but reasonably adequate for school use. It is not apparent what useful purpose the two toilets immediately adjacent to the proscenium opening will serve. Certainly they could not be used during any performance because of the noise of the flush valves and it is our opinion that they might well have been omitted at a saving of money and permit better utilization of the stage floor area.

At the rear of the auditorium there is a large projection room mezzanine, which could just as well have been omitted as far as school purposes are concerned. It has no equipment at present and would have to be equipped with large and heavy commercial types of projection equipment to be of any value because of the length of throw to the stage. The storage space north of the projection room on the mezzanine is so hard to get to as to be of little value except as a vault for dead records. There is no communication between the stage and the projection room.

The music room under the stage is of relatively low ceiling height and of slightly over 1,000 square feet in area. The music department would be subject to serious limitations as to the kind and scope of the program to be offered because of the physical facilities. There are only practice rooms, all without outside light and a relatively small instrument storage room. The entrance from the corridor to the music room is complex, down a flight of steps and between the boys' and girls' dressing room area. Taking instruments from the music room to the stage or to the space in front of the stage would be cumbersome and time consuming. Recommendations of the State school planning office which would have materially improved this department were not incorporated.

The library, while perhaps impressive looking because of the large west window, the high ceiling and the dark stained hardwood cabinet work is not well planned with educational needs in mind. In the first place it is too small, seating comfortably only about one class at a time. Recognized standards call for a seating capacity of 10% of the student body, requiring about twice the provided floor area. In addition there should be a small conference room and a librarian's work room with sink and running water for book repairs. It is also considered good practice to relate the Audio-visual department directly to the library so that the use and distribution of all forms of instructional aids can be coordinated by the librarian. This was also suggested by the State authorities but not included in the planning. The student store in this wing is a poorly lighted inside room with no windows, a single doorway and inadequate ventilation, considering the purpose for which it is used. It has a bare concrete floor, and is in all a very unattractive room.

The two boys' and girls' toilet rooms on the north side of the corridor leading to the library were perhaps intended for public use when the remainder of the building would be closed off by the gates provided. They would be inadequate for this purpose since they are associated with an auditorium seating more than 700 persons. They have an additional disadvantage of being inside rooms with no natural light or natural ventilation. There are mechanical provisions to take care of the special problem of ventilation, but even with the small use that they have been given to date these toilets are smelly and humid.

The shutter mechanism for automatic venting of the stage loft apparently needs attention as it was banging loudly in the wind when the building was under survey, so much as to interfere with hearing in the auditorium.

The study hall itself is a room of generally unworkable shape, being 24 feet wide and 82 feet long, too long and too narrow for easy supervision and for most effective use. The State recommended a wider span and shorter room for the study hall and library wing.

*North wing.*—The north wing contains five principal spaces, a so-called Audio-visual room 24 x 32, a girls' toilet, a Home economics room for teaching sewing 24 x 44 feet, a Home economics class room 24 x 34, and a Home economics room for the teaching of cooking approximately 24 x 58 feet.

The Audio-visual room was probably so designated because it is below the size of a standard class room and also because it is so located with respect to one of the principal north entrances to the school that it was necessary to omit about one-third of the fenestration on the east wall, which should have been continuous. This room is equipped with chalkboard on the south wall only, the other walls being plaster. Under crowded conditions it will probably be necessary to use this room as a standard academic classroom, a purpose for which it is not well suited, both because of natural lighting deficiencies and lack of tackboard space. Neither does it have the standard storage facilities or classroom sink of the standard classroom. It is not apparent why a special room was designated as an Audio-visual room because all classrooms in the building are darkenable and suitable for the use of Audio-visual equipment. Normally the Audio-visual department has the responsibility of storing and caring for all forms of Audio-visual instructional aids and as such is differently designed and equipped than this room and is often located in close relationship to the library or to the administrative offices.

The girls' toilet room in this wing is similar to others in the building. The entry from the corridor is a dark room with a low furred ceiling in which it will be necessary to burn lights while the school is in operation. There are no screens on the windows, and as estimated from the size of the ceiling grills the ventilation is probably very meager. It appears that there is some possibility that the recirculation system which uses the halls as a return plenum will draw air from the toilet rooms into the corridors, in event that the exhaust system fails or is not properly operated.

The clothing laboratory, while it does not have some of the features considered desirable such as a properly equipped fitting room affording some measure of privacy, is spacious and well lighted and will lend itself to the teaching of Junior High sewing quite satisfactorily.

The cooking laboratory is another example of a room of which the shape is not advantageous for the use, being relatively long and narrow, 24 x 58. This shape requires that all of the unit kitchens be placed along one side of the room away from the windows and thus are difficult to supervise and not too well lighted. Suggestions of the State home economics department which would have broadened the scope of the work in home economics into general home-making education rather than just cooking and sewing were not incorporated into the design.

The Home economics lecture room located between the cooking and sewing rooms is little more than another classroom and will probably be so used under the crowded conditions which will obtain when school opens. It is not apparent from the equipment of the room just what educational purpose it was intended to serve. The west wall is without chalkboard or tackboard. In all, the whole home-making suite could well have been planned with a broader educational concept in line with the recommendations of the State and the space thus be put to more effective use.

It is not apparent why this one wing was designed with a single loaded corridor and with a small west-facing clerestory, giving bi-lateral lighting for classrooms of 24-foot width. In the original plan this wing contained the science rooms, which were interchanged with the home economics department, first located on the ground floor of the east wing. This exchange of location was partly brought about through the recommendations of the State authorities against placing the homemaking rooms near the shops. The State's recommendation was to place the homemaking rooms directly over the shops but this was overruled because the plumbing would show in the shop ceiling below. Largely at the suggestion of the Richland school board the homemaking rooms were shifted to their present location, and the science rooms to the ground floor.

*South wing.*—The south wing contains seven of the standard classrooms referred to above. In addition it contains a boys' toilet room, a girls' toilet room, the cafeteria with its kitchen and auxiliary spaces, a women teachers' rest room and a fan room for the heating and ventilating system for this wing.

As previously indicated the seven classrooms in this wing are well equipped, of adequate design, nicely finished and generally acceptable as an educational environment.

Both the boys' and girls' toilet rooms of this wing have the same conditions relative to entrances, lack of screens on the windows and characteristics of the ventilation system that were discussed above. According to national standards and to the requirements of the State sanitary regulations, the ratio of urinals to toilets in boys' toilet rooms is 3 to 1. It is difficult to understand why the

boys' toilet room in this wing was equipped with 7 toilets and only 4 urinals and 4 basins. The neighboring girls' toilet room has only 6 toilets and 4 basins.

The women teachers' room in this wing has the only toilet for the private use of the staff in the whole classroom group of buildings. It is not evident why provisions were not made for a men teachers' toilet or for toilets and washrooms for the clerical and administrative staff. One of the first plans showed a men teachers' room where the kitchen storage rooms for the cafeteria are now located.

The main dining room of the cafeteria is large and spacious with a high ceiling and large windows in the east wall. The usefulness of the room is somewhat reduced by the presence of columns in the room, though this is not serious. The serving line could well have been isolated from the dining area by a regular partition with doors rather than with modernfold partitions, which are expensive and do not permit passage when closed. Entry to the serving line from the corridor is not convenient and the system for collecting receipts at the end of the line is not well organized. When the serving line is isolated by the closing of the Modernfold partitions there is no way to enter the kitchen area from the corridor, the only entry being from outside. There is no provision for canteen or snack bar service to students who do not wish to go through the serving line but prefer to eat outside. The space provided for a cafeteria office is much larger than required for that purpose and probably entered considerably into the cost of the building because of the manner in which it was appended to the building as an added structure.

The foyer connecting the auditorium, the cafeteria and the classroom wings has an extremely high ceiling not required by the function it is to perform. Public toilets are not accessible from this foyer, but are down the west corridor. The four columns in the foyer are an obstruction to the use of the space.

*East wing.*—The east wing is a two story structure. On the upper floor are located the administrative offices, the nurses room, four standard classrooms, two rooms designated as typing and bookkeeping on the plans but no different than a standard classroom, an art room with adjacent storeroom and a boys' toilet room.

The standard classrooms, including in that category the two rooms designated as typing and bookkeeping, are 24 x 40 feet in size and of the same character and similarly equipped with the exception of omission of the drapes for darkening in the typing and bookkeeping rooms. These six rooms are good standard rooms identical to the others in the building.

The administrative suite consists of a general public office with an adjoining vault and small storage room, and four small offices for the principal, vice principal and two counsellors. Only one of these offices can be entered directly from the public and clerk's space, that being the office of the vice principal. In order to enter any of the other three offices from the reception space one must pass out into the general corridor and down the hall to small auxiliary corridors which serve as waiting space outside each private office. Thus the clerical staff is not able to exercise any control or supervision of the passage of students or public to and from three of the four administrative offices. Similarly, the access of administrative personnel to clerical service and office records is only through the main corridor or by telephone.

The nurses suite is across the hall from the main office, where it is not super-visible by the clerical staff. The inside cot rooms of this suite are dark and small with no outside windows. In general, the facilities provided in the health suite are below the standards suggested by the State Department of Education. The arrangement of the rooms is such as to make it very difficult to conduct a program of examinations or immunization in an orderly and systematic way. All traffic to and from the room must flow through a single door to the corridor and through a small inside waiting room. Provisions for storage of sterile materials and instruments are lacking, as are provisions for sterilizing equipment or instruments used by the nurse. Only one toilet is provided, which presumably must be used by both boys and girls.

The art room proper is the same size as a standard classroom but is not so equipped. Supplementing the main space is a spacious storeroom equipped with cabinet work, stainless steel sink and large storage drawers for customarily used art supplies. The only place where water can be obtained is in the storeroom and this will undoubtedly prove to be awkward. Under usual conditions at least two additional sinks are required in that art room, located in such a position as to be readily available to students. The windows of this room face the north, which is highly desirable for an art room.

The boys' toilet room on this floor, equipped with 4 toilets and 4 urinals, also was planned without regard to the standard 3 to 1 ratio between urinals and toilets provided in the State code.

On the ground floor of the east wing are located the two shops, janitorial store rooms, two general science rooms, a mechanical drawing room, a storeroom designated as "Memo Room" and probably intended as a mimeograph room, a girls' and a boys' toilet room and a fan room for the wing.

It is not apparent why the janitorial storage space was divided in such a way as to create an inside room opening only off the corridor. If partitioning was required for some reason this might better have been accomplished by screening from the main room which is accessible for deliveries from the driveway outside. An incinerator was provided for in the plans but was deleted during construction. Waste will therefore have to be carried downstairs by the janitors for disposal outside the building.

Definite recommendation of Mr. Barnes concurred in by Mr. Henning were made in the statement that "The standard Junior High School exploratory type manual training instruction will be given in the above two shops. Hand-type operated tools and equipment will be used in the majority of cases. Power tools will be limited to minimum requirements for the exploratory type program." In spite of this clear statement both shops are equipped with heavy and expensive power tools of the type usually provided in technical and vocational schools. In fact the two shops are so planned and equipped that it will be difficult to avoid a rather narrow specification in each, to the detriment of broad exploratory type courses. The total space allocated to the wood shop is 24 x 100 feet including a paint room and lumber storage room at the east end. Here again is a relatively long and narrow space which is difficult to organize and supervise properly. There is a possibility that recirculated air from the room could pass into the lower floor corridor through louvers in the doors, tending to distribute dust and paint odors throughout the wing.

In both shops the provisions for obtaining water for shop purposes are inadequate as are the provisions for hand washing and clean-up at the end of the instructional period. Each shop contains only one hand basin on the wall. The boys' toilet on this floor is at the extreme western end of the corridor and is entered through a narrow and dark passage behind the fan room. This toilet room also shows the same unbalance in fixtures and contains only two hand basins, which could hardly be considered as a satisfactory supplement to the two basins in the shops. The same conditions with respect to ventilation and screens exists here as elsewhere.

If the room marked "Memo room" was intended as a mimeograph room its location on the floor below the offices would not be satisfactory.

It is not evident just what considerations were behind the great disparity in size and equipment in the two rooms marked "General Science." The total space allocated to the larger of these two rooms, including the office and alcove at the east end is 24 x 63 feet, while the neighboring room 24 x 32 is sub-standard in area even for a regular classroom. It would have seemed to be more in line with educational needs if the total allocation of space for the two general science rooms could have been more evenly divided, perhaps locating an office and storeroom between the two where it could serve both rooms. It is not clear just what need exists for an office here except for storage purposes.

The mechanical drawing room is the same size as the standard classroom and is similarly equipped as far as chalkboard and tackboards are concerned. The sink arrangement at the rear is different and the room lacks the closet found in the standard classroom. The room is crowded but if class enrollments are kept relatively low should meet the purposes quite satisfactorily.

*Gymnasium building.*—Aside from its community use aspects the gymnasium building should be designed as the place in and from which the physical and health education program which is required by law and which is dictated by good educational practice is directed, organized and conducted.

The facilities provided for this Junior High School have fundamental deficiencies most of which were clearly pointed out in the recommendations of the State Department of Education. The objective pointed out by the State is to meet the needs for a daily program of physical education for every boy and girl enrolled. In a school of 750 enrollment this would mean a daily load of approximately 375 girls and 375 boys which would probably entail some peak loads of 80 per period each of boys and girls. The facilities provided are positively not adequate for these daily loads. Only 40 lockers are provided for street clothes,

only 6 shower heads in the boys' shower room, no towel storage or issue room, no equipment issue window or storage room, no first-aid room, no facilities for drying out wet athletic clothing, entirely inadequate space allowances for the whole locker room facility, insufficient floor drains in some of the spaces, almost no ventilation, small windows for light and air, these items are typical of the inadequacies of the facilities as an instructional environment.

The girls' locker and shower rooms have the same inadequacies of space and facilities as the boys'. In addition they cannot be entered directly from the corridor but must be entered either by going outside the building, across one end of the gym floor past the door to the boys' locker room, or through the upper floor corridor and down the exit stairs. There is no floor drain in the drying room next to the showers. The semi-private showers are placed in an inside room without sunlight and where ventilation will be difficult even though exhaust ventilation is provided. There are 5 doors to pass through in going from the outside entrance to the girls' locker room to the gym floor.

The placement of the physical directors' offices on the mezzanine floor entirely separated from the locker rooms is unrealistic to say the least. It is difficult to see what use these rooms will be during the school day. They have no closets and cannot be used by the instructors for changing clothes. A private toilet without shower is provided off the mezzanine corridor, presumably for the director of girls' physical education. A similar private toilet enterable only through the entrance to the boys' toilet room could perhaps be used by the boys' director. Because of the nature of their work, showers for the physical directors are considered standard equipment in a properly planned school.

A recommendation by the State to divide the main gym floor into two areas, one for boys and the other for girls, by means of a dividing curtain, was ignored. The replacement of the permanent concrete bleachers on the west side by folding bleachers would have provided much more usable floor area for day to day use within the same structure. The storage space under the permanent bleachers is too long and narrow and too poorly ventilated to be of great value. At the present time some lumber has been stored in this space, which is intended for gymnasium equipment.

Apparently the problem of glare control in the gymnasium was not considered. Morning sun will come through the east windows and afternoon sun through the west side. In order to make the cross courts usable some solution for glare control will be required.

In general the recommendations of the State Department of Education were conservative and outlined the minimum changes that should have been made. Failure to give serious consideration to these recommendations must eventually result in extensive remodeling, reconstruction, and additional construction if the gymnasium is to be brought up to these standards as an educational facility.

At the risk of being repetitive, it should be emphasized again at this point that the respects in which the educational evaluation of the site use plan and the facilities of the building itself may seem critical can be charged to the policies used in the promotion of the work. The Architect was not given the time required for a proper study of the problem and for the development of studies and plans in cooperation with those concerned. In the interests of conservation of time the basic plans were considered not modifiable at the time they were submitted to the State Department of Education for suggestions. Considering the policies used in the promotion of the work, the results are all that can be expected.

## XII. TIME SCHEDULING FOR THE WORK

The time scheduling for the work, while an intangible item relative to material costs, was a very vital factor in contributing to the final high cost of the work.

It appears that there was ample time to prepare plans and secure competitive bids in a normal manner for the construction of a Junior High School for Richland from the time of authorization of plans in January 1947 for completion on September 1, 1948. This would have allowed 20 months for preparation of plans and construction of the work.

Because of the adoption of an inadequate policy concerning the needs for junior high school facilities for the Richland District it was necessary to stop work on the original plans for the project on December 7, 1947. This created a loss of eleven months in the time available for completion of new school facilities.

Authorization of architect-engineering services for the Carmichael School proposed under the new policy for two junior high schools was made in December

1947. On March 26, 1948, the official "Project Proposal" was submitted to the Atomic Energy Commission with an estimated time requirement for the project of ten months.

It is obvious that the time allotted in the application was extremely unrealistic since plans at this date had not been completed and a building of this size and complexity could not reasonably have been expected to be completed in less than ten to twelve months for construction time alone. As it was, the actual construction time for the project consisted of eleven months in spite of the extraordinary means employed for expediting the work.

It is true that the school district occupied portions of the north, south, east and west wings on February 28, 1949, consisting primarily of ordinary classrooms. However, the lack of the use of the auditorium, music room, cafeteria, home economics room and shop facilities gave very little actual use of the facility to the school district for the spring term. These delayed facilities were not turned over to the school until approximately April 21, 1948, and the playground surfacing, driveways and landscaping are not completed to our knowledge as of the date of the writing of this report. For all intents and purposes therefore the school benefited very little from the use of this facility in the spring term of 1949.

While the school district made as effective use as possible of the spaces available to it for approximately 3 months of the spring term, such use could well have been delayed until the opening of school in September 1949 in the interests of lower costs and better planning. This would have given an additional six months for construction of the project.

From the experience to date there is question that very much was gained by trying to meet a time schedule for September 1, 1948, which obviously was impossible to fulfill. A realistic time schedule for the project should have been to plan for completion for September 1949.

On May 13, 1948, construction work actually started with a directive for completion to have the plant ready for use on September 1, 1948, and physically complete February 1, 1949. This schedule was obviously impossible to fulfill since the approximate time from May 13, 1948, to September 1948, gave a construction time of only 3½ months for substantial completion for occupancy.

Because of the fact that so early an objective for completion was established, insufficient time was allowed for the proper and intelligent planning and design of the school, creating haste in the preparation of the plans and some justification for awarding the contract for construction of the project with the working drawings only approximately 40% complete.

If a realistic policy had been adopted concerning the time scheduling of the work, i. e., completion for September 1949, there would have been allowed 20 months for the design and construction of the project. Assuming 12 months for construction, this would have allowed eight months for preparation of the plans and specifications which in the opinion of this office would have been ample.

This timing would then have allowed the project to have been built on the basis of completed working drawings, competitive bidding and under normal procedures. This undoubtedly would have eliminated special job costs, a great deal of overtime, special expediting costs, and would have resulted in lower costs of materials and subcontracts. This would also have eliminated the numerous change orders and unquestionably would have resulted in a more economical and efficiently designed plant.

It is our firm opinion that notwithstanding the above, three additional months to complete the working drawings would have saved considerably more than that in time for completion of the project together with a considerable saving of money.

There also appears to have been a characteristic of inflexibility in changing the policies to meet changing conditions as the work progressed. In this respect it seems that the management failed to consider changes in fundamental policies with respect to the construction procedures as circumstances changed. For example, when it appeared in December of 1948 that the building could not possibly be completed in time to be of any real value to the school district for the spring term the policies with respect to overtime, with respect to special job costs, with respect to the special expediting of materials could well have been changed and a more normal procedure have been adopted for the remaining construction time.

## XIII. CONSTRUCTION POLICIES AND PROCEDURES

Policies used determining the methods and procedures followed in the construction of the Carmichael School were certainly of major importance in creating the high cost of the work.

These policies include among others:

1. The use of the General Electric Company as the contracting and administrative agency for the work.
2. The awarding of contracts on the basis of uncompleted plans.
3. The awarding of the work on a cost-plus-fixed-fee basis.
4. The attempt to construct the work under an unrealistic time schedule.
5. The use of a 6-day, 48-hour week, incurring overtime pay for labor on the project.
6. The use of special expeditors and specialists in an attempt to speed up the work.

7. The policy to continue work on an overtime basis and with the use of expeditors even after it was established that the building would not be completed in time to be of any real value to the school district for the spring term of 1949.

In the first instance, the policy decision to vest the authority for administration and management of the work with the General Electric Company as prime contractor, as far as can be determined, added a burden of \$738,611 of overhead allocated to the work which would otherwise have been avoided had the Atomic Energy Commission used other means open and available to it for this responsibility, i. e., the local school board.

It is difficult to justify this added cost allocation, especially in view of the fact that the responsibility for construction of the proposed North Junior High School is being given to the Richland School Board instead of the General Electric Company. This change of policy involves a tacit admission of the advantage of this method over the former used for construction of the Carmichael School. Under the changed policy the Richland School District is being allocated a lump sum based upon the State average cost of \$2,232.00, per pupil housed for purposes of construction of the project, and it is reasonable to expect that the work should be accomplished within the budget.

The Design Department of General Electric estimates that the plans for the Carmichael School were 38% complete when construction began. Project memoranda and change orders applying to the school building program under the McNeill Construction Company run over a thousand. It is reliably estimated that the change orders and project memoranda applying to the Carmichael School alone run into a figure approximating 800. In Exhibit B of the General Electric Company's Realty Board reports concerning the Carmichael Junior High School the total amount of additive change orders issued to the principal subcontractors employed on the Carmichael School was in excess of 40% of the original sub-contract price.

Proceeding without completely developed plans not only tends to create excessive additive change orders but it also imposes restrictions on planning of the building itself. It tends to crystallize the arrangement of spaces and the internal planning of the building before such factors are ready to be crystallized and therefore to give the owner a school plant that is less desirable than it might have been.

When it was decided by management as a matter of policy that the construction of the Carmichael School should be on a cost-plus-fixed-fee basis, it is the opinion of this office that many of the excessive costs of the project were thereby determined. Under the normal competitive bidding process none of the General Electric Company overhead would have been charged to the project. It is also well recognized that the general over-all efficiency of promotion of the work and the efficiency of the labor itself is lower under cost-plus-fixed-fee contracts than it is under the normal competitive lump-sum bid system.

The attempt to construct the project on an unrealistic time schedule was basic to increases in cost of the project in other ways than through the dominance of the time element in other major policy decisions. Because of the fast construction schedule the work was not carried out in the normal sequence usually employed. Asphalt tile was installed before plastering was completed, plastering was partially completed in a room and then finished after steel sash arrived, painting was performed in stages, trades worked as far as possible and then stopped work to await work by other trades or the receipt of materials or equipment. If actual construction in the field had been held up until all plans were

complete and materials on order, a more orderly and efficient construction schedule could have been planned.

Before the project was initiated it was decided as a matter of policy that a six-day, 48-hour week would be employed on the project because of its urgency. This policy in itself dictated the fact that one out of every six working days was at overtime rates and materially added to the cost of the project.

The amount so added is estimated at \$115,786 in the General Electric Realty Board's report on the project. The total direct labor for which McNeill was reimbursed by General Electric was \$1,070,275 as of March 31. This does not include all of the direct labor on the project, as a relatively small amount was also involved in the lump-sum bids of subcontractors. It does indicate, however, that overtime premiums of about 10% were paid because of the policy with respect to overtime. This just about equals the ratio of isolation pay to direct labor included in the General Electric Company overhead, which is 11% according to F. E. Baker, Comptroller.

Subcontractors in submitting lump-sum bids to McNeill were allowed as part of the contract wage escalation fees to compensate for any increases in basic wage rates during the progress of the work. It is estimated that wage escalation during the progress of the work added approximately \$100,000 to the cost, both in payments to McNeill and to his subcontractors. This would account in part for the estimates being low.

It was the policy of management, because of the urgency assigned to the project, to allow premiums and special expediting costs, as for example the sending of expeditors to the places at which materials were contracted for, such as the steel mills supplying the steel. Some \$33,000 was spent in this manner.

Even though it was apparent in December of 1948 that the school would not be completely ready in time to be of much use to the school district for the spring term, special job costs were continued. One of these special costs was incurred in providing for temporary enclosures for all the windows so that the building could be heated to allow erection of interior partitions and plastering and similar work to go on during a protracted period of cold weather. Overtime work was also continued when it became apparent that the building would be delayed beyond the point at which it would be of much value to the school district during the current school term.

Specialists were employed to supervise the installation of public address equipment, the clock and bell system, stage equipment, auditorium seats, kitchen equipment, Modern Fold doors, rolling fire doors, and folding bleachers.

#### XIV. CONCLUSIONS

1. The determination to construct a single large central junior high school was inadequately made. This project was ultimately abandoned with considerable loss of time and money. This was a major factor that contributed to the formulation of an unrealistic time schedule for construction of the Carmichael School. This resulted in the adoption of inefficient and costly construction policies.

2. The policy adopted for the general administration of the work resulted in inordinate allocation of costs for management and overhead for a project of this type.

3. The planning and programing as a basis for the design of the project was inadequate, and manifested a lack of cooperation with state and local agencies.

4. The original estimate of direct construction cost for the project, \$1,488,000, was reasonable and apparently soundly made relative to the cost of other schools in the area.

5. The school as built is not unreasonable in quality of materials, equipment, or facilities relative to projects of a similar nature in the area or the Pacific Coast region generally.

6. The school project as finally constructed could be considered of average quality in plan and design although it fails to meet in numerous instances generally accepted minimum educational standards for a building of this type, as well as those recommended by the State of Washington.

7. The time schedule for the design and construction of the project was unrealistic. This contributed in a large degree to the adoption of inefficient policies concerning the methods to be employed in the construction of the project.

8. In the opinion of this firm, a reasonable estimate of cost for the work, considering all factors and following usual and normal procedures for construction of the work, would be \$1,917,692.

9. The reported cost of the work to date is approximately \$3,650,835 or \$1,733,143 in excess of the cost of other school projects similar in nature, scope and quality constructed in the State of Washington and other states of the Pacific Coast region.

10. In general the excessive cost of the work was primarily the result of the policies and conditions under which the project was planned and constructed. The complexities in the building design are unquestionably a result of these policies and not the basic cause of the high cost of the work. The fixed conditions and quality of materials were relatively minor factors.

11. It is entirely possible that as a result of this preliminary study additional information and data may be produced or developed which may modify or affect the conclusions reached on the basis of presently available information.

---

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
August 19, 1949.

Mr. CARROLL L. WILSON,  
General Manager, United States Atomic Energy Commission,  
Washington, D. C.

DEAR MR. WILSON: Attached herewith is a copy of a self-explanatory report prepared by the firm of Mr. E. J. Kump on the Carmichael Junior High School at Richland, Wash. This report is to be printed in full as part of the appendix to the hearings of the joint committee investigation of the Atomic Energy Commission. In keeping with the practice of inserting in the record whatever material the interested parties deem to be useful and relevant (within practical limits), any statement which you may wish to submit commenting on the report will also be made part of the appendix. If you desire to have such a statement printed I would much appreciate receiving it within the next 2 weeks.

Sincerely,

WILLIAM L. BORDEN, *Executive Director.*

---

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington, September 13, 1949.

Mr. WILLIAM L. BORDEN,  
Executive Director, Joint Committee on Atomic Energy.

DEAR MR. BORDEN: We submit herewith our comments with respect to the preliminary report upon the Carmichael Junior High School at Richland, Washington, prepared for the Joint Committee on Atomic Energy by Ernest J. Kump & Mark Falk, consulting architect and engineer, San Francisco, California.

In retrospect, it is possible to say that some actions were inadvisably taken, that mistakes were made, and that the costs of the school have proven too high. However, the extent to which these things are true should be judged, in our opinion, on the basis of the conditions which existed at Hanford at the time the school was planned and constructed rather than on the basis of application of criteria which are customarily used in appraising a school project in a normal community. We also think that the judgment which is made should take into consideration the nature of the over-all construction program at Hanford and the character of performance with respect to such over-all program. Certain of these considerations may be outside the purview of the report. However, since these matters are believed to be necessary for a complete appraisal, they will be dealt with in our comments.

The report states that "excess cost" of the school to the Government is computed at \$1,733,143. While there is some ambiguity in the report concerning what is meant by the term "excess cost," the sense in which that term is used is indicated by the statement in conclusion of the report (at page 1202) that the reported cost of the work to date is "\$1,733,143 in excess of the cost of other school projects similar in nature, scope, and quality constructed in the State of Washington and other states of the Pacific Coast region." It is important that this use of the term be noted inasmuch as the situation faced with respect to the construction of the Carmichael School differed in many respects from that normally encountered in contemporary West Coast construction.

It should also be noted that the cost figures include a sum of approximately \$738,611.00 for overhead which the report states could have been avoided if the Commission had allocated the funds to the local school district and authorized

it to take the necessary steps to construct the school. At the hearing, detailed testimony was given concerning the matter of overhead. It was pointed out at that time that the overhead figure represents the portion of the indirect costs incurred in connection with the total construction program at Hanford which was allocated for accounting purposes to the school project. It was also pointed out that the method adopted for allocation of these costs to the individual projects, while it involved a saving in clerical work and expense and simplified the over-all accounting, had the effect, in various instances, of charging against the school project costs which should appropriately have been charged against other projects. Furthermore, if a local school agency had acted as the contracting agency, many of the costs would have been incurred and these costs would have had to be absorbed by some one. The report refers in its conclusions (at page 1201) to the "inordinate allocation" of costs for overhead for a project of this type. We think this approach to the question from the standpoint of allocation of the overhead costs is more accurate than the approach adopted in the other parts of the report that all the overhead costs could have been avoided.

The report attributes the excess cost of the school primarily to the policies and conditions under which the project was planned and constructed. However, the report fails in our judgment adequately to take into account the basic conditions existing at Hanford which distinguished it from a normal community and which resulted in the adoption of certain of the policies and practices which contributed to the cost. The difficulties inherent in any attempt now to reconstruct the nature of the conditions at Hanford as of several years ago are fully appreciated. However, this failure of the report is believed to be responsible, in part, for the report's characterization of the time schedule for design and construction as unrealistic. It also appears to be partially responsible for the criticisms contained in the report of the policies adopted to expedite the construction work and obtain early completion, including the policy of proceeding with construction before plans had been completely developed and on the basis of a cost-plus-a-fixed-fee contract. There was an urgent need to take steps to alleviate at the earliest possible date the lack of adequate school facilities and thereby avoid the anticipated adverse effect, including the possible loss of personnel, of this factor upon the production program at Hanford. While the time schedule was stringent, the meeting of the schedule appeared at the time possible on the basis of the procedures adopted.

The report also fails in our judgment sufficiently to take into account the fact that the construction of the Carmichael School while an integral part was nevertheless only one, and a comparatively small, part of a vast construction program undertaken in an isolated locality under conditions of great urgency. At that time, construction of major production facilities was being expedited to such an extent that the effect was necessarily felt on projects such as the Carmichael School. This factor should be given consideration if the policies and practices followed in the planning and construction of the School are to be fairly appraised.

As the report points out, the data contained therein upon which the conclusions of the report are based was obtained from various sources and has not been investigated to determine its accuracy or completeness. We note below a number of statements contained in the report which we believe to be inaccurate or incomplete.

The report states (at page 1181) that no evidence was found of a basis or method that was used for determining that one junior high school was to be built rather than two schools and the report declares (at page 1199) that the adoption of the inadequate policy concerning the needs for junior high school facilities created a loss of eleven months in the time available for completion of new school facilities. At the time a single school was planned, which was before the Commission assumed control of Hanford Operations, the program at Hanford was so nebulous that an accurate judgment was not possible concerning what the future school population would be. The estimate of future construction at that time was \$85,000,000. It was not until many months later that an expansion program was decided upon, that an estimate of \$85,000,000 for future construction at Hanford was made and that a reasonably dependable judgment could be reached with respect to the school population.

The report states (at page 1188) that the school project was given to the Turnbull organization "along with 58 other projects for a total of approximately \$240,000,000 of construction cost" and that it was, therefore, almost inevitable that the school project competed with the Turnbull organization for planning time and the talent of the organization. The fact is that of the 59 projects given to

the Turnbull organization, only 26 projects involved construction and the construction costs amounted to \$17,000,000 rather than \$240,000,000. The remaining 33 projects were planning studies only.

The statements in the report (at page 1201) concerning the increased costs resulting from employment of a 6-day 48-hour work week on the school project omit references to the fact that the competition offered by the production projects at Hanford, on which projects use of a 6-day 48-hour week was necessary because of the urgency of construction of the production facilities, prevented the school contractor from operating except on the basis of such a work week.

The report criticizes (at pages 1183 and 1200) the failure to vest in the School Board, rather than the General Electric Company, authority for the administration and management of the school project. However, in fact, the School Board at that time was not organized or equipped to handle such work.

As we have stated previously, we are of the opinion that the costs of the school have proven too high. However, we think that fair appraisal of the policies followed and the costs involved requires that full consideration be given to the various matters discussed above and to the testimony given at the hearing.

We believe the Joint Committee is aware that the Commission has taken steps to guard against the incurring of excessive costs, and to disclose promptly situations in which costs may exceed estimates.

Sincerely yours,

CARROLL L. WILSON, *General Manager.*

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., September 13, 1949.

MR. WILLIAM L. BORDEN,

*Executive Director, Joint Committee on Atomic Energy.*

DEAR MR. BORDEN: At the request of the General Electric Company, we transmit herewith two photostatic copies of a letter dated August 29, 1949, to the Hanford Operations Office, Atomic Energy Commission, from F. K. McCune, Assistant General Manager, General Electric Nucleonics Project, General Electric Company, together with photostatic copies of documents attached to that letter. The letter, with the attachments, embodies the comments of the General Electric Company with respect to the preliminary report on the Carmichael School at Richland, Washington, prepared by Ernest J. Kump & Mark Falk, consulting engineer and architect.

The General Electric Company has also requested that we transmit the enclosed photostatic copies of a letter dated August 30, 1949, to Mr. G. R. Prout, General Electric Company, from Mr. D. M. Checkley, Project Manager, J. Gordon Turnbull, Inc.

Sincerely yours,

CARROLL L. WILSON, *General Manager.*

Encl.

J. GORDON TURNBULL, INC.,  
GRAHAM, ANDERSON, PROBST & WHITE,  
Richland, Washington, August 30, 1949.

Subject: School Design Experience.

G. R. PROUT,

*General Manager, General Electric Company,  
Richland, Washington.*

DEAR MR. PROUT: In reply to your recent inquiry pertaining to our qualification for the design of school buildings, we wish to state that the joint-venture Architect-Engineer firms and their predecessors have designed more than thirty schools buildings in various parts of the country. Among these buildings are the following: Reeves School, St. Louis County; Four Grade Schools; Centralia, Illinois; Centralia High School, Centralia, Illinois; Centralia Junior High School, Centralia, Illinois; Trout Memorial Gymnasium and School Building, Centralia, Illinois; Brighton High School, Brighton, Illinois; Grade School, Nashville, Illinois; Grade School, Central City, Illinois; Junior High School, Harrisburg, Illinois; High School Gymnasium, Harrisburg, Illinois; Community Center and Industrial Arts School, Centralia, Illinois; School and Gymnasium, Jerseyville, Illinois.

Additionally, the three individuals on our staff, who were responsible for the design of school buildings in Richland each have considerable school planning experience. The principal Architect has twenty-two schools to his credit, the second has designed nine schools, and the third has worked on six buildings of this type. These include grade schools, junior high schools, high schools, and special purpose educational buildings located in various parts of the East.

We also call your attention to the fact that we maintain a planning and statistical organization experienced in determining school requirements as they relate to over-all community needs. This section of our staff is also expert in the design of school-site improvements. The value of close coordination between the planning group and the Architects has been well demonstrated by recent experience on this project.

Although we have not restricted our practice to school work alone, we consider this condition to be a distinct advantage. It is often considered that diversified experience, as opposed to restrictive specialization, usually enables the Architect to produce a more practical and functional solution to any given design program.

Very truly yours,

DMC:jkp.

GENERAL ELECTRIC COMPANY,  
HANFORD ENGINEER WORKS,  
*Richland, Washington, August 29, 1949.*

ATOMIC ENERGY COMMISSION,  
*Hanford Operations Office, Richland, Washington.*  
(Attention: F. C. Schlemmer, Manager.)

REPORT AND APPRAISAL ON THE CARMICHAEL SCHOOL

GENTLEMEN: At your request we are commenting on the preliminary report and appraisal on the Carmichael School prepared by Ernest J. Kump and Mark Falk, Consulting Architect and Engineer. It must be borne in mind that we have had insufficient time to adequately prepare detailed comments and to check all statements, since this report was delivered to us late Thursday afternoon. However, our cursory reading of the document makes us feel that it is either a result of woefully inadequate study, or deliberate intent not to inquire into or report many pertinent facts.

Our comments therefore may be summarized as follows:

1. Many facts are misrepresented. Examples of some of these are listed in an attached memorandum.

2. Much background data is not mentioned. For example, the report purports to be quite critical of the time between the first request for a school and the decision to build two schools. Attached is a curve of population covering this period.<sup>1</sup> This tremendous growth was a direct reflection of the changing emphasis on production caused by the completely unpredictable international situation. While obviously many facts could not be discussed with an investigator not cleared for classified data, the population data could have been easily obtained. We believe this alone is sufficient to demonstrate the impossibility of long-range planning in the period in question.

3. The investigator appears to have little understanding of accounting methods, and no understanding of the cost accounting methods used at Hanford. See memorandum attached prepared by our Comptroller.

This lack of understanding, we believe, accounts for many of the erroneous conclusions. A reader of the report would arrive at the totally absurd conclusion that an unwarranted expenditure of \$738,611 was caused by General Electric. Actually, and the investigator was so advised, this simply represents the amount of total indirect cost assessed to the project for accounting purposes.

4. The investigator told General Electric representatives he was primarily interested in the question, "Is the school worth what it cost?" Every effort was made to make available to him original data from our files on this point. In the short time he was here this was all that could be done. Much to our surprise, this point takes a very minor place in the report. It would seem that those who prepared the report were unable or unwilling to cover this fully.

<sup>1</sup> See chart facing p. 1206.

5. We dislike the volume of unsubstantiated opinion, particularly on architectural matters. See attached letter from Turnbull and Associates dated August 26, 1949.

6. In addition we wish to make a few specific comments:

(a) Much is made of the one school or two school discussion. It must be borne in mind, though not mentioned in the report, that one school is cheaper to operate; hence many, possibly the majority, of towns plan one school where possible, with full knowledge that two have been recommended as more convenient for the pupils.

(b) The school was continually under the supervision of the School Board and Superintendent of Schools. See Community Activities Division's letter attached. However, and this point is not noted in the report, the Superintendent of Schools was replaced July 1, 1948, and his organization strengthened. The result is that we now have much more confidence in this group, and have assigned further school planning to them.

(c) The statement is made, "It appears that the dominant reason for assigning the work to General Electric was that in the opinion of the Atomic Energy Commission by adopting this method the project could be completed at a much earlier date." While we cannot speak for the Atomic Energy Commission, you may wish to point out the complete lack of organization of the then existing school board and office of the superintendent of schools to handle such a project.

Summarizing, we believe that no good has been done by this report. The data presented as facts are inadequate and in certain cases incorrect. The conclusions are, in our opinion, almost wholly erroneous, possibly as a result of inadequate facts and knowledge. While the General Electric Company did not handle this school as well as it did the great majority of the \$200,000,000 construction program (which it now appears, including the school, will be completed well within 1% above the original estimate—see statement attached) and in essence so testified to the Joint Committee on Atomic Energy, the consulting Architect Engineers' report is not in our opinion a faithful, accurate, unbiased presentation of the story, and we take exception to it, therefore, practically in toto.

Very truly yours,

F. K. McCune,

F. K. McCune,

*Assistant General Manager.*

COMMENTS ON "REPORT AND APPRAISAL OF THE CARMICHAEL SCHOOL, RICHLAND, WASH., TO THE JOINT COMMITTEE ON ATOMIC ENERGY PREPARED BY ERNEST J. KUMP AND MARK FALK, CONSULTING ARCHITECT AND ENGINEER"

Page 1176: The chronology of principal events and decisions is generally sketchy and does not present the full history.

Page 1177: Comment with respect to completion of housing units is incorrect. Actual completion dates and number of units were as follows: 397 AJ units, July 1948; 450 Hudson units, June 1948; 1,000 Ranch-type units, February 1949.

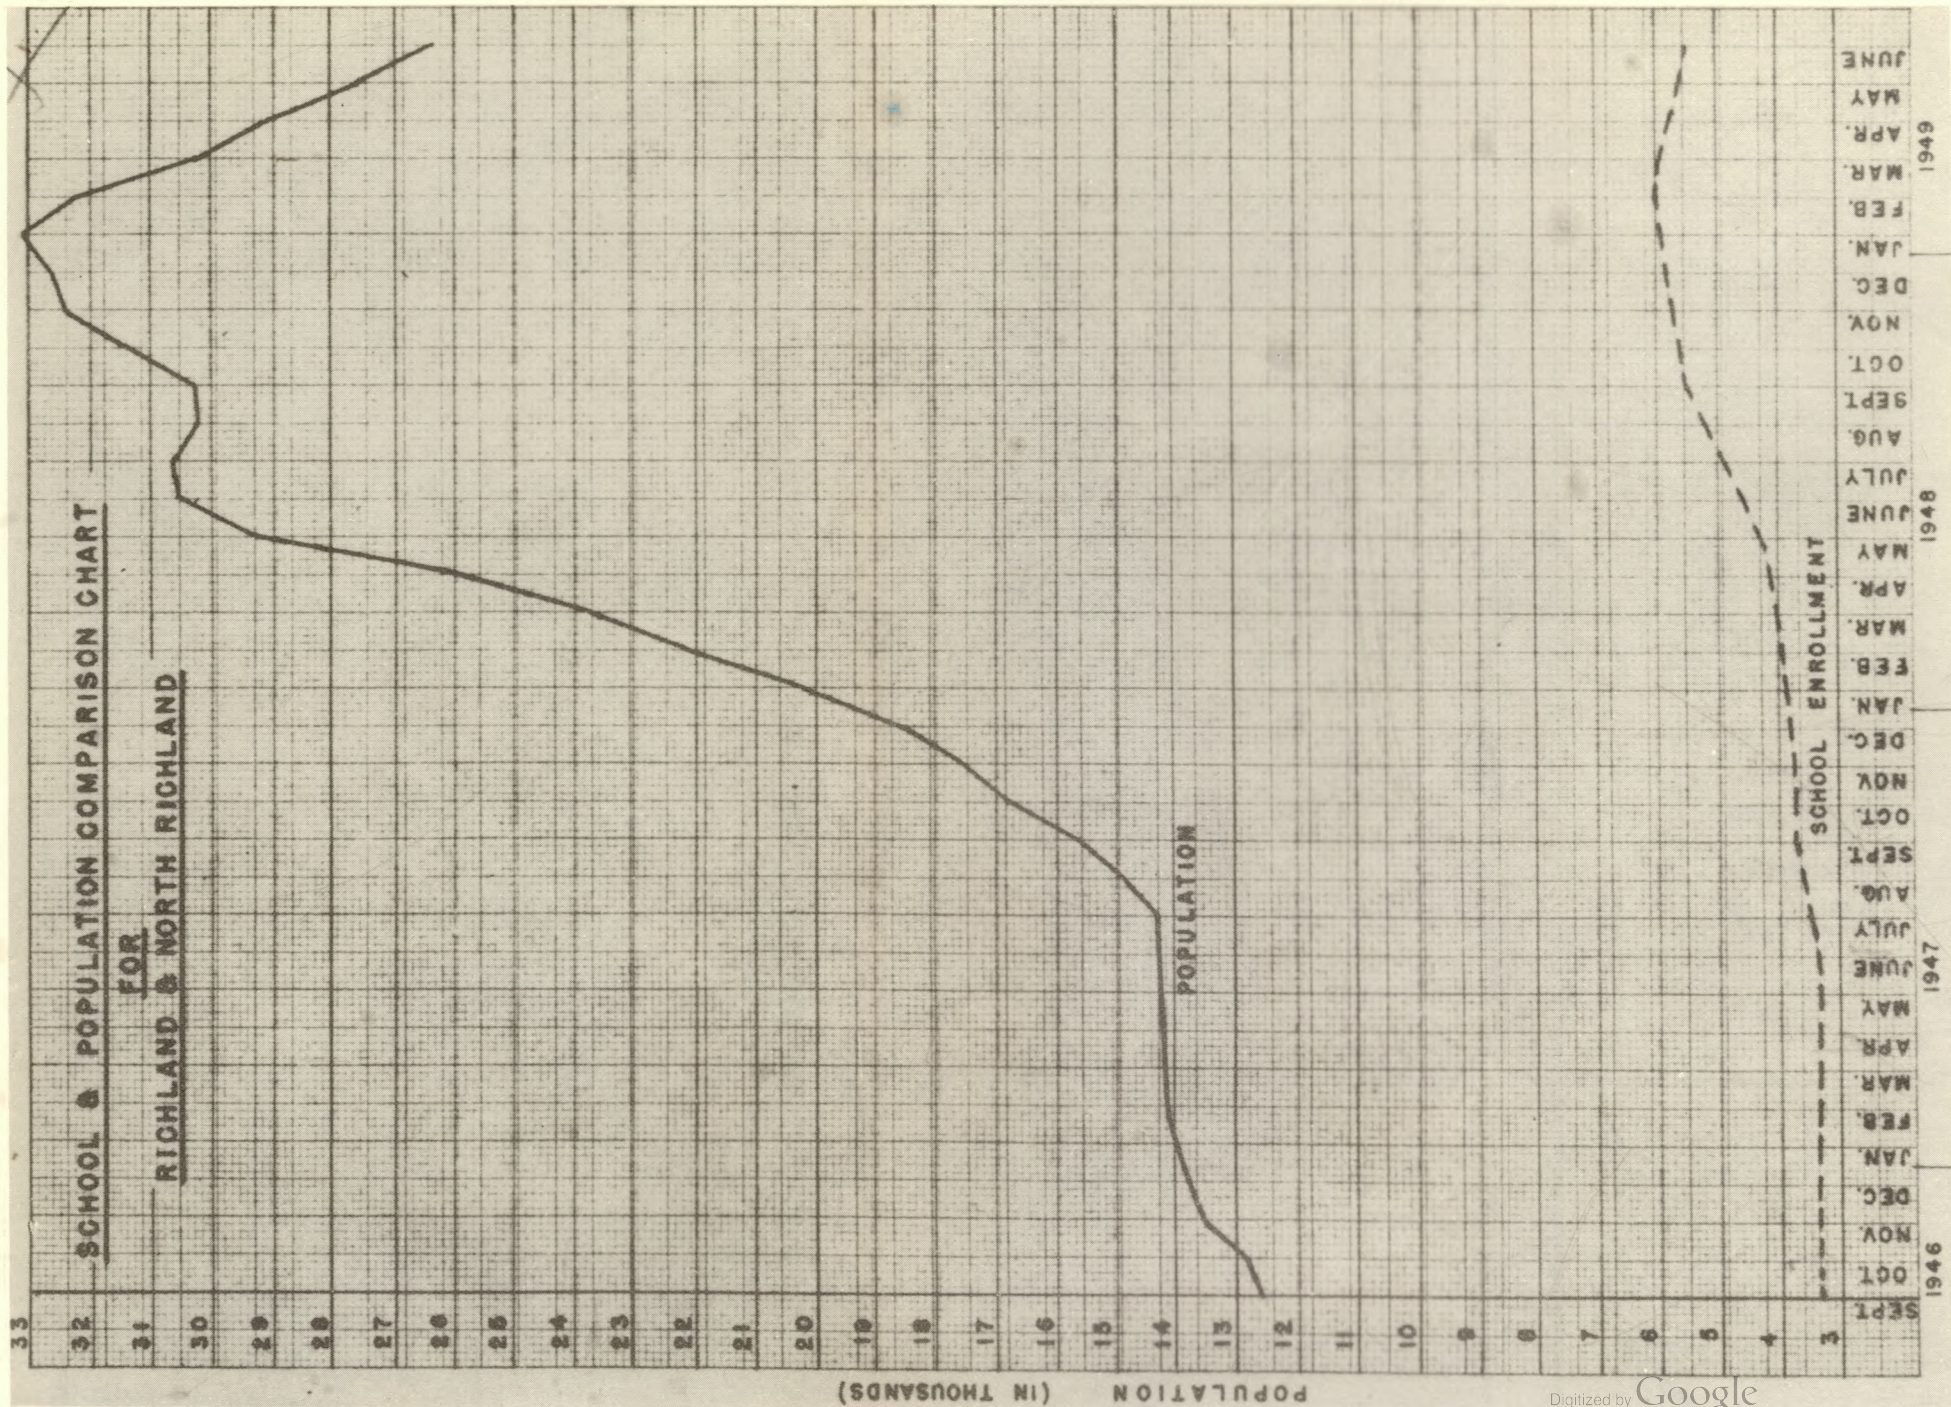

Page 1188: Very little level area was lost in the grading of the site. Steeper embankment would have been unsafe and it would have been impossible to plant or maintain grass on such an embankment.

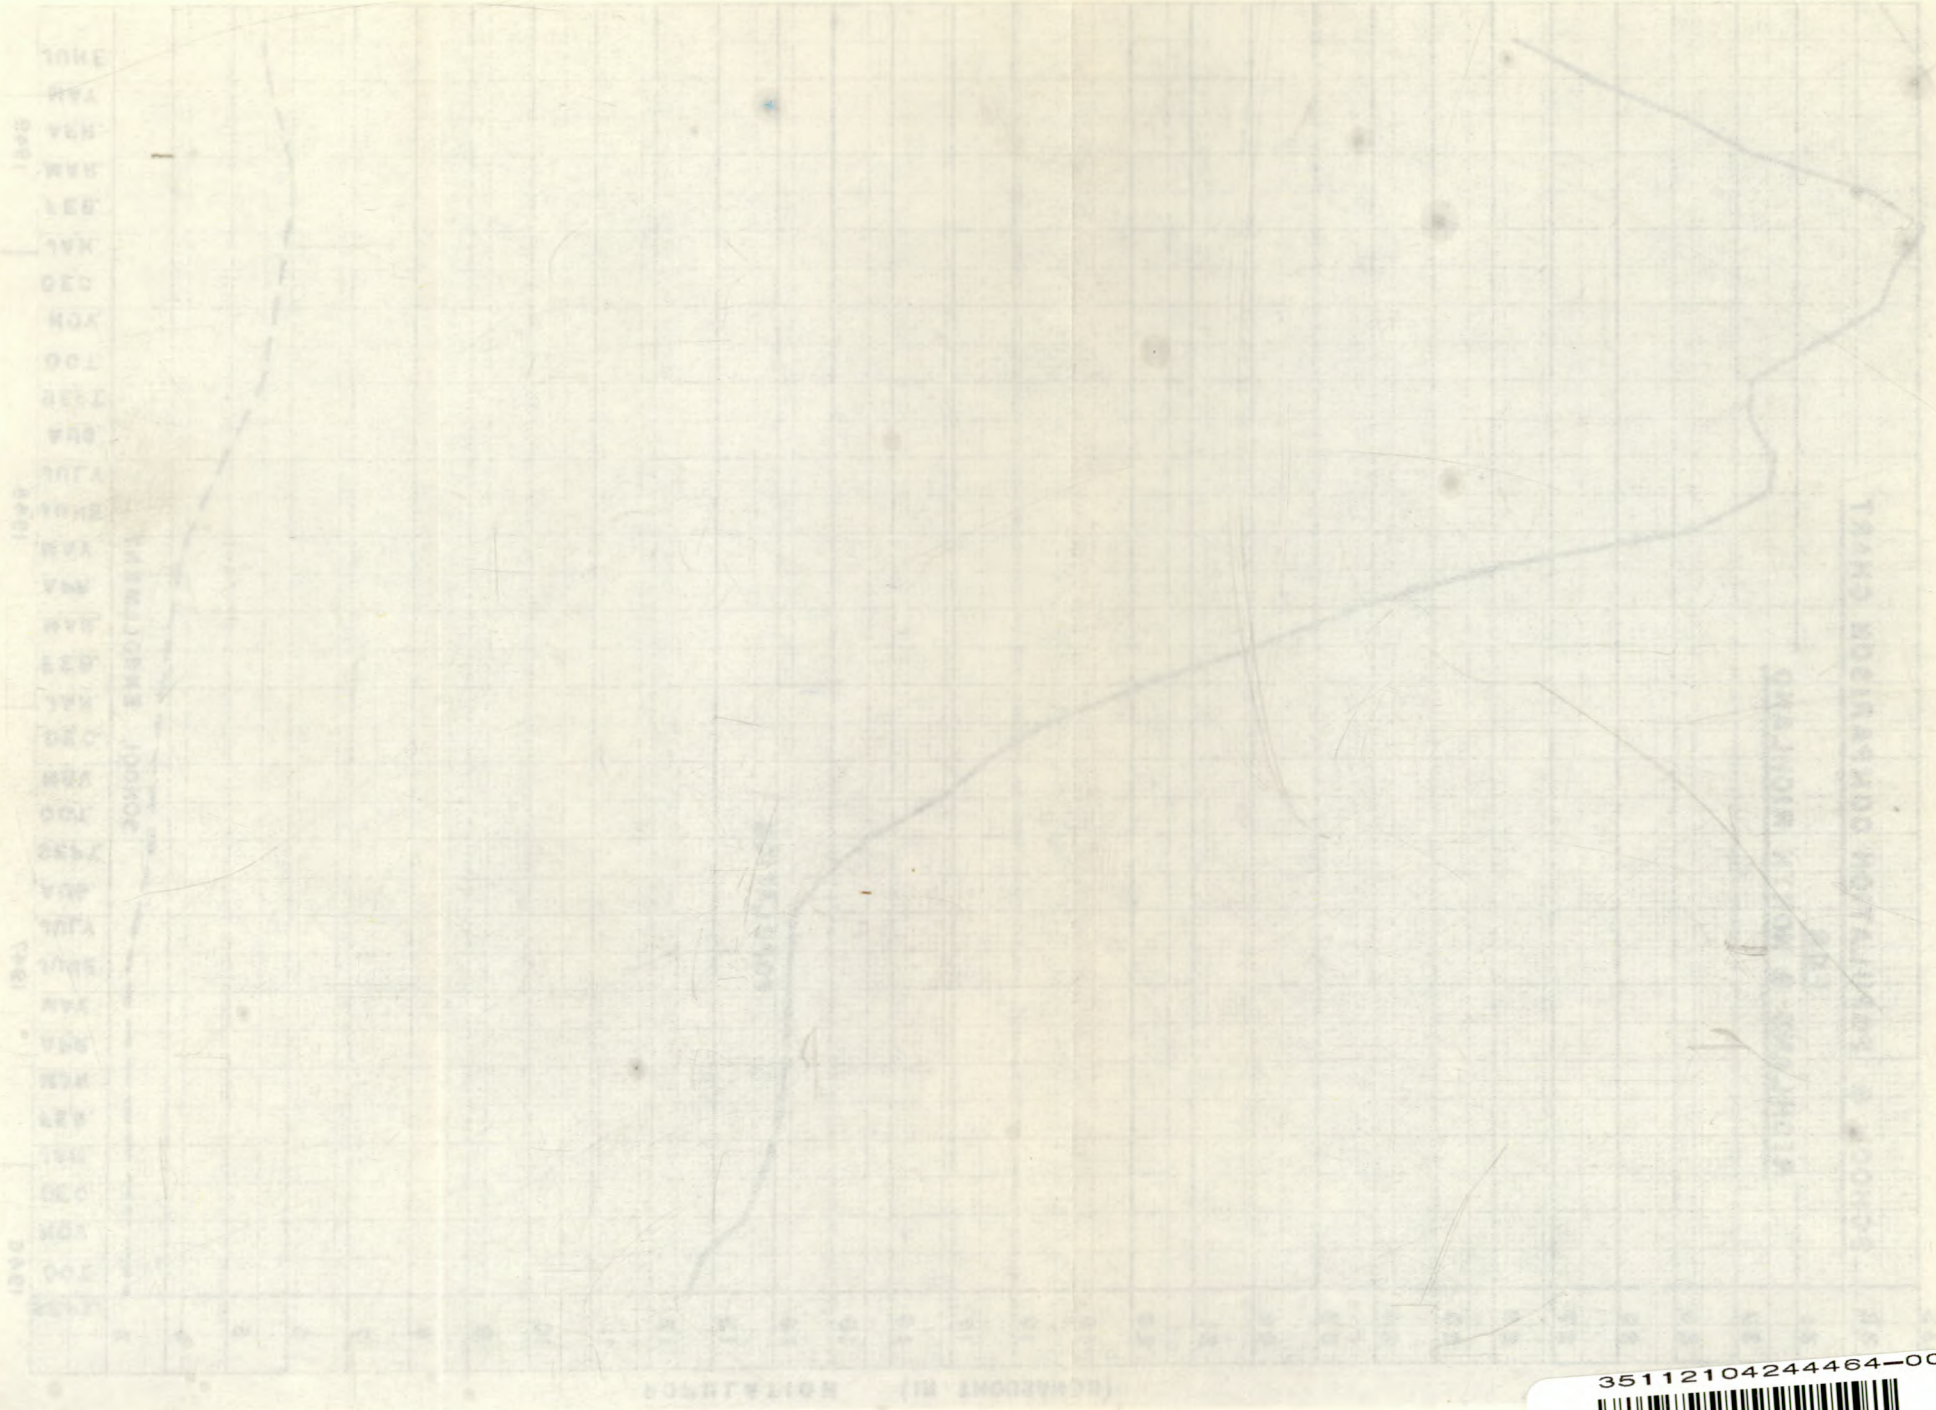

Page 1188: Fee for design of the school including supervision was computed at the rate of 4½ percent of the estimated normal construction cost.

Fifty-eight other projects are stated to involve construction costs approximating \$240,000,000. Actually 33 of these projects involved engineering, studies, etc. in connection with community planning. The remaining 25 projects involved construction in an aggregate amount of approximately \$13,000,000. While the engineering studies had an impact on other construction, the quoted figure of \$240,000,000 is incorrect by at least a factor of 10 to 1.

Page 1189: Design for school was not prepared in Cleveland, plans were available in Richland during all stages of the design.

Page 1190: Although incomplete drawings accounted for added change orders, a check of the amount of the subcontracts and the change orders for the various trades shows that the over-all cost was not substantially increased for this reason.

35112104244464-00

FLD00100030

Page 1191: The first sketches for the building located more of the structure on the upper level of the site. This was rejected in order to eliminate as much two-story construction as possible.

Page 1191: Criticism of mechanical and electrical work is unfounded and evidently is based on unqualified observation or misinformation.

Page 1191: We disagree with statement that cabinet work is "of rather low quality."

Page 1192: Criticism of planning is based on too much theory and too little practical consideration. Some conclusions are extremely farfetched such as the statement that students get "lost." In this connection attention is directed to letter dated August 26, 1949, from Mr. P. A. Wright, Superintendent of Schools. Statement regarding "variety of concepts" can be made of virtually every public building including most schools recently completed.

Page 1193: Placing service facilities on street would be most undesirable as the building faces residences. Actually service drive area is necessary for fire protection and would be required regardless of its use for service purposes.

Page 1193: Terraced parking areas would be very expensive and could not be justified.

Page 1194: The fly loft in stage was recommended by Washington State College report for junior high school use.

Page 1194: The music teacher feels that the music room is quite satisfactory.

Page 1194: Toilet rooms adjacent to auditorium are not "smelly and humid" and are equipped with very satisfactory mechanical exhaust ventilation.

Page 1195: Comments regarding low ceiling and necessity for burning lights in entrance to girls' toilet are farfetched.

Page 1195: Reference to toilet rooms implies inadequate fixtures where actually the number of fixtures is in excess of State requirements. The toilet room ventilation is entirely satisfactory.

Clear span rather than columns in the cafeteria could not be justified economically and the presence of the columns does not detract from cafeteria use.

Page 1196: The same comment applies with respect to columns in the entrance foyer.

Counselor's offices are not directly related to general office and arrangement was designed to fit a specific operating requirement. The nurse's suite is satisfactory to the Public Health authorities.

Page 1197: The woodworking equipment was specified and approved by the manual training instructor who also directed placement of the machinery. The equipment is also used by adult classes in the evenings. A dust collection system was planned but is not presently installed.

Page 1197: Location of the mimeograph room was selected to reduce noise level on upper floor, is close to receiving dock for incoming paper and to waste paper disposal point. Routine office duplicating by ditto machine is handled in general office.

The letter dated August 26, 1949 from the Superintendent of Schools comments upon the adequacy of the gymnasium facilities.

Page 1198: Actually there is a very direct route to the girls' locker room by means of corridor and stairway.

The following paragraph appears on page 1183 of the report:

"The Commission was aware of the fact that under the first policy for constructing the school, using the General Electric Co. as prime contractor, was involved additional overhead and distributive costs to General Electric Co. over and above that which would be required under the second method mentioned, or through the school district as contracting agency. In the case of the Carmichael School this added an amount of approximately \$738,611 of overhead to the total cost of the project which otherwise would not have been incurred. This is one of the major items contributing to the excessive cost of the project."

The following paragraph appears on page 1200 of the report:

"In the first instance, the policy decision to vest the authority for administration and management of the work with the General Electric Co. as prime contractor, as far as can be determined, added a burden of \$738,611 of overhead allocated to the work which would otherwise have been avoided had the Atomic Energy Commission used other means open and available to it for this responsibility, i. e., the local school board."

The ease with which \$738,611 of the alleged "excess" cost of \$1,733,143 is attributed by the investigator to using General Electric Co. as prime contractor would in itself warrant special comment were it not also true that such a conclusion cannot be substantiated by the facts. That the investigator arrived at

such an erroneous conclusion can only be attributable to one or both of the following:

1. Inability of the investigator to understand the accounting principles involved in determining job costs under the major construction program being carried on at Hanford Works, or

2. Lack of a desire on the part of the investigator to ascertain the facts.

Certainly the very brief discussion which I had with the investigator, at his request, could not logically lead to the statement that "this added an amount of approximately \$738,611 of overhead to the total cost of the project *which otherwise would not have been incurred.*" My testimony before the Joint Committee on Atomic Energy on June 20 and 21, 1949, contained a detailed description of how costs of the Hanford Construction program are allocated to individual jobs for accounting purposes. This testimony is a matter of public record and I assume was available to the investigator. I cautioned the investigator that the problem of allocating indirect costs to each project was extremely involved and that a clear understanding would be necessary if correct conclusions were to be reached. It is now apparent that the investigator did not take sufficient time to understand this matter.

At the expense of being repetitious, I would again like to point out the following:

1. The indirect costs allocated to this job included costs incurred by the construction contractor in amount of about \$165,000 for such things as administration, procurement of materials, supervision of field work, contract administration, accounting, time keeping and payrolls, personnel, safety and fire protection, traffic and transportation, expendable office and engineering supplies, office equipment maintenance, workmen's compensation and other insurance, social security taxes, Washington State business tax, maintenance of offices and shops, etc. To conclude that such costs would not have been incurred by the construction contractor had the school district acted as contracting agency is, to say the least, unrealistic.

2. The indirect costs allocated to this job included liquidation of similar and further costs incurred by General Electric Company and other construction contractors who contributed to this job, the allocation being made on a basis which is in accordance with generally accepted accounting principles. To say that such costs would not have been incurred had the school district acted as contracting agency would mean literally that no material would have been procured by others than the construction contractor, that no patrol, safety, fire prevention, or security measures would have been undertaken, that no supervision of the construction contractor would have been exercised, that no power, light, heat, water, or ice would have been provided to the work site, etc. Of course, it could mean that had the school district acted as contracting agency such costs would have been incurred but would have been absorbed by the school district against its educational costs rather than allocated to the cost of constructing the school.

3. The indirect costs allocated to this job included liquidation of the cost of operating the construction camp and hospital. To say that such costs would not have been incurred had the school district acted as contracting agency would mean literally that the construction workers would not have been housed and would not have received medical attention. Such a conclusion is, to say the least, unrealistic. We can assume, therefore, that the investigator really means that such costs might not have been allocated to the cost of the school but would have been absorbed by others.

4. Additional items of indirect costs are of the same nature and further comment appears unnecessary.

The investigator points out on page 1183 that the school board is administering the program of designing and constructing a new north junior high school through its regular staff and has selected an experienced specialist in school architecture to work with them in programing, planning, designing, and supervising the erection of the needed additional facilities. This clearly indicates that from an accounting standpoint certain indirect costs will be incurred but the investigator does not indicate whether or not such indirect costs are provided for in the per-pupil allowance of \$2,232. Neither does the investigator indicate that the allowance of \$2,232 provides for the cost of housing the construction workers, attending to their medical needs, etc.

It is important to bear in mind that the aggregate amount of indirect costs incurred in connection with the construction program can in no way be affected by the accounting method used in allocating it to each project. If the Carmichael

School job does not receive its share of total indirect cost then other jobs will automatically be charged with that share. This fact has apparently been ignored by the investigator.

Further indication of a lack of understanding on the part of the investigator of the accounting principles involved in the allocation of indirect costs is contained in the footnote to the tabulation on page 1178 as follows:

"The overhead charged to the project by General Electric Company reflects a reduction of \$187,010 entered as an adjustment as directed by Atomic Energy Commission and accounts for previous figures approximating \$3,900,000 as the total project cost."

As a matter of fact, the adjustment was not made at the direction of the Atomic Energy Commission but was determined by joint action of GE and AEC accountants to correct previous allocations and this was pointed out in my testimony before the Joint Committee on Atomic Energy on June 20 and 21, 1949, which testimony is a matter of public record.

FE BAKER: RA.

August 26, 1949.

*Hanford Works—Design and construction divisions, summary of major construction projects*

	Total	Complete or nearly complete	In Process
Number of projects.....	57	45	12
Original estimated cost.....	\$233,340,000	\$223,860,000	\$9,480,000

F. E. BAKER.

AUGUST 29, 1949.

AUGUST 26, 1949.

G. R. PROUT,  
General Manager, General Electric Company,  
Richland, Washington.

DEAR MR. PROUT: I am returning this morning the copy of the Preliminary Report and Appraisal of the Carmichael School, dated August 6, 1949, which was handed to me in your office at four-thirty yesterday afternoon. Although the time allowed for my inspection was very short, I have reviewed the report carefully and have prepared notes on those sections which are of interest to this organization.

The content of this report is substantially in accord with the impressions which I gained during my interview with Mr. Kump in San Francisco on August 5, 1949, and which were recounted to yourself and Mr. Rue on Tuesday, August 9. As I stated at that time, the report is highly critical in the sense that no detail was overlooked. The report is also highly controversial and, in my opinion, displays very poor judgment on the part of the critics in the selection of material for discussion. Evidently the appraisers felt that they were compelled to submit a voluminous report and for this reason an evident straining for points of criticism is demonstrated.

Many of the observations contained in this report could be applied to even the best of public buildings. In a few cases the wording of the criticism makes erroneous implications. For example, the criticism of the distribution of fixtures in the toilet rooms and of the ventilation of toilet rooms, on page 1195, would lead one to believe that an inadequate number of fixtures are provided throughout the entire building, and that the toilet rooms are improperly ventilated. As a matter of fact, the number of fixtures in each case exceeds the requirements established by the State, and each of the toilet rooms is mechanically ventilated in accordance with generally accepted engineering practice.

On page 1195 the report states that air from the toilet rooms may be drawn into the halls in the event of the exhaust system fails or is not properly operated. Any ventilation system can fail to produce satisfactory results if not operated

properly or in case of mechanical failure. Thus the ventilation of any building can be criticized on the same basis. This fact is obvious to any person with experience in ventilation; however, the remark might be misconstrued by a casual reader. For that reason such pointless discussion should not be included in a report of this kind.

The arbitrary nature of many of the criticisms is well demonstrated by the comment on page 1196 with regard to the columns in the cafeteria space, which states that "the usefulness of the room is somewhat reduced by the presence of columns." A similar comment is made with regard to the entrance foyer, on page 1196. The decision to use columns was dictated by economy, as the additional cost of clear span construction would not have been justified. Obviously, these statements are expressions of opinion and, in my judgment, have no place in the report as they tend to confuse the basic issues.

Some of the statements contained in this report indicate a lack of familiarity with building and site construction. The remarks regarding ventilation disqualify the observer, as do the criticisms of the site construction, on page 1193. On that page the report suggests that a steeper slope might have been used or that the parking spaces might have been terraced. Both of these suggestions border on the ridiculous and would not have been made by a person experienced in site planning.

I do not see the necessity for citing on pages 1177 and 1188 the total lump-sum amount contracted by this organization, nor the reason for estimating the fee for preparation of the Master Plan. These amounts have no place in this appraisal of the school and do not contribute in any way to the completeness of the report. The total of \$240,000,000 shown on page 1188 is obviously incorrect and would be misleading if published together with the lump-sum amount for the engineering subcontract. We suggest that this discrepancy be corrected.

As I pointed out in our discussion of August 9, the report is meant to be confined to the statement of the adequacies and inadequacies of the building as seen by the appraisers. They did not feel that it was their duty to set forth the reasons for such inadequacies as were apparent to them, stating that the burden of explanation should rest with General Electric Company and the Atomic Energy Commission. For example, the ventilating of the woodworking shop is criticized on page 1197. Actually, certain difficulties presently exist but will be corrected by the future installation of a dust collection system. This exhaust system was originally contemplated by the designers, but was deleted during construction in the interest of reducing the initial cost of the project.

After reviewing the complete report I do not feel that this organization is in any way compelled to justify its action with regard to the engineering of the school. The primary criticism directed at the Architect-Engineer is for rushing the design and attempting to maintain the schedule set by General Electric Company. Another section of the report suggests that better results might have been obtained if an architectural firm specializing in school design had been selected for this work. It is further suggested that the large volume of work being handled by this organization during the period of design may have caused this building to receive less attention than it deserved. These implications are easily refuted by examination of the facts and do not warrant unbecoming action on our part.

From the standpoint of professional ethics we do not wish to implicate our organization or other reputable architectural firms in a controversy of this nature. Although we take exception to many of the opinions set forth in the report and with the manner of presentation in general, we do not wish to discredit the firm which compiled the report. Favorable testimonials of a general nature from other architects would only serve to accomplish this questionable purpose.

Recognizing the fact that the burden of answering this report falls upon your Company as our client, we offer our services in presenting facts to refute misstatements contained in the report, and expressions of our opinions on arbitrary points of design. Also, we will furnish General Electric Company with a statement of our qualification for the design of school buildings, citing our previous experience in that field.

Very truly yours,

(S) D. M. Checkley

D. M. CHECKLEY,

*Project Manager, J. Gordon Turnbull, Inc., Graham, Anderson, Probst  
and White, Inc.*

RICHLAND, WASHINGTON, August 26, 1949.

Mr. F. K. McCUNE,  
*Assistant General Manager, Hanford Works.*

**PUBLIC SCHOOL CONSTRUCTION**

As arranged by Mr. E. L. Richmond, attached is a "Chronological History of the Recommendations Received from the State Department of Education Regarding the Construction of the Robert Gray Junior High School." This is the information which Mr. J. R. Rue requested.

In addition, we have attached a copy of a letter from Mr. P. A. Wright, Superintendent of School District #400, in which he comments on the acceptability and serviceability of the Carmichael Junior High School.

*Superintendent, Community-Activities Division.*

CF Barnes: hsf.  
cc: EL Richmond.  
Activities File.

AUGUST 15, 1949.

**CHRONOLOGICAL HISTORY OF THE RECOMMENDATIONS RECEIVED FROM THE STATE DEPARTMENT OF EDUCATION REGARDING THE CONSTRUCTION OF THE ROBERT GRAY JUNIOR HIGH SCHOOL**

December 31, 1947: Preliminary sketches for the Robert Gray Junior High School were submitted by J. Gordon Turnbull, Inc., to the General Electric Design Division and the Community-Activities Division for approval.

January 5, 1948: Preliminary sketches submitted to the General Electric Design Division by J. Gordon Turnbull, Inc., for approval. In the letter of transmittal it stated that the foundation plans and specifications would be completed thirty days from the date of approval of these sketches, complete architectural and structural plans eight weeks after date of approval and complete mechanical plans, two weeks later.

January 10, 1948: In a conference with Mr. C. F. Barnes, Community-Activities Division, Superintendent, School District #400 and J. Gordon Turnbull, Architect, the request received from School District #400 regarding the change in the location of the Home Economics Room from the lower floor to the upper floor were reviewed and approved. It was agreed that the rearranging would have no effect on the foundation plans, the size or shape of the building. Mr. Turnbull was instructed to advise the Cleveland Office of this change and that they were to proceed with the preparation of the foundation plans as originally scheduled. These changes were approved and included for construction.

January 12, 1948: Mr. T. W. Hauff, Chairman of the School Board, Mr. C. F. Barnes, Community-Activities Division, Mr. Clinton Henning, General Electric Design Engineer, and William Cornelius, Atomic Energy Commission, approved the floor plans of the Robert Gray Junior High School including all changes that had been received to date.

January 14, 1948: A letter from Elmer L. Breckner, Assistant Superintendent in charge of Administration and Finance of the State Department of Education stated that the proposed layouts for the special purpose facilities for the Junior High School were not complete. It was further stated that the study reveals many improvements would be desirable. Forwarded under separate cover as of this date The National Council Schoolhouse Construction booklet. This construction booklet was forwarded to J. Gordon Turnbull, Inc., as of this date. These recommendations requested that the main practice room be treated acoustically and that three (3) practice rooms be provided. These recommendations were approved and included with construction.

January 15, 1948: A letter received by School District #400 from the Superintendent of Public Instruction, State Department of Education, outlining plans and suggestions for the music room, auditorium, stage, library, and study hall. It was requested that these suggestions and plans be incorporated in the final plans for the Robert Gray Junior High School. These suggestions and recommendations were included insofar as it being possible without changing the foundation plans for the building.

January 21, 1948: Mr. T. W. Hauff, Chairman of the Board of Education for School District #400 received from the State Department of Education sugges-

tions relative to the programming and the development of a curriculum for the Robert Gray Junior High School.

January 23, 1948: Mr. R. H. Fergin, Superintendent, School District No. 400, Mr. T. W. Hauff, Chairman, Board of Education, School District No. 400, Mr. Elmer Breckner, Assistant State Superintendent of Public Instruction, Mr. Sincock, Dr. C. O. Westby, Building Specialist and Mr. Turnbull consulted for two days concerning revisions in the plans and specifications for the Robert Gray Junior High School. As a result of this meeting, the changes that didn't require a change in the building foundations were included for construction as far as could be conceivably done without delaying construction.

February 3, 1948: A letter was received from Mr. R. H. Fergin, Superintendent of schools, advising Mr. C. F. Barnes that Mr. Elmer Breckner, Assistant Superintendent of Public Schools, State Department of Education, Dr. C. O. Westby and Mr. Sincock had reviewed the plans and were submitting their recommendations which were to be included in the final plans. These recommendations requested that the shape of the shops be changed from a rectangular room to a room practically square, and that the Home Economics Rooms be relocated from the first floor to the second floor. The relocation of the Home Economics Rooms were the only changes approved due to the fact that the change in the size and shape of the shops would cause considerable delay in construction due to changes that would have to be made in the foundation plans.

March 2, 1948: A letter to Mr. C. O. Henning, General Electric Design Engineer from W. R. Atterbury, Community-Activities Division, transmitting specifications and equipment lists as approved by Dr. C. O. Westby of the State Department of Education and School District No. 400.

RICHLAND PUBLIC SCHOOLS,  
Richland, Wash., August 26, 1949.

Mr. C. F. BARNES,  
720 Building, Richland, Washington.

DEAR MR. BARNES: I thought you might be interested to receive my reactions to the Carmichael Junior High School. Reactions, as you know are caused by various influences. I have been in a position to be influenced by what I see and hear regarding this building.

Carmichael Junior High has now been in use by students for several months. I have been able to feel their reactions and I have been able to measure, in a way at least, the influences which it has had upon teachers and patrons.

We all realize that there has been some criticism of this building, both from school planning point of view and also from the direction of cost. I am unable to be much concerned with the first criticism. The building in most part is made up of classrooms. Probably 75 percent of the space is classroom space. It is my opinion that the classrooms are unusually well planned. They have proper floor space, and good lighting. They follow the Harmon technique in colors and are well supplied with cupboard space. Each room contains a sink or extra services. The gymnasium is comfortable but not extravagant. The dressing rooms are completely standard and usable. The auditorium is very satisfactory in every degree. The cafeteria is usable and helpful in a school of this sort.

The reactions which have come to me from teachers, pupils, visitors, and patrons have been most satisfying. They feel that the school has something which gives a lift to its young people. I have been especially interested in the reaction of students. Their general attitudes seem better than was the case under other conditions. I believe we will find a definite improvement in general school morale.

There are, no doubt, a few spots in the building which can be subjected to some criticism. This is nothing about which one should be alarmed. There never was a home, a school, or a church constructed but that one could enter and find some part which he would like to change. I am sure each person has observed this truth as they visit the neighbors' homes or investigate homes with the thought of purchase.

The money cost for the Carmichael Junior High was too much. However, one needs to keep in mind the conditions under which it was constructed. No contractor would bid on a firm bid basis. Time was the essence of the contract. This is always expensive. Boys and girls were attending school in every conceivable

type of space, including gymnasiums, libraries, music rooms, hutments, and one shower room. From all of these points of view it seems to me that we must draw the conclusion that while some errors may have been made, we have a building of which we can well be proud and which will be usable for many years.

We like Carmichael Junior High School and we want you to know that it is serving a cause of education in an excellent manner.

Yours very truly,

P. A. Wright,  
P. A. WRIGHT, *Superintendent.*

## APPENDIX 6

[From Moscow Daily News (weekly edition)]

### SOVIET SCIENTISTS PROBE THE ATOM

JULY 30, 1933.

For years scientists at their test tubes have sought to penetrate the secret of the atom. And for years the atom as inexonerably withheld its secrets, throwing off at lengthy intervals some faint clue to the more audacious and preserving. Have Soviet scientists W. A. Sobolov and M. G. Gurevich arrived within visible distance of the final solution?

The announcement of their new method of high precision gas analysis has created something of a sensation in Soviet scientific circles. Their method, which is likely to supersede those hitherto in use, allows not only a calculation of atomic nuclei moving at high velocity, as had hitherto been the case, but also a full analysis of the products of atomic disintegration, without reference to velocity.

In an interview with the Moscow Daily News, Sobolov described earlier methods as partial and inadequate. Furtherest advance had been made by the British chemist, Rutherford, whose scientific method enabled a detection of corpuscles moving at high velocities. But a satisfactory analysis of the structure and contents of the atom was precluded by the crudeness of the instruments employed. The new method is expected to yield invaluable data, and bring the scientist closer to the goal of his long efforts.

#### PROVIDES A BASE

"Our discovery is only a preliminary step," Sobolov modestly explained. "It will provide a basis for developing new theories and guiding future research. Science is still far from penetrating the secret of the atom. But once it is grasped, new and undreamed of sources of energy will be placed at the service of man.

"One gram of radium, for example, in its disintegration, emits 2,000,000,000 calories of energy. So far, however, we have made little progress toward harnessing this reservoir of power. The case with other elements is similar."

According to Sobolov the scintillation method of analysis is limited to the larger nuclei ejected by decomposing atoms. His new method of chemical analysis, in reality a combination of several methods formerly attempted, enables a fuller and more accurate determination of the atomic structure and its nuclear contents than has hitherto been possible.

"The new method enables us, for instance, to find that aluminum decomposes at a greater velocity and yields higher quantities of hydrogen cells than has hitherto been known. We have also noted variations in the velocity of the hydrogen bodies under the action of alpha rays, and have found that hydrogen is produced not only by rapidly moving particles but also at much lower velocities. These data must be interpreted according to the 'wave theory.'

"In fact," continued Sobolov, "our discovery is barely more than a first step. It is a method that we must learn to apply to various phenomena, and whose results we must investigate. It holds the clue to the whole problem which, paradoxically enough, once vexed the alchemists of old, that of the transmutation of elements—a problem based on the relationships of energy coefficients. And greatest of all, it brings us nearer to a definition of those great riddles of the universe—matter and electricity."

## NEW METHODS OF PROSPECTING

A concrete application of Sobolov's high precision method of gas analysis is his new method of prospecting oil and gas fields, based on an analysis of surface gases. Drilling and boring still remain the standard methods of determining the presence of oil and gas. Sobolov's method is based on simple analysis of gases pumped out of the soil at a meter depth. The presence of a certain amount of hydrocarbonic gas and methane indicates the presence of oil.

"We cannot determine the amount of oil present by this method but it is possible to define the extent of the oil area," Sobolov stated. "The first tests made at Grosny and Baku in 1930 gave brilliant results. The oil trusts immediately urged us to develop the method. It represents a great advance over boring methods. The most efficient California oil companies, according to their own estimates, average 1 oil pocket for every 10 borings. Such expenditure of effort and money can be averted by our system."

He is convinced that his idea represents nothing new to science. "I reported my findings at the Geological Conference in January. And in May I had the pleasure of reading in the German Petroleum Zeitschrift the report of a German scientist who had worked on the same problem. He had completed 30 analyses at the time of his report. At that time I had already made 850 analyses. It reminds me of how Newton and Leibnitz both arrived at their theories of differential calculus simultaneously and independently of each other," he said, smiling.

## AUTHOR AND INVENTOR TOO

W. A. Sobolov is but 32 years old. Stocky, serious, slow moving, he moves with professional ease and certainty among his laboratory apparatus at the House of Scientists on Ulitsa Kropotkina 8. He is the author of 40 scientific reports dealing with radioactivity and related subjects, and the inventor of 19 new laboratory apparatuses. In his work he has been assisted by M. G. Gurevich, 27 years old, and graduate of the Mining Institute, where he specialized in gas chemistry.

"I am happy to be associated with Sobolov," Gurevich stated. "Our work together has been pleasant and profitable. We hope to continue our close cooperation in developing our new discoveries." Much credit is given by both to the Committee for the Assistance of Scientists, chiefly to Fratkin, Present, and Voronov.

The committee became interested in their work at an early stage, and placed its laboratories at their disposal.

"While laboratory work began only 2 years ago, I had pondered the idea for 11 years," stated Sololov.

Both scientists have left for the Baku oil fields to continue investigations of their new methods of surface-gas analysis.

## URANIUM INVENTORY AT OAK RIDGE

(The printed testimony contained herein relates to materials accountability at Oak Ridge, Tenn. It has been edited so as to eliminate all restricted data as defined in the Atomic Energy Act of 1946)

MONDAY, JUNE 20, 1949

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met in executive session, pursuant to notice, at 3 p. m., in room G-48, Capitol Building, Washington, D. C., Senator Brien McMahon (chairman) presiding.

Present: Senator McMahon (chairman), Representative Durham (vice chairman), Senators Hickenlooper, Vandenberg, and Knowland; Representatives Price, Jackson, Cole, Elston, and Hinshaw.

Also present: David E. Lilienthal, Chairman; Sumner T. Pike, Commissioner; Lewis L. Strauss, Commissioner; Gordon E. Dean, Commissioner; Henry D. Smyth, Commissioner; Carroll L. Wilson, General Manager; and Walter J. Williams, Director, Division of Production; Joseph Volpe, Jr., general counsel, all from the Atomic Energy Commission.

Clark Center, Manager, Carbide & Carbon Chemicals Corp.; Dr. Clarence Larson, Superintendent, Y-12 Electromagnetic Plant; Jesse Herndon, Superintendent of Production, Y-12 Plant; N. H. McKay, Assistant Superintendent of Production, Y-12 Plant; and Fred Uffelman, Director of SF Accountability, Y-12 Plant, all from the atomic energy installation at Oak Ridge, Tenn.

Senator McMAHON. Now, gentlemen, there have been some further developments in Oak Ridge in regard to the unaccounted-for uranium.

Mr. WILSON. Mr. Chairman, Dr. Larson of the Carbide & Carbon Chemicals Corp., who is in charge of that part of the operation at Oak Ridge, is here and is prepared to address the committee.

Senator McMAHON. All right, doctor, will you step up?

Dr. LARSON. It has been suggested that I go a little into my background as is customary. I took my undergraduate work at the University of Minnesota, receiving my bachelor's degree in 1932. I went to the University of California and received a Ph. D. in chemistry in 1937. Since that time, I was professor of chemistry at the College of the Pacific in Stockton, the last 3 years of which I was head of the chemistry department. In August 1942, I joined the Radiation Laboratory under Dr. E. O. Lawrence, who had the responsibility of developing the electromagnetic process for the separation of U-235. While at the Radiation Laboratory, I was head of the analytical research and services group. In July 1943, I joined the Tennessee East-

man Corp., which was to operate the electromagnetic plant at Oak Ridge, as director of the technical staff. Since then, I have held positions as research director of the chemical development; later on, Research Director, and now Plant Superintendent of the Y-12 Plant at Oak Ridge, operated for the Atomic Energy Commission by the Carbide & Carbon Chemicals Corp. I have with me today Mr. Herndon, who is the Superintendent in charge of production operations, and Mr. Uffelman, who is in charge of materials accountability, to furnish supplementary information on this problem.

I think considerable background is necessary concerning the unaccounted for material which arose as the result of an inventory taken over a month ago, at which time it was reported immediately for consideration by the proper authorities. The unaccounted for material, I think, should be considered in the light of the large amount of material processed in this operation. I think it is very important to bring out that it is extremely difficult to describe the circumstances of our accountability without bordering on top secret information because this material is all involved in weapons fabrication. Any hesitancy or groping for a way of expressing this without going into top secret information will be as a result of this. If, however, it is decided that you want top secret information, we are prepared to give it, although I understand that you have not desired to have some of this.

This operation concerns fissionable material and involves the processing through many complicated operations of an extremely large amount of material. We have been successful in the recovery of material through all of these very complicated operations. We have been successful beyond any previous experience of accountability and recoveries to date have been extremely high. It must be emphasized that when we are considering amounts of unaccounted for material, you must remember that we are talking about very small percentages. This is a slight discrepancy considering the process that this material goes through and the complexity and difficulty of the methods by which we account for this material. This material is received as uranium hexafluoride which, as you know, is a gaseous material. That material must be dissolved in water and put through a series of chemical reactions involving precipitation and filtering which converts and processes the material to a very high degree of purity. The purity requirements are beyond that which is normal in ordinary industry. Thus, these chemical processes must be rigidly controlled not only from the standpoint of recovery of uranium but also from the standpoint of purity of product. As a general principle, all chemical operations are characterized by some loss. While the losses in chemical processes referred to here have been reduced below any comparable operations in outside industry, there always will exist a small but finite loss.

Some of these operations, however, give rise to quite a large amount of slag which contains uranium. That slag is very carefully kept and processed later. After this metal is made, it is then put through several other processes. These processes are complicated in nature and as a result the uranium is converted to a form which makes recovery and salvage operations difficult. For example, the machining operation must be carried out using oil as a coolant. The small par-

ticles are inevitably mixed with large quantities of oil which complicates recovery operations to a considerable extent. After this operation takes place, it goes through a few more supplementary operations. As you can see, this series of operations has a potential loss and an actual loss at every step.

We were very pleased and somewhat astounded to find out we were able to carry out this very complicated series of operations with extremely high yield.

Through all of these operations, we maintain records when the material is transferred from one operation to another so that we have an accountability of material as it is transferred from one place to another. Later on, Mr. Herndon can give you some of the details.

Senator McMAHON. When did you install that?

Dr. LARSON. The accountability system? It was installed several years ago.

Mr. UFFELMAN. Since the plant began the operation; as soon as the operation began.

Dr. LARSON. We have had an accountability system from the start but the present refined accountability system is at least 2 years old. This accountability system has been carried to a very high degree of perfection, involving use of IBM equipment and very close record control. This is the manual of our accountability system. We have several copies here, if any of you wish to examine it. It is a very highly organized system. In order to get at the accountability for a complex operation like this, it is not simply a matter of weighing up your material and taking a few minutes to do that; but in these net figures of unaccounted for material, they are the result of more than 2,000 separate analytical operations and weighings. In addition to analytical operations, we must make certain that there are no substitutions of other material. We guard very rigidly against substitution of normal uranium by means of a mass spectrometric operation by which, for every key step taken, we determine the U-235 content of the material.

Mr. HINSHAW. Does the gentleman want to be interrupted at any time?

Dr. LARSON. Surely, if there are any questions.

Mr. HINSHAW. How would an opportunity arise for substitution of normal uranium?

Dr. LARSON. We feel that we have taken all possible precautions for seeing that this doesn't happen.

We might get right to the matter of the unaccounted for uranium. I have brought Mr. Herndon and Mr. Uffelman and I would like to have them describe some of the details as to how we get our inventory and how we determine this particular amount and why we feel confident at the present time that the situation is well under control and it is within the limit of reasonable error of our records and our analyses.

Senator KNOWLAND. Might I ask a question at this time? Have you had any similar losses during the period you have kept the inventory?

Dr. LARSON. Yes. That will be brought out. It is very important to bring out that each of these inventories are as a result of 2,000 analyses. Uranium, unfortunately, is particularly difficult to analyze for; it has many complications in its analysis. We have had experience in comparing analyses research work with various institutions and

whenever a new project is started with a new uranium source, there is always a certain period of time necessary to get the different institutions to give the same answer on analyses. It requires a good deal of research and very careful work to make sure that interfering substances are not present to ruin your results. There is an uncertainty attached to our analytical process and, as will be pointed out, certain materials are much more easily analyzed for than others. To analyze for pure uranium metal, we have a very fine accuracy. If we have certain low-grade ores the uncertainties are higher. Different types of material in this process give different degrees of difficulty in arriving at the proper answer. I might point out that our precaution to recover material in this operation led us directly into some of these difficulties. The uniforms that our people wear, the floor sweepings—there are no drains in this building—to eliminate the mistake of pouring something down the drain. But we have the possibility of losses through our ventilating systems. However, we cover them with electrical precipitators so that all the dust is collected and the material is reprocessed.

Now, all material, such as slags and floor sweepings, and dust, collections of silica, make recovery of uranium very difficult and it will be brought out by Mr. Herndon in this inventory that the difficulty of some of these very refractory types of materials gives rise to uncertainties which are very small.

Mr. HERNDON. I don't think we can overemphasize the fact that the amount of material that we are talking about is over and above the high recovery that we are speaking of, over the total amount of material processed. Senator Knowland asked about fluctuations of the inventory, month to month. I have figures for the preceding 6 months which will give you a specific idea.

(Discussion off the record.)

Senator HICKENLOOPER. What do you mean by gain?

Mr. HERNDON. The books showed—on the physical inventory it was indicated we had that much more material on hand than the books said we should have. By actual weighing.

Senator HICKENLOOPER. You mean the physical inventory showed more than the calculations showed you should have recovered?

Mr. HERNDON. The records from the previous inventory, plus the input, less removals.

Senator HICKENLOOPER. If you get some material in, you know how much the maximum should be?

Mr. HERNDON. That is right. The inventory of the previous month, and add to it the material received.

Senator HICKENLOOPER. I could understand a gain based on the fact that the calculations might indicate you recovered more than you should have, but I don't know how you can gain in actual uranium.

Mr. HERNDON. You don't actually gain uranium. It is unaccounted for material. It is fluctuations in the analysis, an error in ability to determine how much uranium is in there.

Senator HICKENLOOPER. But this gain is a gain as a result of mistakes or fluctuations in analytical results of the various processes as you go along?

Mr. HERNDON. That is right.

(Discussion off the record.)

Senator HICKENLOOPER. How do your gains run, month by month, over a history of 24 months? Was there a gain each month or not?

Mr. HERNDON. We have not had sufficient experience in this operation, in this magnitude, to know what we can expect.

Senator HICKENLOOPER. How long has your experience been?

Mr. HERNDON. Since November of 1948; 7 months ago.

Mr. COLE. Do you ever have a month when you come out even?

Mr. HERNDON. Not to the gram. You always have some fluctuations.

(Discussion off the record.)

Dr. LARSON. It may be of interest to give an illustration as to how our inventory figures are compiled. Over 2,000 separate chemical analyses and mass spectrometer determinations are made in order to arrive at an accurate determination of the uranium input, output, and inventory of uranium involved in these operations. In addition to the total accountability for the entire operation, each individual operation is accounted for so that any discrepancies can be checked to a specific point. Once a month an inventory is taken and these figures, together with receipts and shipments, form a basis for the calculation of gains or losses in the operation over a period of 1 month. It must be emphasized again that the gains or losses are calculated from several thousand separate figures and represent a very small fraction of the total processed.

Senator McMAHON. You mean by total, raw material or finished?

Dr. LARSON. Incoming receipts as against our outgoing—incoming plus beginning inventory compared with outgoing.

Senator McMAHON. When you say "incoming," do you mean calculated by judgment?

Dr. LARSON. Most of it comes to us in uranium hexafluoride.

(Discussion off the record.)

Dr. LARSON. I just wanted to make sure that we had a clear picture that this net loss or gain is a result of usually very large numbers.

Mr. DURHAM. How much laboratory time do you spend at the present time on the accountability system trying to keep up with how much you got?

Mr. HERNDON. From an analytical standpoint we have 80 people that do nothing but analyze this material to check on it.

Mr. DURHAM. Doing no research work whatever?

Mr. HERNDON. Absolutely not. We have a research department separate and apart from that organization.

Mr. DURHAM. How does that compare with other people in this laboratory? What is your total number doing some research work trying to get this job along?

Mr. HERNDON. Dr. Larson can answer that better than I.

Dr. LARSON. Your question is how many scientific people in research work?

Mr. DURHAM. In this operation; yes.

Dr. LARSON. In this operation, we have approximately 20 people.

Mr. DURHAM. 20 scientists—80 people checking on them?

Dr. LARSON. This particular operation, in the past, has been developed through research work, so that research for this operation is a very small effort; because we have perfected it to a high degree.

Mr. HINSHAW. This isn't a laboratory, it's a production plant.

Mr. HERNDON. I think it would be well to point out that 225 people are involved in this process. In addition to these operators, 80 people are involved in the analytical laboratory and 70 people are involved in the assay laboratory.

(Discussion off the record.)

Mr. HERNDON. I want to enlarge on a point made by Dr. Larson as to our use of the electrical precipitators. In addition to this, we require our personnel to wear AEC clothing which they change in and out of. This clothing is washed right in the building and the water from it is processed for recovery. When their shoes are worn out, they are burned and the ashes recovered. Nothing is thrown away from this operation in a solid state. We have one source of discard—solutions. They are pretty clean solutions and can be assayed accurately for their uranium content.

Senator McMAHON. Now, with all that background, where is the material indicated by the discrepancy in the inventory?

Mr. HERNDON. I think that can be very adequately explained. We have increased this operation manyfold the last 6 months. In March of this year, we began collecting large quantities of solid materials containing uranium.

These are very difficult to analyze. This has been the record for this and similar operations for the past 6 years; particularly wet solids, because in sampling this material—it is not homogeneous, in the first place. We have every reason to believe that this material is contained in this solid material. The reason we believe this is: We took two of these batches of material and gave them initial processings. We won't be through for 5 months because we have to build new equipment to take care of this added operation. We took some of the material and did some preliminary processing. I would like for Mr. McKay to give you an explanation as to what we found in those two batches.

It has been indicated that because of the large amount of insoluble material in these slurries adequate processing facilities are not available at the present time. However, it has been possible to take a small representative sample of this large batch and process it in small laboratory scale equipment in order to determine what recoveries can be expected when the large-scale equipment is available. Recoveries from this batch indicate that 200 to 300 percent more uranium can be recovered beyond that predicted by the inadequate sampling and analytical methods as explained above. Such recoveries would adequately explain the unaccounted for amount reported.

This, incidentally, I might add, is not unusual. This is a history of similar operations. Back in the old electromagnetic process we had volumes of material going through that process to recover uranium from salvage material and it was history to get more uranium out of solids from processing than you would expect them to yield on the basis of the chemical analyses because of the inadequacies of the analytical procedures. We would have to sample the material as best we could but no sample from such a mixture represents a true picture.

Senator McMAHON. How long would it take to process the rest?

Mr. HERNDON. The complete process will require approximately 5 months.

Senator McMAHON. What precautions have you got against somebody walking out with this material?

Mr. HERNDON. We feel we have a great many precautions. We would like to pass these around to the committee [passes charts to members]. These show the personnel security measures that are taken in hiring people or placing them on these jobs. I think it is self-explanatory but you may have some questions. Each step is outlined which is taken with each one individually who may be initially employed or may be transferred to these operations from other operations in the plant. I think it is also important that we point out to you the physical security measures that have been taken.

Senator McMAHON. You give them a lie detector test before they go to work, I see.

Mr. HERNDON. Yes sir.

Mr. JACKSON. I wonder if we can go through and explain it?

Mr. HERNDON. First is the initial application of the employee—his previous work record, experience, and ability to do the job for which he is being hired. The next thing he does is hear that we are interested in employing him. We request he fill out a personnel security questionnaire and then we have the Commission submit it to the FBI for investigation. They conclude their investigation and turn it over to the Commission, and if a "Q" clearance is granted, we can then place him on the pay roll. When he is on the pay roll, the first thing he does is to sign a security statement and at the same time a general security orientation is given the man by the personnel department head before he reaches the department where he intends to work. Next, there is a polygraph examination given to every person who enters the area in question.

Senator McMAHON. What percentage of success do you have?

Mr. HERNDON. So far, we have not had any failures.

Senator McMAHON. What I meant was, have you caught anybody on the lie detector test?

Mr. HERNDON. No. So far I have not been made aware of anyone caught fabricating employment records up to this time.

Mr. JACKSON. In the interrogation on the polygraph examination given prior to the assumption of responsibility of employment, the questions directed primarily are whether or not they have lied or fabricated information in their questionnaire?

Mr. HERNDON. Such questions as "Are you a member of any subversive organization promoting the overthrow of the Government?" "Do you intend to hurt the security of your Nation?" and that sort of thing. The next thing after the polygraph examination is a detailed security orientation. I might add, recently, in view of the interest and our own experiences that, in spite of our discussions with each individual that comes into this plant and telling them what we want and expect from that standpoint, we have found that from further questioning they seem to be vague about what we mean and want and hope to get, and so we have recently developed a four-page outline in regard to security. When the person comes into the plant, and this is done with every person working there, they are taken in groups of 8 or 10 and required to read the letter on security and required to sign it and indicate that they have not only read it but understand it.

Senator KNOWLAND. Now, right at that point, I don't recall, on the number of cases submitted earlier, whether any of them came down.

from your way or not, but have you had cases of people taking material home?

Mr. HERNDON. Yes, some of them are within this operation.

Senator KNOWLAND. They were fully informed not to take any material off the premises?

Mr. HERNDON. Yes, but until recently, we did not have this significant technique.

If something comes up now, this eliminates the possibility of ignorance.

Senator KNOWLAND. Take the ones that happened in 1948 and 1949—a fellow takes some material home. What did you do? What disciplinary action was taken?

Mr. HERNDON. A complete reprimand and reemphasis of the security rules. He used ignorance as the excuse; he didn't realize. Evidently, we failed in not giving him enough of an impression. This resulted in a development of this method to make sure that all phases of security were pointed out.

Senator KNOWLAND. Up until this time, this whole process went off his back like water. What about the others?

Mr. HERNDON. I think there were three cases. I think it is important here, Senator, that we bring out the point as to whether or not it was the intent to harm the national security program. We were of the opinion, after discussing it with them, that they did not have that in mind. It was simply a lack of cognizance.

Senator KNOWLAND. I don't see how a man would, under any circumstances, take the stuff out of the building. Don't you think the over-all effect is more drastic to keep them on rather than to halt employment?

Mr. HERNDON. No, sir; we feel the over-all effect is remarkably worse, because this man takes out in his mind figures, pictures, designs, with which he could do more harm by telling than he could by carrying out some material. I think the whole situation is this: Our security rests with the integrity of the man.

Senator HICKENLOOPER. Well, doesn't it pare down to this security risk? Here is a man who apparently has ability and yet after having been talked to about his responsibilities, he then is so irresponsible that he takes out stuff that certainly he should have known better than to walk out with, and he then excuses himself by saying he had no intention to hurt his country, that he had no intention to violate rules? He knew better and isn't the ultimate question in these cases not whether a man has a deliberate intent to hurt his country, but whether he has the ability to obey security rules? He is very, very lax, indeed. I think there are many people in this country that have no intention of hurting this country but they lack discretion and the ability to comply with rules to such an extent that they may injure their country.

Mr. HERNDON. Dr. Larson has some remarks on that score, if you wish to continue with this question about the precautions we take to see that they don't take it out of the building.

Dr. LARSON. I would like to make one comment. There is no question but that this is something wrong and ignorance is no excuse. We are faced with a practical situation. What would be the consequences of other than the disciplinary action we took in this case?

Now one of the alternate disciplinary actions could be, in this particular case, we could fire the man, or he could be prosecuted under the law. In this case he would be prosecuted with small chance of success. If he were put away in prison I think he is pretty safe. But the consequences of firing this man would be very grave because of the knowledge he carries in his mind.

He would feel that he was being unjustly persecuted, and I think that the man would be very much of a potential danger to this country. You couldn't possibly let him go without a 24-hour surveillance at all times.

Senator HICKENLOOPER. Then if the man has so much knowledge that if you fired him you would have to watch him 24 hours a day, isn't he basically dangerous if he stays on in that employment?

Senator KNOWLAND. And isn't that the same theory as paying blackmail, if that is what we are dealing with?

Dr. LARSON. I wouldn't class them in the same category.

Senator KNOWLAND. No; but if he is fundamentally dangerous, as the Senator points out, that is a double reason for not having him in the project.

Mr. PRICE. Doctor, do you feel there have been a lot of good men go wrong because they have been unjustly dealt with?

Dr. LARSON. Possibly.

Mr. PRICE. And might leave with the feeling that he had been persecuted?

Dr. LARSON. I think that would be definitely the case here.

Mr. PRICE. And you thing the best man in the world might snap under a situation like this?

Mr. ELSTON. Doctor, on the subject of ignorance, you have signs all over the place warning against taking anything out; don't you?

Dr. LARSON. Yes; this is certainly a violation we have to face.

Senator HICKENLOOPER. Well, Doctor, if I might call your attention, we have a couple of Army sergeants who took photographs—everybody is convinced that they didn't intend to sell them, but they are under pretty heavy sentence right now although it was pretty well established that those photographs were souvenirs.

Senator MCMAHON. Did they put them in jail?

Senator HICKENLOOPER. I think they got a \$10,000 fine, suspended, and a jail sentence suspended.

Dr. LARSON. I think I heard about those instances. I remember about the suspended sentence. As far as these men are concerned, I think a word here, under the circumstances under which this operation was initiated, would be in order and that is that this is a very vital operation and bears definitely on a stock pile of effective weapons.

Mr. JACKSON. Before you proceed, I wonder if, for the record, I can get it straight in my own mind whether the material involved in this previous discussion is normal uranium?

Dr. LARSON. Yes; it is normal uranium.

Mr. JACKSON. Would it have any particular value?

Dr. LARSON. It would have no value. Its greatest monetary value would be 3 cents.

Mr. JACKSON. Have you had any situations where the fissionable material has been removed?

Dr. LARSON. No situations in which the fissionable material has been removed deliberately because these individuals have been with that operation quite a bit longer and their security indoctrination was much more thorough.

Mr. JACKSON. You say "nothing deliberately." What do you refer to?

Dr. LARSON. I think you have the reports on these cases in which these men in going home neglected to change their socks, were apparently in a hurry, and during the operations two very small slivers of fissionable material got in their socks. They were conscientious about it and they wrapped them up, returned them, and reported it to their supervisors and were duly reprimanded for it.

Senator KNOWLAND. Let's see if that is correct [reading from an AEC report]:

During a polygraph test on March 21, 1949 \* \* \* admitted that he found approximately 1 gram of normal uranium chips in the cuffs of his trousers when he was changing clothes in the plant. He further admitted that he carried these chips home and, in the presence \* \* \* burned these chips.

Dr. LARSON. These are the normal uranium chips, not fissionable material.

Mr. HERNDON. This map we have here—there is a wide dividing line here. Those buildings on the one side are maintained physically separated, completely separate.

Mr. ELSTON. Don't you have some kind of instrument which the employees can pass between, and which would indicate hidden material on his person?

Dr. LARSON. We have investigated that and there are no practical machines for detecting that.

Mr. JACKSON. These people—let's clarify this point—these people work with normal uranium.

(Discussion off the record.)

Mr. JACKSON. I was confused, where this chap had carried some home in his trousers and burned it. That involved a chap working with normal uranium.

Mr. HERNDON. The two persons who inadvertently carried the stuff out on their socks were working in the specially restricted area.

Mr. JACKSON. Is there any evidence of people working in the specially restricted areas carrying any of this material out with them, besides the two cases you referred to here?

Dr. LARSON. No, sir.

Mr. HERNDON. Absolutely not.

Mr. JACKSON. Any indication on the polygraph?

Mr. HERNDON. No.

Mr. JACKSON. Have any employees indicated that other people had questioned them about what they do which would indicate that someone is trying to get information from them?

Mr. HERNDON. That is one of the questions asked in polygraphing. It would show up there. The question: "Have you ever discussed information with unauthorized people?", and we have not had violations.

Mr. HINSHAW. Do I understand that this specially restricted area is closed off from the unrestricted area?

Mr. HERNDON. Yes. On the chart which you have before you is shown diagrammatically the fencing and compartmentalization concerning this area. Extreme precautions are taken to prevent unauthorized persons entering the area.

Mr. HINSHAW. Mr. Chairman, do I understand that this machining operation is a completely self-containing operation? That is to say, the material is checked into the machine department and checked out of it as a separate operation, the same as with the chemical operation?

Mr. HERDON. It is segregated to the extent that some people who work in the chemical operation do not have access to this area. Accountabilitywise, it is handled together.

Mr. HINSHAW. You mean the salvage and machining is operated as a group?

Mr. HERDON. Right, sir.

Mr. HINSHAW. Would it be difficult to operate the machining alone?

Mr. HERDON. Yes, sir; it certainly would. In order to improve the accountability, it would mean after you have finished the machining of each piece, you would have to clean the machine and run a material balance around the particular piece originally. To do that, we would have to have approximately three times the lathes or mills to still meet the production schedule. Instead of this, we would have to build this wing [referring to chart] a couple of more lengths.

Mr. HINSHAW. If you check into that area a certain number of pounds or ounces, or whatever you want to call it, and put it through the machining process, you know what goes into it and you can see what comes out of it and the salvage is what remains.

Mr. HERNDON. I would like to call on Mr. Uffelman to answer that.

Mr. HINSHAW. In other words, there is no necessity for accountability for salvage if you weigh the scraps.

Mr. HERNDON. It is not that simple. I would like, if I might at this point, to have Mr. Uffelman explain accountability in detail.

Mr. HINSHAW. Just a moment. I understand that this loss took place in the machining process.

Mr. HERNDON. I have just pointed that out. We are of the opinion that it is in these salvage operations—tied up in these solid materials. May Mr. Uffelman proceed? I believe it will answer the Congressmen's questions as to how this work is coordinated.

Mr. UFFELMAN. We have within the area in question, the operating areas broken down into accounting sections. That is, we originally get a given material which we charge into a special account by weight and analysis. When converting this material, we transfer on a waybill form, which is duly signed by the shipper and receiver within the wing, the amount of the material which we are going to convert. As the material goes from one stage to the next—that is, from one account to the next—we credit the first account and debit the second account. Now, if, for example, given amounts of the material go through several different operations during the time it is in one section, it is impossible to run a material balance around each amount. That is, if you put some of the material on a machine which is clean and you used a clean coolant, and you did everything on the one amount on one machine, and then when it was done, cleaned everything—if you had that sort of thing, you could run a material balance around a machine or part. But it is not feasible to run a balance around a

machine nor is it feasible to run a balance around a part because of the number of machines required to keep going. I might comment that it takes 24 hours to tear down the machine, clean it, and get it running again. So, what we do is charge the entire machine account with the unaccounted balance over a month, with each amount of material that comes into it and account for pieces. We account for the number of grams of uranium going in and out. The difference between the two amounts is salvage which should be in chips, coolant, slags and other salvage accumulated in that particular account. We take the difference and charge it into the salvage. Each account produces its salvage. There is no other basis on which to do it since if we went to check out accurately, it would be necessary to completely dismantle the machine.

Mr. HINSHAW. Did I understand that the loss in question was found in the accounting for the machining section?

Mr. UFFELMAN. No, sir; that is not correct. We went through two stages of thinking with respect to this loss. It requires a fairly detailed explanation but I'll try to give it quickly: It appeared from first appearances that the unaccounted-for material could have arisen from the machine section and would have been a result of bad inventory—a certain bias which might have existed in the analysis. We had difficulty in determining the bias of analysis of solution from that section and we knew the measurement of bias has a tendency of raising or lowering the loss and having the corresponding rise or degree of salvaging loss to differ with this solution. So we thought from the analysis situation that we had failed to inventory a piece of uranium.

(Discussion off the record.)

Mr. UFFELMAN. So we thought failing to inventory a piece—incidentally, it wouldn't be a piece; it would be chips—plus the combination of unknown bias in analysis, could have meant that our inventory which unaccounted for the quantity in question was failing to inventory some chips. This was the theory we proposed on the 25th or 26th of May. We then took the second inventory on June 1 and the results of that inventory indicated that it was quite possible that we had failed to inventory some chips in the machine section. And that is not incongruous with the statement that this is where the discrepancy showed up. At the same time, we had another unaccounted-for material, a smaller amount, in the salvage processing section. That is where the tie-up of uranium would show up as a loss. The second month, we gained back in the machine section part of this loss. We did not account for some chips but, at the same time, we had further unaccounted-for material in the salvage section.

So we think the most accurate explanation which fits the situation is there was an inventory error on May 1; on June 1 we found that inventory error, but at the same time the rise in slurries tended to confuse the situation.

Senator McMAHON. What are slurries?

Mr. UFFELMAN. Slurries are a mixture of solids and solutions, sir. Sort of like mush—it is pretty stiff stuff.

By confirming the unaccounted-for material in the salvaging section makes it pretty sure that this is the best explanation.

Mr. ELSTON. Under that system, since there is a great shortage one month and an overage the next month, how are you ever going to know whether something is or is not missing?

Mr. UFFELMAN. From our experience, we found that the inventories for material from time to time oscillate from month to month. We also found that over a period of time, the problem of offsetting gains and losses tends to result in an over-all picture at the end of the year. A year is about the least period one can pick for an inventory the size we have and the way we must do it. Also, under conditions of having to operate 24 hours a day.

Senator KNOWLAND. What do the 12 months show?

(Discussion off the record.)

Mr. UFFELMAN. These things oscillate around but in a long period of time reflect the amount of material held up in solution, solids, etc., which you don't recover by dissolving.

Mr. JACKSON. Is there a definite correlation with losses on increases of production?

Mr. UFFELMAN. There is definite correlation of oscillation with increased production.

Mr. JACKSON. Does your increased production output increase oscillation? Is that the law that we are going to lay down?

Mr. UFFELMAN. I think that is definitely true. When you are producing more you get more variations.

Mr. JACKSON. And your history going back many months bears that out—your experience by trial and error—that you have to learn from experience?

Mr. UFFELMAN. That is right. And our experience in making the process work, unfortunately, gets more difficult.

(Discussion off the record.)

Mr. UFFELMAN. I would like to point out several statistics. They are pretty technical. They say, substantially, that we can place a value on the amount of oscillation you can expect by taking the number of analyses which we have to run. In those analyses the amount of error we can get into any time—we take the "X" grams. I could take it right now and get one figure and you could take it right behind me and we could expect a "Y" gram difference, plus or minus.

Mr. JACKSON. You expect to modify this law?

Mr. UFFELMAN. Yes, sir. The first thing to do is to get an analyst, machine tools, people to take samples and process stuff in places where you can. It is simply a matter of judgment. It is our judgment at this time. We have been doing everything consistently.

Mr. JACKSON. Do these losses increase in arithmetical progression or geometrical progression?

Mr. UFFELMAN. I wouldn't care to figure that this afternoon.

Mr. JACKSON. If you double production ought your oscillation be doubled?

Mr. UFFELMAN. No. If we had this whole inventory in metal, if our scales are good, maybe they would be off "X" grams between the two of us, but when we get to processing, that is when oscillation increases. You get uncertainties.

Mr. JACKSON. But this process is sound; isn't it? You don't vary processing?

Mr. UFFELMAN. You see when our production increased——

Mr. JACKSON. You use different technique when it increases?

Mr. HERNDON. Yes; this much is different.

Mr. UFFELMAN. That's exactly what is happening here so—

Mr. HERNDON. We have to adjust the process to the sudden difference.

Senator KNOWLAND. Mr. Chairman, I would like to oscillate back to these specific cases for a moment. On this case, SI-4 [reading from an AEC report]:

On May 27, 1949, the FBI was notified by the Oak Ridge security office of a rumor that a person working in the Y-12 Plant had some normal uranium metal in his plant locker. Narrowing down the suspects to 12, polygraph examinations were given and one of these, \* \* \* admitted that he had a bar of normal uranium in his locker, approximately  $\frac{1}{2}$  inch in diameter and  $1\frac{1}{2}$  inches long. Immediately after the examination, \* \* \* led the examiner to his locker and produced the above-mentioned bar. He stated that about 2 months ago, a fellow employee dropped it in his shirt pocket and when he changed his clothes, that evening, tossed the bar up on the locker shelf where it had remained. \* \* \* offered no explanation as to why he had not reported this material in violation of the shop rules.

What kind of disciplinary action was taken in this case?

Dr. LARSON. This man, at the present time, has been suspended from work pending investigation of this case.

Senator KNOWLAND. When the investigation is finished, does he get a promise that he'll be put back to work?

Dr. LARSON. No; but I fail to see that this man is in the same category. If the investigation indicates no violation—

Senator KNOWLAND. That is just the point, you start a precedent. All these fancy security plans on paper are not going to work out in practice. If these people don't heed these precautions, it seems to me that everybody else would do likewise.

Mr. HERNDON. I would like to point out, in each of these cases it is a first offense. We have an established disciplinary procedure. In almost no instance except in very serious cases do we have anything but a reprimand and progressive punitive measures. Senator Hickenlooper pointed out that if this man would go out and reveal this information—it is our opinion that you do not create this potential danger until after you fire the man. After you fire him, you do create this danger.

Dr. LARSON. I would say that any man with this particular background would certainly be given a chance to prove himself.

Senator McMAHON. Any other questions?

Mr. ELSTON. As I understand from the explanation—technical and otherwise—you don't know until about the end of a year or 14 months later how much of a variation there has been and even then, you may miss a large amount.

Dr. LARSON. That is correct.

Mr. ELSTON. So that during that period of time, there could be a theft and you would never discover it?

Dr. LARSON. The polygraph would catch a violation of that type.

Mr. ELSTON. Suppose a man quits his job?

Dr. LARSON. He receives a polygraph test before he leaves.

Mr. ELSTON. Yes, but it is not accepted in court because it is not considered accurate.

Dr. LARSON. We agree with you, but this is one additional step—we do everything we think of with regard to normal security methods, plus these extra precautions with the polygraph. In answer to your

question, it is very true that if a man definitely could get away with a limited amount, if we agree that the polygraph is not valid and the amount concerned is within our limit of error, we will have to admit that we would never catch it and we do know that there is no known way you can catch it.

Senator McMAHON. You could go out of business.

Dr. LARSON. Yes; lock it up in the safe and that way not lose it.

Mr. HERNDON. This brings us right back to the personal integrity of the individual involved. If you don't have that, you don't have security. There is no step we have been able to devise other than this. These are the best steps we believe it is practical to take. These gentlemen, Senator Knowland, are not people we have just known yesterday; most of them have been on the project from 3 to 6 years' time. We can't help but look to that phase of it.

Senator HICKENLOOPER. It isn't just a question of one-tenth of a gram; it is a question of taking home anything—these fellows who take this stuff home to show their children.

Mr. HERNDON. We grant you, sir, that a mistake has been made—but we don't agree on the penalty.

Senator HICKENLOOPER. I go on the basis that anyone who has worked there for a substantial length of time, if he is intelligent enough to work there, should be intelligent enough to know the trust he is supposed to keep.

Mr. HERNDON. I think another thing, sir—you will agree that familiarity breeds contempt and these men are working with large amounts of uranium each day and they find it difficult to place the same emphasis of importance that we do. We feel that we are partially to blame, but we have devised new measures which we believe will protect us.

Still and all, this gets back to the point of difference of opinion as to the disciplinary action that should be taken. We felt that we did what should have been done.

Senator McMAHON. I would like to call attention to the fact that, in an unclassified statement in the Top Secret Quarterly Report for October–December 1948, the Commission stated they were not satisfied with the accountability system and were making a further effort to strengthen it.

Senator HICKENLOOPER. I may say in conclusion that without doubt any operation involving human actions is subject to mitigation to various degrees but in these cases, with no disciplinary action whatsoever taken—in other words, it would seem to me at least the company, in good judgment, thought these men ought not to be fired but they could be suspended for a week as a disciplinary measure or some kind—something to impress upon them, some punishment for breaking down these rules. But there should be some degree—if the thing is mitigated in any way, there should be some degree of disciplinary action rather than to say, "No, no; you know better than that. You have known for 5 years. Go and sin no more."

Mr. ELSTON. Wouldn't it appear on this system that the worse a man is, the more reason you have for firing him? But you say there is a fear of firing a man. If he is pretty bad, it makes you all the more afraid to fire him.

Mr. HERNDON. This does not necessarily follow, sir.

Senator McMAHON. Now, I would like to have Mr. Wilson submit for us the number of scientists who are engaged in the whole Atomic Energy Commission operation in inventory and control, or what might be determined as such, and the lump sum of the salaries. They said they had 80 doing nothing but checking. We don't want to run into a situation where we have more men watching than working.

Mr. WILSON. In accountability work, sir?

Senator McMAHON. Those scientists, analytical men, chemists, who are doing nothing except spending all their time checking.

Mr. WILSON. I will be glad to.

Senator McMAHON. I was surprised there were 80.

Mr. WILSON. At this one place.

Senator McMAHON. I want to know how many there are in other places, too.

Mr. WILSON. Yes, sir.

(Whereupon, at 5:10 p. m., the committee adjourned, subject to the call of the Chair.)

# CIVIL DEFENSE AGAINST ATOMIC ATTACK

THURSDAY, MARCH 23, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met in executive session, pursuant to notice, at 10:30 a. m., in room G-48, Capitol Building, Washington, D. C., Senator Brien McMahon (chairman) presiding.

(The following statements were presented to the Joint Committee on Atomic Energy. They have been edited so as to exclude all classified information.)

## STATEMENT OF PAUL J. LARSEN, DIRECTOR, OFFICE OF CIVILIAN MOBILIZATION, NATIONAL SECURITY RESOURCES BOARD

Mr. LARSEN. With your permission, I should like to open this testimony with a discussion of the broad aspects of civil defense before having members of our staff describe the civil defense planning activities of the Federal Government and, in particular, of the National Security Resources Board.

### WHAT IS CIVIL DEFENSE?

Civil defense may be defined briefly as the defense of the home front by civilians and civil authority in time of war. It is largely, but not wholly, passive defense. It consists of measures (1) for assisting the military forces in averting an enemy attack, (2) for minimizing the effects of such enemy attacks as may be successful, and (3) for alleviating, controlling, and repairing the damages created by enemy attack. Thus, it seeks to preserve maximum civilian support of the war effort.

Brief definitions such as the foregoing are, however, subject to misinterpretation. For better understanding of the term "civil defense," it is essential to examine in more detail the measures to be employed by civilians and civil authority in their defense of the home front. By so doing, a better appreciation can be had of the importance of civil defense in the total mobilization picture.

For planning purposes, we have divided the necessary civil defense measures into four groups:

(1) Measures to avert an enemy attack such as camouflage, black-outs, aircraft observer systems, and similar quasi-military activities in which civilians may be called upon to assist.

(2) Advance measures for minimizing the effects of an enemy attack, including such measures as civil air raid warning, the dispersion or relocation of facilities, and the prior evacuation of children and personnel not essential to the war effort.

(3) Measures to alleviate, control, and repair the damages resulting from enemy attack, ranging from medical and health services, decontamination, and fire fighting to the removal of debris and salvage.

(4) And, in connection with the foregoing measures, a group of over-all measures which we term "general considerations," such research and development, legislation, organization, training, policy guidance, military support, and civil defense requirements. Members of our staff will describe in greater detail the many aspects of civil defense planning.

#### THE RELATIONSHIP OF CIVIL DEFENSE TO MOBILIZATION PLANNING

As you know, under the National Security Act of 1947, the National Security Resources Board is responsible for advising the President on the coordination of military, industrial, and civilian mobilization. Civil defense planning was expressly made a responsibility of the Board by Presidential directive on March 3, 1949.

There is a close relationship between planning for civil defense and planning for other forms of mobilization. The protection of our citizens, our homes, and our cities against enemy attack and against the effects of enemy attack is the very essence of national defense and, therefore, plans for the mobilization of our resources must include planning for civil defense as well as for more traditional military needs.

Let me give you one example of how civil defense fits into our other mobilization planning work. Before realistic mobilization planning can be accomplished it is necessary to make at least a rough inventory of the Nation's resources available in wartime and to compare this inventory against the anticipated needs. The responsibility for this type of operation is placed on the NSRB by section 103 (c) (4) of the National Security Act. The needs of any civil defense programs must, of course, be determined in any such balance-sheet operation. Members of my staff will describe in more detail how civil defense planning is geared to the Board's other mobilization planning work.

#### WHAT SHOULD BE THE MAGNITUDE OF OUR CIVIL DEFENSE EFFORT?

One hundred percent security obviously is not possible. Nor is an attempt to achieve absolute security desirable under present conditions, unless we are willing to become a garrison state. If too much of our national effort is expended for military and civil defense purposes, the very liberties we are trying to make secure will themselves be endangered. Take, for example, the question of the security of urban populations from the atomic bomb: From the security point of view alone, the solution would appear to be compulsory dispersion. But what would this mean to our economy and to our democracy?

The dollars and cents cost of decentralizing the some 200 cities in the United States having populations of more than 50,000 would probably be in the neighborhood of \$300,000,000,000. The social and political costs of such decentralization might put an end to democracy as we know it. To accomplish such a program of compulsory dispersion we would have to be willing to become a garrison state.

The determination of the civil defense measures which can and should be taken now necessarily involves reconciling the needs of

civil defense with other national objectives and programs which are also fundamental to our national security. It would be imprudent if the Federal Government were to fail to take those steps necessary to a sound civil defense program; but it would be just as imprudent if we were to allot too great a part of our security budget to civil defense measures at the expense of our first line of defense, the armed forces.

At the present time, the need is for intelligent basic planning upon which operating civil defense programs at the Federal, State, and local levels can be built. Premature action, based on ill-considered plans, could prejudice the effectiveness of our civil defense in time of enemy attack.

There is one question which I am sure must be in your minds: What would we do if bombs should fall tomorrow? Would we be ready?

To be frank, the answer is that we would not be ready tomorrow—not as ready as we will be a year from now, but more nearly ready than a year ago. Should one of our cities be attacked, it would have to rely primarily on existing services: in the first instance, on its own fire-fighting and police forces and on its own medical resources, then on available military forces. Existing Federal agencies would offer technical assistance: the Public Health Service, which has played an important part in developing plans for the health and medical aspects of civil defense, could assist local authorities in such matters as organizing first-aid stations and emergency hospitals, treating radiation burns and sickness, and administering blood collection and transfusion programs; the Bureau of Animal Industry could inspect the available meat supply and take action against animal disease; and the Children's Bureau could assist in handling the problems of homeless children. The American Red Cross would, of course, play an important role in emergency mass care.

Being ready is necessarily a relative matter. Frankly, I wonder whether we would want to be in a state of absolute readiness. Do we want our women and children evacuated from our cities. Can our cities stand the cost of moving their hospitals and fire stations to outlying areas? We believe that at the present time the soundest approach is to stimulate State and community planning of how they would handle such problems as evacuation and of how one community could call on another for aid. Resource studies should be made so that the needs for fire-fighting equipment, hospitals, and reserve supplies of water can be determined. These are among the steps we have already recommended to the States to increase their preparedness.

Wartime civil disasters would differ from peacetime disasters more in magnitude than in kind. Accordingly, we feel that the development of effective programs for Federal, State, and local cooperation in dealing with peacetime disasters is an important step toward achieving adequate civil defense. As you know—in fact I believe that Senator Johnson of this committee is one of its sponsors—a disaster relief bill, S. 2415, has been introduced in the Senate and is now pending in the Committee on Public Works. A similar bill, S. 2831, passed the Senate in 1948. This bill would encourage Federal, State, and local cooperation by authorizing the use of Federal services and supplies, as well as funds, in alleviating disasters. The

passage of this administration measure would be of considerable assistance to the civil defense program.

#### RESPONSIBILITY FOR CIVIL DEFENSE PLANNING

Civil defense is a national task which must be shared by all levels of government—Federal, State, and local. The Federal Government has the important obligation of developing and furnishing to the States and local governments the information, advice, and guidance which they need to develop sound plans for their own communities.

The detailed planning for specific communities must be done by local governments. Civil defense must be based on self-help. Effective community action in time of disaster requires the development, in peacetime, of a sense of community responsibility for self-preservation. When a disaster strikes, immediate action may prevent complete calamity.

The main effort, therefore, must come from the individual citizen and the community group, with needed help coming from county, State, and Federal agencies as time allows. For this reason, among others, the preparation of detailed disaster plans, geared to the State's plan, should be the primary responsibility of the community. The Federal Government, of course, has the important responsibility, not only for furnishing guidance to States and communities for the development of their plans but also for being ready to render aid to States and communities in time of actual or impending enemy attack.

Prior to the President's letter of March 3, 1949, the responsibility for civil defense planning had been lodged in the Department of Defense. The Secretary of Defense had established an Office of Civil Defense Planning which issued the Hopley report. The development, operation, and subsequent dissolution of that office in August 1949 will, it is assumed, be covered in the presentation of the Department of Defense.

On the question of civilian versus military control, let me say that civil defense is a responsibility which must be assumed by civilian government, not by the armed forces. In time of war the armed forces must concentrate on their primary mission of repelling attack and carrying war to the enemy. Certain quasi-military measures included in our broad definition of civilian defense are properly the responsibility of the military, even though they may involve civilian participation—measures such as black-outs, radio-beam controls, and aircraft-observer systems. But fire fighting, evacuation, care of casualties, and the like are essentially civilian in nature. They will require a great amount of local manpower. Since civilians must perform such functions, they should be responsible, at all levels of government, for planning them.

Leadership of civil defense planning has been assigned, as you know, to the National Security Resources Board. The fields of civilian participation in active defense and of passive defense measures required by military necessity have been assigned to the Department of Defense. Primary responsibility for planning the protective measures required before attack and measures to alleviate and control damage after attack, has been assigned to the General Services Administration. I believe the committee is familiar with the valuable and important work which the Atomic Energy Commission is doing in the fields of

information and training as well as in developing instruments for radiation detection.

I am going to ask Mr. Gill, who has been serving temporarily as Coordinator of Civil Defense for the NSRB staff, to describe to you in more detail the vast scope of civil defense planning, its relation to other mobilization planning, and what progress we have made in our planning.

#### **STATEMENT OF WILLIAM A. GILL, COORDINATOR OF CIVIL DEFENSE PLANNING, NATIONAL SECURITY RESOURCES BOARD**

Mr. GILL. By March 1949 the National Security Resources Board had undertaken numerous mobilization planning projects which were basic to civil defense planning. Pertinent examples were: (a) Man-power studies, including rosters of physicians, nurses, sanitary engineers, dentists, et cetera; (b) studies of strategic relocation, including industrial dispersion; (c) resource studies on water, power, housing, transportation, and communication facilities; (d) inventories of health and medical supplies, facilities, and equipment—all important and basic to realistic planning for a civil defense program adequate for the Nation's needs.

In its broad mobilization planning activities, the National Security Resources Board was using the facilities and resources of virtually all agencies of government. When, at the request of the President, the National Security Resources Board assumed leadership of civil defense planning in March of 1949, it was recognized that this responsibility could be carried out more effectively by utilizing the information, technical competence, and channels of communication then existing in other agencies.

A number of these agencies—notably the Public Health Service, the Children's Bureau, the Bureau of Animal Industry, the Food and Drug Administration, the Atomic Energy Commission, and the Department of Defense—had been, and are by nature of their normal functions, engaged in planning, training, and in day-by-day operations which are related to civil defense. However, relationships with State and local governments, with respect to over-all civil-defense planning, were conducted, as of March 1949, almost exclusively by the Department of Defense, although certain of the agencies mentioned above, such as the Public Health Service, had extensive contacts with the States on subjects of importance to civil defense.

The first step taken by the NSRB on assuming responsibility for civil defense planning was to make a study of current civil defense activities and to propose a planning program for the future. In early May, the NSRB staff prepared a Report on Civil Defense Planning, NSRB Document 112. After conferring with the President, the Chairman of the NSRB (a) approved the report in principle, (b) requested several agencies of government to undertake planning responsibilities as recommended in the report, (c) invited all agencies with a major interest in civil defense planning to comment on the report, and (d) initiated interagency staff discussions on further program development and clarification.

The realignment of civil defense planning responsibilities, in conformance with the President's directive and NSRB policies, brought to the forefront the need for a great deal of clarification and crystalliza-

tion of thinking on (a) the scope and substance of a civil defense program, (b) logical responsibilities for planning the various aspects of a program so broad and so complex, (c) relationships between civil defense and other closely allied programs such as internal security, (d) basic Federal objectives, and (e) policy decisions on relationships with State and local governments.

Staff discussions between interested agencies were begun in June, are still being held, and will continue. In spite of the magnitude of the problem, it has been possible to determine basic objectives, to clarify and agree on program scope and responsibilities to an extent permitting agency planning work to proceed at a rapid pace, and to reach necessary policy decisions on Federal-State-local relationships.

In the Department of Defense, the General Services Administration, the Public Health Service, and the NSRB, launching the program required the establishment of small civil defense staffs. Elsewhere in those agencies and in the many other agencies of Government which are participating in civil defense planning, current activities have been or will be extended or expanded to accommodate the additional responsibilities.

Launching the program meant the development of work projects of manageable proportions. A considerable number of such projects has been assigned by the participating agencies to their own staffs or to interagency working groups or committees. Civil defense activities of the Atomic Energy Commission, the Department of Defense, and the General Services Administration have been described by representatives of those agencies. I should like to tell you briefly of our relationships with State and local government, the status of their civil defense planning, our relations with nongovernmental groups and with Canada, and our accomplishments in the field of security location.

#### RELATIONSHIPS WITH STATE AND LOCAL GOVERNMENTS

On October 5, 1949, the Acting Chairman of the NSRB sent to the Governors of the States and Territories a statement, NSRB Document 121, setting forth policies for relationships with State and local governments. The States were encouraged to establish civil defense planning organizations and were requested to initiate plans for transmission of appropriate information to political subdivisions. I should like to offer this document as an exhibit. (See NSRB Doc. 121 in appendix.)

Civil defense information and recommendations are being sent to the States, and to local governments, through a series of civil defense advisory bulletins. The first of these bulletins, NSRB Document 121/1 (see appendix) which you may wish to include as an exhibit, outlined Federal Government objectives in civil defense planning, contained information on Federal agency planning activities, and advised State and local civil defense planning groups as to specific studies which they should undertake now. Information was requested on specific questions relating to State civil defense planning organization or activity.

Succeeding bulletins—NSRB Documents 121/2 and 121/3 (see appendix)—contained information prepared by the Atomic Energy Commission on the medical aspects of atomic explosion and on damage from atomic explosion and the design of protective structures. In

one of these bulletins, the States were invited to designate participants in teacher-training courses in radiological monitoring and in the medical aspects of atomic warfare.

Attention has been directed to civil defense planning in 40 States and Territories. The considerable volume of correspondence with State civil defense agencies, local government officials, associations in the field of government, and interested individuals is increasing. Direct contacts with State and local officials responsible for the direction and conduct of their civil defense planning are being emphasized.

Of the Federal agencies to which planning responsibilities have been delegated, some have established in their normal current operating procedures certain direct relationships with the States. Examples include the Department of Defense and the General Services Administration, the Public Health Service in the Federal Security Agency, and the Bureau of Public Roads in the Department of Commerce. These agencies, with the cooperation of the State civil defense planning agencies, can employ existing relationships in carrying out defense planning activities.

#### CURRENT CIVIL DEFENSE PLANNING ACTIVITY IN STATES

Civil defense or disaster preparedness laws are in effect in 17 states and the territories of Hawaii and the Virgin Islands. States include California, Indiana, Maine, Maryland, Montana, Nebraska, New Hampshire, New Jersey, Ohio, Oregon, South Dakota, Vermont, Florida, Idaho, Michigan, Nevada, and Rhode Island. World War II legislation continues in effect in 5 States: Florida, Idaho, Michigan, Nevada, and Rhode Island.

Disaster preparedness plans prepared by executive direction exist in a few other States: for example, Illinois. Civilian civil defense directors have been appointed in 16 States: Alabama, California, Connecticut, Delaware, Indiana, Maine, Maryland, Michigan, Mississippi, Nevada, New Jersey, Texas, Vermont, Virginia, Washington, and Oregon.

The State adjutant general is charged with the responsibility for direction of civil defense in 25 States: Arizona, Arkansas, Colorado, Georgia, Illinois, Iowa, Kentucky, Louisiana, Massachusetts, Minnesota, Montana, Nebraska, New Hampshire, New Mexico, New York, North Dakota, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, West Virginia, Wisconsin, and Wyoming.

#### RELATIONSHIPS WITH NONGOVERNMENTAL GROUPS

Firm contacts in the field of State and local government have been made with many nongovernmental groups and associations having Nation-wide membership of individual officials or employees, and comprised either of policy-determining officials or of persons representing functional activities of government, for the purpose of securing from them current statistical data and other information and keeping them informed on the defense planning of the Federal Government. NSRB staff representation has been provided at some of the annual conferences of such groups as the International Association of Police Chiefs and the International Association of Fire Chiefs.

I should also like to mention our cooperation with Canada in civil defense planning. In the belief that this continent might be attacked in the event of a future war, and recognizing the importance of coordinating our civil defense plans with those of our continental neighbors, a meeting has been held here between the Coordinators of Civil Defense of Canada and the United States. That meeting resulted in complete agreement on the necessity for coordination of civil defense planning of the two countries, particularly with respect to air raid warning systems, equipment standards, and similar matters. Meetings between United States and Canadian civil defense authorities will be held frequently in the future.

The experience of Great Britain in civil defense planning and operations has been of great value to us. Civil defense planning was started in England in the middle 1920's, and the program developed there was proved under war conditions. We have sent a representative of the Board, Mr. Eric Biddle, to England to study its present civil defense activities. He returned recently and will be glad to answer any questions that you may have on the present British program and on their World War II civil defense experience. Arrangements are being made to send several of our civil defense planning personnel to the civil defense staff schools which have been recently inaugurated in England.

#### SECURITY LOCATION

One of the specific statutory responsibilities of NSRB is that of advising the President regarding "the strategic relocation of industries, services, government, and economic activities, the continuous operation of which is essential to the Nation's security."

Basic to all security location planning is the premise that any relocation of facilities must be economically feasible and consistent with our over-all policy of promoting a vigorous and expanding national economy. Planning in this area is necessarily of a long-range nature and we have felt that our best first step was to influence the location of new construction.

Accordingly, in September 1948 a study was published outlining the major security factors involved in industrial location. This study was given wide distribution with a view to encouraging managements to locate their new plants in accordance with sound security principles. A second and more comprehensive study is in process of preparation.

## EXECUTIVE OFFICE OF THE PRESIDENT

### NATIONAL SECURITY RESOURCES BOARD

#### BOARD SECRETARIAT

*Subject.*—Civil defense planning: Policies for relationships with State and local governments.

*Contents.*—Letter dated October 5, 1949, from the Acting Chairman, NSRB, to the Governors of the States and Territories.

A ten-point statement of policies for relationships with State and local governments in civil defense planning.

*Comments.*—The attached material was mailed to the Governors on October 5, 1949, by the Acting Chairman, NSRB, and memoranda of approval are on file in the Board Secretariat, received from the members of the Board as follows:

This material was submitted to the members of the Board September 15, 1949, by the Acting Chairman, NSRB, and memoranda of approval are on file in the Board Secretariat, received from the members of the Board as follows:

Agriculture: September 19, 1949.

State: September 22, 1949.

Defense: September 22, 1949.

Interior: September 22, 1949.

Treasury: September 26, 1949.

Commerce: September 27, 1949.

Labor: September 30, 1949.

EXECUTIVE OFFICE OF THE PRESIDENT,  
NATIONAL SECURITY RESOURCES BOARD,  
OFFICE OF THE CHAIRMAN,  
Washington, D. C.

MY DEAR GOVERNOR: A number of agencies of the Federal Government are engaged in the various aspects of planning for civil defense in the event of a national emergency. Many of the States are likewise engaged and some have passed, or are considering, legislation which establishes a State civil defense organization and directs local governments to do likewise.

As you may know, the President has directed the National Security Resources Board to serve as the coordinating body in the Federal Government for civil defense planning. In this connection, a primary objective of the Board is to establish basic policies for relationships between agencies of the Federal Government and the States and their political subdivisions. As an initial step in achieving that objective, NSRB Document 121 has been developed, copy attached, which sets forth the views of the Board as to the manner in which the Federal Government will deal with State and local governments in civil defense matters. In addition, the document reflects the Board's thinking with respect to certain criteria which States may wish to consider while engaged in civil defense planning activities.

To be timely, realistic and useful, plans for minimizing the effects of wartime enemy attack, and for repairing the damages from attack must call for joint participation of local, State, and Federal Governments in their implementation. It follows, therefore, that the development of civil defense plans requires the cooperative efforts of Federal, State, and local governments on a continuing basis.

The goal of the National Security Resources Board is the development of genuine and effective Federal-State-local cooperation to avoid unnecessary waste of manpower, time, and money and at the same time to achieve that degree of preparedness which may be required from time to time for our national security.

Sincerely yours,

JOHN R. STEELMAN.

## NSRB Doc. 121

## POLICIES FOR RELATIONSHIPS WITH STATE AND LOCAL GOVERNMENTS IN CIVIL DEFENSE PLANNING

1. The Chairman and staff of the National Security Resources Board will deal directly with State governments, or through State governments with political subdivisions within States.

2. Information or advice released by NSRB will be channeled to States; it is assumed that States will relay the same to their political subdivisions when appropriate.

3. Requests for information or advice received from political subdivisions may be answered directly with copies of the correspondence going to the appropriate State government; however, requests of this nature will be referred to State governments for direct reply as State facilities for processing them are developed.

4. NSRB will look to various agencies of the Federal Government for the development of civil defense plans and preparedness measures. When understandings are reached regarding assignments of this nature, State governments will be notified. Where other Federal agencies are involved in civil defense planning assignments which require the maintenance of channels of communication with States and local governments, they will be guided by the policies outlined in paragraphs 1, 2 and 3 above.

5. NSRB will maintain contact with national organizations in the field of State and local government on civil defense planning matters for the purpose of—

(a) Securing from them current statistical data and other types of general information; and

(b) Keeping them informed of civil defense activities of the Federal Government.

6. The NSRB will encourage States to adopt civil defense legislation which—

(a) Creates a State civil defense planning body;

(b) Provides for civil defense planning bodies in its political subdivisions;

(c) Charges the State officials and subordinate planning bodies with responsibility for both peacetime and wartime disaster relief planning and preparedness measures.

7. Although the report of the Office of Civil Defense Planning entitled "Civil Defense for National Security," known as the "Hoppley Report," has not been officially adopted, and although the NSRB does not agree with all the recommendations made in this report, the NSRB does believe the report to be a useful guide to the substantive areas in which planning must be done for Federal, State, and local civil defense.

8. The Federal Government is not prepared at this time to furnish to State and local governments all of the information and guidance needed by them from Federal sources to prepare well-integrated and timely civil defense plans for State and local use in emergency. While the agencies of the Federal Government are working toward the fulfillment of these needs, the NSRB will encourage State and local governments to proceed as far as practicable with their civil defense planning. In the process of this planning, it would appear advantageous in the immediate future for the State and local governments to place major emphasis on plans for relief from the effects of peacetime disasters. The experience gained in dealing with peacetime disaster, if carefully evaluated, can constitute a realistic frame of reference against which wartime civil disaster planning can be appraised.

9. The NSRB, directly or through other Federal agency channels, will transmit to States—

(a) Information on activities in other States.

(b) Information on activities of Federal agencies.

(c) Policy guidance and planning criteria.

10. The NSRB and other Federal agencies will solicit from States current information as to progress in State and local civil defense planning.

NSRB Doc. 121/1

EXECUTIVE OFFICE OF THE PRESIDENT

NATIONAL SECURITY RESOURCES BOARD

*December 1, 1949*

## CIVIL DEFENSE PLANNING ADVISORY BULLETIN

## INTRODUCTION

Through this and succeeding bulletins of this character, the National Security Resources Board plans to carry out the provisions of NSRB Document 121 for transmitting frequently to State governments information and guidance for use in civil defense planning. The bulletins will also be used occasionally for the purpose of soliciting information from States. Reproduction of this and subsequent bulletins by the States is authorized.

Bulletins in this series will not be the sole medium for the transmission of information and advice to State and local civil defense planners. These bulletins will, however, be used to call attention to other useful sources of information.

## PART I. FEDERAL OBJECTIVES IN CIVIL DEFENSE PLANNING

Various agencies of the Federal Government, under the leadership of the National Security Resources Board, have been discharging their responsibilities for civil defense planning with certain common objectives in view. It is desirable to restate those objectives for the information of State and local governments. They are as follows:

1. Determining the eventual needs for readiness of communities, States, and the Nation to assist in averting enemy attack, or, if attack should come, to minimize its effects and to repair the damage it creates.
2. To advise with respect to the degree or level of civil defense readiness consistent with a balanced civil defense program.
3. Development of plans for an operating civil defense organization in the Federal Government, these plans to be for use only when such an organization is determined to be needed.
4. Securing the assistance of States and communities in reaching the determinations made under 1, 2, and 3 above.
5. Keeping States and communities informed of the determinations made under 1, 2, and 3 above and of any subsequent revisions therein.
6. Developing guides or standards for use of States and communities in making their own determinations of civil defense objectives and the means for achieving them.
7. Giving constant emphasis to the inherent responsibility of States and communities to develop and later to implement their civil defense plans, with recognition of the Federal Government's obligation to furnish information, guidance, and suggestions to States and communities for the development of civil defense plans and its obligation to be ready to render aid to States and communities in time of actual or impending wartime enemy attack.

Implicit in the foregoing objectives is the principle that civil defense planning, and likewise the operation of a civil defense program in time of need, is a responsibility which must be shared by Federal, State, and local governments. For civil defense plans to be timely, realistic, and useful, they must be developed with this principle continuously in view.

In civil defense planning it seems appropriate to determine first, what must be done to accomplish the objectives; second, what resources of manpower, materials, and equipment are needed and what resources are available; and then, finally, what organization is best suited to place the plans in operation. For the present, as the President has stated, the essential need is peacetime planning in preparation for civil defense in the event of war, rather than the operation of a full-scale civil defense program.

We should like to call your attention to the tendency to conceive of civil defense primarily in terms of atomic disaster. True readiness involves the development of measures to cope with all types of potential enemy attack, including conventional bombing and bacteriological or chemical warfare. This all-inclusive planning is being considered by all the agencies of the Federal Government which have responsibilities in the civil defense planning program.

## PART II. INFORMATION ON FEDERAL ACTIVITIES IN CIVIL DEFENSE PLANNING

Among the activities which the Federal Government has undertaken are the following:

1. The Atomic Energy Commission is continuing to collect all available data on the effects of atomic explosions on men, animals, plants, and structures. Through its national laboratories and contracts with universities, research institutions and hospitals, the Commission has been sponsoring studies of the effects of radiation and the care of casualties. Information thus developed is published in technical reports of which more than 400, half of them unclassified, have been issued to date. A selected bibliography of unclassified reports and publications of the Atomic Energy Commission and the Manhattan Engineer District (enclosure No. 1), and a selected bibliography of periodical and book material (enclosure No. 2), both pertaining to civil defense against atom bombing, and both compiled by the Atomic Energy Commission, are attached.
2. For the past 10 months a board of scientists and military officers organized by the Department of Defense and the Atomic Energy Commission has been compiling an authoritative summary of the effects of atomic weapons. In addition, the Atomic Energy Commission is currently preparing unclassified papers of importance to civil defense which will be made available to States as soon as they are published. These papers will include information on the treatment of persons exposed to radiation; on the character of atomic damage to structures and means of minimizing such damage; on the operation and maintenance of monitoring instruments, with standards of tolerance; and on decontamination.
3. The Department of Defense, responsible under the civil defense planning program for those aspects which involve civilian participation in active military defense, recently concluded an exercise known as Operation look-out in 10 northeastern States. This exercise was for the purpose of testing the aircraft-observer organization and facilities designed to supplement the radar-detection system, and for planning, instituting, and testing an air-raid-warning system. Volunteer civilian spotters served in the capacity of observers and assisted in operating filter centers and control centers necessary to the system. The Department of Defense is now contemplating additional exercises in other areas of the country and has solicited the cooperation of State and local governments in conducting these exercises. Under the terms of NSRB Document 121, item 4, you are informed that the expansion of "operation look-out" under this or other designation is a recognized activity under the civil defense planning program and States which have been contacted are urged to cooperate to the fullest extent.
4. The educational aspects of the civil defense planning program are being expanded. This activity embraces training work already under way, expansion, creation of new training programs, and the development or revision of training materials. Information on radiation problems and effects has been given to hundreds of physicians, biologists, and public-health officers in a continuing series of training courses in the medical aspects of atomic energy. These courses are operated by the Atomic Energy Commission in cooperation with universities and the armed forces. Information on training developments will be made available to the States through succeeding bulletins in this series.
5. The National Security Resources Board, the General Services Administration, the Federal Security Agency, the Departments of Agriculture and Defense, and other organizations, working together, are developing criteria as guidance for States and communities in the health and medical aspects of disaster relief. The Health Resources Division of the National Security Resources Board has well under way studies on health manpower (doctors, dentists, nurses, etc.), and on health supplies of all types, which will be extremely useful in considering the requirements for health manpower as well as for health supplies and equipment for the implementation of civil defense plans. These studies are basic to more detailed civil disaster plans and are being developed in cooperation with various governmental health agencies.
6. Specific studies have been undertaken by the National Security Resources Board, the General Services Administration, the Department of Defense, and numerous other Federal agencies covering various aspects of other important civil defense problems. These include studies of problems incident to (a) rescue of persons under conditions of wartime disaster, (b) evacuation of urban areas both prior to and in situations resulting from enemy attack, (c) demolition of

damaged structures which are a hazard to public safety, and (d) the use, protection, and restoration of housing and community facilities.

7. The Public Health Service, the Children's Bureau, the Bureau of Animal Industry, and the Food and Drug Administration are by nature of their normal functions continuously engaged in planning and training and in day-by-day operations which contribute to our readiness for civil defense. The Public Health Service not only directly participates in disaster relief, but is in constant contact with the State health departments for the purpose of increasing the health of our civilian population and for improving sanitary conditions throughout the Nation. It also advises and assists in dealing with the effects of disaster. One of the functions of the Food and Drug Administration is to inspect and, if necessary, condemn food in disaster areas. The Bureau of Animal Industry's functions with respect to the prevention and control of animal diseases, including the exclusion from the United States of dangerous infections, and with respect to the inspection of animals and meat, are closely related to civil defense.

Additional activities will be reported as they are undertaken and, as studies are concluded, their results will be made available for use in State and local civil defense planning.

### PART III. RECOMMENDATIONS FOR STATE AND LOCAL CIVIL DEFENSE PLANNING GROUPS

Some of the civil defense planning done by State and local planners must await information or guidance on technical matters from the Federal Government. As stated in NSRB Document 121, the agencies of the Federal Government are working constantly toward the fulfillment of those needs. There are, however, various types of planning activities in which State and local planners can engage without the need for information, guidance, or assistance from the Federal Government. Examples of planning activities of this type are listed below in the form of recommendations for State and local civil defense planning groups:

1. At this time only tentative estimates can be made of the materials, manpower, equipment, and supplies needed to operate a civil defense program in States and cities in time of war. Studies of existing and potential resources, however, need not be delayed. It is therefore recommended that State and local governments arrange for studies to be made of existing resources of major importance to civil defense plans, if they have not already done so. Among these are (a) water-supply systems, including the consideration of potential reserve supplies; (b) means of communication when normal means have been disrupted; (c) street and highway systems, including means of alternative routes and their adaptability to evacuation; (d) means of transportation, such as bus, truck, automobile, water, trolley cars, and subway; (e) means for emergency shelter of evacuated persons; (f) hospital and first-aid facilities; (g) fire-fighting equipment; and (h) manpower resources available in connection with the foregoing.

Resource studies of the type recommended above could include, but not necessarily be limited to, the following considerations:

- (a) Inventory of existing resources now in use;
- (b) Inventory of reserve or stand-by resources;
- (c) Capability of existing and reserve resources to satisfy current and anticipated needs;
- (d) Availability in emergency of substitute resources;
- (e) Conservation of existing resources;
- (f) Stock piling of additional reserves;
- (g) Availability of plans and blueprints of existing water, gas, and communications systems for use in repairing or restoring facilities disrupted or damaged during enemy attack.

Such resource studies should be utilized to incorporate civil defense considerations into current municipal planning and the planning of civic improvements.

2. Effective planning for civil defense must embrace consideration of the question of mutual aid between communities within a State and between States. Legislation may be required to make mutual aid agreements practicable. It is, therefore, recommended that State and local civil defense planning groups examine the conditions existing and consider the removal of such barriers to intrastate mutual aid agreements and interstate pacts as are found to exist. It would be helpful if State governments would give consideration

to the need for and the provision of interstate mutual aid pacts and convey to the National Security Resources Board their respective views and the results of such interstate conferences as may be held to discuss the subject.

3. The Atomic Energy Commission has prepared a report entitled "The City of Washington and an Atomic Bomb Attack." We attach herewith a copy of the complete report (enclosure No. 3) and suggest that it be brought to the attention of those in State and local governments who are concerned with civil defense planning. Although the report points to the potential effects of an atomic attack on the city of Washington, D. C., certain of its principles apply to any other large city. It is recommended that State and local civil defense planning groups also examine the publication, National Security Factors in Industrial Location, which was published in September 1948 by the National Security Resources Board. A copy of this booklet is attached as enclosure No. 4. Additional copies may be secured from the Superintendent of Documents, United States Government Printing Office, Washington, D. C., at 15 cents each. A second and more comprehensive booklet on the same general subject is now in process of development and should be published and placed in your hands within the next 3 months.

4. Civil defense planning groups at all levels should acquaint themselves with the history of civil defense activities in this and other countries and should study selected writings on potential civil defense problems. To aid civil defense planning groups, there has been prepared a preliminary bibliography of civil defense publications, copy of which is herewith attached as enclosure No. 5. This bibliography will be expanded and revised and through the medium of these bulletins you will be kept advised of changes and additions thereto.

#### PART IV. INFORMATION SOUGHT FROM THE STATES

It is requested that information on the items listed below be made available to the National Security Resources Board at the early convenience of the States. In the event that some of the questions have been anticipated and answered in your previous correspondence with NSRB, please disregard such questions.

1. What State legislative provisions are now effective relative to civil defense planning, both for State and local governments? Please provide copies of acts.

2. Have civil defense planning responsibilities been assigned under the terms of legislation or by executive action to (a) a State council, (b) a State department, (c) a civilian defense director, or (d) to the Adjutant General?

3. Please name the department or individual responsible for civil defense planning, and indicate whether correspondence on civil defense matters between the Federal Government and your State should be directed to the office of the Governor, to the planning agency head, or both.

(Enclosures (5).)

#### *List of enclosures*

The following enclosures should be considered as supplements to the information contained in NSRB Document No. 121/1:

1. A Selected Bibliography of Unclassified Reports and Publications of the Atomic Energy Commission and the Manhattan Engineer District.
2. A Selected Bibliography of Periodical and Book Material.
3. The City of Washington and an Atomic Bomb Attack.
4. National Security Factors in Industrial Location.
5. A Preliminary Bibliography of Civil Defense Publications.

EXECUTIVE OFFICE OF THE PRESIDENT

NATIONAL SECURITY RESOURCES BOARD

January 13, 1950

#### CIVIL DEFENSE PLANNING ADVISORY BULLETIN

1. Attached herewith is a report entitled "Medical Aspects of Atomic Weapons," which has been prepared for the National Security Resources Board by the Department of Defense and the United States Atomic Energy Commission.

2. As indicated in the report itself, additional reports will soon be made available, dealing with (1) damage caused by the air blast created by an atomic explosion and construction designed to resist these effects, and (2) how contamination can be detected and measured.

3. This and subsequent reports of the same nature are essential to the development of realistic and useful plans and readiness measures for civil defense. Therefore, all State and local agencies or individuals concerned with civil defense planning should have access to them.

4. Reproduction of Medical Aspects of Atomic Weapons by States and communities is authorized. Printed copies can now be ordered, at a nominal price, from the Superintendent of Documents, United States Government Printing Office, Washington 25, D. C.

(Enclosure: Medical Aspects of Atomic Weapons.)

NATIONAL SECURITY RESOURCES BOARD

*February 3, 1950*

CIVIL DEFENSE PLANNING ADVISORY BULLETIN

INTRODUCTION

This Civil Defense Planning Advisory Bulletin is the third in a series initiated by the National Security Resources Board for transmitting information and guidance to the States for use in civil-defense planning.

PART I. TRAINING COURSES IN ATOMIC SUBJECTS

In keeping with its policies for furnishing information, advice, and assistance to States and communities in civil-defense planning, and with full recognition of the principle that planning and the development of preparedness measures for civil defense are responsibilities shared by local, State, and Federal Governments, the NSRB has completed arrangements to launch the first two of a group of training courses in civil-defense subjects. Those two courses, mentioned separately in the succeeding paragraphs, are concerned with the techniques for dealing with the effects of atomic attack. They have been developed with the cooperative efforts of the Atomic Energy Commission, Department of Defense, and General Services Administration and are designed for laying the ground work for the development and operation of training programs by States for personnel within States.

Participation by the States in these courses is at the discretion of each State. The Federal Government will bear the expense of conducting the courses described below; however, the travel and subsistence expenses of the State participants in the courses will be borne by the States. It is contemplated that States will bear the expenses involved in their subsequent development and operation of State training programs in civil-defense subjects.

A description of the courses which have been developed for inauguration in the early future, including the criteria for selection of State participants, follows:

*1. Radiological monitoring*

One important phase of civil defense in the event of atomic attack upon the United States is the subject of radiological defense. The crux of such defense is the ability to detect, measure, and interpret the significance of any harmful radiations present in an area after exposure to attack by atomic weapons. Therefore, the need of training personnel to perform the function is an important consideration in any realistic civil-defense planning.

The Atomic Energy Commission, as a participant with the National Security Resources Board and General Services Administration in the Federal Government civil-defense planning, is completing arrangements for training courses in radiological monitoring to be given at Atomic Energy Commission facilities. The purpose of this training is to prepare, through the instruction of a limited number of qualified individuals in the subject of instrumentation and radiological aspects of atomic warfare, a corps of teachers who will return to their institutions and

train others who, in courses given locally, will subsequently disseminate this information to local civil defense personnel.

The Atomic Energy Commission courses thus will be essentially teacher training in nature and at a comparatively high academic level. Individuals chosen to represent their respective States in this course should possess a background of experience in modern or nuclear physics or electrical or chemical engineering and have considerable teaching ability.

State governors are invited to nominate at least one person from their respective States for this training. In making nominations, it is suggested that the State university system be utilized to the fullest extent for both advice and selection of individuals for training and for the establishment of the subsequent training courses.

Names of candidates for this training should be submitted to the National Security Resources Board by each State governor not later than March 1, 1950, together with the statement of the education, experience, and present position of each individual. Because of the technical nature of the training to be given, it is believed advisable that the Federal agencies review the individual qualifications.

These monitoring courses will be given at five locations: Brookhaven National Laboratory, Upton, Long Island; Oak Ridge National Laboratory and Oak Ridge Institute of Nuclear Studies, Oak Ridge, Tenn.; the Illinois Institute of Technology, Chicago, Ill.; Reed College, Portland, Oreg.; and the University of California, Los Angeles. These courses will start in mid-March or soon thereafter, and will be approximately 5 weeks in duration. Government dormitory housing accommodations will be available at Brookhaven and Oak Ridge at a nominal cost.

Upon receipt of nominations from governors and acceptance of candidates, the NSRB will immediately issue invitations to all individuals selected for the radiological monitoring courses and will advise them of definite starting dates and centers to be attended. Because of the time factor involved, telegraphic invitations will be issued directly to the selected candidates.

## *2. Medical aspects of atomic warfare*

Another important phase of the program for wartime disaster relief planning is the establishment of training courses in the treatment of radiological injuries among civilians. To meet this need the Atomic Energy Commission has planned and is now prepared to offer courses in this subject to a limited number of physicians from each State.

The purpose of these training courses is to provide at the State level a nucleus of trained physician teachers in the medical aspects of atomic warfare. It is assumed that physician teachers will return to their States and train others who will subsequently provide training for doctors, nurses, and dentists and allied professions at the local level.

To assist in selection of candidates and to keep registration within limits of available facilities, a committee composed of representatives of the AEC Division of Biology and Medicine, the NSRB, and the interested universities and laboratories have specified the following sources from which selections should be made, and, criteria for individual qualifications:

### *A. Source criteria*

1. A qualified teacher from each class A, 4-year medical school within the State;
2. A qualified teacher from each osteopathic college within the State approved by the American Osteopathic Association;
3. A qualified physician from the State health department;
4. A qualified physician from the largest professional association of physicians in the State.
5. A qualified physician from each city within the State having a population of 100,000 or more, and which is too far removed (at least 75 miles) from a medical school to be convenient in training the secondary group of teachers.

### *B. Criteria for individual qualifications*

Those nominated for the teacher training courses should meet the following qualifications:

1. Should be a competent, experienced teacher or educator;
2. Should have some background of special knowledge related to atomic energy in order that he can absorb a large amount of material on the medical aspects within the short training period of 1 week;

3. Should be interested in the field of atomic medicine to the extent that he would keep abreast of the advances in this field.

4. Should be willing to assume responsibility for teaching this subject to medical students, physicians, and other health personnel; and to cooperate with the State and community civil defense organizations.

It is suggested that the governors of each State or Territory may wish to appoint a committee to assist in nomination of candidates for these courses. Such a committee might be composed of the deans of class A 4-year medical schools within the State; the president of the State medical society or his designated representative, and the State health commissioner or his designated representative.

The location of the medical training centers and the States from which the candidates for each course will be drawn are indicated below. It is possible that, in some instances, not all candidates can be accommodated at the nearest AEC facility and that some of them may have to obtain training at one of the AEC facilities other than as indicated.

AEC Laboratory, University of Rochester, N. Y.: Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island, Vermont.

Johns Hopkins University School of Medicine, Baltimore, Md.: Delaware, District of Columbia, Maryland, New Jersey, North Carolina, Pennsylvania, South Carolina, Virginia, Puerto Rico.

Western Reserve University School of Medicine, Cleveland, Ohio: Indiana, Kentucky, Michigan, Ohio, West Virginia.

University of Alabama School of Medicine, Birmingham Ala.: Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Tennessee.

Argonne National Laboratory, Chicago, Ill.: Illinois, Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota, Wisconsin.

University of Utah School of Medicine, Salt Lake City: Colorado, Idaho, Montana, Nevada, Oregon, Utah, Washington, Wyoming.

AEC project, University of California (Los Angeles): Arizona, California, New Mexico, Oklahoma, Texas, Hawaii, Alaska.

The training courses at all centers will last one week. Those at the University of Rochester and Johns Hopkins Medical School will begin on March 27, 1950, and those at Western Reserve University Medical School on April 3, 1950. Definite starting dates for the other four centers will be determined and communicated to State governors within the next 10 days. Candidates for this training should be submitted to NSRB by each governor not later than March 6, 1950, together with the statement of the education, experience, and present position of each individual. As in the case of the monitoring courses, it is believed advisable that the Federal agencies review the individual qualifications, because of the technical nature of the training to be given. Upon receipt of nominations from governors and acceptance of candidates, the NSRB will immediately issue invitations to individuals selected from the medical training courses and furnish them any additional necessary information. Because of the time factors involved, telegraphic invitations will be issued directly to the selected candidates.

## PART II. ATOMIC WARFARE DEFENSE REPORTS

The second report in a series prepared for the National Security Resources Board by the Department of Defense and the United States Atomic Energy Commission, dealing with the effects of atomic explosion, is titled "Damage from Atomic Explosion and Design of Protective Structures." A mimeographed copy is enclosed.

Printed copies of this report will be sent soon to State civil defense agencies in numbers sufficient to meet their immediate needs for distribution to key State and local civil defense planning personnel. Additional printed copies may be secured from the Superintendent of Documents, United States Government Printing Office, Washington, D. C., at 10 cents each, with a discount of 25 percent on quantities of 100 or more.

The first report in this series, entitled "Medical Aspects of Atomic Weapons," which was forwarded to States on December 2, 1949, as an enclosure with NSRB Document 121/2, is now available at 10 cents per copy and may be secured from the Superintendent of Documents, Washington 25, D. C. A discount of 25 percent is given on quantities of 100 or more.

(Enclosure: Damage from Atomic Explosion and Design of Protective Structures.)

## JOINT COMMITTEE ON ATOMIC ENERGY

(Created pursuant to Public Law 585, 79th Cong.)

**BRIEN McMAHON**, Connecticut, *Chairman*

**CARL T. DURHAM**, North Carolina, *Vice Chairman*

**RICHARD B. RUSSELL**, Georgia

**EDWIN C. JOHNSON**, Colorado

**TOM CONNALLY**, Texas

**MILLARD E. TYDINGS**, Maryland

**BOURKE B. HICKENLOOPER**, Iowa

**EUGENE D. MILLIKIN**, Colorado

**WILLIAM F. KNOWLAND**, California

**JOHN W. BRICKER**, Ohio

**CHET HOLIFIELD**, California

**MELVIN PRICE**, Illinois

**PAUL J. KILDAY**, Texas

**HENRY M. JACKSON**, Washington

**W. STERLING COLE**, New York

**CHARLES H. ELSTON**, Ohio

**CARL HINSHAW**, California

**JAMES E. VAN ZANDT**, Pennsylvania

**WILLIAM L. BORDEN**, *Executive Director*

**HAROLD BERGMAN**, *Deputy Director*

# CIVIL DEFENSE AGAINST ATOMIC ATTACK

THURSDAY, MARCH 30, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met in executive session, pursuant to notice, at 10:30 a. m., in room G-48, Capitol Building, Washington, D. C., Senator Brien McMahon (chairman) presiding.

(The following statements were presented to the Joint Committee on Atomic Energy. They have been edited so as to exclude all classified information.)

## **STATEMENT OF DR. NORVIN C. KIEFER, DIRECTOR, HEALTH RESOURCES DIVISION, OFFICE OF CIVILIAN MOBILIZATION NATIONAL SECURITY RESOURCES BOARD**

Dr. KIEFER. The necessity for coordination of civil defense plans with total wartime mobilization plans already has been discussed with you. The plans for health (and medical) services in civil defense, which I would like to describe to you, represent a specific illustration of this general principle.

The NSRB is concerned with three types of health resources—health manpower, supplies, and facilities—and about 20 professions of which the chief representatives are physicians, nurses, dentists, veterinarians, sanitary engineers, and pharmacists. Our general health resources mobilization plans are based on consideration of both civilian and military wartime needs.

Civilian needs are of two chief types: First, to maintain adequate civilian health services throughout the duration of war, and second, to provide emergency health services following civilian wartime disasters. The latter type must include care and treatment of civilian casualties, maintenance of public health protection, and restoration of environmental sanitation measures.

Civil defense needs are an integral part of the general needs for mobilization of health resources; to consider them as an independent entity would be illogical and, in fact, dangerous. For example, use of health manpower for civil defense purposes cannot be planned without thorough consideration of the effect on health manpower needs of the armed forces or the remainder of the civilian population. So far as possible, the huge quantities of health supplies needed for civilian wartime disasters must be provided—but not by drawing off supplies that the military forces need just as badly.

With your permission, I should like to describe in general some of the conditions that might follow a successful enemy attack on our civilian population, some of the consequent problems that the health services would have to solve, and, finally, some of the specific plans that are being devised to meet these problems. I am going to present an unpleasant but specific example of the magnitude of our problems before telling you what the Federal Government is doing to meet them.

Estimates of the potential number of civilian casualties are of somewhat limited usefulness because unpredictable factors, such as the degree of success of penetration of our defenses by enemy planes, or the accuracy of enemy bombing, may make the most careful estimate of casualties grossly inaccurate; it is even possible that in another war there would be no effective attacks on our cities. Nevertheless, in our civil defense planning work it is only prudent to assume that there will be a large number of casualties among our civilians. My statement to you is based on this assumption.

Because I am trying to make an entirely realistic presentation, I must state that the adequacy of health services following disasters causing these assumed casualties can be viewed only in relative terms. Completely adequate health services would become impossible after any disasters of substantial size because NSRB studies of American health resources have shown that the following shortages would occur under our assumed conditions:

1. There would be inadequate numbers of all types of health personnel.
2. There would be severe shortages of health supplies.
3. There would be serious shortages of hospital facilities.
4. Even if we could assume—and we certainly cannot—that we would have adequate numbers of personnel and adequate supplies, immediate mobilization and transportation of large numbers of professional persons and huge quantities of bulky supplies to reinforce local services and commodities would be severely limited by availability of interurban transportation (which might be crippled by enemy attack) and of intracity travel (which would be impeded by fires, debris, and similar obstacles).

Consider, for instance, a civilian disaster such as the one at Hiroshima which resulted in about 80,000 casualties. It is estimated that just to furnish the initial first-aid and treatment for this number of casualties would require, in the first week, supplies that would demand nearly 200 railroad boxcars for transportation.

Let me continue to use Hiroshima as an example. In some American cities, just as Hiroshima, 50 to 90 percent of the hospitals would be unusable because of total destruction, severe damage or inaccessibility owing to surrounding fire and rubble. Approximately the same percentage of the physicians and nurses would themselves be casualties. Even if they were not, thousands of physicians, nurses, and other health personnel would have to be mobilized in nearby and distant cities and quickly transported, with equipment, to the stricken city. Within the first week, at least a quarter of a million pints of whole blood or blood derivatives—with an equal number of bottles, tubes, and needles—might be needed.

About 40,000 of these injured persons might not be able to reach even a first-aid station by themselves but would have to be trans-

ported by litter and later by vehicles to emergency hospital facilities. These emergency hospitals might have no light because of damage to electric power; they might be without safely treated water—in fact, they might be without any water other than that which could be delivered by tank trucks; and they might be deprived of heat because of fire hazards.

We have been aware of all of these staggering difficulties for well over a year and during that time have been working—with other government health agencies—on the most effective means of solving them. It is a slow, deliberate process, not because of lack of appreciation of wartime dangers, not because of lack of cooperation from other agencies, not because of unavailability of professional competence, but because the problem is too huge and the decisions to be made are too important to allow for hasty or haphazard planning.

To strike a more encouraging note, let me state that there is little about the effects of either old or new weapons which is new to the health professions. The atomic bomb produces burns, lacerations, amputations, crushing injuries, and blast injuries which all surgeons are accustomed to treating. Radiation sickness is a new type of wartime injury, but it is not a new disease and its symptoms are recognized by physicians, particularly radiologists. Biological warfare is only an extension—with some new means of introduction and dissemination—of a form of warfare that nature has waged against man for centuries and for which our health departments have, over decades, built effective defenses. Chemical warfare introduces new agents but does not materially change principles of treatment now used by internists and surgeons.

In the last several years, unprecedented advances have been made in the treatment of injuries and diseases, including many of those which might be encountered frequently in future warfare. There are, however, some “new wrinkles” in warfare for which short periods of specialized training for all physicians will be necessary.

The fundamental problem therefore remains a quantitative one: to mobilize and transport professional health personnel and health supplies in enormous numbers; to transport, hospitalize, and furnish prompt treatment to unprecedented numbers of casualties; to maintain or restore environmental sanitation, and to preserve the safety of food, milk, and water following unparalleled damage to normal protective facilities, equipment, and services. These are the problems which we must solve.

We are fortunate in having existing governmental health agencies with competence related to practically every health aspect of civil defense. The Health Resources Division of NSRB therefore requested these agencies to present detailed recommendations concerning 69 assigned subjects which comprised all or certainly most of the important fields for which national planning is necessary to provide health services in the event of civilian wartime disasters. The Public Health Service worked on 43 of these subjects. The Health Resources Division itself did all of the work on some of those which were closely related to total mobilization planning.

In addition to the official agencies, national professional organizations have been consulted and their advice will be utilized freely now that basic recommendations are ready for further consideration. Incidentally, our problems and tentative recommendations were pre-

sented, in January of this year, to a standing panel of consultants, consisting of five prominent nongovernmental physicians and dentists. They contributed valuable suggestions and expressed their enthusiasm for the nature and progress of our civil defense health plans.

About 1,500 typed pages of tentative proposals and recommendations were submitted to us. These have been revised or supplemented by discussions in numerous meetings and conferences. Individual projects are now being integrated according to major functional areas and will form the basis of recommendations to the President. The plans, however, will never be final; they will have to be revised periodically. We are attempting to establish patterns which are elastic and readily adaptable to alterations necessitated by changing methods of warfare or concepts of defense.

A difficult preliminary step is to grade proposed activities according to relative essentiality and urgency. This is necessary because, although implementation of practically all of the recommendations would be desirable for an adequate national civil defense program, the cost might be prohibitive. Priorities therefore are being devised on the basis of calculated risks and with consideration of existing services which could, without expansion, provide definite, even though incomplete assistance.

I would now like to describe the major areas in which we are planning in order to meet the challenge of war on civilians in the atomic age:

#### I. SPECIAL TRAINING

##### *A. For atomic warfare defense*

Courses for teachers to train all physicians, nurses, and dentists in the treatment of radiological casualties have been announced and are being started by the Atomic Energy Commission in cooperation with the National Security Resources Board and General Services Administration.

Courses for public health physicians and nurses, sanitary engineers, and veterinarians have been planned and will be started by the Public Health Service in April. These are designed for instruction in problems of radiological contamination of food, water, and environment in both peacetime and wartime.

##### *B. For biological warfare defense*

After several conferences between representatives of NSRB, the Department of Defense, the Public Health Service, and the Bureau of Animal Industry, a unanimous agreement was reached to downgrade the security classification of certain aspects of biological warfare defense in order to release needed information to appropriate State and municipal public health officials. The Public Health Service and the Bureau of Animal Industry were designated as the appropriate agencies to conduct courses of instruction for such persons. These agencies are now devising the contents of such courses and will present their proposals to NSRB.

##### *C. For chemical warfare defense*

Brief instruction in this field is needed by physicians, nurses, sanitary engineers, veterinarians, and other professional personnel. Such courses will be ready for inclusion with the others.

*D. First-aid courses for the general public*

It is anticipated that about 20,000,000 persons can be interested in taking civil defense first-aid courses. The Red Cross could devise a new manual and organize and initiate such courses within 3 or 4 months. Advice on the content of the course would be obtained from the National Research Council and other professional groups.

## II. HEALTH PERSONNEL FOR CIVIL DEFENSE

Federal health personnel for civil defense would be needed for two purposes:

(a) Wartime Federal office of civil defense. Most of the health personnel could be assigned from the regular officers and recruited Reserve officers of the Public Health Service just as they were for the World War II Office of Civilian Defense.

(b) Mobile reserve units which could be transported any distance to reinforce local health personnel at the site of a disaster: Affiliated hospital units of inactive Public Health Service Reserve officers similar to those which were organized in World War II, as well as mobile public health units, could again be recruited and organized—on a larger scale than in World War II—and brief specialized training could be given to members.

The Public Health Service has submitted tentative recommendations; detailed proposals will soon be available.

Organization of State and local health personnel should be affected by State and local civil defense organizations with advice from the Federal Government. In most instances the official State or local health departments probably should be charged with responsibility for civil defense health services in their respective areas. Complete cooperation from the various professional organizations is indispensable.

It is extremely difficult to estimate the number of professional personnel which would be required to care for civilian casualties of warfare in the atomic age because no useful precedent is available. The only previous relevant incidents are those at Hiroshima and Nagasaki. In both cases, Japanese first-aid, medical, and other health services broke down so badly that review of their experiences is of little value to a determination of the numbers of health personnel which would be necessary for adequate services. Military tables of organization are not applicable to civilian situations; furthermore, no army ever has suffered a sudden, localized disaster of comparable magnitude.

Estimates of the number and types of professional personnel required would be valuable to plans for organization, mobilization, and transportation of such persons for immediate assistance to a stricken community. We therefore are utilizing the advice of both military and civilian experts in making these estimates. In addition, estimates of the types of casualties, by percentage of the total numbers, have been prepared.

During wartime, today's shortages of professional health personnel would be greatly exaggerated by military needs. Our peacetime economy could not support sufficient numbers of such manpower to meet every wartime need; nor could facilities to train additional personnel be rapidly expanded during wartime. These Nation-wide wartime shortages would constitute one obstacle to immediate pro-

vision of the thousands of professional persons needed in a wartime disaster area. Furthermore, high casualty rates might be expected among professional personnel in the attacked city and there would be serious transportation problems implicit to furnishing of mutual assistance. A great deal of attention therefore must be—and is being—concentrated on methods, mobilization, and transportation for health personnel.

### III. HEALTH SUPPLIES NEEDED FOR CIVIL DEFENSE

Estimates of civil defense needs for health supplies are being made with consideration of current surveys of Nation-wide health supply inventories, maximum manufacturing potentials, available materials and vulnerability of the health supply industry to enemy attack. Such supplies include instruments, drugs, chemicals, biologicals, antibiotics, glassware, textiles, and other consumable items needed for protection of both human and animal lives. Blood will be discussed separately. Studies of both resources and requirements in these health supplies constitute one of the major planning fields of the Health Resources Division. They have been in progress for some time. Preliminary results are now available; more will be within the next 2 months.

Our studies indicate that although, with proper planning, wartime health supplies could be furnished in quantities adequate to meet both essential civilian needs and the additional demands imposed by military operations, the amounts of surgical supplies and equipment would be grossly inadequate for major wartime civilian disasters. The chief reason for the latter difficulty lies in the fact that no substantial reserves of these supplies are held in civilian warehouses, which are practically nonexistent, on retail dealers' shelves or in hospitals. We are, therefore, giving serious consideration to methods of building necessary security reserves of health supplies. The possible methods include Federal purchase, and storage on a regional basis. In the meantime, States and municipalities can determine the location and nature of all health supplies within each State and within or nearby each large city.

### IV. HOSPITAL SERVICES FOR CIVIL DEFENSE

Nine assignments in this planning area were made, chiefly to the Public Health Service, with the Atomic Energy Commission, Department of Defense, and the American National Red Cross making major contributions. Their recommendations, revised by the Health Resources Division, are now ready for discussions with nongovernmental hospital and related organizations, and include those for—

(a) Interchange of hospital accommodations between military, governmental, and nongovernmental hospitals.

(b) Relationship of civil defense and other wartime needs to future hospital building programs. Fortunately, the emphasis of the Hospital Construction Act on suburban and small community hospital needs is automatically resulting in a considerable

amount of dispersion of new hospitals from the industrial—and therefore strategic—hearts of metropolitan areas.

(c) Evacuation of patients from hospitals.

(d) Organization of first-aid stations, emergency hospitals and related facilities. Specific recommendations for organization of these services have been devised.

(e) Selection of buildings for use as emergency hospitals. Detailed general suggestions have been submitted. Further study of individual local problems is needed.

(f) Medical and nonmedical equipment for emergency hospitals. Itemized lists of the needs have been submitted and are being critically examined.

(g) Recommendations for methods of conservation of hospital water supplies during a water shortage in a wartime disaster. The recommendations which have been submitted are sufficiently complete to permit publication and wide distribution, after discussion with nongovernmental hospital organizations.

#### V. CIVIL DEFENSE FOOD SUPPLY PROBLEMS

Recommendations for nutritional standards relating to emergency rations for the infant, child, and adult populations, the injured and ill, and persons requiring special diets, in areas of civilian wartime disaster, have been submitted by the Public Health Service and the Children's Bureau. These include detailed recommendations for a priority rating of needs for emergency milk rations in order to prevent deaths or damage to health among certain groups to whom an uninterrupted supply of milk is essential.

#### VI. FOOD AND MILK SANITATION

These are normal responsibilities of the Public Health Service, the Bureau of Animal Industry, the Bureau of Dairy Industry and the Food and Drug Administration, and their State and local counterparts. Extensive recommendations for specific adaptations of existing practices, and standards to fit wartime disaster situations, have been submitted by Federal agencies.

#### VII. PROTECTION AND MAINTENANCE OF WATER SUPPLIES AND EMERGENCY SEWERAGE AND WASTE SANITATION

From these planning fields arise some of the biggest civil defense health problems. Water supplies are essential to life; unsafe water supplies can be just as deadly as loss of water supply or as bombs. That the purity of these supplies is customarily assured in American cities probably makes us more helpless and in greater danger when we are deprived of normal safety measures. Emergency treatment of water, emergency methods of disposal of excreta and other sewage and solid wastes must be provided immediately in civilian wartime disasters. The sanitation aspects of these services are normal responsibilities of Federal, State, and local health departments. Detailed recommendations for emergency practices and standards have been submitted to us by the Public Health Service.

## VIII. MISCELLANEOUS ENVIROMENTAL SANITATION MEASURES

These include:

(a) Sanitation in emergency eating places to prevent wide-scale food poisonings and other gastro-intestinal diseases.

(b) Special sanitation problems incident to evacuation of large numbers of people from a wartime disaster area. The Public Health Service has submitted detailed recommendations for measures required in these two areas.

(c) Control of rats and other rodents, and flies and other disease-carrying insects, after wartime disasters. It is rare that large-scale destruction does not have as one aftermath extensive problems of control of rats and insects which transmit serious diseases to man. Control of this problem is necessary in order to preserve the lives of those who escape the direct blow of the enemy attack. These measures are normal activities of government agencies, particularly the Public Health Service. Detailed recommendations for extension of these activities to meet wartime disaster conditions have been submitted to us.

## IX. SPECIAL PROBLEMS

*A. Blood and blood derivatives*

It has been estimated that several million pints (or units) of blood might be needed within the first few weeks of an attack on our civilian population. Provision of large quantities of this indispensable life-saving item presents some unique problems which arise from the fact that under proper refrigeration, whole blood can be preserved for only 3 or 4 weeks.

Intensive research on methods to extend this period is being conducted but until it is successful we must base our plans on present limitations. It would be extremely wasteful and probably impossible to maintain a 3-week stock pile of such proportions. Plasma can be kept for several years but, although it is useful in the treatment of shock, it is by no means a complete substitute for whole blood.

Therefore, the only recourse is a highly efficient organization—including a huge reserve of standard bottles and other supplies—ready to stage a mass blood procurement from persons outside the attacked area.

It is entirely possible to devise, on paper, an organization which could recruit millions of blood donors within a period of one to several days. But this is a highly technical operation which produces a commodity that can be lethal unless it is collected and transfused with strict conformity to complex safety standards.

To activate an adequate and safe wartime blood program without previous, extensive, actual experience in peacetime would be virtually impossible. If an efficient integrated, Nation-wide peacetime blood program could be organized it would answer an immense and vital peacetime need and also would offer a strong foundation on which an expanded wartime program could be built with relative ease, safety, and speed. Standardization of equipment is imperative and, in addition, great efforts must be made to extend the period in which whole blood can be preserved and to develop more effective blood substitutes.

The NSRB therefore is initiating a series of conferences between the various interested agencies in order to solve these problems and to plan a blood program which will be adequate for wartime civilian and military needs. The Public Health Service has already submitted detailed recommendations, including those for emergency blood-matching laboratory services and for a number of other emergency laboratory services which would be essential to the management of civilian wartime disaster casualties. Extensive suggestions for mobile laboratories, laboratory personnel organization and use of auxiliary laboratory workers are included.

#### *B. Standardization of supplies for treatment of burns*

One of the most common types of casualties in civilian wartime disasters is burns. Even before the advent of the atomic bomb, fire raids such as those on Hamburg and Tokyo resulted in enormous numbers of burn casualties. Based on Hiroshima experiences, about 60 percent of atomic bomb casualties would be burn cases, with or without other accompanying injuries or radiation sickness. It is well known that burns require an extraordinarily large amount of nursing care and of supplies. The multiplicity of methods of treatment for burns makes it essential that if reserves of health supplies are developed they must conform to the needs of one uniform system of treatment. We therefore are concentrating a great deal of attention on the development of a method of treatment which would be medically sound and effective and, at the same time, practical for use in large disasters.

### X. TRANSPORTATION PROBLEMS

Recommendations relating to litter services, emergency ambulances, and evacuation of civilian casualties are being developed by the Public Health Service, American Red Cross, and Department of Defense. Needs for transportation services for professional health workers in disaster areas also are being considered.

### XI. SPECIAL VETERINARY MEDICAL SERVICES

Specific training programs have already been described. Recommendations for emergency measures to prevent spread of disease from animals to man and for emergency standards of meat inspection have been prepared and submitted by the Bureau of Animal Industry.

### XII. INDUSTRIAL HYGIENE AND MEDICINE

Detailed proposals for special disaster programs within industry, as well as suggestions for methods to minimize industrial hazards to neighboring areas have been prepared by the Public Health Service. All ultimate services in this area must be integrated with the general community organization.

### XIII. MENTAL-HYGIENE PROGRAM

Peacetime planning for measures to study the psychological impact of war on civilian populations is a part of general mobilization plans. Special comprehensive methods limited to civil defense uses have been described, and suggestions for the management of psychiatric patients

confined to institutions in disaster areas have been submitted, by the Public Health Service.

#### XIV. MORGUE AND BURIAL SERVICES

These services are indispensable to provide identification of bodies and to avoid the health hazards arising from inadequate burial facilities. The Public Health Service has submitted recommendations with the help of the Department of Defense. Some of these are sufficiently complete to permit publication as manuals within a short time.

#### XV. MAINTENANCE OF VITAL STATISTICS

Detailed recommendations for wartime extension or adaptation of peacetime vital statistics, reporting and identification procedures have been submitted by the Public Health Service. Without extensive peacetime planning—and, in some cases, implementation—many of these extended and extremely important services could not be provided in wartime.

This completes my summary of the NSRB planning activities for health services needed in civilian wartime disasters. In each of these 15 areas, comprehensive proposals are now being prepared by the Health Resources Division in consultation with other governmental and nongovernmental agencies and professional organizations and individuals. All material is being developed for the purpose of aiding States and communities in their civil defense planning activities. In some areas further study and research is required. Some of the plans—such as those for training courses—will be ready for implementation during this fiscal year. Some of the recommendations could be published in the form of reports or manuals within a short time. In every case, periodic review must be made to determine whether revision is indicated by shifting international relations and changes in potential methods of warfare.

#### **STATEMENT OF RALPH R. KAUL, ACTING DIRECTOR, HOUSING AND COMMUNITY FACILITIES DIVISION, OFFICE OF CIVILIAN MOBILIZATION, NATIONAL SECURITY RESOURCES BOARD**

Mr. KAUL. In any future war we can expect urgent housing needs to arise almost immediately in all industrial communities and military centers, whether or not these communities are subject to enemy attack. These needs would arise when essential war plants are expanded and put on a two- or three-shift operation, or when essential plants have to be relocated into undeveloped areas for strategic reasons, or when military installations, located near outlying and dormant communities are suddenly put into full operation.

Civil defense will add to these needs to the extent that housing and community facilities are destroyed and shelter must be provided for the evacuees of disaster areas. During the past year the National Security Resources Board has been developing a comprehensive planning program for the mobilization of housing and community facilities to meet wartime needs.

## PROGRAM

The allotted time will not permit a detailed description of the entire war housing and community planning program. But before I get into the direct civil defense planning of the Housing Division, I would like to simply enumerate the seven major problem areas in which we are working. These areas are—

First, utilization of existing housing;

Second, the regulation of private construction, maintenance, and repair;

Third, the provision of emergency and mobile housing and community facilities;

Fourth, the management and operation of war rental housing;

Fifth, the provision of adequate facilities and services for community mobilization;

Sixth, the encouragement of research and development in this field; and

Seventh, planning for the organization and administration of a wartime-housing program.

All of the housing mobilization plans have a bearing on civil defense preparedness but there are two programs which are particularly important to civil defense. These are housing utilization and emergency and mobile housing. I would like to discuss these programs briefly as examples of what is being done and how we in the National Security Resources Board staff have gone about doing it.

## EXAMPLES OF MOBILIZATION PLANNING—PRELIMINARY INVESTIGATION

Since the cities of this country had never been subjected to enemy attack, one of our first jobs was to look into the World War II experience of other countries. Early last year, in April to be exact, the National Security Resources Board arranged with the Housing and Home Finance Agency, Department of State, and the Civil Affairs Division of the Army to investigate the housing and care of civilian population in the bombed cities of England, Germany, and Japan. Several significant facts emerged from this preliminary investigation:

First, the magnitude of damage to housing and community facilities was vastly greater than our estimates. In England, for example, the German bombings seriously damaged or destroyed  $4\frac{1}{2}$  million out of 13 million dwellings. Similar damage occurred in German cities where Allied air attacks resulted in the damage or loss of 6,000,000 out of 18,000,000 dwelling units. These were the results of conventional warfare over a period of months. In Hiroshima, on the other hand, one atomic blast totally destroyed or severely damaged 59,000 out of 90,000 buildings in an area of less than 10 square miles. None of these countries were prepared for the large number of their people left homeless and destitute and the corresponding loss of strength in their industrial and civilian economies.

Second, no type of housing or construction system was found which could replace housing losses of such magnitude in a war economy. England, Germany, and Japan had to cut out practically all new housing construction and meet the problem with emergency structures and with greater use of existing facilities.

Third, under the pressure of enemy attack the civilian populations accepted very substandard living conditions providing families were housed together and given privacy. For example, the separation of parents from children or the lack of a private bathroom or kitchen, with no foreseeable prospect of getting them, proved to demoralize families and war workers even more than bombings.

Lastly, it was revealed that community facilities, such as restaurants, theaters, nurseries, laundries, beer parlors, and the like, had a tremendous influence on morale and efficiency. It was found that workers would put up with very inadequate housing provided there was a retreat to adequate community facilities. This condition was confirmed in the experience of our own occupation forces in Japan and Germany.

#### UTILIZATION MEASURES

In the light of this preliminary investigation, the planning of utilization measures in wartime was given a high priority in the program of the Housing and Community Facilities Division. Detailed research projects on housing utilization policies and methods in England, Germany, and Japan were initiated. The first of these to be completed is a study on Emergency Measures for Housing and Community Services in Germany during World War II, prepared for the National Security Resources Board by the United States High Commissioner for Germany. This study brings out several noteworthy factors in civil defense planning:

First, housing utilization measures were cut to fit the requirements and resources in each community. Even under the extreme regimentation of a totalitarian system, the German Government had to depend on the initiative and discretion of local authorities for adequate housing measures. This is indicated by one of the conclusions in the German report, which I quote as follows:

Particular emphasis was given to the flexibility of the general orders. The Nazi authorities \* \* \* understood that in this particular instance the initiative of the local authorities must not be limited except for the framework of over-all planning and direction.

Second, in some German cities where civil defense measures were well organized, bombings did not result in complete community disorganization as was the case in cities where civil defense was not well planned. This was brought out clearly in the comparison of the cities of Duisburg and Hanau in the report. The city of Duisburg was exposed to air raids early in 1941, and a competent and well-organized civil defense system gradually grew up in that community. As a result, the casualties were small and essential work was effectively maintained during the period of intensive bombings in 1943 and 1944. The city of Hanau, on the other hand, felt that it was too small and unimportant industrially to be a target for heavy air raids. Civil defense plans were not taken very seriously. When a large air raid did occur in December 1944, the Hanau population was panic-stricken and fled the city without organization or plan. Within one night, this community of 43,000 people became a mass of ruins with only five or six thousand people left of its original population of 43,000 and it has never recovered from this disaster.

Third, sustained air raids caused a migration of the civilian population from the large vulnerable cities into the smaller outlying towns.

For example, the population of Cologne dropped from 763,000 people in 1943 to 40,000 when the armistice was concluded, whereas the university town of Heidelberg increased from 86,000 to 120,000. The air raids thus created congestion and housing shortage in these smaller towns as critical as that in the bombed cities.

The surveys on England and Japan are bringing out similar results and conclusions. On the basis of these investigations, and taking into account the homes use program in the United States during the war, the NSRB is developing a housing utilization plan for wartime. This plan includes registration methods by which available housing resources can be quickly appraised in any community. It would provide a range of inducements and regulations which could be employed, depending upon the local circumstances, to assure the maximum use of available accommodations. Finally, it takes into account possible methods for the requisition and assignment of housing to meet critical needs in disaster areas. It is too early to have any final conclusions but as the housing utilization plans are perfected and amplified, they will provide for community mobilization and civil defense needs in any future emergency.

#### EMERGENCY AND MOBILE HOUSING

The second planning area of the Housing Division which is directly related to civil defense requirements is the provision of emergency and mobile housing and community facilities. Although we have some 43 million dwellings in this country, less than three-tenths of 1 percent of these resources are mobile or capable of being moved from areas of housing surplus to the critical war areas. We must be prepared to provide housing and community facilities of many types which can be shipped into disaster or shortage areas ready for immediate use, or those which can be built quickly with a minimum of local labor and materials. This is how the Federal Government has tackled this problem and the progress that is being made in the field:

Emergency and mobile housing was given a top priority among the other programs.

Our second step was to work out specific projects and assignments for the participating Federal agencies.

For example, through the combined efforts of the State Department, the United States High Commissioner for Germany, and the Department of Defense, studies have been undertaken of emergency and protective structures in England, Germany, and Japan.

The first of these studies, the one of the German experience, was completed and submitted to the National Security Resources Board only last week. There has not been sufficient time to appraise this study fully, but it does bring out the importance of various types of emergency and protective shelters, as well as the planning of communities to minimize the effects of bomb damage. The report is now being distributed for review by the General Services Administration, the Housing and Home Finance Agency, the Department of Defense, and the Federal Security Agency, and will be used in the development of mobilization plans in this field.

The Department of Defense, through the Munitions Board, has been working on a number of types of shelters and emergency facilities which can be used for civil defense purposes. These include tent and

panel structures of the Army Quartermaster, mobile water and power units of the Army engineers, and mobile and demountable community buildings of the Army engineers and the Navy Bureau of Yards and Docks.

Other agencies, such as the Housing and Home Finance Agency, the Public Health Service, and General Services Administration, are working on trailers, sectional houses, mobile medical units and other types of shelters and facilities in which they have special competence. Also, case studies have been started which show the housing and community needs in war towns and disaster areas and how those requirements were met in actual experience.

The third step is the evaluation of these projects and assignments as they are completed. For this purpose an Interagency Working Group on Emergency Housing and Community Facilities was created last fall by the Chairman of the National Security Resources Board. It consists of the Housing and Community Facilities Division, Housing and Home Finance Agency, Department of Defense, General Services Administration, and Federal Security Agency. The Group has met intermittently since it was created and has considered the task in terms of four major questions:

1. What are the kinds of housing and community facilities that will be needed?
2. What types of emergency facilities could be provided under wartime shortages of materials, labor, equipment, and so forth?
3. How can up-to-date plans on emergency housing and community facilities be kept in constant readiness for use by Federal, State, and local governments in any sudden emergency?
4. What steps can be taken to encourage research and development and the strengthening of housing resources that would be needed in wartime?

Within a few days the Interagency Working Group will complete its first and preliminary report. As soon as this report is completed and reviewed by Mr. Paul Larsen and Dr. Steelman, a copy will be furnished for the information of the committee. If time permits, I can briefly summarize for you the results, thus far, of this interagency project:

Case studies are being reviewed on the housing and community services in eight war communities and disaster areas as follows: Oak Ridge, Tenn.; Seneca, Ill.; Orange, Tex.; Provo, S. Dak.; Richmond, Calif.; the Texas City disaster; the Vanport flood, and the Maine fires.

These studies are bringing out the types of requirements in wartime. The Oak Ridge story, for example, shows the vital need for prefabricated mobile housing. Texas City brings out the urgent need for emergency feeding, sheltering, and medical facilities. Vanport shows the job that trailers could do as a stopgap housing resource.

#### REPORTS ON AVAILABLE FACILITIES

Also, the Working Group has reviewed, or is reviewing, some 16 special types of emergency housing and community facilities, which

already have been developed and would be available for use if an emergency came tomorrow. These reports include such systems<sup>as</sup>:

- Portable tent-type shelter, Army Quartermaster
- PHA house trailer
- Ibec concrete house
- Mobile medical units
- Sectional mobile house, TVA system

and a number of others which are listed here for the record:

- Steel arch rib hut (Quonset), United States Navy
- PHA portable house
- PHA dormitories
- PHA demountable house
- PHA temporary dwelling units
- Precast concrete units
- Water pumping, purifying units, Army engineers
- Portable electric unit, Army
- Mobile sanitary facilities
- Mobile commercial facilities.

I have here the preliminary report on the portable tent-type shelter, recently developed by the Army Quartermaster, as an example of this work. The shelters are briefly and pictorially described in this report, which includes a summary of their potential civil defense uses. The reports will be used by Federal, State, and local civil defense authorities to let them know what is available and to give them the widest possible choice of solutions for their emergency needs.

The Interagency Working Group proposes to continue its survey of emergency and mobile housing until all important systems and methods have been reviewed, and to keep the reports up to date with technological developments and significant changes in requirements in this field.

#### CONCLUSION

The final step in this process of mobilization planning is an end product of readiness measures and future plans. In closing, I would like to sum up briefly the preliminary findings thus far, and our plans for continued emphasis and work in the coming months:

First, civil defense authorities will need a wide choice of mobile and emergency housing and community facilities when mobilization starts. A number of reports are now in shape for reproduction and distribution. Eventually all types of emergency facilities will be evaluated and cataloged for mobilization purposes.

Second, there is need for continuing research and development of emergency and mobile facilities. The systematic appraisal of our emergency housing requirements and resources will serve as a stimulus and guide to the work of Government agencies, as well as private industry and research organizations. As our work progresses, the research activities of the Federal Government will be drawn more and more into the solution of civil defense requirements.

Third, with all our large housing resources and construction capacity, the amount of mobile or portable housing in this country is negligible. There is a need for increasing the resources of housing.

and facilities which can be shifted in wartime to critical areas. Much can be accomplished in building up this resource if we give greater consideration to mobility, speed of construction, conservation of labor and materials, and economies of mass production in our peacetime housing and construction programs.

Fourth, we cannot safely count on having the time or resources for a vast construction program after the emergency starts. Our communities must be prepared to use their existing housing and community facilities wisely and fully to meet emergency needs. We have made a good start in assembling and reviewing the wartime experience in the United States and in those foreign countries that have suffered serious damage to their cities. This mobilization planning will culminate in recommendations for community mobilization measures which provide the greatest personal safeguards and at the same time achieve the degree of utilization necessary to meet disaster needs.

Finally, we are giving consideration to protective construction and community plans which will minimize the effects of attacks on our cities. A good start has been made in the analysis of the foreign experience. As our work goes forward on vulnerability analysis, which Mr. Paul Larsen has already described, the Federal Government will be in a position to provide increasingly effective leadership and guidance in this area.

In closing, I would like to mention that we have had the cooperation of numerous individuals and organizations in the housing and community planning field, and the unstinted assistance of the other Federal agencies participating in this work. Our future progress in this field depends on the continued cooperation and hard work of these agencies.

I thank you for permitting me to discuss this work with you and will attempt to answer any questions the committee may have in this mobilization planning field.

#### **SUMMATION STATEMENT ON CURRENT CIVIL DEFENSE PLANNING, BY PAUL J. LARSEN, DIRECTOR, OFFICE OF CIVILIAN MOBILIZATION, NATIONAL SECURITY RESOURCES BOARD**

Mr. LARSEN. The planning program which the National Security Resources Board has undertaken on civil defense aspects has been outlined in general to your committee.

In summation, it can be said that the over-all planning has been basic in order to round out a complete civil defense plan from the Federal Government standpoint, the implementation of which will be the responsibility of the States and local community organizations. Our planning in respect to this Federal plan has differed from other nations' planning, basically because of our governmental structure and the belief that civil defense operations must be maintained on the basis of our democratic system of Government.

It is our belief that the responsibility of the Federal Government in civil defense activities even after implementation will not require the establishment of a large Federal organization in order to insure adequate civil defense to overcome disaster which may occur by enemy action. The Federal agency for civil defense will be basically

responsible prior to mobilization for (1) formalizing a Federal plan which will be accepted by States and local communities, (2) assisting States and local communities in training of volunteer workers, (3) establishing national schools for training of key State and community civil defense personnel, (4) evaluating requirements of equipment and resources for civil defense and determining which of these should be obligations of the Federal Government and/or State and local communities, (5) evaluating weapons effects in order to determine sound dispersion and evacuation policies of Government activities and/or other vital installations, (6) maintaining such reserve stores or critical materials as will be required in event of disaster plus control and distribution of these to communities requiring them in the event of disaster, and (7) maintaining close liaison with the public and public groups through the medium of information, public relations and education on civil defense planning and the dangers which the public should prepare for without introducing hysteria or fear which would affect morale and effective civilian participation in the civil defense program and the public's main functions of maintaining activity at top level for the war effort.

The National plan can in our estimation be implemented by the States and local communities for the present without necessity for Federal civil defense legislation beyond that now existing in the National Security Act of 1947. Additional legislation will be requested when appropriate in order that the Federal Government can implement its planning, training, and operation program in order to establish supplies for emergency uses and to establish an operating Federal organization.

We will, in the future, submit to your committee, if you so request, our firm plans when these are ready so that your committee may have full knowledge of the progress of Federal planning on civil defense.

# APPENDIX

The following was among the material distributed to the States in connection with the National Securities Resources Board Civil Defense Planning Advisory Bulletin of January 13, 1950, designated "NSRB Document 121/2."

## MEDICAL ASPECTS OF ATOMIC WEAPONS

Prepared for the National Security Resources Board by the Department of Defense and the United States Atomic Energy Commission

*This document is issued by the National Security Resources Board as one of a series designed to meet the current informational needs of Civil Defense Planning Agency representatives of State and local governments, and other citizens interested in the discussion and planning of civil defense.*

JOHN R. STEELMAN,  
*Acting Chairman.*

### FOREWORD

This is one of a series of reports which assess in general terms what is known about the results of an atomic explosion, what damage and injuries a bomb can cause, and what can feasibly be done to protect people and structures. This first report deals particularly with the effects of an atomic bomb explosion upon people within its range, the medical and biological aspects of injuries and their treatment. This and the other related reports are being prepared at the request of the National Security Resources Board, which has been charged by the President with responsibility for coordinating plans concerned with civilian defense in event of war.

The material is based on a wide variety of investigations, discussions, and documents brought together by experts in the various fields. Later reports will deal with (a) the damage caused by the air-blast created by an atomic explosion, and how buildings can be constructed to resist these effects, and (b) how contamination can be detected and measured.

A complete book on the effects of atomic weapons is under preparation by a board of editors organized by the Atomic Energy Commission's Los Alamos Scientific Laboratory for the Department of Defense and the Atomic Energy Commission. Some of these reports to NSRB will be based upon material gathered for the comprehensive book.

### INTRODUCTION

A single atomic bomb of the type dropped on Nagasaki and Hiroshima during the war can lay waste the heart of a large city and injure and kill great numbers of people. In the two Japanese cities, over 100,000 were killed, and nearly as many were injured. If a bomb were dropped in such a way as to leave the area contaminated with radioactive materials, other casualties might result and rescue and repair work would be hampered. The area of damage, the number and kind of casualties and the extent of contamination would depend on how powerful the bomb was, and on how it was used—whether at high or low altitude on a clear or stormy day, or exploded in a river or harbor.

Each way in which a bomb was used would have its own particular type of Hazard. In some cases, the area of damage would be at a maximum; in others the area of damage might be reduced but radioactive contamination would be more severe. In these discussions, we are primarily interpreting data derived from the Japanese bombings in which an atomic bomb, considered as roughly equivalent to setting off 20,000 tons of TNT, was exploded at a height of about 2,000 feet above the earth on a clear day. This was about the altitude at which

a bomb of this power is estimated to have the greatest effect. Higher than this, its blast effects would be weakened, lower than this, the circle of damage would be reduced.

#### *The power of the bomb*

The Hiroshima and Nagasaki bombs caused total destruction and serious damage to buildings—death and injury to people—for 2 miles from the point at which the bomb was set off, the extreme limit of damage was about 4 miles. More powerful bombs could cause a wider area of damage, but very great increases in explosive force are necessary in order to accomplish relatively small increases in the area of damage. For example, it would be necessary to double the power of a bomb in order to increase the radius of severe damage and injury by one-fourth from 2 to 2½ miles. Estimates based on the type of bomb dropped over Japan can be used as a rough basis for discussion and planning.

#### *The way bomb is used*

A high air burst, such as that in Japan, leaves no dangerous amounts or radioactivity on the ground. A bomb exploded in the air at low altitude—as in the Alamogordo test—will pulverize and vaporize materials in its immediate vicinity. It will not affect as wide an area, and the screening effect of hills will be increased since the explosion takes place closer to the earth. Radioactive contamination will, however, be severe within a limited area.

An underwater explosion of an atomic bomb also might cause serious contamination. The area affected would depend on where the bomb exploded, on the combined depth of the water, and the soft bottom such as mud, and upon the direction and force of the wind. At Bikini, the underwater (Baker) test caused what is known as a *base surge*—a 200- to 300-foot “wave” of heavy radioactive mist which spread outward from the base of the mushroom tower of water, turned into a low-lying rain cloud and precipitated radioactive materials over the surrounding area. If the explosion of a bomb caused such a base surge, contamination of any adjacent land areas would result. Other types of injuries from the explosion itself, however, would be reduced.

#### *Effects upon people*

The effects of the burst of an atomic bomb upon people are essentially the same as those caused by an amount of TNT that releases an equivalent total of energy, but with certain added factors. Mechanical injuries suffered in the collapse of buildings will predominate in both cases. The main differences are, first, the greater amount of radiant heat released by an atomic explosion; second, the large amounts of light, including ultra-violet; and, third, the large amounts of nuclear radiation.

Injuries to people from an atomic bomb can be divided into four general categories—those caused by the blast pressure wave directly; those caused when buildings are wrecked; those caused by burns either in the wreckage or from radiant heat; those caused by nuclear radiation, either directly or through residual contamination.

In the case of an underwater blast, the water absorbs the radiant heat, light, and nuclear radiation, hence direct injuries from these sources do not occur. The contamination absorbed by the water is, however, spread whenever a base surge is formed.

In the case of such a high air blast as in Japan, some 15 to 20 percent of the deaths probably will be caused solely by nuclear radiation. The remaining 80 to 85 percent will be caused primarily by injuries suffered in the collapse of buildings and by burns, although many of these also suffered severe radiation exposure.

Direct injury from radiant heat occurs at the explosion of the bomb; Japanese people in the open suffered third-degree burns up to 1,500 yards and second-degree burns up to 2,500 yards. The effect was instantaneous. Nuclear radiation continues in dangerous quantities for 60 seconds but most of it is concentrated in the first few seconds, 50 percent occurring in the first second. People suffered injuries from nuclear radiation, but beyond a mile and a quarter injuries fell off sharply. The shock wave from the blast sweeps outward rapidly from ground zero and, in the case of Japan, took up to 10 seconds to travel 2 miles to the perimeter of greatest damage. Injuries from its effects occurred throughout this region.

In the following sections, we will discuss (a) the type of injuries caused by an atomic explosion, and the extent to which they occurred in Japan at various distances from ground zero, (b) the nature of the radiation hazard, the effects of

exposure, and some of the treatments for acute radiation sickness, (c) the nature of the hazard from radiological contamination—not encountered in Japan—and some of the precautions that can be taken against it.

### INJURIES FROM ATOMIC BOMBS

#### *Air blast effects*

Air blast effects on people fall into two categories: (a) Those caused directly by the pressure wave of the blast, and (b) those caused indirectly by collapse of buildings, flying wreckage, and by people being thrown against solid objects.

#### *Direct injury*

Direct blast injury may occur wherever the air comes into contact with body surfaces—particularly the intestinal tract, the stomach, the lungs, the ears, and the sinuses about the nose. Greatly increased pressure, especially if the increase is sudden, can tear these tissues. Few injuries of this sort were reported in Japan among survivors.

In the water, the dangerous level for pressure is about 500 pounds per square inch. In an underwater atomic explosion, any person immersed in the water probably would be killed or seriously injured up to 2,000 yards from the zero point.

#### *Indirect injury*

Secondary blast injuries are an important cause of death in an atomic bomb explosion. Since practically all brick and light masonry buildings with weight-bearing walls in the blast area will be wrecked, wooden buildings flattened, and the doors and other partitions of blast-resistant steel-reinforced concrete buildings blown out, people in or near these buildings will be killed or injured by collapse of structures, and by missile effects of debris. Among such injuries will be crushing, fracturing of bones, and lacerations and bruises of various types. Mechanical injuries resulting from atomic bomb damage vary in no way from those that would be produced by other explosives or missiles.

Flying glass contributes a large share of superficial injuries to be expected in any powerful explosion. In Japan, glass fragments penetrated over an inch beneath the skin. The clinical course of Japanese patients with mechanical injury showed that there was no damage attributable specifically to the nature of an atomic blast which impaired either rate or type of healing. Such impairment as occurred was clearly attributable to infection, loss of blood, starvation, loss of body fluids, or a combination of these factors.

#### *Injuries due to heat and light*

Severe burns were caused both by the radiant heat from the explosion of the atomic bomb (flash burns) and from the fires that broke out in the wreckage (flame burns). The effects of visible light probably are not significant. Even those who looked directly at the burst apparently suffered only temporary dazzling and loss of vision, but no clear-cut evidence of harm was reported. Temporary blindness resulted when the intense light bleached out the substance within the eyeball called "visual purple," and persisted for several hours until the body could manufacture a new supply.

Where hemorrhages of the eye occurred, it was from the general systemic effects of nuclear radiation. Conjunctivitis was common, but this infection of the outer eye was caused by smoke and dust.

#### *Flash burns*

The flash burns caused by an atomic explosion may be first degree, merely reddening the skin; second degree, causing blisters; or third degree, damaging all layers of the skin. The severity of an individual's injury, as with other types of burns, depends not only upon the degree of the burns, but even more upon the proportion of the body's total skin area that is affected.

Atomic bomb flash burns are distinctly different from those caused by other types of explosion, since they are due to radiant heat rather than to hot gasses, as in the case of shell bursts or gasoline explosions. They are readily distinguished because atomic flash burns are sharp in outline and are oriented to the point of the explosion. Shadow effects are prominent. An ear, for example, might be badly burned yet the skin behind the ear be unharmed.

Even loose clothing afforded some protection against atomic flash burns, and color also had a protective effect. White clothing tended to reflect the radiant

heat, darker clothing to absorb heat. Burns sometimes were cross-hatched where light clothing was marked with dark lines. Tight clothing was less protection, and burns were inflicted at elbows and where straps crossed the shoulders, for example, while other places where clothing was loose were protected, or less severely burned.

The effects of ultraviolet light produced by the bomb are uncertain. Ozone generated from the air by the explosion would absorb a great deal of the ultraviolet spectrum. The flash-burned Japanese did show darker pigmentation about their scars, and this is still apparent, but no clear evidence has been found that ultraviolet radiation caused this or that such radiation played a prominent part in causing burns.

#### *Flame burns*

The flame burns in Japan mostly occurred when people were trapped in the wreckage of buildings which afterward caught fire. A conflagration may be expected to follow any atomic bomb blast. Not only is the radiant heat sufficient to ignite wood and lighter materials, but the collapse of structures overturns stoves and furnaces, breaks electric wires and ruptures gas lines. About 70 percent of Hiroshima's fire-fighting equipment was destroyed, firemen were killed, the water supply was disrupted, and streets were clogged with debris.

The uprush of the atomic cloud after the explosion causes an inrush of wind, and heat from fires augments this effect. At Hiroshima a "fire storm" resulted, with gale-winds sucked inward toward the center by the continued uprush of hot air. This did not occur at Nagasaki, but must be assumed as a danger in an atomic blast. At the very least, fires about the perimeter will tend to consolidate and cut off help from people trapped within the blast area.

Burns suffered from flames, in such cases, differ in no way from those encountered in any ordinary intense fires. If the case is not complicated by injury from nuclear radiation, the determining factors in survival and rate of recovery will not vary from those of a comparable ordinary burn. Where radiation injury has been suffered, infection will be a grave danger as explained in the following section.

Among the injured in Japan, there were many cases where excessive scar tissue (keloids) formed, and many of the survivors have contraction deformities resulting from improper care of burns and other injuries during the healing process. The deformities and the keloids are not specifically related to exposure to the atomic bomb, but rather to slow healing and to infection. The keloids also apparently stem from a tendency in the Japanese as a race; and burns suffered in nonatomic bomb raids resulted in comparable amounts of scar tissue. Adequate medical care would reduce the amount of keloids and prevent much of the crippling.

Had proper medical care been available, it is also probable that many of the Japanese who died from burns, as from other causes, might have been saved. The death totals must be weighed in relation to the fact that all medical care for days after the atomic blast was totally disorganized.

Adequate care to injuries and burns suffered in an atomic explosion present a problem of great magnitude. While the types of injuries, aside from the radiation hazard, are similar to those encountered in ordinary bombing or other catastrophe, the large numbers of individuals involved in an atomic blast, and the general chaos that results, present a problem whose solution requires a great deal of careful planning and preparation.

It would be unrealistic to prepare for fewer than 40,000 to 50,000 severely burned persons from a single atomic explosion. Ideal care of a severely burned patient, according to one such case, would include provision for 42 tanks of oxygen, 3 nurses, 2.7 miles of gauze, 36 pints of plasma, 40 pints of whole blood, and 100 pints of other fluids plus drugs such as morphine and the antibiotics. Obviously such ideal treatment would be impossible under catastrophe conditions. Although not all the burn cases would require as much support as the case cited above, this example, nevertheless, makes apparent the magnitude of the burn problem alone. Fortunately severe symptoms from radiation in those not killed outright do not ordinarily come on until several days after the acute exposure, so that those suffering from burns and mechanical injuries will actually constitute the chief immediate medical problem and make their heaviest demands on emergency facilities at a time when those suffering solely from acute radiation will require very little attention.

## THE RADIATION HAZARD

The nuclear radiation that causes direct injury in an atomic explosion includes *neutrons* and *gamma-rays*. The former are tiny invisible particles driven out of fissioning atoms; the latter are invisible electro-magnetic waves very similar to powerful X-rays and constitute the greatest radiological danger in an atomic blast. Both forms of radiation cause the same type of injury. They penetrate deeply into the body and *ionize* the atoms that make up the various elements—carbon, nitrogen, hydrogen, oxygen among others—so that the atoms are no longer neutral electrically, but carry a positive or negative electrical charge which makes them violently reactive chemically. Nuclear radiation, or *ionizing radiation*, disrupts the complex combinations of these elements and thus changes the proteins, enzymes and other substances that make up our cells and bodies. As a result, the cells are injured or killed, and bodily functions can be affected; if enough cells are damaged or killed, the person becomes seriously ill or dies.

This ionizing radiation cannot ordinarily be detected by the senses. If one touches a hot stove, the sensation of heat and resulting tissue damage is immediate. But one may receive an amount of ionizing radiation that will produce far more serious tissue damage than a burn without any sensation. Although chemical and physiological changes are produced almost instantly, no damage will be apparent for several days.

Beyond these general facts cited, we know very little about the exact mechanism by which radiation harms living molecules, cells and tissue. The clinical effects have, however, been extensively studied in Japan. And in the United States a Nation-wide research effort to investigate these effects has been under way since the early days of wartime development. (See Sixth Semiannual Report of the Atomic Energy Commission, July 1949.)

*Acute radiation illness*

These clinical findings in Japan show that people exposed to heavy radiation suffer various injuries, sicknesses, and malfunctions which together are called the *acute radiation syndrome*. Physicians find that the severity of the symptoms is related importantly to two factors: the amount of radiation absorbed in a single dose, and the proportion of the body exposed.

It is possible to expose a skin cancer an inch in diameter to 5,000 roentgens<sup>1</sup> of radiation (X-ray) without any effect on the patient other than that upon the cancer cells and, some scarring of adjacent normal tissues. But one-tenth this amount of radiation (about 500 roentgens), given over the whole body would probably prove fatal. And 400 roentgens of whole body irradiation is believed to be the dose that will kill about half of all the persons exposed to it (a dose called the human LD-50, or 50 percent lethal dose). Half of that amount of whole body irradiation, 200 roentgens, would cause radiation illness and, in rare cases, might result in death. The degree of acute radiation illness, and the probability of recovery or death, will thus vary sharply with the dosage received. The syndrome also can result from radioactive materials absorbed and lodged widely within the body where they then could emit their destructive radiation at close range. This danger from *internal* radiation is discussed later. Here, we are concerned with the effects of *external* radiation.

*Results of exposure*

Clinical observations have made it clear that heavy external exposure to penetrating radiation causes a massive break-down of the body's tissues, particularly in certain organs of the body. Since destruction of cells in various tissues reaches its height at different times after exposure, symptoms from these injuries will occur at different times. Two features make this type of body damage unique:

1. No two organs or tissues of the body suffer exactly the same amount of damage. Lymphoid tissue, bone marrow, the sex organs, and the lining of the small intestine suffer heavy damage. Muscles, nerves, and fully grown bone are not so easily injured. Other tissues, such as skin, liver, and lung, lie in between these extremes.

2. Unless the radiation has been extremely heavy, cells may not die for hours or days. For a week after skin is injured, it may show only a surface reddening and swelling of the underlying tissues. Blistering and loss of dead skin may be delayed for 2 weeks.

<sup>1</sup> The roentgen is a measurement of the ionizing effect of radiation. The precise definition of this measurement is less important here than the number of roentgen which will produce a certain effect upon a person exposed to it. A roentgen is defined as the amount of X-rays or gamma-rays required to produce ions equivalent to one electrostatic unit of charge in one cubic centimeter of air under standard conditions.

The course of illness in acute radiation syndrome can be described from the case records of Japanese exposed to atomic bombings, where their injuries were uncomplicated by blast damage or flash burns. Among Japanese who received 600 roentgens or more of radiation, the onset of the syndrome was violent and, in 75 percent of the cases, the first symptoms appeared within a half hour of exposure, great weakness followed and death sometimes occurred within 24 hours. Some patients lived 10 days. Among those receiving around the LD-50 or 400 roentgens, the first symptoms might not appear for several hours and, after the first onset, the patient might be able to carry on normal duties for a week. One Soldier in Japan, exposed in this way, afterward marched 15 miles with a full pack.

The sequence of symptoms among all exposed to heavy radiation was roughly the same, but the time intervals of various phases of the illness varied according to the severity of the exposure. Those who received around 400 roentgens or less developed additional symptoms—loss of hair and severe infections. The illness of a typical patient among the latter group goes through four phases:

*Phase I.*—Within an hour or so after exposure, the patient becomes nauseated, vomits, and suffers general prostration and weakness. Diarrhea may occur and his blood pressure may fall a little. In general, the heavier the dosage, the more ill the patient will be. This phase is quite similar to the "radiation sickness" suffered by patients treated intensively with X-ray or radium.

*Phase II.*—After the first onset of the illness, symptoms tend to disappear, and for a period of a few days to several weeks the patient feels less ill. For patients who have suffered the heaviest radiation, this period will be short. Reports have stated that Japanese injured by radiation alone were entirely without symptoms during this time, but the best information is that they were sick people who, because of the emergency, drove themselves to do what had to be done.

*Phase III.*—The illness reaches its height during this phase. Whether or not the patient survives depends on his ability to endure this acute stage. The patient becomes apathetic and develops a fever and rapid heart action. He becomes increasingly weak and loses weight. He loses his appetite, may become nauseated and suffer severe diarrhea which is sometimes bloody. Small hemorrhages may appear in the skin and the gums bleed. In severe cases, infected ulcers may spread throughout the mouth and alimentary tract. The hair may fall from the head and body about 3 weeks after exposure.

The slightly injured recover quickly, but those who receive a heavier dose of radiation may continue gravely ill for weeks. The most severely injured may grow progressively worse over a period of weeks and finally succumb, or may die within a few days.

*Phase IV.*—Patients who survive enter a convalescence during which a feeling of weakness and fatigue are the outstanding symptoms. It may be months before the patients recover normal strength and weight. The skin hemorrhages disappear and the hair, if lost, gradually regrows. Usually within 6 months, the patient feels completely well. All usual methods of examination indicate that, by this time, the patient is normal. Nevertheless, it is too soon to say that survivors will not suffer further ill effects.

#### *Other reactions*

Besides the symptoms described, the acute radiation illness includes damage that can be detected only by laboratory tests—changes in blood cells, in male sex organs, and in the functioning of other organs.

Several symptoms of the third, or acute, phase of the illness stem directly from injuries to certain elements in the blood. Infections and ulcerations arise because radiation destroys white blood cells that normally aid in combating bacteria. A few days after radiation exposure, the number of white cells declines and, in severe cases, the cells disappear almost entirely. The skin and gum hemorrhages are seemingly connected with a fall in the number of *platelets* in the blood, since these substances play a role in the clotting of the blood. Other causes, such as an increase in anticlotting substance that resembles heparin, a normal blood chemical, also contribute. Platelets begin to decline only after an interval of weeks and, where the patient survives, reappear during convalescence. A third, and very serious, effect upon the blood, the decline in the number of red cells, causes anemia and contributes to the general weakness and debility so marked in acute radiation illness. The decline in the number of red cells starts immediately after exposure and may continue for months.

Microscopic studies of tissue, amplified by more complete research with animals, indicate these blood changes are caused by radiation damage to the bone marrow and to the lymphoid tissue where these various cells are born. And the injury to

tissue, as well as the course of illness in the patient, can be traced to damage to the cells. Radiation causes the cells to swell, disorganizes their structure and stops them from reproducing themselves. The stoppage of cell division occurs immediately after irradiation; structural changes appear more gradually. The most spectacular change is the collapse of certain parts of the cell, and the shrinkage of the nucleus followed by death and disintegration. The interruption of cell division is temporary, but when new cells begin again to divide they often show bizarre changes in their inner structure.

#### *Treatment of radiation injuries*

Many people believe that very little can be done in treatment of radiation casualties. This is true in case of a lethal dose; but certainly is not true when the exposure is in the median lethal range. Many borderline cases can be saved by:

- a. Good medical and nursing care.
- b. Whole blood transfusions, given as may be required in the individual case until the bone marrow has had time to regenerate and produce blood.
- c. Control of infection by antibiotics such as penicillin.
- d. Intravenous feeding to supply necessary sugars, proteins and vitamins.
- e. Control of the bleeding tendency by use of drugs.

Whole blood would be required in great quantities, primarily to treat the casualties suffering from mechanical injuries and burns, secondarily to treat victims of ionizing radiation.

It has been estimated that for a catastrophe such as at Hiroshima approximately 250,000 pints of blood would be needed, 80,000 per week for the first 3 weeks. Subsequent to this, there would be only a nominal requirement for whole blood. This time relationship favors the possibility of obtaining blood from donors, processing it, and transporting it to the operations area, as is envisaged in the blood program of the American Red Cross.

Equally, the time factor would permit evacuation of victims to unbombed areas where better nursing care, so essential to recovery, could be better provided.

#### *After effects of radiation exposure*

Many people who recovered from radiation sickness itself afterward died from tuberculosis, pneumonia, or some other disease which appeared as a complicating factor during that illness. No unusual ill effects directly attributable to ionizing radiation have occurred among Japanese survivors. Whether or not such after effects will occur among these survivors will have to be answered in the future. There are two possible after effects from radiation exposure that cannot be fully assessed for many years—effects on heredity, and effects on fertility (occurrence of sterility).

Since the demonstration in 1927 that X-rays increased the natural rate of mutations in the fruitfly, there has been much interest in the possibility of similar effects of radiation on man. Mutations have been produced in a variety of plant and animal forms by acute as well as chronic exposure.

Mice bred up to six generations while continuously exposed to 1.1 roentgen daily of gamma radiation from radium gave normal litters and had normal life span. Mice exposed to 8.8 roentgens per day, up to a total dose of 880 roentgens for females and 1,100 roentgens for males, showed no genetic changes in the first generation offspring. Single doses of 1,500 roentgens delivered to the testes of mice have produced gene mutations, both by radiation of the mature sperm present, and by changes in the sperm-forming cells, abnormalities of the feet, retardation of growth, and anemia appeared in the offspring.

From these and other investigations, it is found that the likelihood of parents having deformed children after suffering sublethal amounts of ionizing radiation is very slight.

#### *Genetic effects*

A study of the Atomic Bomb Casualty Commission in Japan deals with possible effects of massive radiation doses on human heredity. Any genetic effects among the Japanese at Hiroshima and Nagasaki will show up in the offspring of exposed people though possibly not until the second and subsequent generations. No such effects have been observed up to this time. Perhaps 25 years must elapse before reliable information can be obtained about the effects of radiation exposure upon heredity following atomic bomb explosions.

#### *Sterility*

Another Casualty Commission study deals with the fertility of the Japanese affected by atomic bomb radiations blasts. Ionizing radiation can cause permanent sterility, but it appears to require about 400 roentgens—the range of

the median lethal dose. Temporary sterility occurred among many Japanese, both male and female, but the vast majority of them have returned to normal. It cannot be stated that all returned to normal because investigators do not know how many of them were sterile from other causes before the bombing. Many have produced normal children since their illness.

#### *Cataracts*

No significant development of cataracts—a growth which makes the lens of the eye opaque and causes blindness—has been noted among the Japanese as a result of exposure to radiation although a few have been recently observed. Full evaluation of this hazard must wait on lapse of sufficient time for full development and investigation.

#### *Injury zones in atomic burst*

Radiation injury sufficient to cause acute radiation illness will occur frequently for wholly exposed persons even a mile from ground zero. Exposed people 1,400 yards away will receive the LD-50 dose of gamma radiation which will cause the death of about half of them. Under 1,000 yards, exposed people will certainly be killed. Neutron radiation would prove lethal up to 500 yards, but all people so exposed would equally receive a lethal dose of gamma rays.

In the following section, types of injuries to be expected at various distances from ground zero, as judged by effects in Japan, are given in summary. Measurements are of the radius of concentric circles whose center is ground zero—directly below the point of explosion. The effects in these zones will depend somewhat on local factors, especially such topographical features as hills, and the change from one zone to another is gradual rather than abrupt.

#### *Half-mile radius*

Within a half-mile of ground zero when the atomic bomb is similar to those used against Japan and detonated about 2,000 feet in the air, the following will occur:

The blast pressure created by the bomb explosion would demolish all structures not of reinforced concrete or steel construction. Even buildings of this type would suffer 70 percent destruction. Persons not sufficiently protected by shelter able to withstand the blast would undoubtedly be killed by falling buildings or flying wreckage.

Intense thermal energy generated by the explosion would cause fatal burns to unprotected persons and would start fires in the wreckage.

Because of the concentration of ionizing radiation nearly everyone not protected by earth, steel, or thick concrete would die. The most serious cases would succumb within a few hours to 4 or 5 days after exposure. A second group would develop susceptibility to infection due to destruction of their white blood cells and would die from 4 days to 6 weeks after exposure. Another group would incur multiple hemorrhages and die within 2 to 3 weeks from this cause.

#### *One-half to one mile*

Structural damage due to blast and fire would be general in the area outside the half-mile circle and up to one mile from ground zero. Residential buildings would be almost destroyed. Only fire and shock-resistant buildings would be immune to any appreciable extent. Casualties from flame burns, blast effects, and injuries due to falling debris and flying glass would consequently be prominent.

Second or third degree flash burns would be suffered by people not protected.

Injury from ionizing radiation also would be serious, but as the distance from the explosion point increases, shielding is more effective in lessening of damage from the rays.

#### *One to one-and-a-half miles*

Beyond a mile, blast damage would still be extensive to residential structures. Fire damage would be extensive in inflammable areas. Flash burns can be expected at this distance. Secondary injuries remain fairly prominent, in the absence of protection by natural or artificial barriers. At Nagasaki, steep hills sharply limited the effects of blast and fire.

Radiation could be expected to be very prominent among the causes of injury up to approximately one and a quarter miles from ground zero. After that distance, such cases drop off sharply.

#### *One-and-a-half to two miles*

At Hiroshima the average limit of heavy structural damage was roughly 2 miles from ground zero. The limits of fire damage would roughly coincide with this boundary, except where wind causes wider effects.

Flash burns will not be so severe in this area.

Although some Japanese at Hiroshima and Nagasaki who were ill of radiation sickness were reported to have been as far away as  $1\frac{1}{2}$  to 2 miles, observations at tests held since then indicate this is impossible.

#### *Over 2 miles*

Structural damage due to blast and fire is appreciably lessened beyond 2 miles from ground zero and secondary injuries correspondingly decrease. The maximum distance of a recorded structural damage at Hiroshima, however, was 4.1 miles.

Radiation injury and flash burns would be insignificant in this zone.

### RADIOLOGICAL CONTAMINATION

The radiation dangers discussed so far are those affecting people exposed to immediate injury from the explosion of the bomb. Under certain conditions, radiological contamination could become a dangerous after-effect of the explosion. A high air burst, on a clear day, probably would produce no dangerous contamination at all on the surface of the earth—it did not in Japan—and people could enter the area even directly under the point where the bomb exploded immediately afterward without danger from this source. This is because most of the residual radiation is swept up into the atomic cloud by the in-rush of wind that follows the explosion and is afterward dispersed into the general atmosphere. Most of this radioactive material will eventually fall to the earth but will be so dispersed and diluted that it will rarely, if ever, be hazardous. Heavier particles will fall first, so the greatest outfall will be concentrated immediately downwind from the explosion point. Here, again, no hazard occurred after the Japanese explosions.

A burst close to the surface, or under water, would increase the amount of contaminated material. When a base surge occurred, heavy contamination might be expected. The amount of such residual radioactivity, and how long it would continue to a degree dangerous to people, would depend upon many and variable factors, which are discussed in other reports of this series. Residual radioactivity can be detected and measured by trained teams using Geiger counters and similar devices, and their measurements would determine when and for how long it would be safe to enter a contaminated area.

Residual radiation could come from three different sources: (a) *Fission products* produced by the splitting of atoms in the bomb explosion and deposited on the surface; (b) *unfissioned uranium or plutonium* so deposited; and (c) *Materials made radioactive* by the radiation emitted during the explosion and either already on the surface or afterward deposited there. The radiation danger during the explosion comes from neutrons and gamma-rays. Residual radiation does not include neutrons but comes from gamma-rays and from two other types of nuclear particles—alpha and beta. The latter two are chiefly dangerous when emitted by material lodged inside the body, but they can injure the skin when they strike the outside of the body.

*Alpha particles*, which are positively charged helium nuclei containing two protons and two neutrons, have tremendous ionizing power—the factor which causes injuries to peoples' bodies—10,000 times that of gamma-rays. But alpha particles will be stopped by an inch or two of air, by a sheet of paper, or by the surface layer of the skin, which they affect very much like a burn. Alpha particles are emitted by unfissioned uranium or plutonium but, of these two, uranium is only moderately radioactive and so is not a serious hazard. Plutonium, however, is several thousand times more radioactive than uranium and would be dangerous in contact with the skin or especially if lodged inside the body.

*Beta particles*, which are negatively charged electrons, have 100 times the ionizing power of gamma-rays but can travel only a few yards through the air. Ordinarily, they also can be stopped by a sheet of paper or by clothing, and will penetrate only about a fifth of an inch into the skin, which they affect very much like a burn. Beta particles are emitted, along with gamma-rays, by fission products and other materials made radioactive by the explosion. The gamma-radiation would be the chief external radiation threat, but would be even more dangerous if the substances were taken into the body.

Thus, while the bomb burst is a direct radiological menace exclusively because of external whole body radiation, residual radiation is dangerous not only as a source of external radiation, but also internally, if taken accidentally into the body in any quantity and lodged there. Under such conditions, internal radiation

can cause acute radiation illness if widely enough distributed, can destroy or hamper vital functions of the body, or can cause cancer. These two types of residual hazard, external and internal, are discussed separately.

#### *Internal radiation*

Radioactive materials can enter the body through the mouth, through breathing, or through a wound. They are particularly destructive when retained in the body for some time. Alpha and beta particles, which can be stopped by the skin, meet no such barrier inside the body. If lodged there, materials that emit these particles can cause serious damage. In evaluating the radiation hazard from these sources, three main factors must be considered:

*First.*—The chemical characteristics of a radioactive element are important, because they determine in what organ the material is likely to be deposited. Materials that behave chemically like calcium will be deposited in bone. Plutonium and strontium are two such elements.

*Second.*—If a material is taken in through the mouth, its solubility in body fluids is important. What chemical forms are we dealing with? How much is absorbed from the gastric intestinal tract? Fortunately, most of the fission products are quite insoluble and will not be absorbed in significant amounts. Compounds of strontium, barium, and iodine are the most soluble. Plutonium exists usually in the form of an oxide and only about five-hundredths of 1 percent of the amount ingested is fixed in the body. Swallowed materials must gain access to the circulating blood before they can be deposited in an organ. Thus, even in the stomach and intestines, they are for all practical purposes still outside the body as far as radioactive poisoning is concerned.

Once plutonium enters the blood stream, it may be carried to all parts of the body, and much of it is deposited in the liver, spleen and bone. The most significant points of deposit, as far as serious injury is concerned, are close to the blood-forming tissue in the bone marrow. Here, because of the tremendous ionizing power of its alpha particles it is a constant source of injury to the adjacent tissues. If it remains in the body long enough, the injury will result in the formation of malignant tumors and severe anemia.

*Third.*—The length of time materials remain in the body depends upon their "biological half-life"—the time required by the body to lose one-half the radioactivity by decay and the body's regular processes of elimination. This varies from hours to years with the different elements. In the case of plutonium, the biological half-life is 50 years. The amount of plutonium deemed safe to have fixed in the body has been considered to be one microgram (a millionth part of one twenty-eighth of an ounce), but further analysis may show that this should be lowered by a factor of 10.

#### *The plutonium hazard*

The amount of plutonium scattered after a high burst of an atomic bomb on a clear day may be considered inconsequential. Even after a much lower burst, contamination is negligible: one would have to swallow the surface contamination contained in an area of several square yards to get a dangerous amount. The situation probably is not greatly different when atomic bombs are exploded in other ways.

#### *Drinking water contamination*

Much concern has been expressed regarding the contamination of drinking water. In a high air burst on a clear day, the fall out of radioactive materials is so small that dilution by the water probably ensures safety. The efficiency of the filtration plants, and the distance of sources of supply from cities are further safety factors. Fission products and fissionable material have a tendency to adhere to any organic material with which they come in contact. They will cling to the banks and the bottom of lakes, to the pipes, and other material to such a degree that it is probably that very little would ever reach the populace. Water containing one-millionth of a curie of fission products per liter is considered safe for drinking. (This means that about one atom in 250,000 billion billion is disintegrating every second.) Many popular mineral waters contain more than this. Hazards in the case of a storm or base surge remain to be evaluated. Testing for radioactivity is advisable. At Bikini, sea water from a heavily contaminated source was distilled (that is, turned into steam and condensed, not merely boiled) and found safe for drinking purposes.

*Inhaling radioactive particles*

As to the hazard of inhaling particles of matter, the size of the particle is important. The nose filters out almost all particles larger than 10 microns in size (one inch equals 25,000 microns). It will filter out 95 percent of all particles over 5 microns in size. The size at which particles most readily pass from the small air pockets of the lung into the blood stream is about one-half micron. Particles 1 to 5 microns in size may, however, reach the lymphatic system.

At a bomb burst, contaminated particles of this size—the largest only one five-hundred thousandths of an inch in diameter—ascend rapidly into the atmosphere. If they settle, as on a rainy day, they usually attach themselves immediately to larger particles. The chances of inhaling a dangerous amount of these small particles is small. A combat-type gas mask will filter out 99.999 percent of all such particles.

*Contaminated wounds*

If someone is wounded while in a contaminated area, the hazards of the situation will depend almost entirely upon the amount and kind of contamination present, and the extent to which the contaminated material is soluble in body fluids. It is difficult to conceive of a situation in which a sufficient amount of contamination would be present to endanger life by this means of exposure, although material introduced into the blood is fixed in the body in a very short time.

Such a wound should be cared for in the same manner as any similar injury in an uncontaminated area. Cleansing with soap and water is particularly important, and cutting out of damaged tissue. The wound should then be closed. Amputation is not indicated.

*External radiation*

The chief external radiation hazard in a contaminated area will come from gamma-rays thrown off by fission products or by materials made radioactive by neutrons or gamma-rays during the explosion. Alpha and beta radiations will be dangerous chiefly if they come into actual contact with the skin, but it will be necessary to guard against contaminated dust. Filter-masks, clothing tight at the wrists, ankles, and neck, and tight-wristed gloves will afford protection against alpha and beta particle contamination. Material heavily contaminated with beta-emitting material should not, however, be handled even with gloved hands since it can cause severe burns. Tongs or equivalent instruments should be used. Clothing should be discarded at the edge of the contaminated area to avoid spreading radioactive contamination. Thorough soap-and-water bathing would be a valuable precaution.

Bodies that have been exposed to radiation can be safely handled.

Gamma radiation cannot be turned aside by such simple measures as protective clothing, but dense material, such as concrete, can reduce its ionizing effect. Three inches of concrete will cut the amounts of gamma radiation by half, and the customary 9-inch concrete wall used in construction would reduce gamma rays to one-eighth their original potency. However, the gamma radiation from a bomb is measured in thousands of roentgens and, even at distances of 1,000 yards from ground zero, 21 inches of concrete would be necessary to cut down gamma rays enough to prevent serious radiation injury. Gamma radiation from contamination will not approach the power of direct bomb radiation, but it still can be severe. The best protection against contamination that gives off gamma radiation is to use instruments to detect its presence and to avoid any dangerous concentration.

What is a dangerous concentration of ionizing radiation? There is a general agreement that, wherever possible, it is desirable to avoid all exposure to ionizing radiation. This, of course, is impossible. Radiation exists everywhere in the world; it comes from radioactive material distributed throughout the earth's crust but its chief source is the bombardment of the earth by cosmic rays from the sky. Human life has always been exposed to this radiation.

In the atomic-energy program, a standard has been set—called the maximum permissible dose—which stipulates an exposure which experts believe a man could experience every day in his life without danger of injury. This has been fixed at a maximum of one-tenth of a roentgen a day with a weekly maximum of three-tenths of a roentgen. But this standard applies to *daily* exposures—a

very different matter from a one-time exposure in emergency. Thus, in the course of a medical study of a disease of the stomach or intestines, a patient may be exposed to some 40 roentgens in undergoing a series of X-ray examinations. X-rays of the teeth may subject the patient to about 2 roentgens. It is clear that a person may be subjected to a one-time exposure of many times the daily "maximum permissible dose" without suffering injury.

In emergency operations, a person could probably be exposed to 50 roentgens of total body radiation without incurring injury and be able to continue at his duties. A person exposed to 100 roentgens might have some nausea and changes in the number of blood cells, but most likely would be able to continue at his normal duties. Those exposed to 200 roentgens probably would become incapacitated after the injuries suffered began to take effect—probably a matter of some hours. In rare cases, as stated earlier, 200 roentgens might ultimately cause death.

While acute exposures of 200 roentgens and more will result from atomic bomb explosions, radiation of this degree will rarely result from residual contamination deposited by a bomb. The rate of exposure is of considerable importance. A person who receives 600 roentgens in a single exposure within a period of a few minutes will have small chance of survival, but if a man received only 30 roentgens a day it probably would take a total of as much as 1,800 roentgens to prove fatal.

\* \* \*

The medical aspects of atomic bomb explosions have been presented here only in summary, but the main factors that must be considered have all been touched upon. In future publications, a more technical and detailed analysis of the problems involved from the medical man's viewpoint will be presented.

The summary indicates clearly that a major task for medical authorities will be the care of blast and burn injuries; that a main problem will be caring for patients in numbers that would swamp the normally available facilities, even in the improbable circumstance that facilities were not appreciably damaged. Dispersion of facilities thus becomes important as does organization of emergency work over wide areas, so that outside help can come to the rescue of bombed areas, and so that patients capable of being moved can be evacuated to places where they can receive better care.

The following material was distributed to the States in connection with the National Security Resources Board Civil Defense Planning Advisory Bulletin of February 3, 1950, entitled "NSRB Document 121/3."

### DAMAGE FROM ATOMIC EXPLOSION AND DESIGN OF PROTECTIVE STRUCTURES

Prepared for the National Security Resources Board by the Department of Defense  
and the United States Atomic Energy Commission

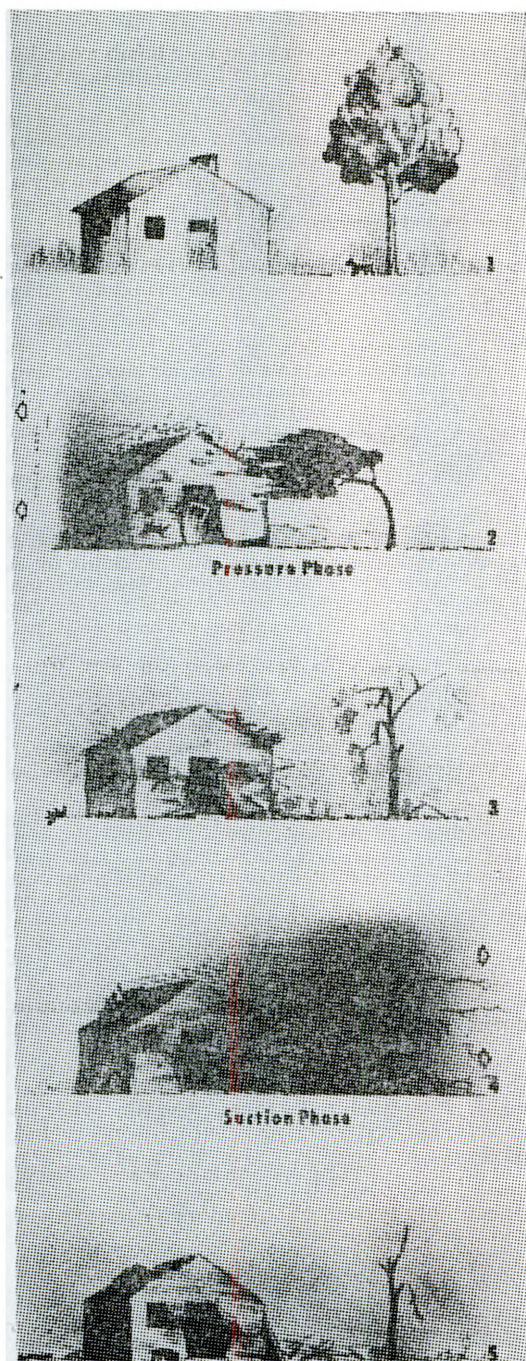

*This document is issued by the National Security Reserves Board as one of a series designed to meet the current informational needs of Civil Defense Planning Agency representatives of State and local governments, and other citizens interested in the discussion and planning of civil defense.*

JOHN R. STEELMAN,  
Acting Chairman.

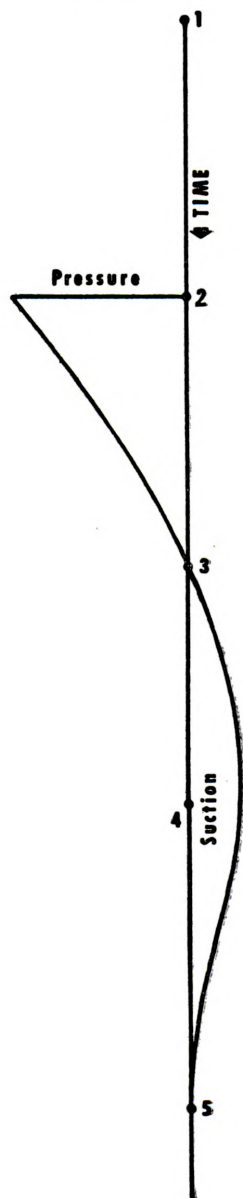

#### FOREWORD

This report assesses in general terms certain effects of atomic weapons. It deals particularly with the damage an air blast would cause to various types of structures and buildings, and building construction to resist these effects. A complete handbook on atomic weapon effects is under preparation by a board of editors organized by the Los Alamos Scientific Laboratory for the Department of Defense and the Atomic Energy Commission. The present report is taken from the material gathered for the comprehensive report on the effects of atomic weapons. This material is based primarily upon the material contributed by Sherwood B. Smith, Office of the Chief of Engineers, United States Army, and Curtis W. Lampson of the Ballistics Research Laboratory, Army Ordnance Department, with the invaluable technical assistance of many other specialists who have advised the Los Alamos Scientific Laboratory in evaluating the effects of atomic weapons.

Wind velocity (mph)	Duration (sec)	Overpres- sure (psi)	Miles	Feet	Damage
					Limit of light damage at 8 miles.
50	1.25	1.5	2.25	12,000	Light damage to window frames and doors, moderate plaster damage, complete window damage.
60	1.23	1.7	2.0	11,000	Flash charring of telegraph poles. Roof and wall covering on steel frame building damaged.
70	1.20	2.0	1.75	10,000	Partial damage to structures in area. Blind damage to majority of homes. Severe fire damage expected. Flash ignition of dry combustible materials.
80	1.15	2.4	1.50	9000	Heavy plaster damage. Moderate damage to area.
100	1.12	2.9	1.25	8000	Severe damage to homes, heavy damage to window frames and doors, foliage scorched by radiant heat.
125	1.06	3.6	1.0	7000	Structural damage to multistory brick buildings. Roof tiles bubbled (melted by heat).
160	0.98	5.2	0.75	6000	Severe damage to entire area. Severe structural damage to steel frame building. 9-inch brick walls moderately cracked. Electrical installations and trolley cars destroyed. Multistory brick building completely destroyed.
200	0.90	7.4	0.50	5000	12-inch brick walls severely cracked. Steel frame building destroyed (mass distortion of frame). Light concrete buildings collapsed.
270	0.77	10	0.25	4000	Reinforced concrete smoke stack with 8-inch walls overturned. 18-inch brick walls completely destroyed.
380	0.62	16	0.125	3000	Virtually complete destruction of all buildings, other than reinforced concrete aseismic design.
550	0.45	24	0.0625	2000	Limit of severe structural damage to earthquake-resistant reinforced concrete buildings. Reinforced concrete building collapsed, 10-inch walls, 6-inch floor. Mass distortion of heavy steel frame buildings. Loss of roofs and panels.
800	0.37	36	0.03125	1000	Decks of steel plate girder bridge shift laterally.
					0 Air Burst of an Atomic Bomb.

**PRESSURE-TIME RELATION  
OF BLAST WAVE STRIKING  
THE STRUCTURE**

**FIGURE 1.—The effect of a blast wave striking a structure.**

## I. DAMAGE FROM AIR BLAST

The large amount of energy released suddenly when an atomic bomb explodes in air appears in two major forms—*mechanical energy* transmitted to the surrounding air, and *radiant energy* (heat, gamma rays, nuclear particles, etc.).

The mechanical effect on the air arises from the sudden heating of the air to a very high temperature. This heated air, in its efforts to expand, exerts an outward force of great magnitude. The sudden expansion produces a compressive shock wave similar to that caused by the detonation of conventional explosives of equivalent explosive energy. This report assumes a nominal atomic bomb releasing energy equivalent to about 20,000 tons of TNT. Only the mechanical, blast effects of the bomb are considered. The first section is devoted to the behavior of the air shock wave and the damage it is capable of doing to various classes of structures. The second section deals with the problems of designing structures to withstand the blast effects.

*Characteristics of the air shock wave*

Figure 1 shows graphically certain important features of the air shock wave:

- a. An abrupt rise in pressure, which takes place immediately.
- b. A gradually decreasing pressure, lasting for about a second.
- c. A suction phase characterized by a decrease below normal atmospheric pressure which lasts for several seconds.

Associated with the abrupt rise of pressure in the first phase of the blast wave is an intense wind velocity which persists—but with diminishing velocity—throughout the pressure phase, blowing away from the point of detonation. This wind reverses its direction at the start of the suction phase, blowing with a lesser velocity in the direction opposite to its former course, but persisting for a longer period of time. The effect of these winds, in the case of long duration blast waves, is to produce a force on the structure for a relatively long time after the shock front has enveloped it and passed by. These various stages of the blast phenomena are illustrated in figure 1.

*The nature of blast effects on structures*

The general nature of the effect of a blast wave on a structure is that of a giant blow due to the sudden onset of pressure, followed by a more or less steady force on the structure directed away from the source of blast which lasts until the blast wave envelops the building. At this time a pressure builds up on the opposite side of the structure (exerted back toward the blast) and adds a net squeezing or compressional force to the over-all structure unless the pressure is relieved by the failure of doors and windows or other structural members.

The ability of a building to resist this rough treatment depends mainly, of course, upon its strength, to a lesser degree upon its shape, and upon the number of openings through the building which can serve to relieve the pressure on the outside walls. The strength, used in this sense, is a general term influenced by many factors, some of which are obvious and others not. The most obvious indicator of strength is massiveness of construction, but this is modified greatly by other factors not immediately visible to the eye, such as (a) the resilience and ductility of the frame, (b) the strength of beam and corner connections, (c) the redundancy or duplication of supports, and (d) the amount of diagonal bracing in the structure.

The strongest structures are heavily framed steel and reinforced concrete buildings, while the weakest are probably certain shed type commercial structures having light frames and long spans of unsupported beams. Certain types of lightly built residential construction also fall in this category, but well-constructed frame residences show good resistance to blast from ordinary bombs and presumably would also to blast from atomic bombs. The resistance to blast of brick structures in which the walls support a load is rather poor, due probably to lack of resilience and relatively poor strength of the connections put under stress when the blast-load is applied laterally to the building.

The effect of shape is not very pronounced in conventional structures which are generally of a rectangular plan form, but of course a long narrow structure will be more resistant to blast against the end than on the side. The shape effect is most pronounced in certain auxiliary parts of the structure such as smoke stacks which, because of the rapid equalization of pressure around them and their relatively low wind drag, are surprisingly resistant to blast; these frequently remain erect when the structures adjacent to them are leveled to the ground. On the other hand, flat surfaces such as windows in an extensive wall surface will have no rapid relief of pressure except by breakage and, having a short period of

vibration, will have a maximum of strain induced in them with a high probability of failure even at comparatively low blast pressures.

Recognizing that substantial variations in blast resistance will occur as a result of differences in building design and construction, it is nevertheless possible to draw significant conclusions from a table of expected damage versus distance, assuming that the strength of the structures approaches what may be termed an average value. Damage information given in table I was prepared largely from data acquired by exhaustive surveys of the damage at Nagasaki and Hiroshima. The numerical values are calculated. Differences from our own construction practices may produce some discrepancies, but it is not believed that they will be very significant. Certain of the Japanese structures were designed to be earthquake resistant, which probably made them stronger than their counterparts in this country; other construction was possibly lighter than our own. However, contrary to popular conceptions concerning the flimsy characteristics of Japanese residences, a group of highly qualified architects and engineers who surveyed the damage concluded that the resistance to blast of American residences in general would not be markedly different from that observed in these cities. Examination of table I indicates that for a nominal 20,000-ton TNT equivalent energy atomic bomb, the categories of damage together with their radii and areas will be as follows:

a. *Virtually complete destruction* will occur out to a radius of approximately one-half mile from the ground zero point when the bomb is exploded at about the optimum height (assumed 2,000 feet) to cause the maximum of destruction. This area of destruction will be approximately three-quarters of a square mile.

b. *Damage ranging from severe to destructive* will occur out to a radial distance slightly in excess of a mile from ground zero, which corresponds to an area of 4 square miles. Severe damage is defined as major structural damage resulting in collapse or liability to collapse of the building.

c. *Moderate to destructive damage* will occur out to a radius of about  $1\frac{1}{2}$  miles, corresponding to an area of 8 square miles. Moderate damage is defined as damage that is short of major structural damage but sufficient to render the structure unusable until repaired.

d. *Partial damage* will be inflicted out to a radius of approximately 2 miles. This adds 4 square miles of damage area, making a total of 12 square miles subject to some degree of damage more severe than plaster damage and window destruction.

e. *Light damage*, which is mostly plaster damage and window breakage, may extend out to a radius of 8 miles or more, encompassing an area of about 200 square miles. Actually these distances at which window and light plaster damage will be inflicted vary markedly with the meteorological conditions at the time of detonation. It is possible to have a "focusing effect" which can produce appreciable damage at quite remote distances. This effect would depend on a set of meteorological conditions which exist occasionally over extensive areas of the United States.

The distances and areas of the various classes of damage cited above are based on the nominal atomic bomb mentioned earlier. Larger bombs would cause greater damage, but a bomb of twice the size—40,000 tons TNT energy equivalence—would not double the area, but would increase it by about 60 percent. The radii of the various zones of damage would be increased by about 25 percent.

#### *Ground shock damage from an air burst*

The burst of an atomic bomb in the air at a height that gives maximum air blast damage exerts a fairly large reflected pressure, of the order of 25 to 50 pounds per square inch, on the ground directly underneath the point of burst. This pressure exists for a period of time equal to the duration of the blast wave itself, although the rate of dissipation with time would be more rapid.

Applying such a load suddenly to the ground surface causes it to act somewhat like a bowl of jelly does when a finger is placed rather gently but suddenly in the center. The surface waves radiating out from the center produce what is termed "ground roll," which in the case of an air burst is a rather minor oscillation of the surface sufficient to be felt but insufficient to cause any damage. However, the pressure acting on the earth's surface will be transmitted downward, with some attenuation, to any superficially buried object in the ground. These pressures might damage certain structures having shallow depths of burial, but air-raid shelters could be designed to withstand such pressure.

In general it can be said that the ground shock effects from an air bomb burst will probably be negligible at a distance, and even directly underneath the burst moderately strong underground structures will be undamaged.

Shallow burial may not be enough protection to prevent certain public utilities such as tile sewer pipes and drains from being damaged by earth shock, but metal piping would probably not be harmed except where it was exposed to disruption by damage to surrounding structures resulting from air blast.

*Structural factors which influence blast resistance*

The general effect of blast on structures varies with a number of factors—the distances from the explosion, the direction and vertical angle from the explosion, the shape and size of the structure, and the equalization of pressure by local failure such as window breakage.

#### EFFECTS OF BLASTS ON STRUCTURES

The preceding general discussion of blast phenomena will be useful in the more detailed consideration that follows of the effects on buildings, bridges, utilities, and housing. The probable effect of blast resulting from explosion of a nominal atomic bomb on various types of structures and utilities will be taken up in turn. Experience in Japan will be our primary guide but it is also necessary to consider structures of types that were not found in the blasted area and differences in construction practice which would affect comparative results in Japan and this country.

Very careful surveys were made of the areas affected by the atomic bomb in Japan. Small masonry buildings were engulfed by the oncoming pressure wave and collapsed completely. Light buildings and residences were completely demolished by blast and fire. Manufacturing buildings of steel construction were denuded of roofing and siding and only the twisted frames remained. Everything above ground at close range was destroyed, except reinforced concrete buildings and smoke stacks. Some buildings which, at a distance, appeared to be sound were found on closer inspection to be damaged and gutted by fire. Some buildings leaned away from ground zero as though struck by a hurricane of unusual violence.

There were many evidences of the effect of radiant heat in starting fires and in scorching and drying out materials that were not highly combustible. Telephone poles were charred and granite surfaces were etched by heat and by the sand blasting effects of the high winds carrying abrasive material. All vehicles at close range were damaged by blast and were burned out.

Many telephone poles were snapped off at ground level, carrying the wires down with them. Gas tanks were ruptured and collapsed and exposed gas mains across bridges were broken. Most important, water pressure was lost due to the break-up of pipes leading to buildings and houses and of mains across bridges. This breakage increased greatly the additional hazard of fires. The following paragraphs contain discussions of the details of this blast-inflicted damage.

*Multistory reinforced concrete frame buildings*

There were many building of this type in Hiroshima and a smaller number in Nagasaki. They varied in resistance to blast according to design and construction but generally suffered remarkably little damage, particularly those designed for resistance against earthquakes. After the severe earthquake of 1923 a code was established for all new construction to reduce earthquake damage. The height of buildings was limited to 100 feet and design for a lateral load of one-tenth the gravity load was required. In addition, the recognized principles of stiffening by diagonals and improved framing to provide continuity were specified. The more important buildings were well designed and constructed according to the code, but some were built without much regard for its requirements.

Close to the explosion, the vertical component of blast was more important than the lateral (sidewise), so that there was heavy damage caused by the downward force exerted on the roof. Depending upon its strength, the roof was pushed down and left sagging or failed completely. The remainder of the structure was less damaged than similar buildings at greater distances because of the lesser horizontal force.

At greater distances the lateral force was proportionately greater and produced these effects:

a. *Buckling and failure of the roof slab by lateral compression.*—This was apparently caused by the force applied to the side of the building which in turn was transferred to the roof, tending to push it back. Since the roof was restrained by connections to less affected portions of the building, it failed in compression.

b. *A similar failure in floor systems.*—Failure usually occurred in the bay between

the first row of interior columns and the affected wall. Buckling was usually upward.

*c. Cracking of concrete and overstressing of concrete and steel at haunches and connections.*—This effect was apparent in a large number of buildings and is readily explained by the tremendous lateral force applied.

*d. Failure of columns by shearing action.*—Columns in the first story were cracked diagonally. This was probably caused by the higher shearing force in the first story resulting from the lateral pressure on the building. Since these columns would receive a heavier lateral force than those above, it is quite natural that they would fail first.

*e. Failure of exterior walls.*—On the side toward the blast, walls were dished inward. The degree of such action depended upon the distance from ground zero, the strength of the wall, and the number of windows which, by breakage, assisted in equalizing pressure rapidly.

*f. Failure of floors.*—Floors were most affected by direct blast in those cases where pressure equalization was not possible. For example, the floors over enclosed basements were pushed downward when higher floors were undamaged.

*g. Miscellaneous effects.*—In addition to the above structural damage, there was heavy damage to false ceilings, plaster, and partitions. Such damage occurred in varying degrees out to a distance of 12,000 feet in Nagasaki. Glass window panes were blown out as far as 12,000 feet from ground zero. This type of damage is extremely important because of the large number of casualties caused by missiles and flying glass.

#### *Multistory steel frame buildings*

There was only one building of this type on record. This was in Nagasaki at a distance of 4,750 feet. The roof was dished 3 feet but the remainder of the frame was largely unaffected. The only part of the structure not classified as being of heavy construction was the roof, which was of thin concrete supported by unusually light steel trusses. The downward failure of the roof was the only structural damage in the building. Reinforced concrete buildings at the same distance were undamaged. However, it is difficult to draw any conclusion as to relative resistance of the two types.

#### *Steel industrial buildings*

In Nagasaki there were many steel buildings used for manufacturing; these were generally of the shed type, with some of the saw-tooth design. Roofs and siding were of corrugated sheet metal or asbestos cement. In some cases there were rails for heavy gantry cranes, but most cranes were of low capacity. Construction was generally comparable to that in the United States. The first effect of blast was to strip off the siding and roof material. Since this did not occur instantaneously, a large impulsive force was applied to the frame. Severe damage occurred up to a distance of 6,000 feet.

There were several types of failure of such structures. At close range the buildings were pushed over bodily, while at greater distances they were left leaning away from ground zero in many cases. The columns, being long and slender, offered little resistance to the lateral force. Sometimes columns failed by a combination of lateral force that caused flexure and, at the same time, an increased downward load from the vertical component of blast on the roof. This caused buckling and collapse. Roof trusses were buckled by compression resulting from blast on the exposed side of the building.

A difference was noticed in the effect on the frame depending upon whether a brittle material like asbestos-cement or a material of high tensile strength such as corrugated sheet iron was used for roof and siding. Asbestos-cement broke up more readily and transferred less force to the steel frame with less structural damage.

Fire produced heavy damage to unprotected steel members so that it was impossible to tell exactly what the blast effect had been. In general, the steel frames were badly distorted and would have been of little use even though siding and roofing material had been available for repairs.

#### *Other types of industrial structures*

Wood trusses were also used to support the roofs. These were more vulnerable to blast because of poor framing and connections and were readily burned out by fire. Concrete columns were used in some cases with steel roof trusses. The concrete columns were more resistant to buckling than the steel.

*Machine tools.*—Damage to machine tools was caused by debris, particularly in reinforced concrete sheds, by fire in wood frame structures, and in all cases by dis-

location and overturning caused by damage to the structure. In many cases the machine tools were belt driven, so that the distortion of the building pulled the machine tool off its base, damaging or overturning it.

*Stacks.*—Stacks are of special interest. Those of reinforced concrete were particularly resistant to blast. This can be accounted for by the shape and small cross section, which permitted the blast to equalize quickly, by their long periods of vibration, and by their inherent strength. Steel stacks stood up fairly well, but, being lighter in weight and subject to crushing, were not comparable to reinforced concrete. Well-constructed masonry stacks also withstood damage reasonably well.

#### *Building with load-bearing walls*

Smaller buildings of this type with light walls collapsed. Large buildings with cross walls and of somewhat heavier construction were more resistant but failed at distances up to 6,200 feet. Even when the building remained standing, cracks were observed at the junction of cross walls and side walls.

#### *Timber-Framed Buildings and Housing*

While the quality of the workmanship in wood buildings was high, little attention was paid to engineering principles. Mortise and tenon joints were weak points and connections in general were poor. Timbers were notched excessively or splices were put in improper locations. In general the construction was not well adapted to resist wracking or twisting action. Housing collapsed at Nagasaki up to a distance of 7,500 feet and there was structural damage up to a distance of 8,600 feet. Roofs, wall panels, and partitions were damaged out to a distance of 9,000 feet.

#### *Bridges*

There were a number of kinds of bridges exposed in Hiroshima and Nagasaki. Those of wood were burned in most cases but the steel girder bridges came through remarkably well. One was only 260 feet from ground zero. It was a girder type and had a reinforced concrete deck. There was no sign of any structural damage. The spans had apparently been deflected by the blast and had rebounded, causing a slight movement. Other bridges at greater distance suffered more lateral shifting. A reinforced concrete deck was lifted from the supporting steel girders of one bridge, presumably by force of the blast wave reflected from the water below.

#### *Utilities*

In Nagasaki the public utility system was comparable to that in an American city of 30,000 population, except that open sewers were used.

Damage to the water supply essential for firefighting was of the greatest significance. Except for one case, this was caused not by failure of the underground mains but by loss of pressure through breakage of pipes in houses and buildings. In one filled-in area, surface depressions up to 1 foot in depth were observed at scattered points as far as 2,000 feet from ground zero. This caused a series of failures of 12-inch cast iron water pipes 3 feet below ground. This breakage was probably caused by unequal vertical displacement. There was no serious damage to reservoirs and water treatment plants as they were located at too great a distance from ground zero.

Overhead utility poles were broken close to the ground by blast, and overhead utilities were heavily damaged at distances up to 10,000 feet. Underground electrical conduits were little affected. Switch gear and transformers were not damaged directly by blast but by secondary effects such as collapse of the structure in which they were located or by debris. Motors and generators were damaged by fire.

Gas tanks were heavily damaged by blast at 6,600 feet; the escaping gas was ignited but there was no explosion. Gas mains suffered no observable damage except where exposed over bridges. Street railway equipment was heavily damaged by fire and blast. Buses and automobiles in general were damaged by blast, and were burned out at shorter distances. As an example, an American-made car was heavily damaged and burned at 3,000 feet while one at 6,000 suffered only minor damage.

#### *Shelters*

Caves were used for shelter to a large extent, but there were many timber, semiburied shelters with earth cover. The semiburied shelters were not particularly well built, but in some cases they withstood the blast at a distance of 900 feet from ground zero and none was damaged beyond one-half mile.

## DISCUSSION OF PROPARLE EFFECTS IN THE UNITED STATES

While the structural effects observed in Japan are comparable in general to what would be expected in this country, some differences are worthy of discussion. Studies of the resistance of small bridges in Japan to atomic blast gives no direct guide to the question of the larger bridges in many American cities.

*Reinforced concrete frame buildings*

In Japan, reinforced concrete buildings of earthquake-resistant design withstood blast quite well. These buildings were designed for a lateral force equal to 10 percent of the vertical load. When lateral pressure tends to displace the top of the building with respect to the foundation the resulting action is roughly the same as if earthquake forces moved the foundation against the inertial resistance of the structure.

Our multistory buildings in this country are generally designed to withstand wind load only. Therefore our reinforced concrete buildings would be generally less resistant to collapse than those designed for earthquake resistance in Japan. In the 11 Western States of this country, the building codes provide for the design of structures to resist horizontal earthquake forces varying from 2 to 16 percent of the vertical load, which is usually taken as dead weight plus half the vertical design live load. Of the earthquake zones the Pacific coast area has the highest requirements. The earthquake design requirements as stipulated in the building codes are similar to those for wind loads, but call for a 33-percent increase in the allowable working stresses. These buildings would be proportionately more resistant as the percentage of horizontal to vertical design load increases.

*Steel-frame buildings*

The effect on steel-frame buildings, such as multiple storied office and hospital structures, should be approximately the same as that on reinforced-concrete. Tall buildings having heavy steel frames and a long period of vibration should withstand the effect of blast very well.

*Industrial type buildings*

Our steel industrial buildings would probably fare no better than those in Japan. The saw-tooth roofs designed as rigid frames would be especially vulnerable to blast damage.

*Housing*

Tests made on typical housing of wood frame construction with conventional bombs up to 500 pounds, and at various distances, indicate a high degree of resistance against blast beyond 30 feet. While no direct interpretation of these results can be made with regard to the blast from a large explosion which would have quite different characteristics, it is believed that the radius of material structural blast damage from a nominal atomic bomb burst would not exceed 7,500 feet. This is slightly less than the extreme radius in Nagasaki, where severe damage to houses extended in some cases to a distance of 8,500 feet.

*Bridges*

In Japan, bridges withstood vertical blast loads very well, and there is no reason to believe that all bridges would not behave in a similar fashion. Lateral loads, even if excessive, would affect the less important structural members of the bridge. The actual lateral loads are difficult to calculate. We are dealing with blast wind velocities that may approach that of sound. It is clear, however, that in this case only the drag pressure will be of great importance, and there will be relatively small effect from the shock wave blast because of the comparatively small size of the members. Wind tunnel tests would be necessary to provide accurate data on drag coefficients.

## II. PROTECTIVE CONSTRUCTION

In planning protective construction, it is reasonable to assume that any prospective enemy would attempt first to destroy our ability to wage war by attacking selected vital facilities. In such an attack the enemy would attempt to do the greatest possible damage with the bombs available and the force he has to deliver them. Conversely, the primary objective from the standpoint of protective construction is to make it as difficult as possible to reduce our war potential. If we could make the enemy expend more effort to produce the same damage, it should be an important factor in the outcome of any future war. In fact, by making our country less vulnerable, we increase our military strength.

With the above general objective in view, this section indicates measures of protection that can be provided by site planning, design of new structures, and modification of existing structures. The effects of the atomic bomb discussed in section I provide a good basis for indicating protective requirements. Of primary interest to the architect and engineer are air blast, earth shock, prompt ionizing radiation, and radiant heat. There is a great deal that can be done to minimize the damage resulting from these phenomena.

New construction affords the best opportunity for the inclusion of measures of protective construction at minimum cost. Location is probably the primary consideration, involving both the existing target value of the surrounding area and the new plant. If the facilities being planned are important to the war potential, they may be dispersed so as to reduce their attractiveness as targets.

Also, it is possible to make structures more resistant to blast, ground shock, and fire, and thus increase the protection afforded to personnel and equipment. For example, blast effect is reduced by strengthening structures, particularly against lateral and downward blast forces, and avoiding types and materials of construction that would be hazardous to occupants when buildings are subjected to violent forces.

Fire hazard is reduced by site planning for new construction; by use of fire-resistant construction; by avoiding exposed inflammable materials which might be ignited by radiant heat; and by insuring adequate means of fighting fires.

New facilities might be placed underground in an existing mine or a site excavated in rock for the purpose. This provides a high degree of protection and the cost is not unreasonable, particularly when an existing mine is used. Studies of European experience and possibilities in this country indicate that for the most vital industrial facilities underground construction is entirely practical. Also, control facilities for civil defense could be placed underground to good advantage.

The effectiveness of various combinations of the above measures may depend upon the particular situation. Therefore it is necessary to evaluate the hazard, the importance of the facility, and the cost of protective measures to decide on the measures to be used. Furthermore, it is necessary to consider the broad problem including civil defense. An atomic bomb explosion will affect a large portion of a city, so that protection of any facility is inevitably linked with that of the community in which it is located. Disaster control is vital, and protective construction measures must insure that services essential for control, rescue, and limitation of fire damage will remain available.

#### PROTECTIVE MEASURES

With the above general introduction the separate measures that may be employed will be discussed in greater detail. These relate to the broad field of protective construction as applied to industry, city planning, and civil defense. Specific examples are given to indicate what is possible. In general it is assumed that damage within a radius of one-half mile would be so severe as to make protection of above-ground facilities impractical within that area.

It is important to bear in mind that the statements made here concerning types of protective measures that might be employed are simply statements of physical fact. Applying some of these measures, such as dispersion, means far-reaching decisions of policy that will affect many people and communities. This discussion does not go into the policy questions which are outside the scope of this paper.

##### *Dispersion*

Dispersion is of primary importance in planning rescue and damage control services in a city. Constant effective control is vital in carrying out rescue operations and limiting fire damage. It may well be that control centers must be located centrally in which case structural protection of the centers would be desirable. However, it appears entirely feasible to have control centers at two or more locations at least 3 miles from the probable target area and thus obtain reasonable assurance that control can be maintained. Control requires adequate and uninterrupted communication with field units to obtain information on casualties and damage, and to direct relief efforts. Since a major disaster may destroy all normal communications facilities, the control center should be able to broadcast from a self-contained power unit.

##### *Duplication*

The provision of duplicate services on a stand-by basis is another principle of protective construction. For example, a separate connection to a second power source might be provided and thus duplicate incoming power lines serving a

manufacturing plant. To be effective, the lines should be separated as far as possible. It is rarely practicable, however, to have complete duplication. In many cases, it is possible to provide greater assurance of continued operations by partial duplication. For example, there might be a primary control center, complete with all necessary communications and a secondary control center so equipped that it would serve as a primary center in case of damage to the regular primary center. It is quite possible that the extra space and communications over and above that needed for use as a secondary station could be provided at reasonable expense.

Duplication of water supply to the fringes of various areas in a city, assuming loss of pressure in those areas, will be desirable. Similarly, increasing the fire-fighting force and facilities in suburbs of a large industrial city to assure better protection of the city itself might be considered a form of duplication.

#### METHODS OF REDUCING BLAST HAZARDS IN BUILDING

The most serious danger to persons and equipment in a building is from total collapse. Design to reduce danger of collapse is discussed in the latter part of this section. From an over-all viewpoint, the more important consideration is to reduce the hazard to persons who are in buildings that are able to resist collapse but would be damaged to some extent. A well-attached, reinforced concrete shell on a frame of either steel or reinforced concrete will provide a high degree of protection to persons both inside and outside the building, whereas a lightly attached wall of concrete blocks or bricks will provide almost no protection inside the building and will provide missiles both inside and out. Avoiding danger of injury from flying glass, displaced equipment, falling fixtures, and false ceilings is particularly important.

Flying glass is a serious hazard that should be considered in design. Measures used in protection against conventional bombs, such as muslin glued or pasted over the surface of the glass and frame, would have little value as the long duration of an atomic blast would cause the glass to be blown out anyway. Tentatively, wire glass plus half-inch-mesh wire screening, securely nailed to the frame, may afford a partial measure of protection. This would not cut off light appreciably and would stop the larger, more dangerous pieces of flying glass. Another possible measure would be the use of plastic substitutes for glass.

Consideration should be given to the possible hazard from fixtures and heavier ornamental plaster or other interior treatment that might be thrown down by the blast or wracking action on the building. The safest procedure would be to remove any hazardous item. If this is not fully practicable, such partial safeguards should be provided as may be feasible.

Blast walls of the type provided to localize damage from ordinary bombs will be helpful in reducing injury from flying missiles and will afford some protection against atomic blast. Similarly, walls around transformers and other equipment will be effective in reducing damage. These walls should be of reinforced concrete 12 inches thick and should be made resistant to overturning. This may be accomplished by use of counterforts, providing a wide base, or by use of steel beams incorporated into the wall and extending into the ground. The last method is preferred.

In an industrial plant, there may be requirements for protected areas—for essential control or first-aid facilities—that will provide reasonable safety against blast and radiation injury at a distance of one-half mile from ground zero. A total thickness of about 21 inches of concrete will be required to protect against serious prompt radiation injury at one-half mile. If a first-aid room is to be provided in a steel mill-type factory building, for example, it should be of reinforced concrete of that thickness. Consideration in design should be given to possible debris load, blast pressure, and wracking action. Locations where heavy debris loads might come on the first-aid room should be avoided. In framed structures the roof of the room should be designed for a static load of 500 pounds per square foot to resist debris loads and blast. Walls of the shelter should be designed for a static load of 500 pounds per square foot to protect against blast. There should be no windows, and doors should be designed for the same pressure as the walls. There should be at least two means of exit. Fillets at the corners with diagonal bars to resist wracking action are recommended. Water storage, emergency rations, and emergency lighting will be desirable.

In a city, a protected area on one of the lower floors of a fireproof, well-constructed, reinforced-concrete or steel-frame building might offer the best possibility for a control or first-aid room. The building should be either in a

group of fireproof buildings or isolated from other buildings to avoid hazard of a general conflagration. An effective degree of blast protection within such a building could be provided by enclosing a properly located area with a 12-inch reinforced-concrete wall, anchored to the floor to prevent displacement and braced or secured at the top to prevent overturning. It is believed, in this case, that the blast pressure inside the building would be considerably reduced and that a 12-inch thick wall would be adequate at a distance of one-half mile. It is assumed here that the exterior walls of the building would have a protective value against prompt radiation equivalent to 9 inches of concrete, which together with the special area wall, would provide a total effective thickness of 21 inches.

#### *Underground construction*

Vital installations may be put underground in an existing mine or newly excavated site, to obtain a high degree of protection against the atomic bomb. Studies recently completed indicate that there are no serious difficulties in constructing and operating underground manufacturing plants. When noxious fumes or large amounts of heat are produced, the capacity of the air-conditioning equipment must, of course, be adequate, which will add to the cost; but for certain types of manufacturing there is only a small difference in the cost whether the plant is built above ground or below ground in an existing mine. Estimates are that there are approximately 320 million square feet of floor space available in mines of suitable type in the United States. Many of these are within reasonable distance of transportation and labor supply. Construction in a suitable geologic formation would be more costly but by no means prohibitive.

There may be tunnels or caves near cities that can be used for control centers, emergency operating rooms, or for storage of medical supplies. They must be in good condition and in a suitably stable geologic formation. The entrance doors must be protected against blast by barricades (walls in front of doors to reduce blast effect) and should be of heavy steel construction.

#### *Heavy concrete construction*

Military requirements exist for heavy concrete structures that will afford protection against direct hits of high-explosive bombs and which will provide protection against the atomic bomb except at extremely close range. Such structures would be of little use in an area where large-scale fires might occur which would render them untenable, or where they might become isolated by damage to communications. There is serious question as to the justification for such construction in a city, that is, heavy enough to withstand a very close atomic-bomb explosion, but it may be required for vital facilities in vulnerable areas where underground construction is not feasible.

#### *Design of buildings to resist blast effects of the atomic bomb*

If buildings must be constructed in possible target areas for atomic-bomb attack, prudence dictates that they be designed so as to increase the safety of occupants and offer the greatest practicable resistance to collapse and damage. Target areas are defined generally in the NSRB publication, *National Security Factors in Industrial Location*. A general evaluation of the importance of industry or other activity in war should provide additional guidance as to vital targets. Any building to be constructed within 3 miles of any such vital target should be considered as in the target area. In determining the degree of protection to be provided, the location of the building within this area should be considered.

Considerable study is being given to the problem of blast-resistant design by the Department of Defense and educational institutions. There remains, however, a great deal to be done before satisfactory design procedures can be established. Therefore more detailed discussion would have little value at this time.

#### RECOMMENDATIONS ON CONSTRUCTION

For the present the following tentative recommendations are made: *Multistory reinforced-concrete or steel-frame building*.—It is suggested that the designer assume a horizontal wind component of 90 pounds per square foot and a vertical component of 70 pounds per square foot for protection against structural collapse from an atomic bomb releasing energy equivalent to 20,000 tons of TNT, exploding at a horizontal distance of one-half mile and a height of approximately 2,000 feet. It is also suggested that buildings and their component parts be designed employing the methods, allowable stresses, and details employed in wind- or earthquake-resistant design. For greater distances, it is recommended that the designer re-

duce the pressure in proportion to reduction in peak pressure indicated in table I, allowing for the change in vertical angle.

The above recommendations are based on the experience in Japan for this type of building limited to 100 feet in height. Wind load is believed to be the best basis for design to resist blast. Design for a 90-pound horizontal-component wind load compares roughly with an earthquake-resistant design for a lateral force equal to 10 percent of the weight. Since earthquake-resistant buildings suffered no damage to the frame at 2,000 feet and beyond in Nagasaki, this appears to be reasonable.

*Smaller reinforced-concrete buildings.*—Design for same pressures prescribed for multistory buildings as monolithic structures employing principles of earthquake-resistant design.

*Steel mill buildings.*—Design for horizontal component of wind pressure of 90 pounds per square foot and vertical component of 70 pounds per square foot for resistance of frame at horizontal distance of one-half mile and height of explosion of 2,000 feet. This assumes that failure of corrugated metal or asbestos-cement siding and roofing will reduce the load on frame, thus compensating for the lighter weight. Use of a material such as asbestos-cement which will break up more readily than corrugated metal will contribute to reduction in load on frames and reduce injuries and damage from pieces of siding or roofing that strike occupants and equipment.

#### *General considerations in structural design of buildings to resist blast*

Rigidity, redundancy, and ductility are important factors affecting resistance of buildings to blast. All of these increase resistance but it is now necessary to suggest design methods for improving resistance in these respects. Stability is also a factor, but in the usual case will be less important. The stresses produced by overturning effect should be considered in all cases, however.

*Rigidity.*—It is believed that the general solution of the problem of designing a building to resist high lateral and downward pressures is to provide additional resisting elements, such as transverse shear walls, lateral beams, and deep lateral trusses, and to design concrete floors and roofs to transmit the lateral forces to shear walls. In bending caused by frame action, the conventional use of the column as the resisting elements is unsatisfactory for high lateral forces. The establishment of design requirements for a static wind load is largely arbitrary and is useful in providing a design criterion. It will be beneficial to include any design feature that will provide greater strength where cost is not materially increased. It will also be found that limiting the height of buildings is desirable in order to avoid high lateral stresses.

*Redundancy.*—In the sense used here, redundancy is the quality of a structure to resist damage when certain members fail, by bringing into play other structural elements. Suppose, for example, that first-story columns were damaged by shearing action but that there were reinforced-concrete walls that would help support the load from above. The walls may be damaged too, but they may continue to support the second floor of the building. In a Manila public building several columns in a row in the first story were destroyed by artillery fire. The second floor sagged slightly but the damaged portion was bridged by the undamaged structure above. In general, reinforced-concrete structures have this quality. No absolute guide can be laid down for design, but a study of probable points of failure and possible support that might be provided by adjacent portions of the building should indicate to the designer both possible and practical means of adding to the blast-resistant quality of the building.

*Ductility.*—Ductility in a building material refers to its quality of yielding gradually under stress, or of undergoing deformation before failing. Usually a ductile material would deform to a greater extent within the elastic limit under the same load than one that is less ductile. In that sense a requirement for ductility is not consistent with rigidity. Nevertheless, ductility is an important consideration in resisting collapse. When the elastic limit of a ductile material such as steel is exceeded, considerable yield results before failure occurs. On the other hand a brittle material such as concrete would yield only to a limited extent before failing.

Tests have shown that for blast resistance purposes a structural-grade steel is much better for reinforcement than a hard-grade. When a reinforced-concrete structure is subjected to heavy blast forces and damage occurs, the softer steel may elongate or deform without failure where the hard-grade steel snaps. More energy is absorbed in the plastic range by the structural-grade steel. Accordingly, the use of a structural-grade reinforcing steel is recommended. In the usual case such a selection will have little effect on rigidity.

### *Bridges*

Since most of the bridges exposed in Japan were small in size there is little indication of what would happen to the larger bridges of varying types found in the United States. It is recommended that bridges be analyzed dynamically. For chord members or suspension cables, drag force would receive primary consideration. The vertical component of blast on the deck could be serious, but bridges are designed for vertical load. Stressing of cross-bracing by the lateral component of the blast force would probably not be critical.

### *Strengthening existing structures and reducing hazards*

This is a much more difficult problem than that of incorporating necessary measures in design. It will be necessary to analyze the structure, find weak points and then determine the best method of strengthening. It is believed that adding bracing and shoring of new transverse reinforced concrete walls will, in most buildings, be more feasible than strengthening the frame. Removal of portions of interior construction and fixtures likely to injure personnel or provision of adequate safeguards must be considered. Also overhanging cornices, finials, etc., on the outside, will be a hazard to passers-by, and their removal would be worth while. One very simple requirement is for the provision of materials for replacement of roofing and siding of steel mill buildings, closure of window openings, and other measures to protect against the weather.

### *Fire protection*

Fires are started by radiant heat and by secondary effects such as overturning of stoves and rupture of gas pipes. Fire-resistant construction and avoidance of fabrics and other light material of inflammable character are essential to reduce fire damage. The possible disruption of water supply and the tremendous demand for fire-fighting services in time of disaster must be kept in mind.

All of the proved methods of design to reduce fire damage are fully applicable in plans to minimize the effect of atomic bomb. Extreme fire-protective measures are indicated under certain conditions. The value of protection of steel columns and other steel members from fire is emphasized by the distortion of exposed structural steel frames in Japan. Narrow fire breaks in Japan were of little use. Fire breaks which may be provided in city planning, or by demolition once fires have started, must be adequate for a major conflagration.

The provision of an adequate water supply is probably the most important single element in control of fires. In Nagasaki, it was estimated that almost immediately after the detonation, fires were started in dwellings within a radius of 3,000 feet from ground zero. Beyond this distance, fires were caused largely by spread; nearly all fires were secondary. The water pressure was only 30 pounds per square inch at the time of the explosion and because of breaks in mains and house service lines, soon dropped to 10 pounds and on the following day was zero.

The experience at Nagasaki gives some idea of the area immediately affected and that in which some control may be possible. As indicated earlier, there are certain areas of most big cities that would contain probable targets. The enemy would probably want to damage facilities or plants most important to the war effort. However, there would be no assurance that the explosion might not occur at some other point because of errors by the attacking force. A reasonable approach would be to study the map of the city and make various assumptions as to areas in which large scale fires might be started by an atomic bomb with loss of water supply occurring in the same area. The objective would be to provide for the localization of the loss of pressure and water in order to assure adequate pressure and supply for firefighting in fringe areas.

Storage tanks for local supply would be of value in stopping incipient and local fires, but would probably have limited value in large-scale fire-fighting operations. Their installation should be considered where appropriate, particularly for manufacturing plants.

Assurance of adequate firefighting services is a separate problem. Within the scope of this section, it is only necessary to emphasize the desirability of locating a sufficient number of fire stations on the outskirts of the city, as well dispersed as possible. Joint fire defense planning among cities is highly desirable but, to be effective, mutual aid between cities requires standardization of hose couplings or use of adaptors.

## SHELTERS

Considerations involved in the provision of shelters are (a) warning to be expected, (b) time required for persons to reach shelters, (c) number of persons to a shelter, (d) period of occupancy, (e) degree of protection to be afforded.

If there is little warning, shelter must be found, in general, close to the place of work. In our large cities, an extremely large number of persons are concentrated in buildings that cannot be evacuated rapidly. The use of shelter areas in buildings therefore appears to be the most feasible scheme unless adequate warning can be assured. Even with adequate warning the practical problem of finding a place for shelters in a congested city would be difficult.

Plans for locating shelter areas in buildings should be given first priority. Principles involved are briefly as follows: First, select fireproof reinforced-concrete or steel-frame buildings that are resistant to collapse; next, find areas that offer acceptable protection against blast, radiation, flying glass, and debris. These areas will be found usually on the lower floors and in halls or the interior portion of the building. Avoid secondary hazards such as that from falling plaster or fixtures and inflammable materials. At least two means of exit are essential for safety. Since general evacuation will probably be necessary, an important requirement is a means of leaving the building without depending on elevators, which might be inoperative.

With regard to details of protection, table I indicates the blast pressure to be expected in the open. The reduction in pressure to be expected inside a building must be largely an estimate. The amount of glass and strength of intervening partitions would be factors. Around the shelter area, a 12-inch-thick reinforced-concrete wall well tied into the outer structure would, in most cases, be adequate to resist blast at a distance of one-half mile.

Basements of homes would offer reasonable protection against distant detonation. However, care must be taken to provide escapes to be used in case the house above catches on fire.

Outside shelters should, in the usual case, be built to resist the full effects of a near miss of a high explosive bomb and the blast effects from a nominal atomic bomb at a reasonable distance, say one-half mile. They should be located well clear of buildings to avoid hazard from debris and fire. A buried or semi-buried shelter will usually be the best choice (for protection from an *air burst*) as blast effect will be less than that on a surface shelter. Reinforced concrete is a good construction material and can be made strong enough to resist the forces involved. Alternatively, for a well-buried shelter corrugated sheet iron of the type used in culverts has strength and is capable of a high degree of distortion without failure. Wood is also suitable but less permanent.

Tentatively, shelters may be designed for a static load of 500 pounds per square foot with usual design stresses. This should provide protection against blast at one-half mile from ground zero if an earth cover of at least 2 feet is provided. This cover is necessary for protection against ionizing radiation; it also adds appreciably to the blast resistance. Dead load should be figured separately. Adequate drainage should be provided. The shelter should be capable of being closed up so as to be air tight. Doors should also be blast resistant and designed for static pressure of 500 pounds per square foot, and should close tightly against seals in the frame. A ramp entrance is preferred to one with steps. At least two means of exit are essential.

Shelters vary in capacity, and the equipment that can be provided will be more extensive in a large shelter than a small one. Generally, the following should be considered in design.

**Ventilation**

Mechanical ventilating system.

Hand-powered ventilating system if no power available.

**General**

Telephone between inside and outside of shelter.

Lights—battery operated.

Light system if power is provided.

Power plant with separate gasoline or Diesel drive, located in separate part of shelter accessible to outside air with operating switches in closed portion of shelter.

Benches.

Bunks were justified.

Chemical toilets.

Drinking water.

Emergency rations.

First-aid equipment.

Blankets.

# CIVIL DEFENSE AGAINST ATOMIC ATTACK

---

FRIDAY, MARCH 17, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met at 10:30 a. m., pursuant to call, in the caucus room of the Senate Office Building, Senator Brien McMahon (chairman), presiding.

Present: Senators McMahon (chairman), Connally, Tydings, Hickenlooper, Knowland, and Bricker; and Representatives Holifield, Price, and Elston.

The CHAIRMAN. The joint committee will be in order.

Before we hear from the Commission, I would like to say that this is the first in a series of hearings regarding the state of our civilian defenses as it pertains to atomic attack.

I personally have great faith and hope that any set-up that we have will never be made use of. We must realize, however, that we are spending some \$15,000,000,000 a year on our Military Establishment, and we are spending it for the purpose of protecting this country. It therefore would seem only right and sensible that we examine into the state of the plans for the protection of our civilians, at least as far as we can, in the atomic field.

The people of the United States are not aggressively minded, but past history has shown they can be very aggressive when they are attacked. If we should be in the future, we will, I am sure, give a good account of ourselves. We will also give a good account of ourselves on the home front, if that should become necessary.

I have asked the Atomic Energy Commission to come and present their views, which I might say are being presented after extensive executive hearings. The matters that will be presented here have been carefully screened, and they are designed for the information and help of the citizens of the United States, and not for aid and assistance to anybody else.

In our executive hearings we have heard from the Commission, from General Bradley, and from the National Security Resources Board representatives. The staff has made a rather complete study of the civil defense plans of other countries, and we have a joint committee print of preliminary data on that subject.

Now, Commissioner, with that introduction, will you come forward, please?

## STATEMENT OF GORDON E. DEAN, COMMISSIONER, UNITED STATES ATOMIC ENERGY COMMISSION

Commissioner DEAN. Mr. Chairman and members of the committee, it will be our purpose this morning to explain to you first, rather briefly, the role of the Atomic Energy Commission in this field of civil defense. We will go on beyond that with additional witnesses to convey to the committee some of the knowledge which has been developed inside the Commission which pertains to this subject.

I have prepared a brief opening statement here which I should like to offer for the record, not with a view to having it printed, necessarily, because I will paraphrase it in my remarks.

(The statement follows:)

### STATEMENT PREPARED BY GORDON E. DEAN, COMMISSIONER, UNITED STATES ATOMIC ENERGY COMMISSION

As you know, the President last spring gave the National Security Resources Board primary responsibility for civil defense planning. The Board, in turn, has been in touch with various agencies of the Government, including the Atomic Energy Commission, and it has indicated what our role shall be.

In an exchange of correspondence of last July it was agreed by us and by the NSRB that "the Commission's role in civil defense planning will be in large measure one of supplying information to other agencies with primary responsibility for civil defense planning."

As we conceive our role, it is to supply to the NSRB—because we are the people who presumably know most about it—the information on atomic energy which we have inside our organization and which might be useful to the NSRB in planning for civil defense against atomic warfare.

The Commission and the NSRB agree that the Commission should not have any planning or operating function in the field of civil defense. For example, the NSRB does not expect us to perform or plan for such typically civil defense functions as the administration of emergency medical aid, fire fighting, or area evacuation, or, except as provided through stopgap emergency arrangements, the monitoring of an area contaminated by the explosion of an atomic bomb.

I would also like to emphasize that we are not the experts on such questions as what would be the most logical targets within the United States to defend against atomic attack, or whether, when, or how the dispersal of industries or cities should be carried out.

Our job, then, is to supply the information that we have on atomic energy to the people who make the decisions and carry on operating functions in the field of civil defense. I would like to say at this point that we are acutely aware of the value of the information we hold to civil defense authorities, and of our responsibility to supply as full a measure as possible of the information relating to atomic energy that is essential to the proper handling of civil defense functions. At the same time, however, the Commission must always be aware of the equally important need to keep restrictions on certain information in the interests of the national defense and security. The task of striking a proper balance between these two important considerations is a difficult and delicate one.

In this connection, we have declassified about 150 documents out of some 400 that we have in our organization which we believe would be useful in civil defense planning. These documents have been made available to the NSRB.

We are also preparing, together with the Department of Defense, a Weapons Effects Handbook, about which we have reported to you in the past. Progress on this has been slow, partly due to the need of first preparing a classified draft and then determining how much of it can be declassified. Because of this, we decided a few months ago not to wait for the handbook but to get out the most useful information that could be made public at the moment.

As a result, we have prepared three studies which have been supplied to the NSRB and reproduced and distributed by them. One—a very short one—had to do with the effects of an atomic explosion on the city of Washington. The others, both prepared by us jointly with the Department of Defense, are called Medical Aspects of Atomic Weapons, and Damage from Atomic Explosion and Design of Protective Structures. The first describes the injuries caused by atomic

bombs, the effects of radiation and the nature of residual radiological contamination. The second deals with the damage an air blast from an atomic bomb would cause to various types of structures and buildings, and how buildings may be constructed to resist these effects.

There is also presently being prepared for submission to the NSRB a study, titled "Radiation Detection Instruments," which describes the operational characteristics of the portable instruments now being used by radiation monitoring specialists in the atomic energy program. One of the principal needs of civil defense monitors will be a simple, rugged, easily operated radiation monitoring instrument that can be used by people without advanced training in this field. We have recently made some progress in the development of such an instrument.

At the request of the NSRB, we are also engaging in some training activities, which we feel is another especially good way to get the information held by people within our organization out into the hands of those who will instruct the people required in civil defense work.

We have conceived our purpose in connection with our training work to be this: That we should not go out and train people in all of the States, but we should train instructors from the States who can in turn go out and train people in their own areas under the direction of their own local civil defense authorities. We have accordingly established training courses at a number of conveniently located laboratories for doctors and radiological monitoring experts.

I have with me here Dr. Shields Warren, Director of our Division of Biology and Medicine, who is prepared to tell you about these training courses, and also about those features of our medical research program which have a civilian defense application.

Also here, are Mr. John A. Derry, executive officer of the Biology and Medicine Division, who will describe our program for the development and use of radiation detection instruments, and Mr. Harry L. Bowman, a consultant to the Biology and Medicine Division, who will discuss the effects of atomic explosions on structures.

These gentlemen have been given primary responsibility within the Commission for liaison with the NSRB and other Government agencies on civil defense planning matters.

Commissioner DEAN. As you know, the President last spring gave to the National Security Resources Board the primary responsibility for civil defense planning. The Board, in turn, has been in touch with the various Federal agencies that might have some contribution to make to the subject, and included among those agencies has been the Atomic Energy Commission.

The NSRB, as the National Security Resources Board is commonly known, assigned to us a role. That was done last spring following their designation as the agency of primary responsibility by the President.

As we conceive our role, it is to supply information to the NSRB—because presumably we are the ones that have the most information on this subject, that is, information concerning the effects of atomic explosion.

The Commission and the NSRB agree that the Commission should not have any planning or operating responsibility; that we are simply dispensers of information on the effect of atomic explosions. For example, the NSRB does not expect us to perform or plan for such typically civil defense functions as the administration of emergency medical aid, fire fighting, or area evacuation, or, except as provided through certain emergency arrangements which we will deal with later, it does not expect us to even monitor areas where there has been an atomic explosion.

I would also like to emphasize that we are not experts on such questions as what would be the most logical targets within the United States for an enemy to hit, or whether and to what extent there should be dispersal within this country.

Our job, then, is to supply information we have on atomic energy to the people who make the decisions and carry on the operating functions in the field of civil defense.

The CHAIRMAN. Mr. Dean, at that point could you tell us, while I realize it is not directly within your own scope, what other agencies have been asked to report to the NSRB, with a general explanation of their duties?

Commissioner DEAN. I am probably not the best witness on this subject. It is a long list of Government agencies.

The CHAIRMAN. Suppose you give us two or three examples.

Commissioner DEAN. One example would be the Federal Works Agency. Another would be, of course, liaison with the Defense Establishment. Another would be the United States Public Health Service. There are probably 15 or 20 agencies that would be included in the list.

The CHAIRMAN. And the Interstate Commerce Commission on communications?

Commissioner DEAN. I believe so. I am trying to find the list, because I believe there was one published by the NSRB.

I do not happen to have it before me.

The CHAIRMAN. What I am trying to bring out, in other words, right at the beginning, is that your agency is in a comparable position with some of the other agencies with regard to your peculiar field and their peculiar field. You send to the NSRB the information upon which they can base their planning, and so do 15 or 20 other departments of the Government.

Commissioner DEAN. I might name a few of these. I now have a chart before me. This is in the printed booklet prepared by the staff of the joint committee, at page 7.

You will note that under the column "Other Federal agencies and departments," the Atomic Energy Commission is listed first, and I think it is well that I read the description there:

Technical advice and assistance—Radiological defense schools.

Then it passes on to the Federal Security Agency, which is in charge of health and medical programs and plans.

Third, the Department of Commerce, Bureau of Public Roads—Plans and programs for highway use.

Fourth, the Department of the Interior, Bureau of Mines—Plans for heavy rescue activities.

Fifth, Housing and Home Finance Agency, which is responsible for plans and programs for emergency housing.

And there are other miscellaneous agencies.

I would say that those were the primary agencies with whom the NSRB is in touch.

Senator TYDINGS. I think the record ought to also show that the Interstate Commerce Commission and the Federal Communications Commission and the Maritime Commission, as well as the armed services—I will leave those out for the moment—and the Attorney General's office, the FBI, all of those various agencies have some facet in this very multiple thing that we call defense in its entirety.

Commissioner DEAN. That is quite true.

I would like to say at this point that we are acutely aware of the value of the information that we have, and of our responsibility to

supply that information to the proper agencies of government. I do not have to suggest, certainly, to this joint committee, because you are quite familiar with it, that we must also be aware of the equally important need to keep restrictions on certain information, in the interests of national defense and security. The chairman has already indicated that emphasis.

In this connection, that is, the dissemination of information to the NSRB, we have already declassified about 150 documents out of some 400 that we have in our organization which we believe are useful to civil defense planning. These documents have been turned over to the NSRB.

We are also preparing, together with the Department of Defense, a weapons effects handbook, about which we have reported to you in executive session. Progress on this, I must admit, has been rather slow because we first had to go through a classified version, and then we are trying to use the blue pencil and come out with an unclassified version. At the same time, I think that we have made up for that slowness by getting out three portions of the text in pamphlet form. These have been made available to the public—to the NSRB, and in turn to the public.

We have prepared one on the medical aspects of atomic weapons; we have prepared a pamphlet entitled "Damage From Atomic Explosion and Design of Protective Structures"; and a third one, a brief one, on the effect of an atomic blast on the city of Washington.

The first-named one describes the injuries caused by atomic bombs, the effects of radiation and the nature of residual radiological contamination.

The second deals with damage that an air blast from an atomic bomb would cause to various types of structures and buildings, and how the buildings may be so constructed as to withstand such blast.

There is also presently being prepared for submission to the NSRB a study entitled "Radiation Detection Instruments," of which we hope to give you some more information later on this morning, which describes the operational characteristics of the portable instruments now being used by radiation monitoring specialists in the atomic energy program.

One of the principal needs of civil defense monitors, as we see it, will be a simple, rugged, easily operated radiation monitoring instrument that can be used by people without advanced training in this field, and we have recently made some progress in the development of such an instrument. We expect to demonstrate some of these later on this morning.

At the request of the NSRB, we are also engaged in some training activities, which we feel is another especially good way to get the information held by people within our organization out into the hands of those who will instruct the people in civil defense work. And in this connection, I should like to emphasize that we have conceived our purpose in this field of training to be this: That we should not go out and train people in all of the States, but we should train instructors from the various States who can in turn go out and train people in their own areas under the direction of their own local civil defense authorities.

We have accordingly established training courses at a number of conveniently located laboratories for doctors and radiological monitoring experts.

The Commission has up here this morning three persons who have primary responsibility and peculiar knowledge in three separate fields touching on this subject. The first one is Dr. Shields Warren, Director of our Division of Biology and Medicine, who is prepared to tell you first about these training courses, and also about those features of our medical research program which have a civilian defense application.

We have also Mr. John A. Derry, the executive officer of the Biology and Medicine Division, who will describe our program for the development and use of radiation detection instruments.

We have Harry L. Bowman, a consultant to the Biology and Medicine Division, who will discuss the effects of atomic explosions on structures.

I would hope that you might have those three gentlemen in mind when you put the questions. Mr. Bowman is the expert on physical structures; Dr. Shields Warren on radiation effects; and Mr. Derry in the field of monitoring instruments. I suggest that we hear from Dr. Warren first.

#### **STATEMENT OF DR. SHIELDS WARREN, DIRECTOR, DIVISION OF BIOLOGY AND MEDICINE, UNITED STATES ATOMIC ENERGY COMMISSION**

Dr. WARREN. Mr. Chairman and members of the joint committee, I have prepared in a little more logical fashion than I perhaps would be able to present orally, my statement, and if that might be submitted for purposes of the record.

(The statement follows:)

#### **OUTLINE OF REMARKS PREPARED BY DR. SHIELDS WARREN, DIRECTOR OF THE ATOMIC ENERGY COMMISSION'S DIVISION OF BIOLOGY AND MEDICINE**

##### **CIVIL DEFENSE INSTRUCTOR TRAINING COURSES**

The starting dates of the instructor-training courses sponsored by the Atomic Energy Commission, cooperating with the National Security Resources Board and the General Services Administration, previously announced in AEC releases No. 242, December 24, 1949, and No. 248, January 15, 1950, are now set as follows:

##### *Radiological monitoring instructor-training course*

Brookhaven National Laboratory, Upton, Long Island, N. Y., March 27, 1950.

University of California at Los Angeles, Atomic Energy project, Los Angeles, Calif., March 27, 1950.

Oak Ridge National Laboratory and Oak Ridge Institute of Nuclear Studies, Oak Ridge, Tenn., April 3, 1950.

##### *Medical aspects of atomic warfare*

Argonne National Laboratory, Chicago, Ill.; University of Rochester, Rochester, N. Y.; Johns Hopkins Medical School, Baltimore, Md., March 27, 1950.

Western Reserve University Medical School, Cleveland, Ohio; University of Utah Medical School, Salt Lake City, Utah, April 3.

University of California at Los Angeles, Atomic Energy project, Los Angeles, Calif., April 17.

University of Alabama School of Medicine, Birmingham, Ala., May 1.

As of March 16, 1950, nomination of 58 candidates for the monitor course from 36 of the States and Territories and nomination of 96 candidates for the medical

course from 34 of the States and Territories have been received. Ten States have not submitted nominations. Six States and one Territory have indicated that they will not send representatives to either course.

Nominees for the radiological monitor courses, which will be of approximately 5 weeks' duration, include two university deans and several professors and heads of university departments; nominees for the 1-week medical courses include faculty members of accredited medical schools, representatives of State health organizations, and State medical associations, and general practitioners.

---

#### AEC To Sponsor Training Courses in Medical Hazards of Atomic Warfare

The United States Atomic Energy Commission, in cooperation with the National Security Resources Board and the General Services Administration, will sponsor a series of 1-week "teacher training" courses in the medical hazards of atomic warfare for selected representatives of the medical profession, it was announced today by the AEC.

The NSRB, the Government agency responsible for civil defense planning, has assigned to the GSA the responsibility for planning in the field of wartime disaster relief. The AEC has been assigned the task of setting up training courses in the treatment of radiological injuries among civilians as part of the program for wartime disaster relief planning.

The first of the courses will be held in March at the Argonne National Laboratory, Chicago, Ill.; the Atomic Energy project, University of Rochester, Rochester, N. Y., and Western Reserve University School of Medicine, Cleveland, Ohio. Later in the spring, courses will be offered at the Atomic Energy project, University of California at Los Angeles, Calif.; the University of Utah School of Medicine, Salt Lake City, Utah; the University of Alabama School of Medicine, Birmingham, Ala.; and Johns Hopkins School of Medicine, Baltimore, Md.

The basic purpose of the courses is to provide information and materials to selected members of the medical profession who in turn will instruct physicians, dentists, and nurses in local areas as part of State and municipal civil defense programs. Those attending the AEC-sponsored courses will be representatives of State medical societies, accredited medical schools, and State and large city governments. Invitations to nominate representatives to the courses will be issued by the NSRB. The qualification requirements which trainees must meet will be set jointly by the NSRB, the AEC, and the GSA.

Plans for the courses were developed at a meeting this week of representatives of the AEC Division of Biology and Medicine, the NSRB, and the interested universities and laboratories. Those who attended were:

- Dr. Shields Warren, Director, Division of Biology and Medicine, AEC.
- Dr. Norvin C. Kiefer, Director, Health Resources Division, NSRB.
- Dr. Henry A. Blair, Atomic Energy project, University of Rochester.
- Dr. John Z. Bowers, Deputy Director, Division of Biology and Medicine, AEC.
- Dr. Austin M. Brues, Director, Biology Division, Argonne National Laboratory.
- Dr. Charles L. Dunham, Division of Biology and Medicine, AEC.
- Dr. Hymer I. Friedall, Department of Radiology, Western Reserve University School of Medicine, Cleveland, Ohio.
- Dr. B. V. Jager, associate professor of medicine, University of Utah, Salt Lake City, Utah.
- Dr. Perrin H. Long, professor of preventive medicine, Johns Hopkins University School of Medicine, Baltimore, Md.
- Dr. William H. Riser, Jr., professor of medicine, University of Alabama, Birmingham, Ala.

---

#### AEC To Sponsor Instructor Training Courses in Radiological Monitoring

The United States Atomic Energy Commission, in cooperation with the National Security Resources Board and the General Services Administration, will sponsor three 5-week instructor training courses in radiological monitoring techniques for qualified educators and technicians selected by State governors.

The NSRB, the Federal Government agency responsible for civil defense planning, has assigned to the GSA the responsibility for planning in the field of wartime disaster relief. The AEC, in turn, has been requested to set up training

courses in both radiological monitoring techniques and the treatment of radiological injuries among civilians as part of the program for wartime disaster relief planning.

Two of the three radiological monitoring courses will be offered beginning March 13 at the Brookhaven National Laboratory, Upton, Long Island, and the Atomic Energy project, University of California at Los Angeles, California. The third will be offered beginning April 3 at Oak Ridge, Tenn. The Oak Ridge course will be administered jointly by the Oak Ridge Institute of Nuclear Studies and the Oak Ridge National Laboratory.

As announced December 24, the training courses in the treatment of radiological injuries will be given at seven institutions beginning in March.

The basic purpose of the radiological monitoring courses will be to provide technical information to selected individuals who have a background in the physical sciences as well as teaching experience, who in turn could instruct local science teachers in monitoring techniques. It is expected that these local science teachers could then be utilized to teach monitoring teams as part of State and municipal civil defense activity.

Invitations to State governors to nominate representatives for the courses will be issued soon by the NSRB. There will be facilities to accommodate approximately 25 trainees in each course. If necessary, the courses will be repeated. Specific qualification requirements will be set jointly by the AEC, the NSRB, and the GSA.

Plans for the courses were developed by the AEC Division of Biology and Medicine in cooperation with representatives of the NSRB, the GSA, and the three training centers.

Dr. WARREN. First with regard to our series of training courses, these courses have been prepared at the request of the National Security Resources Board for the purpose of instructing those from the various States who will have responsibility for setting up training in those States in these particular fields.

The courses are of two types: Radiological monitoring courses, which Mr. Derry will mention in somewhat greater detail later, of which we have three, one opening March 27 at Brookhaven National Laboratory, one opening March 27 at the University of California at Los Angeles, and one opening April 3 at the Oak Ridge National Laboratory. We have in addition, training in the medical aspects. These will open March 27 at the Argonne National Laboratory in Chicago, at the University of Rochester, Rochester, N. Y., and Johns Hopkins Medical School at Baltimore. On April 3, the Western Reserve University Medical School will have a course, at Cleveland; and the University of Utah Medical School at Salt Lake City.

Senator TYDINGS. How long does one of these courses last, approximately?

Dr. WARREN. The radiological monitoring training course is a 5-week course, Senator Tydings. The medical course is a 1-week course.

On April 17, a medical course at the University of California at Los Angeles; and on May 1, a medical course at the University of Alabama School of Medicine at Birmingham.

At the present time we have nominees for the monitoring courses from 36 of the States and Territories; and for the medical courses from 34 of the States and Territories. They are chosen by the governors of the respective States and Territories.

These persons who have these initial courses will then have the key elements of information which, together with the information available in the form of various leaflets, pamphlets mentioned by Mr. Dean which have been prepared by the National Security Resources Board on the basis of information we have submitted to them,

will enable them to carry on the necessary information to those in the intrastate and intraterritorial organizations.

Dr. WARREN. Now, so far as the medical effects are concerned there is relatively little that I need to add to the statement that has been prepared and has been published by the National Security Resources Board on these medical effects. I would, however, like to bring you up to date on some of the research activities that the Commission has in this field, because we hope from them certain matters that are considerably important in the field may result.

The first of these is a careful and thorough study of the survivors in Japan at Hiroshima and Nagasaki. The most significant finding that has been developed from them is that the vast majority of the survivors are in surprisingly good shape at the present time, that once recovered from the initial injuries there has been a very satisfactory recovery and the vast majority of people are back at their ordinary activities.

There are several points of particular interest, however. One is that the lens of the eye is particularly susceptible to injury by radiation and there is a form of cataract which develops following radiation. Of the survivors close in at Nagasaki there are some 45 at the present time who have developed this radiation-type of cataract.

Senator TYDINGS. Could I interrupt you there?

Dr. WARREN. Yes, sir.

Senator TYDINGS. How long, as a general rule, is the eye susceptible to these effects after a bomb is dropped?

Dr. WARREN. Usually a matter of several years, Senator. That is based on our previous information from experience in the X-ray field and in the cyclotron field.

Senator TYDINGS. How long would a person, who was not in the area that was bombed, be safe in going in the area? How much of the radiation would have to be removed approximately before the eye would not be susceptible to this injury?

Dr. WARREN. In the case of an air-burst, such as at Nagasaki or Hiroshima, it would be feasible to go in practically immediately afterward.

Senator TYDINGS. If you were there at the time the bomb was dropped and you survived you might have this trouble?

Dr. WARREN. If you are sufficiently close in to have received a heavy dose of radiation.

Senator TYDINGS. Now would the kind of dark glasses that they used in bomb explosions on Eniwetok eliminate that trouble if you had them on when the blast took place?

Dr. WARREN. No; they would be of no service because the type of radiation which produced the injury would penetrate them very readily.

Senator TYDINGS. Thank you.

Dr. WARREN. A second point of major importance that has developed from our studies in Nagasaki and Hiroshima has been that while there has been a considerable number of children born to the survivors, there has been in this first generation thus far, no increase in abnormalities. This is a very reassuring finding.

The next finding is that taking the mass of population in general, the cells of the bone marrow which were damaged at the time of

radiation have recovered sufficiently so that we do not expect any widespread injury to result from the bone marrow effects.

Senator TYDINGS. In order that I may follow you a little more closely, you are talking about all forms of atomic bombs generally and not just any particular type at the moment?

Dr. WARREN. Yes, that is quite true.

Representative HOLIFIELD. What percentage of radiation are you referring to in discussing these cases? Is there a way of measuring the exposure in terms of units to which you refer? If so, will you give us those?

Dr. WARREN. Yes, sir; there is. It is possible to determine, and there has been determined by theoretical calculations plus actual observations, the extent to which various types of radiation and amounts of those various types of radiation will penetrate surrounding the source of explosion. Also, studies have been made of the residual radiation.

I cannot give those to you in detail but I can say in general that those within a radius of 1,000 meters, a little over a thousand yards, would probably fail to survive in large part, or would show very heavy damage; but those who were some 3 miles away and in the open would show very little, if any, damage.

Representative HOLIFIELD. This applies to the Hiroshima and Nagasaki type of bomb only?

Dr. WARREN. That is correct.

I am speaking in terms of them at the present time.

Senator TYDINGS. Dr. Warren, there are a few questions I would like to ask.

I suppose that after the blast of a moderate type atomic bomb it would not be feasible to eat any food that was left in the city even though it apparently appeared to be undamaged?

Dr. WARREN. If it were an air burst, after appropriate check by instrumentation such as Mr. Derry will explain later on, it would be quite possible to eat a considerable amount of the food. One would want to check on it, however, but I would anticipate that a considerable portion of warehouse stocks would be entirely suitable for human consumption, assuming an air type of burst.

Senator TYDINGS. After a city has been visited with a modern atomic bomb, I take it that it would not be safe for the people to drink the water or eat the food until after it had been passed on by competent authority as being suitable as in the case of water and food for human consumption? Otherwise, even though they escaped the blast itself by being in a cave or some other fortunate circumstance, they might really save themselves only to be contaminated in some other way if they drank water or ate food that had not been declared safe in a bombed area. Is that correct?

Dr. WARREN. That is absolutely right, Senator Tydings.

Senator BRICKER. Referring to your statement a while ago about these survivors of Hiroshima, you mentioned that there had been a repair of bone marrow at the present time. Has enough time elapsed so that you can make any estimate of the ultimate effects on the corpuscle-making power of the bone marrow?

Dr. WARREN. It is still too early and we expect to continue these studies for a considerable period of time. These statements are made on the basis of our information as it exists at the present time.

Senator BRICKER. Even though there might be a temporary repair, ultimately it might have a decided deteriorating effect?

Dr. WARREN. There is that possibility and I cannot answer unequivocally at this time as to what we will find.

Representative ELSTON. Referring to your statement that there had been no abnormalities in the children born to parents who lived in Hiroshima and Nagasaki, I ask you whether or not there was any decrease in the birth rate in those cities.

Dr. WARREN. I would like to straighten out one point, if I might. There have been abnormalities that have occurred but to no greater extent than there would be in any normal population.

In ordinary circumstances we expect certain abnormalities to appear in about 1 birth in 1,000 births.

With regard to the other point which you raised, in my anxiety to get the point straight I missed it. Could you restate the latter part of your question for me?

Representative ELSTON. The question was whether or not there had been any decrease in the birth rate in those cities.

Dr. WARREN. No; there has been increase in the birth rate.

Representative ELSTON. My question was whether there had been any decrease.

Dr. WARREN. There has been no increase, either. I think in the Japanese cities it would be hard to recognize any increase. There are a very large number of children.

Representative HOLIFIELD. Doctor, on that same question I believe a more responsive answer would be, if your answer were based on the people exposed?

Dr. WARREN. Yes; this is based on a population that includes both people who are exposed and those on the fringes of the city or who had come into the city since. We have a few instances of sterility, but not sufficiently great to affect the population as a whole and the birth rate.

The CHAIRMAN. Do you remember that book, Mr. Adam, Dr. Warren?

Dr. WARREN. I read it with great interest and enjoyment.

The CHAIRMAN. Do you think that there is any immediate prospect then, from at least the Hiroshima or Nagasaki experience, that that would be anything except a fanciful tale?

Dr. WARREN. I am quite sure of that, sir. I might say in addition, that we spent last Sunday with a group of experts on heredity, addressing ourselves to exactly that problem among other genetic problems, and those who are far more informed on genetic effects than I agree with that viewpoint.

One of the very real problems with regard to bomb explosion is that of flash burns. There is intense heat that is set free from the explosion of the bomb as well as kinetic energy, air blast, and radioactivity. We are carrying out a few intensive flash-burn studies. The principal one of those is at the University of Rochester. This is being carefully correlated with research in the burn field being carried out for the armed forces by Dr. Everett Evans at the medical college at Richmond, Va.

Senator BRICKER. Is the effect of those flash burns, because of the fact that there is radiation also present, any different than what would be the ordinary burn?

Dr. WARREN. So far as we have been able to determine, they have been exactly like the ordinary burn. If there is enough radiation to alter the picture of the burn, the person will not survive.

In still another field it is necessary to know how to treat the acute and immediate effects of radiation and the damage is shown by increased susceptibility to effects, anemia, tendency to bleed, gastrointestinal disturbances.

In the studies so far there are certain drugs, chiefly in the antibiotics, that are of material aid in controlling infection. Anemia can be controlled by transfusion. The tendency to bleed can be controlled only in part by certain drugs such as one called toluidine blue and by the use of certain of the fractions prepared from blood.

Senator BRICKER. Those effects that have been observed, to which you have applied treatment, have all been the result of the weakening of the power of the corpuscle-making capacity of the body?

Dr. WARREN. Very largely that. The gastrointestinal disturbances are due to direct injury of the lining of that tract. In addition, there is some evidence that the bleeding tendency may be related to damage to the lining of the blood vessels themselves and to some of the functions of other organs.

It is quite clear that in any civil defense set-up the means of handling these injuries must be very carefully evolved and followed.

Now, one of the things that is important is to know when one can go back into these areas and we have made a few studies at Hiroshima, at Nagasaki, Bikini, Eniwetok and Alamogordo.

The nearest we have to the ground burst is the Alamogordo burst and there careful studies have been made, and we have taken the cattle that are continually grazing in the area, sampled their tissues and found that they have absorbed no radioactivity that would make them unfit for food.

We know that as early as September when I took my team into Nagasaki and Hiroshima it was safe to enter the cities at that time.

Senator BRICKER. How long was that after the bomb explosion?

Dr. WARREN. That was almost 5 weeks after the bomb explosion.

We were able to find a considerable number of people who had gone in very promptly afterward and careful study of them showed they had suffered no harm.

As you know, with the underwater type of burst, many of the Bikini ships were so active radiologically that we could not go on them for a fair period of time.

With the monitoring instruments that we will show you later it is quite possible to determine just what the hazards are, where the hazards are, and know what zones to keep out of, and what zones are safe to enter.

Representative HOLIFIELD. Dr. Warren, can you give us any percentage quantity of absorption of radiation by various types of buildings, such as plaster, cement, steel, iron, concrete, both in the air burst and the underwater-burst type of explosion?

Dr. WARREN. Yes. So far as the air burst is concerned, at a distance of approximately 3,000 feet it takes 14 inches of concrete to protect from the air-burst type of radiation.

In an underwater burst, there is no direct radiation but wherever the contaminated water might penetrate, there would be radioactivity.

Consequently, the interior of a building would be relatively safe. We found on getting our experimental animals off the Bikini ships that once we could get inside the ships down where there was no contaminated surface of the deck or bulkhead and so on, that you could get to a safe zone.

Representative HOLIFIELD. Now, can you give us one more point? What is the residual absorption of radiation by these different types of buildings so that after the explosion you would know that you should stay away from certain types of buildings longer than others?

Dr. WARREN. There really is no choice except that by and large, I would say a building with a rough, porous type of wall would soak up more contamination in the case of an air burst than a building with a relatively polished or painted wall. However, I think that in most instances one could get the protection of space, that is, air itself, if you stay far enough away from a building, and get a certain amount of protection. We have detailed information as to what degrees of contamination various types of surfaces would provide.

Representative HOLIFIELD. Thank you.

Dr. WARREN. I think those are the major points from the strictly medical aspect to which I would like to call your attention. Since I have mentioned a good deal about these protection instruments and so on, I believe it would be helpful if I could have Mr. Derry show you some of those and explain to you some of the problems.

The CHAIRMAN. All right, Mr. Derry.

#### STATEMENT OF JOHN A. DERRY, EXECUTIVE OFFICER, DIVISION OF BIOLOGY AND MEDICINE, ATOMIC ENERGY COMMISSION

Mr. DERRY. Mr. Chairman, I have some outlines of remarks from which I will talk. I do not think I will follow them very closely. I would like to put them in the record.

The CHAIRMAN. Your prepared statements will be printed in the record at this point.

(The statements referred to are as follows:)

#### OUTLINE OF REMARKS PREPARED BY JOHN A. DERRY, EXECUTIVE OFFICER OF THE ATOMIC ENERGY COMMISSION'S DIVISION OF BIOLOGY AND MEDICINE

##### INSTRUMENTATION FOR RADIATION DETECTION

During World War II, the atomic energy laboratories of the Manhattan District designed and constructed virtually all of the various radiation-detection devices required in the nuclear research and production programs and to assure the radiological safety of their employees.

Since January 1, 1947, the Atomic Energy Commission has followed a policy of stimulating the establishment and development of a commercial radiation-detection instrument industry in the United States. Whereas in 1947 there were 9 companies manufacturing and selling 19 different types of instruments, there are today 44 companies manufacturing and selling 146 different types of complete instruments, and approximately 15 additional companies manufacturing accessories and components. The per annum gross sales of such instruments now amounts to about \$5,000,000.

As part of its policy of furthering the advance of commercial production of detection instruments, the AEC has sponsored under contract the industrial engineering of numerous instrument types developed in Government laboratories. This program has provided manufacturers with prototype models as well as with the guidance of scientific personnel who originally developed them. Approximately \$1,000,000 was expended in this manner during fiscal year 1949.

The basic design and development of essentially all radiation instruments now commercially available have stemmed from the atomic energy project. Although most of these instruments are being used for peacetime applications, such as the health protection of atomic energy workers, many of them could be useful for radiological monitoring which might be required as the result of possible atomic disaster. These instruments, however, generally require considerable technical knowledge for their proper operation.

As the AEC has had much experience and a continuing need for the protection of its own atomic workers and employs many of the top authorities in the field of radiation detection instrumentation, we feel that we have a distinct responsibility to assist in the development of suitable monitoring instruments for civil defense purposes. These devices, we believe, should be easily usable by relatively inexperienced persons to detect any dangerous concentration of radiation resulting from atomic warfare.

A study to determine the scope that such an instrument-development program should have indicates that two distinct types of instruments would be required. The first would be a very simple device which would show how much radiation a person has received, to be worn by each individual in areas which might possibly be subjected to atomic attack. The readings from these devices could be of great value in determining the type of medical treatment required by those who have been overexposed. The second type would be an instrument to indicate the rate at which radiation is being received and would, therefore, inform a person how long he could safely stay within a contaminated area.

The armed services have had an active program for the development of the first type of device, and it is therefore felt that the AEC should not have a large development program for this instrument but that it should concentrate on the second type. This latter should be simple, inexpensive, dependable, and rugged, capable of being used by such persons as the air-raid wardens of World War II civil defense.

The program for the development of this second type of device falls principally into three activities:

1. Research and development in AEC laboratories (see separate statement of new AEC-developed Geiger counter suitable for civilian defense.)

2. Solicitation of proposals from industry. A large group of instrument manufacturers has been invited to submit proposals. After these proposals have been received they will be carefully evaluated. On the basis of uniqueness, practicality, simplicity, technical feasibility and other considerations, a number of these will be selected and contracts initiated.

3. Testing of the resulting prototype instruments will probably be performed by the Bureau of Standards. Based on these tests, the instrument or instruments which appear best and meet all requirements will be recommended to the National Security Resources Board as suitable for civilian radiological safety use.

#### NEW AEC GEIGER COUNTER DEVELOPED FOR CIVILIAN USE

An inexpensive Geiger counter designed to measure high levels of radiation has been developed by the instrument laboratory of the New York Operations Office of the United States Atomic Energy Commission.

Upon completion of industrial engineering, the Commission expects to submit the new instrument to the National Security Resources Board for consideration as a radiation detection device suitable for civilian defense purposes.

The new instrument is powered by three 1½ volt flashlight batteries. It weighs slightly under 2½ pounds and is housed in a moisture-proof aluminum case. The case consists of two aluminum cylinders, one holding the flashlight batteries and the other containing all the working parts of the counter.

No field calibration of the instrument is necessary, and its dial reads directly in roentgens per hour, the basic units of radiation measurement. The dial is divided into three color zones:

Green—from 0 to 0.1 roentgens per hour.

Yellow—from 0.1 to 1.0 roentgens per hour.

Red—from 1.0 to 5 roentgens per hour.

The instrument's ability to measure radiation intensities up to the relatively high level of 5 roentgens per hour makes it unique among Geiger counters. It will also give dial readings of intensities as low as 0.05 roentgen per hour, and, by using earphones, the operator can obtain an approximation of radiation intensity below this level.

It is estimated that if the new instrument were put into large-scale production it probably could be sold commercially for from \$10 to \$15.

In its present form, the instrument is not designed for prospecting or other low-level monitoring, and cannot be used for these purposes without modification. Therefore, whether or not this high-level detection instrument is manufactured may depend upon civil defense requirements for monitoring devices.

The new instrument uses a halogen-filled Geiger tube, specially designed by Amperex Electronic Products Co., Brooklyn, N. Y., which delivers between 50 to 100 times the output current of conventional tubes. For this reason, no amplification of the tube's pulses is required.

Flashlight batteries were chosen as the power supply because they are conveniently portable, have a relatively long life (80 or more hours of total operation) and are inexpensive.

The new counter was designed by H. D. LeVine, H. J. DiGiovanni, and M. R. Coe of the Instruments Branch, Health and Safety Division, AEC New York Operations Office, and models were built in the New York Operations Office's instruments shop.

#### AEC EMERGENCY MONITORING TEAMS

In an extension of its program for control of radiation the Atomic Energy Commission is establishing through its field operations offices teams of qualified personnel to monitor any radiation accidentally released in Commission activities.

These teams are to be composed of AEC and AEC-contractor personnel, with approximately 12 men per team. Originally "ready lists" of approximately 100 persons at each operations office were set up to provide a pool available for emergency monitoring duty. With the formal establishment of teams in the various areas, specified organized team personnel will replace the "ready lists." It is expected that the teams will undergo field practice in order to acquire proficiency under simulated emergency conditions.

The teams will use radiation-detection instruments presently on hand or now being procured for this purpose. To supplement existing stocks, approximately 3,000 new instruments of various types are being procured and allocated to the AEC Operations Offices at Oak Ridge, New York, Los Alamos, Hanford, and Chicago.

The Commission recognizes its teams could be useful in the event of a disaster involving radioactive hazards which do not stem from AEC activities. Such service, however, would necessarily be but an interim, stop-gap measure until the appropriate civil authorities could get on the job with groups organized for this work.

The Atomic Energy Commission's emergency monitoring teams should not be considered in any sense an adequate radiation monitoring force for use in a civil disaster resulting from atomic attack. They simply represent a presently existing stop-gap resource and would be most inadequate in dealing with the consequence of an atom bomb explosion.

Under the five operations offices, teams are being organized at a total of 18 different locations in the country where such persons and equipment can best contribute to the safety or security of the atomic energy program. These locations are:

##### Under the New York Operations Office:

- Brookhaven National Laboratory, Upton, Long Island
- Schenectady, N. Y.
- Boston, Mass.
- New Brunswick, N. J.
- New York, N. Y.

##### Under the Chicago Operations Office:

- Pittsburgh, Pa.
- Ames, Iowa
- Berkeley, Calif.
- Chicago, Ill.

##### Under the Oak Ridge Operations Office:

- Dayton, Ohio
- Washington, D. C.
- Oak Ridge, Tenn.

##### Under the Santa Fe Operations Office at Los Alamos, N. Mex.:

- Albuquerque, N. Mex.
- Los Alamos, N. Mex.

##### Under the Hanford Operations Office at Richland, Wash.:

- Pullman, Wash.
- Seattle, Wash.
- Portland, Oreg.
- Richland, Wash.

Mr. DERRY. The first subject I would like to discuss is instrumentation for radiation detection with which I am reasonably sure most people are familiar. The atomic energy laboratories of the Manhattan District designed and constructed virtually all the various radiation devices used in nuclear research and production and for the radiological safety of the employees.

Following the end of the war, the field was largely declassified because it had been declassified before the war. As everything was classified during the war, this was just another subject. Then Manhattan District started a policy, and this was furthered by the Atomic Energy Commission, of stimulating the establishment and the development of a commercial radiation-detection-instrument industry in the United States. When the Commission took over in 1947 there were about 9 companies manufacturing and selling about 19 different types of instruments. Today there are about 44 companies manufacturing and selling 146 different types of complete instruments, and approximately 15 additional companies manufacturing accessories and components, making a total of around 60 manufacturing whole instruments and accessories. The annual gross sales of these companies amount to about \$5,000,000.

This is an industry that the atomic energy program has stimulated, to which came, mostly from the project laboratories that designed these things during the war, men who set themselves up in small businesses. The Commission as a part of its policy of furthering advancement and production of these instruments developed prototype laboratory models and had the instrument companies take them and run them through their production lines and come out with a production model. We then bought these instruments from the companies in order to supply our laboratory research investigators and for use in radiological safety. The basic design and development of nearly all the radiation instruments now commercially available have come from the project. Although most of these instruments are being used for peacetime applications, such as the health protection of atomic energy workers, they could be useful for radiological monitoring which might be required as the result of possible atomic disaster. These instruments, however, the ones I am talking about now, are rather technical and require considerable technical skill and knowledge for their proper operation.

We feel the Commission has had a lot of experience in this field. Most of the people working in the laboratories are probably the top brains and the top authorities in the development of instruments for radiation detection. We felt that we had a distinct responsibility to assist in the development of a suitable or several suitable monitoring devices that might be useful for civil defense purposes. These devices we believe could be easily usable by relatively inexperienced persons who would go through several successions of monitoring training courses.

The first ones that Dr. Warren described are the ones that would be at Brookhaven, Oak Ridge, and UCLA. These are instructor monitoring training courses. From these courses we hope the instructors will go out to the States and set up State training courses, and then the cities and towns set up training courses for the air-raid wardens.

Those people we feel will have enough knowledge for operating a simple kind of device that might come out of some development we could undertake.

A study then was made to find out under the instrument-development program what was required. The first we felt would be a rather simple device. This is what we call a dosimeter. It is a quartz fiber gadget that registers an integrated dose of how much radiation a man gets. If these things are properly charged and are in the hands of competent people, they are useful. From that might be determined what kind of medical treatment would be necessary. We are doing some work in this at the Argonne Laboratory and some work at UCLA on the colorimeter dosimeter.

The largest effort by far is with the armed services. We coordinate our development in these instruments, as well as others very closely with the armed services.

Representative HOLIFIELD. Is that information made available to these small businesses on a license basis, or on a gratis basis?

Mr. DERRY. It is on a license basis, I believe. I am not particularly competent to say.

Representative HOLIFIELD. They make no charge for such research and development as they make?

Mr. DERRY. No, Mr. Holifield.

No manufacturer has ever been turned down, so far as I know, who wished to get into the business of manufacturing instruments developed on the atomic energy project. They are freely licensed and can go into the business of making these things up. The dosimeters would probably cost about \$50. We hope to get the price of these things down.

Therefore, we feel that probably the thing we should do is to develop an instrument that is simple, inexpensive, dependable, and rugged, and this would lead us into a development activity probably in three categories, research and development in our own laboratories, solicitation of proposals from industry to see if they have any ideas. If any people who have gone from our laboratories to industry have some ideas, that we feel could probably and properly be financed, we would like to see what they are.

We have solicited about 33 companies. We have had replies from about 11. We are evaluating these proposals and we will probably select a few of the most promising and contract with these people to develop further instruments.

Beyond this point we need to test the resulting prototypes. This will probably be done at the Bureau of Standards. The ones that appear to be best we will recommend to the National Security Resources Board as probably suitable for radiological monitoring.

With respect to the most promising immediate development, I think you may recall in the executive session I said that New York looked as if they were coming up with a promising development. They have come up with something that we think is of rather great promise. It is an inexpensive Geiger counter. I have here a laboratory model. It is one of the nicest little things that I think we have ever seen. In this side are batteries and in this side the Geiger counter with a scale showing three ranges, green, yellow, and red, energized by just pressing the button. We hope that that can be sold commercially for about \$10 to \$15.

That is contrasted with the price of a more sensitive Geiger counter of this model, which costs about \$200. The new one is a high range reading meter and this standard type is a very low range reading meter.

The CHAIRMAN. Whose development is this?

Mr. DERRY. The New York Operations Office development in their radiological or instruments laboratory.

We are now presently talking with an industrial instrument company whose people came from the Chicago Metallurgical Laboratory for the production and development of the new type of model, the same company that developed this one that you saw in the executive session.

This one from this rather weak source will show good radiation, will show a count on the meter. When we use the same thing on the standard large one it shows a fairly perceptible move of the arm. This meter is for quite high radiation, high level. This is only useful in places that might be endangered from an atomic-bomb burst. This, I hope, will be rugged enough and cheap enough. The companies that we were talking with believe they can do it for \$10.

The CHAIRMAN. Have you ordered any of those?

Mr. DERRY. We have not yet, sir.

We are now trying to develop an improved power supply. The holo-gen-filled Geiger tube was especially developed by Amperex. We are going to have 20 prototypes built. They will cost us approximately \$100 apiece; but, after they build the prototypes, then of course anyone can build them. The fact that this company is the one we are dealing with means that they have competent personnel. We feel that going into industry and tooling up for a thousand or more, the instruments may be sold for \$10 or \$15, not more than \$15. Our objective was \$25.

Representative HOLIFIELD. From a practical civilian standpoint, your development of a radiation instrument that would register only on pretty strong radiation would be the best?

Mr. DERRY. Yes. You see, the large one is particularly useful in our laboratory. The small one reads only gamma radiation. The large one reads beta and gamma. The large one reads very low radiation. It will not read anything higher than that because it will block. We feel that in the small one we have something.

I do not know how soon, Mr. Chairman, this thing will be available. It will take somewhere in the order of 3 to 4 months to build prototypes and then to release to industry, probably another 4 to 6 months before this thing gets into production.

Representative HOLIFIELD. This is an accomplished fact and it does work?

Mr. DERRY. Yes, sir; it does work.

I did not bring with me a strong enough radioactive source because my men told me it was not particularly safe to carry. Those things I have on the table are buttons that the sailors wear on shipboard at night to keep from bumping into each other. They are rather weak radioactive sources.

The third thing that we have that I want to talk about is what we call our emergency monitoring teams, teams which will use our normal kind of instruments. We consider this an extension of our program for the control of radiation and will establish through our field operations offices teams of qualified personnel. These people are teams that are now trained as monitors to monitor any radiation that might accidentally be released in our own laboratories or in connection with our own activities. These teams are composed of about 12

men per team, more for spares. We first set up originally a "ready list" of 100 men. We advised you, I think, about a year ago that this was to provide a pool from which to draw these teams. With the formal establishment of these teams about a month and a half ago, we have had specified areas and specified team personnel to replace these "ready lists" and it is expected that these teams will probably do some field practice in order to acquire proficiency under simulated emergency conditions. They will use radio-detection instruments presently on hand, just like this one, the kind we use in our own laboratories.

We are buying about 3,000 new instruments. By buying these in these quantities we were able to cut the price of this one from \$200 down to \$88.

The Commission recognizes that these teams could be useful in the event of disaster involving radioactivity hazards which did not come from our activities but we feel strongly that such service would necessarily be but an interim stopgap measure until appropriate civil authorities got on the job with groups organized for this work.

The Commission's monitoring teams should not be considered in any sense an adequate radiation monitoring force for use in disaster in case of an atomic attack. They simply represent a presently existing stopgap resource. It is insurance that we feel we are buying for ourselves as well as this interim gap between the training program and until the men in the instructor training courses get out in the States.

Under the five operations offices, teams have been organized in a total of 18 different locations. These locations are:

Under the New York Operations Office: Brookhaven National Laboratory, Upton, Long Island; Schenectady, N. Y.; Boston, Mass.; New Brunswick, N. J.; New York, N. Y.

Under the Oak Ridge Operations Office: Dayton, Ohio; Washington, D. C.; Oak Ridge, Tenn.

The one in Washington is the group that works under me handling these instruments.

Under the Santa Fe Operations Office at Los Alamos, N. Mex.: Albuquerque, N. Mex.; Los Alamos, N. Mex.

Under the Chicago operations office, which covers a wide territory and is not geographically identified here: Pittsburgh, Pa.; Ames, Iowa; Berkeley, Calif.; Chicago, Ill.

Under the Hanford operations office at Richland, Wash.: Pullman, Wash.; Seattle, Wash.; Portland, Oreg.; Richland, Wash.

There probably will be an extension of teams in other localities where we have interests, where we have contractors and where we have a responsibility to our own defense.

Senator KNOWLAND. Would this portable, inexpensive type be suitable in your judgment for civil defense teams that might be set up?

Mr. DERRY. They would be suitable, Senator, if the men had training, if they could properly interpret the readings.

An untrained person should not attempt to understand anything from the reading on the dial because it has to be related to the kind of radiation, the time when the radiation happened, and then related on the scale which reads directly in roentgens or milliroentgens as to how much time he should stay in. It takes some understanding of the subject before these things should be used.

Senator BRICKER. It would not take any engineering background or scientific information to train the team?

Mr. DERRY. No, sir.

Senator BRICKER. A person of ordinary intelligence could soon understand the operation and read the dial?

Mr. DERRY. I am sure that could be done. We feel, though, in the training courses we should start out with a fairly high level of instructors. We have asked the National Security Resources Board, in getting candidates from the States, that they get men to attend the first level monitoring training courses who are professors of physics at State universities or colleges, or men who have an understanding of physics, so that they can then go back and set up their own training courses in the States.

At these other courses there will be a gradual dissemination of information and a gradual diffusion of emphasis so that the men who get the instruction at the air-raid warden level or police and fire-department level will need to have only normal intelligence.

The CHAIRMAN. I am advised by Senator Knowland that Mayor Bowron of Los Angeles is in the room and that he has expressed a desire to be heard.

#### STATEMENT OF HON. FLETCHER BOWRON, MAYOR OF LOS ANGELES, CALIF.

Mayor BOWRON. Mr. Chairman and members of the committee, what I have to say relates peculiarly to the subject of civil defense on the west coast.

I appear for my own city and speak in my individual capacity. I have had an opportunity as an officer of the League of California Cities to get the thinking of the mayors and other officials of my State.

During the year 1948 I was president of the American Municipal Association and during that year we had a Nation-wide committee studying the subject of civil defense from the point of view of cities.

I may make reference to a prepared report of that committee which, however, was not adopted at our annual conference in December of that year for the reason that the Bull report and the Hopley report had not, and we understood at that time, would not be formally approved and was to an extent in some particulars considered unrealistic.

In my own city of Los Angeles, we have an organization which is prepared for any eventuality of not too great a magnitude.

It was organized during the middle 1930's. While we do not particularly like to discuss the fact or openly admit the fact, we realize that on the west coast we may at some time have a severe aspect. That was the reason for the creation of our major disaster organization, which was pretty well organized and in operation at the time of the entry of this country into the World War. It was reorganized for war purposes. At the conclusion of the war it was disbanded and again reorganized on a peacetime basis.

The organization is primarily made up of city department heads with the exception of four functions included in the organization, the American Red Cross; a transportation division, which includes representatives of some of our street railway and trucking concerns; a communications division, the head of which is the general manager of the telephone company; and a personnel and recruitment division which

is largely manned by representatives of the veterans groups, primarily the American Legion.

I should like to refer to and adopt as a portion of my statement a report of the committee on civil defense of the American Municipal Association which, as I have already stated, was not adopted as the formal action of the association but which reflects, nevertheless, my own personal views.

To be acceptable to the cities, a civil defense plan must meet the test of two standards: (1) It must be realistic, practical, and provide the absolute maximum of assurance that it will function in an efficient orderly manner under emergency conditions; and (2) it must seek to preserve rather than alter vital constitutional and statutory principles which control relationships between Federal, State, and local Government in the United States, particularly in the exercise of police powers.

There is no order of priority here. Both are indispensable, a choice is unnecessary.

There has been some confusion, I feel, relative to the accepted definition of civil defense. That set forth in the Hopley Report is not satisfactory to the cities because, without reading it, one important objection is the failure of the definition specifically to recognize that the organization of the people is a State and particularly local government responsibility.

Our previous experience with the Federal Office of Civil Defense leads us to insist that we have had enough of proposals for civil defense organization operated by civilians in some semiautonomous relationship to city government.

City defense is an integral part of the total national war effort. It is dangerous folly to develop plans for the military defense and the civil defense of the United States as though they were separate and only indirectly related undertakings.

The CHAIRMAN. As I understand it, you are critical of that definition which you just read?

Mayor BOWRON. I did not read the definition. It is included in the Hopley Report.

The CHAIRMAN. You are critical of what you have just read there?

Mayor BOWRON. Yes.

I would like to suggest another definition of civil defense which I feel reflects the thinking of those who are responsible to the people in the organized areas.

As I say, I have been mayor of the city of Los Angeles for a period of approximately 12 years and went all through this during the war. I was the head of our local organization not only in the city but in the metropolitan area. We hope that we will not have the same confusion and misunderstanding if we are going to organize a second time.

The CHAIRMAN. That is the purpose of these hearings, so that you will not have that kind of confusion in the event that it ever becomes necessary. That is exactly what we are trying to do.

Mayor BOWRON. I am very happy indeed to hear that is the announced purpose of this committee.

We would like to suggest this definition:

Civil defense is an essential part of national defense and security. It requires effective utilization of all available useful resources of Federal, State, and local governments and a mobilization, organization, and direction of the civilian populace and available private resources by the appropriate agencies of government to

minimize the effect of enemy action directed against the people, communities, industrial plants, facilities, and other installations, and to maintain or restore those facilities essential to civil life, and to preserve the maximum civilian support of the war effort.

It is the joint responsibility of Federal, State, and local governments in the operation of which the powers and resources of the Federal Government and the States are normally used, to aid and assist the cities in the task of protecting life and property.

**I would like to refer to another statement:**

Even the necessary emphasis would be difficult to accomplish without reference to a national plan. National guidance, highly technical and professional scales for operation and training will be required and these as well as access to information can reasonably be made available only from national sources.

It has been our experience, and I am speaking as a result of rather frequent conferences in my own State among mayors and other municipal officials, that no one has taken us into his confidence. We do not know what we are expected to do. One difficulty is this: A plan cannot be worked out here in Washington and expected to succeed unless it is presented in the proper light to the people. I am sure that everyone must realize that a civilian or, as it is now termed, a civil defense program must be voluntary and, in order to get the degree of voluntary, effective cooperation, it must be sold to the people.

We have just had an experience on the west coast, particularly in my own State, pursuant to a communication that was received by our Governor from the Secretary of Defense with reference to the establishment of an aircraft warning service.

Immediately people misunderstood and the press criticized this effort as unnecessary and, quoting one editorial as "silly." I myself did not understand the situation until I learned the exact purpose and just why this was necessary. As a civilian, I felt that mechanical means, particularly radar, were so far superior to ground-crew observation that I was inclined to agree with others that it was wholly unnecessary. It was only after it was explained to me that I then felt that it should be done. But still, I do not know whether I am at liberty to pass on the information that was conveyed to me. Something must be done in order to get some several hundred thousand people interested in this sort of thing. That is true with reference to any other effort. I think that the people must understand the reasons.

The CHAIRMAN. You see, Mayor Bowron, that is one of the difficulties. You rightfully point out that you have to inform the people in order to get their cooperation and the way in which that is done, so it leads to that kind of cooperation without bringing about needless uncertainty and panic, is the real problem. It is because of the existence of that problem that the committee has been considering at great length in executive session every aspect of this problem. It is one of the reasons why we decided on holding a few open hearings with the idea not only of getting out some information to the people but also getting before the people the existence of this problem.

I might say, while I have interrupted you, that there is an interesting excerpt from our own booklet which the staff has prepared. It appears on page 17, the fourth paragraph on the page.

Liaison with State and local authorities has been effected. On October 5, 1949, the Acting Chairman—

that is the Acting Chairman of the National Security Resources Board—

transmitted to the governors of the States and Territories, a statement of policies for relations with State and local governments. On December 1, 1949, the first of a series of civil defense planning advisory bulletins outlined the Federal Government's objectives in civil defense planning, set forth information on planning activities now in progress, made recommendations for State and local action, and requested information on specific questions relating to State civil defense activities.

Then it goes on to state the activities as you can see.

So this information is beginning to flow out, apparently, to the governors of the States. I do not doubt that in a short while it will come down to the municipalities.

Mayor BOWRON. I would like to make a few more statements and then my testimony will be concluded.

The Hopley Report has never been approved and the subsequent gradual infiltration and integration of military authority into the civil life of the country is a matter of national concern.

Now I would like to make it clear, speaking for one city, that we want to do our part definitely and certainly. We, however, do not like to see, certainly in a time of peace, an approach that would tend to break down the constitutional guaranties and the divisions as between the Federal and State authorities. We will assume our responsibility under the jurisdiction of the State if we can just be given some guidance as to plan and procedure but we dislike to be ordered to do it.

Conversely, having gone through the experience during the last World War, we do not want to have to do many needless things which we in the light of experience feel now could have better been devoted to the all-out war effort, and to that end we rather dislike to contemplate uninformed civilians going from place to place and telling police departments, fire departments, and city health departments just how to conduct their own business.

I do not now believe that military authority should exercise the degree of general civil defense responsibility which apparently some here in Washington have thus far advocated.

As a practical matter, no effective State and local civil defense program is possible in the absence of an adequate, effective, realistic, and very thorough national civil defense policy and program implemented under Federal authority.

In the war of national survival, as the next one clearly will be, it is cold-blooded but nevertheless true to state that the national interest in civil defense in any area is concerned primarily with sustaining the capacity of the country to prosecute the war and the will of the people to fight. The humanitarian aspects of civil defense are secondary considerations. There is the complete justification for vesting the primary obligation for developing, staffing, equipping, and, if necessary, financing the national civil defense effort in the National Government. The shaping of the policy must not distinguish between the necessity for an acceptable national civil defense program, the obligation to make available skilled technical people in the complex, technical supplies and materials that would be required, from their understandable and very desirable reluctance to establish a national civil defense agency which would attempt to take over

and control State and local government and a voluntary civil defense organization involving millions of American citizens.

The two things are entirely different and yet quite consistent as a point of divided responsibility.

Here are some of the suggestions that I would like to make:

No workable national civil defense program can be developed and no sensible, orderly relationship with State and local government can be maintained if the Federal responsibility is divided among four or five or any number of unrelated and uncoordinated Federal agencies and departments. Those of us at the civil level see this division and we are confused. We do now know whom to follow and who is responsible for the plan and who is doing the job. If Washington cannot handle this, they cannot win a war without terrific waste of resources and human effort.

It is not possible in the light of the atomic bomb and other modern weapons to develop civil defense programs now which are related to a catastrophe about the magnitude of a major fire or natural disaster and later expect us to adapt these kinds of organization and resources to meet the impact of modern war. We are wasting our time and our resources.

I seriously question whether a civil defense against the atomic bomb is possible on a company basis. If this should be true, why does not someone say so and permit us to develop this aspect of civilian defense organization on a realistic geographical basis?

If we are primarily concerned in our civil defense obligation with defense against sabotage, which we can organize to handle, and defense against atomic attack, it is true that no enemy could afford to use atomic weapons against any except primarily military targets.

Of course, I am making bold to make these suggestions without any basis or experience in connection with the military.

Resolving the doubts in favor of an adequate coverage, should we have the same kind of civil defense organization in those areas of our States which, by no stretch of the imagination would be subject to atomic attack as we have in the areas which might be? Are not the problems quite different? Why not set up a civil defense plan that squares with the facts?

Similarly, why should States which are out of range be demanding the same kind of protection and place the same demand upon the limited resources of skilled manpower and technical material as the States which are exposed to such attack? Just because it would take political courage to deny one in order to meet the needs of another does not justify the unwillingness of Federal authority to do so.

With further reference to that point, we had about the same kind of civil defense organization in every city of every State in the country last time. We wasted enough man-hours of effort in useless civil defense activities to make a material contribution to some useful part of the war effort. Are we going to do that same thing again?

Similarly with a limited supply of fire-fighting equipment available, equal demand came from every area of the country.

Are we going to be confronted with that problem again? Is the National Government going to send the people into the areas which are safe from atomic attack to teach all of the civilians how to defend themselves against an attack which cannot occur, thereby reducing the availability of such personnel for services in the areas where such

attack could occur? Are we to go without adequate medical, hospital, and similar supplies into those areas of the country subject to attack because they must be spread thin around the country to pacify the citizens?

These are questions that someone should answer.

Almost every bit of the knowledge, technical or military in character, which is needed to develop an effective civil defense program in this country is the exclusive property of Federal officials. If they are unwilling to take governors, mayors, and other key officials into their confidence to the extent which a realistic civil defense program would make necessary, then I submit that they leave us no alternative but to demand complete Federal responsibility for civil defense. We cannot build, organize, and develop programs and recruit and train volunteers when we are in ignorance ourselves. I think the American people can learn to live with the truth and if they are told by responsible authority that they live in an area which may be attacked and that they must prepare themselves to meet it, when the first shock passes I think that they will get to work. I do not think that they will ever get to work and stay at work for the kind of civil defense program such as the one we had during the last war.

Now that is the burden and the substance of my position, and again I will say I speak only for one city and one community. I have had the advantage of discussion with many mayors and of municipal officials and particularly those who went through the experience of the civilian defense organization during the last war.

Representative HOLIFIELD. Mr. Chairman, I would like my colleagues on the committee to know that Mayor Bowron represents the largest city in California, a part of which is in my congressional district; that he is looked upon as our No. 1 citizen. He is a former superior court judge, ran as a reform mayor in the city of Los Angeles and has been elected several times by both Democrats and Republicans with overwhelming majority. The fact that he is here on the first day of our hearings shows his initiative and shows the progressive type of public servant that we select in the city of Los Angeles to be our mayor.

Personally, I am glad that he is here and glad that he has made this very fine statement to the committee.

Mayor BOWRON. Thank you, Mr. Holifield.

Senator BRICKER. Mayor Bowron, do you not feel that as a result of the civil defense program during the war there was an increased zeal and a sense of responsibility on the part of the citizens partaking in it that did lift up rather than handicap the war-production effort?

Mayor BOWRON. Yes; I think so; very definitely.

Senator BRICKER. There was a certain zeal and patriotism that was the effect of the organization of civilian defense even in those areas where there was no possibility of attack at that time?

Mayor BOWRON. The over-all effect undoubtedly was good. It increased the patriotic response, but I feel there was an awful lot of waste motion.

Senator BRICKER. There is no question about that, but we had thousands in our State that otherwise would have had no sense of participation. I think, as a result of that, brothers and fathers and sons did have an added zeal through this encouragement to make an all-out war effort.

Senator KNOWLAND. Mr. Mayor, in regard to some of the questions raised and I think pertinent questions, which not only the committee but the administrative officials who are responsible must consider, you mentioned that perhaps the situation might have to be on a large, geographical basis. You have in mind in that regard that even though a community itself might not be a primary target, it would have a contribution to make in either fire-fighting equipment or in other personnel that they might send into a disaster area where the local forces might have been eliminated at least temporarily?

Mayor BOWRON. Very definitely. One thing that we did learn from our experience during the last World War was that of mutual aid. I may say that lesson has been a good one. We are carrying it forward in time of peace to the advantage of better protection to all cities.

Senator KNOWLAND. But your feeling is that there might be, and someone should have the information, prime targets throughout the country, and that on the basis of some kind of priority, with limited personnel that might be available for training purposes and otherwise they should take a realistic view and assist those communities in putting themselves in order first before going out to an area which, by no stretch of the imagination, would be likely to be a target of atomic attack?

Mayor BOWRON. Exactly.

Of course I realize that there is much information that cannot, by the very nature of things, be made public.

Take my own State of California. If the Governor of our State could be taken into someone's confidence so that he in turn could pass the word down and indicate just where and how we should prepare, I am sure that it would help a great deal in the understanding and the cooperative effort that would result. I merely suggest that someone on the civilian level should know a little bit more about the situation and the reasons why.

I feel very definitely that we should preserve the constitutional limitations. In the event of an all-out war, of course, the military would come in and we would expect to cooperate fully. Certainly in times of peace, we feel that what the civilian population is expected to do should come through civilian sources rather than the military.

Senator KNOWLAND. As a matter of fact, the basic strength of the country is this local responsibility and willingness to assume it and, if they conceivably eliminate the Nation's Capital, still have a basic strength in the Nation which in some nations where they have centralized power in a capital city they do not have. In other words, the people of the United States are in a position to assume the responsibility out on the local level, which gives us a great strength which a dictatorship nation does not have under present circumstances.

Mayor BOWRON. That is correct.

Representative HOLIFIELD. Mayor Bowron, you have made some very good points and I think that it might be well to confirm them at this time.

You do believe that there should be a national policy of civilian defense evolved which would complement itself all over the Nation?

Mayor BOWRON. Very definitely; yes.

Representative HOLIFIELD. You also believe that the local political subdivisions should have one Federal agency to deal with on this matter?

Mayor BOWRON. If possible.

Representative HOLIFIELD. Where authority is concentrated particularly for civilian defense, where immediate attack has not occurred?

Mayor BOWRON. If not one agency, it might be too much to expect that the different agencies would know what the other is knowing.

Representative HOLIFIELD. They should be coordinated so that, as far as contact on the local level is concerned, there would be no conflict between those agencies?

Mayor BOWRON. That is right.

Representative HOLIFIELD. You also have stated I think a very fundamental premise that the civilian defense should be completely under the control and direction of our local citizenry, their representatives.

Mayor BOWRON. That is what we believe; yes.

Representative HOLIFIELD. I think that those are three very fundamental premises upon which you have made your statement, and I certainly agree with them. I believe that these hearings will bring out the necessity of doing those three things.

The CHAIRMAN. Thank you very much, Mayor Bowron. I might say this to you that I at least am convinced from the hearings that we have had in executive session that some of the points you have raised, together with a great many others, have been given and are being given much study and thought. I cannot emphasize too strongly how complex a problem it is with which we are dealing. It is tremendously complex.

Mayor BOWRON. I may say for the information of the committee that the American Municipal Association has designated a committee which will be very glad to cooperate, and the chairman of that committee happens to be a resident of my home State, Richard Graves, who was, during the last war, the State director of civilian defense and one who I think has approached the subject very intelligently.

The CHAIRMAN. Yes; we have heard from them and have had a request that they be permitted to appear, and of course they will be given that opportunity.

Thank you very much.

Mayor BOWRON. Thank you, Mr. Chairman.

Commissioner DEAN. We have one more witness to present in order to cover our story.

The CHAIRMAN. We prefer not to hear him now. We can have him return at the beginning of our next hearing which will be at the call of the Chair. I am not quite certain when we can set the time.

(Whereupon, at 12:15 p. m., the committee recessed subject to the call of the Chair.)

# CIVIL DEFENSE AGAINST ATOMIC ATTACK

---

**MONDAY, MARCH 20, 1950**

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met at 2:30 p. m., pursuant to call, in the caucus room of the Senate Office Building, Senator Brien McMahon (chairman) presiding.

Present: Senator McMahon and Representatives Durham, Holifield, and Hinshaw.

The CHAIRMAN. The meeting will come to order.

This is the second session of the joint committee on the subject of civil defense.

We have with us today, representing the American Legion, Mr. Miles D. Kennedy, legislative director, Mr. Erle Cocke, chairman of the national security commission, Niel R. Allen, chairman of the civil defense committee, Paul C. Potter, consultant on panic prevention, and Granville S. Ridley, chairman of the national security training committee.

Now, gentlemen, I believe you wish to be called in the order in which I read the names of the witnesses. Mr. Kennedy, the legislative director, is the first witness.

## **STATEMENT OF MILES D. KENNEDY, NATIONAL LEGISLATIVE DIRECTOR OF THE AMERICAN LEGION**

Mr. KENNEDY. Mr. Chairman, my name is Miles D. Kennedy. I am the national legislative director of the American Legion.

I do not intend to submit any testimony personally, Mr. Chairman, but I would be most ungrateful if I were not to tell you how much the 3,000,000 men of the American Legion appreciate your courtesy and the courtesy of your fellow members on this committee in extending an invitation to us to appear here and express our views.

As you know, our membership is made up of men and women who have seen active service in either World War I or World War II, and as such, naturally they are very much interested in civilian defense and the work of your committee. On their behalf, Mr. Chairman, may I again extend our thanks and appreciation for the privilege of appearing before your committee this afternoon.

At this time I would like to introduce to you, on behalf of the American Legion, Mr. Erle Cocke, Jr., of Dawson, Ga., who is the chairman of the national security commission of the American Legion. Mr. Cocke is a young man, a veteran of World War II, who interrupted

his college course to serve in the armed forces, and became an officer in an infantry outfit and served through the European campaign, and is one of the most decorated men in the armed forces coming out of World War II, having suffered 12 or 14 wounds during the course of his service.

Ever since his discharge from the Army and entry into the American Legion, he has been most active in things having to do with civilian defense.

With your permission, Mr. Chairman, at this time I would like to introduce to you Mr. Erle Cocke, Jr., of Dawson, Ga.

The CHAIRMAN. Thank you very much, Mr. Kennedy.

I would just like to make this comment before we hear from Mr. Cocke. I believe it is true that we extended an invitation to the Legion, after the Legion had made quite a few representations to me about the subject of the civilian defense and wanting the hearing on it. That is my recollection. And I merely say that because the Legion, I think it should be pointed out, requested a hearing on this subject, and it was not something that we thought up. It was something that apparently the Legion has been thinking about a good deal.

Mr. KENNEDY. We want you to know that we want to work to our mutual advantage and cooperation for the benefit of the general public.

Thank you, Mr. Chairman.

#### STATEMENT OF ERLE COCKE, JR., CHAIRMAN, NATIONAL SECURITY COMMISSION, THE AMERICAN LEGION, DAWSON, GA.

Mr. COCKE. Mr. Chairman, as chairman of the national security commission, I would like to emphasize the point as to the three gentlemen we are going to present to you today, their testimony all comes from three different parts of our country. The first gentleman comes from Oregon, the second from Colorado, and the third from Tennessee. I think that you will find a continuity in their statements, because they all see a problem in civil defense based on the nearness, probably the need, and I think the present statement which seems to be catching on, the fact that "it is probably later than we think," and we certainly cannot be caught short; we need, and a definite need is certainly seen by the working Legionnaires of our country who feel that a sound and workable solution to civil defense is a timely problem, and we are delighted to have the privilege of being here today to present this case to you.

The first witness is a practicing attorney from Grants Pass, Oreg. He is probably in the category of a country lawyer. He is a graduate of Stanford University and was a lieutenant in World War I. He has been an active leader in Legion affairs, and particularly in the field of civil defense.

It is my pleasure at this time to present to you Mr. Niel R. Allen, to speak to you and review for you, briefly, the position the American Legion has had in civil defense for the last several years.

**STATEMENT OF NIEL R. ALLEN, CHAIRMAN OF THE CIVIL DEFENSE COMMITTEE OF THE AMERICAN LEGION, GRANTS PASS, OREG.**

The CHAIRMAN. You are Mr. Niel Allen?

Mr. ALLEN. Yes, sir; I am Niel Allen, of Grants Pass, Oreg. I am the chairman of the American Legion's civil defense committee.

Ordinarily I would prefer not to read a statement, but in this case it appears desirable to present to your committee a documentation of the position that the American Legion has had with respect to civil defense ever since World War II.

If you will bear with me, I would appreciate making our statement a part of the record.

We would like you to know that the American Legion does very earnestly and sincerely welcome the opportunity that has been offered by this invitation to include in your record a statement of its official position with respect to civil defense.

This presentation is based upon official action of the American Legion as taken in national convention and as carried forward by its national executive committee and by its standing committees or commissions as authorized.

It should be stated at the outset that the American Legion is not satisfied with the present state of civil defense planning, nor is it satisfied with the present uncoordinated and almost latent development of civil defense organization and implementation.

This clearly appears from the action of its 1949 national convention at Philadelphia, which was our resolution No. 643, at page 85 of the Summary of Proceedings of the Thirty-first Annual National Convention of the American Legion, August 29 to September 1, 1949, wherein the convention recited the fact that the American Legion at every national convention since World War II has urgently demanded preparation of a sound and acceptable plan of civil defense as an integral part of the Nation's total defense by appropriate organization of the people to minimize the effect of enemy action against life, production and property; and wherein it recited the further fact that there was yet as of that time, September 1, 1949, no accepted or approved comprehensive plan for the civil defense of the Nation; wherefore, the American Legion thereupon vigorously demanded that immediate action be taken at the Federal level to develop a sound and acceptable civil defense plan; and further demanded that this plan conform substantially to the principles expressed by the American Legion at its last four national conventions, and specifically that the responsibility for development and implementation of such civil defense plans be placed in the Department of Defense.

All departments and posts of the American Legion were furthermore called upon immediately to cooperate with State and local agencies in planning and development of civil defense plans, facilities and functions in accordance with previous national convention action.

The CHAIRMAN. You say that you want it placed in the Department of Defense. Are you certain in your own mind as to what part of it belongs in the Department of Defense?

Mr. ALLEN. Over the past 4 years, and I think that the documentation appearing in the balance of this statement will bear out an answer to your question to the effect that we believe there must be one head to this planning and development. It will develop later in the report that we also believe that it must be a civilian head, but the civilian head or civilian agency may very properly be within the Department of Defense, and we very sincerely believe that there will not be the necessary coordination otherwise.

Now, that may be subject to future changes of direction as other appropriate steps may be taken, but that is the thinking to date of the American Legion.

The CHAIRMAN. Because, of course, there are many things that must be done in the way of effective civil defense that are not primarily of a military nature. I mean your tax structure, for instance, might have to be revised, and your transportation situation within your country would have to be attended to, and I could go on and enumerate many facets of our life that would be vitally affected by a conflict, that are not primarily connected with the fighting end of the war.

Mr. ALLEN. I think you will find that our last statement in here will be entirely consistent with the thought you have developed. When I get to that point I will stop at what I have in mind in answer to your question, if I may.

The CHAIRMAN. You may proceed.

Mr. ALLEN. By November of 1949 there was still no positive overall program for a national civil defense of the Nation.

Accordingly, the national executive committee of the American Legion approved and adopted the report of the Legion's national security commission which included the following declarations with respect to civil defense:

Events of the past few weeks have made it mandatory that we reevaluate our over-all national security program. Our monopoly on the atomic bomb no longer exists. We know definitely that Russia has brought about a controlled atomic explosion and our only hope for security is through self-protection. This means an adequate and immediate civil-defense structure that will enable our communities and their people to minimize the initial attack of any aggressor nation. For several years, the American Legion has studied the need for and the requirement of a civil-defense program. Such a program evolves itself into three phases:

(1) The planning and policy stage, in which all known factors are considered that evolve from or contribute to civilians trying to help themselves in their own communities to neutralize the effects of enemy action against them, with the least possible disruption of normal community life and the least possible disruption of the organized military defense.

(2) The training phase and the establishment of cadres. These to be expanded and around which a civil-defense organization could be built as world conditions dictated.

(3) The actual implementation of the civil-defense plan, utilizing the trained people of the organized cadres as the hub of this structure.

We the national security commission believe phase (1) has been sufficiently considered and that it is high time we entered into phase (2) in acquiring for this country an adequate civil defense.

After months of intensive study, a report was released in October 1948, giving a plan for civil defense that was endorsed by the American Legion with certain recommendations. These recommendations were designed to increase the internal security of the organization and to guard against the entry of subversive elements. The American Legion in its desire to cooperate with the Federal Government in its program for civil defense has patiently waited its approval of some practical plan for civil defense in which it, the American Legion, could participate with the Federal Government to give our people the protection needed. The failure of the Federal Government to set up a sound and acceptable plan of civil defense will inevitably lead to disaster unless positive measures are taken at once.

In accordance with these findings, a resolution has been prepared demanding that the Congress of the United States take this matter into its own hands and proceed with legislation that will provide a sound and acceptable plan of Nation-wide civil-defense training designed to give to all the States a common basis for civil defense.

That was from page 132, digest of minutes, national executive committee meeting, the American Legion, Indianapolis, Ind., November 4, 5, and 6, 1949.

Since it sets forth vigorously and concisely the impatience of the American Legion with the present status of civil defense in this country, the resolution mentioned in the foregoing quotation and duly adopted by the national executive committee at that meeting is set forth in full:

#### FEDERAL PLAN OF CIVIL DEFENSE

##### RESOLUTION NO. 20 OF THE NATIONAL EXECUTIVE COMMITTEE MEETING

Whereas failure of the executive branch of the Federal Government to produce a civil-defense blueprint and training program has aroused the country, and

Whereas the American Legion believes this is inexcusable and has been demanding with all its vigor since the end of the war that the Government set up a sound and acceptable plan of civil defense, but has been ignored in all these demands and in all preliminary planning, and

Whereas our national membership is severely critical of this inaction and believes it might have tragic results, and is calling for immediate action to set up a coordinated Nation-wide training program: Now, therefore, be it

*Resolved*, That in order to put an end to these ominous delays and omissions, and in order to get the action demanded by the people and by the mandates of the San Francisco, New York, Miami, and Philadelphia national conventions of the American Legion; it is

*Resolved*, That the American Legion now demands in terms so unmistakable that there can be no misunderstanding that the Congress of the United States take this matter into its own hands and proceed to enact a law which will provide a sound and acceptable plan of Nation-wide civil-defense training designed to give to all the States a common basis of civil defense; and be it further

*Resolved*, That the Congress provide that civil-defense planning and training be made the responsibility of a single Federal office, or department, as mandated by our national convention action.

If you will note, Mr. Chairman, at that point, I think that that answers your question, that whereas in 1947 the statement had been that the department was pin-pointed as the Department of Defense, in the 1949 declaration at the national convention we said, "A single Federal department." Our thinking has not departed in fact from the thought that the Department of Defense should be given at least the major directional planning and implementation with whatever collateral and incidental powers may be necessary, rather than perhaps creating one new over-all agency which necessarily would overlap on other existing agencies.

The CHAIRMAN. Have you made any study of the English system as it was used in the last conflict?

Mr. ALLEN. We have had working with us Col. Frank McNamee, of New York, and Col. William Warner and Col. William Brewer, all of whom were closely associated in the passive defense of the Low Countries and England during the war, and they have helped in the drafting of our resolutions and our plans of civil defense. I am not familiar with it myself, to that extent.

The CHAIRMAN. I wonder if, before that resolution was passed, you know whether or not your national officers had any contact with the NSRB, the National Security Resources Board?

Mr. ALLEN. I will state the fact. The resolution that I just read came from our national executive committee meeting in November of 1949, following the summary that I have read of the resolution adopted at the Philadelphia convention. At that time, every inquiry was made as to what governmental authority we could go to to find where we were in this country with regard to civil defense. We got the most active cooperation from the Department of Defense, which sent down representatives to meet with and to discuss with us the status, the planning, and the future of civil defense, and to help us in our thinking.

We made a similar request of the NSRB, and we were advised that they had no man in there who knew anything about civil defense.

Now, let me qualify that statement. We know that they did have some men who knew something about civil defense, but the response that was made was with particular reference to the action the Legion was wanting to take at its Philadelphia convention, as to what we could set up as a plan. It was our understanding that the work in the NSRB was almost purely an investigatory and planning type of work, and that they were not vested with authority to promulgate plans.

The CHAIRMAN. That is not quite accurate, I think. After all, they are the coordinating agency for all of the departments of the Government which have an interest in civilian defense. There is scarcely an agency of the Government that does not have some function, some part to play.

Mr. ALLEN. That is right.

The CHAIRMAN. There is the Treasury, the Department of Justice, and the Department of Commerce in export licenses, and the Department of the Interior in natural resources, and the Department of State. The thing that occurs to some of us is that if you were to set up one department and call it the Department of Civilian Defense, you would duplicate the whole Government. Of course, we cannot afford that. We cannot have a duplicate Department of the Treasury to deal with matters of civilian defense, so that is why it has been determined that the best way to handle it is to have a coordinating agency.

Now, I regret that when you tried to get some information from them they did not come forward, because they should have.

This committee has held several executive hearings, executive because there were matters which we wanted to discuss which it was not practical to discuss openly, that is, in an open hearing. I do not want to speak for the committee, but I will speak for myself in saying that the amount of planning and the amount of study that has been done rather surprised me, and I did not know that they had done as much as they had.

However, that is the purpose of these meetings, to see to it that the planning that can be brought to the attention of the public should be brought to the attention of the public, and perhaps the American Legion will feel when the job is done in part by this committee, that they have not been as much asleep as both you and I thought that they were, at least before I started to investigate it.

Representative HOLIFIELD. Mr. Chairman, may I ask a question of the witness?

Your original resolution was passed in March of 1948, you say?

Mr. ALLEN. No, sir. The resolution I just read was adopted by the national executive committee in November of 1949. The resolution preceding, that had been referred to, had first been adopted at the New York national convention in 1947. That was reaffirmed at Miami in 1948.

Representative HOLIFIELD. The reason I asked was that the President assigned to the National Security Resources Board the leadership in coordinating civil defense in March of 1949.

Mr. ALLEN. We had that action before us at the time of our Philadelphia convention in 1949. This resolution was adopted after that, and it was in view of that fact that the national commander of the Legion made the request of the National Security Resources Board that it, if it could, send one or more representatives to meet with our committees at Philadelphia, to bring them up to date as to what the state of civil defense planning might be, and what the plans were for actually instituting such a system. It was at that time that we were advised that they were not equipped to give us that information. They did not send anybody down.

The CHAIRMAN. What was that date?

Mr. ALLEN. They were not equipped, they said, at that time to give us that information we were requesting. That was in August and September of 1949. That was at the time of the national convention in Philadelphia.

Then Mr. Cocke, as chairman of the National Security Commission, got in touch with the NSRB at Washington by phone to inquire, if one or more of us came to Washington, whether there would be somebody who could meet with us to help us in our thinking, because we were responsible to report back to some 3,000,000 members in over 15,000 posts who were demanding of our organization that it do something to get a civil defense plan in this country.

Representative HOLIFIELD. I think the American Legion is to be commended for its initiative in pushing for some type of civilian defense. However, as this committee has entered into this subject and heard testimony, we find that it is a very complicated field; it is much more complicated than it was in the last war, and we cannot envisage the same type of civil defense such as tin hats and sand buckets, under the circumstances which now exist, and therefore it would be worse than useless to start on a plan that was not well thought out and well integrated into our whole national structure.

I doubt if there is any member of this committee right at this time that would be willing to write down a rigid form of civilian defense. I do not believe there is any organization in the American Legion or anyone else who could prescribe an inflexible plan right at this time to answer the needs of civil defense in America. I think that we are all exploring that, and we are just as anxious as you are that the proper kind of civil defense plan be promulgated. But we do not want to lead the people down a blind alley with the wrong kind or inadequate kind of civil defense program.

Mr. ALLEN. Did my response to the Senator's question give you the idea that I thought that either we or somebody else could provide such a plan right now? I did not so intend.

Representative HOLIFIELD. No; I did not understand that.

Mr. ALLEN. All we wanted to say was that somebody ought to get busy now, not merely thinking and not merely philosophizing and

not merely planning and not merely writing magazine articles, but somebody ought to get busy. And we set about trying to say who we thought should do it. And we are saying that here. We think it is Congress.

I would like to finish, if I may, on that same subject.

The CHAIRMAN. Yes. I have some questions here which raise some problems, which I will be glad to refer to after you finish.

Mr. ALLEN. I may cover some of the points, because we were trying not to go too far afield, and therefore a lot of these things are short-cut.

Then, in January of 1950, the national security commission of the American Legion, meeting in Washington, D. C.—and at that time there were members of the NSRB meeting with our commission, for the first time—adopted a report to the national executive committee reciting that—

the totality of modern war and the complete vulnerability of our homes and our industries have brought new emphasis for the necessity for a practical plan of civil defense.

It further reported that although the Hopley report—Civil Defense for National Security reports to the Secretary of Defense through the Office of Civil Defense Planning, dated October 1, 1948—had laid down a blueprint that is proving useful as a guide for communities all over the Nation, nevertheless that plan had not been adopted or approved by the Federal Government, and that on March 3, 1949, the President in a letter to the National Security Resources Board asked for a plan of civil defense and that the Board in turn had reassigned the project to other agencies. The Legion's national-security commission thereupon observed that—

progress has been slow and at times difficult, because of lack of leadership and the fixing of responsibility on a definite Nation-wide plan.

The national security commission did, however, comment upon one bright spot in the picture. It noted that—

In the operation of the present auxiliary tests, control has been vested in the Civil Defense Section, Department of Defense.

Noting that in these regards progress has been made, it was further noted that, as proposed in the Hopley report, civilian participation in existing community structure has been followed; that civilians will be charged with responsibilities in auxiliary units that have to do with every phase of civil defense. It was further noted that trials have been run on limited scales in some phases of these auxiliary services and that more extensive tests are now being planned. These are the tests which are being carried out under the Department of Defense, and it is in that Department where progress is being made.

At this point it should be reiterated that the American Legion repeatedly has called for the placement of the responsibility for development and implementation of civil defense in the Department of Defense through a civilian agency.

It has been the confirmed conviction of the American Legion that responsibility for positive action will have to be placed under one head in order to provide an acceptable and workable plan of civil defense for the entire Nation.

In that regard, let me digress to say that the Legion is not endeavoring to say to the Congress where the one head should be or how it should be or what the correlation of those things should be. I would

like to say that we met this morning with the new Director of Civil Defense, and we were likewise surprised to find some of the scope and extent to which their planning has gone, but we are still unsatisfied as to the steps being taken for progress in the future. We find that their planning is merely being recommended to the States and communities. We believe that the Congress must soon act with legislation to implement the continuity of a common plan down through the communities and down through the States, with a Federal head.

The CHAIRMAN. We had the mayor of Los Angeles here the other day, and he made a strong plea for the cities and the States being permitted to handle this problem. This was Mayor Bowron. I do not quote him, but I give the sense of what he said, and he said that he was somewhat alarmed at the growing militarization of the United States, and he wanted to make certain that the military did not come into control of the program until there was an absolute necessity for it.

Do I quote him correctly in that, or do I convey his thoughts?

Representative HOLIFIELD. I believe so.

The CHAIRMAN. He, too, complained that he had not received definite word as to what he should do, although the Governors of the States have in the past, I believe it is, 30 or 40 days gotten some rather definite information.

The point that I want to make or sum up is that at least we have had one witness before us who does not see eye to eye with the Legion in the matter.

Representative HOLIFIELD. May I ask, Mr. Chairman—

Mr. ALLEN. I wish to respond to this extent: that, in the next development that I come to here, the Legion insists upon the recognition of local autonomy, the sovereignty of the States. We are merely calling for a common plan, evolved somewhere in one place, whereby the 48 States will have one plan instead of 48 different plans, and the communities will all be on a common basis. If a man moves from New York to Los Angeles, he knows what to do if he is assigned to a given unit, instead of having as many different types of organizations as there are cities, so that the articulation of that plan in the event of attack can be as easily accomplished as the federalization of the National Guard, so far as chain of command is concerned, or so far as the flow of common action.

Representative DURHAM. Is that not where you run into difficulty, Mr. Allen, because you get into a different situation in Chicago rather than Chapel Hill, and to work out an over-all plan for each State on the same basis, to me, it faces a great many difficulties.

Mr. ALLEN. Of course, we are getting into a discussion of something that the Legion has not undertaken to do. We are not undertaking to set up a plan; we are saying to the Congress, "We think that you should evolve a plan." We are saying to you that, when you do, we think there should be a continuity of the principle involved so that the application of that in the different States will have a common basis.

Representative DURHAM. I understood you to say it should be an over-all plan.

Mr. ALLEN. It is an over-all plan, but there is a plan for cities of 10,000, and 50,000, and 1,000,000; and the things that do exist in common in those kinds of places. Those are the details that we have not endeavored to say to you anything about. The experts are there for that purpose.

Representative HOLIFIELD. The thing that you are looking for is expert Federal guidance on a uniform plan in the different communities, of solving a common problem which might be common to them?

Mr. ALLEN. That is right.

Representative HOLIFIELD. I am glad to hear you say that you are asking for autonomy to be held on the State level, because I think most of us feel that, in a civil defense program of the magnitude that will be necessary, it will have to be run with volunteer help, and when you have volunteer help the Federal Government cannot step down and direct them as to how it must ask them to cooperate along the lines of a common plan.

Mr. ALLEN. My next paragraph covers that, Mr. Holifield.

Representative HOLIFIELD. Also, the point I wish to speak on is on your military or civilian control. I think, if we have been informed correctly, the military part of our Government does not want to have the responsibility of actually directing civilian defense. I think they want to work in the sphere of military action rather than in civil action; and, while there is a necessary coordination there, yet they realize that they cannot be burdened with the tremendous job of civilian defense if they are going to defend the Nation in a military way.

Mr. ALLEN. I think that you will see from our own development we do not expect the Department of the Army or the Navy or Air Force to have anything to do with it. The Secretary of Defense is, of course, a civilian. There are civilians under him. There are other civilians or civilian agencies, of course, that might be possible. That is the question we leave to Congress. We are not trying to say to you how to do it. We are saying to you that something must be done, and now, and more than has been done.

I think the next paragraph is directly on the point that you had, of autonomy, and shows the thinking of the Legion and its continuity of thought since 1947.

The CHAIRMAN. I just want to make a comment on that. It is true that the Legion in 1947 and 1948 and 1949 made reference to this problem, but it is significant that your executive committee met in between conventions and brought up this thing in November of 1949; and as Mr. Kennedy, I believe, said, in the interval between your convention and the executive committee meeting came the atomic explosion.

Mr. COCKE. We adjourned on September 1, and on September 23 President Truman talked about the explosion of the atomic bomb in Russia.

The CHAIRMAN. The reaction on you fellows was not a lot different from the reaction on Government, Congress, and on the people generally. It is pretty difficult—and I am not trying, because I had nothing to do with it, I am not making any alibis for what they did or they have not done—but I think it is only fair to say that the impetus for civilian defense was not present until the existence was proved of the Russian atomic bomb; do you not agree?

Mr. COCKE. Right, and therefore more important now.

The CHAIRMAN. I agree. But what I am trying to point out is simply to be fair to all concerned. Your Government is a reflection of your people, in large part, and the impetus was not there.

Then, again, I am one of those who did not depreciate the importance of what happened last August, announced in September. To my way of thinking, some of our national leaders made statements with an effort to play down the importance of it, which I do not believe was wise. I personally did not take that attitude, and I think it had tremendous implications. I think that that is becoming more and more apparent to the people of the United States with every day that goes by.

I just make those comments showing that you do not get things done until you have a reason to get them done that you can see. It is theoretical up to that time; and then we know that they are in prospect of having a stock pile of atomic weapons, and that is the impetus to get busy, the Legion just as well as those responsible here.

Mr. ALLEN. In defense of the Legion itself——

The CHAIRMAN. You do not need to.

Mr. ALLEN. I am saying it this way; that it had, perhaps, keener apprehension of some of these things earlier than the mass of the people. We were advised at New York in 1947 that there would be an atomic explosion under control in another country at some time. The timetable was shortened, to be sure, but it did not in any degree lessen the interest and lessen the apprehension of those who were working on this. And so I would like to go ahead into the next paragraph, and as I read it, please remember that it was written in August of 1947 in New York City.

Representative DURHAM. This is a continuation of the policy that we have always had, because of the fact that in the twenties we were always apprehensive then of what was going to happen as far as our defense was concerned.

Mr. ALLEN. If they had not thought we were ill-advisedly apprehensive, we might have kept out of at least one of those wars.

The CHAIRMAN. How many of those 3,000,000 members of the Legion have signed petitions asking that the budget be balanced and that all expenditures be cut?

Mr. ALLEN. I would not know anything about that.

The CHAIRMAN. I will bet you a lot of them have.

Mr. ALLEN. Yes; no doubt.

The CHAIRMAN. They sign petitions for defense of the country on the one hand, and giving h-e-l-l to anybody who cuts the appropriation; and then a week later you will get a letter saying, "Why don't you balance the budget, and why are you spending so much money?"

Mr. ALLEN. In Oregon, we like them not to spend money in Connecticut, but not to cut us off.

The CHAIRMAN. And in Connecticut, Oregon is a long ways away. Of course, I might add that the balance is against us.

Mr. ALLEN. This has been the position of the American Legion since its 1947 national convention at New York, where it declared:

It is clear that organized and disciplined local civil-defense agencies, with adequately trained personnel, under wartime military jurisdiction, must be immediately available in every community if the Nation is to survive the totality of any future war.

While the development and preparation of any over-all plan for civil defense is basically the responsibility of the several sovereign States and the local communities, the problem in its entirety transcends State bounds, and requires some form of articulated Nation-wide control, and accordingly belongs in the Office of the Secretary of Defense——

and that was our 1947 statement—

for leadership, policy, unified national plans and over-all supervision, and for Federal control upon actual activation in case of attack.

That was from page 92, Summary of Proceedings, Twenty-ninth Annual National Convention of the American Legion, New York, N. Y., August 28 to 31, 1947.

The 1947 position of the American Legion was further amplified in the resolutions appearing in full on pages 92 and 93 of the Summary of Proceedings above mentioned. This included the outline of a basic plan of civil defense and copies of the Summary of Proceedings of the New York Convention, so far as available, will be made a part of this statement. The basic plan so outlined in Resolution No. 845, appearing in full on page 93 of said Summary of Proceedings is incorporated, in its main essentials, in the aforesaid Hopley report, which of course amplifies and details the functions therein set forth. That has been set out as a plan of civil defense and expanded in the Hopley report, and which the Legion has approved, with certain recommendations.

The Hopley Report aforesaid sets forth on pages 280 to 285, both inclusive, a model state civil defense act. Although the Hopley Report has not officially been approved, nevertheless various bar associations in the States and the American Bar Association at its St. Louis convention favorably considered the model act as a proper basis for uniform State legislation upon the subject of civil defense.

Accordingly, the American Legion has proceeded to urge the adoption of the model act throughout the States and this has been accomplished in some moderate degree.

It becomes obvious from all the foregoing, of course, that there must be created some central motivating force in order to accomplish a satisfactory Nation-wide application and organization of a sound and acceptable civil defense plan.

With this in mind the national security commission of the American Legion on January 28, 1950, meeting in Washington, D. C., originated and approved its resolution No. 1 calling for an official plan of civil defense.

This resolution by the national security commission recited that there has in fact existed since October 1, 1948, an adequate and comprehensive plan for civil defense, that offers an integrated plan for national, State and municipal governments.

The commission then proceeded to state that—

There is practically no leadership from the Federal Government to coordinate, counsel or assist in the training of State and municipal civil defense organizations—

let me stop there to say that the NSRB expressly, as I understand it, disclaims any authority to go out and aid in the training on these things. They are merely a planning agency so far, merely considering what ought to be done, and perhaps making some suggestions. But we are saying somebody should go from that point on now to phase (2) and proceed upon a training program that will answer the questions of the mayor of Los Angeles and say, "We are leaving this to you and your local autonomy, but here is what we think is a good thing for you to do; and if you do it, it will be in the general pattern of all of the other communities."

The CHAIRMAN. You were told that that was in the works?

Mr. ALLEN. He was saying that they are exceeding the planning authorized, perhaps, to the extent of recommending that their planning be adopted. We say that the Congress should not leave it to any such body to merely recommend its plan, but should give statutory authority for such a group, the same one, perhaps, to have the authority to give such aid as may be necessary to the States and to the communities in carrying it out and doing it expeditiously. As it is going now, maybe in 10 or 15 years we might have it, and it might be 9 or 14 years too late; and we think that we need something pretty soon.

Representative HOLIFIELD. You are advocating the passage of a civil defense act something like the British have?

Mr. ALLEN. Something along that nature.

Representative HOLIFIELD. But how would you provide for the degree of financial aid which could be extended from the Federal Government to the local agencies before we find out just exactly what kind of a plan is the best suited?

Mr. ALLEN. I think we would deem that any suggestions from us to the Congress on that score would be presumptuous. That, as we conceive it as citizens, is the duty of our Congress to figure out.

Representative HOLIFIELD. That is one of the things that we are trying to figure out.

Mr. ALLEN. We do not want you to spend too much of our money, of course.

The Commission thereupon resolved:

That the President of the United States immediately declare an official plan for civil defense that will permit the establishment of a practical civil defense organization.

The foregoing expression of the national security commission must, of course, be interpreted in the light of the official convention action of September 1949, at Philadelphia as hereinabove quoted, and the November 1949, action of the national executive committee calling upon the Congress to take the matter of civil defense into its own hands and to base it upon the enactment of a law which will provide—

a sound and acceptable plan of Nation-wide civil defense training designed to give all the States a common basis of civil defense.

While realizing that this presentation has intruded upon your time and your patience, it has gone to this length only to indicate the growing impatience of the American Legion as the world's greatest veterans' organization, over the inaction and lack of leadership displayed upon the Federal level with respect to promulgation and development of a sound and acceptable plan of civil defense. It has been deemed worth while to indicate to you in some detail the tolerance and patience of the American Legion in putting up with the snail-like progress made by the Federal Government, since World War II, in the direction of an adequate civil defense program.

In addition, however, it has been given you with some detailed reference to official action in order to indicate that the American Legion fully realizes the dangers inherent and implicit in any ill-advised or hastily put together Nation-wide plan of civil defense, even though an efficient one.

Your attention is respectfully invited to the fact that the American Legion has stated and restated in every official declaration, that any

plan of civil defense to which it will give its support, must be a "sound and acceptable plan of civil defense."

I would like to interpolate into the mimeographed copy that you have there, something that has occurred since we had discussed these matters, to make it clear what the Legion thinking has been. It is appropriate to remark at this point that any such plan must be created and administered under civilian control to meet Legion requirements.

Preservation of local autonomy and sovereignty of the States was declared for in the 1947 New York resolution as hereinabove quoted.

The national executive committee, in interpreting and carrying forward the declarations of the American Legion in its various national conventions since World War II calls attention to—

the Legion's insistence upon preservation of local autonomy in peacetime, and maximum protection of those human rights and liberties which we deem fundamental to our concept of a free America.

That is from page 101, digest of minutes, national executive committee meeting, national headquarters, the American Legion, Indianapolis, Ind., November 18, 19, and 20, 1948.

Upon the same page in the same document, and referring to the Hopley Report which it said appeared to embrace and implement the principles of civil defense as outlined and declared by the American Legion at its 1947 New York convention, it states nevertheless—

but the national security commission and the civil defense committee will have to subject this entire proposal to the most searching scrutiny before we shall be able to give you a final approval upon which to base official Legion action. It is self-evident that the impact of full regimentation, under civil defense, could be devastating to the American concept of freedom.

In the next paragraph it proceeds further to state that any such Nation-wide plan offered for approval must be—

based upon basic principles previously declared by the Legion to be essential to an acceptable civil defense establishment.

Again upon the same page the national executive committee reaffirms the declarations of every national convention since World War II—

that the American Legion stands ready to furnish direct and immediate support through cooperation, coordination and education, in the event the plan meets with final approval.

Throughout its planning the American Legion has been keenly aware of the fact that it would be quite futile in the end result if the creation of an efficient centrally controlled and regimented system of civil defense should mean the loss of those fundamental human rights and liberties for the attainment of which, and in the defense of which, the American people have struggled from the inception of our Nation.

It was with this in mind that the national executive committee said on page 100 of the digest of minutes of the November 1948 meeting above mentioned, that—

the relationship of the American Legion to civil defense has now taken a new turn. New duties lie before us, and our responsibility has become great \* \* \*.

and then closed on page 101 with the following:

We would not have intruded upon your time to this extent, but for a keen realization of the far-reaching impact upon our whole people of any permanent plan of civil defense. It must be acceptable according to the concepts of the American Legion.

It was with this in mind that the American Legion has called upon the Congress to assume the controls—civil defense must remain with the people, both as to when they go into it, and when and how they come out. That is the responsibility of the Congress.

Upon behalf of the American Legion we wish to thank you again for the opportunity to bring into your record the full weight of the American Legion's 4-year position with respect to civil defense:

First, as to the necessity for a sound and acceptable over-all Nation-wide plan; and

Second, the equally imperative requirement of any such plan that it be not the instrumentality of losing those fundamental human rights and liberties guaranteed to us by our Constitution; and

Third, the American Legion's belief that this safeguard must be accomplished by the exertion of effective control over civil defense in its inception, in its operation, and in its termination, by the Congress of the United States.

The CHAIRMAN. Are there any questions, gentlemen?

Representative HOLIFIELD. I would like to make this comment, if I may, Mr. Chairman.

I think your presentation is very good, and you have certainly outlined to us the problem that we have before us, which has been outlined to us before. You have put, and rightly so, certain prohibitions against putting a plan into effect which increases the seriousness of the problem, because we are going to have to go at it in the American way, which we want to do, and that is the way we want to go at it; and that means that we are going to have to develop it on the basis of cooperation rather than coercion. And, of course, we must have the support of the people throughout the Nation or we cannot do that.

The Chairman's remarks on timing, in my opinion, are very important, because at the present time if you go into a community and try to sell them a plan which may be the necessary type of plan to save that community or to partially save it, the attitude with which those people meet that plan is going to be very important. If they say, "What are you trying to do, scare us? We are not going to give up enough of our time to take this training, and we do not believe we are going to have a war right away and we see no necessity of going into this thing as seriously as you seem to think it is necessary," at that point, unless we do have real grass-roots support for the type of a plan that may be necessary, our whole structure will break down.

Mr. ALLEN. Congressman, I am very grateful for your bringing that subject up, for this reason: As I said a few minutes ago, we in the American Legion make no pretense of being experts on how to do this civil defense thing. We do pride ourselves to some extent that by lifelong application to the principles of the Legion and of our country, we can see what the problems are that the experts ought to go to work on.

Now, we can perform a function on the very angle you mentioned. That can be, as was said in here, new duties and responsibilities of the Legion. Our relationship now takes a new turn.

First we propose to safeguard those fundamental human rights and liberties to the bitter end, whether we ever get civil defense or not. We are not going to give up what we have in the Constitution. That is, just for something that might do us a job.

The next thing is this: When the Congress delivers back to us what we are asking for from you now, which is a sound and acceptable plan of civil defense guaranteeing the human rights and liberties and protecting those things to the fullest extent consistent with the necessities of the situation, then we can offer to you the greatest veterans' selling organization in the world, of three million members with over 15,000 posts, in every State and community of the United States, where our men can go in there and say, not "we are going to do the job," but "as citizens we are here to help to do the job."

Representative DURHAM. The application of it is what is worrying me, because it is not very difficult to get people enthused over something if you are in war. In peace it is a selling job, as you have pointed out.

Now, as I understand your recommendations or your thinking, of course it coincides with mine, to keep it on a local level and in the hands of the Governors and the mayors and the people. I think that that is the right procedure. I understand you to say that something should be done in the way of statutory authority; is that correct?

Mr. ALLEN. That is right.

Representative DURHAM. Have you gone so far since you more or less volunteered your services, could the veterans' organization be put into the statutory authority as something along that line?

Mr. ALLEN. I am glad you raised that question. The American Legion does not ask to be recognized as an organization at any point.

Representative DURHAM. I am talking about all veterans' organizations.

Mr. ALLEN. Or any veterans' organization. We are simply saying that as good American citizens, give us something which as citizens we can do to fit into the civil defense program. What we are saying to you beyond that is that as the American Legion, give us a selling job to do to the citizens of whom we are a part.

Representative DURHAM. And you do it on a voluntary basis?

Mr. ALLEN. Absolutely; and we do not ask to be mentioned in any statute.

Representative DURHAM. As I say, somebody has got to administer this thing, and, as you know, sometimes our elected officials get a little careless.

Mr. ALLEN. You give it to our Governor—and he is a good Legionnaire—and we will say to him, "What do you want us to do?" He will say what he wants done. It is a duty of citizenship, and the offer of the Legion here is only as a function of citizenship.

Mr. COCKE. I think in the interest of time, we can excuse Niel Allen, of Oregon, and I want to present the second witness here.

Besides being a Catholic priest, well known and admired in his State of Colorado, the next witness is Father Paul C. Potter, who is a consultant to the National Security Commission of the American Legion, and his military record, which is certainly a brilliant piece of service, between 1940 and 1946 in World War II, he was a colonel in the United States Army Air Force at the time. Although he is a chaplain, Father Potter was officially admitted and recognized throughout the War Department as the chief instructor of the Air Force's training command, at which time they had probably the largest school or university in the world, and under his direction as the chief instructor, which numbered 1,450,000 at the peak time.

So you might say he has operated the biggest classroom instruction that the world has ever seen. He certainly has been recognized in many fields, and understands the aspects of training that affect the cross-section of the Nation's youth.

So we feel that we have, and I will present him to you today, the foremost internationally known authority in the field of panic research and survival training.

It is a pleasure to present to you as an expert witness, and one that I feel will be very entertaining and beneficial to this committee, Father Potter, from Colorado.

**STATEMENT OF FATHER PAUL C. POTTER, OF COLORADO  
CONSULTANT TO THE NATIONAL SECURITY TRAINING  
COMMITTEE OF THE AMERICAN LEGION**

Father POTTER. Mr. Chairman and gentlemen of the committee: As a member of the American Legion and technical consultant to its national security training committee, I appreciate the privilege of coming before your group today to testify concerning the immediate and urgent need for a systematic training designed to prepare the youth of the Nation for potentialities of the future by no means uncertain.

Mainly because civilian populations of the larger cities of America will be not only the shock troops of any next world war but also constitute the mobilized manpower for purposes of counterattack and mop-up, one of the major problems now confronting the youth of the Nation is the problem of survival. And because the means of survival in an age of technological warfare do not come as an inborn or intuitive or instinctive knowledge, the provision of a correlated form of survival training has quite inadvertently become one of the pressing duties of National Government. No longer can it be viewed as a matter of choice or privilege; it is an obligation—not merely an "ought" or an "if," but a "must."

Recognition of that fact is, of course, back of any inquiry into the necessity for some sound plan of civil defense.

You have already heard the Legion's statement that civil defense is "the organization of the people to minimize the effect of enemy action against life, production, and property."

In the light of my present discussion, may I say more specifically, civil defense training is now survival training.

In further support of this statement I invite your attention away from generalities and to something definite and specific—to a fact which is not a matter of hearsay or opinion or ideology.

It is this: Anyone who could this day penetrate the Soviet iron curtain far enough to audit classes now in progress in the Soviet Air Academy at Monino near Moscow or at the Soviet Command and Staff School in Moscow, could observe for himself how literal translations of two American publications are distributed to Soviet students of military tactics and strategy.

One of these is a verbatim translation of a book entitled "Invasion From Mars" written by Prof. Hadley Cantril of Princeton University and giving a play-by-play account of what happened on the night of October 30, 1938, when a fictitious news broadcast by Orson

Welles channeled over a Nation-wide system, plunged civilians in all parts of the Nation into a state of panic so interesting and amazing that the psychology department of one of the Nation's leading universities made it the subject of detailed study and research.

The CHAIRMAN. You know, Father, I remember it took about 3 days to get some of those people back from the hills of Oregon, and I remember that very well.

Father POTTER. That is correct. In fact, people of one New England city wrapped their faces in wet towels and besought gas masks from the courthouse. At Pensacola, Fla., a father murdered his two children so that they would not be molested by inhabitants from Mars; and a Memphis newspaper published the accounts of the destruction of St. Louis and Chicago.

The other translation is an account of the very revealing psychiatric experiences of one of the numbered Air Forces in World War II. It is entitled "Men Under Stress," written by Colonel Grinker and Major Spiegel.

The fact that these and similar publications are made a subject of detailed analysis in military classrooms in Soviet schools of advanced military science does not indicate a mere hobby or avocation or pastime on the part of military specialists in Soviet Russia. There can be but one logical conclusion: namely, that the Kremlin planners know the weakest point of the world's strongest Nation—its susceptibility to panic.

By "panic" the psychologist means any sudden, extreme, and unreasoning reaction to fear. Whether it is individual or group or mass panic does not alter its basic utility to an enemy who aims to break a Nation's will to resist. Consequently, any modern system of national defense which does not give specific attention to the panic-proofing of personnel, civilian as well as military, is as useless as a gun with a cardboard barrel. And the security which it affords is a misnomer.

This is mainly because the interrelations of warfare and weaponry have been changing more rapidly than the common concepts of military science. Best sellers are still speaking of an Absolute Weapon. Vannevar Bush, for example, defines it as that weapon which renders all other weapons obsolete.

Actually, in this age of technological warfare, there is little use talking—except from the engineering viewpoint—about the absolute weapon; for it is purely an imaginary thing. It cannot long exist outside the mind of its inventor. It can never be photographed with a camera nor weighed on a scale nor calibrated with a meter; simply because it is obsolescent before its fabrication is completed. If obsolescent, it is not absolute. And although it will always be necessary to stock pile supplies of so-called absolute weapons in order to back up the Nation's threat to counterattack in kind, the only concept common to the changing techniques of modern warfare is the ultimate weapon, namely "panic."

The capacity to create individual or mass panic is the only objective of warfare which has remained unchanged from the era of caveman combat, through the wars of the Philistines and Genghis Khan, down to the reciprocal mass destruction of modern times. This is because the threat of panic is the basic thing which can cause an armed enemy to abandon opposition. And such is the aim of all warfare.

Because reasonable fear is a natural emotional pattern developed in humans as a normal and necessary protective device, immunity to panic or fright or tension is not a common heritage of all men. It is something which can and must be developed. Lack of such immunity is what basically caused most casualties which in World War I were commonly known as shell shock and in World War II were dignified with the name war neuroses or combat fatigue. Regardless of what such casualties are called, psychological research has given us not only the ways to prevent them in both military and civilian personnel but also the advanced methods for screening and classifying persons so as to make such training most effective. One of the objectives of the national security training program which the American Legion advocates is to process the youth of the Nation in such a way as to send them back home again to their respective communities with the know-how, the know-why, and the wherewithal which constitutes immunity to needless fear, useless tension, and suicidal panic.

In this Nation of relative plenty where big-city youth has been softened by the comforts of modern indoor living, it is being utterly unmindful of the Nation's future to let youth continue on with a sense of security adapted from the Buck Rogers or Flash Gordon school of survival.

The significance of this thought becomes more pertinent when it is recalled how, in the attempted mobilization of manpower for World War II, three-quarters of a million of the Nation's youth had to be rejected by draft boards due to psychological unfitness for combat. Regardless of this precaution, psychiatric casualties numbered nearly 2,000,000. This significance became doubly emphasized just 4 months ago when the Acting Federal Security Administrator testified before Congress that not less than 3,000,000 of the youth now in the Nation's schools will at some future time have to be committed to mental hospitals for observation or treatment.

It is consequently apparent that a system of national-security training involves not so much the issue of the Nation's youth sacrificing a brief portion of their time for group training as it does the Nation giving its youth one last opportunity for survival. From the standpoint of youth, national-security training is therefore not a Plea but a Privilege.

With very few and minor exceptions, the youth of America are brought up to believe in rugged individualism. In times of peace this is perhaps a tremendous asset to both youth and to the Nation, but it can become a national and individual liability in wartime manpower mobilization, and for two reasons:

(1) It opposes development of capabilities for essential teamwork, without which any kind of group combat action is not only useless but suicidal.

(2) It begets a feeling of frustration which breeds neuroses. Such conflicting habit patterns create further mental kinks which curtail the man's usefulness to himself and to the Nation.

Even apart, therefore, from the way in which national-security training would aid far-flung communities in stabilizing and correlating their fulfillment of civil defense, apart from the screening, classification, and psychological processing procedures available for the first time on a national scale, there will be afforded to youth a solidarity of national viewpoint and a confidence in the American way of life.

In summary, therefore, may I point to the following facts:

(1) The possibility of harassment by nerve poisons, or biological warfare, which are by themselves perhaps more of a threat than atomic attack, is not a remote potentiality but a pressing and immediate threat, to prevent which the Nation is presently spending two-thirds of the national income. The Kremlin has repeatedly declared that conflict between communistic and capitalistic ideologies is certain.

(2) Russia now has a workable A-bomb and the means of delivering it to any portion of the United States.

(3) This Nation is repeatedly informed that the air defense of America is inadequate and, even if it were the best which could be devised, 50 percent or more of hostile aircraft might penetrate the Nation's air defenses.

(4) Since the national policy commits us not to strike the first blow without warning, a second and more devastating Pearl Harbor will be our first indication of state of war.

(5) The very nature of such an attack and the devastating results will provide the precise requirements for national panic as previously explained. People under stress lose ability to think logically and are momentarily deprived of their ability to protect themselves from destruction, excepting in cases where strong leadership is involved, either available or utilized.

(6) The Nation must look particularly to the civilian youth of America and not to the regular military forces for instant action to counteract the effects of hysteria and panic.

(7) Despite the drastic threat to our security, no method of long-range control exists except to train and otherwise prepare the civil population for such an eventuality.

(8) Leaders are useless unless they are trained and their correlated efforts are supplemented by a trained manpower so organized as to be promptly susceptible to leadership.

Thus it would appear to be self-evident that, unless we decide this Nation is in no danger of being attacked within its borders, there must be some preplanned, widely known and understood civil defense system.

It follows that this cannot be accomplished without training. I call it Survival Training, and it necessarily assumes two phases:

First, present training of the entire civilian population, adult as well as youth; and

Second, long-range youth training such as the national security training program provides, to implement civil defense until the long-awaited dawn of universal peace.

Meanwhile, the Nation's security can be no more dependable than the mass security of the manpower mobilized to defend it.

The CHAIRMAN. Do you have any questions?

I think that that is a very fine statement.

Representative DURHAM. It is a very fine statement.

Mr. COCKE. Mr. Chairman and gentlemen of the committee, our final witness will be an attorney from Murfreesboro, Tenn., Mr. Granville S. Ridley, a veteran of World War I, and who has been extremely active in Legion circles as well as being an authority in the field of national security training. He is going to close our argument at this time.

**STATEMENT OF GRANVILLE S. RIDLEY, CHAIRMAN OF THE  
AMERICAN LEGION NATIONAL SECURITY TRAINING COM-  
MITTEE, MURFREESBORO, TENN.**

Mr. RIDLEY. Mr. Chairman and members of the committee, the American Legion comes before you in the comforting knowledge that you sincerely seek a solution that will insure security and peace for our Nation. The Legion appears to say to you how it believes this can best be insured.

We have no ax to grind. Our sole objective is the security and peace of our Nation. The American Legion believes that only in actual real strength is there any insurance of security and peace. In this, your objective and that of the Legion is the same.

The shock troops of the next world war will be the civilian populations of such centers of importance as Washington; Detroit; New York; the Tennessee Valley; Oak Ridge, Tenn.; Hanford, Wash.; San Francisco; Los Angeles; and other population and industrial centers. In a sense the Reserve components and even the Regular armed forces will be only the counterattack or mop-up troops.

Our democratic system of government forbids us to precipitate an armed conflict without a declaration of war by using our Reserve or Regular forces for an offensive prior to such a declaration.

Undoubtedly the dictator nation which appears to be our only enemy in the foreseeable future will begin hostilities with a "Port Arthur" or a "Pearl Harbor." The consensus of our military, diplomatic, and lay thinking seems to be that this "Port Arthur" or "Pearl Harbor" will be aimed at our vital civilian centers.

It seems to the American Legion that the best and only way to withstand the initial shock to these vital civilian centers is by having the strongest segment of the population of these vital areas, the male youth, uniformly trained and organized.

The Legion has prepared a plan to initiate this training and organization which is embodied in a bill introduced in the Senate as S. 66 and in the House as H. R. 1305 which has already been referred to the Senate Armed Services Committee, but which, because of the changed situation confronting us, would probably more properly be a part of our national civil defense system.

The President of the United States in a speech to Congress on March 17, 1948, recommended the permanent enactment of universal-training legislation and the temporary enactment of selective-service legislation. He recommended selective service as a temporary solution of an emergency arising because of the rapidly dwindling strength of our armed forces.

Following the leadership of its President and upholding his hand in time of what then appeared to be a pressing emergency, the American Legion abandoned its historical opposition to compulsory military service in peacetime, and as a temporary expedient, and only as a temporary expedient, advocated selective service. The Selective Service Act of 1948 will expire on June 24 next, leaving our Nation with no Selective Service System and with no plan of universal training.

Then again, in his budget message to Congress on January 10, 1949, the President of the United States, himself a most distinguished

Legionnaire, said, and I quote from page 143 of the Congressional Record of January 10, 1949, as follows:

Before the Congress could complete action on that budget (fiscal year 1949), the uncertainty of world conditions made it necessary to consider steps to develop additional military strength which would give evidence of continuing firmness in world affairs. Therefore, in an address to the Congress on March 17, 1948, I recommended the prompt enactment of universal-training legislation and the temporary enactment of selective-service legislation. Shortly thereafter, I recommended additional authorizations for national defense, bringing my total recommendations for fiscal year 1949 to more than 14.7 billion dollars.

Since then I have given continued study to our national security requirements for the present and the future. For the time being it is essential to continue the selective-service process. However, this is not the solution to the Nation's long-range military manpower and training problem. Permanent legislation providing for universal training is essential if we are to achieve an acceptable degree of national security.

During this same session of Congress the President included in his budget the sum of \$800,000,000 for the expressed purpose of inaugurating a permanent program of universal training. The Congress of the United States saw fit not to inaugurate such a program and the money was otherwise used.

On January 9, 1950, the President of the United States in his budget message to Congress again said:

The extension of selective service authority will provide a temporary solution to the military manpower problem of the active forces, but will leave unsolved the problem of trained manpower for our Reserve forces. I point out again the necessity of a program of universal training, if we are to provide on a continuing basis sufficient numbers of men for the Reserve forces, adequately trained to use effectively the increasingly complex machines of war.

That is from page 176, Congressional Record of January 9, 1950.

He has repeatedly urged the establishment of universal training as the one proper permanent solution.

As emphatically as it is possible to speak, let me state that the American Legion believes that strength is the only insurance of security and peace; strength and ever more potential strength. By this the Legion means strength of every component of the Regular armed forces and every component of the National Guard and Reserves, with the emphasis always upon the provision of this strength through a trained civilian population.

The time has come to abandon bluffing and make-believe—to quit improvising expedients for every emergency. The time will never come when there is no potential crisis. Now is the moment to adopt a permanent plan of training to provide real permanent strength, the strength of a trained citizenry. To provide this strength, to provide a nucleus of trained and organized citizens about which the shattered and panic-stricken segments of any devastated vital area may rally from an initial shock, the American Legion has offered the plan of universal training as outlined in S. 66 and H. R. 1305. This plan is known as the American Legion's plan of national security training, and we believe it will accomplish the following results:

- (1) Provide a permanent and democratic induction system;
- (2) Provide a storehouse of trained personnel in time of emergency;
- (3) Help unify the services by a system of basic training;
- (4) Insure the maintenance at authorized strength of the National Guard and Reserves;
- (5) Restrain our enemies and reassure our friends;

(6) Even in time of peace give to our youth physical and mental profiling, moral and occupational guidance, and appreciation of America;

(7) Prepare the Nation to survive by withstanding the initial shock.

To summarize, let me emphatically state that the American Legion believes that only in strength does there lie security and peace, that the potential strength of the American Nation can best be organized through national security training, that this training is an integral part of the civilian defense program already outlined by other witnesses preceding me or of any worth while civilian defense program.

Therefore, gentlemen, the American Legion urges this committee to adopt a civilian defense program that will enable our Nation to survive by withstanding the initial shock, to take a courageous stand by advocating the adoption of national security training as an imperative part of such a program, and as a permanent solution of the Nation's peacetime training problem.

Thank you, gentlemen, for your indulgence. I realize that I have departed somewhat from the subject, but we do think that this training is an indispensable part of any adequate civil defense program.

Representative HOLIFIELD. As a matter of fact, is it not true that within the next 10 or 15 years, young men trained as you suggest would be inducted into the military service rather than into the home civil defense program?

Mr. RIDLEY. I do not think for that long that they would be inducted. The Training Act only provides that they shall be in the Reserve for as long as 5 years.

Representative HOLIFIELD. I realize that, but in time of a national emergency, their age, assuming they were 18 at the point of induction into training, and up to the age of 45, is generally considered the military age. So that that particular group that could pass the physical tests would go into military service rather than into home civil defense service.

Mr. RIDLEY. Still, that is true to a certain extent, but I do not think that it would ever be profitable to induct them at the age you mentioned, up to 45. I think, however, they would be very valuable in this training. It would be only a few short years before our entire male population had this training, just as a matter of course; if they were trained every year, in a few years our entire male population would be trained, and as part of that training they would be panic-resistant, panic-proof, or perhaps impervious to panic.

Representative HOLIFIELD. I can see, certainly, value to a trained citizen rather than an untrained one, but I think for the immediate problem we are going to have to rely on the people who are either physically disqualified for military service or over the age limit, or of the sex that does not go to war.

Mr. COCKE. We are always going to rely on those to look after the home defenses.

Representative HOLIFIELD. I am thinking of the condition of England. I was in England during the recent war, and I know that their civilian defense corps was almost completely composed of elderly people, both sexes. Every other younger person had a job to do, either in production or in the military forces, in England.

In view of the fact that any civil defense program that we go into must have several million people involved in it, I believe we are go-

ing to have to concentrate on training a different class of people than you speak of in your program, and for different duties than you would train those that you speak of in your universal training program.

Mr. RIDLEY. I think to a certain extent that is true, but I also think that it would have great value, the special training that this segment of the population would get would be of great value.

Representative HOLIFIELD. That is all.

Mr. COCKE. Mr. Chairman, we certainly appreciate the time you have given us, and we are delighted that we could come as a group of individual citizens and under the auspices of the American Legion from different sections of our great country, to present this program to you.

Thank you.

The CHAIRMAN. Thank you very much, indeed.

Now we will hear from Mr. Anthony, the chairman of the Civilian Protection Group of New York City.

#### **STATEMENT OF S. A. ANTHONY, JR., CHAIRMAN OF THE CIVILIAN PROTECTION GROUP, NEW YORK, N. Y.**

Mr. ANTHONY. Mr. Chairman and gentlemen, the Civilian Protection Group welcomes this opportunity to express its views on civil defense, and extends thanks to the joint congressional committee.

I am S. A. Anthony, Jr., of New York City, chairman of the Civilian Protection Group. With me are two members who have also prepared statements reflecting their points of view. They are Dr. Walter S. Cronin, disaster coordinator for Cambridge, Mass., and Murray S. Levine, of New York City, and formerly selective service officer for the Manhattan district. I shall endeavor to speak broadly for the group as a whole, leaving to Dr. Cronin and Mr. Levine some of the more controversial angles.

The Civilian Protection Group had its beginning during World War II, as a result of the War Department civilian protection schools, which had been set up by the Army and the OCD. There were some 2,500 graduates of these schools along the eastern seaboard, many of whom met in conferences to exchange ideas from time to time. This WDCPS alumni group functioned up to the cessation of civil defense of World War II.

There remained, however, a small group who sustained an active interest in problems of civilian and disaster needs. In 1947 active discussions were resumed to consider possible needs for civil defense in view of the international situation. This resulted in the reorganization of the WDCPS alumni as the Civilian Protection Group, with a protection seminar set up early in 1949. Many facets of civilian and industrial protection have been and are being thoroughly explored in this continuing seminar.

Our group represents a composite of the citizens of an average community. It brings together individuals from various areas along the eastern seaboard. For example, officially participating are the disaster coordinator for Cambridge, Mass., and the civil defense coordinator for Westchester County, N. Y. Industry, business, profession, organizations, clergy, educators take part. All are thinking

in terms of what can be done to utilize, to the best advantage, the individual in the community.

Ours is an organization of individuals. Each of us is prompted by an earnest desire to see an adequate program of preparedness in this country, preparedness for civilians and industry as well as preparedness for the military. Failure to realize this may spell the difference between an absolute catastrophe and a successfully resisted enemy attack.

We are conscious of the fact that civil defense will bring many of the old responsibilities and problems anticipated in World War II, but on a far greater scale than ever before. New situations and complications call for more extensive planning, thorough preparation, and training. The time element in World War III, in all probability, will not afford the community nor the individual much opportunity to anticipate these problems. For that reason we are anxious to have enabling legislation right now.

There are five points that I wish to stress at this time. Each could be the subject of a lengthy study, and should be. I will merely touch on high spots.

1. Federal civil defense legislation.
2. Federal civil defense training schools.
3. Psychological problems.
4. Public information.
5. Selection of personnel.

1. Federal civil defense legislation should be enacted at the earliest possible moment. It becomes more urgent each day with mounting international tensions. An effective program at State and local levels cannot be initiated and carried on without a Federal Office of Civil Defense. States are looking to Washington for authoritative policy guidance and technical assistance. At present we have only a "planning organization." It is not reasonable to expect States or municipalities to enact legislation and to take action in a field in which the Federal Government itself does not feel constrained to assume its proper position. The over-all safety of the country is primarily a Federal responsibility, not one of local government alone.

Failure to immediately provide for a Federal Office of Civilian Defense, with sufficient authority and funds, can result in nothing but confusion at a time when coordinated action will be most needed. There must be one responsible authority. It must be administered by a man of proven administrative ability, and one understanding the needs of and for civil defense.

Actually, if it is important to consider the need for a Military Establishment at this time, to stockpile critical materials, and to provide atomic weapons, it is equally important to develop defense for civilians. In fact, it deserves status comparable to that of our military. It should not be considered in any sense a political issue.

2. Federal civil defense training schools should be initiated at once. Our experience in World War II and England's current training program should be studied carefully and a comprehensive curriculum developed. Courses should be intensive and of such a nature as to adequately prepare local leaders for eventualities. Classes should be composed of equal numbers of civilian volunteers and civil employees. They will both arrive at a better understanding as a result of such joint training.

The National Security Resources Board specialists schools and classes recently initiated are an excellent start in the right direction.

Training must be thorough if our civil defense is to really protect lives. Training must begin in the top ranks of civil employees and continue right down through the volunteer group. Gradually expanding through each echelon, this will result in a well-trained corps of civil defense workers. Such activity in itself should create an air of confidence in the community which would be an asset at the time of any disaster.

All such training, at the leadership levels, should be carried on with the civil servant learning along with the volunteer leader. Solving problems together will mean better relationships, and more effective teamwork. Actually, civil defense is going to be everybody's job, but there won't be time at the last minute to prepare. We must work fast right now and get our advance training under way.

3. Psychological problems will become more obvious as we get into civil defense, and most troublesome in another war. There must be more research into psychological areas, and we urge that any Federal civil defense program give serious consideration to this.

The CHAIRMAN. Apparently you agree with Father Potter.

Mr. ANTHONY. All of the way.

The matter of relationships will be an important one, and they will fall into several areas. They are as follows:

- (a) Military-civil authority.
- (b) Federal-State.
- (c) Local authority, volunteer leader.
- (d) Civil employee, volunteer.
- (e) Civil defense, public.

One of our most important areas for work at this time will be (c), relationships between the local volunteer leader and the local authorities. Many strains developed during World War II in this area, and a majority of them can be ironed out in advance. The civilian must understand the local authority's point of view and his problems, and vice versa. This can make a material difference in emergency operations.

During any emergency there will be problems of panic, mass hysteria, and the like. The lack of suitable training here will materially handicap local leadership and volunteers. On the other hand, proper training may alleviate some of the hazards incident to any disaster.

4. Public information is one of the most important areas in civil defense, and should be started at this time. An approach has been made to this problem by the release of some information. And might I interject my thanks and congratulations to the committee for their preliminary release. Everybody who has seen it agrees that it is a most excellent job.

The CHAIRMAN. You mean the pamphlet that we got up, that compendium of information?

Mr. ANTHONY. Yes.

The CHAIRMAN. Thank you.

Mr. ANTHONY. But there is still such public confusion that the only way this problem will be solved is through adequate dissemination of information. Public education must be a part of an OCD program. A program of public information started now will inform the civilian

as to some of the situations he may have to face, and will prepare him for cooperation with civil defense when it becomes necessary. The civilian should at least be provided with an intelligent understanding of such matters as do not fall into the category of military secrets. For example, the average high-school science student is acquainted with the principles of a Geiger counter, and because of that he has less fear of the future.

At the same time we must consider the matter of technical and semi-technical information for the civil defense workers. It must be authoritative and accurate. There should never be any question of providing him with what is necessary for intelligent and effective action, consistent with security. However, civil defense should at all times be viewed as an arm of our defense and entitled to such information as will facilitate its work.

5. Selection of personnel is important on two counts; finding the best civil employees and the best volunteer worker for the job in hand. Selection of civilian volunteers is especially important. Anyone involved in our World War II civil defense at the local level was painfully conscious of the fact that many well-meaning volunteers should never have been accepted. There should be no mass recruiting. It is far better to have a small corps of well trained, intelligent personnel than a large group incapable of functioning in an emergency. However, any recruiting should be done now, while there is time to train properly.

In conclusion, the first thing that we need is legislation. The communities and States are looking to the Federal Government for adequate enabling legislation to initiate and support a vigorous program of civil defense. And our citizens are also looking to the Federal Government for proper defense of the country.

We must have the very best possible man to head civil defense at the Federal level. His executive ability and understanding of civil defense needs and problems are obvious requirements. No matter who is chosen, he should be given a clear-cut job to do, defined so that he can go right ahead without worries of conflicting interpretations. The responsibility rests with Congress to define what is to be done in unmistakable terms, and to see that it is done.

This should result in the establishment of Federal civil-defense training schools to provide our States and municipalities with civil employees and volunteers who can work together effectively in time of an emergency.

In turn these schools will provide the means for extensive research in psychological and technical areas.

An equally urgent need is for a comprehensive program of public information, which will tend to reduce fear of the unknown.

Finally, we cannot stress too strongly that quality and not quantity must be paramount in the selection of civil defense personnel.

This, gentlemen, winds up my statement.

Let us get civil defense on the books at once, and select the best men we can find to head this program.

Let us do both of these vital things immediately, and let us keep them out of politics.

Thank you.

Mr. Levine has a statement which he would like to introduce.

The CHAIRMAN. All right, Mr. Levine.

Representative HOLIFIELD. Before the witness leaves the stand, I notice that he has several other pieces of literature here appended to his statement. Do you wish to comment on what they are, and your reason for attaching them?

Mr. ANTHONY. For your edification. I attached the minutes of our annual meeting which gives the background of what we have been doing during the last year or so and a session we had on Federal civil defense legislation.

Representative DURHAM. Do you know of any other group which has been organized in the United States?

Mr. ANTHONY. I do not know of any other group that is functioning as we are; no, sir.

Representative DURHAM. What is your number of people in your organization?

Mr. ANTHONY. That is a movable thing. It is pretty much an invitation affair. We have an active membership, I would say, of about 50, but over 200 take part from time to time.

Representative DURHAM. It kind of interests me how you got started, because it seems to me you have got something started here which is worth while for the whole country. If we could get interested groups like yours in different sections of the country, we would have another arm of support. How did you organize it or did you just go at it voluntarily?

Mr. ANTHONY. It is strictly a volunteer proposition, a group of people who are very keenly interested in this sort of thing. We have gradually expanded. Our first sessions amounted to about six or eight people, and then we would find somebody else who we thought had something to contribute to our thinking.

Representative DURHAM. Do you hold regular meetings?

Mr. ANTHONY. Every month, regularly. It is interesting you make the comment about other areas, because there are two other areas where similar groups are being set up shortly.

Representative HOLIFIELD. I notice in glancing through this appendix here that you have made some pretty definite proposals in the way of civil defense legislation, and I would like to ask at this time if you thought of drawing up a model bill, taking into consideration the type of legislation that has been enacted in England and other countries that were under actual war conditions. Has your organization drawn up a model?

Mr. ANTHONY. We had not done that, sir.

Representative HOLIFIELD. I think that it might be something you might put your talents to as long as you are interested in this, and Congress is looking for some specific recommendations. I think many of the people who testify before us testify in a general way, and leave it up to Congress. We realize and accept the responsibility of taking the final action, but at the same time this is a matter that concerns the whole country and it seems likely to me we need the best minds in the country working on the type of legislation that is necessary.

Representative HINSHAW. Perhaps I should not ask this question here, Mr. Chairman, but in listening to this testimony, and glancing through ahead of the testimony that may be given in the rest of the afternoon, I was curious to know what it was contemplated that such legislation might emanate from this committee.

If that is not a proper question, I will drop it.

The CHAIRMAN. Well, only this, Mr. Hinshaw: That I have regarded these sessions as preliminary in nature, so we could get educated in the problem. If it becomes apparent to us, either individually or as a committee, that legislation should be introduced, I assume if it came within our field that we would introduce it. I have no particular bill in mind personally at the moment.

Representative HINSHAW. My reason for asking the question is that customarily in the past such legislation has emanated from the Committee on the Armed Services, and I was just wondering whether we had in mind doing something of that sort, or whether it would come from the Armed Services Committee.

The CHAIRMAN. Well, I have not thought about any jurisdictional difficulty. Of course, it all depends upon what you are talking about. If it is established by mobilization legislation, the Armed Services would have a very small proportion of it within its jurisdiction. You have transportation mobilization, which would be before the Interstate and Foreign Commerce Committee, and allocation of price control and allocation of materials perhaps would be Banking and Currency Committee. Certainly defense from atomic attack would be in this committee. Allocation of manpower, I do not know where it would come.

The thing I want to emphasize is that this business of preparing for total defense against a total war that might be waged is in some part within the jurisdiction of every committee of the Congress. The Armed Services, to my way of thinking, would have a part, but only a part.

Representative HOLIFIELD. My questions were not predicated upon this particular committee assuming jurisdiction over this whole field. It was predicated more upon my awareness as a member of this committee of what a serious problem is presented to the Nation, and my individual responsibility as a Congressman to do something about it.

#### **STATEMENT OF MURRAY S. LEVINE, CHAIRMAN OF THE NEW YORK COMMITTEE ON ATOMIC INFORMATION, NEW YORK CITY, N. Y.**

Mr. LEVINE. I speak here this afternoon as a private citizen. I will present my qualifications and my limitations in a little while.

In my opinion, we can lose the next war through our failure to defend our cities. That is what brings me here today. It seems alarming to many of us that we are spending billions for defense, but it is really going into offense. It is time, and long past time, to spend some effort and money on preparation for true defense, measures to save the lives of Americans in their own cities and towns. I do not mean that I believe we should necessarily curtail the other expenditures, but without preparation at home we have a gaping hole in our defense structure.

Every expert tells us there will be no perfect military defense against atomic attack. In the next war America will be hit and hurt. How we will meet that attack and recover and fight on will be determined not by military action alone, but by how well prepared we

are in our own backyards. We cannot hope to be immune to attack, but we must prepare to be resilient to attack. Whether or not we have that resilience may decide the fate of the Western World.

America has devoted many months to questions concerning how vulnerable the B-36 is to attack. At Bikini I saw how we spent millions to learn how to improve battleships and other vessels against attack in future wars. We have spent money on the defense of the battleship *New York* but we have neglected the city of New York, and all the other cities in the country.

The recent statements that if we are attacked we shall retaliate "within the hour" make good reading; they make us sound strong. I believe that until we devote some time to preparation for what happens "within the hour" to our own cities we are actually weak. In America today we are sitting ducks for any possible enemy. The enemy knows it. I believe we should face it, we should do something about it, and we should do something now. I do not think preparation to save our lives if attacked is a warlike gesture. I believe it is less warlike than talk of the damage and injury we can inflict upon the enemy. It seems to me merely prudent. We live in a perilous age.

Before outlining some of the things which I think you might consider for action, a word about my qualifications and limitations.

I saw Bikini. Since then, I have been interested in civilian protection.

Bikini changed the rules of war. In my opinion it made absolutely certain something which was already becoming the prime military axiom of the atomic age. The offense has overtaken the defense. In other words, all scientific developments to protect people are many years behind our scientific development in the laboratories to kill people.

I went to Bikini as an assistant to the Chief of the Radiological Division. I was a military observer, and saw both blasts, Test Able and Test Baker, at short range. My duties required me to board most of the target ships immediately after the explosions. This experience gave me personal contact with radioactive contamination of all intensities, and I helped write some of the secret reports on the Bikini findings.

Previously I had been at Oak Ridge. I am a lawyer by profession, and have only a modicum of scientific training. My job for General Groves was selective service. My office had the peculiar task of securing the proper personnel for the Manhattan District project, and keeping them on the job as long as they were vital to the achievement of an atomic bomb. We kept many a single man out of the service, because he had the special intelligence and training we needed to make the bomb which would, we thought, end the war. Altogether I signed draft deferments for 52,000 men, and we could not tell the local draft boards what work these men were needed for. It was secret.

What I saw at Oak Ridge gave me profound convictions on the basic principles of mobilizing the strength of America. What I saw at Bikini made me resolve that I would do what little I could to warn my fellow citizens, and help them, so far as I was able, to an understanding of the new age in which we must live. Similar beliefs led others to join with me in forming the New York Committee on Atomic Informa-

tion, and the Civilian Protection Group. These are both study groups; they are nonpartisan and not political in any way, and of course I am speaking merely for myself, and not for the organizations.

The main thing which motivates most students of civil defense today, I think you will find, is this conclusion which came to me so forcefully at Bikini. The offense has overtaken the defense. We cannot guarantee that enemy action will not plant such a bomb upon one or several of our cities. As Secretary Johnson recently said, in a speech little noticed by the press, no amount of money can guarantee we will not be struck, and struck at home.

On the other hand, medical and radiation experts with the Atomic Energy Commission will tell you that 30 percent of the casualties in the Japanese cities could have been saved if they had been properly prepared. It is perfectly obvious that France would have stayed longer in the war if she had won the battle of the farmyards. Her peasants had placed their faith, not in knowledge and teamwork, but in the Maginot line. England, of course, won the battle of the rooftops. She started her preparations 4 years before the Luftwaffe came over London. She has started them again, and so, of course, has France and Sweden and Belgium and little Luxembourg. We are a lot bigger target than Luxembourg, but our official attitude has been that we are not worried.

The average American today knows less about the realities of the war which may come than Frenchmen knew of World War II. His officials have, not through conspiracy, but through inertia, let him believe the atomic age has made us strong, when in fact it has made us relatively more weak. In fact there are no strong and secure nations in the world, and cannot be again until all countries stop making the bombs.

But meanwhile we must cease to think we can sleep while radar keeps us safe. Radar and the B-36 and the push-button wars that move so smoothly in the Sunday supplements—these are the emplacements of America's mental Maginot line—a line that will be pierced all the more easily because it exists only in the supplements and in the rosy optimistic statements of certain so-called experts.

President Truman intimated in a statement the other day that we are fully prepared in a military sense. It made headlines, "Defense at peak." Yet the basic military revolution of our time is that modern war is war upon population and production; atomic bombs are not made for people but for cities. We have not begun to mobilize the million and a half persons who will be needed, according to the Hopley report, to render the aid that could save those not killed outright. And our potential enemy has a fifth column such as Hitler only wished he had, and new devices make sabotage perhaps a major offensive weapon of war.

It does not seem to me that arms or mechanisms or gadgets or even appropriations for civil defense will forge for us what the Hopley report said in its opening sentence was "a missing link" in our defense structure.

The real strength of America, as it was seen in the Manhattan project, was not its scientific brains, and you know that many of them were borrowed from other countries. It was not even our matchless industrial strength and versatility. It was mobilization, the fact that we had the people who could learn for themselves, make decisions,

improvise, take a bold chance, work with other people, and above all, learn new things. If we undertake to teach them how to defend themselves, they will be able to learn.

Take my own humble example. Between the time that our ship left Hawaii and the time we arrived at Bikini, I was given my first real instruction in handling Geiger counters, ionization chambers, and dosimeters. Many others likewise learned to defend themselves. They are not as complicated to handle as a camera. This is our real strength. Americans who know how to handle cameras can easily learn to handle Geiger counters. They have the resourcefulness and the can-do spirit which can handle a new idea. If they are given something to do about it, I do not think you will find that any idea is too frightening for them to absorb. This is a perilous world, but in all history it has never really been safe.

But to come back to civil defense.

Perhaps some of you at Bikini heard the Geiger counters sing. Bikini veterans pray God the Geigers may never sing so loud upon the streets of Washington. But it could happen, and if it does, let us be certain that we have the Geigermen and a population which knows enough to take their advice. This is up to you. If we do not, it will not be because Americans were too slow or too frightened to learn but because they were never asked to learn.

Americans have a native intelligence to learn, particularly in an emergency, and when the incentive and interest are there. More important, they have faith in themselves and their Government.

I found that out when I worked for General Groves in dealing with 6,000 draft boards and tens of thousands of selective service personnel. We wanted men deferred for work which could not be described. They granted deferments for keen young scientists in thousands, not because General Groves wanted them deferred or because my name was on the application, but because they trusted their Government. They trusted their neighbors on the draft board. A single board could have tipped over the entire appplecart of secrecy, and they would have been within their legal rights. They did not, and the real secret of the Manhattan project, the secret weapon no other country can ever steal from us, is contained right there. Through the Selective Service System we had gotten down to the grass roots of America, we had mobilized the native intelligence, judgment, fair play, and spirit of sacrifice of the average American. If we can mobilize this spirit in peacetime, and we must, we will be well on our way to the only true defense we can know against atomic weapons.

We have a long way to go. We may not have much time.

Some think the cold war will last for a generation or longer, but it could become hot as atomic bombs within a few hours.

Not long ago I called upon police department officials of New York City, inquiring about the city's defense plans. One official told me not to worry. "Why," he said, "we have a complete list of air raid wardens of the last war."

A list of air raid wardens is not an answer to an age in which New York could be destroyed by seven atomic bombs. And if New York is to be H-bombed, what of the problems of the surrounding cities? It seems to me we must never forget that we have to prepare not only for atomic war, but for a war in which atomic bombs may never be

used, but in any case we would be foolish to assume that American soil will not be the scene of enemy action. It will.

Then I heard a high official of civilian defense in an eastern State making a speech. He was asked about assistance to the New York metropolitan area. He said, "Well, of course, we have come to think of New York City as expendable."

Many of us would rather see planning for the appalling task of evacuating New York than to see us abandon the helpless and unorganized population, said to be expendable. The second law of civil defense in the future will be mutual aid. Our cities must band together to help each other and help themselves. The problems of large-scale attack are hopelessly beyond the individual city.

As for expendability, let us stop counting the dead of the next war, and prepare to help the living.

We are a proud nation, and we have already forgotten the dark days of Corregidor when we had to write off thousands of brave men as expendable. We had to sneak away from "The Rock," in the dead of night, by submarine, the man whose person represented to the whole of Asia the greatness of the United States.

Those of you who were not at Bikini may think it farfetched for me to suggest that if we ever have to abandon the "rock" of Manhattan, we may have to take off Mayor O'Dwyer by helicopter because the waters of the harbor would be too radioactive. Perhaps you think this is a sensational statement. What is the point I want to dramatize?

My point is that once before America failed, was surprised, and suffered temporary but appalling defeat. We lacked persons of responsibility who could believe what they knew. We lacked leaders who could face cold facts, in the days when selective service was passed by one vote. Through being surprised at Pearl Harbor we came to Corregidor, the lowest point of our national history.

Unpreparedness now is flirting with national disaster on a much larger scale.

I spoke recently to a high-ranking officer with the Secretary of Defense. He is one of the planners of civil defense. I asked, "In view of the inadequacies of the New York disaster plans, what would happen if an atomic bomb did go off in the harbor next week?" He replied with a question, "Have you got a crystal ball?"

So the crystal ball goes along with the list of air raid wardens as our preparation for the future. Gentlemen, the handwriting has been on the wall for 5 years in letters 5 miles high. Surely it is time to read it, believe in it, and act upon it.

Here are some specific suggestions.

1. Civilian defense is as important as any other arm of defense. It should be placed under the Secretary for Defense, on a parity with Army, Navy, and Air.

Its importance others can convey better than I. But here are some figures: in all the bombing of England, home front deaths were 60,000. In Hamburg, in the country where Hitler told his people the bad news far too late, they lost 60,000 persons in 1 month, July 1943. I might add that in Hamburg they made the mistake they are making in New York—at present they plan to center control in the police department, a department which will be busy with its own work if disaster strikes.

Representative HOLIFIELD. Is that not true about the Army, too; the military forces will be too busy with their job to take over civilian defense?

Mr. LEVINE. Definitely, I think so.

My second point, and this is one that I think I may find some disagreement here, is that I think it is absolutely necessary that the Selective Service Act be extended, and I think it should be kept on our books for at least the duration of the cold war. I think it should be amended to include provisions for civilian defense mobilization. Not that I doubt that thousands of patriotic Americans will flock to serve once the organization starts rolling. But civil defense requires selectivity as well as quantity.

Representative DURHAM. You will not find any objection from me on that.

Mr. LEVINE. I am glad to hear that. Our watchmaker, our television or radio repairman will be of more value than a score of housewives who are ready to do their bit.

Civilian defense should be our fourth arm, with training schools, lectures, drills, and so forth. It will require the young as well as the old. Those called to service should be paid and possibly placed in uniform. Civil defense should be given an emphasis to command respect in the communities. It must be divorced from politics. Only through selective service can this be accomplished. Atomic war is grim business and calls for a total effort or none at all.

3. Total mobilization must be planned now. Your business is organization, both official and unofficial, and I am sure I do not need to labor this point. This time we cannot wait as America in the past has always waited to try at 10 minutes to midnight to get ready. Americans should learn that they must prepare in peacetime to be able to win a war if it is thrust upon them.

4. While planning goes on, action must begin now. We all have sympathy for officials who deal with the thorny problem of civil defense. The cities have waited on the States, the States upon the Federal Government. Washington may be forgiven today for waiting upon the people. History may not forgive. There are times when leaders must be ahead of their people, and this is certainly true when the people may not know the full story. When the story is known, the people may have a long memory. Many who remember Pearl Harbor forget how they asked their Senators to vote against selective service. But they remember that their Senator did vote against it, and some of those Senators are not with us today. The people rightly believe their leaders should have known.

5. We need a program of atomic education, our Government must tell the people what they need to know. No other group can do it. It has taken 4½ years for the Government to tell us, in the recent report from the AEC and NSRB, about the blast damage of atomic bombs. We must not wait 4½ years for the next chapter on radiological injury and what to do about it. Americans are becoming aware that every secret kept from the Russians is also kept from Americans. In fact, they are coming to realize that ever since the President told Mr. Stalin about the bomb at Potsdam, before he told the American people, others have been making decisions without the advice or consent of the voters. Certainly they know that far more dangerous things have become known to the Kremlin but not to city

hall. A knowledge of the facts of life in the atomic age will help you, and this country, to sound decisions in many fields besides home front defense. I do not mean it should be done for this reason; it should be done to save lives in the next war. But there will be extra dividends if we readopt the policy which made this country great, the theory that no group of people, scientists, bureaucrats, brass hats or Congressmen—no special group can have the wisdom which we hold resides in the consensus of opinion of a well informed people.

6. We should take action now.

People will say it is a poor time to add to our budget. What we need is not appropriations so much as organization of people.

Others will say it is warmongering, it will promote a nervousness that will lead to war. Any psychologist will tell you that fear of the unknown is what produces panic, not respect for known dangers. It is not as warlike to prepare to help yourself if attacked, as it is to announce every other day that our bombers could massacre thousands in the twinkling of an eye.

It will be said the public is not ready.

My observation in my own organizations and neighborhood is that the people would welcome a chance to do something specific about the awesome mushroom cloud which today shadows all of our affairs.

The American people have been bombarded with misinformation about atomic energy and the next war. Any tomfool with pretensions can orate at length about the H-bomb, while the people who know about it find their lips are sealed. If we end this ridiculous situation I do think you will find America would rather listen to facts than to fools.

They instinctively know that the whistle-blowing tin hat boy scout civil defense of the last war will be useless in the next.

You will not scare people by telling them in the next war it will not be up to Washington; it will be up to them.

Our defense leaders put our trust in what we can do to the enemy, but the Federal Government will make the biggest mistake since Pearl Harbor if it does not prepare us now for what the enemy might do to us.

All the people ask for is a little information. "Help us to help ourselves. What can we do? How do we do it?"

You must give them the answer, gentlemen, for we may win or lose the next war on how we defend our cities.

I hope these suggestions will help you gentlemen find the answer.

We have confidence in your committee and in our Congress.

I thank you.

The CHAIRMAN. I appreciate very much your statement, and I was particularly impressed with your emphasis on the analysis of letting people know, because I agree with you that the proper antidote to panic is fact and not rumor and not hearsay.

Mr. LEVINE. Thank you.

The CHAIRMAN. Dr. Walter L. Cronin.

## **STATEMENT OF DR. WALTER L. CRONIN, DISASTER RELIEF COORDINATOR FOR THE CITY OF CAMBRIDGE, MASS.**

Dr. CRONIN. My name is Dr. Walter L. Cronin. I am here in my official capacity as disaster relief coordinator for the city of Cambridge, Mass. During World War II, I was chief air raid warden and director

of the protection division in Cambridge. I also served as a consultant for the Massachusetts Committee on Public Safety.

My duties were to organize, train, and direct 12,000 civil defense workers.

During this period we were cited by Army and civilian defense authorities as the model civilian defense city on the eastern seaboard.

While our population numbers only 120,000 persons, Cambridge is the largest of the 43 cities and towns in metropolitan Boston. This area has a total population of 2,066,000.

We were designated as a target area in World War II, not only because of our proximity to the port of Boston, nor because of our defense industries, but principally because of its vital research installations.

Today, Cambridge is again the center of vital research. Massachusetts Institute of Technology, Harvard University, the United States Air Force research laboratory, the United States Navy supersonic wind tunnel, the proposed location of the new Quartermaster consolidated laboratory, and several nationally known private research laboratories, are not only contributing now directly or indirectly to the program of defense, but these facilities would be considerably enlarged in time of hostilities.

We therefore find ourselves in the unenviable position of probably again being designated as a target area in the event of future hostilities.

Two years ago, the city manager of Cambridge, Col. John B. Atkinson, directed me to make a study of civil defense and to formulate tentative plans for disaster relief.

I appealed for help and assistance from Washington authorities without much success. With the exception of the Bull and Hopley Reports and a limited amount of information from other Washington sources, the usual reply was "we are in the planning stage."

Permit me to digress at this time, to state that in my opinion the Hopley Report was an excellent study of civil defense. While I differ strongly with one phase of the report, that covering local organization and duties, it is 90 percent sound and it should, with some changes, be immediately adopted. My points of difference have been enumerated in a critique which I have written and which has attained some attention.

To resume—the story of civil defense in the last few years has been one of confusion and inaction. There appears to be no question in the minds of the military and of those who have been students of the subject, that a strong civil defense program is a must if we are to survive a future war.

Yet as of today we cannot look to anyone for definite leadership, no one to say with authority this is the proper course to pursue, no one to say these are the dangers, and these are the methods to combat them, no one with a definite program to adhere to.

Federal authorities generally point out, that the States have been requested to take the initiative, and State officials reply that they could not act until Washington adopted a program.

We find in responsible government positions a deplorable lack of knowledge of the tremendous scope of future plans for civil defense. Most are thinking of the horse and buggy type of civilian defense of the last war, when only token raids were expected. Many have not given it a thought and are unaware that there has been any action at the Washington level.

Recently we have witnessed some action by the States, but in many instances there has not been uniform legislation, and some have been inadequate or unworkable.

State legislative committees have heard witnesses who had not the least conception of the needs of the fundamentals of civilian defense.

I could cite one major State on the eastern seaboard that has a civil defense act under consideration by its legislature that is unsound, unworkable, and even contains some ridiculous sections. If passed, this legislation will not properly prepare this State for future hostilities.

At the Federal level we have the situation where civil defense by Executive order is placed under the National Security Resources Board. According to the United Press on March 11, the Civilian Mobilization Director is "charged with the perfecting of civil defense plans."

Note particularly that his powers are limited to "perfecting civil defense plans." No authority to carry them out, no authority to say "this is the way to do it." Just plans, plans, plans.

The Office of Coordinator of Civil Defense Planning under the NSRB is in the same category—no power, no duties except to plan.

The Hopley committee was created exactly 2 years ago; in exactly 6 months they had a report covering over 300 pages. Whether you agree with it or not, they did their job expeditiously and thoroughly. We got action.

Eighteen months have elapsed since then. The Department of Defense no longer has the responsibility and we find ourselves back to March 1948, with 2 years of effort wasted.

In the meantime, information which the public is entitled to has been suppressed. A wall of censorship has been erected around material which is known to, or would not be of value to an enemy. A childish system of "classification" exists. And the American public, who pays the bills, and will be the ones to die if attacks reach our communities, are denied the means and the knowledge of survival.

Books have been written; newspaper and magazine articles have been published, many by pseudo experts who on one hand hysterically convince their readers that there is no hope, that we all are going to be destroyed, and the other group who placidly assert that there is nothing to fear, we are well protected, and these modern weapons are not the lethal weapons that they are cracked up to be.

Confusion and inaction, suppression of information and lassitude, that has been the contribution at the Federal level.

The CHAIRMAN. Some of those two viewpoints have come out of the Defense Establishment.

Dr. CRONIN. What is that?

The CHAIRMAN. Some representations on those two viewpoints you have just given have come out of the Pentagon.

Dr. CRONIN. That is right.

The CHAIRMAN. Depending upon which service they were in.

Dr. CRONIN. That is right. For the first time, Mr. Chairman, a bright star has appeared on the horizon, one of the most important committees in Congress, the Joint Committee on Atomic Energy, says, "Here is something that merits our attention."

And your committee is doing something about it. And Mr. Chairman, if my community is typical of the "grass roots" of this Nation, then you have the thanks and the approbation of the American people.

The people want the truth. They are willing to make sacrifices when they know the truth. The greatest fear that they have now is one of confusion. Today if war should strike we would have hysteria, panic, and a disorganized people. Give them the facts and the training and you will have a united nation. History has always proved this.

It therefore is an honor for me to plead the cause of the Nation's communities before a committee of Congress, so well qualified to act on this matter.

Based upon my experience in civilian defense in World War II, plus an exhaustive study of the present situation, I respectfully make certain recommendations to this committee.

1. By an act of Congress, place the Office of Civil Defense under the Secretary of Defense.

My reasons for this recommendation are as follows:

(a) This is the only agency of the Government so far that has shown a knowledge of the problem and the will to do the job promptly.

(b) They have the know-how in training large masses of people.

(c) They have the knowledge of modern weapons and the means to combat them.

(d) They have ready access to all information in every branch of the Government, on all matters affecting our national safety, secret or otherwise.

(e) It would minimize the probability of political job seekers filling jobs which they would be incapable of administering.

(f) It being the responsibility of the Department of Defense, the States and communities would fare better in obtaining necessary matériel and equipment than they did in World War II.

(g) It would eliminate the confusing and conflicting directives experienced in World War II from the Army and OCD.

(h) And, most important, it is the responsibility of the Department of Defense to protect our land and our people during time of war. It is their sole and primary responsibility. They cannot shirk this duty. If we should be visited by large-scale attacks, the Department of Defense will take over in whole or in part irrespective of any other agency.

2. In the act of Congress a director should be created with broad powers in the event of emergency. Proper safeguards can be set up restricting his powers to take effect only in the event that the President declares this emergency.

3. Prior to that state of emergency, he should be directed by Congress to organize a department of civil defense. He should have on his staff qualified experts on all matters pertaining to civil defense. He should be directed to consult with all branches of the Government possessing pertinent information.

He should be directed to establish a uniform civil defense organization, and aid and assist the States and communities to act similarly.

He should prepare and distribute civil defense training and organization manuals for civil defense authorities.

He should prepare and disseminate civil defense information to the public.

4. A director should be chosen of proved executive ability, preferably with some knowledge of civil defense matters.

5. Congress should appropriate sufficient funds to carry out all provisions necessary for an adequate civil defense organization.

6. Congress should appropriate sufficient funds to furnish communities in vulnerable areas extraordinary equipment and matériel necessary to properly safeguard the population.

Immediate action is imperative. The time that will be required to organize, train and equip the skeleton forces necessary in local organizations is great. It will be at least 1 year from the time that legislation is passed before our communities can demonstrate an adequate skeleton organization.

Again, Mr. Chairman, may I, in the name of the communities of America, thank you and your committee for their timely and forthright consideration of the problem.

I submit these two books. One is a newspaper clipping of the test that we had on March 5th, and, secondly, a critique of the Hopley report, which I have made.

Representative DURHAM. Then you definitely believe, Doctor, that this fear thing that has permeated the whole country is all wrong?

Dr. CRONIN. That is right. The individual citizen right now is fearful of this. They read the scare headlines and they read the illustrations that an atomic bomb will do this damage to you; and a great many people have a fatalistic attitude. They say to me, as the chairman of the disaster relief for the city of Cambridge, "What is the sense of you doing anything. We will all be wiped out, and we won't know anything about it." They do not realize there is a fringe group that are going to be injured, and that are going to need care.

True, within the immediate area of the atomic bomb, everybody is done for, but they do not know anything of the problem. They are looking at it from a fear standpoint. The fear is there now, gentlemen. You are not going to frighten the people of America by putting in a sensible civil defense skeleton program now. You are going to reassure them. You are going to say to them that the American Government, our Government, is doing something for them. They do not look to the Governor of the State or to me in a community; they look to Congress for their help. If Congress says, "Here is something we are doing for you," they say, "God bless you; you are doing something for us." Washington is the all-powerful group. They are the ones that say here is an atomic bomb, and they say here is an H-bomb we are working on, and Washington says: "We are appropriating money for Army and Navy and the Air Corps and all of that." Now what is Washington doing for us? What are they doing to protect us? The people know the fear part of it, and they have already got it in them, and now it is up to Washington to say, "This is the way to protect yourself; this is the way to survive in an atomic age." They are looking for it.

Representative DURHAM. You have made a good statement, Doctor.

The CHAIRMAN. Thank you very much, indeed.

Mr. ANTHONY. May I say that we feel very strongly as to the civil defense. A few people in each community who know what the answers are partially are going to help alleviate a lot of that fear.

The CHAIRMAN. Thank you very much.

The meeting of the committee will be on the call of the Chair.

(Thereupon, at 5:15 p. m., the committee recessed subject to call of the Chair.)

# CIVIL DEFENSE AGAINST ATOMIC ATTACK

MONDAY, APRIL 3, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met at 10:30 a. m., pursuant to call, in the caucus room of the Senate Office Building, Senator Brien McMahon (chairman), presiding.

Present: Senator McMahon (chairman), Representative Durham (vice chairman), Senator Knowland, Representatives Holifield, Price, and Hinshaw.

Also present: William L. Borden, executive director.

The CHAIRMAN. All right, gentlemen, we will come to order.

Our first witness today is Capt. C. A. Parkinson, Deputy Director of the Civil Defense and Disaster Committee, Milwaukee, Wis.

Captain Parkinson?

## STATEMENT OF CAPT. C. A. PARKINSON, USNR, COORDINATOR, CIVIL DISASTER RELIEF COMMITTEE, MILWAUKEE, WIS.

Captain PARKINSON. Mr. Chairman, and gentlemen of the committee, I should like to divide my remarks this morning into three parts. The first will consist of a brief discussion of the basic principles upon which the Milwaukee civil defense and disaster organization was formed.

In the second part, I should like to raise certain questions which perhaps can be answered by this committee and which are of vital interest, not only to the Milwaukee metropolitan area, but to all of the large metropolitan areas in the United States.

Third, I should like to have the privilege of submitting to you one or two suggestions which have stemmed from our experience in Milwaukee.

The Milwaukee civil defense organization had its inception in a meeting called by Mayor Frank P. Zeidler in June 1948. Mayor Zeidler felt that it was important for a large metropolitan community to be organized so that it could take care of its property and people in the most effective way in the event of any major disaster either natural or man-made.

At the time the committee first met, there had been received no guidance from the higher echelons of government as to how a defense and disaster plan should be devised. Since this was the case, one of the first tasks of the committee was to agree upon certain basic principles. These are as follows:

1. Any civil defense and disaster plan must provide maximum protection to the lives and properties of the citizens of the community.

2. Any such plan must be sufficiently flexible that it can be adapted quickly and effectively to meet various possible situations.

3. Any such plan shall disrupt the normal functions and the activities of the civil government to the least possible extent.

4. In any such plan the normal divisions of the civil government shall be utilized to the fullest extent rather than to have them replaced by some separate or extraneous agency.

5. A community must plan to depend as much as possible on its own resources both as to personnel, material, and basic community organization. Self-help shall be emphasized in all phases of this plan.

6. A community must be prepared to give assistance to a stricken neighboring community promptly and effectively.

7. A community plan must necessarily fit into the national and State plans of civil defense.

There was unanimous agreement that probably no two communities will need or find effective exactly the same pattern of civil defense organization. Hence, a thorough analysis of community resources and the development of a plan to meet the special needs of our community were basic to the entire development.

Subsequent to the development of the original organization in Milwaukee, we received the Hopley report, and it was indeed most gratifying to find that in the main, the Milwaukee plan fit into the recommendations of this report. We felt that certain minor differences were necessary if our plan was to meet the needs of our community.

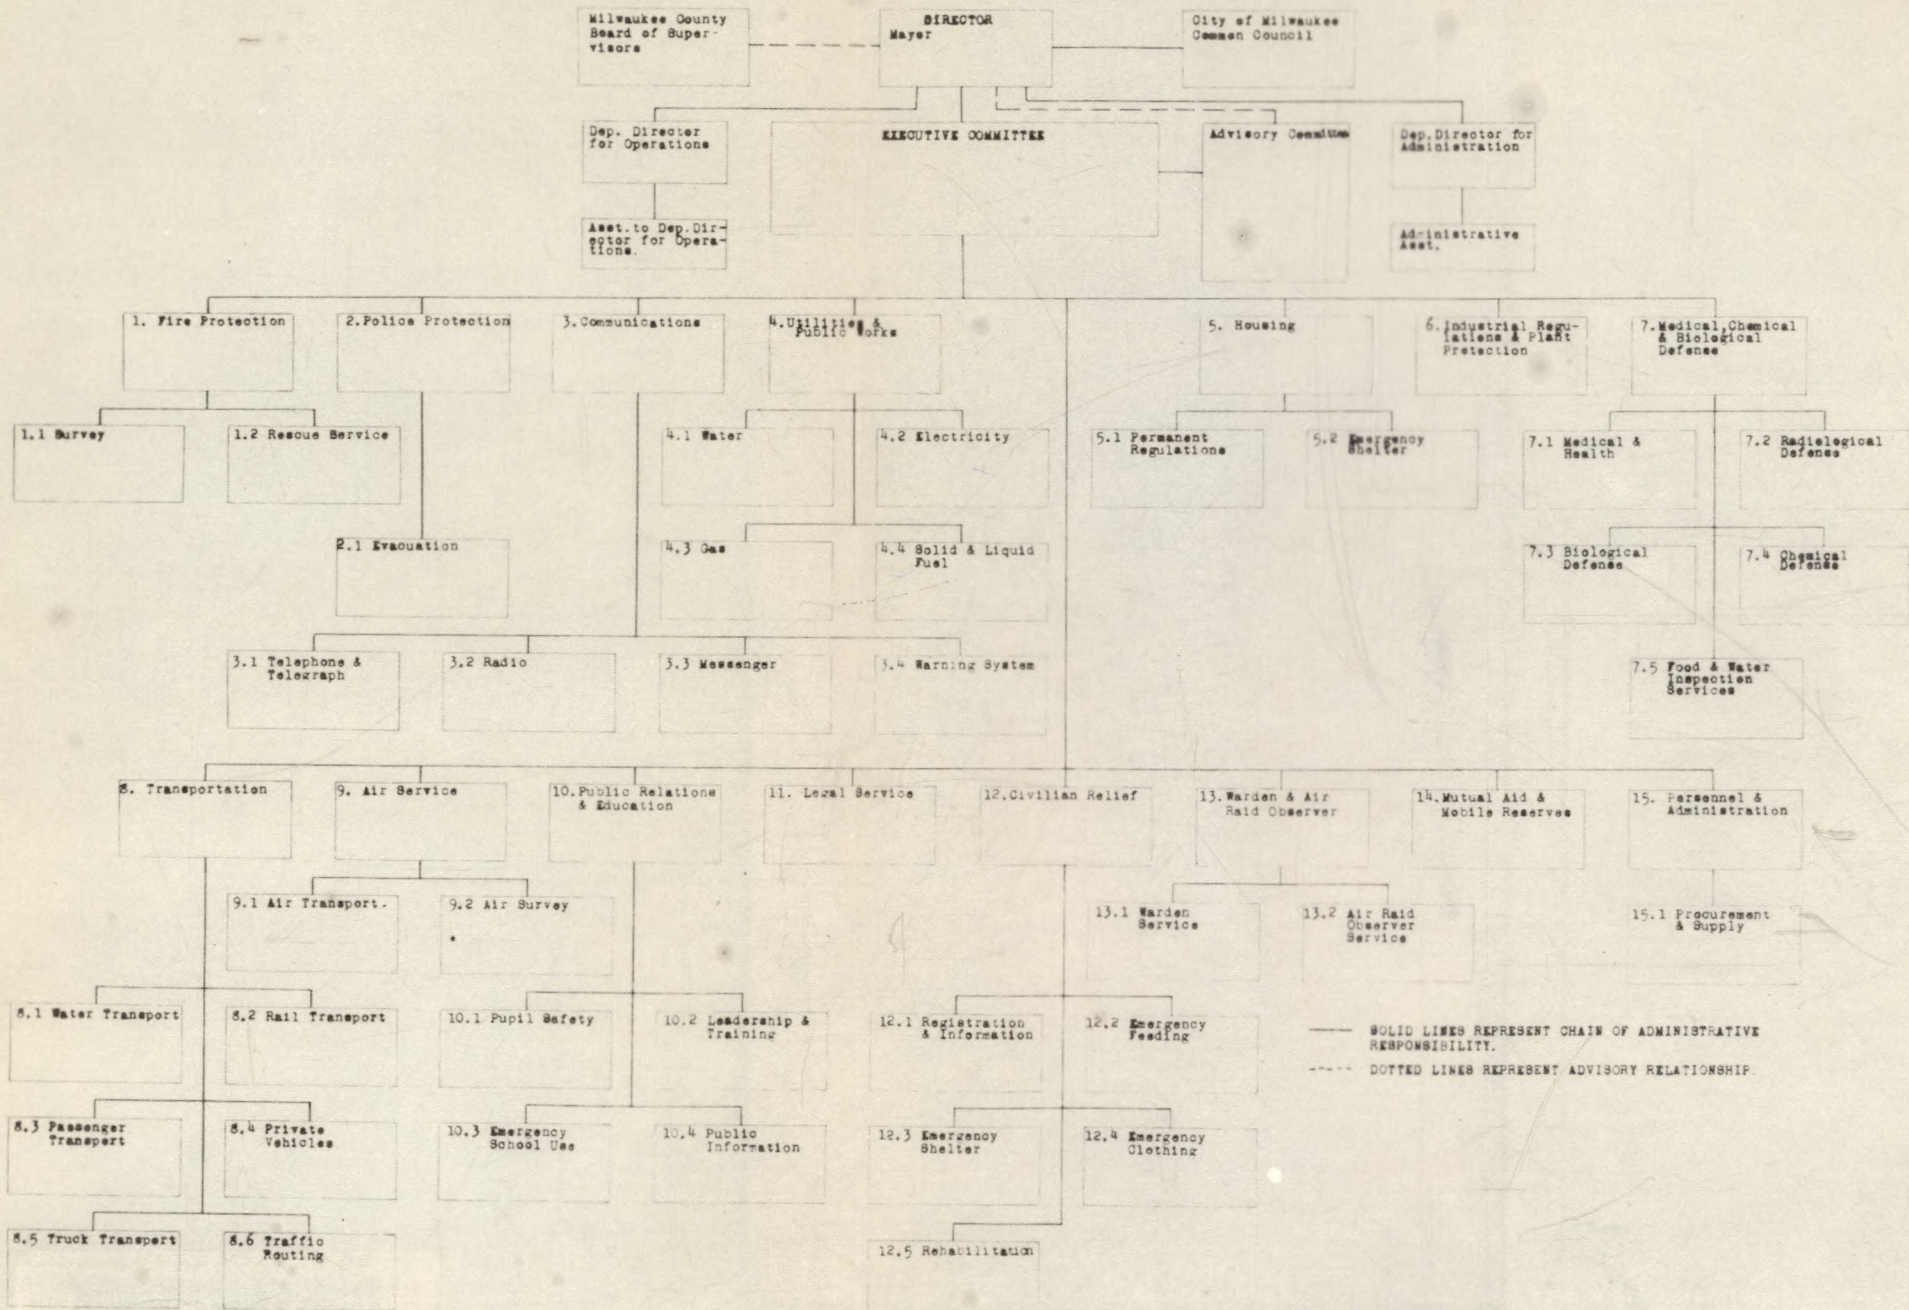

In the beginning, our organizational thinking was largely directed toward civil disasters of the type experienced in the Texas City fire and others of this sort. In the last few months we are frank to admit that our thinking and planning have been directed toward the problems which would eventuate from an all-out strategic bombing or an atom-bomb attack. This change in our point of view has necessitated a reorientation of our thinking and has made necessary some major shifts in emphasis in the development of our plans of operation. It has not, however, made necessary any basic structural changes in our organizational pattern.

Annexed to this report is a chart which presents diagrammatically a picture of the Milwaukee civil defense organization with its various divisional units and subunits. This organization exists today. All of the divisions, except No. 14, mutual aid and mobile reserves, have been activated and most of them are sufficiently far advanced in their development that they can, and in some cases have, engaged in extensive operations.

On July 27, 1949, the Riverside pumping station of Milwaukee was put out of commission by a flash flood. Six main pumps were taken out of service. Through the efforts of division No. 10, public relations and education, industrial users of large quantities of water were contacted and through their voluntary self-imposed restrictions a water crisis in Milwaukee was avoided and many thousands of citizens did not even know that the situation was critical.

On March 4, 1950, a civil air patrol plane returning to Milwaukee from Washington, D. C., crashed into Lake Michigan off the Milwaukee County Airport. There were no county facilities for air-sea rescue service. However, Chief Edward E. Wischer of the Milwaukee Fire Department left the dock with his new fire tug, the *Deluge*, within 14 minutes after word of the crash had been received by him.

FLD00200060

Chief Wischer conducted a search for the survivors and was later assisted by the Coast Guard from the Racine, Wis., station.

This event brought to the fore the problem of city responsibility and opportunity for service even beyond the confines of the city limits. It also showed members of the Milwaukee Civil Defense and Disaster Committee that the close relationship which has been developed among our many community agencies could result, and does result, in effective operations.

Last Sunday morning, March 24, 1950, there was a large fire in a rooming house in our sixth ward. Some 90 persons were rendered homeless, many were hurt, and 3 were killed. The Milwaukee chapter of the American Red Cross, which is one of our coordinated agencies, was on the job within one-half hour after the Milwaukee Fire Department had arrived and proceeded to provide registration and identification services, emergency shelter, food, and emergency clothing. The Red Cross is notified by the fire department on every second alarm fire. This custom has been followed for many years before the existence of the Milwaukee Civil Defense and Disaster Committee.

I have mentioned this incident here simply to give an indication of the types of coordinated community activities which have been incorporated into the Milwaukee civil defense and disaster plan.

Again may I reemphasize the fact that each of the divisional organizations is closely integrated with those public or private community groups who are engaged in, or whose activities are directed toward, similar functions under what might be termed normal disaster conditions.

Further, to illustrate my point, the Milwaukee Naval Reserve has a disaster bill. This unit is composed of some 3,000 officers and men, most of whom have been trained in the service. These officers and men are divided into task units, such as fire fighting, police, electronics, communications, transportation, and so forth. Each task unit is headed by an officer properly trained in that particular type of duty and that officer in turn is a member of the executive committee of the appropriate division of the civil defense and disaster committee.

Another example is the way in which the Milwaukee County chapter of the American Red Cross referred to above is tied into the organization. You will notice that division 12 is the division of civilian relief, under which we have subdivisions of registration and information, emergency feeding, emergency clothing, emergency shelter, and rehabilitation. Each of the committee chairmen of the appropriate committee of the American Red Cross is chairman of, or vice chairman of, the appropriate subcommittee of the civil defense organization, and the vice director of the division itself is the representative of the head of the Milwaukee County chapter of the American Red Cross.

Other organizations which are tied into this plan are the Wisconsin National Guard, the Wisconsin Air National Guard, the Civil Air Patrol, Milwaukee County Medical Society, Milwaukee County Funeral Directors Association, taxicab companies, trucking companies, public utilities, and others. It is possible to show this type of community integration throughout the entire organization.

May I now raise certain questions which we feel merit serious consideration, and which have stemmed from our experience in the development of this organization?

It appears that many of the States, including our own, have little or no State organization at the present time. In Wisconsin last year we attempted to get appropriate enabling legislation through the State legislature. We were not successful, due largely to the lack of understanding of the urgency of the problem on the part of many of the legislators.

It is probably true that people living in less densely populated rural areas are not as apprehensive regarding the need for civil defense as are inhabitants of the densely populated urban areas. We feel very strongly that this lack of appreciation of the problem on the part of the inhabitants of the rural areas should not and cannot prevent the inhabitants of the urban areas from taking such steps as are necessary for the adequate protection of their own lives and property. Hence, we are asking the following questions:

1. We are asking whether the Federal Government is going to take a firm position in developing National and State patterns of civil defense which will make it possible for the cities and large industrial areas to do the job which must be done in their own communities.

The CHAIRMAN. Of course, you realize that there has been a great deal of information that has gone to the State organizations. I do not know whether in your particular State they have turned it over to the cities. Have you received any of that material?

Captain PARKINSON. We have gotten the information, sir. But the point is that the impact of that information has not reached the lower level. Take, for example, the Hopley report. It has never been adopted as an official pattern. It has been recommended as a very desirable one; but we feel that a little stronger position on the part of the top echelon of government would provide impetus to the local development, which is very essential at this time.

The CHAIRMAN. Of course, you realize that the NSRB is set up to deal with State governments rather than with the municipalities. The idea is that any contact from the Washington organization will be with your State capital.

Now, whether the States are going to do the job or not, after they get it, we do not know, but they should do it.

Captain PARKINSON. Yes, Mr. Chairman; we quite appreciate that. But we feel that perhaps a little more vigorous position here will in a measure overcome some of the inertia at the State level. May we put it that way?

The CHAIRMAN. Will you talk about the directions in which you wish that vigorous position to be manifested? That is part of your statement.

Captain PARKINSON. Yes; that is part of the statement, sir.

The CHAIRMAN. I would just like to say, further, that we hear a great deal here about States' rights, you know.

Captain PARKINSON. Yes, sir.

The CHAIRMAN. Rights also mean responsibilities and duties; and too often, it seems to me, the States forget the responsibilities and the duties, and all they talk about are their rights.

Now, they have some duties and responsibilities in this field, particularly in this field, because it has to be set up on a local basis, for the reason that we would be struck locally.

Captain PARKINSON. I hope you appreciate, sir, that we are not being critical.

The CHAIRMAN. I want you to be critical.

Captain PARKINSON. We are just hoping that there will be, shall we say, a little more voltage coming down the line, which will seep down to the local levels.

The CHAIRMAN. Do not misunderstand me. That is what we are here for: to get criticism and to see where this crowd here have not been doing the right thing; to get recommendations for further and greater action on their part. We are not here to resent any criticism. I am simply pointing out an obvious truth, that there is a job to be done at home. And I am sure that you know it, because your outfit seems to have done very well with it.

Captain PARKINSON. Thank you, sir.

2. We are asking that we be advised as to whether top-echelon thinking here in Washington feels that the large urban areas in this country can or cannot be defended against high concentrations of strategic bombing or atom-bomb attacks.

3. We are asking to be advised of the type of warfare and type of weapons against which we should plan to protect our communities.

Senator KNOWLAND. Of course, right at that point, those two questions you have just raised are questions which obviously no Governor, or no State administration, could answer. They are ones that would have to be answered on the Federal level by those charged with the defense of the Nation. And until they pass that type of information along, you cannot expect the administration at any statehouse to find, in their sources of information, the answers to the questions you have just raised.

Captain PARKINSON. And we realize, too, that these questions are rather basic. They will involve basic research and fundamental research on the part of this top echelon of Government. But we are hoping that in the relatively near future we will have some indication of the answers to these questions. We need them.

4. We are asking to be advised as to how best we can proceed in the development of our organization without inciting mass hysteria in light of the current publicity being given to A- and H-bombs. Perhaps if the right amount of appropriate publicity is promulgated, many excellent ideas will come from the people themselves as to how best to meet these dangers. This has always been true in America in the past. It is reasonable to expect that it will continue to be true in the future.

The CHAIRMAN. All right, now, let us stop and examine that for a moment. You, in that paragraph 4, very definitely state the delicate question that must be determined; namely, how to get out enough information to enable the people to meet a reasonable standard of preparedness and yet not produce a worry psychosis throughout the whole United States. I saw where Admiral Nimitz the other day made a remark to the effect—I do not think he used this phrase, but I believe it is what he meant—that we were getting into a worry psychosis. The admiral did not, however, add, as I wish he would, what the defense was against ships coming into your harbors loaded with atomic bombs.

And I am not advocating that we go into any worry psychosis. I believe, too, that, if we tell the people the truth, the facts, that is the best way of handling a disagreeable situation.

Now, let us assume, just for hypothetical purposes, that in answer to your second question you are advised that some large urban area in this country probably cannot be defended against some hits. Let us put it that way, hypothetically.

Now let us assume they came to that determination. Do you think that would be a good thing to turn loose to the American people?

Captain PARKINSON. If I may suggest a possible method of approach to this, and it is perhaps one of our most critical problems, as I think we all realize: The people of this country are apprehensive at the present time. They do have a worry psychosis, if you want to put it that way, to a certain extent. And I think that if they are fully advised as to the steps which are being taken by the Federal Government, by the States, and by the local communities to protect them and their property, it will develop a feeling of confidence rather than the contrary.

And I think, if I may suggest it, that that might be a method of approach.

In other words, we are planning mass evacuation, for example. Suppose we just say that in the case of an atom attack we cannot protect the central core of a city or industrial area. All right. We are going to plan to move out. The fact that such a plan is in existence, that people are working on it, that all of the agencies of Government are concerned with the individual protection of the life and property of each individual householder, I think will engender confidence and I think will do much to allay this present hysteria, which I think is an important factor.

Senator KNOWLAND. Might I ask this question: A week or two ago, the mayor of Los Angeles, Fletcher Bowron, was testifying before the committee. He pointed out, among other things, that possibly we would want a little different type of civil defense organization than we had in World War II; that at that time almost every community in the country was organized, equipment was requested, and so forth, whereas in the type of warfare we may face it is quite likely that the primary targets will be larger industrial centers, communications centers, and so forth; and that rather than dissipate the ability to get certain types of equipment, you should set up what might be called a system of priorities.

Take our own State of California as an example. Probably San Francisco, Oakland, Los Angeles, San Diego, might be primary targets. There is grave doubt whether an attempt would be made to put an atom bomb on Vacaville or Merced.

You probably do not know our State, but I am just mentioning those as an example.

On the other hand, it is quite possible that, taking a community like Palo Alto, which is reasonably close to San Francisco and yet is far enough out where it perhaps would not suffer damage in the event of an atomic attack on San Francisco, they perhaps would have a contribution they could make in sending fire-fighting equipment or hospital assistance, and otherwise, into the city of San Francisco in case it should be the victim of an attack.

So that there are area problems that perhaps could be worked out, which would be very helpful in a situation of this kind.

Have you given thought to that phase of it?

Captain PARKINSON. Yes, sir. I have a statement on that as part of this presentation, sir. And I think that you have put your finger on one of the most crucial problems of civil defense right there.

5. We have one further request to make, and that is that some sort of National and State pattern of organization be set up so that a large urban area will be treated as such, with due regard for the technical skill, equipment, and facilities which are available in the city itself and which in many cases are not available to the surrounding governmental units. It is well known that some of the governmental units schematically superior to the cities, as, for example, the county governments, can and even might stifle the development of an appropriate regional civil defense organization. We are asking how this problem can best be handled in order that full use may be made of the resources of the city as the central core of the region.

That is, I think, exactly your problem, and it is exactly our problem. Actually, the cities are the central core of what I call high-disaster potential, and this drops off as you go away from this central core. All of the region, however, is involved in the problem.

But the center of gravity of the technical ability and the facilities rests within the city. Now how can that be integrated with the surrounding area in the most effective way?

As a result of our continued thinking during the past 2 years, we should like respectfully to make certain suggestions to you for your consideration:

1. We suggest that the Hopley report should be promulgated as the basic standard pattern for the development of the civil defense organization, at least until such time as a better plan has been prepared.

May I insert a comment there? You have recommended the Hopley report as a very desirable general guide. We feel that something a little more concrete should be recommended. This, we feel, is the best pattern that has been developed up to this time. We are quite sure that there will stem from the National Security Resources Board, Mr. Larson's office, in the next 6 or 9 months, a better plan than the Hopley report; but, until that is promulgated, we feel that the Hopley report will provide a very satisfactory guide and should be given official support.

Representative HOLIFIELD. May I stop the witness there, for a question, Mr. Chairman?

The CHAIRMAN. Mr. Holifield.

Representative HOLIFIELD. As I remember, the Hopley report made two recommendations as far as administrative authority was concerned. One was that this independent organization which they advocated should report to the Secretary of Defense; and the alternate proposal, I believe, was that it should be completely independent of the military and should report directly to the President.

Now, do you, or your group, have any comment to make on the preferability of either one of those recommendations?

Captain PARKINSON. We have no comment to make on that. We simply are interested in having the basic pattern and having it given official support, so that the people will know the direction in which to plan.

We feel that that question that you raised should be handled at this end.

Representative HOLIFIELD. I see.

Captain PARKINSON. 2. We suggest that there should be set up a central office of information which would constitute a clearing house for ideas in the development of the various civil defense patterns throughout the country. We feel that no single community can develop the best civil defense pattern within itself. No one city will have all of the best ideas. Each community can and must tailor its program to meet its own local needs but should be advised of the very excellent ideas and developments which are taking place in other communities.

3. We should like to suggest that a study be made toward the standardization of procedures and equipment of various municipal organizations, such as fire departments, departments of public works, and public health departments, so that the communities could interchange services and activities, and so that even vital materials and equipment could be transported from one community to another by air or other rapid transport and be immediately useful in that community.

4. The last suggestion which we would like to make has many important ramifications, both political and financial, and that is the question of decentralization of governmental functions, industrial activity, and housing facilities. We believe that there should be a study on the national level which will give local communities some of the answers to some of the problems in this area.

To what extent should a city plan to decentralize its governmental activities; to what extent should its utilities be put underground or decentralized; to what extent should private industry be urged to decentralize its activities and factories; and what should be the guiding principles which should govern the construction of public and private housing? Attached to all of this is the basic problem, who is going to pay how much for what.

The CHAIRMAN. And, of course, if there is very much of that, there is not money enough to pay for it, either federally or on the State or local level.

Captain PARKINSON. That is quite correct, sir. There is not money enough to do a complete job. But we do feel that we should have national guidance in the directions in which we ought to work and the extent to which we should try to accomplish the solution of these problems.

The CHAIRMAN. I have come to the conclusion that any effective digging in, that is, any measure of it that would do you a very great amount of good, is just out of the question. You just cannot put America underground. And, furthermore, we are not going to go underground for anybody.

If I am correct as to the disposition of the American people, I do not think we are going to make moles out of ourselves.

Captain PARKINSON. Perhaps the implication of the question I raised was a little strong. Are there any critical facilities that should be put underground, or should we put nothing under there? Should you put a water-pumping station underground so that it would be relatively invulnerable to attack? Should your communication cables be put underground?

The CHAIRMAN. Well, suppose you put a water-pumping station or half a dozen of them in the city underground; and then let us assume that in the future you have hydrogen bombs developed and they go to

a depth of  $x$  feet. Let us assume that your pumping stations are deeper than that. Certainly your pipe lines will not be. And what good will your pumping stations be if your pipe lines are all blown apart?

Captain PARKINSON. The answer is "No good," if that is the case.

Representative HOLIFIELD. As a matter of fact, Mr. Chairman, is it not true that the pipe lines in Hiroshima were broken all over the city, and the pressure dropped immediately to zero? Possibly it was because some of those lines followed our usual American procedure of crossing above ground on bridges across certain waterways, there. Some of that might be corrected by putting those particular links underground, but any place where an exposed fire plug, or anything like that, is connected to a water line, or the water lines in buildings, for instance, they would be destroyed.

You see what you are up against when you go to trying to maintain utilities in even the obsolete type of bomb used at Hiroshima.

Captain PARKINSON. You see, Mr. Chairman, this is what we are asking. There is a good deal of, shall I say, confused thinking at the local level at the present time. We are asking for leadership in this thinking.

In other words, what is your thinking? What shall we do? And we feel that you gentlemen are certainly in position to come closest to the answer, of anybody in the country.

Senator KNOWLAND. That is what you were pointing out earlier, the need for some advice and direction from above; because some of these questions you cannot possibly answer on the local level unless you have the facts.

Captain PARKINSON. Mr. Chairman, we are asking for national guidance and advice on these most important matters, which we feel are basic to the development of any effective civil defense program in this country.

Thank you very much.

The CHAIRMAN. Thank you very much. I think that was an excellent presentation.

Captain PARKINSON. Thank you, sir.

The CHAIRMAN. And I want to congratulate you on all the sensible planning work that you people have done in Milwaukee. It is really, I think, quite exceptional.

Captain PARKINSON. We hope we have not gone completely off on a tangent.

The CHAIRMAN. No; I do not think you have.

Captain PARKINSON. Thank you.

The CHAIRMAN. The next witness will be Mayor Elmer E. Robinson of San Francisco.

Mayor, you have some of your California people here on this committee, as you can see.

#### STATEMENT OF HON. ELMER E. ROBINSON, MAYOR OF SAN FRANCISCO, CALIF.

Mr. ROBINSON. Yes, Mr. Chairman, I recognize them.

Senator KNOWLAND. I might say we are glad to have the mayor here with us, from 3,000 miles across the continent.

Mr. ROBINSON. Thank you very much, Senator.

Mr. Chairman and members of the committee, it is a privilege to appear before you today to present my views on civil defense. My remarks are based on my observations as a volunteer in civil defense during World War II, as well as on information gathered during my term as mayor of San Francisco, and as a member of the civil defense policy committee of the American Municipal Association.

When I became mayor of San Francisco, our World War II civil defense organization had been deactivated, being replaced by the San Francisco Disaster Council and Corps, established by action of the board of supervisors on September 16, 1946.

The ordinance establishing this corps was patterned after legislation suggested by the California State Disaster Council. The purpose of the San Francisco Disaster Council and Corps is twofold:

1. To coordinate the various city departments concerned with handling a local disaster; and
2. To serve as a nucleus for the reestablishment of a civil defense organization when needed.

Provision is made in the ordinance for the recruitment of volunteers, but the San Francisco Chapter of the American National Red Cross is the only volunteer agency which at present is a member of the corps.

In January of 1948, because of the renewed public interest in civil defense, I instructed the executive officer of the disaster council and corps to obtain all current information available in the field of civil defense, and to keep abreast of all developments on that subject. The executive officer is the public service director attached to my office with civil-service status.

Pursuant to my instructions, he has consulted with numerous persons interested in civil defense and attended many conferences at which it was the prime consideration. He has kept me fully informed on the activity of the Federal Government in civil defense.

This activity began, as you know, with the Bull report, which was released 2 years ago. That report, in turn, led to the establishment of the office of civil defense planning, which issued the highly controversial Hopley report.

Then, on March 3, 1949, President Truman delegated to the National Security Resources Board the responsibility for leadership and coordination in civil defense planning.

Finally, effective March 1, 1950, Mr. Paul J. Larsen was appointed director of the office of civilian defense mobilization.

The legally constituted city departments of San Francisco which are already organized and staffed for doing special work in all types of emergencies, are the backbone of any local civil defense organization. Since the devastating fire of 1906 we in San Francisco have been fully aware of the possibility of another sudden and widespread catastrophe. Consequently, our protective services are always on the alert for any contingency.

The police, fire, medical, welfare, and other protective services can be mobilized quickly to cope with the destruction of a normal disaster. These departments operate with the most modern equipment available and boast of a highly trained personnel.

Furthermore, there is full cooperation and liaison between the San Francisco Chapter of the American National Red Cross and our city departments. The disaster section of the Red Cross maintains an active interest in disaster relief. At frequent intervals it presents

a disaster relief problem for discussion and possible solution. Present at all of these meetings are representatives of the fire, police, medical, and welfare departments who participate in solving the hypothetical problem.

It should be evident, therefore, that San Francisco is well prepared to cope with any natural disaster.

But, gentlemen, I have not traveled 3,000 miles to report to you our ability to deal with natural disasters. I am here to tell you point blank that we are not prepared to, nor can we, protect ourselves against the results of an atomic attack.

We are not prepared because, as of this date, the civil defense of our people from atomic attack seems to be nothing more than a buck-passing operation of the first magnitude between top Federal agencies.

Many responsible citizens of San Francisco, aware that our city is a primary target, are sincerely concerned over the destruction and horror which would result from the explosion of an atomic bomb. Their concern is absolutely justified.

San Francisco is a primary military target, as is well known by the military establishment, because it is the industrial, shipping, rail, and financial center of the entire west coast. Our city of 800,000 people is the most important atomic bomb target west of the Mississippi River. Mine is the only major city in the United States which is extremely vulnerable to an underwater bomb burst.

The CHAIRMAN. I do not know that you are accurate about that, Mayor.

Mr. ROBINSON. I think I can demonstrate it to you.

The CHAIRMAN. How about New York and Philadelphia?

Mr. ROBINSON. They are not on a peninsula as we are, Senator. We are surrounded on three sides by water, located on just the tip of a peninsula. And we would have but one possible land exit if a submarine should fire a bomb, an atomic bomb, on San Francisco.

And I might call to your attention that twice within the past 10 days unidentified submarines have been observed off the California coast. About 10 days ago, or less, one appeared some 8 miles off shore. And I read in the morning press in Washington that another has now been sighted offshore in the vicinity of southern California about the area of Santa Barbara.

But San Francisco is peculiarly situated, and I still say and maintain that we are probably more vulnerable to an underwater bomb burst than any other city in the Nation. We have a very dense population crowded together upon a peninsula from which the routes of exit and entrance are sharply limited. We have but 42 square miles in our city on this peninsula; being what I have often referred to as the thumbnail of the thumb of that peninsular, a very compact area.

San Francisco is about 2,700 miles from the Russian mainland, less distance than from San Francisco to Washington, or from Washington to San Francisco.

I might call to your attention that an ordinary commercial passenger plane brings us from San Francisco to Washington in 12 to 14 hours. Last night an executive officer of a passenger plane corporation, a commercial aviation corporation, told me that, in his opinion, a high-speed plane of an enemy could travel that same distance in 6 to 8 hours.

San Francisco, as I again call to your attention, is but 2,700 miles from the Russian mainland, easily reached by air or water over the Great Circle route. An atomic attack upon San Francisco would not only result in heavy loss of life, but it could convert the city into the world's largest ghost town from which the entire population would have to be excluded for 4 years or more.

During this time the best harbor in the West, the Navy's largest base, the headquarters of the United States Sixth Army, and other important military facilities, would be blacked out.

And at this point, I would like to depart from my prepared statement to point this out to you, or call it again to your attention: Civil defense, to my mind, does not mean nursing the injured and burying the dead. It means something to prevent injury and death. In addition to that, I might call to your attention that cities, counties, and States are not armed militarily to defend anything, so that at the most, when we talk of civilian defense we are properly talking of licking our wounds, nursing our injured, and burying our dead. And I would like to say that that seems to be the defense definition that we appear to be getting out of Washington today.

It is natural to presume that the military will, therefore, be concerned primarily with the defense of its installations.

It is no wonder, then, that my people are greatly concerned with their own safety in the event of an atomic attack on San Francisco.

And there is another thing that has been discussed here, and I again depart from my script. You know, it is not so much evacuation with which we should be concerned as it is dispersal of our population in advance of attack, after sufficient warning that an attack is about to occur. Because as I understand the effect of an atomic attack, after it has occurred, the radiation remains in the area, and you are not permitted to depart that area; and neither are those who would come to your relief permitted to enter that area.

So you become isolated in your suffering and in your wounds and in your death. You must be prepared to take care of yourself. And it is on this point that we are looking for light and guidance from our Federal Government.

The CHAIRMAN. Have you received any material from the Governor's office in California?

Mr. ROBINSON. I would like to answer that later in my statement, and then I will refer specifically to the question, if I may reserve my answer, Senator.

Representative HOLIFIELD. If you had 6 hours' warning, Mayor, of an atomic attack, could you evacuate the city of San Francisco over its bridges?

Mr. ROBINSON. In part. We could save some lives. The extent of the evacuation would depend upon many factors, but we could save some lives in the matter of 6 hours.

At no time have I had any indication that the military has given consideration to the protection of the civilian population as well as to its own establishments.

Across the bay from San Francisco, at the University of California, a school for atomic defense has been in operation for some time. Military personnel have been trained in the science of atomic defense. Presumably, some persons have been graduated from that school, and yet, not once has one of these trained experts been directed by

his superiors to drive 8 miles and instruct me, as the chief executive officer of a primary target city charged with the responsibility of planning the welfare and safety of 800,000 people, on what he has learned in that school about atomic defense.

The CHAIRMAN. They are keeping it a secret?

Mr. ROBINSON. Yes. I am afraid they might keep it a secret too long.

Nor has anyone connected with that school given me any indication of a realistic basis upon which I could proceed to plan for the protection of my people in the event of an atomic attack. I can only conclude, therefore, that the military is training its technical experts in the defense of military installations and establishments, and consequently, the civilian authorities, like myself, must shift for themselves in this matter.

The CHAIRMAN. Mayor, have you communicated with any of the Army personnel around your town on this subject and asked them for aid or assistance?

Mr. ROBINSON. I might say to you, sir, that in preparing this paper I was advised by high military advisers, capable people in the military field, whose names I shall not disclose.

The CHAIRMAN. I wondered if you had asked these people over at this school if they could send anybody over to see you and help you out.

Mr. ROBINSON. No, Senator, we had figured that the Federal Government had the situation in hand and was going to tell us. I will come to that very presently. You will see my point, I am sure.

But in modern war, gentlemen, the citizen in the street is a target of attack as much as the soldier or sailor. That civilian is paying the Army and Navy to protect him, and he expects a job to be done, not merely passing the buck to civilian committees. The citizen in the street is the person who provides the skills and techniques which the production of modern instruments of war and the maintenance of fully supplied military establishments require. Neglect measures for protecting him from the results of an atomic bomb burst and you have shut off the flow of materials and weapons to the armed forces.

The citizens of industrial cities provide the sinews of war. And the citizens must be accorded the same place in realistic planning to meet an atomic attack as that given to the military or the establishments of the military.

I am aware that there are civilian committees which have been shuffling defense plans around on their desks here in Washington for the past 3 years, but no realistic and comprehensive plan has yet reached the authorities in my city, and I doubt one has reached authorities of any other prime target city.

The military have all the know-how about atomic defense; yet, at the same time, they impose ridiculous rules of secrecy which prevent the rest of us from finding out enough to enable us to plan realistically for our protection. As a result, we must turn to other sources for guidance.

And what are these other sources? We have been informed that by sending 10 or 15 cents to the Superintendent of Documents, we may receive certain pamphlets which deal with civilian defense.

I submit, gentlemen, that inviting a mayor of a city of 800,000 people to send 10 or 15 cents to Washington for a pamphlet on civilian

defense is reducing the critically important question of protecting the lives and the economy of the city of San Francisco to the same status and category as that of a youngster sending the same amount to the same address to learn how to raise white rats. The thing is utterly ridiculous.

But even sending along my 15 cents has not produced results. On January 27, 1950, in response to a publicity release, my office ordered 25 copies of a publication entitled "The Medical Aspects of Atomic Weapons" from the Superintendent of Documents, Government Printing Office in Washington. By return mail I was informed that temporarily the Superintendent of Documents did not have a stock of the publication and that our order had been placed on file. To date we still have not received these documents. That was in January.

Gentlemen, I emphatically urge in behalf of my people that a policy of total defense be inaugurated immediately by the Federal Government. And I would like to repeat, total defense. That policy of total defense should integrate both military and civilian defense measures.

I urge that henceforward the safety and welfare of the civilian population be considered as of equal priority and importance with the protection of military establishments and installations.

Certainly San Francisco is not only ready and willing, but is eager to cooperate with the Federal Government in any way and in every way for the protection of our people.

But you must understand, gentlemen, that, because San Francisco is a primary target, our people are vitally concerned about the lack of specific and substantial information upon which we can base our plans to mitigate the effects of an atomic attack. Our people, like everyone else, have read about a radar screen that someone says is to be built around the country, but at a cost of more money than we have. They have been told of the need for high speed interceptors.

But if there is a single informed person in the United States today who believes it possible for interceptors to completely prevent enemy bombers from reaching their targets in this country, I have yet to meet him.

The truth is that passive defense is an impossibility, and you know it, and I know it, and every airman knows it, and even a high school boy can figure it out. An attack, therefore, apparently cannot be prevented.

I am most anxious to be helpful and cooperative in the national defense effort. But it has been 5 years since Hiroshima and more than 3 years since Bikini, and during this period, so far as I can determine, the National Government has been fumbling the ball of civilian defense.

As mayor of San Francisco, I am responsible to the people for their welfare, and I believe that their welfare is being seriously threatened by the present lack of preparation to meet an atomic attack.

Now let me tell you what I am faced with. I have the police department, the fire department, public utilities department, public health department, and others, prepared to coordinate their efforts in a plan for civil defense. And yet, I have absolutely no notion of precisely what steps should be taken by them to meet an atomic attack upon San Francisco.

I need not tell my police department how to maintain order. They know that already. I need not tell my fire department how to

put out fires. They know that already. The Public Health Department of San Francisco is, I am happy to say, preparing itself to meet certain of the medical aspects of an atomic attack.

But the over-all picture is simply that we do not have a specific and detailed plan of action for the simple reason that we have not been informed about precisely what to expect as the result of an atomic explosion.

The CHAIRMAN. Well, now, Mayor, you are in a bad way.

Mr. ROBINSON. You are? Or I am?

The CHAIRMAN. We all are, I guess.

Mr. ROBINSON. We know that.

The CHAIRMAN. Now, precisely what to expect as the result of an atomic explosion?

Mr. ROBINSON. That is right.

The CHAIRMAN. Well, you have a pretty fair idea, and so have I.

Mr. ROBINSON. And you and I are not supposed to be military experts, or medical experts.

The CHAIRMAN. Yes, I know. But you have a pretty fair idea of what Hiroshima and Nagasaki were like.

Mr. ROBINSON. We know there was great destruction and disaster and death and injury.

The CHAIRMAN. And there have been yards and yards of stuff written on that.

Mr. ROBINSON. Yes.

The CHAIRMAN. And, of course, it is because you have read it and because you are aware of it that you are here today. So the results of an atomic explosion in San Francisco, in the harbor of San Francisco or overhead, you have pretty well described in the forepart of this statement, it seems to me.

Well, go ahead.

Mr. ROBINSON. I am interested in a realistic training program which will enable my people to meet an attack when it does come in a calm and orderly fashion so that thousands of lives might be saved which would otherwise be lost.

I, therefore, propose a program which I should like to designate "Operation Intelligence," for which I suggest the Congress make the Department of National Defense responsible.

I propose that Operation Intelligence consist of three phases:

1. Immediate establishment of intelligence liaison between the Federal Government, the State government, and primary target cities, through which liaison will flow all the information required to keep officials at those levels cognizant of every latest development in the field of atomic defense.

This phase should be completely informational and I propose that this be accomplished through some military officer or other agency of the Federal Government together with responsible representatives of the governors of the States and the mayors of primary target cities.

2. That educational information be developed and disseminated through "Operation Intelligence" which can be imparted to every man, woman, and child, even down to the children in our schools and youth groups, such as the Boy Scouts and Girl Scouts.

3. That the military commander of each primary target area be instructed to designate one thoroughly trained expert in atomic defense to consult with the municipal and State authorities as an active par-

ticipant in the development of plans for civilian defense. Such an officer would be in a position to keep his commander fully cognizant of those plans being developed by the civilian agencies so that in event of an attack the military command would know precisely and specifically what the civilian organizations were doing.

Furthermore, such an officer would give such civilian defense planning the realism which it must have in general and in its most minute details.

My program calls for full cooperation on the part of the Federal Government, but by no means does it imply that the Federal Government should control the operation of the civilian defense forces in each city. Home rule is the Golden Rule in this matter.

I do not believe that the education of our people through "Operation Intelligence" will create unreasonable fear or mass hysteria. People develop unreasonable fears from the unknown, not from something which they can freely discuss. A person rarely fears entering a dark room if he knows where each piece of furniture is located.

The CHAIRMAN. I agree with you on that.

Mr. ROBINSON. And in that regard, Senator, let me say this to you: During all of my experience in attempting to get information during the past 2 years, I have received nothing but a hush-hush shush-shush attitude from the Federal Government concerning the atomic bomb and civilian defense in connection therewith.

Our newspapers have printed thousands and hundreds of thousands of inches of material with reference to the destruction of an atomic bomb, of a possible hydrogen bomb. Our radios have carried hundreds of thousands of words over the air to the people about the destruction of an atomic bomb. Our people are no longer shocked or excited about the words "atomic bomb," or "hydrogen bomb." Every boy in the street; every man, woman, and child, now knows that such a thing exists.

There is no great excitement or mass hysteria among our people at the moment. And all of that has been going on for years, until it has almost become the story of the wolf.

Now, why not tell our people, in plain and understandable language: If an atomic attack comes, you should go underground. You should go upstairs. You should wrap yourself in a wet blanket. You should bathe yourself with oil. There must be some remedies. There must be something that a man can do to at least alleviate the suffering and pain that are threatened here. Tell our children, tell our men and our women, tell our people, whether they should run to the water or to the mountains; whether they should stand on earth or whether they should stand on metal, or stand on cement. Give them the simple rudiments of self-preservation. That is the thing with which we are concerned.

Let those who claim to know, or think they know, tell us what to do should such an attack come. That will bring comfort to the people. In an emergency, understanding of what to do, how to behave at the time of an attack, can help materially. It can save lives, and it can preserve the courage of the people.

Representative HOLIFIELD. Mr. Mayor, I was a member of the President's Atomic Bomb Evaluation Committee at Bikini, along with one other Member of the House, and two Members of the Senate; and in the conclusion of our report to the President, after that

occurred, I think you will find the sentence which says that "Distance is the only real defense against the atomic bomb."

Mr. ROBINSON. Well, tell us so.

Representative HOLIFIELD. In other words, just do not be there when it happens.

Mr. ROBINSON. That is a delightful idea, if we could all make sure of it. But, as I will say later, the enemy never tells when or where or how he is going to attack. That is one of the incidents of war.

Nevertheless, I believe that our medical people have possibly found some means of alleviating the suffering. Maybe it won't cure; maybe it won't save lives. But perhaps it will at least alleviate the suffering. And at least, if it does nothing else, it could alleviate the worry and the fear.

Representative HOLIFIELD. Well, now, you have been quite critical of the National Government.

Mr. ROBINSON. I have not completed, either. I would like to; and then you can take me on.

Representative HOLIFIELD. I have glanced ahead of you. You have been quite critical. And possibly criticism is due. But, you know, modern science poses a question at some times to which we do not have complete answers.

Mr. ROBINSON. We do not expect complete answers.

Representative HOLIFIELD. And sometimes if an answer is given that is not a completely factual answer, that might give to the people a feeling of security which the National Government would not want to be responsible for.

Mr. ROBINSON. I don't believe I have suggested any factual answer that would not be truthful. I believe what I say is: If you don't know anything about it, tell us so. If you know something about it, tell us the little you know. Give us the benefit of anything that you do know about it at the Federal level, and then we will do our part for the State government and the Federal Government, and for the people we represent in the cities.

But if you have seen the sorry spectacles at the American Municipal Association of persons trying to talk about civilian defense—surely it is the halt leading the blind. Because no one knew anything about it. Even the Hopley report gave us little comfort and much confusion.

Senator KNOWLAND. I think the mayor has also quite ably pointed out here, that there is no final defense against passively sitting and waiting for somebody to make a Pearl Harbor type of attack; that the chances of keeping out all planes that might come over, or all submarines that might cross the seas, are such that it is just too much for a realistic person to expect, and some of them are bound to get through.

Therefore, along with the civil defense phase of it, there must be a more active defense, to prevent, in the mayor's case, the Pacific Coast from becoming the first line of defense of this country. And, therefore, there is a very real interest in the maintenance of adequate defense in Alaska, or in Hawaii, or in Japan, or Okinawa, or in the Philippines.

Because if you move that defense line back to the Pacific coast, the chances of having warning of even 6 hours becomes much less than if our defense perimeter were farther out in the Pacific Ocean.

Mr. ROBINSON. That is right. That is best illustrated, gentlemen, by the fact that an unidentified submarine appeared within 8 miles of the California coast line within the past 10 days. Now, fortunately, we know of nothing that occurred to our detriment or prejudice. But let us assume that that submarine had wanted to project an atom bomb on San Francisco. Where was our Federal defense? Where was our local civilian defense? What were we going to do about it?

We would be killed like sitting ducks. And that is what concerns us.

What happened to intercept this submarine 8 miles off our shore that was unidentified? Where was our protection? Me sitting at my desk in the city hall? Was I protecting my 800,000 people? Was the Governor of California, up in Sacramento taking care of his business, protecting the 10 or 12 million people of the State of California?]

We must rely for our protection on the military forces of this Nation. And that is why I say, gentlemen: total defense.

My people in San Francisco have the intelligence and courage to face any kind of a threat which they are allowed to understand. My people are getting restless because of the unknown factors involved in an atomic attack. To give the people information will certainly not cause panic or hysteria. Every newspaper, and I suppose every radio, has already given the widest possible coverage to the terrible potentialities of atomic bombs and of hydrogen bombs.

If any mass hysteria were going to take place, gentlemen, it would have taken place at the height of those disclosures. So I feel that undertaking a program of public enlightenment will in no wise contribute to panic or hysteria on the part of the people.

We are ready to do what we are asked to do, but we must know what direction our efforts should take. Some of the people may suppose that secret measures are being taken to meet the problem of civilian defense. But most of them know that any program which requires the intelligent cooperation of every citizen must, of necessity be common knowledge. They will not tolerate negligence or the present division of irresponsibility for realistic training for civil defense.

I firmly believe that Operation Intelligence will mean the inauguration of a comprehensive program of public instruction and indoctrination which will reach from the governor of my State down to every school child.

From Operation Intelligence I can well visualize the establishment of special emergency task assignments for every civilian group in accordance with its speciality and ability. Through Operation Intelligence every doctor, nurse, pharmacist, bus driver, fireman, and motorman may and should receive detailed instructions regarding the task he will be expected to perform in an emergency.

I believe we must have Operation Intelligence in order to plan in advance how to solve the problems of medical care, transportation, and the feeding of thousands of homeless people.

I do not propose the setting up at this time of a full blown, active and heavily manned civilian defense organization in our municipalities. But I do believe that the authorities charged with the formation of such organizations should and must be fully prepared to react immediately and effectively in event of atomic attack.

Apart from the foregoing, there is another factor which may be peculiar to San Francisco, but which merits the consideration of this committee. I believe that the key municipal employees needed to operate a civilian defense plan which protects a highly industrialized community should be exempt from military service.

For example, the San Francisco Police Department has estimated that if the same selective service policy should apply again which was in effect during World War II, probably 41 percent of the force could be called into military service, either through reserve affiliation or by the military draft. This would have a crippling effect upon the civilian defense operations in San Francisco.

In my opinion, the exemption or deferment of key personnel in primary target areas should be a matter of law or national policy, and not left to the sole discretion of draft boards.

One further point, I believe, must be presented to this committee by the mayor of San Francisco. I should like to remind this committee that San Francisco is situated at the tip of a peninsula. In order to evacuate our people eastward, we would have to use the San Francisco Bay Bridge. It has been proposed that a second crossing of San Francisco Bay be erected parallel with and adjacent to the present bridge. The Department of National Defense of the United States has taken the position that, from a military standpoint, a southerly crossing of the bay is preferable to a parallel bridge.

Incidentally, I might interject as an aside, that Senator Knowland and I are not thoroughly in accord on this subject.

I submit that the dispersal of transportation routes in and out of San Francisco and its neighboring communities is essential to the civil defense requirements of the entire area.

Senator KNOWLAND. I might say to the mayor that it seems to me the important factor is getting another crossing, so that within 6 hours the people will be able to get out. Because I believe I betray no secrets when I say that if a hydrogen bomb should be dropped both bridges, whether they be southern crossings or otherwise, will probably be unusable.

Mr. ROBINSON. It might happen. But I therefore respectfully request that this committee and the Office of Civilian Mobilization issue a forthright statement declaring their opposition to a parallel or twin bridge spanning San Francisco Bay.

Local civil defense is an essential component of national defense and it must be so treated by the Federal Government.

A future war will be fought on three levels—by the fighting men who will be called upon to repulse the attack and later carry the war to the enemy; by the security forces who will try to suppress the fifth-column activity, and, finally, by the civil defense forces in the cities which will reduce the effect of enemy attack that reaches the cities. Defeat at any level would well mean national disaster.

In conclusion, gentlemen, let me remind you that the city of San Francisco suffered one of the greatest catastrophies in modern American history. But our people rebuilt the city brick by brick and stone by stone until today San Francisco stands proudly as a monument to the courage and determination of our people.

I want to assure you again that whatever information may be given to the people of San Francisco will not be received in the spirit of panicky hysteria, but will be received as information given them for their own protection and self-preservation.

All they ask, and all I ask in their name, is that we be permitted to cooperate with the Federal Government in realistic planning for our welfare. Cooperation is absolutely essential to the success of a civilian defense program.

Surely it is indicated by the threat which hangs over our country today, and I, therefore, urge you to see to it that the Federal Government does its part in extending the practical and realistic cooperation to municipal authorities which those authorities must have if they and their people are to react as they should to an atomic attack.

May such an attack never come. But if it does come, may any enemy find in us a people whose resolute courage is matched by the thoroughness of their preparation to meet that attack.

After arriving here, gentlemen, and studying my hurriedly prepared statement, because I had very limited notice of this meeting, which caught me in the middle of municipal budget sessions, I prepared about a page and a half of supplement which I should like to read into the record. I will make it as rapid as I possibly can.

In my preceding remarks I have endeavored to make constructive criticisms of civilian defense planning to date and to offer a definite solution by way of a workable program which I hope will be adopted by your committee.

Although I have spoken for the most part about atomic defense, what I have said also applies in part to defense against bacteriological and chemical warfare.

In connection with the necessity for adequate bridges across San Francisco Bay properly separated, not only are they necessary to insure the maximum opportunity for ingress and egress to evacuate the population following an attack, but they are also necessary to permit satisfactory dispersal of the populace prior to an attack.

My program calls for direct liaison between the Federal Government, State governors and the mayors of primary target areas. It is my belief that the Federal Government should concentrate its civilian defense energies at the outset on the primary target areas, instead of wasting valuable time, money, and manpower on less vulnerable areas. It is conceivable that many entire States, and many more cities, are low on the vulnerability list.

The Federal Government should designate the primary target areas and should then confer immediately and as often as necessary thereafter with the governors and mayors of those areas.

Not only have efforts and planning thus far been diffused, confused, and delayed by covering too many States and communities, but it is my guess that too many of the usual interagency conferences have been taking place here in Washington on conjectured facts instead of singling out the primary target cities for on-the-spot surveys and planning conferences in such cities.

We must all recognize that an enemy is not purposely going to divulge to us the pattern of his attack—when, where, or how—but we have the right to assume that our military with its over-all knowledge of such affairs should be able with some accuracy to designate primary target areas so that our Federal Government can proceed to formulate a program of national civilian defense with emphasis and greater particularity with reference to primary targets.

Whether a particular city should have a primary target area type of civilian defense program, or a lesser type, or none at all, should not be left to the chance determination of uninformed local officials, but it is a direct responsibility of the Federal Government to make such decisions and to see to it that adequate programs are established, as adequate protection of primary target areas is vital to our national security.

Now, Senator McMahon, to answer your question with reference to our Governor sending information to the mayors of the cities, I will say to you that Governor Warren, of California, called a meeting at our State capital, Sacramento, very well attended by representatives of municipalities. I was represented there by my representative, to whom I referred earlier in my statement. And the Governor had before him all that the Federal Government had given him, which I have read and which in my opinion amounts to very, very little.

The CHAIRMAN. What date was that?

Mr. ROBINSON. I do not have it before me. It is in my file.

The CHAIRMAN. I mean, is it recent? I am trying to pin it down.

Mr. ROBINSON. It is within the last 2 or 3 weeks, at the most.

But our press carried accounts of Operation Lookout, involving 150,000 people participating in lookouts and radar, at an expense involved that I don't believe the United States Mint is prepared to mint. The Governor imparted all that he had, and all that he had from the Federal Government, I still say, was diffused and confused and not informative or realistic.

The CHAIRMAN. Now, I asked the staff of the committee to get up for me what had gone forward to the States.

Mr. ROBINSON. I can show you what has not gone forward, excepting through the ads stating that you could buy them from Washington for 10 and 15 cents.

The CHAIRMAN. On October 5, 1949, the Acting Chairman of the NSRB sent to the governors a 10-point statement of policies for relationships with State and local governments in civil defense planning. This was sent after discussion with representatives of associations representing State and local government interests.

The following extracts from the statement seem relevant:

1. The Chairman and staff of the National Security Resources Board will deal directly with State governments, or through State governments with political subdivisions within States.

2. Information or advice released by NSRB will be channeled to States; it is assumed that States will relay the same to their political subdivisions when appropriate.

3. Requests for information or advice received from political subdivisions may be answered directly with copies of the correspondence going to the appropriate State government; however, requests of this nature will be referred to State governments for direct reply as State facilities for processing them are developed.

In other words, the NSRB has specifically made it clear that it will not deal directly with municipalities; it has informed the States that it regards this as their responsibility.

The fact seems to be that a good number of States are negligent in passing NSRB information on to cities.

I don't say that is so in your State, because the Governor had the conference up there.

Too frequently documents from Washington are buried in obscure files in the State capitols.

Three civil defense planning advisory bulletins, dated December 1, January 15, and February 3, have been transmitted by NSRB to the States. These bulletins and their enclosures have dealt with such topics as the following:

Federal objectives in civil defense planning, information on Federal activities in civil defense planning, recommendations for State and local civil defense planning groups, information sought from the States, medical aspects of atomic weapons, training courses in radiological monitoring and medical aspects of atomic warfare, and damage from atomic explosion and design on protective structures.

The NSRB has also worked with the Conference of Mayors and the American Municipal Association, and publications of these organizations have carried accounts of Federal civil defense activity.

Now, there appeared recently, and this I think is of some interest to you, in the Saturday Evening Post, on January 7, 1950, an article, *How You Can Survive an A-Bomb Blast*, by a gentleman by the name of Richard Gerstell. The subhead is:

If you think a falling A-bomb means the end of everything, this remarkable report may change your mind. Here are protective measures you can take—and proof that the blast is not always so fatal and frightful as you think.

Mr. Gerstell is now with the staff of the NSRB, and I believe that a rewrite or simplification, or rather, a condensation, of this article is going to go forward by the millions in a very short time. I just give you that for your information.

Mr. ROBINSON. Well, I would like to repeat this:

Whether a particular city should have a primary target area type of civilian defense program, or a lesser type, or none at all, should not be left to the chance determination of uninformed local officials, but it is a direct responsibility of the Federal Government to make such decisions and to see to it that adequate programs are established, as adequate protection of primary target areas is vital to our national security.

Now, with due respect to the individuals concerned, you can take all the literature that has come out of Washington with reference to civilian defense, and when you get through reading it, it tells you nothing specific. They say, "We are pleased to give you advice," and you write for the advice, but you don't get it.

Now, we have had some considerable correspondence with Mr. Washburn, who is the executive officer of Governor Warren's Disaster Council of California, and I was trying to find it hurriedly, through the parcel of material I have here, and I don't have it.

But as late as January of this year he wrote to Mr. John Sullivan, the man to whom I earlier referred as representing me, a letter in which he says:

All we can do is stand by until they tell us something to do.

Now, this literature is all very nice, which is made up here in Washington, but it doesn't come out and tell us factually or realistically how we should provide any civilian defense for our people. The pamphlets are made up in attractive form, and it is nice for you to mail them to the governors. That is all very well, and it is well appreciated.

But it doesn't tell the mayors of large cities, having the direct responsibility to the people, what to do and how to proceed. And I challenge any man to take the literature that has come out there and show us where there is any direct instruction for planning for civilian defense; except to lick your wounds, nurse your injuries, and die.

Representative DURHAM. Mr. Mayor, I would like to ask you one question. I notice in your plan here, your operations plan, you advocate complete cooperation with the Federal Government.

Mr. ROBINSON. Yes, sir.

Representative DURHAM. Now, the question in my mind is: Can you have complete cooperation without the Federal Government pushing you mayors around somewhat at times?

Mr. ROBINSON. Oh, I don't go for being pushed around at all, Senator; not at all. Of course, we have to be realistic.

Let me say this to you: In the event of an atomic attack, this would probably happen: If there is a military installation in your area, you would probably have martial law within an hour. Now, let us put aside all of these well-laid plans of men in Washington, or agencies, I mean, and get right down to brass tacks.

If you have an atomic attack, and there is any military installation there, and it survives at all, you will probably have military law.

Representative DURHAM. That is the point that worries me.

Mr. ROBINSON. Well, it worries all of us.

Representative DURHAM. And that is something that we are deeply concerned about, because we do not want to get into a military state of affairs before we know what we are doing.

Mr. ROBINSON. That is right. But that is why I call for local defense by the military. Let us approach this thing realistically. Let us not fool ourselves.

The most your civilian population can do is to bury their dead, nurse their injured, lick their own wounds, and try to find food and water to sustain themselves until relief can come. And the defense end of it must come from the military.

Representative DURHAM. Of course, when that time comes, I think we are all going to be more or less confused. But in the period of time intervening, I think we should proceed cautiously in that respect.

We start out with a plan of military cooperation. And I know the military pretty well, having been associated with them for 10 or 12 years now, and I am sure my friend Kiesling—he was with them at one time. And I always found that when you give them a little authority, usually they take over.

And the civilian authority, then, has to run here to us in Congress and begin complaining about it. Now, this is a rather delicate thing, this matter of working out cooperation between the mayors and the cities. It is one that, of course, we want to bring about, but in a reasonable and sensible way.

Mr. ROBINSON. I believe my proposal is reasonable and would prove successful. Operation Intelligence, as I have outlined it here, means complete liaison in the matter of civilian defense, the matter of civilian care, planning to take care of our injured and our dead, to take care of our wounds, and to provide ourselves with water and food and clothing.

Those are civilian matters which should remain, up to the time of an attack, completely in the hands of your mayors.

Representative DURHAM. Do you believe that you can write this into statutory law, then, so that it will be workable?

Mr. ROBINSON. I sincerely believe so. All it takes is realistic thinking and planning and cooperation. I don't believe in wasting time, in our communities.

Senator Knowland lives in the city of Oakland just across the bay from San Francisco. I don't believe San Francisco should attempt to set up one kind of civilian defense, Oakland another, or maybe Oakland a defense and San Francisco none, or California one type of defense and Oregon none, or a different type of defense, or Minneapolis one kind and St. Paul none at all, or the reverse.

I don't believe Kansas City, Kans., should have one kind of civilian defense and Kansas City, Mo., maybe none at all. That hopscotch, random way of thinking isn't the way to plan.

Representative DURHAM. I believe that the pattern should be, of course, according to Hoyle.

Mr. ROBINSON. Then, I don't believe that some little town out in the desert, without naming any particular one, needs the same degree of civilian defense as does a primary target city.

Representative DURHAM. Perhaps that mayor is going to raise just as much fuss with his Congressman as you raise with yours.

Mr. ROBINSON. No, if you can assure him that he is not in a primary target area, he doesn't have to have the same kind or the same degree of civilian defense or protection as does the fellow in a primary target area, and he will realize that.

Representative DURHAM. It is going to be very difficult.

Mr. ROBINSON. It will be very difficult, but we have to meet the difficulties. We have to recognize difficulties. This is the survival of the Nation, the survival of the people, and we don't care whose toes are stepped on. You have to tell your supporter, your constituent, in your district, that "you are not in a primary target area, so this is the type of civilian defense for you." If you are in a primary target area, then your mayor must sit in with your governor and your Federal authorities, and you must work out a primary defense.

Representative DURHAM. Did I understand you to say that you believe that the Federal Government should tell you this whole story?

Mr. ROBINSON. No; I did not say that.

Representative DURHAM. I kind of understood it.

Mr. ROBINSON. No, you won't find "the whole story" in my statement. They should tell us enough so that we can guide our people. I say that one liaison officer, military, stationed in an area, could tell one man designated by the governor of a State, and one man designated by the mayor in a primary target city, "You must be alerted."

Representative DURHAM. What you want to be assured of is that you really have a radar screen, or whatever you have to have?

Mr. ROBINSON. We must be assured that we can be alerted; that we can make the added effort; whereas another city that is not in a target area at all should not make the same exhaustive effort that we would have to make in the primary target areas.

The military of this Nation should by now know generally and be able to reasonably tell us where the primary target areas are. And I think our effort and our spending and our planning should be designated as to the primary target areas.

Representative DURHAM. That is pretty good information for the enemy, Mr. Mayor.

Mr. ROBINSON. Well, let us hope that that information is not going to the enemy, but that it is going to those who have to know. You don't make that public.

Representative DURHAM. I hope not.

Mr. ROBINSON. We have all hoped that for a long time, about Washington.

Representative DURHAM. You have made yours quite public here this morning.

Mr. ROBINSON. Well, it shouldn't be made public. I like to think there is at least one man in each State, and one man in each city, who can bear the confidences of the Nation. And when we have reached the point where there no longer remains one such man in the city and one in the State, then I doubt if there is one in the Federal Government who can keep the secret.

The CHAIRMAN. But you have suggested here, Mr. Mayor, that in order to get the support which is necessary to put into effect a suitable plan, you must have an informed citizenry.

Mr. ROBINSON. That is a different thing.

The CHAIRMAN. So having it a secret would not do a great deal of good.

Mr. ROBINSON. Senator, you misconstrue. If you will read my statement, you will see that what I say about informing the Boy Scouts and the Girl Scouts and the boys and girls in the street refers undoubtedly to self-preservation. It refers not at all to the defense of the Nation, which we are paying our money, our taxes, to the military for.

Senator KNOWLAND. I take it the mayor is not suggesting that the local authorities need the formula on how the A-bomb should be made, or the H-bomb should be made.

Mr. ROBINSON. Not at all.

Senator KNOWLAND. Dr. Fuchs apparently has done a pretty good job on getting that information to where it should not be. But what the mayor has in mind is that information which can be released, which will enable the municipal authorities to do the job they will be called upon to do.

The CHAIRMAN. But just a minute, Mr. Mayor. He also, Senator, has indicated that the primary targets should be defined. Now, if you are going to define them, if you are going to tell Mayor Robinson that San Francisco is a primary target and considered as a primary target, then certain civilian defense measures must follow, of quite an extensive character.

In order for him to get the cooperation of his people to organize that civilian defense, he has got to indicate to them that they are living in such an area. If he does not want to use the term "primary target," he might not use it, but at least he would have to tell them that they are living in an area which might be attacked.

Mr. ROBINSON. Senator, I do not have to tell them. They all know it. Every man, woman, and child in the street knows it at this time. You could not read the papers without knowing it.

The CHAIRMAN. What did you think of the Hopley report?

Mr. ROBINSON. I would not like to express myself at the moment, Senator. I thought it was very poorly done.

The CHAIRMAN. Very poorly done?

Mr. ROBINSON. I thought so. It only provided material for more argument and more discussion back here. All of us people out in the communities, the mayors of the cities, the governors of the States, were led to believe that here was the solution. And then Washington

started fighting over it, and I don't know that the quarrel has ever come to an end.

The CHAIRMAN. The Office of Civilian Defense Planning refers to it this way:

Although the report of the Office of Civil Defense Planning, titled "Civil Defense for National Security," known as the Hopley report, has not been officially adopted, and although the NSRB does not agree with all of the recommendations made in this report, the NSRB does believe that the report could be a useful guide to the substantive areas in which planning must be done for Federal, State, and local civil defense.

Now, I have read that Hopley report at some length and studied it. I think there is a great deal of fundamental information in it, which has answered a good many of the questions which you have raised today.

Now, Mr. Mayor, if an attack comes on San Francisco, I think basically the local municipal organization, the local municipal agencies, the local civic agencies, are the ones that are going to have to handle the burden of it. I think that is indicated in this Hopley report.

You have given us much food for thought here today, but I would recommend that you study this Hopley report some more, and then match it against your statement. I think you will find that some of the questions which you have asked have been answered in that report.

Mr. ROBINSON. May I reply, Senator, in this fashion: The Hopley report was given to the people, and those who have the responsibility of civil defense planning. Then official Washington, the Federal Government, proceeds to refuse to adopt it.

Now, are we to be guided by reports that have been discarded and not accepted by the Federal Government, for a guide for our civilian defense? Is that what we are to assume?

The CHAIRMAN. No; I was suggesting that there was much basic information which you as an intelligent man would find very useful in thinking about your problems.

Mr. ROBINSON. But if you recall, Senator, I asked that the Federal Government take the initiative in being sure that primary target areas have adequate civil defense units. And the Hopley report has not been approved by the Federal Government.

Now, are we to go running off on our own with the ball, or are we to stay on the team? If we start adopting reports that have been rejected in Washington, written by anyone, the Hopley or any other report, and if we are to start to go to those for our guidance and our direction, then I would say that we are not giving the cooperation to the Federal Government that we desire to give. Because somebody else might write a report to the contrary next week. And which of the two reports are we to follow?

Mr. CHAIRMAN. Mr. Mayor, I was suggesting that there is much material in the public domain, such as this article I referred to in the Saturday Evening Post, the Hopley report, and the bulletins, the studies that have been put out by the Atomic Energy Commission. I presume you have read their study of the effects of an atomic blast upon the city of Washington, D. C.

Mr. ROBINSON. Yes, I have a copy of that, and I have one prepared similarly for San Francisco, sir, which I intend to release to the people shortly after my return home.

Representative DURHAM. I would like to ask another question, Mr. Mayor, which I think is also important.

When we go out and set up those primary targets and we designate them, what are you going to say to a man who walks into your office who has, say, a million dollars to invest in San Francisco? Are we going to tell him that it is a primary target and established as such by the Federal Government?

Mr. ROBINSON. If the military tells us that, wouldn't it be dishonest not to tell him?

Representative DURHAM. I am just approaching this thing realistically.

Mr. ROBINSON. I think the military are entitled to know the facts. There is not a man, woman, or child in my town, Senator, who today does not know that San Francisco is in a primary target area. They may not use that language, but they know how we are located.

Representative DURHAM. That is a little different from the Federal Government's going out and designating it as a prime target. If we set these things up, establish them officially, it provides a somewhat different emphasis.

Mr. ROBINSON. Of course, the Federal Government should not select just one city. It should tell the Nation where the prime and secondary areas, and so forth, are.

Representative DURHAM. I am just afraid you are going to put your chambers of commerce out of business.

Mr. ROBINSON. I would not mind, if that becomes necessary to save the lives of our people.

Now, I want to make one further comment. I sold the Saturday Evening Post on the streets 45 years ago, peddled them from door to door; but I still don't want to go, Senator McMahon, to the Saturday Evening Post to get my instructions from my Federal Government. And while the article may be interesting reading, and it is probably on my reading table at home, and I may get to see it, nevertheless I want the facts presented realistically from my Government.

► Representative DURHAM. Have you seen the Bull report, which preceded the Hopley report?

Mr. ROBINSON. Yes; we have read that. And the Federal Government has not adopted that.

Senator KNOWLAND. If I might ask this question: On the question which Congressman Durham has raised, as to designating certain areas as potential targets, however you might use the designation, after all, as you point out, there is probably not a person in this country who does not know that certain cities would stand out as potential targets. They may never be attacked.

Mr. ROBINSON. That is right.

Senator KNOWLAND. Only one-tenth of them may ever be attacked.

Mr. ROBINSON. That is right.

Senator KNOWLAND. But the fact remains that every member of the Politburo, or every person in charge of the planning in the Soviet Union, with the access they have to American newspapers, magazines, chambers of commerce reports, Bureau of the Census statistics, could pick out key industrial and communications centers of this area.

Mr. ROBINSON. They undoubtedly have had that information for many years.

Senator KNOWLAND. So since they have the information, there is no reason why the American people should not be acquainted with what the best judgment is of the military defense authorities as to where there might be potential targets in this country. And that is all you are asking, as I understand.

Mr. ROBINSON. That is my point exactly, Senator, and that covers it. And you leave out the other areas.

Representative PRICE. Since everyone knows this, the mayors in these communities already know how they stand in their cities as military targets, or any other kind of targets; so why is there so much concern about designating them?

Senator KNOWLAND. Because what the mayor has been trying to make clear, and I think has made very clear, is that once you have certain areas which are primary targets or possible potential objectives of an enemy who might attack us, then, as I understand it, he feels that the Federal Government should say that in all such areas, whether they be located in North Carolina or Michigan or California, they should have a certain type of defense for that type of an area.

If they are in that area, this is our best judgment as to the type of civil defense they should have. If they are not in this type of an area, they do not need the highly developed type that you would need in that area.

Representative PRICE. The Senator, I think, is correct about that. But from some of these meetings I have attended, it is clear, and I think you will agree, that the Federal Government is working toward that end.

Senator KNOWLAND. I think the mayor agrees that they may be working toward it, but as I understand it his objection is that the definitive word has not come down to those who live in or have responsibility as a mayor of a city of that type.

The CHAIRMAN. That is the purpose of these hearings, Mr. Mayor, to have a review of our situation. And we are very glad that you came today and told us your views on the whole matter.

We have had many hearings in this committee, many executive hearings. There has been a tremendous amount of planning work done that I think you will begin to see the results of very shortly. It has not been easy. It has not been simple.

The questions which have been raised to us have been extremely serious. The questions themselves, to say nothing of the answers, have been considered in executive session, because we believed that at the present time they must be so considered.

As I say, I think this tremendous amount of work that has been done on the planning level will make itself evident in a very short period of time. I just say that to you for your information.

Mr. ROBINSON. Well, I appreciate the opportunity to appear here Senator. We out in the States and in the cities feel that when a Federal agency is not doing a job the place to go is to the Congress of the United States, and there make known our feelings and our wishes and our hopes and ambitions. And when we come to Washington before a committee of either the Senate or of the House, or a joint committee, as this is, we feel we have come to the forum where we may make known our criticisms of the deficiencies of the various agencies of the Federal Government.

The CHAIRMAN. That is the purpose of these hearings.

Mr. ROBINSON. We understand that full well.

And in coming to this committee, we feel that we have the right and the duty to state the facts realistically.

The CHAIRMAN. Thank you.

Mr. ROBINSON. We have in mind, Senator, that it is 5 years since Hiroshima and 3 years since Bikini, and it may be later than the agencies think. For that reason we call on our legislative representatives to take the situation in hand, and we give only the benefit of our thinking.

Thanks very much.

Representative HOLIFIELD. Mr. Mayor, before you leave the stand: Of course, I want to thank you, too, as a fellow Californian, for coming to Washington on this matter. It is a matter of great concern, of course, to every Member of the Congress, and we have been studying this matter for some time.

I want to point out, however, that there is a much greater mass of information available than your statement indicates, and I want to point out that in the Hopley report, which I am looking at now, there is a great deal of information in the way of the organizational set-up which is needed on the local level to effectuate several different things, evacuation, fire protection, police protection, the enlistment of citizens in these types of programs—

Mr. ROBINSON. If you read my statement, you will see that I acknowledge all of that, and that I accept all of that.

Representative HOLIFIELD. And the hospitalization facilities which are going to be necessary. Now, as mayor of a great city, I do not believe that you can escape completely the responsibility which you owe to the people of your city by transferring this complete responsibility to Washington.

Mr. ROBINSON. I have no such desire.

Representative HOLIFIELD. Because 90 percent of your civilian defense is going to have to be done on the local level, and 90 percent of the civilian defense function at the present time is indicated in the Hopley report and the Bull report and the Medical Aspect of Atomic Weapons and the other pamphlets and the other material which has already been designed just for that sort of thing, pointing out the dangers of atomic warfare and pointing out the procedure which is necessary.

Now, I would say to you in return for your many accusations as to this report to the effect that the Federal Government has not stepped fast enough—and it may be true—that neither have the local governments. I am speaking now of State governments particularly, on down; major cities, too. Neither have they stepped fast enough, in relation to the information which they have.

So we all stand guilty. And let us all take the blame together.

Mr. ROBINSON. Congressman, I could only answer you in this way: We have done the one thing we could do to support the Federal Government and the military. We have paid our taxes. We in the municipalities cannot arm. The States cannot arm.

Representative HOLIFIELD. The Hopley report does not call for that type of thing that you are speaking of.

Mr. ROBINSON. I would like to complete my statement, Congressman.

Representative HOLIFIELD. Yes?

Mr. ROBINSON. We cannot arm. We are not organized to defend ourselves militarily. We have not the equipment nor the money nor the means. That is why we pay our taxes to the Federal Government.

Representative HOLIFIELD. That is not indicated at all in any of these reports.

Mr. ROBINSON. I don't say it is in the Hopley report. But, you say we have done nothing. We have lacked guidance.

Representative HOLIFIELD. I am talking about civilian defense, and not military defense.

Mr. ROBINSON. What civilian defense, Congressman, have you in mind, outside of, as I said before, licking our wounds, burying our dead, and nursing our injured? What defense have you in mind?

Representative HOLIFIELD. I will tell you very frankly, and on civilian defense, not military defense.

I realize that the city of San Francisco, or the city of Los Angeles where I live, cannot defend itself militarily.

Mr. ROBINSON. That is what I mean.

Representative HOLIFIELD. But if 90 percent of the civilian defense operation is going to be by participation on the local level, it is a matter for the inhabitants of the city, for the people on the local level.

Mr. ROBINSON. In connection with what?

Representative HOLIFIELD. With civilian defense. I will get to that in a minute. And if the direction of civilian defense is going to be maintained on the local level, which I think it should be, then I say that the job is on the local level, and that there is information available right now for you to start planning your evacuation, planning the treatment for the hospitalization outside of the fringe areas, the preparation of blood banks, the preparation of storehouses of commodities, the distributive functions, the housing function as to a mass of people that have to be taken out of the city, and all the other things that are indicated in the Hopley report.

Now, it is a big job, and the reason you have not attacked it on the local level is the same reason we have not attacked it on the national level. Because we realize it is such a big job that it is going to put a burden of expense upon the local communities, and a burden of expense upon the National Government, which is almost impossible to bear.

Mr. ROBINSON. I do not like to believe that the Congress of the United States is going to say to the communities and to the States, "Base your civilian defense upon a report that we ourselves have not approved or put into effect."

Now, the Hopley report may have what you consider good suggestions in it, but I have heard great differences of opinion.

Representative HOLIFIELD. I do not agree with all of it, either.

Mr. ROBINSON. All right. If the Congress itself has not agreed upon it, has not laid it down as a measure, or a standard for the communities and the States, how can we be guided by it?

And you undoubtedly have not read my statement, because I said, with reference to welfare, with reference to police, with reference to fire, with reference to water, that we have all of those things in readiness and have had them for years.

Representative HOLIFIELD. Let me ask you a question, directly.

Do you have a mass evacuation plan for the city of San Francisco at the present time?

Mr. ROBINSON. No. We are asking for one.

Representative HOLIFIELD. From whom?

Mr. ROBINSON. From the Federal Government. We have our bridge fight on. You must remember that.

Representative HOLIFIELD. Let us not get into that bridge fight.

Mr. ROBINSON. The bridge is one of the important elements.

Representative HOLIFIELD. Yes, I know it. But there are certain means of ingress and egress to and from the peninsula, there. Now, do you have an evacuation program designed to evacuate your people at the present time from the peninsula?

Mr. ROBINSON. No; we have not, for one reason.

Representative HOLIFIELD. Let me ask you another question now. You have answered that.

Mr. ROBINSON. No; I haven't answered it.

Representative HOLIFIELD. That is clearly within the province of a local municipality. You can do that. The Federal Government cannot come in there and tell you how to take those people out over that bridge, Mr. Mayor.

Mr. ROBINSON. No one can, neither the Federal Government nor anyone else.

Representative HOLIFIELD. Let me ask you another question.

Have you made any attempt to prepare a blood bank? You know it has been publicly said by the Atomic Energy Commission that one of the main and only curative things that is known at the present time for anyone that has been exposed to radioactivity is the immediate infusion of new blood. Have you prepared any type of a mass blood bank?

Mr. ROBINSON. No. We have blood banks all about the entire bay area.

Representative HOLIFIELD. Oh, yes; you have them for peacetime, but I am talking now about civilian defense for atomic attack.

Mr. ROBINSON. Nobody has told us that we necessarily have to prepare that.

Representative HOLIFIELD. Now, wait a minute. You have sense enough to know that. You are a smart man, Mayor, and I respect you. You are the mayor of a great city. And those people elected you because you are an intelligent man.

Mr. ROBINSON. If we are to rely on our own judgment, and the Congress of the United States tells us so, and that is as much guidance as we are to get, that would be your answer.

Representative HOLIFIELD. And in the absence of direction from Washington you are going to lay down on your own local responsibilities?

Mr. ROBINSON. No; we are far ahead of what you might think we are.

Representative HOLIFIELD. Now, have you prepared any mass places for evacuation outside of your city, the metropolitan area?

Mr. ROBINSON. Do you know the peninsula very well?

Representative HOLIFIELD. Yes, I do. You have some background country around there.

Mr. ROBINSON. Where is it?

Representative HOLIFIELD. After you cross the bridge to the mainland, what we consider the mainland.

Mr. ROBINSON. If there is war, if an atomic bomb explodes, do you think those bridges are going to be there?

Representative HOLIFIELD. Do you think by appealing to the Federal Government you are going to put up a bridge in a matter of a few days? You are not going to change the geography by appealing to the National Government.

Mr. ROBINSON. I don't think you really mean that question, Congressman. It is so obvious.

Representative HOLIFIELD. And the problem is so obvious that the need for your facing it directly is clear.

Mr. ROBINSON. When the defense end tells us what to do on the civilian question that can help the Federal program, we will be glad to do it.

Representative HOLIFIELD. I think if you will study the information that is available, and if you will fill your own local obligation to the fullest extent—

Mr. ROBINSON. You mean articles written by agencies? Or do you mean something that the Federal Government has adopted and approved as a guide to the communities?

Representative HOLIFIELD. I mean the use of common sense and the information which is presently available.

Mr. ROBINSON. If we are called upon to use our own judgment, we would like the Congress to tell us so.

Representative HINSHAW. Mr. Chairman, I would like to point out to our distinguished friend, the mayor of San Francisco, that a number of cities, and in one case a group of cities, have come to this committee and have come before this committee and presented a plan in being, pending any remarks that may be made by the Federal Government as to possibly a better plan.

But they have presented to us plans in being, completely organized, with heads of departments that are established in a civilian defense plan. And it seems to me that if our mayors of the cities of the United States are going to sit around and wait for somebody to tell them what to do, it is liable to be very much too late, because we are working hard, but we cannot get everything together in order to have it for these mayors.

I would like to say one more thing. The mayor has at his right one of the most capable former officers there is in the United States Army, Col. Francis Kiesling, who knows where he can get all of the information there is. And I doubt not that he has gotten a great deal of it already.

I think that there are probably a great many more men, both retired and reserve, all over the United States, in all of our cities, who are just as competent to make plans for their local areas, and even recommend to the Federal Government what plans should be made. It is not a one-way street, this thing. Everybody has got to join in this plan.

And I do not think that we can sit around and say, "Well, you have not told us what to do." There are a lot of things that can be done, without being told. And we hope that the people of the United States will take that attitude toward it instead of sitting around and saying, "Well, you have not told us."

Mr. ROBINSON. Well, if you will look at our statement, you will see that we have done much. And we are prepared to carry all of our share of the load.

But we want to know where the defense is coming from; not the care, but the defense.

Representative HINSHAW. If you want to know where the military defense is coming from, we are doing our best to supply everything that the taxpayers of the United States can afford, and a little bit more; as you probably know when you go to pay your own tax bill.

Mr. ROBINSON. We feel that.

Representative HINSHAW. And one-third of the budget at the present time is for current military expense, nearly 40 percent of it. We think that is a pretty good load for the people to carry. And part of it is going to the San Francisco Bay area. You have several perfectly good airfields. You have military installations in the vicinity. You have practically everything that San Francisco could ask for.

Seattle is another area that requires defense, because of the Hanford Works. Minneapolis, Chicago, Detroit, Philadelphia, Pittsburgh, New York—all of these places have problems of that sort, and we are trying to spread ourselves and spread our military defenses as thickly as we can around the needed areas for that purpose, and still get by with a budget that the people of the United States can sustain that are paying the taxes.

Mr. ROBINSON. Congressman, would you make that same statement had the submarine that was 8 miles off our coast just within the past 10 days projected an atomic bomb into San Francisco?

Representative HINSHAW. Let me just mention something about submarines. I have been a Member of Congress for 12 years, and curiously enough about every time of year when there is going to be an appropriation bill come before the Congress of the United States, you begin to hear about unknown things of various kinds, either in the water or in the air.

Representative HOLIFIELD. Flying saucers or mysterious submarines.

Representative HINSHAW. It happens that way every year when we do not have a war.

Mr. ROBINSON. It is a sad commentary on our people and on the Congress if that is the way it is played.

Representative HINSHAW. There are all kinds of ways in which pressure is applied, and that may be one of the ways.

Mr. ROBINSON. There are all kinds of ways of bringing pressure on mayors, too, I assure you.

Representative HINSHAW. And he hollers to the Congress to put up more money for military defense. Now, I am in favor of all the military defense we can afford in the United States, as everybody should know. At the same time, I realize that we have these things happen about ever so often, and we just cannot be scared to death every time some vessel sticks its nose out from under water and nobody sees what vessel it is.

Mr. ROBINSON. I recall that you come from southern California.

Representative HINSHAW. Yes, sir.

Mr. ROBINSON. In the Los Angeles area?

Representative HINSHAW. Yes

Mr. ROBINSON. Well, I do not have a certified copy, but I have a copy of what purports to be the statement of Mayor Bowron before this committee, and I think he found himself somewhat at a loss to find guidance for civilian defense also when he appeared before you.

Representative HINSHAW. I agree that the guidance, as such, is not here. But there is a great deal of common sense that can be employed by every head of a subdivision of government of the United States.

Mr. ROBINSON. That is agreed. And all I ask is that we use it together instead of individually. I think it is best that we do it collectively.

Representative HINSHAW. For example, you have a lot of cities around the Bay area around San Francisco, just as there are a lot of cities around the city of Los Angeles. I think there are 43 of them altogether around the city of Los Angeles, and there may be as many in the Bay area. I never counted them.

Mr. ROBINSON. Not quite so many.

Representative HINSHAW. Maybe not, but the area around San Francisco is pretty near as big as Los Angeles County. Have there been any coordinated meetings of persons appointed for civilian defense in the Bay area?

Mr. ROBINSON. Oh, yes; for years. Certainly.

Representative HINSHAW. Well, are they organizing various means for communication, and all that?

Mr. ROBINSON. They are talking, talking, talking; yes. They are consulting each other. They are planning generally to get together the fire departments, the police departments. They are planning to keep communications going between the various cities. They are doing all of the things that local people can do.

But that is not much defense. That is consolation, but not defense.

Representative HINSHAW. Why do you not go back and deliver them very much the same speech that you have made here before our committee and insist that they get together and do something?

Mr. ROBINSON. I have that in mind, sir, and I likewise have in mind calling a conference at a very early date of the mayors of the Pacific coast.

Representative HINSHAW. I think it is a good idea.

Mr. ROBINSON. A conference to discuss the same situation.

Representative HINSHAW. And, perhaps by the time that conference is called, there will be some more publications from the NSRB available for your use.

Mr. ROBINSON. You do not mean at 15 cents a copy.

Representative HINSHAW. Well, now, Mr. Mayor, nearly everyone in the United States knows that all they have to do is write their Congressman or their Senator, and they get them for free.

Mr. ROBINSON. Well, we wanted a quantity of them. We did not want to embarrass our Congressman by asking for something for free when we were willing to pay for the information.

Representative HINSHAW. If you are willing to pay, then go ahead and send your money in.

Mr. ROBINSON. We sent it, and here is the reply. We get a green slip that they are out of print over 2 months ago, and not a word since about any more copies.

Representative HINSHAW. Well, I have some out-of-print documents in my office, too.

Mr. ROBINSON. We appreciate receiving them.

Senator KNOWLAND. Mr. Chairman, just before we adjourn, I think it is important that the record not be left with the implication that the city and county of San Francisco has done nothing. I say that, because I think some may have come in after the mayor had started to talk.

To the contrary, the mayor, I think, made it perfectly clear that there had been work done in the city and county of San Francisco. He was in the closest liaison with the American Red Cross on disaster plans in and for the city and county of San Francisco. He does not want the job passed on to the Federal Government.

To the contrary, he recognizes the primary responsibility that the local community has. But he does want to get some of the latest and presumably official Federal points of view as to what, in areas of this particular type, should be done in the event of the danger of an atomic attack.

And since much of that information has been classified, he has no place to turn but to the Federal Government.

Mr. ROBINSON. It is all in my printed statement, Senator Knowland.

The CHAIRMAN. All right, Mayor Roberts, if we can complete your statement before lunch, we will hear General Dougherty this afternoon.

(The following telegram is incorporated as part of this hearing.)

APRIL 4, 1950.

Mayor ELMER ROBINSON,  
*Statler Hotel, Washington, D. C.:*

I wish to highly commend you on your fine talk before the Joint Congressional Committee on Atomic Energy. I borrowed a copy of the Hopley Report on Civil Defense for National Security from your office and sent to the Superintendent of Documents, Washington, for five copies of it for the use of the members of the committee of civil defense of San Francisco Medical Society. The order was returned marked "Report permanently out of print." This seems in line with your statement about difficulty of obtaining information regarding civilian defense. With many thanks for your efforts on behalf of the citizens of San Francisco, I am

HAROLD A. HILL, M. D.,  
*Member Civil Defense Committee,  
San Francisco County Medical Society,  
San Francisco, Calif.*

### STATEMENT OF HON. DENNIS J. ROBERTS, MAYOR OF PROVIDENCE, R. I.

Mr. ROBERTS. Mr. Chairman and members of the committee, I speak to you today purely in my individual capacity as mayor of the city of Providence.

We are a large industrial community which had considerable experience with civil defense organization during the last war, and it may be that these opinions based on that background will be of interest and assistance to this committee.

I have been asked to tell you three things:

1. What we have done about civil defense in Providence;
2. What the State should do; and
3. What I believe the Federal Government should do.

Although we regard the possibility of bombing as "remote" in Providence, as a matter of prudence sometime ago I requested a committee of citizens to study problems of civil defense and report to me on what we should do.

Chairman of this committee was Dr. Samuel T. Arnold, provost of Brown University. He was assisted by Drs. Robert H. Cole, James

S. Coles, and Donald F. Hornig of the Brown chemistry department; Rev. F. C. Hickey, chairman of the Providence College department of chemistry, and his colleague of the college physics department; Dr. Edwin Gore, and Deputy Chief Lewis A. Marshall and Battalion Chief Leo E. Gorman of the Providence Fire Department.

Mr. William Webster, a citizen of Providence, now Chairman of the Research and Development Board in the Department of Defense, served as consultant to the committee.

In essence, the report recommended creation and training of an emergency service organization centered on the professional personnel of the fire department. Operations would be keyed to a general plan of short-term and long-term preparedness and a postbombing program of relief.

I will not go into the details of the report, but with your permission I should like to offer this copy for insertion in the record.

The CHAIRMAN. We will put it in the record, mayor.

(The report referred to is as follows:)

#### ABSTRACT OF THE REPORT OF THE SPECIAL COMMITTEE APPOINTED AT THE REQUEST OF MAYOR ROBERTS

While probability of an atomic explosion in the city of Providence is remote, it is nevertheless real, since, due to the city's proximity to possible primary targets, its importance as a communications center, and its variegated vulnerability, it would be a logical secondary or alternative target for an attack by enemy aircraft. An air-burst explosion is considered to be more likely than an underwater or ground-burst explosion, which means there is less likelihood of persistent radioactive contamination in the devastated or nearby areas.

The greatest and most immediate problem following such an explosion will be the control of the resulting fire. Reliable emergency communications are essential, together with intelligence concerning the devastated area, and deployment and free rapid movement of emergency vehicles or apparatus. The latter requirement should be considered by the city in its long-range highway plans.

Human casualties will be of two types: those suffering from injuries or burns which need immediate treatment, and those who have been exposed to intense radioactive radiation in which, according to current information, the beginning of treatment may be delayed for several days. The former casualties will require local treatment and hospitalization, while the latter may be sent to medical centers at some distance from Providence.

The committee feels it would be advisable for the fire department to constitute within itself the nucleus of the organization to counteract the disaster of an atomic explosion. (This recommendation is in view of the coincidence of many of this department's existing and planned projects and activities, of the particular nature of its own functions, and of its conceptual attitudes in making long-range advance plans for coping with emergencies.) It should consider it a part of its responsibility to be alert to new developments with respect to this type of disaster, and should call the attention of other groups to the necessity for considering the eventuality of an atomic explosion in any projected plans or construction. It should maintain liaison with any State and Federal agencies established for planning civil-defense measures.

The local medical societies should be alerted to have plans made for the organization and function of medical aid following an atomic explosion.

The city of Providence should also consider plans for the eventuality of a bacterial warfare attack.

#### REPORT OF THE SPECIAL COMMITTEE APPOINTED AT THE REQUEST OF MAYOR ROBERTS

##### I. NATURE OF THE PROBLEM

##### A. *Liability of Providence to such an explosion*

The probability that the city of Providence will sometime be subject to an atomic explosion is remote, even in the event of open hostilities. The strategic importance of the city is less than that of other nearby metropolitan centers (i. e., Boston and New York), so that, considering the availability of atomic

weapons relative to the number of high-priority targets in the United States, it is unlikely that Providence would be a primary target. However, it is possible that Providence might become a secondary target in case of unsuitable conditions for bombing over Boston or New York.

In view of the existence of such a possibility, it is desirable to consider the situation resulting from such an explosion not only in the light of the general problem, but also with regard to conditions which are peculiar to Providence. Included among these are its narrow streets, its high percentage of frame construction, its sectoring by Narragansett Bay, and the close proximity of the city's center, east-west rail, highway-traffic and communications lines, and power plants.

#### *B. General nature of damage or hazard from such an explosion*

An atomic explosion in the city of Providence might be one of three types: (1) air burst, in which the explosion takes place in the air above the city; (2) ground burst, in which the explosion would take place in contact with the ground or some structure on the ground; (3) underwater detonations, in which the explosion would take place below the surface of Narragansett Bay or its tributaries. (Radioactive contamination of the water supply is considered elsewhere.)

An air burst near the city's center would probably result in major destruction over an area of about 1,500 yards in radius, and moderate to severe damage in the area from 1,500 to 3,000 yards from the explosion. At distances greater than 2 miles from the explosion, the physical damage would be light or none. This damage and destruction would be the result of the blast from the bomb itself, and the widespread fires resulting from the explosion. The radioactive emanations from the explosion would be very intense at the instant of explosion, but the residual radiation in the damaged area would probably be negligibly small. Casualties of the radioactive rays of the bomb would not need attention until several days later. Thus, the immediate problems arising from such an explosion would be the same as those from other types of explosions, but multiplied manifold by the greater destruction.

The extent of the areas damaged by an air burst may be obtained by centering the attached green disk over a possible target on the attached map. The ruled inner circle corresponds to the area of major destruction, and the remaining area covered by the green disk to the area suffering damage of diminishing intensity as the distance from the target becomes greater. In the area completely outside the green disk, the damage would be light or negligible. Thus, if the target were city hall, the area of major destruction would include Union Station, the State capitol, Rhode Island College of Education, the library, Central High School, Rhode Island Hospital, Narragansett Electric Co. power plant, Point Street Bridge, the post office, the entire business center of the city, the main portion of the railroad yards, the courthouse, Brown University, and Pembroke College. The following would be on the inner edge of the light-to-negligible damage area: Providence College, Olneyville, Elmwood, Sassafras Point, Metacomet Golf Club, Red Bridge, Aldrich Field, and the Rhode Island Auditorium.

The types and extent of casualties from an air burst may be estimated from the following table:

Distance from center of impact (yards)	Casualties	Cause
Within 500 yards.....	Nearly 100 percent immediate fatalities.	Ionizing radiation, blast, burns, structural collapse, etc.
500 to 1,000 yards.....	Nearly 100 percent fatalities within 3 weeks after explosion.	Ionizing radiation, burns, blast, structural collapse, etc.
1,000 to 1,500 yards.....	50 percent fatalities.....	Burns, blast, structural collapse, ionizing radiation, etc.
1,500 to 2,500 yards.....	15 percent fatalities.....	Burns, blast, structural collapse.
2,500 to 3,000 yards.....	1 to 2 percent fatalities.....	Burns, indirectly from blast.
Beyond 3,000 yards.....	Few, if any, injuries.	

For a ground burst, the area of complete and partial damage would be much smaller, but there would be added the problem of residual radioactivity. This would necessitate the use of existing relatively simple instruments in demarcating the area forbidden to personnel because of radioactivity, and the policing of said area. Later on decontamination procedures to allow reentry to this area would be necessary.

For an underwater explosion, the damage to structures would be still less, but there would probably be residual radioactive contamination by the water spray from the explosion. This would require a thorough hosing down of the con-

taminated area by suitably protected personnel before permitting general reentry. there would also be residual radioactivity in the adjacent waters, the amount of which, and the time for clearing by the tidal and other circulation, would be difficult to estimate from currently available data.

However, judging from published reports of the relative damage to structures from these three types of explosions, it is not likely that there would be an intentional ground or underwater explosion. For that reason this report will be concerned principally with the contingency of an air-burst explosion.

## II. PREPARATIVE AND RESTORATIVE MEASURES

In discussing ways of meeting a disaster, any plans will involve what can be done in advance of the disaster to minimize its effect and to enable the greatest efficiency of action after the disaster and what should be done as a consequence of the disaster. The former would include the planning for the possibility of such a disaster: long range plans of a general nature, such as the location of communications or nerve centers relative to the probable site of such a disaster and short range plans of a rather specific nature outlined in some detail, such as the organization of a civilian defense corps. The latter might be considered as restorative measures—measures taken after the fact to restore as nearly as possible the previous functions of the area. These would include extinguishing fires, making streets passable, removing residual hazards such as unsafe structures or radioactivity, restoring utilities, providing food and shelter for the homeless, treating casualties, etc.

### A. Long-range preparation

The long-range preparations are in general more difficult, more expensive, and are of such nature that continued vigilance on the part of all municipal and State authorities, and any planning groups, must be maintained to ensure that every plan made or undertaken is in accord with the long-range plans to meet the possibility of an atomic explosion. Many measures already inaugurated by the fire department and other authorities have anticipated the considerations here discussed. For example: as new fire stations are located and built, equipment procured, and regular and emergency communications set up, the possibility of an atomic explosion must be considered. Equally important are transport considerations, not only of fire but other emergency equipment or personnel, in planning highway construction. Peripheral highways or a Fields Point Bridge may assume greater desirability when the potential area of devastation is studied with the attached disc and map.

Some nucleus of an organization in which plans for handling such a catastrophe would be centered is essential. Owing to the tenuous and indefinite nature of the event, it would be best if this nucleus could be an existing organization with experience and training in disaster work, and with the attitude of mind and mode of thinking which would enhance the efforts of the community in its plans for an atomic explosion. Such an existing organization is the fire department, which in addition to the above attributes, also has experience in organizing and making use of the help of volunteers. The use of the fire department as a nucleus for this work would also be in accord with the belief that the greatest major job at the time of the emergency would be fighting the resulting fire.

Long-range preparation for medical assistance assumes the continued alertness of the medical profession in the community with respect to new developments in medicine and in the training and recruiting of doctors and nurses for the community. Aside from this, other preparations would be similar to those already discussed: communications, location of new hospitals which may be contemplated, transport (including intercity for rapid transport of outside aid, and rapid removal of casualties), emergency housing, etc.

Communication, as well as power facilities are better below ground where damage from an explosion in the air will be minimized. However, since this will not be the general case, and since there is apt to be damage regardless of location, two-way radio and emergency operating power would be essential. Transport will depend principally upon existing highways, and the ability to have power equipment quickly clear or repair blocked or damaged highways.

Bomb-proof shelters are often discussed, but their construction is expensive, and they offer protection only to a limited number of persons. It is not believed that an extensive construction program for such shelters would be practical to undertake under present circumstances. However, should the city ever contemplate underground parking lots or other similar construction, it should at the same time consider seriously their being convertible to bomb-proof shelters.

*B. Short range preparation*

The items involved in short range preparation would be similar to those employed in World War II, with somewhat different emphasis, and with the dispersal of forces such as would be required by the greater area of bomb damage. A well organized and instructed civilian defense corps would be essential. Fire police and medical forces would have to be properly equipped and integrated. The general public would have to be educated as to what it might expect in such a disaster, as to what measures will be provided for its protection and aid, and as to what it should do and how it should behave in the event of such a disaster. Warning, intelligence, and communications systems which would function not only before, but after, such a disaster would have to be arranged.

The equipment necessary for detecting radioactivity in case of ground or underwater burst must be at hand if the likelihood of an attack becomes appreciable; it would not be necessary to purchase such equipment until that time, however. The operation of this equipment is easily and quickly learned by intelligent lay personnel.

*C. Restorative measures*

In considering restorative measures, one should remember that in general they are not specific for an atomic explosion of the type most likely to occur, but apply equally well in handling any major disaster. Such restorative measures will be concerned with fire, medical aid, utilities and transport, and food and shelter.

For combating a fire of the proportions expected, probably the most critical factors will be intelligence concerning the location, extent, and direction of the fire, the availability of fire-fighting apparatus, and the coordination of effort. This involves observation of the fire as a whole, probably from radio-equipped aircraft, and good communications between fire headquarters, observers, and fighters. Inherent in this is the existence of an alternate fire headquarters completely equipped and located at some distance from the regular headquarters, in the event of the total destruction of the main headquarters. The necessity of two-way radio communication and emergency power for the same is obvious. The availability of fire apparatus involves its dispersal outside of the most likely devastated area, and adequate means of moving it from one place to another. The existence of broad highways not so liable to blocking and capable of carrying heavy traffic loads at high speed, both through and peripheral to the city would make the movement of apparatus easier, and lessen the burden of clearing the streets. Anticipating the need for aid from other communities, similar intercity traffic arteries would be extremely useful.

Immediate medical aid required will be of the same sort as that required after any type of large explosion or series of explosions. In addition, it will be necessary to determine which individuals were exposed to high-intensity radiation at the time of the burst, and to have facilities available for transport to hospitals in some other undevastated community for later treatment. According to the information available to this committee, immediate medical treatment is not necessary for these radiation casualties.

Utilities exposed above the surface of the earth will be liable to great damage in the area of the burst, and would be in need of repair. Crews from other communities should be available on call for this emergency work. Emergency measures would be necessary for food and medicine distribution, and there would have to be facilities for emergency shelter. Transport facilities would have to be restored as quickly as possible.

The effectiveness of all restorative measures will depend upon the preparations for applying them which are made in advance. Such advance preparations fall into two general categories: short-range preparations such as would be made if war were imminent or had been declared, and long-range preparations which must be considered continually until that time when world peace is so assured that all nations can dispense with their military forces.

## III. RECOMMENDATIONS

*A. Scope of this committee's prerogatives*

This committee feels that its function and authority from the mayor is to survey the ability of Providence to withstand an atomic explosion, and to report back to him recommendations only in the most general terms. These recommendations should be to indicate the proper course for the city to follow in view of the best knowledge available concerning the type and extent of damage to be expected, and the probability of occurrence of such an explosion. The committee does not feel that the drawing up of detailed plans for reacting to such a disaster falls within its province.

*B. The organization and maintenance of a nucleus for an emergency service corps*

This committee recommends that the Fire Department of the city of Providence be given the responsibility for maintaining within itself the nucleus of the organization of an emergency service corps to meet with the disaster resulting from an atomic explosion. The proper officials of this department should draw up detailed mobilization and training plans for use should the probability of such a disaster become great, and these officials should maintain liaison with the Federal agency or agencies set up to deal with such problems. Liaison should also be made with representatives of medical, utilities, police, and other groups corresponding to the particular service which will be needed. As other public agencies undertake major projects (e. g., highway construction) it should be the responsibility of this organizational nucleus to consider how these may be harmonized with the over-all long-range plans for meeting the disaster under consideration. The similarity of defensive and rehabilitary measures for an atomic explosion to those appropriate to any disaster cannot be overemphasized.

*C. Measures for control of fire following explosion.*

To control and minimize destruction from the fire following such an explosion, it is recommended that an alternative headquarters be established well outside the area of probable destruction (perhaps in Roger Williams Park or some other equally outlying district), and that two-way emergency-powered radio communication be made extensively available. Some means of obtaining over-all observations of the extent and progress of the fire and of clear routes for the transport of apparatus should be available. This might well be a radio-equipped aircraft. Fire-fighting equipment and heavy construction equipment (bulldozers, cranes, power shovels, etc., owned privately or by the city) should be well dispersed peripherally to the area of possible destruction.

Provisions must be made for the construction and maintenance of highways for transport of fire and other emergency equipment. These highways must be of the type which are not easily blocked by rubble, and should be of sufficient width or so located that when blocked they can be easily cleared by power equipment, such as bulldozers. As the attached map indicates, peripheral highways or a lower river bridge, would be exceedingly valuable for effective transport after such a disaster. Fast through highways should be available to other nearby cities, so that outside aid may be quickly obtained, and casualties quickly evacuated.

*D. Medical assistance*

A committee appointed by the Rhode Island Medical Society should be alerted to keep abreast of the best medical practice in treating radiation casualties and to have plans for mobilizing the medical personnel and facilities of the community for emergency service. The same recommendations regarding communications, deployment, and transport made above apply also to medical assistance.

*E. Protective shelters and other emergency aids*

Considering all aspects of the situation, the committee does not believe it to be advisable to construct on a large scale underground bomb-proof shelters. Should, however, the construction of underground parking lots ever be contemplated, it is recommended that their construction be such that they could be easily converted to use as bomb-proof shelters. New construction of public buildings should also make provision for such shelters below them.

It is recommended that representatives of the utilities serving the community be members of the planning nucleus, and the eventuality of an atomic explosion should be considered whenever contemplating any changes, extensions, or new construction in any utilities system.

It is recommended that only the most general plans be considered at this time with regard to emergency food and housing service, public education as to their responsibilities and duties in the event of an atomic explosion, the organization of a civilian defense corps, and similar activities.

*F. Bacterial warfare and radioactive contamination of the water supply*

In view of the widespread and vicious destruction of World War II, and of current attitudes and amorality of possible attackers, it is doubtful that any so-called humane warfare will be practiced. This committee calls attention to the possibility of bacterial warfare, and recommends that if no officially constituted group within the city is currently taking cognizance of the emergency resulting from a bacterial attack, such a group be established for this purpose. A problem closely connected with this, and which might be considered by the same group, is the contamination of the city's water supply by radioactive material.

Mr. ROBERTS. This report sets forth what we believe Providence should do to prepare itself against bombing. It is a limited program because our resources are limited.

In Providence, we are short of money even for the ordinary operations of city government. We cannot finance out of revenue any such extraordinary expenditures as those for proper civil defense in this atomic age.

Furthermore, there is grave doubt in my mind whether we should burden the city by borrowing money to meet what may be a remote contingency.

Even assuming, however, that we did have the resources to finance a civil defense program, there is the further question of whether or not we, as civilians, would have adequate knowledge of defense requirements so that we could buy equipment and organize it wisely and well.

In all humility, we are no worse off in these respects than any other city in the country. The things I have said about Providence can just as well be said of almost any big city you can name.

The question of what the State governments can and should do depends, of course, on a number of factors.

There is the problem of finance, as always. Most industrial States—the States that are most in danger of bombing—are having heavy weather right now in trying to handle expenditures for schools, highways, and other necessary public improvements, in addition to growing demands for service of all kinds.

Even assuming, however, that the State could finance civilian defense, there is the question of how much and what they should do.

That, in turn, hinges in general on the over-all estimate of the potential situation: Is bombing probable? What are the most likely targets? And so on. It hinges in particular on the question of just how much and what kind of help the Federal Government can and will provide.

The only agency that can make an informed estimate of the situation is the Federal Government. Only the Federal Government can decide what it will do to help us in the States and in the cities.

Right there, as I see it, is the core and crux of the whole problem of civil defense in the atomic age. I would like, therefore, to say a few words about it.

What I shall say is based on the assumption that any future attack on this country will use atomic weapons against our cities, and that our problem is how we can cope most effectively with resulting damage.

I would suggest to you, first of all, that in any approach to the problem of civil defense there are two principal facts that we absolutely must face. From them, cold logic takes us straight to the general program I will outline to you in a moment.

The first fact is that the onset of any future war will probably be an all-out strike, depending on surprise and numbers to overpower the defense and smash the roots of effective moral and physical resistance.

The strike will be a strategic attack on the entire nation, carried out tactically through bombing of industrial centers.

Thus, the moment the first bomb is detonated, the civil defense of each industrial city is an interlocking part of the national defense.

We will not have time after war begins to correct mistakes made beforehand. We will stand or fall on our program in readiness on the day of attack.

The second fact we must face in considering civil defense is this: The individual city is and will be unable to cope effectively with attack by A-bomb or H-bomb on itself.

I have as much pride in the city of Providence as any man can have in his community. My fellow citizens have no lack of fighting hearts or the will to win.

But I say to you, frankly, that in the fire, shock and shattering destruction of an atomic attack we could do but very little for ourselves, and the same thing is true of any city in the country.

Let me give you a few reasons why the individual city cannot be expected to do much for itself after a bomb is dropped:

One: The first objective will be to save essential factories to produce weapons of further defense. This will be hard, dangerous work of absolutely vital importance to the national life. It can be done effectively only by professional men who are hand-picked and highly trained. In fact, postbombing civil defense operations will require the speed, skill, precision, communications, and, above all, the iron discipline of a tactical military operation in the field.

Two: Civilians simply cannot acquire the skill, organization, and discipline for such an operation by studying it on a part-time basis.

Three: Even if they could, it is probable that, after a bombing, too many of the city's inhabitants would be either dead, injured, shocked, or too panicky to do an effective job within their own city, either for the arsenals of defense, or for the population.

Now, let us see what conclusions are to be drawn from these facts, in terms of what kind of civil defense program should be adopted.

The first fact I mentioned was that the defense of each city is interlocked with the over-all defense of the Nation.

The conclusion to be drawn from that is inescapably this: that we should adopt a civil defense program on a national scale and under Federal direction.

Civil defense will be a national and not a local problem as soon as the first bomb is dropped. We should prepare for that emergency on a national basis now.

Adoption of a sound and effective national civil defense program requires, in my opinion, several basic steps. For example:

One: A single civil defense agency or department should be set up here in Washington, so that we in the local communities will have only one outfit with which to deal.

Two: My suggestion is that civil defense be returned to and set up as a major arm of the Department of Defense. Civil defense will be a military matter on the day any bomb is dropped. It should be a military matter in the preparation beforehand.

Three: For the protection of the individual citizen, however, I suggest that veto powers be given in peacetime to the governors and mayors in their respective jurisdictions. In that way, any undue or thoughtless demands made by the military can be headed off or compromised. There will be no lack of cooperation by civilians and government in the States and providing people realize the need for civil defense.

Four: In the initial phase of this program, my suggestion is that professional and highly qualified military men survey the cities they

believe to be most probable targets. Then they should come to us and tell us straight from the shoulder what they want us to do. In turn, we will tell them frankly what we can do—and I can assure you that we will do everything possible within our limited powers and resources.

Five: The gap between what the military wants us to do and what we can do should then be filled by the Federal Government. Through a Civil Defense Department we should be supplied with equipment and professional personnel for training and over-all guidance of the program on the local level. Uniform standards of training are essential.

Six: Whatever program is organized should definitely be on a regional basis, with priority in training and equipment given to the most probable target areas. There is no sense in every community having the same type of organization as every other, as was done in the last war. It is a waste of valuable time, money, and equipment.

The second fact we must face is that the individual city will be able to do little or nothing for itself after a bombing attack. To what conclusion does that lead? It definitely does not mean that we should abandon the idea of organizing citizens in civil defense units. Far from it.

It means, in my opinion, that a Department of Civil Defense should set up its operations plan to bring in aid to each bombed city from outside.

You cannot expect a badly shocked population to do the kind of job that must be done after a bombing. You must bring in fresh men from outside the city. This aid from outside should be provided both by special professional civil defense units from the armed forces and by civilian teams from communities nearby the bombed city.

First, let's take the professional units. My suggestion is that these should be organized as air-borne divisions and based on airfields from which they can move to bombed cities in minimum time. They would fly personnel and equipment into the area, if necessary, sending special emergency units ahead to jump in.

Included in these air-borne divisions would be units of medics and Public Health men, radiation specialists, engineers, demolition experts, firefighters, public-utility technicians, military police to keep order, and experienced city administrators to take over or assist the local government in case regular officials were casualties. All these units would be self-contained and would bring their own equipment and rations with them.

For example, these professional divisions would be specifically charged with immediate protection of factories and other essential installations from further damage by fire and locally generated explosions; with putting the city administration back on its feet so that survivors could function as an orderly community; with restoring water, sanitation, gas and electric services, and with taking immediate measures to protect the public health against epidemic disease and radioactivity.

In short, these professional highly trained men from the regular armed forces would be the spearhead of rescue work. They would have the know-how, the equipment, the organization, and the discipline to do the kind of desperate and dangerous job that must be done immediately as a matter of maintaining our capacity for further defense.

The second type of aid from outside the city should be provided by civilian units from nearby communities.

These units should be organized along military lines with a definite table of organization. Included would be men trained in the various fields I mentioned in discussing composition of the professional divisions. They would have been given as much training as possible. They would be expected to be competent amateurs, but not skilled professionals.

These units would move into a city according to a prearranged operations plan. There they would report to the armed forces' commander for further orders. He would use these civilian units to back up and assist the professionals.

These units, also, would bring in their own equipment and rations. No chance should be taken that equipment in the city may have been rendered useless.

These civilian units would be trained on a scheduled basis by professionals of the armed forces, or by specially instructed officers and men of the present military Reserve formations. They would be organized and uniformed on military lines and have the status of Active Reserves of the armed forces.

The question immediately arises as to how these civilian civil defense units should be recruited. Naturally, I believe that recruitment should be on a voluntary basis. I further believe that those selected should be well qualified physically and by experience for the units to which they would be assigned. Just any patriotic civilian, unfortunately, will not be able to do the kind of job these units may be called on to perform.

It must be remembered that we are in a much better position to organize these units now than before the last war. Today there are millions of veterans in the United States who not only have the needed skills and stamina but also have had the experience and discipline of military organization. In my opinion, these veterans should be the main source from which personnel of the civilian atomic units should be selected.

I am certain that, if they felt the necessity was real, these veterans would volunteer by the hundreds of thousands for these Reserve units. After all, they risked their lives before for the country. They will surely do it again, especially when the stakes are national survival.

The civilian population, however, must understand and feel a real need for civil defense training. There has been so much pro and con talk about war possibilities in the press that we don't know what to think about it. Nobody wants to get into a uniform and train unless he personally feels he is doing the country a useful, and not a needless, service.

Here, again, we come back to the Federal Government. Only the heads of government here in Washington have the knowledge and experience to evaluate the potential danger of an attack by A-bomb or H-bomb.

If they believe that there is even a slight possibility of attack, then they should tell us. It will take time for us to get ready, and ready we must be, or face the greatest disaster ever suffered by any nation in history.

If it is felt that there is even a slight possibility of attack, the Federal Government should now undertake a national program of civil defense along the lines I have mentioned.

The decision is squarely up to the Federal Government. We in the cities cannot make it. And we cannot carry out a civil defense program without Federal help in money, equipment, guidance, and training.

I have made these recommendations to you from a profound sense of duty, as a citizen desirous of the ultimate best for the United States; as mayor of Providence desirous of protecting his fellow citizens, and anxious to enable our community to contribute maximum industrial production to the defense of our country.

During 15 years of active public life, and during the last war, when I had the honor to be an officer in the United States Navy, I have had the opportunity to observe wartime operations in both the civil and military fields.

It seems to me that, in this atomic age of total war, organization and training of civil defense is as much a military matter as is the organization and training of the regular and reserve components of the Army, Navy, and Air Force.

It also seems to me, in all candor, that either we are in danger of atomic attack, or we are not in danger of atomic attack. I realize that the line of decision is cloudy, and that major considerations of foreign and domestic policy are involved, but I suggest to you that the decision must be made, and made soon.

I am deeply conscious of the fact that a civil defense such as I have outlined will cost many billions of dollars we cannot well afford.

But no price can be too great to pay for the safety and security of the Nation. We cannot build effective civil defense except through a serious program on a national basis.

The CHAIRMAN. Do you wish the rest of it to go into the record?

Mr. ROBERTS. Yes, please.

The CHAIRMAN. All right.

Thank you, Mr. Mayor.

Mr. ROBERTS. Thank you, Mr. Chairman.

(The remainder of the statement referred to is as follows:)

If it is believed that there is even remote danger, let's go to work now on a realistic basis. If there is no danger, then let's say so and forget the whole thing.

I pray that no bomb ever will be dropped anywhere in the world again. But if one is dropped here in America—and we are here today with that possibility as a premise—on that day we will have made all the mistakes we will have a chance to make as a sovereign Nation.

On that day we will be faced with the brutal, clean-cut naked problem of survival—survival for the American people as a Nation of free men.

On that day we will stand or fall on the kind of program in effect at that time. We will not be able to correct our mistakes then.

We must not make any mistakes now. We must face up to the facts and act upon them with realism and resolution.

The people of Providence want to do whatever it is necessary to do.

The Federal Government must decide what they want us to do, tell us frankly what they want us to do, show us how to do it, and you can bet your bottom dollar that the American people will do it if the job lies within the courage and capacity of men.

Thank you.

The CHAIRMAN. I am sorry the other members of the committee had to go to the floor.

Mr. ROBERTS. Well, I think the field has been well covered.

The CHAIRMAN. The mayor of San Francisco took more time than we had anticipated.

There is, I think, some disagreement with your concept of turning this over to the military.

Mr. ROBERTS. Yes, sir.

The CHAIRMAN. There is so much to civilian defense that is not military in nature. We have determined about one-third of the total things that have to be done will be connected with the Military Establishment. Of course, in the event of an attack, they will be pretty busy themselves. And there are questions of universal service, allocation of materials, allocation of manpower, taxation, priorities, the mobilization of transportation facilities. All of those things will have to be done by civilians.

I just mention that to you.

Mr. ROBERTS. I realize, Senator, that the establishment of an adequate civil defense program in the United States involves many tremendous decisions and a great expenditure of money.

The CHAIRMAN. Mr. Borden, our chief of staff, just reminded me that there is less than one-third of it. And, of course, that is one-third on the Federal level.

Personally, I am against turning civilian defense over to the Military Establishment for the reasons that I have given you. I just do not think they are going to be able to handle it and handle the military defense and the military attack.

Mr. ROBERTS. I attempted to point out, maybe not adequately enough, Senator, that there are certain phases of civilian defense that will result after an atomic attack that can only be handled by those who are under discipline and organization and trained in particular skills similar to those of military armed forces.

There is the other phase, that was known in World War II as civilian defense, which was to build morale and to try to do what they could to alleviate the suffering and the consequences of ordinary bombing. That will be very inadequate when atomic bombing happens, if it does.

The CHAIRMAN. Thank you very much indeed, Mr. Mayor.

We will reconvene at 2:30 o'clock.

(Thereupon, at 1:05 p. m., the committee recessed, to reconvene at 2:30 p. m., of the same day.)

#### AFTERNOON SESSION

The CHAIRMAN. We will come to order. We will incorporate your complete paper in the record. You may read your abstract.

#### STATEMENT OF CLYDE DOUGHERTY, COORDINATOR OF CIVIL DEFENSE, DETROIT, MICH.

Mr. DOUGHERTY. I appear here not only as coordinator of civil defense for the city of Detroit, appointed by Mayor Albert E. Cobo, but also as a citizen, who, appreciative of the great privileges of his citizenship, recognizes also his responsibilities to his community, State, and Nation. Both before and since my appointment as coordinator of the Detroit program, I have devoted time, thought, and study to the problem of civil defense and have reached some definite conclusions connected with such a program which I submit for your consideration.

The first conclusion reached is that the civil defense is not a purely local problem but definitely national in its scope. A major disaster striking the city of Washington, affecting the seat of our Federal Government, with possible casualties to key personnel in all branches of government, would affect not merely the District of Columbia and the city of Washington, but every citizen of the United States; likewise, in the event of national emergency, a disaster materially upsetting any of our great industrial centers, such as the city of Detroit, and thereby our war potential, affects every citizen of the country and not merely the citizens of the particular community and State. If that premise is conceded, and in all reason it seems that it must be conceded, the onus of any civil defense program should not rest on local government or local citizenry, but must certainly be shared, if not assumed, by the National Government.

Another conclusion which should, it seems to me, be self-evident is the absolute need for complete coordination of all civil defense programs. A major catastrophe striking any community would, in all probability, seriously cripple, if it did not entirely destroy, the local agencies designed to handle disasters. It would follow, therefore, that the surrounding and adjacent communities would have to furnish the facilities needed to supplement and possibly replace purely local facilities. This has been recognized in the suggestion that civil defense planning should be organized on a State level.

No recognition, however, has been given to the fact that disaster might reach such proportions, or strike in such a way, that the only sources of help to a stricken community might have to come from outside of a State. For example, a disaster striking Toledo, Ohio, might well require assistance from adjoining Michigan communities which in point of time could be more effectively rallied from a major city like Detroit, some 60 miles away, than from the major city of Cleveland, more than twice as far from the affected area. Should that planning be left to voluntary coordination between States, or might it not be better done from a central authority which could coordinate State programs as the State is expected to coordinate municipal programs within its own boundaries?

The CHAIRMAN. You raise a very good question there. We have thought about that. You take Newark, N. J., and New York City. Take Gary, Ind., Chicago, big centers of population that are on both sides of a very thin marginal line. We have been giving consideration to that.

Mr. DOUGHERTY. Another conclusion which seems self-evident, if we are to consider the type of disaster which results from a break-down in international relations rather than from natural causes, is that knowledge of the imminence of danger of disaster might well exist on high national levels and not have reached even the State level, to say nothing of the municipal level. Here I would like to digress slightly to point out the difficulties of local planning at this particular moment, in the absence of emphasis upon a civil defense program from the seat of Federal Government. One finds little serious thought on the subject of civil defense planning, with resultant apathy on the part of the public generally on this topic and worse than apathy, an attitude of sometimes almost derision toward those suggesting that there is any need presently for such a program. I personally, in attempting to advise our local program before groups of what would

ordinarily be regarded as well-informed and responsible citizens, have met with an attitude, I might say of amused tolerance, which in effect says, "If Washington is not excited about the urgency of such a program, why should we be too disturbed?" Such an attitude points out the need for information and policies emanating from high level if local efforts are to progress and local programs are to be taken seriously.

Another conclusion is that not only must we look to high levels for authoritative information but that we must, likewise, look to high levels for properly trained personnel to direct and instruct those willing to assume responsibility on the local plane. What is true of the need for trained personnel from topside is doubly true on the very important matter of proper equipment.

This, in turn, has led me to the conclusion, since I am convinced of the correctness of my preceding statements, that a substantial share, if not all, of the expense of the civil defense should and must be borne by the Federal Government. That, gentlemen, is where and when you definitely and positively must enter this picture. Congress cannot permit civil defense planning to suffer from vacillation and lack of decision if we are to avoid apathy and even ridicule in connection with local programs. If we are to have sound civil defense, anything done or contemplated locally must be implemented by forceful and effective legislation and financial support from the Federal Government. You must act and act now, or civil defense will exist only in paper and in the minds of the few who presently recognize the need for it, and will be conspicuous by its absence or failure in the hour of need.

Since October 1, 1948, you have had available the Hopley report submitted by Russell J. Hopley, Director, Civil Defense Planning. The letter of transmittal dated October 1, 1948, of the report is worth your study. I quote from the latter:

It is the purpose of this report to recommend for adoption a permanent peacetime system of civil defense which will round out our defense structure and which, in the event of an emergency, can quickly and easily be expanded to meet the exigencies of a given situation.

From the introduction, *The Need for Civil Defense*, I extract the following quotations:

Page 1, paragraph 3:

But the missing element—the "missing link"—in the defense structure is civil defense. Without a sound and effective system of civil defense, the people and the productive facilities of the country are unprepared to deal effectively with the results of an enemy attack on our country.

Page 10:

Mutual Aid and Mobile Reserves. The devastating attack which a modern war would bring to American shore might be such that no individual, no family, no community or State could count entirely on its own resources to recover or survive.

Under civil defense, therefore, should be organized the means for mutual assistance whereby neighborhoods, communities, or States would come to each other's aid on an organized, planned basis.

Page 13:

These functions of civil defense cannot be made to work effectively unless there is thorough and adequate training—training of the 15,000,000 men and women who would make up the civil-defense organization; training of all the people in things they must know in preparation for emergency.

The entire population will need to know the problems which may confront them, and what each can do in any of a hundred different situations.

Very definitely I realize that I am quoting from a document which is available to all of you. However, recognizing that, in the press of the many problems besetting you, you may not have had an opportunity to consider it in its entirety, I direct which I regard as its particularly pertinent provisions to your attention. I feel that they emphasize the conclusions which I first presented to you, and which I suggest demand your immediate, full, and serious attention with appropriate action. Those of us who are seriously interested, either as private citizens or as appointees to definite tasks in this effort, are not seeking a way to avoid our responsibilities but are rather asking for the help that is essential if our efforts are not to meet with substantial failure. We ask that Congress insure that planning be coordinated and integrated, and that funds for trained personnel and equipment be made available, but most important that the authority of the Federal Government give impetus so that an effective program can be initiated and completed.

With your indulgence I would like to discuss briefly our Detroit situation. We have, we believe, a well integrated disaster plan. It forms a sound framework upon which a civil defense plan can be built and expanded. Frankly, the plan is not complete in all details, but is progressing well in its organization. Our disaster plan provides for the essential factors stressed in the Hopley report; naturally, however, our plan does not, and at this time cannot, include training or equipment for defense against radiological or other special weapons, or the measures to be taken in the event of disaster following the use of any such weapons against us. Our plan does cover coordinated central control, control and use of trained personnel in police, fire, health, and welfare departments, control of equipment, and control of means of communication.

We lack definite and authoritative information about many essential matters. Lacking that information we do not know with certainty what may be our needs for equipment. We do not desire, nor do we believe you would want us, to plan and spend on the basis of a guessing game gleaned from the press and periodicals as to what we may need for sound civil defense. One of the most important immediate needs we have is proper educational material on the subject for the public. Those given positions in the program desperately need information; we desperately need trained instructors and certainly some minimum items of essential equipment not available on the local level. I suggest for your immediate consideration the following items for a sound civil defense program.

The CHAIRMAN. I am very much interested in what you are going to say on this subject, because to me this comes pretty close to being basic as to just what policy we are going to adopt. There are those that the minute you give out information say you are scaremongers.

Mr. DOUGHERTY. That is true. We realize that, too.

The CHAIRMAN. You are worrywarts. This is unpleasant information and people just do not want to receive it. I mean they have a disposition against receiving it. Do you not agree with me?

Mr. DOUGHERTY. I do. I agree, Senator.

The CHAIRMAN. And the very people who greeted you, as you described it, with amused tolerance in Detroit, when they received the

information showing that there was a concern about it from Washington, would be among those, I am afraid, who would condemn it as being unnecessary alarming of the public.

Mr. DOUGHERTY. Well, there is that possibility.

(A) To arouse public interest in the need for civil defense and what it can do, and what it can do for the citizen in time of disaster or national emergency. Community leaders and particularly the professions whose services will be needed must be convinced of the need for a civil defense program and of their obligations as citizens to participate in the program. If it is suggested that we might stir up fears in our people, I say to you that it is far better that they be disturbed in time of peace and normal life than thrown into panic in time of disaster, with such panic and hysteria aggravated by the realization that no one has planned for their succor in disaster; I further suggest that our people have demonstrated their ability, time and again, to meet catastrophe, especially when they were well informed.

(B) Provide technical data about—

1. What the individual citizen can do for his own and his family's protection.

2. What the organized community civilian defense group can do:

(a) Preventive.

(b) Security.

(c) Decontamination.

(d) Treatment, care, and disposition of casualties.

(C) Equipment and facilities:

1. What equipment is necessary to perform the preventive, security, decontamination, and treatment, care, and disposition of casualties required.

2. What are the processes for prompt, orderly, effective evacuation in the event evacuation is necessary?

3. What preliminary planning on a State-wide, region-wide, and Nation-wide basis can be performed to facilitate movement and pooling of equipment and personnel?

This is not an exhaustive survey. I refer again to the Hopley report as being the exhaustive treatment of the subject.

Gentlemen, may I remind you that during World War II the War Damage Corporation was organized for the express purpose of insuring property of individuals in this country against war damage resulting from enemy action. The War Damage Corporation insured and issued about 8,700,000 policies, assuming liabilities in the amount of \$140,000,000,000. When the War Damage Corporation was terminated on January 22, 1947, it had paid to policyholders for damages incurred in the amount of \$20,015,556 and declared a profit of \$221,000,000. The Corporation, at its termination, paid to the United States Treasury for national debt reduction, \$209,808,866 (U. S. Government Manual 1949). The above figures are quoted from the Commercial and Financial Chronicle of August 22, 1946, page 1021. I assume that our Government is not in the insurance business for profit and suggest, for your consideration, that the profit declared in the amount of \$221,000,000 be returned to the people of this country in an appropriation to finance, organize, and equip a sound, efficient, and capable civil defense organization as further insurance against future war damage.

Gentlemen, yours is a heavy responsibility in this matter. It is a national problem requiring an integrated national program. You cannot afford to be penurious when the safety of our people and our country may be at stake. No local, State, or regional action can be effective in an area of national responsibility. An assault on Detroit, Toledo, Topeka, or Dallas is an assault on the Nation. None of these communities has the authority or power to mobilize resources of trained personnel and equipment not under its immediate jurisdiction. I think the one experience in our history of such haphazard planning during our Revolutionary days and prior to the ratification of the Constitution should make you hesitate at seeking escape from the problem by shunting responsibility to the States.

Members of this Joint Atomic Energy Committee, I make this plea on behalf of all the citizens of this country. Give us the means to defend ourselves by providing an integrated civil defense that is adequately financed, effectively directed, and properly trained.

I thank you for this opportunity to appear before you.

The CHAIRMAN. All right, General. Thanks very much. I think that you will see considerably more information coming out, as I indicated to you. Our executive sessions indicate that the planning stage is much further along than most people realize. A great deal of basic work has been done. When that starts to flow, I think it will be coming forward in quite some quantity.

Of course, you raise the big question as to the division of responsibility between the States and the Federal Government. That question certainly is not settled.

Mr. DOUGHERTY. No; I realize that, Senator; and I think in the final analysis the average man on the street comes up with this answer. We all believe in States' rights. We all believe in the constitutionality of the State, and the municipality, but only up to a point, that point being where States' rights interfere with the security of the country as a whole, then I think at that point it should not be considered too seriously. I think generally that is the thinking of the average man and woman.

The CHAIRMAN. Thank you very much.

Mr. DOUGHERTY. Thank you, Senator.

The CHAIRMAN. The hearing is adjourned.

(At 2:50 p. m., the hearing was adjourned.)

HAROLD BERGMAN, *Deputy Director*

# CIVIL DEFENSE AGAINST ATOMIC ATTACK

MONDAY, DECEMBER 4, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met at 3:15 p. m., pursuant to call, in room 318, Senate Office Building, Senator Brien McMahon (chairman of the joint committee), presiding.

Present: Senators McMahon (chairman), Millikin, Knowland, Hickenlooper; Representatives Durham (vice chairman), Holifield, Price, Kilday, Jackson, Cole, Elston, and Hinshaw.

The CHAIRMAN. All right, gentlemen. We will proceed.

Mr. Wadsworth, Mr. Symington's deputy in civil defense matters, is here with us today. Mr. Symington informed me about a half hour ago that he had been called into a conference downtown. He asked to be excused and suggested that Mr. Wadsworth, Acting Director of the Office of Civil Defense, would appear.

I think in view of the situation that developed in the Senate this morning in regard to the bills which were introduced on this subject, I should say that this meeting was scheduled before those bills were introduced in the Senate; and the record will show that this joint committee has conducted either 10 or 11 hearings, open and executive, over a period of about a year.

Reference has been made to the Armed Services Committee in the Senate, and I understand it has been made in the House to the Armed Services Committee. I have held some conversations with Senator Russell and Senator Kefauver relative to some kind of combined operations. I am sure that it is the feeling of all of us that what we want to do is to get this matter forward, and there has never been any disposition in any way to have any dispute over jurisdiction. I have advanced the belief, and I do again, that in view of the abdication by the Armed Forces of responsibility in this matter, which has occurred repeatedly, it would seem as though a committee other than that of the Armed Services should be primarily concerned with the problem. However, that is something which we will work out or not, as the case may be, and the matter will not be delayed.

In the meantime we can hear from you, Mr. Wadsworth, on the progress that you have made in your organization since we last met and discussed this matter. And this may be the last meeting of the joint committee, and probably will be, on this subject. In other words, if we are concerned with it at all from here on in, it will be in conjunction with the Armed Services Committee. But I believe that it would be helpful to our record and helpful to the country if now we had a summary of what your Office has done. And give us any other information which you believe to be pertinent, since our last meeting.

**STATEMENT OF JAMES J. WADSWORTH, ACTING DEPUTY ADMINISTRATOR, CIVIL DEFENSE ADMINISTRATION, WASHINGTON, D. C.**

Mr. WADSWORTH. Thank you, Mr. Chairman and members of the committee. Mr. Symington regrets that he cannot be here today; and, with the chairman's permission, I will read a very short statement that he would have given had he been here. [Reading:]

As this committee knows, civil defense has been the responsibility of the National Security Resources Board since March 3, 1949.

This past Friday the President issued an Executive order removing civil defense from the jurisdiction of the Resources Board and establishing it as a separate Civil Defense Administration in the Executive Office of the President.

You are all aware that just prior to issuing the Executive order the President named a distinguished American, one of your former colleagues, the Honorable Millard F. Caldwell, Jr., as the new Civil Defense Administrator. This we consider one of the finest appointments in the long series of fine appointments made by President Truman.

On the record it is obvious that Governor Caldwell is exceptionally well qualified to carry on the difficult duties of Civil Defense Administrator. He was Governor of Florida from 1945 to 1949 and served 8 years as a member of Congress from Florida during the period of 1933-41. He was chairman of the National Governor's Conference in 1946-47 and president of the Council of State Governments for the same period. This background is of particular importance in civil defense, which must be based on harmonious relationships between the Congress and the Civil Defense Administration, as well as between the Federal, State, and local governments.

Governor Caldwell had to return to Florida immediately after his appointment to wind up his personal affairs in order to return to Washington later this week. He has asked me to express his regrets at being unable to appear at this hearing.

The recent grave turn of events in the international situation has, of course, made all of us more conscious of the state of our national security. Certainly a major part of that national security is the civil defense program. It has been referred to as the missing element in our national security.

The greatest pressure of the operating load in civil defense rests squarely on the shoulders of our State and local governments. Accordingly those co-partners with the Federal Government in civil defense have a special interest in wanting to know now, and in substantial detail, what the organizational and financial impact of civil defense will be on their local communities.

That question is of particular interest at this immediate time because 44 State legislatures are meeting in January 1951 for a few weeks only. They will not convene again for 2 years except in emergency session. Naturally, the governors' budgets for the various States require broad civil defense estimates for the next fiscal year in order to allow the States and cities within their borders to function properly in this important field.

That is equally true of cities whose municipal budgets must be prepared for early meetings in 1951. In order that State and municipal officials shall be under no illusions as to the urgency of civil defense and the need for large-scale financial and operational activities at their State and local levels, I would suggest that they study carefully the financial aspects of the civil defense program to be presented later in this hearing. This will alert them to the heavy financial responsibility they face today and tomorrow in the protection of their home communities.

In the 168-page book, United States Civil Defense, which is the national plan for organizing civil defense, and in repeated statements going back over the past 2 years, the Federal Government has emphasized repeatedly the fact that it was shouldering the responsibility for high level of leadership in the planning, organization, and guidance of this part of our national security program.

In addition, the Civil Defense Office has pounded home constantly the theme that our States and cities in turn must meet squarely the problem of heading up the grave and complex program which the international situation has imposed upon every State and almost every city in our country.

Leadership, however, is not the whole answer to civil defense. We must have a practical and realistic program for our local leaders to carry out. Obviously, the fate of the Nation would be in jeopardy if we put our trust in a "broomstick

army" of eager but untrained volunteers which some might believe could be mustered overnight to cope with the crashing impact of atomic warfare.

Without question, the national civil defense program is the greatest challenge ever faced by our State and local governments, and their duly constituted authorities. To meet that challenge, the Federal Government has worked hard over the past several years to produce a sound, practical plan for the protection of our cities and the defense of critical target areas within our States which would realistically meet the needs of national security in this air-atomic age.

Federal planning for civil defense has not been and will not be in the short-range category. The problem is too big and too new and too complex to be tackled in fits and starts at whatever point the pressure of events seems to be temporarily the greatest. Because our national security is at stake we cannot allow ourselves to be stampeded, but must continue to be realistic enough to pace the development of our Federal civil defense planning to meet the long-term situations which we face.

It has often been said that an adequate civil defense program should provide the means by which this country could get up off the floor and fight back in the event of an enemy attack on our homeland. In that same sense our planning and training as civilian fighters in another war must be sound enough to enable us to handle ourselves steadily and well to the end of any bout, no matter how long it should last. We cannot afford to make a good showing only in the first round or two. We must be in condition to follow through to the final bell—and win.

Thereupon Mr. Symington planned to turn the balance of the presentation over to me, as evidenced by the last paragraph.

Now, Mr. Chairman and gentlemen, in the event anybody would like to interrupt the reading of this next part of the presentation, please do not hesitate to do so; for it is a reasonably long document, and it might possibly be of some value to have a break in the event something meets your mind as we go through it concerning which you would like further detail or expansion.

The CHAIRMAN. Mr. Wadsworth, at that point, let me say to you that you will be responsible as far as security is concerned, and if there are questions which you regard as treading upon security matters which come up you will advise us of that and we will take them up in executive session.

Mr. WADSWORTH. Yes, sir. Thank you.

Representative COLE. Mr. Chairman, before Mr. Wadsworth starts with his statement, I should like to inquire as to the statutory authority upon which the President issued the directive or Executive order creating the Civil Defense Administration.

Mr. WADSWORTH. We can give you the answer; yes. Mr. Samuel Sabin of the legal staff of the National Security Resources Board, who was instrumental in drawing the Executive order and also the legislation, is here with me.

Did you get the question from Congressman Cole?

Mr. SABIN. Yes. This is based on the organization within the Executive Office of the President.

Senator MILLIKIN. Mr. Chairman, may we have a repetition of the question, please?

Representative COLE. The question was: What was the statutory authority by which the President undertook to issue the Executive order creating the Civil Defense Administration?

Mr. SABIN. The authority rests in the President, within the authorization of the Executive Office, under which he was given power early in World War II to establish an Office of Emergency Management. That power still remains, and by reason of that, plus his inherent powers as Commander in Chief and executive head of the Government, he was empowered to create this agency.

Senator MILLIKIN. But the specific authority upon which this is based, is that contained in World War II powers given to the President?

Mr. SABIN. Yes, sir.

Mr. WADSWORTH. Today, we would like to report on the major developments in the civil defense program which have taken place since our previous appearances before this committee in March of this year.

The general outlines of responsibility and strategy for development of the civil defense program at all levels was stated broadly in the national plan, United States Civil Defense. Neither the responsibility nor the strategy in this plan has changed or is expected to change substantially.

Primarily, the Federal Government assumes responsibility for leadership and coordination in the national program, as clearly stated in United States Civil Defense. Further, on the financial side, the Federal Government will undertake some limited assistance to the States and cities. The proposed extent of this financial assistance will be discussed later on in this statement.

In closed session later, because of the security involved, we would like to explain to the committee a number of assumptions upon which we have based our strategic and financial planning decisions in civil defense.

As you know, maps indicating the critical target areas and the mutual aid and mobile support systems for each State were sent to each governor of the States and Territories some weeks ago.

As a matter of fact, it was in September, on the 18th. These critical target area maps are and should remain classified documents.

Senator MILLIKIN. Mr. Chairman, I should like to ask the witness whether he has had responses from the governors.

Mr. WADSWORTH. We have had acknowledgment in almost all cases. We have worked more closely with the State civil defense directors than with the governors themselves.

Senator MILLIKIN. Have they been appointed in all States?

Mr. WADSWORTH. Yes, sir. I will describe the progress of the State situation a little bit later. I think it would be of interest.

On national progress: It is gratifying to be able to report to you that in the past 6 months a substantial amount of progress has been made in all branches of civil defense.

On September 18 the National Security Resources Board forwarded to the President, and he to the Congress, the national civil defense program. This 168-page book, entitled "United States Civil Defense," was the result of intensive planning and study by American authorities on all phases of civil defense. In particular, this report rounded out and carried on much of the initial work embraced in the excellent Hopley report, prepared by the late Secretary Forrestal under the direction of the late J. Russell Hopley.

In carrying forward this national plan prepared by the Resources Board, there have been a number of major civil defense developments in recent months:

A. To provide leadership for State and local efforts, the Civil Defense Office of the Resources Board has participated in a rapidly increasing number of meetings and conferences with State and local civil defense directors, as well as with governors, State legislators,

mayors, and other officials who have taken an active interest in civil defense activities.

In particular, reference is made to the very successful conferences, two of them, of eastern and western State civil defense directors held in Washington under the auspices of the National Security Resources Board during October last. That was on the 2d and 3d of October. I should like to introduce a transcript of the discussions of those meetings into the record of this hearing, if I may.

(The material referred to above will be found in the appendix.)

Mr. WADSWORTH. It is of paramount importance to remember that the chain command starts at the State level. The Federal Government in its capacity will and should deal only with State governors and State civil defense directors. It cannot and it has not bypassed them to deal individually with cities or voluntary groups.

B. There are now six active field representatives of the Civil Defense Office. Currently, these advisers are engaged in their third series of field conferences with State civil defense directors, helping to work out local legislative policy and planning problems. Backing this type of Federal assistance is a constant flow of bulletins and other communications between our Civil Defense Office and the State directors who are handling day-to-day problems of organization, financing, and operation.

C. To inform the general public fully on what to do in the event of enemy bombing, we have issued a 32-page booklet, entitled "Survival Under Atomic Attack." This booklet tells in simple language what the individual should do for self-protection in atomic warfare.

The National Security Resources Board has distributed more than a quarter of a million copies of this booklet. It will take the combined resources of the Federal, State, and local civil defense organizations, plus those of many private publishing firms, to make this booklet available to every family in America.

We understand excerpts from this booklet are being widely reprinted in newspapers, magazines, and industrial house organs, and that it is now on sale privately at newsstands for 10 cents a copy. We are, of course, encouraging the widest possible circulation of the information it contains.

Representative JACKSON. Mr. Chairman, might I interrupt?

Mr. Wadsworth, I wondered if you had considered the possibility of taking from the pamphlet entitled "Survival Under Atomic Attack" the six points contained on page 16, entitled "Six Survival Secrets of Atomic Attack," and then the five points on page 18, and putting them on what would be a little bigger than a 1-cent postal card, which you could send out through the Post Office Department. Especially in the critical areas, inasmuch as I come from the Northwest, where we are a little more important targets, possibly, I suggest the possibility of sending that out on a card, so that each householder could hang it up on the door. I am afraid that a lot of people, while this is a very fine pamphlet, will not take the trouble of reading it through. But if it is placed on one card and just sent out through the Post Office Department, you would have complete distribution overnight, in some of the very vital areas of the country, to start with. I mention this because one of our radio stations out home has been doing a real job getting this information out piecemeal, and it occurred to me that that is the heart of this pamphlet, and a real job could be done if that

was placed on one card and mailed out to all of the householders, at least in my area, in which I am interested, the Pacific Northwest.

Mr. WADSWORTH. Yes, sir; there are various plans about distributing the meat of that book in various ways. However, we do feel that as far as possible we should encourage distribution of the entire book because there is so much more meat in it.

Now, there are different plans. For instance, the State director of New Jersey just called this morning. He is going to have a card printed up like that, to have it tacked on the wall, the kitchen, for example.

Representative JACKSON. Yes; but I do not think people should have to pay 10 cents for one of these pamphlets, because the people who probably ought to read it will not get it. And there is quite a bit of criticism on that point. Maybe a person ought to be willing to pay 10 cents to survive, or at least manifest an interest to that extent. But I do think some condensed version that could appear on one card represents a common-sense approach. Because you are going to find very, very few people reading this pamphlet. Maybe the block leader in your civil defense organization will read it through and then explain it to other people. But if you have a simple document that you can tack on the kitchen door or some other suitable place, I think you will be taking a long step forward. And I base that on discussions with some of our people out home during this past week.

Mr. WADSWORTH. I would be inclined to agree definitely.

There is another card coming out from the Armed Services, which is going to be almost the same. It is a card that we have looked over and checked with them. And we have also already approached the Post Office Department on this basis of a wholesale distribution by bulk shipment to each post office, to have them dropped in the boxes and taken around by the carriers. Thank you for the suggestion.

Senator MILLIKIN. Mr. Chairman, I would like to ask the witness, What cities are now, you might say, completely organized?

Mr. WADSWORTH. I don't believe, sir, that we could say that any city is completely organized. Quite a few are well on the way.

Senator MILLIKIN. What cities approximate complete organization?

Mr. WADSWORTH. Mr. Chairman, would that be the kind of question we could answer better in a closed session? It is not that it would be classified "information," exactly, but it would seem to indicate a preference in our minds as between the way one city organizes over another. If it is all right with you, sir, I think we could give you all of that information very easily.

Senator MILLIKIN. It is all right with me, except that I am not interested in avoiding that particular embarrassment as far as you gentlemen are concerned. But if that would give information to a potential enemy, of course we could bring it out in private session.

Mr. WADSWORTH. I would prefer it in private, if that would be all right.

D. Two new manuals for the civil defense program will be issued during December. The Fire Effects of Bombing Attacks will be released December 11. The Civil Defense Health Services Manual, which is a comprehensive document of several hundred pages, will be sent to State civil defense directors immediately before the first of the year. That will be right around Christmas time, I believe.

These new manuals, while only the forerunners of many others to come, will answer in detail many of the questions being asked by State and local civil defense officials.

E. In order to give the States and cities, particularly in the critical target areas, a realistic exercise in the tough, detailed planning of civil defense against atomic attack, the Resources Board has sponsored three initial planning exercises. These have been staged during the past months in Washington, D. C., Seattle, and Chicago. These exercises were attended by representatives of 24 States and approximately 200 cities, as well as by Canadian and British civil defense authorities as observers. Each of these large-scale exercises took months of intensive preparation. The results allowed the test cities to develop workable standard operating procedures by their major municipal activities in civil defense.

These exercises did not solve all civil defense problems for the cities involved nor answer all the questions of those who participated as observers. By going at it the hard way through these test exercises, however, the cities are now well along in the grim job of planning for an attack, and the observers who sat in are better informed as to the actual conditions that might be expected in the event of a bombing of their own communities.

United States Civil Defense strongly recommended that every State director should pick at least one city in his State and undertake a test exercise. Hawaii already has completed its exercise, while Philadelphia and Detroit have set definite plans for theirs. I am also told, just this morning, by the State director from California that he has other plans in mind for several cities in his State. We have repeatedly urged that such an exercise is an absolute "must" for any metropolitan center, but as yet only a few cities have tackled this job of getting first-hand information regarding their civil defense needs.

F. For the individual citizens who have been asking, "What can I do?", the American National Red Cross has mobilized its facilities and chapters in cooperation with the Civil Defense Office to carry out three major activities in which every one can take part. These are—

1. The first-aid program, in which some 20,000,000 people should be trained as rapidly as possible;

2. The national blood program, in which the Red Cross will coordinate the efforts of all interested agencies in developing a realistic program of mass blood procurement; and

3. Nurses' aide and home nursing training, which will be carried out on a large scale.

In addition to this, of course, the American Red Cross will, by offering its help and facilities to the State and local directors, play a very important part in civil defense. They will, however, be integrated into the civil defense organization and will not act in this capacity as a separate entity of the Red Cross.

G. In preparing the national civil defense plan, and in day-to-day operations, we have placed strong emphasis on the matter of active liaison with British and Canadian civil defense officials. Their help in the development of our program has been most valuable, and will continue to be so. I believe we can also say that we are working with them on the same tough problems in civil defense, such as shelter design and construction, to which there is no quick, simple solution.

In recent weeks, a number of our top-staff personnel in civil defense have visited England as a part of the continued exchange which has been going on during the past year. During November, the civil defense staff met with the Canadian civil defense staff and representatives of our State Department, to establish a working group which will seek to solve joint problems including mutual aid with respect to border areas.

H. With respect to shelters, a series of field tests of a number of potential shelter types is planned for the immediate future. When these tests are completed, specifications for more adequate and improved shelter types for individual and community use will be announced.

Surveys of potential existing shelters are now being made.

I. Because mutual aid problems are such a large part of the civil defense program on a State-to-State basis, our Civil Defense Office has just released a suggested model for an interstate civil defense and disaster compact. This was prepared jointly by our staff with the Council of State Governments. The model compact provides the legal answers to many questions which have been troubling the State civil defense authorities who are now in process of making such agreements.

J. In the spring of 1950, the National Security Resources Board sponsored five separate 5-week courses in radiological monitoring for State civil defense authorities. These courses were held throughout the United States under the direction of the Atomic Energy Commission. In that same field, and after months of intensive study of the problems involved, the Civil Defense Office will release, this week, specifications for radiological monitoring instruments. These will be suitable for standard civil defense survey work, and for immediate use in training courses to be carried out by the States and cities.

Senator MILLIKIN. What do you mean by a radiological monitoring instrument?

Mr. WADSWORTH. Perhaps the most commonly understood one, sir, would be the Geiger counter, where the survey worker comes in to test the amount of radiation in the area which has been struck.

K. Crucial to the civil defense system is the air-raid-warning program now being operated as an interim measure by the Department of Defense through the Continental Air Command. It has been estimated that even a few minutes of advance warning, plus a well-organized and well-trained civil defense organization, would cut our casualties in an atomic raid by at least 50 percent. One of the objectives of the civil defense program is the continuous expansion and improvement of the air-raid-warning service, and much progress is being made in that respect.

Representative HINSHAW. Mr. Chairman, in this connection, are we going to have an opportunity to discuss the air-raid-warning set-up in executive session? Or is that something that should be discussed here?

The CHAIRMAN. I would think it would be better in executive session, Mr. Wadsworth; would it not?

Representative HINSHAW. I would like to give notice that I would like to discuss that in executive session.

Mr. WADSWORTH. L. It is recognized that women can and will play a major part in our civil defense program, as they did both in

this country and abroad during World War II. In order that leading American women's organizations might have their due share in the development of the civil defense program, a meeting of women representing these groups was sponsored by the National Security Resources Board in October. Since that time, a special committee formed by these national women's groups has been most active in studying ways in which women can best help the civil defense program.

M. Currently we are sponsoring a series of courses for selected professional nurses in the Nursing Aspects of Atomic Warfare, which is the name of the course. The first of these courses was held in November at Rochester, N. Y. The others will be held in five major cities between now and mid-February 1951. These courses are being conducted by the Public Health Service and the Atomic Energy Commission. An average of five nurses per State will take these training courses for trainers. And then we will go back to their States and fan out the information which they have received.

Under the general heading of "State and municipal progress": When civil defense officials of the National Security Resources Board reported to this committee last spring, they testified that only 16 States had appointed civil defense directors, and that only 17 States had special civil defense legislation. We had no actual local appropriations to report except several States which had emergency funds for this and for other reasons.

There is no better evidence of the progress we are making as a nation in civil defense than the fact that today all States have appointed civil defense directors, with one exception. In addition, there is a civil defense director for the District of Columbia, and one for each of the Territories. Most of these directors are in office on the soundest possible basis. They are full-time, paid, and competent officials, not casual part-time employees, and they have authority to act by legislation or by Executive order.

I can tell you from a number of first-hand meetings, with them that these men are high-caliber executives, worthy of the grave task which confronts each of them. In addition to the States, all of our great metropolitan centers also now have full-time civil defense directors, with active civil defense programs in various States of organization.

Bona fide evidence that a number of our State legislatures are aware of their financial responsibilities in civil defense are these amounts which have been appropriated during the recent months for civil defense purposes:

New York.....	\$600, 000	Louisiana.....	\$50, 000
California.....	475, 000	Minnesota.....	50, 000
Massachusetts.....	150, 000	Colorado.....	20, 000
Connecticut.....	75, 000	North Dakota.....	10, 000

While State leadership and State action is crucial to the development of our civil defense program we must remember that an enemy's bombs would fall on our cities and their people. For the first time since the Indian wars our homes are in the front lines. As in those days, we must realize that our civilians and our soldiers are equals again in danger and in responsibility.

The cities which mean so much to our national security have made progress in civil defense. Some of them have made substantial prog-

ress. Not all the progress that we would like to see made, perhaps, but progress that is worthy of note, nevertheless.

Strong evidence of this is contained in the recent civil defense survey made by the American Municipal Association, which, incidentally, is meeting in Washington this week. Some 139 American cities detailed their civil defense efforts to date through the medium of this survey. Their answers reflected all stages of organization, but, for the most part, were in sharp and gratifying contrast to the situation only 6 months ago.

Under the general heading of "Finances": As a major part of our planning for civil defense, we have given serious thought to the cost of preparing for an enemy attack and to the proportionate share of that cost which should be borne by the Federal Government. The scope of the possible disaster resulting from enemy attack upon this country demands plans which are much more comprehensive and costly than were necessary in World War II.

Our approach to financing has been the same as our approach to planning, namely, that adequate preparation against the loss of life and property is of primary concern to the affected community. Our plan, therefore, requires substantial financial outlays by State and local governments.

The civil defense program, however, is Nation-wide in scope. One of its purposes is to protect the productive resources of the entire country. It is probable that attacks, should they come, would fall with great weight and destructiveness on certain strategic areas in the country, while other areas may escape entirely.

It would be economically unsound to take all possible precautionary measures in all possible target areas at once. Such measures would probably be inadequate to cope with a massive attack upon any one area, and might be entirely wasted in other areas.

However, in some aspects of the program a uniformity of approach throughout the country is not only desirable but necessary if we are to avoid confusion and delay. Therefore, the Federal Government should assume the responsibility for providing regional stockpiles of some types of supplies. It should also share the financial burden imposed by the need for special equipment.

In defining this responsibility we have attempted to avoid, on the one hand, Federal aid which would destroy a sense of local responsibility. On the other hand, we have tried not to make our financial aid so small and restricted in scope as to stunt the growth of the program. In keeping with those aims we have developed the following plan for financing which we recommend to the Congress for its consideration:

A. That the cost of local personnel and administration be the financial responsibility of the States and local communities, together with the cost of supplies and equipment of a personal character needed by volunteer workers. Our preliminary estimate is that such expense over the next 3 years would amount to approximately \$200,000,000.

Senator MILLIKIN. You mean at the Federal or the local level?

Mr. WADSWORTH. That is the local level only, sir, State and local.

B. That the Federal Government share with the States and local communities the cost of procuring such heavy and, I should say, such special equipment as may be necessary for augmented fire services, engineering services, transportation services, communications serv-

ices, and rescue services. It is estimated that over a 3-year period the cost of such equipment to the Federal Government would be about \$100,000,000, and to the State and local governments an equal amount.

C. That the Federal Government match equally the expenditures of the States and cities for the construction of communal-type shelters. To do less, in our opinion, might well result in no shelters, or in shelters completely inadequate to cope with the atom bomb. It is estimated that the Federal share of this program, over the 3-year period, will be \$1,125,000,000, with an equal expenditure by the State and local governments.

Senator MILLIKIN. In that field will you deal directly with the municipalities, or will it all go through the States as such?

Mr. WADSWORTH. It would be planned to have it go through a coordinated State plan, and any moneys advanced by the Federal Government would clear through the States for redistribution to the localities.

Senator HICKENLOOPER. Who would determine the location in the States? The State planning group?

Mr. WADSWORTH. The location of shelters? I believe that it would be a combination of the State and the Federal. Because if the Federal would have to pay 50 percent of the cost, we would have to approve the general program. Naturally, the first pick on where a shelter goes in your city, or a group of shelters, would be up to the city authorities, who would then turn in their program to the State authorities, who would have to get our approval to get their 50 percent matching funds.

D. That the Federal Government provide regional stockpiles of critically needed materials, particularly of those types which would not otherwise be available in the event of an emergency. This program, embracing engineering supplies, blood plasma, medical supplies, and evacuee supplies, would cost an estimated \$400,000,000 over the 3-year period.

E. That the communications and communication-control centers necessary to distribute timely and adequate warning of an enemy attack be provided by the Federal Government. It is estimated that such a system would cost about \$32,000,000.

Following this plan, the estimated total cost over the 3-year period for civil defense would be about \$3,100,000,000. The Federal Government's share of this cost would be approximately \$1,670,000,000, or 54 percent. The States would assume expenditures of approximately \$1,430,000,000, or 46 percent of the total cost.

Senator KNOWLAND. Might I interrupt at that point to ask: In the surveys that you have made of countries like Great Britain, as an example, what have they done in this particular field? Have the construction costs been allocated to the National Government, or is it shared on a national-local basis? Or just how is it handled?

Mr. WADSWORTH. An overwhelming majority of it is paid for by the National Government, somewhere between 85 and 90 percent, Senator.

Senator KNOWLAND. So I suppose to an extent at least the assistance that we have rendered has helped the British Government carry the burden, in a way?

Mr. WADSWORTH. If you have in mind Marshall-plan aid, none of that money has gone for shelter-type outlay.

Senator KNOWLAND. But insofar as, we will say, the arms-implementation aid has released a certain burden from the British budget, it has in turn permitted them to retain a balanced budget, if you please, and also to contribute to this air-raid program; has it not?

Mr. WADSWORTH. No, sir; I am afraid not.

Senator KNOWLAND. Why not?

Mr. WADSWORTH. Because, as far as I know, the British have built no shelters recently.

Senator KNOWLAND. I understood you to say that at least the plan was to have the National Government contribute largely to the building of these shelters.

Mr. WADSWORTH. No, sir. I am sorry. What I meant to say was that during World War II they paid for between 85 and 90 percent.

Senator KNOWLAND. That was not the question I asked.

Mr. WADSWORTH. I am sorry, sir.

Senator KNOWLAND. What is the plan as you understand it on the part of the Government of Great Britain in the meeting of this problem?

Mr. WADSWORTH. I did not have that information ready, sir. I don't know.

I was going to interpolate down at the very bottom of page 11 that I meant State and local governments. It is a generic term including both.

In view of the destructiveness which might result from atomic attack, a vast stock piling of supplies and equipment might conceivably be defended as being necessary to alleviate human suffering and possible loss of production capacity.

Our general principle, however, has been to provide only those special materials which would not otherwise be available in the quantities required. As regards the advance stock piling of such staples as food, clothing, lumber, and other materials, we have a variety of plans under continuous study. Many of these supplies could be requisitioned from other sections of the country and rushed to a disaster area. As soon as these studies have been completed, definite recommendations will be made in respect to such items.

When Mr. Symington said earlier, in his statement which I read, that civil defense is the missing element in our national security, he was emphasizing the role that every citizen must play in the event of enemy attack. When it comes to civil defense, there can be no "take to the hills" mentality or "let George do it" attitude on the part of any person in this country, wherever he may live.

Our cities must be manned and fought just as our Navy's ships are manned and fought. When our ship captains come under fire they do not turn tail and run. They fight their ships as long as they have decks under them—and usually win.

Simply and directly, then, we civilians must have the guts and courage to do all that is expected of us. Each day the headlines hammer home the fact that the time for the maximum civil defense effort by all of us—and on a Nation-wide scale—is now.

We feel confident that the Congress will give immediate and careful attention to civil defense legislation which is now before it. Meanwhile, local officials who pass off this grave responsibility or say that

they cannot or will not move until every "i" is dotted, and every "t" crossed by the Federal Government are losing sight of their responsibility to their own people.

Senator MILLIKIN. Mr. Chairman, I would like to ask the witness:

What is the sponsored bill before the Congress, which your agency is sponsoring?

Mr. WADSWORTH. The House bill introduced by Mr. Durham is H. R. 9798. There are two separate bills in the Senate: one introduced by Senator McMahon and the other jointly by Senators Cain and Kefauver.

Senator MILLIKIN. Which is the sponsored bill?

Mr. WADSWORTH. They are identical, Senator.

The CHAIRMAN. Are there any other questions, gentlemen?

Is there anyone else you wish to present, Mr. Wadsworth?

Mr. WADSWORTH. Not unless there is some question the answer to which may be best presented by some member of the staff here who specializes in such matters.

The CHAIRMAN. I have some questions that I would like to ask, but they will have to be asked in executive session.

If the committee is agreeable, we will now go into executive session.

This closes the open session.

(Thereupon, at 4 p. m., the committee continued in executive session.)

## APPENDIX

### EXECUTIVE OFFICE OF THE PRESIDENT, NATIONAL SECURITY RESOURCES BOARD, CIVIL DEFENSE OFFICE

SUMMARY OF CONFERENCES OF STATE CIVIL DEFENSE DIRECTORS, OCTOBER 2  
AND 3, 1950, EXECUTIVE OFFICE BUILDING, WASHINGTON, D. C.

#### CIVIL DEFENSE REPRESENTATIVES OF THE STATES

##### WESTERN MEETING—OCTOBER 2

###### Arkansas:

Adj. Gen. Earl Ricks  
John B. Morris

###### Arizona:

Gov. Dan E. Garvey  
Fred O. Wilson, attorney general  
Mr. Watkins, Governor's administrative staff  
Mr. Williams, Governor's administrative staff  
Mr. Ruth, Governor's administrative staff

###### California:

Maj. Gen. W. M. Robertson, director  
Burton Washburn, secretary, California Defense Council  
David C. Andrew, staff, California Defense Council  
Lt. Col. William Haines, Headquarters, Sixth Army

###### Colorado:

Gov. Walter W. Johnson  
R. George Woods, director

Hawaii: George C. Wallace representing William B. Cobb, director

Kansas: Standish Hall, director

Louisiana: Maj. Gen. Raymond Hufft, director

Minnesota: Col. E. B. Miller, director

Missouri: Ralph W. Hammond, director

Montana: Col. A. H. Williams representing Adjutant General Mitchell

Nebraska: Edward Gillette, vice chairman, State defense council

Nevada: Brig. Gen. James May, director

New Mexico: Edward Oakley, assistant director

Oklahoma: Forest McIntyre, Governor's executive secretary

Oregon: Louis Starr, director

South Dakota: R. P. Harmon, director

###### Texas:

William L. McGill, director  
R. E. Smith, Civil Defense Agency staff

Utah: J. Wallace West, adjutant general

Washington: R. J. Olson, director

Wyoming: Brig. Gen. R. L. Esmay, director

##### EASTERN MEETING—OCTOBER 3

Alabama: Col. Ira. B. Thompson, director

###### Connecticut:

Roger Gleason, director  
Edward J. Coady, assistant director

###### Delaware:

D. Preston Lee, director  
Maurice Dupont Lee

**District of Columbia:**

Inspector John E. Fondahl, acting director  
Col. Thomas Hayes, assistant commissioner

**Florida:**

Col. R. G. Howie, director  
Dr. K. E. Miller, civil defense council

**Georgia:**

Maj. Gen. S. E. Vandiver, director  
Col. Frank A. Kopf, coordinator  
Maj. Homer Flynn, information officer

**Illinois:** Gen. D. O. Elliott**Indiana:** Lt. Comdr. Frederick T. Creators, deputy director**Maryland:** Lt. Col. David McIntosh III, director**Maine:** Col. Spaulding Bisbee, director**Massachusetts:** John Stokes, director**Michigan:**

Donald S. Leonard, commissioner  
Thomas J. Masterson, civil defense staff  
Ambrose Howell, civil defense staff

**Mississippi:** Alex McKeigney, acting director**New Hampshire:** Rear Adm. Miles R. Browning, director**New York:** Lawrence Wilkinson, director**North Carolina:** E. Z. Jones, director**New Jersey:**

Leonard Dreyfuss, director  
Thomas S. Dignan, assistant director

**Pennsylvania:**

Maj. Gen. Richard K. Mellon, commissioner of military and civil affairs  
Col. A. C. Miller, director of civil defense  
J. H. Hermana, State civil defense office

**Puerto Rico:** Hon. Jorge J. Jimenez, commissioner**Rhode Island:** Brig. Gen. James A. Murphy**South Carolina:**

Brig. Gen. James C. Dozier, director  
Col. George Warren, deputy director

**Tennessee:**

Adj. Gen. Sam T. Wallace, director  
Herman T. Millerie, civil defense agency staff

**Vermont:**

Maj. Gen. Merritt Edson, director  
Brig. Gen. Murdock Campbell, assistant director  
J. Larmon, civil defense agency staff

**Virginia:**

J. H. Wyse, coordinator  
J. J. Howard, civil defense staff assistant

**Virgin Islands:** Adolph Gereau, director**West Virginia:**

Brig. Gen. Charles R. Fox, director  
Maj. Edgar Sites, deputy director

**PROGRAM****CONFERENCES OF STATE CIVIL DEFENSE DIRECTORS**

Presiding: Mr. James J. Wadsworth, Acting Director, Civil Defense Office.

Statement: Mr. W. Stuart Symington, Chairman, National Security Resources Board.

1. Purpose of the conference and the work of the National Civil Defense Office: Mr. James J. Wadsworth, Acting Director.

2. Relationships with States and suggested State legislation: Hubert R. Gallagher, head, State and local relations.

3. Women's role in civil defense: Mrs. Martha Sharp, special advisor to Chairman, National Security Resources Board.

4. Role of the Department of Defense in civil defense: Col. Barnet W. Beers, Assistant to the Secretary of Defense.

5. Air alerts and air-raid warning system: Col. A. B. Pitts, Office of Civil Defense Liaison, Department of Defense.

6. Critical target area maps: Leslie Kullenberg, head, research group.
7. Mutual aid and mobile support: Col. J. C. Gault, General Staff Corps, Office of Civil Defense Liaison, Department of Defense. (This session was held in the map room and was classified.)
8. Manuals: Gerald R. Gallagher, head, technical services group.
9. Public affairs: John A. DeChant, head, public affairs.
10. Communications: Robert R. Burton, head, civil defense communications.
11. Shelter: Leslie Kullenberg, head, research group.
12. Plant protection: Carl Gabel, head, plant protection group.
13. Training: John Sundstrom, head, training group.
14. Requirements and supply: William A. Gridley, head, requirements group.
15. Financing civil defense: James J. Wadsworth, Acting Director. (Adjournment.)

#### CONFERENCE OF STATE CIVIL DEFENSE DIRECTORS

OCTOBER 2 AND 3, 1950

The conferences were convened on Monday, October 2, 1950, with State civil defense directors west of the Mississippi in attendance, and on Tuesday, October 3, 1950, with State directors east of the Mississippi present. Two meetings were held in order to facilitate round table discussion. The agenda was identical for both conferences. This summary includes statements made by the staff of the Civil Defense Office and discussions which took place at both meetings.

Mr. James J. Wadsworth, Acting Director of the Civil Defense Office, presided at both conferences.

Mr. WADSWORTH. "We are glad to see you all today and without further ado, I would like to present to you, Mr. W. Stuart Symington, Chairman of the National Security Resources Board."

#### STATEMENT OF MR. W. STUART SYMINGTON

The civil defense of the United States is now a very practical matter. We know that our only possible enemy has the atomic bomb and also has the capacity to deliver it on this country.

The interest in civil defense has varied over the country in recent months, but I think it is fair to say that it is of great interest to our citizens all over the Nation.

I believe this is sound and wise because, based on the last two World Wars, anybody who decided that they wanted to attack the United States would certainly consider it as their primary target, and perhaps their first target is productive capacity.

I think it is fair to say, in addition to the courage of our fighting people, that the productive capacity of the United States had more to do with winning the last two World Wars than any other single item. Therefore, what I am trying to say is that what you are all here today to discuss is of very practical interest to our future security.

We have a report out here which I think is a good one. It was delayed, for which we were criticized, but we wanted to get it right and felt, therefore, that the delay in getting it the way we wanted it was justified. It has in it two outstanding characteristics. I think, first, that it shows the wishes of the administration are for civilian administration control.

Those of you who had experience in the battle of Britain and afterwards the German attack at night, know that the British problem was handled entirely by the civilians with great and outstanding success to the point where the Bull report, the first report put out by this country on civil defense, said that England could not have lived and stood up under the attack if it had not been for their preparation over the preceding years in civilian defense. I think, therefore, that that is one of the two characteristics that is worth noting.

The second is that what the Federal Government wants to do is be, you might say, a catalytic agent, an over-all planner or suggestor to the States and municipalities. That is also characteristic of the extremely successful British effort, and I will refer to that because they had such a practical experience as against our theoretical developments. Their organization was decentralized and handled in the various 12 districts that they had set up. So that is a State problem and a problem of the municipalities under the States and various home communities.

The last point is that I hope we don't get lulled into any false sense of security as the result of the fine new developments in Korea. After all, in the Korean situation we had some great advantages. Korea itself was almost adjacent to

our extensive military developments in Japan, and we might say that perhaps Korea was the cheapest, the least strong satellite of the Russians, and the fact that we have been able, after some months, to defeat them, in my opinion, should not lull us into any false sense of safety.

I believe that, as the years go on and any possible enemy develops a stock of atomic bombs, regardless of any periphery action or reaction, the security of the United States becomes more and more ominous unless we have some form of world peace through an agency like the United Nations. Just as I have been pretty sure in my own mind that the Russians will not attack this country until they do have a stock of atomic bombs, so I personally feel convinced that they will attack when they do have a stock, unless we are so strong that they feel they could not win. To the best of my knowledge, nobody has started a war that they did not feel they could win.

Those are just a few brief thoughts on my part.

We, in this agency, are very grateful to you all for coming down here and giving your time and energies to this great new problem which Mr. Hopley in his fine report described as the missing link in our defense structure.

#### PURPOSE AND OBJECTIVES OF THE CONFERENCE

(By James J. Wadsworth, Acting Director, Civil Defense Office)

The purpose of this meeting is to acquaint you with our staff and the problems on which we are working, and to get your advice, your criticism and your cooperation. The conference is designed to interpret the United States civil defense plan, explore the needs for strengthening the plan, and find means of guaranteeing smooth and satisfactory operation of a successfully functioning national civil defense system.

Some of the States have already carried out many of the recommendations made in the report and we commend them for their initiative. Others must wait for the convening of their legislative sessions in January to secure the necessary funds and authority to operate. Despite the fact that some of the States have not had legislative authority or specific appropriations, much has been done by the governors by executive order, or through their adjutant generals or some other responsible department.

What we are developing is a Federal plan. We cannot succeed without the active participation of the States, any more than you can succeed without the complete cooperation and the well directed participation of the operating agencies in the front line and at the attack and shock points of civil defense—the local civil defense organizations.

We in the national Civil Defense Office, you in the States, and the localities face stern tests. We shall need to exert great effort to insure against ineffectiveness or failure. It is the intention of the President to seek the passage soon of Federal legislation establishing a Federal Civil Defense Administration patterned after the proposed act included in the appendix of United States Civil Defense. This proposed legislation is suggestive only and is subject to modification. The suggestions of State civil defense directors will be given careful consideration.

In the meantime it is intended, as was pointed out in the President's message transmitting the report to Congress, to establish a Federal Civil Defense Administration by Executive order. Such an order has been drafted and is in the process of clearance by appropriate agencies. Many of the functions and powers included in the proposed act can be carried on by our agency under the authority of such an Executive order. In the meantime we have a staff of specialists and consultants working on the many problems concerned with developing an effective defense against atomic or other attack.

This staff is in daily contact with members of the Department of Defense, the Atomic Energy Commission, the Red Cross, the Public Health Services, and numerous other public and private agencies. Regardless of developments in the international situation in the foreseeable future, civil defense must remain a program of paramount importance to the security of the United States and of its people.

In closing, few statements have expressed the spirit of what we are trying to accomplish in civil defense planning and operation better than the following paragraph from a recent report of a State civil defense director:

"We are all working together as a team toward one great goal; the maximum perfection of local organizations working under a common plan of mutual support for the protection and assistance of the civilian population should an emergency develop within the State. Civil defense is today a vast undertaking, and in order

to achieve a maximum degree of success in its great variety of problems, it is necessary to utilize and absorb the ideas of all concerned."

#### RELATIONSHIPS WITH STATES AND PROPOSED LEGISLATION

(By Hubert R. Gallagher)

The United States civil defense plan follows long-established and traditional principles of American Government. It recognizes that ours is a Federal system and that the States are vital to the successful functioning of our governmental structure. As in the Hopley report, the United States civil defense plan provides that the Federal Civil Defense Administration will operate through the States.

Experts on civil defense and intergovernmental relations have long recognized that it would be unwise practically and administratively unsound for a Federal civil defense office to work directly with the nearly 2,000 cities and towns in the United States. To carry out such a program would result in a Federal civil defense bureaucracy, and in the expenditure of Federal funds almost beyond reason. The policy set forth in the United States civil defense plan calls upon the States to be co-partners with the Federal Government in furthering civil defense.

Experience in two wars has demonstrated that the key to a successful mobilization of the civilian population is the proper organization of defense agencies. Therefore, over-all policies and plans for civil defense should be developed by the Federal Government through a Federal Civil Defense Administration—and their actual operation carried out by the States through legally established State and local defense agencies. Intergovernmental cooperation is the key to a successful civil defense and preparedness program. These are the principles that we expect to carry out in operating the Federal Civil Defense Agency.

From an operating standpoint we are in the process of selecting a field staff which will work out of Washington and which will assist the States in their organization and planning; help them with their technical work, and aid them in interpreting Federal policies and programs. Five members of such a field staff have been appointed and they are here to meet you, and in the future to work with you in a purely advisory capacity. These men have been selected because of their training and experience in State and local government work. We are sure that you will find them of assistance. In brief, their functions are as follows:

1. Serve as a point of contact between the national office and State defense directors. The directors would be expected to continue their contacts with the Washington office.
2. Advise and assist State defense directors, governors, State legislators and other public officials on civil defense.
3. Appear at State legislative hearings, but only on request, and represent the Federal civil defense agency at regional conferences, State and local meetings, and before various public groups.
4. Assist in the development of State civil defense activities.

It is our plan to serve as a clearing house for you. In addition to the regular civil defense publications of a general nature which will be sent to you from here, we hope to make available summaries and digests in the form of memoranda which would report on the activities of the State defense agencies. Such publications would deal particularly with legislative and administrative matters of interest to the State directors themselves.

To make this service useful, we will need your aid and assistance. Thus we would appreciate it if you would continue to send publications or documents that would be of use to us as well as any new legislation or amendments to your existing Civil Defense Act, including information regarding planning and organizational activity on the local level.

From an operating standpoint we will undertake the following:

1. To serve as a clearing house on Federal and State civil defense developments. On policy matters and questions, our Advisory Bulletin series will be continued and expanded to keep States, and through the States, counties and cities informed of civil defense policies and activities at the national level.
2. To develop our memorandum series principally for the use of the State civil defense director. The recent memorandum on the organization and legislative status of the various State civil defense councils is an example. Another is the table showing the status of State defense laws. These have been sent to you.
3. By correspondence and field staff to work with you and operate as a service and research agency for you.

## STATE LEGISLATION

Now I would like to discuss briefly the subject of State civil defense legislation. State civil defense directors recently have been sent a chart and a memorandum outlining the status of civil defense legislation in the States. In addition, we have included in the appendix of United States Civil Defense the text of a suggested model State civil defense act. The need for such legislation is set forth in the report.

It is our feeling that every State should study and review its existing civil defense legislation. If no enabling legislation is in existence then it should consider enacting State civil defense legislation.

According to the information which we have received, the status of State civil defense legislation is as follows:

## STATUS OF STATE CIVIL DEFENSE LAWS

Twenty States have new laws enacted since World War II.

Fourteen States have laws based on World War II legislation.

Fourteen States have established defense agencies by Executive order.

In reviewing its civil defense legislation, we suggest that a State should provide for the following:

1. The establishment of a State civil defense agency in the executive branch of the State government to serve as an advisory agency to the governor. Action when necessary would be carried out through the office of the governor, and he would serve as chairman ex-officio of the defense council. Additional extraordinary emergency powers under such legislation could be exercised by the governor in case of war or upon the declaration of an extreme emergency.
2. The appointment by the Governor of a full-time, salaried civilian director who would serve as the operating head of the council in executing the governor's civil defense responsibilities. The director would coordinate the activities of State and local defense agencies.
3. The authority to create local organizations for civil defense in the political subdivisions of the State.
4. The authority to enter into mutual-aid arrangements with other States; to coordinate mutual aid plans among political subdivisions of the State, and to establish mobile support units to reinforce stricken areas.
5. The authority to use the property, services, and resources of the State for civil defense purposes.
6. The power to make surveys regarding food, clothing and other necessities of life, and the distribution of the same.
7. The power to take precautionary measures against air raids and other forms of attack and the authority to appoint auxiliary personnel and to mobilize police and firemen.
8. The authority to regulate highway traffic in the interest of national defense and in case of evacuation.
9. The power to designate emergency health and sanitation areas in any section of the State which has been damaged by air raids or has suffered other catastrophe, and the authority to make rules and regulations designed to safeguard public health and to prevent the spread of radiological infection or other maladies.
10. The authority to direct all activities by State and local officials and volunteer agencies, with regard to evacuation of civilians into adjoining States.
11. The power to enforce all laws and regulations relating to civil defense, including Federal regulations and in emergency to assume direct operational control of all civil defense forces.

All of these functions and activities are provided for in the suggested model act.

In addition, the States should provide by legislation for the necessary State appropriations to support a full-time organization. Furthermore, consideration should be given to providing a contingent fund of from \$250,000 to \$5,000,000 for unusual or additional civil defense purposes which cannot be accurately estimated at this time or for immediate use in case of disaster or great emergency. If a catastrophe occurs, it is probable that the legislature would immediately be called into special session to provide for the State's needs so the amount set aside for contingencies should be based on that factor.

The following existing appropriations are submitted as a guide in preparing appropriation requests for the administrative costs of the State defense agency: (The amounts shown are for the present fiscal year.)

California.....	\$475, 000	Louisiana.....	\$50, 000
New York.....	100, 000	Minnesota.....	50, 000
Massachusetts.....	150, 000	Colorado.....	20, 000
District of Columbia.....	100, 000	North Dakota.....	10, 000
Connecticut.....	75, 000		

We will keep you advised from time to time as to what the States are planning by way of appropriations, and as to what we think will be needed during the coming months.

#### DISCUSSION—LEGISLATION

Mr. Gillette expressed the view that the State directors should be kept advised when field representatives of the Civil Defense Office consult with officials of cities. Mr. Wadsworth assured the State directors that no Civil Defense Office field man would go to any city without going through the State civil defense director and keeping him advised completely as to where he is going and what he is doing. Mr. Gillette indicated that was quite satisfactory. Mr. H. R. Gallagher also said in response to Mr. Hammond's inquiry that the field men will come into the States from time to time in order to assist the State directors and serve as their point of contact with Washington.

Mr. Wadsworth added that if a city asks the national office for help without first clearing the request through the State director's channels, the national office will clear the request with the State director first. He further stated that the Civil Defense Office would not suggest that its field representatives should appear officially before meetings of State legislative committees, as that was the province of State civil defense officials, but that the field representatives would be available for informal meetings.

In response to a query from Mr. Dreyfuss as to whether civil defense workers and volunteers would be covered by the Federal Government in case of death or injury, it was stated that legislation was being studied which would establish Federal war damage or war risk insurance to compensate those injured or those whose property is damaged.

Mr. Wadsworth further advised Mr. Dreyfuss that in keeping with the principles set forth in "United States Civil Defense" the mayors will be expected to channel civil-defense matters through the State civil-defense organization to Washington and, he continued, he would drive this principle home with all the power he had at his command.

#### WOMEN IN CIVIL DEFENSE

(Mrs. Martha Sharp, special adviser to the Chairman, National Security Resources Board)

I am happy to speak on the role of women in civil defense. Ever since the President made his appeal for unity, the women of the United States have been writing to the President and to Mr. Symington pledging their cooperation and that of their organizations in the planning and the implementation of our national-defense effort.

Women are the greatest untapped resource of the manpower of the United States. They will be called upon to carry at least half of the civil-defense responsibilities of our country. Women are able to do any job as well as men if they are properly trained. Women have certain qualifications by inheritance which make us think of them as being especially qualified in certain roles. Women can do well any of the following jobs:

Warden services	Auxiliary police traffic control
Communications	Welfare services
Evacuation services, including emergency housing and feeding	Public relations
Medical services (we all know the splendid record of the nurse's aides)	Supply (the collection of clothing and its distribution)
Teaching	Civil Air Patrol expects to use a majority of women in their ground teams.
Driving	

The women's services of the Department of Defense have offered to provide the Civil Defense offices with the names of former servicewomen who are now

mothers of young children and therefore will not be taken back into the services, but whose special training would make them excellent civil-defense volunteers or part-time workers in their local areas.

Since women are to participate so completely in the civil-defense program, we expect that their representation will also be large in the State and local advisory boards and administrative offices. We hope that you defense directors will choose qualified citizens who also happen to be women to serve on all levels in advisory, in paid, and in volunteer positions.

May I suggest that women will be particularly useful in the field of volunteer services where they can fit the intricate part-time efforts of thousands of citizens into a powerful working whole. They are also especially qualified by their traditional interests in welfare and in community services.

In commenting on the role of women in civil defense, Mr. Starr stated that a woman serves on the Governor's Defense Council for the State of Oregon, and that 17 women serve the State in an advisory capacity.

#### ROLE OF DEPARTMENT OF DEFENSE

(By Col. Barnet W. Beers)

In discussing the role of the military today, I am of course, excluding a discussion of its well-known primary mission in wartime—that of defeating the enemy in combat. My remarks will be confined entirely to a discussion of the role of the military in connection with the domestic affairs of the Nation and in civil defense. There has always been a traditional dependence on the Armed Forces in times of emergency. The Constitution and our laws have wisely provided limitations regarding military activities and military authority in order to assure that our military forces serve our people rather than control them. The military forces are an agency that emphasizes organization, discipline, and carefully planned techniques, a force that is widely dispersed geographically throughout the United States; and a force that is mobilized and available 24 hours a day, 7 days a week, 52 weeks a year. It is a force that the Chief Executive traditionally calls upon to meet emergencies such as managing railroad systems, accomplishing rescue in disaster, building emergency bridges, handling emergency evacuations, affording emergency relief and the like. The military forces have furnished training facilities to national guard troops in peacetime, to cadets, to high-school students, and provided instructor staffs at scores of universities. For many years the Army supervised and operated the Civilian Conservation Corps because of its capability of doing so rather than to fulfill a function that was primarily military.

To have prominent military participation in peacetime is proper and expedient, but it is neither expedient nor safe to depend upon the Armed Forces in wartime to perform functions that should be accomplished by civil agencies. This consideration has been included in establishing the policies concerning our national civil-defense plan. Therefore, the entire Department of Defense will fulfill only a role of complete cooperation and support. It will make available its extensive technical knowledge in the development of civil defense and in times of emergency, war-caused or otherwise, will give material support and aid to the civil power to the limit of its ability. Such support and assistance will be quick and temporary and will be designed only to fill gaps that might exist in the civilian effort. Some people have conceived that martial law will be declared throughout the United States immediately following enemy attack by any means, but the provisions for martial law were not designated to meet such a situation. I should like to make it clear that there are two entirely different applications of military assistance. One, martial law—or the application of martial law—which is the assumption of control of the population and is usually accomplished because civil law has failed or broken down temporarily. The other military support does not necessarily imply military control. In the Texas City disaster, in the South Amboy disaster, in the floods of the Ohio and the Mississippi Rivers, extensive immediate and effective assistance was given by military forces all without any thought of applying martial law. However, provisions for its application are in existence to meet any serious situation which might require it.

In the prosecution of a war, the military not only will be limited in its ability to give assistance but it will itself require a great deal of help from civilians. We have already established as a military auxiliary an aircraft observer corps requiring 160,000 volunteers. This is presently operated in 25 States, as Colonel Pitts will later explain. We will extend this according to plan in the near future. In the event of war, other auxiliaries will be required, making additional demands on the patriotic and volunteer efforts of civilians.

In brief, the role of the military sets up a two-way street. The military needs auxiliaries, but at the same time the military becomes a member of the team where every man, woman, and child in the United States under wise and proper organization and leadership of the civil officials combine to meet any emergency that might arise.

#### AIR-RAID WARNING AND AIRCRAFT OBSERVATION

(By Col. A. B. Pitts)

There is presently being created, in selected areas of the United States, a network of observation posts from which information of the movement of aircraft over those areas can be obtained—a service that will supplement or augment the air-surveillance capabilities of our air-defense forces. These posts, located at appropriate intervals, are to be manned by civilian volunteers recruited by the directors of Civil Defense in the States involved or by special headquarters established for the purpose. Aircraft movement observed from these posts is reported over the existing commercial telephone system to collecting points called filter centers.

At these filter centers observer reports, plotted on a large map, show graphically the position and flight path of aircraft observed. Tellers at these filter centers relay this data to air-defense fighter-control stations, where they are evaluated and added to the information obtained from the radar screen. At the fighter-control stations—called ground control intercept stations—hostile aircraft are identified; tactical action is initiated, and pertinent information, such as position, altitude, direction, and speed of the invader, is immediately reported to a higher air-defense headquarters for plotting on the large situation map at the Air Defense Control Center.

Based on the evaluated information on hostile aircraft, as shown on the Air Defense Control Center situation map, air-raid warnings are initiated and disseminated to civil-defense authorities in the threatened areas.

While the installation of ground observation posts is presently being made in selected areas, an interim air-raid warning system which covers the entire United States has been installed and is now being operated by the United States Air Force. It includes personnel and terminal telephone equipment with which to initiate warnings at air-defense control centers, and it provides special telephone equipment installed in strategic locations where civil-defense authorities can receive warnings for further dissemination throughout the threatened areas within their boundaries. The dissemination of warnings from the key receiving points becomes a responsibility of the States alerted and is accomplished in accordance with their respective facilities and capabilities.

In the national civil defense program special attention is being directed toward further development of warning media and procedures that will provide at all levels a warning system of maximum efficiency.

#### GENERAL DISCUSSION—AIR RAID WARNING AND AIRCRAFT OBSERVATION

In response to a question from Mr. Pryde as to whether there had been a change in the color system, Colonel Beers said: "The Air Force is presently eliminating the blue for usage under the present system. They anticipate, in anything that would come up in the immediate future, not having the capability of giving too many degrees of warning. I want you to keep in mind that we are not eliminating the blue signal at this level for all time. I want you to keep in mind the meaning of the blue warning. In this agency, which will take over eventually at the Air Defense Control Center, based on the information they give us, we will probably develop a capability of using the blue signal again at some future time. So don't erase it as a possibility in your future operations." Colonel Pitts continued: "I told you that we regarded this as a provisional warning system and a limited one. It needs a lot of refinement. We are aware of that. And there will be improvement in it—either in it or in the development of a better system as time goes on. That question is being studied."

In a reply to a question from General Robertson, Colonel Beers said that the type of alert is a prerogative of the air defense people of the Air Force. Colonel Beers continued: "The present system will be converted. When this agency, the Civil Defense Administration, is established and the whole pattern is capable of operating, there will be a reshuffle, and the alerts will be given to the State authorities. It will be their responsibility to fan that out through their own communications system. Until there is a shifting of the pattern as well as of the responsibility, this is an interim warning system that will give a degree of

warning. Until there is a change-over to meet a pattern such as you suggest consider each of these phones that lies within your State as being a source of information in the event of anything happening. It is far from perfect. It is designed as a military means of giving warning down to these areas likely to receive attack, but it doesn't fit in with a program where there is complete autonomy at the State level, and there will have to be a transition into that other pattern. So we are just putting it forth as the one in existence now and should be changed over into a different pattern. If one State has several of these key point air raid sources, you have several sources; but if you only want one, we have one source. We have to let that ride that way until a transition can be made to a new system. We are developing the possibility of having more than one way of getting a warning out, probably by some auto-radio system, and that whole pattern will be changed in the future. We simply describe to you the system that is in being and workable at the present time. We now have a pattern that is set up by the Air Force independent of an organized system of civil defense. When this was installed, you as States were not nearly in the position you are now to receive this warning and carry it out. It was set up on a pattern of getting direct warnings to certain areas without regard to State lines or anything of the sort—a military pattern. Just as soon as it can be done, we will switch it over to the State pattern."

#### MANUALS

(Address of Mr. G. R. Gallagher)

We are all familiar with the fact that an architect, as a general rule, in designing a structure first makes architectural drawings showing elevations and floor plans which define the size and shape of the structure. Before construction can proceed very far the architect's drawings must be followed by detailed working drawings for the builder. He must have specific information as to the details of construction of the walls and the roof of the structure as well as guidance in the installation of such things as lighting, plumbing, and heating facilities.

The basic plan for civil defense, the architect's drawing, is provided in our recent publication, *United States Civil Defense*. In order that the actual construction of the civil defense structures to protect the citizens of New York or California or any other State can proceed to completion, you the builders must be provided with additional details.

To supply some of these details and to supplement *United States Civil Defense*, as promised in that document, we are already engaged in the preparation of the manuals and other publications covering the information which the Federal Government must provide for setting up the civil defense program at State and local levels. Much of the detailed information the States obviously will work out for themselves in their own plans. It will be our policy to provide in the manuals only that information which is absolutely required from us for uniformity of organization and indoctrination, and secondarily the information which the Federal Government is uniquely fitted to provide as an authoritative source.

We propose to confine manual writing to that information which you in the States want and need in order to bring an effective civil defense organization into being at the earliest possible time. We do not propose to attempt, for example, to tell firemen how to train auxiliaries in fire fighting except insofar as the extraordinary conditions of modern warfare indicate the need for such information. In the same way we will not attempt to tell a road builder how to patch a road or an engineer how to repair a bridge.

The term "manual" is used as a designation for all forms of publications needed for the indoctrination of the personnel of the civil defense organization. Generally they will appear in four forms, administrative guides, instructor's guides, technical manuals, and handbooks.

While the definitions cannot be too rigid, the general purposes of the various types can be stated in this way:

An administrative guide will impart instructions on the planning, organizing, staffing, training, and operating of civil defense activities.

An instructor's guide will outline for a trainer methods and procedures needed to convey the content of civil defense instruction effectively.

A technical manual will provide the civil defense service chiefs, instructors, and other civil defense administrators and supervisors with detailed technical or specialized information in an area of civil defense.

The purpose of a handbook will be to provide the nonsupervisory civil defense workers with the basic information required for them to do their jobs.

It is our firm policy to restrict the number of manuals to the absolute minimum consistent with the purposes which I have outlined. On the basis of the present schedule we anticipate that approximately 30 manuals will be produced and distributed by June 1951. This implies a production of about one per week. We plan to have these 30-odd manuals cover the bulk of the basic informational guidance needed by the States and localities for establishing, organizing, and training the forces to make civil defense a going concern on a national basis. There will, of course, be production of guidance material beyond next June, particularly in the technical manual field where it is anticipated that for an indefinite time manual production will continue, as the need for specialized information on various subjects appears.

There are obvious priorities of need in the development of manuals. There has been a discussion of our first production, Critical Target Areas in Civil Defense, a copy of which has been given to each of you. While this document does not, perhaps, fit any of the definitions I have given you for manuals, it is nevertheless, in our opinion, a most important item for the guidance of Governors and State directors in approaching their civil defense planning task, and it was therefore given earliest priority. Next priority is to be given to a manual covering the planning procedures outlined in part 3 of United States Civil Defense.

We have on hand or in process drafts of about 13 or 14 separate manuals. There will be early production of a health technical manual, one entitled "Fire Effects of Bombing Attacks" which is a historical record of experience with fires due to bombing in the last war for the guidance of our fire-fighting services, and manuals in the administrative guide series covering the organization and operation of mutual aid and mobile support. Among the technical manuals which will be of prime interest to you—and these are planned for the earliest possible production—will be a series dealing with personnel shelters and protective construction.

Fulllest use will be made in manual preparation of all available materials including those of the World War II Office of Civil Defense, the Office of Civil Defense Planning, which produced the Hopley report, and all pertinent material from nongovernmental groups and foreign sources. We are proceeding with our own development of materials required for the manuals which we feel will be necessary. In the process, the advice of State directors will be solicited as we are soliciting the guidance and assistance of technical experts in the various service fields.

In the distribution of the manuals we must, of course, take into account limitations of budget. There will be some free distribution for State civil defense directors. Documents at the Government Printing Office will be available and additional copies of the same will be purchasable from the Office from the Superintendent of Documents. They will always be for sale at the lowest possible price and can be bought in any quantity unless paper shortages in the future make it impossible.

#### GENERAL DISCUSSION—MANUALS

Mr. Wadsworth in answer to a query from Mr. Dreyfuss said that where it is advisable and necessary the State directors would be given a chance to look over the proposed manuals. In addition, he pointed out experts on State and local police and fire services are serving on the Civil Defense Office staff as advisors and full-time staff.

#### PUBLIC AFFAIRS PROGRAM

(By John A. DeChant)

There is a strong and growing demand, of which you are aware, from the public for all the information on all aspects of civil defense.

The public affairs program, as outlined in the national plan, recommends, that three major activities be launched as quickly as possible by the State and local civil defense directors: (1) General public education, (2) public information, and (3) public relations or group relations.

One of the first major Federal activities will be the series of public education booklets with which some of you are now familiar. The current plans for this series are roughly as follows:

1. There will be six public booklets in the initial series. These would include survival booklets on atomic, biological and chemical warfare; a postdisaster handbook, a simple first-aid booklet; and a simple explanation of the civil defense program.

2. We intend to ask all media to build programs around each booklet in order to utilize every possible type of sound public education media, such as motion pictures, radio, television, etc.

3. The first public booklet *Survival Under Atomic Attack* is now in its final stages. It has taken 4 months of intensive research and review by many experts in and outside the Government to prepare this booklet so that it is both technically accurate and highly readable. On the face of it, that might seem a long time, but the problems are so many and varied in atomic warfare and civil defense that we had to be sure that the information we release to the public will be accurate.

This public booklet will be released in October or early in November, with an initial distribution by the Federal Government, principally to State and municipal civil defense directors, in the same manner as the national civil defense plan was handled.

4. The demand for public education is so vast that it would not be possible for any Government agency at the Federal, State, or local level to supply all the booklets, films, and radio material from its own budget. For that reason it will be the responsibility of the Federal Civil Defense Office initially, and then the State and local directors, to urge all communications media such as newspapers, radio, television stations, magazines, book and private publishers and printers, and private interests and organizations to buy copies or reproduction proofs of these booklets from the Government Printing Office for printing and distribution or sales through their own facilities in cooperation with the local and State civil defense authorities.

Should State and municipal civil defense agencies decide to distribute these booklets out of their own funds, or through some arrangements with local private organizations, every assistance will be given to develop that type of localized distribution.

5. Obviously mere distribution of booklets and films and audio-visual aids to the public through one facility or another does not guarantee public understanding of the material. What is needed, as quickly as possible, is an intensified program through State and local facilities to make certain that the local public is constantly exposed to the material contained in the booklets. This could include mass distribution of the booklet and the four-page "tear-out" which is a summary of the high points of each booklet; use of the material by study clubs, speakers' bureaus, radio and television spot announcements, information centers, displays, posters, advertisers, study courses in the schools and any other sound means that can be devised locally to intensify public awareness and, finally, understanding.

As the public demand for information on all the aspects of civil defense in modern warfare continues to increase, it will be more than evident that State and local affairs programs will require tremendous effort and attention. Unless the public has an understanding of all its aspects, no civil defense program can hope to succeed.

#### GENERAL DISCUSSION—PUBLIC AFFAIRS

In response to inquiries from Mr. Pryde of Washington, Mr. Starr of Oregon, Mr. Hammond of Missouri, Mr. Hall of Kansas, and Mr. Woods of Colorado regarding informational material on civil defense, Mr. DeChant stated: "At present the Civil Defense Office is not in a position to give official approval to State, local, or private publications relating to civil defense but upon request will state whether the material has been cleared with the Office for accuracy."

The State civil defense organizations will undoubtedly find it extremely desirable to include State legislators in their information programs and on their general mailing list to receive material.

In addition to various booklets there will be films. There are several private producers who have made films and there are several more coming up. This is such a vast job that we will encourage all private production of films, booklets, and radio shows providing that the technical accuracy of the material is established before it is distributed, because, as you know, there is a wealth of misinformation on the whole subject of civil defense and modern weapons. We have access to all facilities in the Federal Government and we have used them extensively.

General Dozier asked if the staff would undertake the job of condensing into one page the vital information contained in a 65-page booklet so the newspapers in the States could have a civil defense item to publish for the information of the public?

Mr. DeChant said that the initial civil defense plan went to every daily newspaper in the country, every major weekly newspaper and every major radio and

television station throughout the country. We will continue to do this with any document that is of considerable public importance. The civil defense plan was accompanied by a summary of four or five pages and we disseminated it as widely as possible not only to communications media but to major organizations too. We are finishing the preparation of a 4,000 word summary of the civil defense plan. That will be sent to all the State directors in quantity, perhaps 50 to 70 copies. Our facilities are such that we cannot go beyond that. We plan to prepare radio shows and other material that might be of use to you. You are perfectly at liberty to adapt them in any fashion that you choose. In all these areas we will try to take some burden off your shoulders.

In answer to a question from Mr. Leonard concerning the use of penalty envelopes and the franking privilege, Mr. Wadsworth said it was being given consideration.

In answer to a number of questions concerning civil defense movies, Mr. DeChant said, "There are a number of films in this field that were made for purposes other than civil defense. The Atomic Energy Commission has five or six different films which do pertain to civil defense. One is the monitoring film at Oak Ridge and another is at UCLA, but none of them are directed precisely to problems of civil defense."

Mr. Leonard asked if there was a list of such films, if the films were available and where they might be procured. Mr. DeChant said there are no films today in our estimation adequate for training or educational purposes. The Department of Defense wants to make several changes in the film *Everybody's Business* before it goes out. It has served the purpose of indoctrination of Army personnel. As soon as films like that are made available we will make them available to you.

Mr. Gereau asked if the Civil Defense Office would consider putting out a number of short talks to assist in the training program, which might be run over several of the broadcasting stations throughout the country. Mr. DeChant said that the Civil Defense Office hopes to have recorded radio shows issued to back up each of the educational booklets as they come out. The recordings will be available for the State directors for whatever use they wish to make of them. You can also make use of films that will be obtainable through your office and our office to anyone who requests them.

#### CIVIL DEFENSE COMMUNICATIONS

(By Robert R. Burton)

In the time allotted to me to present the subject of civil defense communications to you, I intend to touch on three points. First, I would like to bring to your attention the importance of communications. Next, I would like to present a brief survey of the facilities we have in this country for civil defense communications use. Finally, I would like to offer some suggestions on making use of the communications facilities we have, both on the national level, and on the State or local level.

The summer before last I was designated by the State Department to head the United States delegation at two radio conferences held in Europe. These conferences dealt with the allocation of radio frequencies to the countries in Europe, including the American zone in Germany. The first conference was held in Brussels, and while there I took the opportunity to visit the old battlefield of Waterloo which is just a few miles outside of Brussels. On the battlefield there is now a museum and a motion picture house which shows a movie of the modern conception of how the battle was fought.

As you may recall, Napoleon had two marshals on whom he relied to command portions of the troops. Marshal Ney's troops were the ones that fought in the Battle of Waterloo. Marshal Grouchy had been sent the day previously by Napoleon to intercept the Prussian General Blücher who was attempting to join his troops with those of Wellington's.

On June 18, 1815, the famous battle started. Around noon Napoleon saw a dark cloud of dust, stirred up by horses and men, approaching across the plain toward his flank. On investigation it became apparent that Blücher had evaded Marshal Grouchy and was hastening to join the attack on Napoleon. Napoleon immediately wrote a letter to Marshal Grouchy (who, incidentally, was within hearing distance of the cannonading at Waterloo, but who had disregarded the advice of his generals to return to Waterloo because Napoleon had given him orders to find Blücher and stop him).

When Grouchy finally received Napoleon's letter, ordering him to return to Waterloo, it was 4 p. m., and too late for Grouchy to do anything to affect the

decision at Waterloo. In Napoleon's memoirs, later written while he was a prisoner on St. Helena, he attributed the loss of the battle of Waterloo to Grouchy's absence on that fateful day. What might have been the course of history if Napoleon and Grouchy had been provided with walkie-talkie sets?

The Battle of Waterloo is a famous case illustrating the value of communications in warfare. However, we do not need to go abroad to find such examples. On that same fateful year of 1815—on January 8, to be exact—the British attacked New Orleans, and after a furious battle in which they lost 2,000 men, they were driven off by the city's defenders under Andrew Jackson.

The ironical part about that battle was that neither the British nor the Americans who fought in it were aware that a treaty of peace had already been signed between the two nations at Ghent—some 15 days earlier. Due to lack of communications, thousands of widows, orphans, and heartbroken mothers were needlessly created.

The same possibility of needless tragedy descending upon our cities is with us today. In event of war, it is a foregone conclusion that our cities will be bombed. The degree of tragedy—the loss of life, and the destruction of property—will depend to a certain degree on the efficiency of the communications in the cities.

Before Hitler rose to power I spent 3 years in Germany. Four years ago the State Department sent me to a conference in Moscow. While waiting for the Russian plane to pick us up in Berlin I chanced to run into one of my acquaintances of 20 years before. She had been bombed out of her home three times, and had been in the last block of houses to capitulate to the Russians when Berlin surrendered. She told me there was nothing—absolutely nothing—that could equal the sheer terror caused by mass air raids. Every Berliner knew of friends and acquaintances who had been trapped and burned to death. It seemed that no matter what type of bombs were utilized—incendiary or demolition—fire always resulted, and always caused the bulk of the damage.

The United States is most fortunate in the possession of communications facilities. In this country we have approximately 42,000,000 telephones, which is more than all the rest of the world combined. In fact, about 60 percent of all the world's telephones are to be found in this country.

In radio the picture is approximately the same. For instance, we have three times as many broadcasting stations as all of Europe combined. We have some 80,000 radio amateurs in this country, who possess short-wave transmitting and receiving equipment. We have twice as many licensed amateurs as all the rest of the world combined.

The same situation probably exists, although to a lesser degree, in the radio equipment used by fire departments, police departments, and by waterworks and utilities departments.

Commercial and private aircraft, taxicab companies, doctors, and even farmers seem to be getting more radio-minded day by day.

Now we come to the third part and the conclusion of my talk. What are we going to do about these facilities? We have a great need for the facilities we have, which are many, but we may need more. What is our next step?

I can tell you in one, two, three, order. I won't attempt right now to tell you about the intricacies of radio, since you are not communications people, and in line with what we have just heard we don't want to use big words that are not understandable to everybody and anybody.

Incidentally, I come from the West and have lived in many of the States that are represented here today. I can recall some 15 years ago when I was an engineer in a broadcasting station. At that time it was a common habit for the local townspeople to come out to the radio transmitter and ask to be shown through. As a matter of courtesy and as a matter of advertising, we were glad to show them through. We then hastened through a spiel on the technicalities of the mechanism and then asked if there were any questions. We usually got this one, "Yes, tell us how it works."

Well, I don't want to do that today. First of all, when you get back to your States get a communications man to be on your State staff. Next, try to get a communications man on the civil defense staff of every target city in your State. Third, if you have questions on how to get started inform your communications people to write in to the Washington office and we will send you written material telling you how to get started. If you want a visit we will do our best to accommodate you.

There are three problems with which we are concerned here at the national office right now. You have named all three of them, although they are not broken down exactly that way. The first one deals with broadcasting. Will it be permitted to remain on the air during an air raid, and how long, if permitted.

Well, broadcasting offers a wonderful medium for disseminating information to people. They take special comfort from a calm voice telling them what to do and how to do it and when to do it. Then, broadcasting has some very grave disadvantages. One of them being that every broadcasting station in the world is world known. It has given its exact location in degrees, minutes, and seconds, latitude and longitude to the world. You see, there is an International Telecommunications Union with headquarters in Switzerland and they publish a famous list called the Bern list, which gives priorities on frequency usage to the various nations. In order to give priorities they must be furnished the location and the date operations are started.

So, with that information in enemy hands and knowing the facility of using radio frequencies for homing devices, we have a very bad combination. People can slide in on that beam just as if it were an aircraft beam guiding them in and they know the exact location of where the beam is going to stop, because they know in advance the exact location of it. We are studying right now just how far we might go in utilizing broadcasting stations.

Now, the third point is the use of amateurs. The amateurs have a series of bands going through the high-frequency spectrum. All have different carrying power. Some will carry only across the city. On a lower frequency some will carry around to China. We have already had some preliminary discussion with the military as to what amateur frequencies will be kept available for amateur civil defense purposes. A committee has been set up and I anticipate that soon we will get in operation.

#### GENERAL DISCUSSION—CIVIL DEFENSE COMMUNICATIONS

In response to a question from Mr. McIntyre, Mr. Burton said that no plans have been made to designate any single station or network in a region as a clear-channel station for the exclusive use of the Government or for broadcasting official information. Mr. Burton also stated that efforts would be made to utilize local ham organizations in civil defense.

Mr. Dreyfuss said they were having inquiries from the local defense councils that have ham operators in a network for local use as to what wave length they should travel on. In reply Colonel Beers states that they should use the facilities they now have and the wave length they are authorized to use. Later there may be a change in the authorized wave length assigned to them. Mr. Burton added that we are going to work out a sharing arrangement so that civil defense can use parts of all the other amateur bands, which number some 10 or 12. That has not been done as yet. A committee has been set up to do that.

Colonel McIntosh asked if it was planned to provide a communications frequency for civil defense per se, as distinct from any channels that the ham operators, fire, police, or other agencies may be using. Further, will such a channel be a Federal one or will we get such a channel for use within the State itself? Mr. Burton answered that he knew the frequency referred to. It is really more than a frequency, he said. It is a band of frequencies and is 50 kilocycles wide. It has been set up by the Federal Communications Commission as a disaster band. It was set up before civil defense became so hot and they didn't at that time intend it to be used exclusively for civil defense nor do they yet.

I talked to the chief of the Federal Communications yesterday and he said he would be very happy for us to work in it, but he thought that band should continue even after the civil defense agency may be a thing of the past. I agree with him on that. We still have to work out with the FCC the rules that will apply to that band. The FCC has worked up a set of tentative rules and they have come to us for comment. We sent them our tentative comments 2 weeks ago to this effect: They have a 50 kilocycles wide band. The first half is divided into channels 1 kilocycle wide, which means no voice communications can be used on those channels. Only Morse code can be transmitted over such narrow channels. Furthermore, to set up such a stringent frequency tolerance would mean that no amateur equipment could work on it. It would take commercial equipment and a very high type commercial equipment at that.

So, our tentative comment on that was that we thought we might review the separation of bands, the band widths and the tolerances. That is something we will have to send you further word on.

The FCC, Mr. Burton said, will license the people in your State and we will try to get something established whereby civil defense will know of all licenses that are issued. It will be something like the WERS of the last war where civil defense knew what was going on, but really FCC licensed the people in the States. It is definitely planned to give defense officials a channel to operate on.

## SHELTER

(By Leslie Kullenberg)

The Civil Defense Office has been studying the question of shelters for a considerable period of time. We have looked into the shelter experiences of all the foreign countries, particularly Great Britain. We have arrived at this general conclusion. We feel that major emphasis on the provision of shelters to the public should be concentrated in the designated critical target areas for a very practical reason. Any attempt to provide protective shelter to all of the population of the United States would cost such a terrific sum of money that it would break our economy. We would pull out of our economy materials which would be required in connection with a great many things—concrete, steel, air-conditioning equipment, communications equipment, pipe, and all the other things that go into any kind of a shelter.

Secondly, we recognize that even in the critical target areas there can be no absolute protection provided by a shelter. That simply means we must take a calculated risk. If we attempted to provide 100 percent shelter protection for all of the people in all of the critical target areas, the massive construction required in connection with the development of these shelters would be such that it would be prohibitive from an economic standpoint. Since, as someone mentioned this afternoon, we don't know precisely what point in a target area would be used as an aiming point and therefore what might be ground zero point, we would have to provide very heavy shelters over such a wide area that a great deal of money would be wasted. The very heavy shelters would be worth-while in providing protection if they happened to be under or near the ground zero point. For those that were outside, obviously the extra heavy construction provided would be wasted.

Now, that simply means that about all we can expect in the critical target areas is that we can provide minimum protection to the greatest number of people and thereby reduce the casualties as much as we can.

As I stated before, we have been studying this problem for a considerable period of time. We have enlisted the help of the Corps of Engineers of the United States Army to make a very thorough study of the whole subject of both the individual family type shelters and the communal type shelters. They are the group in the Government who have been studying this problem of protective shelter for the longest period of time. We expect to produce in the near future a shelter manual. This manual will contain a series of drawings on variations of two or three standard types of shelters. The dimensions will be those which will give the maximum of protection from an atom bomb exploding at a given distance from the shelter.

The Protective Construction Manual is in the process of completion. It discusses the type of protective construction which will be necessary in certain parts of the city. That is, we assume there is a certain place within the core of a city that would be a logical aiming point and that any new construction within a rather broadly defined area, in order to withstand an atomic bomb attack, would have to be of rather heavy construction. The construction standards will be thoroughly discussed in the manual. Since the forces dissipate themselves the farther out you get from ground zero, it simply means that less massive type construction is necessary out in the more distant zones. Naturally, these zones are going to have to be rather broad because we have to take into consideration first the bomb aiming errors and secondly the errors that might be caused by evasive action that might be taken by the enemy aircraft because of our own fighter aircraft. Under these conditions planting a bomb precisely where they want it might not be possible.

In attempting to define some of the problems connected with how many shelters should be provided, where they should be provided, and how they should be provided, we run into a great many problems. First, what degree of protection should be provided? Then, what use can be made of existing buildings? How accessible should the shelters be to the people who are seeking the shelter? Also what normal peacetime use could be made of these shelters, because there is an economic problem connected with it. Lastly is the problem of the direction from which the explosive forces will come. In relationship to a specific shelter it makes a great deal of difference whether the entrance to the shelter is faced toward the direction from which you could normally expect the explosion to come or away from it and the type of doors makes a great deal of difference.

There is also the question of improvising shelters. It was found in England during the war that a great many personal shelters were built by excavating an

area in the back yard or on the side of a hill, putting heavy timbers over the top of it and putting an earth fill over the top of that. That type of improvised shelter has some advantages in that the earth fill over the top, particularly in home shelters, will provide protection against the radiation which normally occurs in the explosion of an atomic bomb.

Now, until the Corps of Engineers is able to provide us in the very near future with the first of a series of draft manuals on protective shelters we are in no position to provide you with specific information as to how thick the walls of a shelter should be, how thick the roof should be or information about the problems of orientation of the shelter in relation to probable ground zero points.

There is this hopeful aspect to the problem, however. During recent months there has been a conversion of the design data based on static design to dynamic design. By that I mean that the time interval of the shock forces involved in ordinary high explosives are of rather long duration in comparison to the shock forces that will come from an atomic explosion. Therefore, since the duration of the forces is so much smaller, we find that in considering the effects of the shock forces from atomic explosions on structures that where we originally considered that two feet of reinforced concrete were necessary for protection reasonably close to a ground zero point, we may find that that requirement could very possibly be considerably reduced. That in turn means, of course, that the cost of construction of shelters can be reduced somewhat.

There are a lot of ways that shelters can be provided. We have a great many reinforced concrete and steel-frame buildings in most of our major cities. The lower and central portions of those building should be examined to see what can be done to strengthen them, particularly up to the first floor in order to withstand the debris load which will pile up on it if the building should be hit and collapse on top of the first floor area. We find that that is one of the most important things to take into consideration—the lower level of the building should be able to withstand the debris load.

We believe that there is great usefulness in existing subway structures, particularly if entrances or exits can be cut into buildings along the routes where people can get in and out. We also believe there are certain types of home structures which lend themselves to better protection than others. We are at present not in position to give the engineering people the specific answers they need. We do hope to be able to have those ready for you in the not too distant future.

There is a psychological problem in connection with the provision of shelters. The people in a community must be organized and trained and instructed as to where the nearest public shelter is. As we proceed civil defense planning and organization we should have regular shelter drills. Otherwise, you will find that the panic situation which has been described here by several people will take effect and a great many people will be killed who otherwise would not have been if they had received the proper instruction and training as to where the nearest shelter was and the quickest way to get there.

There is finally the question of the responsibility for the provision of shelters. As far as we can see at the present time the Federal Government will be responsible for the necessary research and development in order to come up with the design criteria and to provide you with the information on the effects of various types of weapons on the types of shelters that will be built. We think that the provision of shelters is a joint responsibility between the Federal Government and the State and local governments. The State and local governments will be asked to survey their needs for protective shelters, particularly in the designated critical target areas. They will be asked to execute any construction program on the assumption that the engineering services in the State and local communities will fully participate in such a program and that the development of educational material to counteract the possible panic effects of enemy attack will be a Federal responsibility.

Now, undoubtedly you have questions in your mind as to just what the ratio of the financing of shelters will be and how it will be arrived at—how much the Federal Government will pay, how much the State Governments will be expected to provide and how much the local governments and the private citizens will be asked to provide. Quite frankly we will not have the answer until we have a better idea of what protective shelters will look like, how much they will cost and how many of them will be needed. We will present that information to the Congress and from that point it is considered Congress will decide the extent to which the Federal Government will participate in a shelter protection program.

## GENERAL DISCUSSION—SHELTER PROGRAM

In answer to a question from Mr. Pryde, Mr. Kullenberg said that the United States Corps of Engineers was being called on for advice and assistance in developing standard designs and criteria for a construction program. It would be anticipated that the field offices of the Corps of Engineers would also cooperate on such a program.

Governor Garvey asked if there was any construction contemplated and if so, when and where could it be done? Mr. Kullenberg said that some construction is under way. There is the underground parking construction project in Boston. The people of Boston got together and decided that they wanted a dual purpose structure. They had a problem of parking and decided they wanted an underground parking lot. They applied to the Reconstruction Finance Corporation for a loan, since this was to be a self-liquidating project. The Reconstruction Finance Corporation asked for our opinion. We told them we thought it was a sound idea and that we would certainly give it all possible approval if they would make it a dual purpose structure for parking as well as an underground shelter. They made certain modifications in their design, which were based on the best information we have available at the moment. It will provide an excellent shelter for somewhere in the neighborhood of 40,000 people. Incidentally, on the basis of the changes they made at our suggestion the Reconstruction Finance Corporation granted a loan and we understand they are going ahead with their plans to start construction. They also included provision for a civil defense control center as well as an emergency first-aid room in the structure.

Now, we believe that is one approach to the problem of providing communal shelters and that possibility should certainly be explored in all of the cities which have the space to see if that sort of thing can be done. It takes a financial burden off the taxpayers since it serves a dual purpose. We certainly would encourage that type of thing whenever it comes up for consideration.

Shelters will be used for comparatively short periods of time and for short periods you can crowd a great many people closer together than you would ordinarily consider doing. You certainly don't need 150 square feet per person for a comparatively short period of time. We are not anticipating that people will live in these shelters night after night. If we did that we would be completely disregarding all the work that has been done by the Department of Defense in building up a warning system. The whole problem of shelter, of course, is tied up with how much lead time you have to get people into these shelters. As soon as the raid is over the whole civil defense organization goes into operation and in those areas where people are no longer in danger you will obviously get them out because they will be part of your civil defense organization and you are going to need them. So, you can crowd a lot of people into a pretty small space for a short period of time and get away with it.

In connection with the discussion of shelter, Mr. Wilkinson made the following statement: "It is quite obvious that the whole shelter program is largely contingent upon the ultimate decision on the type and timing of air raid warnings in a city such as New York. It is quite impossible to anticipate the need for adequate shelter on a scale which would house the transients and day-time population—all of them trying to get cover after the air raid warning. Consequently, it seems to me that before there is any policy decision on the very costly construction of large capacity new shelters, we are going to have to think out the circumstances under which they will be used; how effective they will be; whether people are going to live in them for long periods of time; or do we anticipate that people get under cover when a bomb goes off. Those are all variables which have made us feel that for the moment we are only justified in going ahead with the modification of existing structures so that they will afford maximum protection at minimum expense."

## PLANT PROTECTION

(By Carl Gabel)

Gentlemen, the objective of the plant protection program of civil defense is to give the maximum of guidance in plant protection for the protection of personnel and facilities that are engaged in vital war production. We are trying to help them to protect themselves from enemy action, whether it be a bombing raid from the air or sea or whether it be from sabotage, espionage, or subversiveness. Anything that would curtail vital production or endanger personnel by an enemy action, we feel is our concern.

Our program is divided into two parts. The first part is composed of regular civil defense measures for those plants which are located in industrial areas which are likely to be attacked. The second part is a preventive protection program for those critical plants that are so necessary to all-out mobilization.

Earlier, someone brought up the question about the criticality of plants. The establishment of the criticality of a plant is to be done by a board composed of representatives of various Federal agencies. We anticipate this group acting as an evaluation board which would be under a Government agency. One of its functions will be to evaluate all plants and assign criticality ratings for plant protection purposes.

Part 1 of our plan is similar to the civil defense measures that were installed in industrial plants during the last war. That is, an emergency plan on a voluntary basis. By that I mean that it should be manned by adequately trained volunteers under the direction of a capable coordinator. This plan should be one that can be quickly implemented at any time during an emergency.

Here we have a chart—and you gentlemen will notice that it is similar to the one that was issued during the last war, with the fire services, police services, medical services, and maintenance services. Now, we do not wish to say that this is an ideal chart for all plants. In small plants you may wish to contract and combine some of these services. In large plants which spread over a great area it will be necessary that the organization and services be expanded.

There has been some discussion about whether or not we should have these services organized for duty when plants are not in operation. We feel that these services should be manned on a 24-hour basis, as in many instances facilities located in small communities must rely upon their own personnel for aid because the local assistance will be inadequate. Should this personnel not be needed by their own plant they could be of assistance to the local civil defense organization. It is also necessary that the civil defense organization in a plant coordinate their program with the local organization.

On the self-help principle of civil defense we hope that plants will be in a position that will enable them to handle all emergencies in their own plants, whenever these emergencies may occur, but in those extreme emergencies when they do not have sufficient help in the plant it will be necessary to rely on the local civil defense. It also may mean in your coordination effort that the plants will be asked to help the local civil defense organizations in adjacent areas. It also may mean that these plants will be in a position to help other plants in the vicinity. It should be coordination for mutual aid in the entire area and among the plants in the district.

The preventive protection, of course, is a protection that we hope to put into effect before an attack. This is the protection against sabotage, espionage, or subversiveness. We use the usual plant protection measures to combat these particular actions of an enemy—guard forces, fire fighting, fire prevention, control of visitors, control of vehicles, and last but not least, screening of employees.

I mention the screening of employees because just because a man is a good mechanic or a good operator doesn't necessarily mean that he is the most desirable type of man you would want in that particular plant. We think that employers should make every effort to screen employees and try to get the best they can, not only from the standpoint of skill, but also from the standpoint of loyalty.

You will notice that we passed out a few booklets. One is entitled, "Principles of Plant Protection," which has been issued by the Department of Defense and the other booklet on plant protection which was developed by a plant protection group for the Chicago exercise. They are similar and we believe that all plant protection methods are about the same basically with some variations. Our program will be similar to the one by the Department of Defense and at this particular stage of development the effort is toward standardization of plant protection principles of all Government agencies, which should avoid confusion.

We may find from this Evaluation Board that the Department of Defense has so many plants assigned to it for supervision in plant protection. We may find that the Department of Commerce or the Department of the Interior may have some plants or facilities assigned to it for protection purposes. The Atomic Energy Commission may also have additional plants assigned to it for protection and we feel that Civil Defense will be assigned some critical plants for protection. Therefore, we are trying to design our plant protection principles on a standardized basis so that if a plant that has been assigned to Civil Defense for guidance in plant protection is shifted over to the Department of Defense for plant protection purposes, there will be no confusion and that it will be perhaps a matter of adding the extra requirements that are being asked for by the Department of Defense.

There is one thing I would like to ask you, gentlemen: If you please, when you go back to your States ask the industrialists and the people who are managing those facilities to realize the importance of a good plant protection program. We are not going to get by in any type of all-out mobilization if we don't have industry solidly behind us. The production that is going to come from these critical plants is what we will need. If you will please impress upon them the importance of coordinating with your office I feel it will be of great assistance should an emergency occur.

#### GENERAL DISCUSSION—PLANT PROTECTION

In response to the inquiry of Mr. Woods whether auxiliary police would be reestablished for plant protection, Mr. Gabel, Mr. Wadsworth, and Colonel Beers indicated that the Civil Defense Office is not anticipating the establishment of auxiliary police for guarding facilities which may be assigned to Civil Defense. Whether auxiliary military police will be established at plants assigned to the Department of Defense will be determined by that Department.

Mr. Woods also asked whether the Civil Defense Office advocated fingerprinting all employees of plants at this time, adding that certain plants were fingerprinting their employees for the morale effect. Mr. Gabel recognized the psychological value of fingerprinting employees but stated that full use of the fingerprints could not be made at this time because the FBI was unable to process fingerprints until funds were available for this activity.

Mr. Wallace of Hawaii and Mr. Woods of Colorado stated that fingerprints of their civil defense personnel were being processed by their own police facilities. Mr. Gabel and Mr. Wadsworth felt this would be a helpful procedure.

General Hufft commented that the FBI which formerly provided a loyalty check of employees of installations had stated that the Munitions Board would take over this responsibility. They are now cleared by the State police, but this does not provide Nation-wide coverage.

Mr. Gabel, in response to several questions, said that an evaluating board determines criticality of plants and assigns critical plants to various agencies of the Government, the responsibility of guidance, and in some instances the supervision of plant protection. Upon assignment of plants to Civil Defense for guidance in protection, the Civil Defense Office will notify each of the States which plants in the State are considered critical and have been placed under Civil Defense.

In addition, any plant assigned to the Department of Defense will get its guidance and supervision from one of the three departments in the Department of Defense—Army, Navy, or Air Force. Furthermore, some facilities will have such a high critical rating that the Department of Defense will take them under their supervision.

In addition, we are working on an agreement now whereby the agency having the interest in the plant for protection purposes, such as the Department of Defense, will implement civil defense in that plant; that calls for cooperation and coordination with local civil defense units for exchange of aid.

Colonel Hayes asked: "If a steel plant or a chemical plant requests information to supplement their internal security over and above what their plant protection supervisors have, where do we secure that information?" Mr. Gabel said: "That will come from the agency that is charged with the responsibility for guiding or supervising the particular facility. When Civil Defense is notified of plants under their jurisdiction for guidance and protective supervision we will immediately notify the State civil defense directors so they can go to the management."

We intend to set these plants up as autonomous civil defense units which will call upon local civil defense agencies only in case of need. In case of a disaster which a plant can't handle with its own internal fire brigade, the plant will call on the local civil defense organization. It is going to be a coordination job between the local civil defense people, and the plant and other plants. They will have to determine who can and who cannot come on to the premises by coordinating clearance between plants and the local civil defense agency.

Mr. Leonard pointed out that this was a reason why we should have NSRB screening of civil defense people. He said if we screen in civil defense through fingerprinting or some similar method, we won't have subversives going up to the plant gates, but the Federal Government hasn't spoken on that. I would like to recommend that. It is very important for loyalty and security reasons and also for personal identification reasons. I recommend that further consideration for the fingerprinting of all volunteers for civil defense be continued.

Mr. Wadsworth in reply said that a great many organizations have recommended that and we welcome it. He emphasized what had been pointed out

earlier that the FBI cannot undertake the processing of fingerprints with its present personnel and appropriations. Also, the FBI is unable to handle loyalty clearances of State and local civil defense personnel because of statutes and directives which do not allow release of data in the FBI subversive file. We suggested for a loyalty oath and suggested State and local legislation for the same sort of thing. Beyond that we can't go. The local law enforcement agencies have some facilities for screening and that is highly recommended.

### CIVIL DEFENSE TRAINING

(By John W. Sundstrom)

The purpose of this report is to indicate how the Federal Civil Defense Agency is working to provide guidance and assistance to State and local authorities in developing their civil defense training programs.

This assistance takes several forms at this time. You have learned already of the plans for early production of a number of training manuals. These will contain suggestions for planning, organizing, staffing, training, and operating your civil defense organizations. The manuals are important guides since they provide standardized training in civil defense for the entire country and provide a method for achieving uniformity in planning, establishing, and operating your civil defense programs. To emphasize the need for such uniformity here is unnecessary. In practical terms, however, the national civil defense plan outlines policy, while the proposed training manuals make that policy live. We plan, for example, to prepare and issue a considerable number of instructors' guides to assist those responsible for training, especially at the local level. Based on the content of the courses, these guides will break down the course into the appropriate number of lessons, will contain detailed outlines of these lectures, and will recommend audiovisual aids and examinations for use in the courses.

Another way in which the Federal Government has provided guidance and assistance in civil defense training was by conducting training courses for medical and radiological specialists. The purpose of this instruction was to prepare specialist trainers from States and Territories who would plan and develop medical and radiological defense courses at the State level and within the States. In the course entitled "Medical Aspects of Atomic Warfare," 157 medical specialists have completed 1-week courses. There were 78 specialists from 43 States and Territories who completed the 5-week course on radiological monitoring. Both courses were sponsored cooperatively by the Atomic Energy Commission and the National Security Resources Board.

Other courses soon to be conducted in the medical and health areas include the following:

- (1) Nursing aspects of atomic warfare.
- (2) Public health aspects of atomic warfare.
- (3) First aid.
- (4) Nurses aides.
- (5) Home nursing.

The recent publication entitled "United States Civil Defense" proposes several national civil defense schools for State and local directors of civil defense and their staffs. Since the budget authorized under any Executive order creating an operating civil defense agency can be expected to be small, we may be able to establish only the Federal civil defense staff college until such time as Congress appropriates funds for an expanded Federal Civil Defense Office.

We expect to establish the staff college first since it will satisfy the greatest and most urgent need. In this planning stage the immediate need is for assistance to top planners and administrators in civil defense.

The primary objectives of the civil defense staff college will be to furnish top civil defense planners and administrators with a means, place, and occasion for obtaining the latest available information on civil defense and civil defense techniques and a forum for discussion and solution of civil defense problems common to them all.

The staff college will provide an opportunity for studying and developing civil defense policies and practices. Those attending the courses will constitute a qualified group of experts in civil defense, prepared to discuss how civil defense policies and practices operate at the State and local levels.

Our present plans envisage two types of courses at the staff college: One of short duration for those who supervise top, full-time civil defense officials and a longer course, primarily of interest to the principal, full-time civil defense planners

and administrators and to their staffs. If funds are authorized, it is expected that the first of these courses will be under way in February 1951.

The Federal Government will allocate the student quotas among the States for attendance at the staff college; however, students will be selected cooperatively by the State and local civil defense authorities. There probably will be larger quotas for State authorities in the earlier courses. Obviously, civil defense representatives of critical target areas will have priority over those from non-critical areas.

The Civil Defense Office plans to propose the establishment of several Federal technical training centers. The primary purpose of these centers will be the training of those responsible for administering civil defense training programs at the State and local levels of government. These centers will provide a medium for standardizing technical and specialized civil defense training. Standardization is particularly important because of provisions in recent Federal civil defense publications for mutual aid and mobile support, not to mention the fact that a sizable segment of our population is fluid. Equally important is the size of the training job to be done in civil defense.

Those attending Federal technical training centers will be responsible for training others within the States, probably using existing State educational facilities. This training technique sometimes is referred to as the "multiplier principle" of training. In other words, this kind of civil defense training would consist primarily of providing instruction to civil defense trainers, who would, in turn, teach other trainers at the next lower level, and so on down to the person at the end of the line who has to do the job for which the training was intended.

There will be a standardized segment of instruction in courses at technical training centers. This segment or package of training will include the basic instruction necessary for a volunteer to do his special job as a member of a civil defense team. In order to carry out the multiplier principle and to standardize training, students at these centers will be asked to use this package of instruction at all training levels within States.

Our present thinking is that the following courses at the centers can best solve those requirements which cannot be met readily with existing facilities and experience in the States:

- (1) An atomic, biological, and chemical course for training instructors in radiological defense.

- (2) A general course in civil defense, to provide basic training for all civil defense workers including such areas as basic first aid, improvised rescue, and organization and operation of civil defense.

- (3) A course in rescue training, such training to be given largely by demonstration and practice techniques in demolished and partially destroyed buildings. These buildings will be constructed as part of what we might call a rescue street.

We expect to find a need to conduct other courses at the technical training centers. For example, we believe that there will be a need for a course in plant protection.

Other ways in which we expect to provide you with guidance and assistance in civil defense training include development of audiovisual aids and other training materials. In addition, we plan to encourage the development of civil defense courses in schools and colleges. The Federal Civil Defense Training Group also is responsible for developing suggested policies and procedures for the procurement and use of civil defense workers. In this connection, we plan to furnish descriptions of and qualifications for typical civil defense positions, and guidance on organizing and operating a volunteer office.

These are but a few of our plans for assisting you in the development of your civil defense training programs. If we are to be most helpful in meeting your training needs, we recognize that we must provide means for determining what those needs are. Furthermore, we must follow up on our training to be sure that it is realistic and practical. We hope that you will encourage your civil defense training directors, among others, to communicate to us informally what they conceive their training needs to be and how best they can be met. Be assured that your suggestions and theirs will be welcome.

Remember that we can serve you best in civil defense training only when all of us are working together.

#### DISCUSSION—TRAINING, NATIONAL STAFF COLLEGE

In discussing training further, Mr. Sundstrom said that the largest job of training will be done by the States. "The obvious question then, is what role

does the Federal Government serve? It is to provide guidance and assistance to you to best meet your particular training requirements. Therefore, the type of operating training that we might do would be an attempt to supplement your own training—that for which you are already well equipped to do. In that connection we recognize that one of the early needs in training at this stage is guidance and assistance to you who are planners, top planners, and administrators in civil defense.

"Therefore, because our budget will be limited, we have determined that if we are to set up any one type of national school as promised in the plan, that school should be a civil defense staff college. The purpose of this college would be to provide the latest information on civil defense, civil defense technicians and particularly to provide an opportunity for discussion of civil defense problems which you as top planners and administrators would have. We would expect that the staff college would provide us with an opportunity to discover how the plan, the policies, and the procedures that have been established are working out. You people could tell us and members of your staff could help us in that respect.

"Our concept at this time is that we should have two types of courses at the civil defense staff college: A shorter course, which would be for the purpose of covering the things which I mentioned as the purpose of the staff college; the longer course would be for the persons who are spending their full time on civil defense staffs at the State and local levels.

"Obviously, the Federal Government would have to determine pretty much what the quotas of students would be. I know there are considerations of which you are all familiar. There is the criticality of areas and there are certain other factors involved that I think are quite obvious. However, the actual selection of students to attend would be determined cooperatively, as we envisage it, by the State people and the local authorities in your States.

"Congress willing, we hope to set up several technical training centers. These centers are primarily to train your top people in certain specialist areas. Here we are interested in supplementing the kind of training you will require in your States. For the most part you will provide fire and police training. We will concern ourselves at the technical centers with providing training in areas which are peculiar to civil defense—rescue work and radiological defense. In all likelihood there will be a general basic course, which all civil defense workers should have, in such things as first aid, improvised rescue work, and on organization and operation of civil defense. I also remind you that we feel those are in the offing and will depend on the good will of Congress. Our target date for the staff college is February 1951."

In answer to a question as to whether anyone would be sent to the English staff colleges, Mr. Sundstrom said:

"Some personnel are there now, not as students, but rather as observers to pick up information on rescue work as it is done where they have partially demolished and completely demolished buildings. We have an architectural engineer getting that type of information for us. We have had personnel in England in the past. So, we are familiar with what they have been doing. To answer your question specifically, we do not plan to recommend that certain State representatives go to England to attend their courses. They have rather limited facilities both in their technical training centers and particularly in their staff colleges."

Mr. Hall inquired whether the names of the 79 graduates of the radiological monitoring course could be made available to the State civil defense directors. Mr. Wadsworth indicated that the list would be sent to all State directors.

Mr. Washburn indicated that they were starting some training programs now. "For several years we have had in-service training in the fire fields, but in these other categories do you recommend that we hold up further training until you have brought your schools along to a further degree of completion?" Mr. Sundstrom replied that the Civil Defense Office is attempting to supplement what the States are now equipped to do. In other words, I have not said anything about fire or police training because the States have the facilities for the most part and although the training will not be standardized you can be reasonably sure that it will fit into the pattern.

Our training is supplementary in the sense that we are trying to furnish those Federal courses that are peculiar to civil defense. For example, there is nothing quite comparable to rescue training right now. To be sure, we have mine rescue training, but there is no training in rescue quite comparable to that required under an atomic attack. You have some guidance in United States Civil Defense and as long as you are within the bounds outlined therein, you can be reasonably sure that your training will fit the general pattern with only slight adaptation necessary.

Mr. Starr asked: "Do I understand, then, that you do not prefer the training to proceed on radiological monitoring and the other phases of the medical side that

were offered in these colleges? I ask that question for this reason: In my State one of the institutions gave the monitoring course and we have 13 of those people who are ready to go out and teach what they have been taught. We also have seven doctors who attended at Salt Lake City and are ready to start if they get the signal. Should we wait or go ahead with training in our State by using the doctors who took the monitoring course?" Mr. Wadsworth referred this question to Dr. Robert H. Flinn, of the Health and Medical Resources Office of the National Security Resources Board. Dr. Flinn said: "I think Mr. Sundstrom hit the nail on the head when he pointed out the desirability of having a balanced training program across the board. In the civil defense plan it was pointed out that many of these special training courses, such as the one for radiological monitoring and the one on medical aspects of atomic warfare, might well await the forthcoming basic training manuals which will be out before very long. Also, in the matter of monitoring instructions there is a question of developing an economical instrument that will do high range counting under field conditions. In other words, we need better instruction for civil defense purposes.

"However, if any States are equipped to go ahead we would encourage it. New York State has done quite a bit of training for its doctors and public health people on this problem and within the last 2 weeks the District of Columbia has had a series of courses given by the medical society. The main thing is that we are not prepared at the moment to urge every State to go full speed ahead until the basic manuals and instructions are ready."

General Huff explained that he had arranged for a 1-week course in Louisiana in radiological monitoring later in October and inquired whether it was the recommendation of the Civil Defense Office that he proceed with the course. Dr. Flinn answered: "I would say that if you are all equipped and ready, go ahead with it."

In answer to a question from Admiral Browning about the atomic training of physicians, Dr. Flinn said that during the past few months 148 teachers from 38 States have been given courses in the medical aspects of atomic weapons. Since then, 78 teachers from 43 States have been trained at the Atomic Energy Commission laboratories. It is contemplated that these two groups will form the second echelon of teachers, who will in turn train a third echelon of instructors who will conduct courses throughout the States and local communities.

As to the question of suitable instruments for civil defense purposes, Dr. Flinn said the Civil Defense Office has been working with the Atomic Energy Commission, the Department of Defense, and the Bureau of Standards. In the near future we hope to have for the specialist, effective monitoring instruments for civil defense purposes.

In response to Mr. Pryde's question as to how the instruments might be bought, Dr. Flinn said. "That is one of the undecided questions as to how much the Federal Government, how much the States, and how much the localities will finance." Mr. Wadsworth explained further that we do have an indication in United States Civil Defense of what our planning has been in that direction. Certainly the long-range consideration that is handled by the State mobile monitoring people will be able to get a good deal of help in acquiring that equipment. But the small dosage devices that the individual defense worker uses while working in a contaminated area is of such type and price that the Federal Government probably will not enter into that procurement field.

Mr. D. P. Lee asked Dr. Flinn if the Federal Government has recommended any special type of radiological monitoring equipment. He said, "No, we are working on the development of instruments for high-range rugged counters that can be used under field conditions that will not be too expensive."

#### CIVIL DEFENSE REQUIREMENTS

(By William H. Gridley)

In your review of the United States civil defense plan, you have noted that the need for economy is frequently mentioned. This emphasis on economy is necessary since we are only one of the claimants for the overtaxed resources of the country in emergency.

Standardization is conducive to economy. It is therefore to be expected that we should standardize civil defense equipment and material specifications at the outset.

Our principal tool in this standardization will be the Standard Requirements Specifications Manual.

Part I of this manual will include standard requirements lists. These lists will set forth those items which are recommended as standard equipment for the respective civil defense services. They are determined by study of World War II, United States and foreign experience combined with review by representative advisory committees.

In part II the standard lists are explained in the form of brief descriptive specifications, complete enough to identify each item. In the upper right-hand corner will be given a standard Federal specification symbol. This reference to an accepted specification assures the necessary quality control in procurement, production, inspection, storage, and distribution which will follow after the initial stage—determination of requirements—has been completed.

Having determined what the recommended items are, we must next find out how many will be required. These requirements, together with those of the military and civilian economy in general, will be matched with resources at the national level to assure equitable allocation of available resources.

In determining requirements we are going to need the help of your planners throughout the country who know more about their local conditions than anyone else. As you probably know, this same principle of feeding requirement estimates up from the grass roots is used by the military in presenting their estimates to the National Security Resources Board. Fortunately, our problem is not as involved as that of the military, since fewer items and smaller quantities of equipment are involved. However, with 48 States, Territories, and several thousand communities to be considered, it is certain that uniformity of approach to the problem will have many benefits.

Briefly, the recommended approach to the problem by your planners is this:

First the critical classifications of the particular areas, as well as the mutual aid and mobile support reserve obligations, will be determined as explained by preceding speakers.

Next the load imposed by the disaster will be estimated by analysis of the local emergency and the mutual aid and mobile support reserve obligations involved.

Knowing the loads and the part of this load one team can handle, the number of teams needed for the respective services can be estimated. Supplementing the teams with the necessary operational and administrative personnel will complete the organization. The recommended equipment for each team is known, so what is required for the complete organization is readily determined.

Standard forms for reporting requirements estimates have been designed. The forms have been designed to facilitate reporting, with carbon copies provided for retention at local, State, and regional level. Summary forms are included for local and State coordination of requirements. We believe these forms will be helpful not only to the Federal office but also to the States and cities as a comprehensive record of civil defense requirements. Instructions for the use of the forms will be embodied in the manual Procedure for Estimating Standard Requirements.

You will note that no reference has been made as to who will furnish the equipment and material required. We feel we must first take an objective view of our whole requirements picture as above outlined.

It might be well to point out that present inventories will not be reported on the forms. The estimates first requested will include only items needed to adequately equip the civil defense forces in preparation for possible attack. This will be a measure of the immediate additional load which will be imposed upon resources by civil defense. Rehabilitation and replacement estimates will come later and can be made by the same reporting system.

In submitting these standard lists and specifications to the States, Territories, and urban localities, we will solicit suggestions for improvement of the standards. Thus the standards will be strengthened by their use in the requirements estimates and should be in finished form for the procurement, production, and distribution phases.

The benefits to be reaped from the suggested standardization include: Economy of production, since tooling up will be simplified; lower unit costs which attend mass production; promotion of uniformity of training since equipment is standardized; simplification and systemizing of records; reduction of misunderstanding by adherence to one standard; interchangeability—which is of vital importance in civil defense, where mutual-aid pacts will require shifting manpower and material from one area to another.

A similar system is being set up to estimate the manpower requirements of civil defense. By means of standard organization lists, job descriptions and reporting forms, we will promote efficiency and understanding in the equally important study of the effect of civil defense on manpower resources.

## FINANCING CIVIL DEFENSE

(By James J. Wadsworth)

The question of money to finance our needs in civil defense is now and will continue to be high on our list of considerations. This applies to you and your municipalities as well as to us.

You and we must present our needs for funds to our legislative bodies and, when funds are received, must use those funds with the utmost discretion. Every dollar of the taxpayers' money must go as far as possible. And we must use every conceivable means to conserve to the limit every resource we now possess, both tangible and intangible.

Throughout United States Civil Defense are found indications of Federal plans for financial aid in various areas of civil defense. Since these references are scattered throughout various chapters, it is possible that readers have not fully recognized the intent of the Civil Defense Office, the Chairman of the NSRB, and the President in approving the plan as issued. These various items are, therefore, gathered in one statement in order that you may have a clear idea of what the Federal civil defense agency plans to recommend to the Congress in this regard.

The following are the areas in which we believe that it is proper for the Federal Government to participate in whole or in part:

1. In the field of research there are several references in "United States Civil Defense which indicate 100 percent Federal underwriting for projects, including construction standards and criteria for public shelters, code and performance standards for air-raid-warning signals, sirens, etc., the effect of atomic and other weapons on typical structures in American cities, performance and capability standards for radiological monitoring instruments; type and quantity standards for all sorts of essential civil defense equipment, etc.

2. Training costs, which would be absorbed in whole by the Federal Government, are: The establishment and operation of a national staff college, the establishment and operation of several national technical schools, the production and distribution of training manuals, the procurement and distribution of certain training aids, materials, and equipment.

3. In the field of communications, the Federal Government through the Continental Air Command of the Air Force is installing and operating the primary phases of air-raid warning, part of which will be taken over by civil defense and will be operated from the Federal level down to the State or state-area level. All communication equipment in which the Federal Government is involved, i. e., national to regional office; regional to State or State-area office, will be procured by the Federal Government.

4. Procurement and other costs for the health program to which the Federal Government should assume total responsibility are—

- (a) Stockpiles on a regional basis of medical and surgical supplies, strategically placed to service two or more critical target areas.

- (b) Financial aid to the American Red Cross for use in all aspects of the blood program; also storage and processing of blood and blood derivatives at selected centers.

- (c) Preparation and conduct of courses in radiological, bacteriological, and chemical warfare for health technicians and other specialists; procurement of high-range counters for special radiological surveys on a long-range basis, to be performed by mobile teams probably at State level; special-type laboratory equipment to be used on a mobile basis for the various phases of the special weapons defense, particularly bacteriological and chemical.

5. In the field of shelter protection, in addition to the research already specified in section 1 above, the plan states that the Federal Government will finance "a portion of the construction cost of approved community and heavy-type shelter." The exact percentage of this responsibility cannot be determined until the total import of a national shelter program has been estimated in more careful terms than is now possible. It is obvious, for example, that if we recommend to the Congress that the Federal Civil Defense Administration assume 50 percent of the cost of such a program, the first question would be "50 percent of what?"

All of the above indications of commitments on the part of the Federal Government are to be found in one form or another as stated above in the United States Civil Defense. In addition to these statements, however, there is another field which appears only by implication or by omission from the major plan. This is the field where the Federal planning agency does not feel that Federal appropriations should be used in certain areas of civil defense. These are, speaking very roughly, as follows:

1. Federal appropriations will not be used for assistance to States or localities for the payment of salaries of civil defense workers at those levels of Government.
2. Federal appropriations are not planned for the procurement of personal equipment of civil defense workers.
3. Federal appropriations are not planned for the procurement of communications equipment to be used below the point at which the Federal Government is involved. This means that intracommunity, intercommunity, and interstate communications equipment, as a general rule, will not be furnished by the Federal Government. Comparatively simple dosage meters for defense workers entering contaminated areas are not planned for Federal assistance. This is in contrast to the high range counter equipment mentioned in 4 (c) above.
4. The Federal Government is not planning to furnish large amounts of equipment which is normally owned and operated at State and local levels during peacetime. This means, for instance, that standard types of fire-fighting equipment will not be furnished in great quantities. Here we remind the States and cities of the mutual aid and mobile support plans, in which we claim that it is far more economical and realistic to utilize 20 fire companies from 20 surrounding communities than to procure the equipment for 20 additional fire companies for exclusive use of the target city.

#### GENERAL DISCUSSION—ALL AREAS OF CIVIL DEFENSE

Before concluding each meeting, Mr. Wadsworth invited further questions on any phase of civil defense.

Governor Garvey and Mr. Wilson of Arizona stated that many States, including their own, were vitally concerned with the problem of reception of evacuees from other States. Mr. Wadsworth replied that the States were urged in United States Civil Defense to make plans for evacuation of population from critical areas, including surveys of housing and facilities in reception areas. Some of the States have already made evacuation plans to be financed by themselves. We do not know whether the Federal Government will assist in financing this activity. That is one of the things Congress is going to have to help us determine. What level of civil defense will we have? You can put on a certain program for X dollars. You can put on a much bigger program for triple X dollars, but we don't yet know how far we can go. At this point the States should be working out mutual plans for sending and receiving evacuees.

If an adjoining State is going to send you X thousand evacuees, perhaps some reciprocal or reimbursement arrangement could be made. If you can't do that and Congress decides it is a proper use of Federal funds, perhaps the Civil Defense Office can step in and put up aid stations in your States.

Governor Garvey stated that Arizona has made inventories of food, shelter, petroleum, and water supply and has held meetings with California and Nevada, with representation from the Sixth Army Corps, to plan orderly evacuation. But suppose a bomb drops tomorrow, what can be done? It would be difficult to prevent panic evacuation. He felt it was a bigger job than the States could handle. Colonel Beers emphasized that it was the basic responsibility of the States to care for their evacuated citizens. Also, citizens should be shown by public education that their greatest protection lies in orderly evacuation. Mr. Wadsworth indicated that if a catastrophe occurs before Federal and State plans are ready, it might be necessary as a last resort for the military to assist and the Red Cross could be counted on. Mr. Hugh Gallagher also pointed out that funds would be available immediately to feed and clothe evacuees from the \$5,000,000 "Disaster relief" appropriation which the President had signed the preceding Saturday.

Governor Garvey stated that he had been requested to ask a question in connection with fire protection. "Some of the municipalities out in our section of the country have some old equipment they have discarded. They want to know if they should try to put that equipment into commission and, if so, who would help them to pay for it. Mr. Wadsworth replied: "That is one of the questions being asked all over the country. As it can be done through local resources, we say you should bring your fire department up to full peacetime strength as nearly as possible. At present, the Federal Government has no plans for assisting municipalities in repairing old fire equipment for service. That, too, is the kind of thing that we will have to take up with Congress."

Mr. Washburn asked: "Does the Federal Government, either NSRB or the military, recommend that public alarms be installed ready for use at this time?" Mr. Wadsworth said: "We recommend that wherever there are existing instru-

ments of public alarm, no matter of what type, that they be utilized on a code to be developed very shortly. The ordinary types of electronically or motor-operated sirens are not adapted to codes. The Bureau of Standards is now developing codes and also a type of siren that can be used on codes, such as factory whistles or other types of noise-making equipment. Meantime, if you use your own code, it should be standardized within the State.

In response to a question from Mr. Hall regarding mobile support units, Mr. Wadsworth stated that some manuals were to be issued in this field. At the request of Mr. Wadsworth, Colonel Gault explained further that the manuals will contain definite suggestions as to make-up of teams and their duties and will also deal with sustaining properties—how much food, fuel, and other supplies should be carried.

Mr. Hall also asked: "In your plan is thought being given to having the Federal Government supply some of the equipment for these mobile units? Jeeps, fire-fighting equipment or anything of that sort?" Mr. Wadsworth said: "Generally speaking, the equipment used by mobile units will be equipment ordinarily used in your own home communities. The Federal Government should help out financially with special types of equipment not normally used in peacetime. We don't want to make this a heavily paternal type of program. The States are quite articulate on the subject of Federal regulations, which almost invariably follow financial aid from the Federal Government."

Mr. Eric Biddle stated that a booklet would be issued on the process of conducting the test exercises, together with a printed, condensed version of the Chicago, Seattle, and Washington experiences. In the case of Chicago it will be a fairly complete account and in the cases of Seattle and Washington it will be a summary. The three together provide a fairly complete picture of the planning exercise method.

Mr. Wadsworth concluded the conferences with the following statement: "In conclusion, we want to ask again that wherever possible you send to us your public reports and manuals and anything that you feel will be of interest to us and which I know will help. Any time you have criticisms or comments, send them along. I want to repeat again that field men will be available. They will be available in comparatively small numbers at first, but we hope to add to that staff immediately. When necessary, and only when necessary, we plan to repeat meetings of this sort. We won't call you until we feel it justifies the time and expense of your trip to Washington. In the meantime the information we can give you through field officers and through correspondence and through sending you material will be continued.

"I want to say for myself and on behalf of my staff that we appreciate to the full your being here today and the tremendous interest you have shown in the discussion. It has been of great value to all of us. I only hope it has been of near that much value to you. Remember, as far as we are concerned, our watchword is going to be cooperation; first, last, and always. Any time that you don't think you are getting full cooperation, please don't hesitate to let us know."

At the conclusion of the eastern conference, Mr. Wilkinson made this statement: "May I on behalf of the eastern conference of civil defense directors express to you personally and to your staff our genuine thanks and appreciation for this opportunity of meeting with you and discussing our mutual problems in this field of civil defense. I think there is not one of us here who has not gotten a great deal out of this meeting. I think you have personally and officially infused new life into our planning and respective activities and I know you can count on all of us individually and collectively to give you the most complete cooperation and we will look to you for future guidance."

(Adjournment.)

## COMMUNITY POLICY

---

TUESDAY, APRIL 1, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met, pursuant to call, at 11:30 a. m., in room 48-G, United States Capitol Building, Senator Brien McMahon (chairman) presiding.

Present: Senators McMahon (chairman) and Knowland; Representatives Durham, Holifield, Price, and Cole.

Also present: Sumner T. Pike and Henry D. Smyth, Commissioners; Carroll Wilson, Manager; Carlton Shugg, Deputy Manager; Walter Williams, Production Manager; Joseph Volpe, General Counsel; Everett Hollis, and Brig. Gen. James McCormack, Director of Military Application, all of the Atomic Energy Commission.

William L. Borden, executive director; Edward Heller, Walter Hamilton, William Bergin, and Kenneth Mansfield, all of the committee staff.

Mr. DURHAM. The hearing will come to order. The Commission has a matter to discuss with the committee this morning with regard to the problem raised by the limitation placed on the appropriations bill by the Appropriations Committee. That is the House Appropriations Committee.

Mr. PIKE. And, I understand, the proposed action of the Senate Appropriations Committee, too.

Mr. DURHAM. You may proceed and tell us what problems it raises.

Mr. PIKE. As the committee is aware, we have had in the last 6 or 8 months two enormous programs added to what we were previously doing: one, the expanded program for production of fissionable materials centering largely at Oak Ridge, although some of it is at Hanford, where our construction work is now going on; the other one, the H-bomb program, which is a more recent one.

In each of these we are trying to telescope the time element as much as possible, trying to save time in the one place to get into operation and, in the second place, to get to where we can make an experiment to see whether the H-bomb can be designed so as to work, and if it can, to get into production.

Now, as to those two, the real centers of those efforts, although they will be spread somewhat, one will be at Oak Ridge and the other one at Los Alamos.

Now, we have, as you know, a recommendation of the House Appropriations Committee that the fees paid to the community operators—I will use that for a short name—at Los Alamos and at Oak Ridge be cut approximately in half beginning with this fiscal year

and approximately the same recommendation for the transportation system at Oak Ridge.

Also the committee is aware that these towns were set up as auxiliaries to the laboratories and production facilities, and they are still obviously auxiliary plant facilities in the sense that if the plants or laboratories were not there, the towns would not exist.

Almost as obviously, if the towns were bad towns, it would be another deterrent to the quality of the people we need to come to live in them.

We feel that to live with either the recommendation of the House Appropriations Committee or the recommendation which I understand is being considered by the Senate Appropriations Committee, would throw these community affairs into such a state of confusion at just the wrong moment that it might very well be the greatest deterrent to getting on with the H-bomb program that we have to contend with.

We realize that we have been open to criticism, we have criticized ourselves, your committee has criticized us, both appropriations committees have criticized us for somewhat different things, and there is not much use of our going over back history.

The fact is that, looking ahead, if we are forced into a major change-over in community operations in the next several months, looking, I am afraid, almost surely to direct Government operation, with its attendant waste, and I think almost obvious waste of Government money, we are going to be in real trouble.

We take this very seriously. We have been attempting for a long while to work toward better communities, both from the point of view of economy and from the point of view of communities that make sense, as closely as possible to normal American communities.

We have not gone along fast enough to suit you. We have a lot of outside help and advice. But we are inclined to think now that we ought not to have this thing shoved at us at this time. We are not doing this to ask for just time alone. We do think that very possibly if we can have an objective, disinterested survey made by a panel or group of people who would be above any suspicion of having interests in the situation, a group that would be satisfactory to you, do a job of coming up with a report we could all take seriously and study, it might give us an indicated course of action and that it would probably be very helpful.

We have thought about this for some time. We had thought at first perhaps that it might be the sort of thing that the committee should do to avoid its being accused of self-interest or self-service. It looks as though perhaps that would not be too practical. You would know more about that than we would.

Our recommendation is now, one, that this committee, through its membership, really try to convey to the Appropriations Committee the seriousness of this situation in its effect on the two really close-to-the-impossible jobs we are trying to do.

Mr. DURHAM. Did you do that at the time you were having the hearing on the House side?

Mr. PIKE. Yes, sir. We did not put up this particular problem. This occurred to us later. In the Senate we thought we had explained very clearly the close relationship of these communities to the actual management of these two very large jobs, but apparently we failed again. I do not think it was for want of trying.

We have always felt that this community operation was an essential part of plant management, it is going to be an essential part of plant management.

Mr. DURHAM. Has there been a reduction in the amount of money required for the operation since it began under the present arrangement?

Mr. PIKE. I think so.

Mr. DURHAM. As I recall, they have considerably reduced.

Mr. PIKE. I think they have, but I do not have the figures here. What I do know has happened, is that the expense of operating the town at Oak Ridge, the first year we ran a deficit of about \$11,000,000, and for this coming year we think it will be much less than \$4,000,000. That, to me, is much more important as an index of town operation than the amount of the fee paid, which, as I remember, is \$180,000 a year. It has been reduced very substantially. I do not have the figures.

Mr. COLE. Who pays Roane-Anderson, you or Carbide?

Mr. PIKE. We pay Roane-Anderson. That is a separate contract.

Mr. COLE. Who pays Zia?

Mr. PIKE. We pay Zia.

Mr. COLE. You pay all of them? Do you pay American Transit?

Mr. PIKE. Yes; all three of them.

Mr. COLE. I do not see where that provision of the House bill would affect the situations.

Mr. PIKE. Well, only in one case they will not work and in the other case they will keep on and sue us and probably have a good case. At least that is what they have told us they would do.

Mr. COLE. I notice Senator McMahon's statement before the Senate committee raised the question that the House provision might jeopardize the contract with Carbide. How can that be if Carbide does not have any dealings with or responsibilities in connection with town management or transportation?

Mr. PIKE. This was a legal concept, and really I do not think I am competent to follow it. We do know this: These contracts were freely entered into after arm's-length negotiations between ourselves and the contractors. This would have, of course, a very disturbing effect outside of the thing I am making the major point on, on all our fee contractors who in the middle of a contract period may find that fee arbitrarily cut by legislative action.

This, of course, is very clear. If somebody is going to devote a staff for 3 or 4 years and feels he has a valid contract with the Government, then along during that period you say the contract is not any good, this is the disturbing factor. I do not know how high to rate, it, but I rate it rather high.

Mr. COLE. Maybe we ought to hear your suggestion.

Mr. PIKE. It happens that two of these contracts expire at the end of this year. The other one expires in the middle of 1951, the end of fiscal 1951. We think, frankly, we ought to carry out these contracts in good faith as they were entered into. Our principal suggestion, however, is that we get immediately on a study by some outside disinterested objective people, who can come up with some idea that will make sense to the lot of us and get this community situation to where it will not be a constant source of irritation to all and

sundry and where it might not be a major obstacle in the way of doing these two jobs.

Mr. DURHAM. When the study was made before, we tried to compare this with the operation of the services rendered by this organization as compared to running a city of comparable community facilities and population.

Mr. PIKE. Something of the sort.

Mr. DURHAM. Was that not done?

Mr. PIKE. It was done, but that missed one of the larger points there. This is not only a municipal organization, but it is a big real estate and commercial operation, too. Ordinary city management has police, fire, streets, garbage, sewage. I do not know whether it furnishes fuel, but we do, and the removal of ashes. We have rent collecting, repair of all buildings, et cetera.

Mr. DURHAM. He directs all those functions to be carried out. We pay for them, of course; is that right?

Mr. PIKE. We pay for them. They have done a pretty good job, it seems to me. The jobs were slack when we first came on. They were new after the wartime and we have no defense.

Mr. DURHAM. On a per capita basis at Oak Ridge, \$180,000 is what fee for rendering such a service?

Mr. PIKE. About five or six dollars per person. There are about 32,000 or 33,000 people there.

Mr. COLE. How many people are engaged by Roane-Anderson who give this administrative service for which they are paid the \$180,000?

Mr. WILLIAMS. Seventeen hundred.

Mr. COLE. None of the salary of that 1,700 personnel is paid by the Commission?

Mr. PIKE. We reimburse the contractor for all of it.

Mr. COLE. How many people are engaged in employment by Roane-Anderson for which Roane-Anderson receives from the Commission \$180,000?

Mr. PIKE. We reimburse all their expenses. They represent management only.

Mr. COLE. What do they do for \$180,000?

Mr. PIKE. This is their profit on the operation.

Mr. COLE. What is the total operation?

Mr. PIKE. Thirteen million annually, and there is 110 or 111 million dollars' worth of property in their charge.

Mr. COLE. What is that percentage?

Mr. WILLIAMS. One and one-half percent.

Mr. PIKE. One and one-half percent of the annual income and about fifteen one-hundredths of 1 percent of the capital value involved per annum.

Mr. DURHAM. The Appropriations Committee, how deep did it go into this?

Mr. PIKE. This is all we could make out of it. There was no hint before the report came out, as I remember, that this action was proposed. We found it out when we read the report.

Mr. DURHAM. This involves all the utilities, public-health functions, schools, the whole operation of the city?

Mr. PIKE. Yes, sir.

Mr. DURHAM. It could be very disturbing if you cut all the services 50 percent, if you have not been rendering too much service.

Mr. PIKE. You see, this is merely the fee. This is not the services themselves. But it does happen that these contracts were negotiated out and these people—of course, one says he will quit. The other says he will go on and put in a suit in the Court of Claims. Our people believe he would have a good suit.

My real reaction is that these communities are a part of the plants just as much, let us say, as the cafeterias in the plants.

Mr. DURHAM. We might set up a city government and hire our own personnel and operate the things and get rid of this.

Mr. PIKE. We do not get rid of it, Mr. Durham, by doing that.

Mr. DURHAM. Why?

Mr. PIKE. In the first, let's take Oak Ridge. We do not have any charter. We do not have any tax base. The Government owns all the property, including all the houses and all the stores.

The usual thing that you have in a town of 30,000, you have an industry, which helps make up your tax base. That is not in the town.

Mr. DURHAM. I realize that. We are paying that and we ought to, as far as the cost of the present utilities and schools and streets and public health, and all the things that go into the operation of the city. Why could we not have a good man in there and let him manage the thing himself?

Mr. PIKE. We had a little try at this in, I think, early 1946. It only lasted a few months and was one of the finest pieces of empire building started there, Mr. Williams told me, that he ever saw. We got out of it rather quickly and went to the contractor arrangement.

Mr. COLE. Where was that?

Mr. PIKE. Oak Ridge. Our feeling is that we do not see, we have not found any simple and easy answer, and we have tried a good many ways.

What we would like now is to really get a good panel, something like this Bugas panel that just finished on our security set-up, to put some time on it and come up with something we will all view as objective and honest and able, rather than try to prejudge what they will come up with—say here is a problem, it is a serious problem and one thing we can say is that this offers the most serious obstacle right now to getting on with our H-bomb and our expanded program for fissionable material production.

Mr. DURHAM. How many men does Roane-Anderson have at the present time at Oak Ridge functioning on this? How many do they actually have at Oak Ridge? I understand Roane-Anderson uses personnel back in the home office to carry on some of these functions.

Mr. PIKE. I do not believe so, Mr. Chairman. It may be true.

Mr. WILLIAMS. It is all included in the record.

Mr. SHUGG. If you are speaking of executives, they have 21 of the parent company termed "executives" there, and we reimburse their nominal salary at Oak Ridge. The top salary is twelve thousand.

Mr. DURHAM. I am trying to find out how many people actually draw this \$180,000. They ought to be able to give you a justification, in the employment of the personnel for the expenditure, whether it is fifteen hundred or what.

Mr. PIKE. That goes to the parent corporation as its gross profit on the deal. All their expenses are reimbursed at Oak Ridge.

Mr. DURHAM. Evidently they assign some persons to carry it out.

Mr. PIKE. They are paid for part of their time and in some cases whole time while at Oak Ridge. I understand those people also get some bonuses.

Mr. COLE. Does Roane-Anderson operate in other places?

Mr. PIKE. No, sir. It was formed only for this thing and does this one job.

Mr. COLE. What is its capital?

Mr. PIKE. It is a directly owned subsidiary of the Turner Construction Co., which is a pretty large concern. It is a purely synthetic corporation, set up for this purpose.

Mr. HOLIFIELD. This, in effect, is a management fee. This is not their operating expense; is that right?

Mr. PIKE. Not at all.

Mr. HOLIFIELD. That is paid in addition?

Mr. PIKE. That is right.

Mr. HOLIFIELD. That is a management fee?

Mr. PIKE. That is right.

Mr. HOLIFIELD. The point involved is: Are they rendering efficient service and enough economical service to justify this type of a fee? That is really the point involved, and the alternative to it would be that the Commission itself would have to operate the town.

Mr. PIKE. I am afraid that is correct.

Mr. HOLIFIELD. If that occurs, that means every complaint coming from a resident or businessman or anybody else then becomes of primary consideration to the Commission in place of the buffer which Roane-Anderson now operates, a buffer agency.

Mr. PIKE. You are right.

Mr. HOLIFIELD. In other words, it will make this committee a District of Columbia committee so far as the towns are concerned.

Mr. PIKE. You will be in for it as well as ourselves.

Mr. HOLIFIELD. They will come to you and then come to us and complain about it.

Mr. PIKE. I had not thought about it.

Mr. HOLIFIELD. So the alternative of this is that we become a District of Columbia committee on every community operation of AEC.

The CHAIRMAN. How much is the budget? How much does Roane-Anderson spend to get \$180,000?

Mr. PIKE. It is about \$13,000,000 annual expenditure and about \$110,000,000 capital invested.

The CHAIRMAN. That budget would seem to me to be awfully high. You cannot take that amount—\$110,000,000, did you say?

Mr. PIKE. In that neighborhood, capital invested in the town.

The CHAIRMAN. Averaging that among our American cities of similar size, how does it compare budgetwise?

Mr. PIKE. I think it is on the high side.

The CHAIRMAN. I should think very much so. It is a long while since I paid any attention to municipal government, but I would think it is \$5,000,000 high.

Mr. PIKE. Of course, Mr. Chairman, you will remember that includes all the real-estate management, collecting of rents, repair of buildings. This is something completely outside of ordinary municipal government. It does not go too far from a 50 to 50 ratio, as I re-

member it, the work they do; but you have a real-estate management job as well as a municipal.

The CHAIRMAN. I had not thought of it.

Mr. PIKE. That is extremely important.

Mr. HOLIFIELD. I have given this study and I have been on several subcommittees that have given these community problems study, and I think that the method you are using is right. I do not know whether the \$180,000 fee is too much or whether it is too little, but I know that you could not get any management concern such as, for instance, George H. Lee—isn't that a large management concern?

Mr. PIKE. It sounds familiar to me, but I do not know.

Mr. HOLIFIELD. They will go in, for instance, and take over a business that is having trouble, they will streamline and make the business efficient, and they always exact a management fee.

Now the thing that concerns me is not the method by which this is being handled, because I realize you would not fire a man if the Commission took over. You would still have to have the same number of supervisory people and probably more.

Mr. PIKE. We would have to have more on account of Government regulation. It would cost us a half million dollars more a year without any fee just from getting the people in civil service and the leave. Of course, we would then have to have them all FBI'd, too. The cost would be enormous for the two towns. It would cost us at least a million dollars extra that we can see, besides, I am sure, a lot we could not see.

Mr. HOLIFIELD. I am perfectly willing to approve of this present method, and I think that the attention of this committee and Congress should be devoted to whether this is a reasonable management fee in comparison to other management fees of big industries and other large projects which are matters of industrial record. I think that is the point this committee should concern itself with.

Mr. COLE. The Appropriations Committee did not dispute the method of running the place down there, did they? The dispute is entirely with the amount of the fee.

Mr. PIKE. On the fee, except I think in the Senate there was a little question about whether a New York corporation ought to be running a Tennessee town.

Mr. COLE. From my standpoint I will say that when the Federal Government reimburses all of the costs that a person incurs in an operation, where that person has no capital investment whatever, a fee of \$180,000 is altogether too much.

Mr. PIKE. I only have one or two pieces of evidence on the other side, Mr. Cole.

Mr. COLE. What are they doing to justify this cost to the Federal Government of \$180,000?

Mr. PIKE. I have some belief in the profit system, and when a corporation undertakes to do a job for us, I think it is entitled to a profit over its costs.

Mr. HOLIFIELD. Is it not true that while this is spotlighted—

Mr. COLE. What are its costs?

Mr. PIKE. Its costs are all paid.

Mr. COLE. It has no costs.

Mr. PIKE. Its profit is about 1½ percent on the gross business conducted.

Mr. COLE. Not on what it costs them. The profit to them is  $1\frac{1}{2}$  percent on what it costs us.

Mr. PIKE. We certainly could get no private organization to go in for nothing.

Mr. COLE. Of course.

Mr. HOLIFIELD. Is this not an analogy? If you ask one of the shipbuilding companies to build a ship at a cost plus fixed fee, that fixed fee might be 2 percent or 5 percent of the cost of the ship. The Government pays all of the materials cost, it pays all of the employees' wages on that ship, and all of the supervisory employees of the shipbuilding company, and the fixed fee itself is for know-how, for management, for correlation of the work of the project.

Mr. PIKE. That is about it.

Mr. HOLIFIELD. That is exactly what you are up against here. You are up against a cost-plus-fixed-fee operation of a town, just like the cost-plus-fixed-fee building of a plant or a ship or any other Government facilities; is that not right?

Mr. PIKE. I think so, sir.

Mr. HOLIFIELD. Of course, in a fixed fee, it is always based, as you say, on the profit system. You cannot get any big industrial-management organization to go in and manage anything just for the straight cost.

Mr. PIKE. Frankly, if anybody offered to do it for me for nothing, I would look at him with suspicion, thinking he was either a fool or a crook. I would not want to take him on.

Mr. HOLIFIELD. Whether the fee is the right amount, I do not know, I would like to have some evidence presented that this fee is a reasonable fee, commensurate with the amount of management which they actually do. I would like to have a comparison, and undoubtedly you have made that in arriving at this fee.

Mr. PIKE. We have tried our best. We have negotiated it out. To me, as a Commissioner, who went on this fee, I believe in living up to my contracts. This fee was carefully negotiated. That contract has 8 or 9 months to run.

While the Government has a right to break its contracts, I do not believe it is ethically more justified than any other concern.

Another thing that convinces me that this fee is not outrageously high is that this matter of the fee has been aired in the House and Senate committees for 2 or 3 years now. If this fee were high, we would have had contractors running around with their tongues out trying to get this business. To the best of our knowledge, we have had no hint of any reputable people who have come around saying they would like to dicker with us when it runs out.

Mr. HOLIFIELD. Is it a publicly negotiated contract? The general contracting trade knows you make these contracts for certain periods of time?

Mr. PIKE. Yes; and, of course, we deliberately did this for 4 years, I believe it was, so we could get a breathing spell so it would not expire every year.

Now, this year we have been figuring—you see, when this was made you had to go out and catch a contractor, trap him, and put him in a box and make him sign. It was a tight market.

Now, there are plenty of contractors. We get 20 or 30 floating around after every good-sized contract.

We had planned to shop this thing around about the time of its expiration. You cannot give exact specifications that are close enough to tell a fellow exactly what the job is and is going to be. We had expected to get several people in to see what the best deal was we could make. I give it to you that if we arbitrarily have to break that fee or break that thing off in its expiring months, we will discourage a lot of contractors who otherwise might like to do business with us.

Mr. HOLIFIELD. That is another factor of breaking this.

Mr. PIKE. It is only negative testimony.

Mr. HOLIFIELD. Maybe Mr. Williams can answer this. In ordinary cost-plus-fixed-fee contracts, let us say in construction, what is the percentage of fixed fee ordinarily? What is the range of percentage ordinarily of the fixed fee in relation to the gross cost?

Mr. WILLIAMS. It is on a varying scale. If your job is a hundred thousand dollars, it might be as much as 6 percent. When it gets up to 10,000,000, it might be around 2 percent. When it gets up to a hundred million dollars, it gets down to three-quarters of a percent.

Mr. HOLIFIELD. This is a \$13,000,000 operation, as I understand it.

Mr. WILLIAMS. That is gross.

Mr. HOLIFIELD. This \$180,000 fixed fee, then, would represent about  $1\frac{1}{2}$  percent?

Mr. WILLIAMS. Just roughly.

Mr. HOLIFIELD. Of the gross operation?

Mr. WILLIAMS. Yes, sir.

Mr. HOLIFIELD. Now, is that in line with the ordinary fixed-fee, cost-plus-fixed-fee contract, which the Government lets in the ship-building and all other lines?

Mr. WILLIAMS. The way we arrived at our fees for our construction management was to contact a large number of construction firms throughout the United States, well-known firms, and to get them to submit to us a curve of what they thought was a reasonable fee.

We got the Navy, the Corps of Engineers, we got the various Government agencies to give us their fees. We took the fee during the war and from all of these we came out with a fee curve which we use on construction and which is agreed to be reasonable.

Now, that gives the basis on which we negotiated the contract with Roane-Anderson. We split out of that contract those portions which most nearly resembled construction and to those portions we applied, after deducting for complexity, and so on, we applied the general construction fee.

For instance, there is a portion there for collection of rents. They collect several million dollars, I think 6 or 7 million dollars a year for us. On this we did not allow them the same fee at all. We allowed them one-quarter of 1 percent for that. All of this we broke down and went through to justify the fee which we paid them.

I might point out that the Roane-Anderson Co. have written us also, they have talked to us, this negotiation went on over a long period of time. They feel that they should have \$25,000 a month and that is what they asked. If you would talk to their vice president today, Mr. Horr, he will tell you he is doing this for less than he thinks he should and is probably appearing as a sort of a soft touch to the industry because it is less than they think they should get for the number of people they have tied up.

Mr. DURHAM. Is he on record making such a statement?

Mr. WILLIAMS. Sir?

Mr. DURHAM. Has he written the Commission or anything?

Mr. WILLIAMS. Yes; we have a letter here that he wrote. I will be glad to give you a copy of it. I do not have it with me, but I can give it to you.

Mr. DURHAM. Submit it for the record, if you will.

Mr. WILLIAMS. I will do that.

(The letter referred to above is as follows:)

ATOMIC ENERGY COMMISSION,  
Washington, D. C., April 20, 1950.

Mr. WILLIAM L. BORDEN,  
Executive Director, Joint Committee on Atomic Energy,  
United States Congress.

DEAR MR. BORDEN: We are enclosing a photostatic copy of a letter, dated March 9, 1949, from Mr. Clinton N. Hernandez, vice president of the Roane-Anderson Co., to the Atomic Energy Commission. This letter was referred to at the hearing Tuesday morning, April 18, before the joint committee, and it was requested that a copy be furnished for insertion in the record.

Sincerely yours,

WALTER J. WILLIAMS,  
Director of Production.

MARCH 9, 1949.

Subject: Contract No. W-7401 ENG-115, Fixed fee.

UNITED STATES ATOMIC ENERGY COMMISSION,  
Oak Ridge Operations.  
(Attention: F. W. Ford, Acting Director, Office of Community Affairs.),  
(Oak Ridge, Tenn.)

DEAR SIR: The Commission determined that basic policy changes and reorganization within the Community Affairs Division of the Commission at Oak Ridge necessitated revision and changes in the Roane-Anderson Co. contract. The basic policy changes upon which this determination was made, and which Modification No. 20 effectuates, might be briefly stated as follows:

The Commission plans that the Company operate without detailed direction by Commission officials. However, the Commission intends to retain the responsibility for broad basic policy determinations. The company will carry out the intent of such determinations through procedures and methods initiated by the company. This concept of operation is a distinct departure from past performance by the company under the original contract and modifications thereto. This increased management responsibility is developed in more detail, later in this letter, under the heading "Additional responsibility."

Initiated by the city manager, in September 1948, numerous conferences have been held looking to the completion of that objective. On March 1, 1949, in conference at Oak Ridge, modification No. 20 was agreed to in principle by officials of both the company and the AEC. It is confidently expected that this modification will be ready for execution on March 10, 1949. The changes in the contract are comprehensive and modification No. 20 might well be considered a new contract, notwithstanding the fact that the former scope of contract work has not been enlarged as to new operations to an appreciable extent.

During the several conferences, it was mutually agreed that discussion with reference to fixed fee would await the final negotiation of modification No. 20. There has been a meeting of the minds on all other matters contained therein. We, therefore, feel it appropriate to address you on the subject of fee at this time. From informal discussion of the subject, we understand our request will have your early consideration.

The current fixed fee is the sum of \$16,000 per month, made effective July 1, 1947. We had planned that modification No. 20 would provide for a revised fee. But because of the long delay in its negotiation; the fact that the company is currently executing new phases of operation without technical coverage; the desire of all concerned to execute the new modification at the earliest possible moment and the assumption on our part that this application will take time for consideration by you and your staff, leads the company to suggest that

modification No. 20 be executed with the fixed fee remaining as is. We suggest that the fee, if revised, be made effective for the new fiscal year beginning July 1, 1949.

With what we hope is full knowledge of the implications and responsibilities of the company under modification No. 20, we request your consideration and approval of a revised fixed fee in the sum of \$25,000 per month.

Since the inception of contract W-7401, ENG-115, the fixed fee has been changed twice. From September 23, 1943, to October 30, 1945, it was the sum of \$25,000, per month; from November 1, 1945, to June 30, 1947, the sum of \$14,000 per month, and from July 1, 1947, to date, the sum of \$16,000 per month.

It is considered pertinent to examine into the conditions and reasons for these changes in fixed fee.

There is no doubt that the original fee of \$25,000 per month was low in comparison with the general concept of fees on Government contracts even as low as they were during the war period. During the war period the company was thinking less in terms of profit and more in terms of service to the Government in the prosecution of the war effort. During the initial negotiations of the contract there is no doubt that the company or the Government had no appreciation of the scope, the volume, or the difficulty of execution of such a contract. There was no precedent for such a contract and, therefore, no basis for comparison.

Our original contract provided for an increase in fee when additional personnel from the regular staff of the Turner Construction Co., were assigned to the work. Notwithstanding the fact that 32 additional personnel over and above the 10 initially agreed upon, were assigned to the work, the company made no request for additional fee.

In October 1945, upon the request of the Government, the company agreed to reduce its fee to \$14,000 per month. At that time, the war having ended, it was assumed by both the company and the Government that the operation at the Clinton Engineer Works would not continue for a much longer period and that the company's work would gradually grow less in importance and volume. In fact, the opposite proved to be true. The responsibility, scope, and volume increased. Many operations released by the company to the Government were returned to the company, for reorganization and operation. On January 1, 1947, the Atomic Energy Commission took over the contract. Our contract expiration date had been established as June 30, 1947. With the short period of time before contract expiration, the company made no effort to increase the fixed fee.

Subsequent to the take-over by the Atomic Energy Commission from the Manhattan district, negotiations and conferences led to the execution of modification No. 14 to the contract. This modification incorporated the original contract and all modifications thereto. Effective July 1, 1947, the fixed fee became \$16,000. It must be admitted that the company did not visualize the comprehensive changes in policy and procedures effectuated by this modification to the contract, nor did the company contemplate the reduction in management activities and supervision in the Commission's City Management Division. We doubt that the Commission itself was then cognizant of the changes which since have been accomplished. This fee has proved to be inequitable. It can readily be seen from the foregoing why we arrive after 5 years of operation with a fixed fee which we consider too low and which we hope we can convince you should be raised.

Through the negotiations and conferences preceding the final draft of modification No. 20, we have gained an insight and knowledge of what lies before us. We believe this modification entails greater risk and more responsibility for the company. We feel that both we and the Commission have a better understanding of what is to come in the future operations, management, and maintenance of the Oak Ridge area. The effects of an approach to normalcy; the opening of the gates to the public; the entree of a new, free, uninhibited newspaper; closer relations with the citizens of Oak Ridge and the inescapable knowledge of the close cooperation and coordination required to make the partnership of the company and the commission successful; are unknown but their effects and repercussions can be estimated. There follows substantiation of why we consider modification No. 20 entails greater risk and more responsibility for the company, and why the current fixed fee of \$16,000 per month is considered inequitable.

### 1. Performance

The company has operated under the contract with great credit and a minimum of criticism of its operations by governmental authority. Both the United States Engineer Department and the Commission have officially expressed approval of the company and its leadership in all capacities. The volume of work completed under the contract since September 23, 1943, is impressive to say the least, but the fact that the contract scope included every known activity necessary to the life of a city of 75,000 people is more impressive. As of January 31, 1949, the total expenditures of the company in the performance of its work was the sum of \$101,124,057; the collection by the company of cash revenues for the use of Government-owned facilities from lessees and others was the sum of \$39,617,903; making a total of expenditures and collections in the sum of over \$140,000,000. The total fixed fee paid the company amounted to only approximately eighty-six one-hundredths of 1 percent of the total. When it is considered that the particular nature and complexity of the services required for the operation, management, and maintenance of the Oak Ridge area are much more complex than for a construction project of the same dollar volume, it is apparent that the company has received a very low fee for its performance of the contract to date.

### 2. Additional load

Modification No. 20 adds a greater work load. The fact that the original contract and its supplements had developed a scope of work to include every possible requirement of the Government, makes it impossible to state that the scope of the contract has been increased. However, many operations and activities (within the scope of the contract) have passed to and from the company and the Government as new policy or the best interest of the Government required. The following activities newly added or presently operated by the Government are passed to the company for operation under modification No. 20:

- (a) The preparation of and operation under financial budgets. Reimbursement to the company is not limited thereby, but the operation of the contract certainly is more exacting and difficult.
- (b) Operation of the city permit bureau.
- (c) Operation of a radio repair service for the police department.
- (d) Inspection and maintenance of fire extinguishers.
- (e) Inspection and maintenance of sprinkler systems.
- (f) Operation or contracting therefor of the company telephone and communications system. The risk of nonreimbursable expense herein is present but of unknown volume.
- (g) Operation of Elza substation to the extent of dispatching primary current to the city of Oak Ridge and facilities adjacent thereto.
- (h) Operation and management of AEC surplus property and warehouse facilities in addition to our current warehousing and salvage operation.
- (i) Operation of the watchman service, currently under the police department.
- (j) Increased service by the company safety department.
- (k) Additional procurement for the Commission of prime contract materials not purchased by the Commission's prime contractors (electric ranges, etc.).

The transfer of the above duties to the company has made it possible for the Commission to decrease its own personnel and management responsibilities. The company is in full accord with the principle behind this program, and we feel it to be to the best interest of the Government. This program does, however, increase the management responsibility of the company.

### 3. Additional responsibility

The comprehensive future planning initiated by the Commission management of Oak Ridge operations on January 1, 1947, and as now fully envisualized by the master plan contemplate for the company duties and responsibility for the initiation of procedures, and policies certainly not contemplated in prior fee negotiations. It is granted that all phases of the development of Oak Ridge area under the master plan will not be effective during the life of the present company contract. That in itself develops difficult problems in the interim periods between phases of town development. Again the company finds itself confronted by problems for the solution of which there is no precedent. The Commission finds itself in the same position. There has been delay in approval of company recommendations, and it is to be expected there will be further delay in establishing basic policy. The company feels, as we know the Commission feels, these interim periods of operation offer great difficulties, demand greater coordination, leadership and vision than does a construction operation in accord-

ance with proposed plans and specifications or a management operation for which past performance and precedent over the years has defined a proved method for successful performance. The following administrative problems, activities and services add, in the company's opinion, greater responsibility than previously contemplated by prior contractual provisions or procedures and policies of the Commission currently known to the company during prior fee negotiations.

(a) Added responsibility for legal services.

(b) Added responsibility for public relations, the province and extent of which cannot at this time be defined.

(c) Added responsibility for recommendations by the company for the establishment of equitable revenues to the Government for the use by third parties of Government-owned facilities, such as, residential, dormitory, commercial rents, and so forth.

(d) Added responsibility for the unprecedented effort to attract private capital under long-term leases to develop a fully-owned governmental single purpose area and its attendant difficulties and problems. The real-estate promotion operation, already planned by the company and under way, necessitates study, investigations and planning certainly never before contemplated in prior contract negotiations.

(e) Added responsibility for study, advice and recommendation by the company in the design and planning of future large-scale construction developments by the Commission, which the company will later operate in the city area of Oak Ridge.

(f) Added responsibility for the study, advice and development of new light industrial and commercial areas.

(g) Added responsibility for recommendations to change present and past procedures of all operations of the company, where such operation will be more in accord with good business practice, to the best interest of the Government and in accord with the policy of free enterprise.

#### 4. *Transition periods (between phases of town development)*

What the periods of transition from the present to the future of the Oak Ridge area will bring in the form of added responsibility, changes in procedures and operation, condemnation or praise from the public affected, is unknown to both the company and the Commission. Certainly the effects and repercussion of (a) the opening of the gates, (b) the change to private ownership, and (c) the possibility of Oak Ridge being a chartered self-governed municipality, present problems to the company impossible to estimate at this time. The company desires to go on record here that if this request for increased fixed fee is granted, the company will make no further request for increase in fixed fee prior to the termination date of the contract on December 31, 1950, except when initiated at the request of the Commission.

#### 5. *Take-over of housing operation by the company*

When the company and the Commission negotiated our current fixed fee of \$16,000 per month effective July 1, 1947, the operation, management and maintenance of 9,200 residential housing units was currently under subcontract to the Oak Ridge Housing Co. Subsequent to the negotiation of the fee, the company terminated the subcontract in November 1947 and has operated, managed and maintained housing with its own forces since that date. This change was recommended and initiated by the company. The experience of the company's operation since that date (without additional fee) has proven successful and greatly to the best interest of the Government. Coordination of subcontract maintenance; more efficient maintenance by the company; preferable levels of maintenance and greater satisfaction to the householder has resulted. The change in operation of housing and in many other operations of the company during the last 2 years is in accord with the Commission policy enunciated in past conferences, but for the first time being officially confirmed in modification No. 20.

Since January 1946 the colored hutments, apartments, and housing have been operated and managed under a concession agreement by the J. C. Ridenour Co. It has been decided that the company will operate, manage, and maintain this facility with its own forces in the near future. Planning toward this objective and coordination of moves toward its accomplishment are currently proceeding. This facility was similarly subcontracted when modification No. 14, establishing the fee at \$16,000 per month, was negotiated.

The operation of both the above facilities with the company's own forces adds work load and responsibility over and above administrating such an operation on the basis of a subcontract or concession. In that fee negotiations under modification No. 14 were influenced by the fact that both white and colored housing were to be operated under subcontracts and concessions, the fact that both facilities are to be operated with the company's own forces in the future, certainly should be weighed favorably to the company in your consideration of increasing the fixed fee.

#### *6. Company progress under new Commission policy*

The company's operation during the past year has been colored by the changes in policy and organization made effective by Commission management before and during that period. Official commendation was received in the fall of 1948 for the company's efforts and ability to take greater responsibility and effectively prosecute the spirit of the Commission's enunciated desire for greater company responsibility in management.

During 1948 the company reduced its complement of personnel from approximately 4,000 to 2,600. This cut in personnel conformed to a proportionate reduction in management personnel of the Commission. With little change in the volume of operation and work this record bespeaks excellent progress in the short period since the new policy was initiated. The company feels well satisfied that current effort and plans for future changes in operation and procedure will fully satisfy the Commission's desire for effective prosecution of the changes made effective officially by modification No. 20. With the close contact that is being and has been maintained by the staff of both company and Commission, it is felt that the Commission should have complete assurance of the successful accomplishment of the present objectives without further trial or experience with the company's progress in the new work.

#### *Conclusion*

The company feels confident that its request for a fixed fee in the sum of \$25,000 is equitable and in accord with the facts as outlined heretofore. We would like to repeat that the operation of the subject contract is more difficult than a construction contract of equal money value. On the basis of the 1949 budget, i. e., expenditures, approximately 22 million plus revenues 7 millions; a total of 29 million dollars, the percentage fixed fee of the company as requested in the sum of \$25,000 per month is slightly over 1 percent. (This fee certainly is low by any method of comparison.) It might be added that the proposed fee does not take into account the risk that the General Accounting Office of the Government might determine as nonreimbursable costs that have been incurred by the company in good faith and with the direction or authorizations of the Commission, or upon its own initiative and responsibility, both of which have been greatly enlarged as a matter of new policy by modification No. 20. These risks, by good management and the experience gained in the past 5 years' operation of the contract, we hope to avoid.

We appreciate your past consideration and would be most willing to meet with you at your convenience to discuss any matter pertinent to the subject.

Very truly yours,

ROANE-ANDERSON Co.,  
CLINTON N. HERNANDEZ,  
*Vice President.*

Mr. WILLIAMS. They outline what they are doing for us and what they think they ought to have. From this we took off on the negotiations and, after a long period of time, we just more or less arbitrarily said, "We will give you \$15,000 a month."

Now last year it was \$16,000 a month and the Appropriations Committee raised serious objection. We went back to see what we could do about it, and we thoroughly reviewed this, everything we were doing. We broke it down into several different things to try to arrive at a reasonable way to calculate a fee. We came out with \$15,000 a month, to our satisfaction. It did not satisfy the contractor, but we said, "This is it," and he decided he would accept it, although he is not satisfied.

Mr. HOLIFIELD. Of course, we also want to consider that there is quite a recapture of that \$180,000 in income tax, as far as the people involved are concerned. There is at least a 38-percent recapture immediately from the corporation and then when it goes into the individual pockets of the owners as dividends, there is also an additional income tax deducted from that, is there not?

Mr. WILLIAMS. Yes; all of that. When they get through—that is no problem of ours.

Mr. HOLIFIELD. That is true.

Mr. WILLIAMS. But that is a fact.

Mr. HOLIFIELD. I am pointing out that, after all, when a man goes into a business operation, he figures his net. That is important to him. He does not just figure his gross.

This company undoubtedly figures, they do not figure the \$180,000. They figure their net.

Mr. WILLIAMS. For their own employees, there are certain employee benefits they pay out of this. I do not know the exact amount, but I know this is true. I have here a list of the key people on the job. Here is one fellow that came with the company December 4, 1943. He has been with them since that time.

Here is another one that has been with them for 4 years 9 months, and he went with Roane-Anderson in 1944.

Here is another one that went with them in 1945.

Here is one, the assistant superintendent of building maintenance, who has been with them 20 years.

There is one in here for 18 years, another for 27 years, another 11 years, and so on.

Now, these are the people that make the corporations a profit if they are used somewhere else. If you expect, if the Government expects, that they can go out into industry and get industry to do the Government's work on a charity basis, the Government can expect they will get that kind of performance. We have to pay a reasonable fee in order to get people who are sufficiently efficient in their work to show us a return. We feel we have. Our budget, if you will review it, will indicate what we have said.

Mr. HOLIFIELD. I was going to ask you about the 13 million approximately gross cost of operation of this Oak Ridge facility. Do you exercise any control at all upon the cost, and if so, how?

Mr. WILLIAMS. We exercise control. We approve certain transactions that they may make. We formulate policies for them to follow. But the actual saving in practically any contract depends on the attitude and the efficiency of the contractor.

Mr. HOLIFIELD. As far as personnel, I know you have reduced your personnel since the wartime, have you not? That is, Roane-Anderson.

Mr. WILLIAMS. We have reduced them by as much as 40 percent.

Mr. HOLIFIELD. And the cost of operation of the community has been reduced from what?

Mr. WILLIAMS. I can give you the actual figures here.

Mr. HOLIFIELD. I see here that you have approximately fifteen million in 1949, thirteen plus in 1950, and an estimated eleven million for 1951.

Mr. WILLIAMS. That is gross, but the net is still more impressive than that. It goes from eleven million eight, as I recall—

Mr. PIKE. That was the deficit?

Mr. WILLIAMS. That was the difference between the income and cost; that is, the part that the Government has to pay. It has gone in 1948 from \$8,681,000 down to three million eight.

Mr. HOLIFIELD. Let me understand. This thirteen million is not—that is the gross cost? You do have an income from the city to offset?

Mr. WILLIAMS. We have an income.

Mr. HOLIFIELD. What we are interested in then, really, is the net cost to the Government. That has gone from eight million, you say, in 1948 down to three million?

Mr. WILLIAMS. Three million eight. It will be less than that, but that was what is shown in the budget. We will come out some less than that.

Mr. HOLIFIELD. So it does show that from the standpoint of reduction in expense of operation you have had quite a reduction there.

Mr. WILLIAMS. Yes, sir. I would like to point out that in all the phases of the work wages have increased during this period. The fire department, police department, construction industry, all of these wages have increased.

Mr. DURHAM. Will that also apply at Los Alamos? I understand that to be at Oak Ridge, that reduction in operating expenses over the past 2 years.

General McCORMACK. The figures are comparable for Los Alamos. The net deficit, cost to the Government of operating Los Alamos, has come down over the past 4 years from 8.6 million to 4.5 million, to 2.3 million, and is budgeted for next year at 1.7 million.

Mr. DURHAM. In other words, you have come from eight million operating deficit down to a little over one million.

General McCORMACK. The town has grown in the meantime and costs have gone up—labor and materials have gone up.

Mr. PIKE. Mr. Holifield, you were referring to this cost plus fixed fee. I suggest to you you do not even need to go as far as a shipyard. Right there in Oak Ridge itself is the Carbide & Carbon Co. operating the big plant for us on exactly the same basis. They get complete reimbursement and get a fixed fee. This is our normal method of operation when we are unable to get on a lump-sum basis.

I believe, as a former businessman, that an arbitrary breaking of an arrangement entered into in good faith by both sides, when there is no hint of any crookedness, is very bad. It will give a business firm a black eye for everybody that deals with it in the future, and I do not think this is any time to give this operation a black eye. We are going to need a lot of good people for the next 2 years, and that is the most disturbing thing that has happened.

Mr. HOLIFIELD. I agree. If the Government is going to change any contract, the Government is morally bound to change them at the end of the contract.

Now, as to the wisdom of changing it, that is something else.

Mr. DURHAM. This is the point at which you can strike at the morale of the whole service personnel in carrying out your contract by the individual who is also producing the material.

Mr. HOLIFIELD. You break this contract with Roane-Anderson, there is no reason in the world why Carbide & Carbon should not say, "well, we are on an insecure basis, they broke Roane-Anderson's contract, they are likely to want to break ours."

Mr. PIKE. That is the question they will all have.

Mr. HOLIFIELD. And just through a rider on a congressional appropriation bill.

Mr. PIKE. Exactly.

Mr. DURHAM. I do not know how we will come out on it, but we will do the best we can for you.

Mr. HOLIFIELD. That is all you can do.

Mr. PIKE. There is one more point that ought to be made as far as Los Alamos is concerned. Oak Ridge concerns itself with the town real estate, and Los Alamos, as I am sure you will remember, has to do with the whole laboratory set-up where the H-bomb will center. The change in the laboratory thing could have a much more serious effect in what we are trying to do as fast as and as well as we can than the other.

Mr. HOLIFIELD. That is where the Zia Co. operates?

Mr. PIKE. Yes, sir.

Mr. HOLIFIELD. Let me ask you this: What method is used at Hanford?

Mr. PIKE. Hanford is operated directly by the General Electric Co. and it has never been questioned by either Appropriations Committee. The General Electric people are getting pretty sick of it.

Mr. HOLIFIELD. On what basis do they operate there? Do they operate on a fixed fee for their complete operation?

Mr. PIKE. Yes, sir.

Mr. HOLIFIELD. A cost plus fixed fee?

Mr. PIKE. No, sir. It is meant to be a cost including overhead. It is supposed to be a nonprofit contract. They get \$200,000 a month to cover their overhead. At the end of the contract—and I believe our contract runs out within the next year—all those expenses and accounts are to be audited by an independent firm of auditors, and a return is to be made to us for anything above costs, including Schenectady overhead.

Mr. DURHAM. If the big companies are getting sick of these contracts, as you say they are, I think it is about time the Commission, if we have to go to another method of operating these plants, we have to devise some means and methods to do it.

Mr. HOLIFIELD. Let me interpose there. Your contract with GE at Hanford is different from your contract with Carbide & Carbon because you have your profit element in your Carbide & Carbon contract and you are only saying that your contractor is sick of it at Hanford because he is on a nonprofit basis—supposedly nonprofit basis.

Mr. PIKE. What I meant is he is sick of the community end of it. That gives him more trouble than the rest, and he would like to get out of it.

Mr. HOLIFIELD. Do you have any break-down as to the cost of the community operation at Hanford, so we can use that to compare with the cost? Is there any way of comparing it?

Mr. PIKE. There is a question whether we can give it to you accurately. The matter of allocating overhead of people is always a matter of guessing.

Mr. DURHAM. They operate the whole thing at Hanford?

Mr. PIKE. Yes, sir.

Mr. SHUGG. The net cost—

Mr. WILLIAMS. The cost at Hanford is not this simple. There are a lot of things that come into the total. It would take a great deal of explanation.

For instance, the school system out there—the State contributes a large portion of the amount. At Oak Ridge we pay the total bill.

If you take the schools out and if you leave the hospitals in, then it would appear that Hanford costs \$7 per capita more than Oak Ridge, but that has never been questioned.

If you take the hospitals out at Hanford and Oak Ridge, then they are about even or maybe Hanford is doing a little better because it is a different type of operation.

You also have a different problem at Hanford. There is a great deal of water that has to be pumped or that would be a barren desert out there. So you have a great deal of irrigation. You do not have this at Oak Ridge. At Oak Ridge you are confronted with the problem of getting rid of water because you have about 55 or 60 inches of rainfall.

You have a lot of different items entering into it, but we have made comparisons, and depending on what figures you would take, you might prove anything. But the quality of operation is pretty well on a par, we believe.

Mr. DURHAM. We have three places with comparable operations. Can you people give us, so that we will have some figures, the comparable costs on the basis of each individual there in the operation of that, because the functions are similar, though they may be carried out differently.

Mr. PIKE. I think we can. Probably you will also need some explanation with each one and possibly Mr. Shugg has it right there. I doubt, however, if he does have it here.

Mr. SHUGG. I do not have them divided out, but we have in our detailed budget that we presented to the committees, 330 pages of detail on every function, and in there we took individual functions and compared them. We have comparisons not only among the three towns but between similar communities, as nearly similar as we can pick out.

Mr. DURHAM. I read most of that that you gave the Appropriations Committees, but I do not recall that you had a break-down on the actual cost, the number of individuals, whether it was \$5 or \$6 at Oak Ridge, \$7 at Los Alamos, or \$8 at Hanford.

Mr. SHUGG. That can be quickly divided out. You have the higher cost of utilities on the 7,500-foot mesa at Los Alamos. You cannot compare them utilitywise with Richland. The book had to be detailed. May I point this out. We have got reams of detailed information on this, reams of figures.

We have apparently never succeeded in getting the time that it takes to convince the committees of these figures, to get the objective examination of them, and it is just because of the fact that with all this detail and all this work which we have done on it, it has not taken with the committees, that we may have the idea of bringing together a group of experts who are experts each in a part of this business, who are working at it, who are "do it" men, and getting their impartial, calm, over-all analysis of the situation. If we are wrong, we will find it out.

Mr. DURHAM. Would you people like to sit down with two or three of the experts and with Mr. Gore, who has been assigned as an authority on this with the Appropriations Committee? I was hoping we could solve this this year without having to go on the floor of the House.

Mr. SHUGG. I would welcome any study on this.

Mr. HOLIFIELD. I think, of course, the key is in your Appropriations Committee. However, the Appropriations Committee has already acted, as I understand it.

Mr. PIKE. In the House they have. The bill has not gone to the floor. I talked to Senator O'Mahoney, and they are about to act. They are telling us that within 30 days of the passage of the bill we should notify these people of a 6-month cancellation. That is not quite as bad as the other, but it is not different in principle.

What we would like from you—and I really think it could be most useful—if this committee believes that these specific things should be eliminated and this other attack should be taken, you could be most helpful.

May I say this off the record?

Mr. DURHAM. Off the record.

(Discussion was had outside the record.)

Mr. HOLIFIELD. Have you inaugurated the study by a committee yet?

Mr. PIKE. No, sir. We wanted to get your approval, if you feel you should give it. We would like also to get your agreement with the people we pick. We do not feel we ought to be put in the position of being solely responsible for picking the people, who might be accused of bringing out the kind of a report we want.

We think it would be helpful if you or some of the staff would help us explore the field for who might be the right men. We think that, overworked as your staff is, somebody on the staff ought to be in there following and living with this work as it develops, so that as it is finished, no matter how it comes out, we can say it is honestly and decently done.

Mr. DURHAM. Have you gone into this to see if it is subject to a point of order?

Mr. PIKE. The riders? No; I have not. I do not know about the legal staff.

Mr. VOLPE. It is questionable. It depends entirely, particularly on the House side, on how they decide to handle the omnibus bill.

Mr. HOLIFIELD. What kind of rule the appropriation bill comes out under. This will be in the omnibus bill?

Mr. VOLPE. Yes. It is too early to say whether or not a point of order could be made with respect to this particular rider.

Mr. HOLIFIELD. I do not believe it is any way to legislate, and I will make a point of order on it if no one else will at the time, if a point of order can be sustained under the rules of the bill. It has not been put in there with the proper kind of consideration in the hearing.

Mr. DURHAM. The problem we have of covering this large scope, under the 5-minute rule you are under such a handicap.

Mr. PIKE. Are there going to be amendments allowed from the floor? One would like to see this amended out on the floor.

Mr. HOLIFIELD. You can always offer an amendment to strike, but it would be much easier to get it out on a point of order if it is susceptible to it.

Mr. DURHAM. We can determine that. We can get a decision from the Parliamentarian.

Mr. HOLIFIELD. You have three points. One point is that you should prove that this is a reasonable and customary profit on a cost-plus-fixed-fee contract. The second point is that the Government should not break its contracts summarily. The third point, as far as I am concerned, is from a legislative standpoint, this is no way to set the policy of handling these communities at this time, when we are under this H-bomb pressure of production. This is no way for this to be handled. It should be handled by a policy committee in a legislative way, rather than by a rider on an appropriation bill, and that is the way it ought to be fought.

Mr. DURHAM. Under the Supreme Court ruling has the Government a right to break a contract?

Mr. VOLPE. I wonder if I might make a comment off the record?

Mr. DURHAM. Off the record.

(Discussion was had outside the record.)

Mr. DURHAM. Would the Commission do this—advise each member by a letter on some of these problems that were raised, like the decision and other matters, how serious this is? You can set it forth.

Mr. PIKE. Yes, sir.

Mr. HOLIFIELD. Could you cover those three points in some type of brief to members of the committee?

Mr. PIKE. Yes.

Mr. HOLIFIELD. You see what we are up against, the low attendance here.

Mr. PIKE. We appreciate it fully.

Mr. WILSON. The reason Mr. Pike has stressed our point of having an analysis of this problem made by experts from the various categories of real-estate people, municipal operation, et cetera, is that none of us is terribly happy about these towns. They are a burden and they are difficult. But perhaps we can progress toward a more rational answer and course of action to follow in the future if, rather than sort of arbitrarily picking away at certain parts of it, we get a highly competent group, which we hope we can select in consultation with this committee, to make this study and come up with an answer better than anything we have done so far.

Mr. DURHAM. It proves how hard it is to make socialism work.

We appreciate your coming up here before us and outlining those matters to us and we will appreciate it if you will set forth those things we have talked about in a letter to the committee.

(Whereupon, at 12:40 p. m., the joint committee adjourned.)

# COMMUNITY POLICY<sup>1</sup>

TUESDAY, JUNE 6, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met at 2:30 p. m., in room 48-G, the Capitol, Senator Brien McMahon (chairman of the joint committee), presiding.

Present: Senators McMahon (chairman), Millikin, and Bricker; Representatives Durham, Price, Kilday, Cole, Elston, Hinshaw, and Van Zandt.

Representatives of the committee staff present: William L. Borden, executive director; Messrs. Heller, Hamilton, and Mansfield.

Representatives of the Commission present: Commissioners Dean, Smyth, and Murray; Col. Coyner; Messrs. Wilson, Shugg, Williams, Volpe, Bayer, Salisbury, Noble, Towne, Hollis.

The CHAIRMAN. All right, Mr. Dean.

Mr. DEAN. We are up here today to advise you of a problem that if it is wrongly or carelessly resolved, I am afraid will give us a lot of trouble this next year. It has to do with the question of communities.

I am sure you are all rather tired of hearing about it, and certainly it produces the largest number of headaches for us. But I have prepared a statement here, which I am not going to read. I am not even going to attempt to paraphrase it at any length.

I would like to insert it in the record because it indicates pretty well what our position is, what our fears are, and so forth. I would like to give you orally perhaps a shorter version of it, if I may.

The CHAIRMAN. We appreciate that.

(The statement of Mr. Dean is as follows:)

## STATEMENT OF COMMISSIONER GORDON DEAN

In recognition of the Commission's responsibility to keep the joint committee fully and currently informed regarding its activities, we would like to discuss with you today some of the most important appropriation problems confronting the Commission. In particular, as we wrote you on May 23, 1950, requesting this meeting, we propose to discuss three particular provisions contained in the general appropriations act as passed by the House and to discuss them in the light of their effect on the atomic energy program.

The first of these is the community fee limitation which drastically cuts the fees being paid to certain Commission contractors. This provision would result in disrupting our community operations with consequent damage to the technical and production programs of the Commission. The second provision is the so-called Taber-Thomas amendment which in general would reduce the President's budget estimates by establishing ceilings on certain classes of obligations. Apart from the cuts it would impose, this amendment would seriously impair the Commission's ability to make necessary program shifts to meet new conditions and scientific advances. The third provision is the so-called Jensen

<sup>1</sup> Part 1 of the hearings on Community Policy has been printed and is dated April 18, 1950.

amendment. This provision, in general, limits the authority of Government agencies to fill vacancies occurring after June 30, 1950, and would probably cause a drastic reduction in the personnel of the Commission during the next year.

The community fee limitation is contained on page 265 of the general appropriations act, H. R. 7786, the language of which is as follows:

"\* \* \* no part of the foregoing appropriation or contract authorization shall be used in connection with the payment of any contractor or firm of contractors engaged under a cost-plus-a-fixed-fee contract or contracts at any installation of the Commission, where the fee for community management is at a rate in excess of \$90,000 per annum, or for the operation of a transportation system where the fee is at a rate in excess of \$45,000 per annum."

You will recall that we met with this committee on April 18, 1950, in executive session, and at that time explained our strong feeling that the enactment into law of this provision would be contrary to the best interests of the atomic energy program. At the conclusion of that meeting, Mr. Durham suggested that we send a letter to each member of the joint committee setting forth our views. This we did, also sending a similar letter to Congressman Albert Thomas, chairman of the Independent Offices Appropriation Subcommittee of the House and to Senator O'Mahoney, chairman of the Independent Offices Appropriation Committee of the Senate. With your permission, I would like now to refer to pertinent parts of the letter and to insert the full letter in this record.

To make the situation as plain as possible let me describe the operations of the Roane-Anderson Co. at Oak Ridge.

The Roane-Anderson Co. is a subsidiary of the Turner Construction Co. There are 22 persons on the Roane-Anderson Co. payroll who are also attached to Turner Construction Co. This experienced group of key personnel has a considerably greater earning power, in the judgment of Turner Construction Co., than the fee paid by AEC. It was estimated in September 1949, by Mr. Hernandez of the Turner Construction Co., that 14 Turner people employed at that time with Roane-Anderson Co. would earn for the Turner Construction Co. a sum of \$588,000 per annum. This estimate is based on actual earnings of comparable personnel now employed on Turner Construction Co. projects elsewhere than at Oak Ridge. The Roane-Anderson Co. annual fee for use of these persons is \$180,000. The House action would cut it to \$90,000. Over 80 percent of all the work performed by this company is in the field of physical maintenance of land and structures, and of related minor construction. This is the type of work for which the key personnel provided by Turner Construction Co. are especially trained by virtue of long experience, to perform. Compensation for this know-how is the real purpose of the fee.

The efficiency of the Roane-Anderson Co. in carrying out its work can best be judged by examining the record. The company was formed in 1943 when Oak Ridge originated as a war town. Oak Ridge grew rapidly and reached a peak population of 75,000 in 1945. At the time the Commission assumed operating responsibility for Oak Ridge, in January 1947, the population was 42,000, and there were 937 AEC personnel and 2,890 Roane-Anderson personnel with some experience in these operations. Today, Oak Ridge is a settled community of 30,000 population, and the company has had 6½ years' experience in dealing with the great diversity of problems involved in managing the properties in its care.

Roane-Anderson presently employs 1,732 persons, with greater responsibilities than formerly, as evidenced by the reduction in AEC personnel from 937 to 58. The number of Roane-Anderson employees alone is 40 percent below 1947 figures.

In fiscal year 1949, the first year for which accurate records of community costs at Oak Ridge are available, the gross cost of community operations was \$14,282,936, the revenue was \$6,911,030, with a net cost to Government of \$7,371,906. In fiscal year 1950, they are estimated to be \$12,701,918, \$7,888,305, and \$4,313,613, respectively, and in the Commission's fiscal year 1951 budget, gross costs were estimated to be \$11,809,999, the revenue, \$7,979,906, and net cost to the Government \$3,830,093.

These cost reductions are the direct result of intensive effort on the part of the company and the AEC staff to effect economies at a rate as rapid as an orderly adjustment of community services would permit. As you know, the fee limitation provision was debated at length on the floor of the House on May 5, 1950, and despite the efforts of House members of this committee to demonstrate the unsoundness of the provision and to explain its adverse effects on the atomic energy program, it was adopted by the House.

We cannot overemphasize the direct and vital relationship between the stability of the communities and the success of the atomic energy program. If un-

wise policies are pursued in the communities and if the communities are disrupted, then almost certainly disruptive consequences will be manifest in the program itself. It is our view that the community problem must be attacked on a broad base starting with the fundamental recognition that the AEC communities exist solely and completely for the support of the atomic energy plants and laboratories in or adjacent to the communities.

For some time, the joint committee has taken a great interest in the problems of community management and on several occasions has held special hearings regarding these problems. For example, when the Commission raised rents at Oak Ridge in connection with the program of moving ahead as rapidly as feasible in eliminating subsidies in the communities, you remember that there was a considerable furore from the residents of Oak Ridge, and a subcommittee of this committee (Representatives Durham, Holifield, Price) held a hearing at Oak Ridge. We have also been aware of the views of this committee, expressed in the report of the investigation last summer and more recently in the subcommittee report on the department store controversy at Oak Ridge, that you had doubts as to whether the Commission had shown adequate aggressiveness in moving toward the point where it could withdraw from the distracting business of running three communities. This committee had also expressed its opinion that a detailed plan should be drawn up for withdrawing from the towns and a definite timetable established for executing it.

We agree with your general viewpoint and with your objective to transform these communities into self-governing and self-supporting American towns. But we must frankly state that, while we agree with the desired end result, we do not know whether it can actually be done without jeopardizing the program; nor do we know, if it can be done, how long it will take. Our wrestling with this problem practically since the beginning of the Commission's existence, has convinced us that it would be reckless and irresponsible to attempt to pull out in a great rush. Before going into greater detail as to why we believe this, I would like to outline for you what has been our general approach to the whole community problem.

Our priorities in approaching the community management problem have been these: Our first priority has been to see to it that these communities are operated in a way that makes the scientists, technicians, and all the people on whom our program depends, willing to live there. Every other consideration is comparatively insignificant beside this one. It was obvious in 1947, for example, that we could not put a top priority on getting out of the communities altogether, at a time when scientists were leaving the project and there was an urgent need to get the whole project established as a vital going concern. This committee is well aware of the situation as it then existed. In this objective, we believe we have been successful.

Our second priority is, once having established a community with adequate facilities and adequate management, to place it on as efficient and economic a basis as possible as a necessary preliminary to any plan of getting out of the community management business. We believe that substantial progress has been made in this field. For example, the net cost to the Government of community operations at Oak Ridge has been steadily reduced from about \$7,300,000 in fiscal 1949 to an estimated \$3,800,000 in fiscal 1951. Similarly, at Los Alamos, the net cost of community operations was reduced from about \$8,600,000 in fiscal year 1948 to an estimated \$1,700,000 in fiscal 1951. The basic net cost of all community operations has been reduced from about \$21,000,000 in 1948 to an estimated \$7,500,000 in fiscal 1951. These cost reductions have been accomplished in the face of increases in the cost of wages, services, and materials, and, in the case of Los Alamos, a substantial increase in population.

Our third priority is to take all possible steps, without sacrificing our foremost objectives, leading toward the transformation of these towns into normal American communities with self-government, private ownership, and free enterprise. The early steps in this direction will enable us to determine as we go along whether it is possible to get out without jeopardizing the program and, if so, what the time schedule would be.

It is in connection with this third priority that I would like to outline briefly some of the problems which face us in getting entirely out of the community business.

As normal towns these communities would have local self-government, private ownership of commercial property, and private ownership of residential property. Absolutely essential to self-government in any community is not only the establishment of government instrumentalities through which the people can

make known their views and put into practice those policies they desire to pursue, but self-government also involves the vital need for financial stability and the means by which the residents can raise the necessary funds to carry on the local government. These means are lacking in the communities now. It is just a matter of simple arithmetic. For example, a detailed study of the feasibility of incorporating Oak Ridge was completed in January 1949. This study revealed that the community, if it incorporated, would require an annual contribution of \$2,000,000 from the AEC, over and above all payments in lieu of property taxes made by AEC on real estate in the community. This would amount to nearly half of the municipal budget, under incorporation, as estimated by an experienced municipal consulting firm. The net cost of municipal services in Oak Ridge is about \$4,600,000 in the 1950 fiscal year. The temporary war-built houses and commercial structures in Oak Ridge are totally inadequate as a tax base to support these services without confiscatory tax rates. Then, too, as you know, these towns have at present no other industry than the atomic energy plants and laboratories. Also the lay-out of these towns was not planned, during the war, with economy as a prime factor. Our purpose has been to reduce the cost of these services as rapidly as possible in the hope that ultimately the municipal budget could be balanced. But reductions cannot be made suddenly without a sharp curtailment in the standard of services, particularly schools. We are not willing to risk such an impact on the atomic energy program. It must be clearly recognized that the substantial expenditures of Federal moneys in these towns—subsidies, if you will—represent expenditures made as a means of getting the atomic energy job done.

Since the communities could not now support themselves, any reasonable plan for self-government would almost certainly involve substantial payments by the Federal Government to the local governmental unit. We believe the Federal moneys appropriated should be related directly to those needs which are necessary to and justified by their being in furtherance of the atomic energy program. If the Federal moneys now appropriated to these communities were completely turned over to the people for expenditure, special arrangements would be necessary to assure that the way in which the money would be expended would coincide with the needs of the atomic energy program. In fact, such arrangements might well result in greater expenditures in money and larger appropriations of money to the communities than are now being made. In any event, the establishment of local governmental units necessarily involves the working out of sound and equitable fiscal relations between the local government and the Atomic Energy Commission.

We do not believe real self-government is possible in a community owned entirely by the United States Government. Accordingly, any sound plan to get out of the communities involves the sale of land, houses, commercial facilities, and utilities. In the three communities, the estimated cost of the assets that might have to be sold by the Federal Government could amount to as much as \$300,000,000. The magnitude of such an undertaking is obvious.

Furthermore, it must be recognized that the establishment of independent local governments assumes the willingness of residents to purchase their homes and to shoulder the financial obligations involved in establishing complete local self-government. Self-government in the communities means money out of the pockets of the residents. Then, too, the future of these communities also may act as an impediment to the disposal of the houses and other physical assets in the communities, and to complicate the Commission's withdrawal.

It is not possible to establish the conditions of local self-government without reference to the effect it will have on the atomic energy program. The timing and sequence of establishing local self-government must be very carefully worked out to avoid serious disruptions in these three communities, with consequent disruptions to the atomic energy operations carried on in them. The timing, for example, cannot be the same in all three places. The town of Richland, for example, is an open town removed from the plant areas. Los Alamos, on the other hand, is a closed community in which plant facilities are located right in the town.

In sum, this is the situation: the United States Government has built and operates three towns for the single purpose of furthering the successful achievement of the vital goal of maintaining this Nation's supremacy in atomic energy. Much depends on this. If we were confident that the program would go ahead with undiminished drive, we would press immediately for withdrawing from the towns in all possible haste. But we cannot give you that assurance and we simply cannot gamble with the success of the atomic energy program by retiring pre-

capitately from the towns. As you know, we hope soon to have a panel of outstanding men to conduct an independent examination into these community problems and to advise us on what measures may safely be taken to move toward community self-government.

Turning now to the second of the provisions, we discuss the Taber-Thomas amendment (ch. X-A., H. R. 7786).

This amendment is designed to effect reductions in the President's 1951 budget estimates for all the agencies and departments covered by the general appropriation bill by establishing limitations on certain classes of obligations. The amendment provides for limitations on 10 separate classes of obligations corresponding to the "object classes" by which the budget shows the nature of the goods or services for which funds will be obligated during a fiscal year. The limitations are established through reducing, by a fixed percentage for each object class, the President's budget estimate for each department and agency. Let me cite a few examples.

Civilian personnel would be cut 10 percent except for the Department of Defense which is given a 2-percent cut. The personnel-cut provision does not apply to medical personnel in the Public Health Service and the Veterans' Administration. Contractual services would be cut 10 percent except for the Department of Defense. Appropriations for supplies and materials would be cut 10 percent except for the Department of Defense and veterans hospitals which are not cut.

You will recall that the reduction recommended by the House Appropriations Committee, and approved by the House, amounted to 10 percent of AEC's obligational authority for 1951. The House Appropriations Committee action left the Commission free to allocate the recommended 10-percent reduction among its programs and activities as might best suit the changing requirements of the whole atomic energy program. The Taber-Thomas amendment, on the other hand, requires fixed reductions in each of the 10 object classes and would seriously impair the Commission's ability to make changes in programs requiring a shift of funds from one object class to another.

This amendment would thus result in impairing the flexibility in operations which is essential to the program. Fiscal and budget rigidity, as this committee well knows, impedes the atomic energy program as it actually operates and must operate if our lead is to be preserved. The joint committee is in a position to appreciate the constantly changing nature of the atomic energy program and importance of allowing the Commission to adjust its budget to new developments.

Another important effect of the 10 separate limitations provided in the Taber-Thomas amendment would be to require the establishment of a complete system of fund control by object classes. The Commission's 1951 budget was presented on a "cost performance" basis and the present accounting systems of the Commission are designed to measure performance and to establish controls on an accrued cost basis. The method of fund control required by the Taber-Thomas amendment would represent a step backward in the Commission's program to establish its budget and accounting systems on a cost-performance basis.

It is not possible at this time to measure the full effect of each of the limitations under the amendment. However, it is apparent that there would be a substantial effect on activities falling under several of the object classes. For example, in the case of the limitation on rents and utility services, it should be noted that 13.3 million dollars of the 13.9 million dollars shown in the budget estimates for the Commission is for the purchase of gas and power for the operation of the production plants at Hanford and Oak Ridge. Since these plants require a continuous operation and power requirements are fixed, the effect of a 10 percent reduction applied specifically to this object class would be most serious.

It should also be noted that there is an inconsistency between the amendment and the proposed limitation on fees for community management contractors which we discussed earlier. As we explained, the fee limitation, if approved, would probably force us into direct Government operation of at least a part of the work now being done under contract in our communities. The direct activities of the AEC are chargeable to different object classes than are the activities of our contractors. The activities of our contractors are budgeted under the object class "other contractual services", whereas the direct activities of AEC are spread among the other object classes. Should direct Government operation become necessary, all of Roane-Anderson's expenditures, for example, which are currently charged to "other contractual services", would become chargeable as direct Government operations to other object classes and would also certainly require further congressional action to amend the limitations provided by the amendment on those object classes.

The third provision we wish to discuss is the so-called Jensen amendment. (Sec. 1114, H. R. 7786.)

In general, the Jensen amendment would permit the Commission to fill only 1 in every 10 personnel vacancies occurring after June 30, 1950, except for certain exempted positions, such as scientific and technical personnel and law enforcement officers.

The meaning of the amendment is not clear in a number of particulars, and this is one of the features of the amendment that concerns us a great deal. For example, it is not clear what proportion of our security forces would be exempt as law-enforcement officers. As another example, the amendment might be construed to effect the Commission's authority to establish and fill new positions for a new program or a new installation. This could well cripple the program.

Our average turn-over for AEC employees, based on past experience, is about 2 percent a month. This means that beginning with an estimated employment of 5,000 persons on July 1, we can expect vacancies to occur during the fiscal year 1951 in about 1,150 of our existing positions, of which over 300 vacancies would normally occur in our security forces. After allowing for the 10 percent replacement quota provided in the Jensen amendment, there would be more than 1,000 vacancies which could not be filled unless exempted by the terms of the amendment. If we assume that none of our security forces would be exempted as law-enforcement officers, but allowing for replacement of scientific and technical personnel, there would be about 900 vacancies which we could not fill. We, therefore, believe that, particularly with an expanding program, the Jensen amendment would seriously hurt us.

Mr. DEAN. Another thing I would like to insert in the record, which I believe is not in, is a letter which we sent over in response to a suggestion from Congressman Durham the last time we were up here, talking about communities. You asked the Commission for it. It is dated April 21, and I think copies went to every member of this committee and to the Appropriations Committees. If I may introduce that as well; I don't think it is repetitious.

(The letter referred to above is as follows:)

APRIL 21, 1950.

HON. BRIEN McMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
Congress of the United States*

DEAR SENATOR McMAHON: In the hearing before the joint committee last Tuesday morning, we explained to the committee our belief that we would be unable adequately to fulfill our responsibilities for expanded production of fissionable material and the development of new weapons if the community contract fee limitation rider as reported by the House Appropriations Committee is enacted into law. At the conclusion of the hearing Congressman Durham requested us to submit to each member of the joint committee a short written statement setting forth our views on the rider. This letter is in response to that request.

The General Appropriation Act of 1951 (H. R. 7786), as reported by the House Appropriations Committee, contains a provision (p. 265, beginning line 22) which states that no part of the Commission's appropriation or contract authorization "shall be used in connection with the payment of any contractor or firm of contractors engaged under a cost-plus-a-fixed-fee contract or contracts at any installation of the Commission, where the fee for community management is at a rate in excess of \$90,000 per annum, or for the operation of a transportation system where the fee is at a rate in excess of \$45,000 per annum."

If enacted into law this rider would drastically cut the fees paid to three private contractors under existing contracts with the Commission. The Roane-Anderson Co. fee of \$180,000 per annum at Oak Ridge and the Zia Co. fee of approximately \$154,000 at Los Alamos would be cut to \$90,000, and the American Industrial Transit Co. fee for transportation service at Oak Ridge would be cut from \$90,000 to \$45,000. The Roane-Anderson Co. is a Tennessee corporation formed at the request of the Government, whose parent company is the Turner Construction Co. of New York. The Zia Co. is a New Mexico corporation formed at the request of the Government, whose parent company is Robert E. McKee, Inc., of El Paso, Tex. The American Industrial Transit Co. is a Tennessee

corporation formed by officials of large bus companies to operate the transportation system at Oak Ridge.

At the outset we would like to correct one generally prevailing misconception regarding the function of these maintenance and service operating contractors. It is really incorrect to refer to them as "community contractors." Their functions are not at all limited to the normal functions of municipal government. Municipal functions are a minor part of their work. This is particularly true at Los Alamos. Their responsibilities extend far beyond such functions to such additional tasks as managing extensive real estate operations and undertaking the care and maintenance of substantial amounts of physical property in the communities. In fact, at Los Alamos the Zia Co. is responsible for the physical maintenance of the technical laboratory itself.

We firmly believe that the enactment into law of the fee limitation rider would expose the atomic energy program to unnecessary risks which would adversely affect the early accomplishment of critical projects. Our reasons for this belief are as follows:

1. It will play havoc with the stability of community operations. The Roane-Anderson Co. has stated that it expects to be paid the presently agreed fee until the end of the contract on December 31, 1950. The company has informed us that under no circumstances would it consider renewing the contract for the maximum fee permitted in the rider. The Zia Co. has also indicated that it is not interested in continuing under the fee limitation of \$90,000 per annum for all the services they render at Los Alamos. We have as yet received no comment from the American Industrial Transit, Inc.

We do not believe it is possible to obtain competent contractors to take the place of these companies for the maximum fees allowed in the rider. The rider would almost certainly force us into direct Government operation of community affairs. Direct Government operation is extremely unwise for several reasons.

First, it is more costly because of the special security clearance requirements, vacation, sick leave, work day, and pension privileges accorded Federal employees compared with the employees of private contractors. In addition to increased operating costs, we would incur a heavy transition cost.

Secondly, direct operations would constitute a long step backward in our continuing efforts to get the communities on an efficient and economical basis as a necessary preliminary to getting completely out of the community management business. Much progress in this direction has been made. For example, the net cost of community operations at Oak Ridge has been steadily reduced from about \$8,600,000 in fiscal 1948 to an estimated \$3,800,000 in fiscal 1951. Similarly, at Los Alamos the net cost of community operations was reduced from about \$8,600,000 in fiscal 1948 to an estimated \$1,700,000 in fiscal 1951. The basic net cost of all community operations has been reduced from about \$21,000,000 in 1948 to an estimated \$7,500,000 in fiscal 1951. These cost reductions have been accomplished in the face of increases in the cost of wages, services, and materials. These are real savings and this progress ought not to be disturbed.

With respect to municipal affairs, the ultimate achievement of incorporation and local self-government in these communities will be much easier under contractor operations than it will be if we have to take the backward step to direct Government operations.

Finally, and most important, a transition to direct operation would result in a substantial diversion of key Atomic Energy Commission staff and top management, both in the field offices and in Washington, to the job of organizing and implementing an activity of this magnitude. We cannot afford such a diversion of effort at this critical time when the full energies of the Atomic Energy Commission staff are required to successfully carry out our responsibilities for the current expansion program and the weapon effort. This is by all odds the most disturbing aspect of the rider.

2. The rider would undoubtedly have a disturbing effect on other cost-plus-a-fixed-fee contractors, including those who operate the plants and laboratories. The implications of this kind of legislation are indeed serious if private contractors in the atomic energy program come to feel that contracts negotiated in good faith with the Atomic Energy Commission may subsequently be amended by legislation in such a way as to cut the agreed-upon fee.

3. The fees in community contracts were negotiated on an arm's-length basis with the private contractors. We believe those fees are reasonable. The Roane-Anderson Co. fee at Oak Ridge of \$180,000 annually amounts to approximately 1½ percent of the roughly \$13,000,000 total reimbursable costs of the company

for the fiscal year 1950. The Zia Co. fee at Los Alamos of approximately \$154,000 represents about 1¼ percent of the total reimbursable cost of about \$12,500,000. These fees are well within fee schedules used by Government agencies and individual corporations, and are not out of line with fees paid to contractors in generally comparable situations. In considering the reasonableness of the fee, it must be emphasized that a large portion of the work done by the community contractor is of a physical building-trades nature. We believe that private companies are entitled to a reasonable profit for the managerial skill which they furnish and for the assignment of key men to the job—men whose services could profitably be used in other undertakings by the companies.

The community problem should be attacked on a broad basis and not in piecemeal fashion. Accordingly, we propose immediately to set up a panel of outstanding men to conduct an independent examination into our community operations. This panel would include people of recognized competence in the fields of municipal affairs, Federal administration, and real-estate management. Their job would be to make an over-all study of the problem. We would appreciate any recommendations of the committee as to persons who would be particularly well qualified to serve on this panel. As you know, the community problems are extremely complex, particularly in view of the direct relationship between the communities and the laboratories and plants they support. We believe a survey of the communities by a panel is essential to a balanced understanding of the problems involved and is of great importance in formulating sound policies. We urge the joint committee to do what it can to eliminate the rider and thus to avoid an immediate impediment to the fulfillment of the whole atomic energy program as well as to give time to the panel to make its survey and recommendations.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
HENRY D. SMYTH, *Acting Chairman.*

Mr. DEAN. We have got a real problem before us now. When we were up here last time we simply had before us the House rider, which, as you recall, would have cut the fees of Zia at Los Alamos, the fee of Roane-Anderson, and the fee for the transport company at Oak Ridge in half, and which would in effect, because of various circumstances, throw us into a direct Government operation of these communities.

We are faced with the problem of having two policies suggested up here in the Congress as to which direction we should go. I think this committee has been rather consistent in saying we should get as free as possible from the management of these towns; and now we have the proposal over in the House, and we appreciate very much members of this committee trying to make clear in the debate what our problem was, but we have a proposal which would run us directly into Government operation of the towns.

The GAC met with us here about last week end, we told them some of the difficulties, and they said they would not make an assessment of what disruption would be involved at Los Alamos or Oak Ridge.

They didn't feel competent to do it, but they would say that if there ever was a critical time at both Oak Ridge and Los Alamos it is now; and, if any disruption would result from putting this into a Government operation, it certainly should be postponed.

We are prepared to supply you with any information you want on this. I don't think you want to go over things with which you are quite familiar.

One misunderstanding, I think, has crept into these debates, on which we think you could help us straighten out the other Members of the Congress. These are not, strictly speaking, community management fees. Los Alamos has had a particularly hard time getting this point across.

At Los Alamos we have the fee to the Zia Co., and 52 percent of it roughly goes for the purpose of repairing and construction work and

maintaining the laboratory at Los Alamos, and has nothing to do with the town itself.

The remainder does go to such items as customarily fall in town management, plus other items, such as rentals, house repair, and so forth. At least 52 percent of that Los Alamos fee is attributable to the work done for the laboratory itself in the technical area at Los Alamos.

Senator BRICKER. Couldn't that be set up in such a way as to show that more clearly?

Mr. DEAN. We have tried it, and that is why I am up here again.

Mr. VAN ZANDT. If you read the debate, I think you will find that during the debate on the floor we tried to convey to the Appropriations Committee the fact that this committee was an over-all committee and not particularly a management committee.

Mr. DEAN. That is true, but it is one of those points that has to be said over and over again. Otherwise, the confusion remains.

Mr. DURHAM. Mr. Dean, we didn't have the information about the 42 percent for the upkeep of the laboratory.

Mr. DEAN. That figure was not used.

Mr. DURHAM. No.

Mr. COLE. What is the fee of Zia?

Mr. DEAN. About \$153,000.

Mr. COLE. You mean 42 percent of \$153,000 goes to work—

Mr. DEAN. Is attributable, when you make up the component parts of the fee, is attributable to the work in the technical area itself.

Mr. VAN ZANDT. That is maintenance of the technical area?

Mr. DEAN. Maintenance and such construction work as they do.

Mr. VAN ZANDT. New construction?

Mr. DEAN. Call it maintenance.

Mr. HINSHAW. Is that actual maintenance or profit on maintenance?

Mr. DEAN. That is maintenance.

Mr. HINSHAW. It is not any profit at all?

Mr. DEAN. That is right.

Mr. COLE. You don't mean that 42 percent of Zia's fee of \$153,000 is spent by Zia on the painting of houses, surfacing roads, etc.?

Mr. DEAN. I said it is attributable to it.

Mr. COLE. Fifty-two percent of what is attributable?

Mr. DEAN. Of the fee. You take the fee and you are going to work out how Zia shall be paid. You take those portions of the work, and 52 percent of that fee is attributable—actual work done there. The fee, of course, is kept by them.

The CHAIRMAN. As opposed to community management. In other words, 52 percent of it goes for supervision and overseeing and construction work and repairing in the technical area.

Mr. DEAN. And maintenance.

The CHAIRMAN. The other 48 percent is the management fee of a city?

Mr. DEAN. That is right. That doesn't change the whole picture, but it does show you that this label of "community management fee" is too loose a label to apply to this situation.

Mr. VAN ZANDT. Did you give this information to the House Appropriations Committee?

Mr. DEAN. It may be buried in the statistics. I pulled it out for this purpose to point it up. We have a letter here we sent to Mr. Thomas.

I don't know whether it covers that point or not. We sent it to him before the debate on the House floor.

That is the first point I want to make.

Much the same thing could be said about the Roane-Anderson fee. I think we can support this. Only approximately 25 to 27 percent of the fee of Roane-Anderson is attributable to strictly community-management operations, and the remainder of it, practically all the rest, roughly 75, to operations inside the town that are not community, and operations outside the town, but in the area.

Mr. ELSTON. May I ask this: Is that all in your contract?

Mr. DEAN. I will ask Mr. Williams to say whether it appears in the contract. It is part of the papers made up when you go to negotiate the fee, so that both sides understand what part of the fee is attributable to the work.

Mr. ELSTON. Is that the custom ever since they have been managing the properties?

Mr. DEAN. They have never had good cost figures until 1949 on that.

Mr. WILLIAMS. That is true. We had reliable figures in 1949. The contract itself says they will do certain work. It doesn't break it down percentagewise, but the costs are kept on the work, and from the costs you can get the percentage figures.

Mr. ELSTON. So, you can hold to that 52 percent? It is possible to do that? Is 52 percent mentioned in the contract anywhere?

Mr. WILLIAMS. No, because the contract says they will do certain work, and it lists the work they will do, the scope of the work they will do, but it doesn't say this portion of the work is 52 percent or any other percentage. The cost system which we use to record the costs as they are incurred gives you this information.

Mr. ELSTON. How long are these contracts. When do they expire?

Mr. DEAN. Roane-Anderson's expires at the end of the year. Zia's expires June 30 of next year.

Mr. KILDAY. Is it the view of the Commission that the language inserted by the House committee is such that you would not be permitted to separate community management from that work done in the technical area?

Mr. DEAN. That is our view. It is quite clear, in talking to the House committee, that when they used the term "community management fee or its equivalent" they meant the money to Zia or Roane-Anderson; and we would be playing cozy with them if we tried to break it up.

Mr. KILDAY. They say:

*Provided further,* That no part of the foregoing appropriation or contract authorization shall be used in connection with the payment of any contractor or firm of contractors engaged under a cost-plus-fixed-fee contract or contracts at any installation of the Commission, where the fee for community management is at a rate in excess of \$90,000 per annum, or for the operation of a transportation system where the fee is at a rate in excess of \$45,000 per annum.

Couldn't you administratively separate the community-management part?

Mr. DEAN. Not with the legislative history we have on it, and the very frank discussions with some of the staff and members over there. I don't think we could get away from that.

Mr. KILDAY. You are afraid they would get mad?

Mr. DEAN. I think they would say, "You know what we meant, whatever we said, and we made it clear, and now you are trying to come around with a device which really does violence to our directions."

Mr. DURHAM. Did you have an appearance before the Appropriations Committee on the House side. How long was your appearance?

Mr. DEAN. I think our appearance over there—approximately two full days.

Mr. DURHAM. What is the reason you were not able to get it across to them? What was the cause for it?

Mr. DEAN. I think one reason, Mr. Durham, was this: that when we went there to appear on our appropriation they did not say at the outset that "that is what we are going to do to you."

We just presented our budget. While there were little indications during the course of the hearings, they were not happy about community affairs generally—and certainly we are not either—we didn't have any such language to talk to. It was after our presentation was over that we learned what it was, and then the only way we could do it was through letters and conversation.

It really wasn't threshed out in the hearings. If we had been presented with it at the outset, I think we would have been prepared to talk to it, but we weren't.

The CHAIRMAN. You didn't get a warning in the course of the questioning that that was what they had in mind?

Mr. DEAN. Not enough, except a general unhappiness about this.

The CHAIRMAN. This committee registered its unhappiness in the report we made on the investigation last year.

Mr. DEAN. What I should like to suggest, if I might, Mr. Chairman, is this: There is not only this proposal before us but there are lots of other suggestions being made now. The Senate has this matter before it in the Senate Appropriations Committee.

What we fear is not simply the House one, bad as that would be, the Government operation, but we fear any attempt at this time—we fear any kind of rider which would attempt at this time, simply by a rider, to resolve all of the difficult questions that are involved in this question of running communities.

Mr. DURHAM. What is going to be the situation at Arco?

Mr. DEAN. Will we have one? We are determined we will never have a community at Arco. It is the last thing in the world we want.

Mr. VAN ZANDT. Where will they live?

Mr. DEAN. Live in towns. We hope private industry puts up enough places to take care of the people.

Mr. HINSHAW. I think this subject of money and fees could be resolved if we could find out or if anybody could find out just how much of these fees are fees upon which income tax would be paid by the company. That gives you the net amount that can be considered as a fee.

The rest of it deductible for this reason and that reason.

Mr. DEAN. I can give you the figure Roane-Anderson pays in income tax out of the fee.

Mr. HINSHAW. That wouldn't help. It is the figure on which they pay income tax.

Mr. WILLIAMS. This we have not checked. This we have been told. We have not verified it, because we didn't think it of enough interest

to go that far. But we have been told that of the total fee Roane-Anderson had received on their contract at Oak Ridge to date 48 percent plus had been paid back in Federal income taxes.

Mr. HINSHAW. That doesn't come to the point, because that depends on the rate of income tax they pay. What I am talking about is: On how much income do they pay taxes?

Mr. WILLIAMS. I don't know. You mean the total for the company?

Mr. HINSHAW. Roane-Anderson; yes.

Senator BRICKER. Net profit they make on the job.

Mr. HINSHAW. On which they pay income tax, not how much tax they pay.

Mr. DEAN. That figure we don't have.

Mr. HINSHAW. That will give you the net on the thing pretty well, unless they have got some fancy deductions.

Mr. DEAN. This is the suggestion I would like to throw out to this committee with the hope that it might prevent riders too quickly conceived that might really hurt the program.

I am afraid of some kind of rider that might attempt in this session to tell us to free ourselves of this town within the course of the fiscal year. Now, while it is a worthy objective, we are convinced, from our close examination of all the problems involved, it just couldn't be done.

There would be all the problems of selling off the land, getting the houses sold to the people, furnishing a tax base, getting the evaluations necessary for that, getting rid of the stores, incorporating the town—all of those problems could not be done, in our opinion, in less than 3, 4, or 5 years.

So what I would hope this committee might be willing to do is this: there have been plenty of hearings on this community problem, but no committee has sat down on the ground with these people as a community committee, and it seems to me it belongs in the joint committee, and talked to the residents—you have on certain cases such as the hearings on the rents—

Mr. VAN ZANDT. Individually too.

Mr. DEAN. But really go through this thing and come up with some direction to us as to whether we stay in this business or whether we get out of this business and how it is to be done.

It is so broad and it is so complicated I don't think you can consider rider legislation satisfactory, with a problem as big as this one. The more we look at it the more complicated it gets.

Mr. VAN ZANDT. A moment ago you said this situation arrived at a time when conditions are critical at Los Alamos and Hanford. Why are they critical? Is it because of the labor conditions, and so forth?

Mr. DEAN. I am trying to paraphrase the GAC report, and I think they said critical. It is because of the load on those two communities and the importance of the load to national defense. There is no question at Los Alamos today if we start either into a Government operation—that would be bad—but, certainly, if we went into a disbanding of the town, gave up our obligation, tried to sell houses when we have them back of the fence—we would play havoc with national security.

The CHAIRMAN. They would stop work in the laboratory and start wrestling about how much they would pay.

You and I had a talk about a committee that was going to be appointed of outside experts to advise you. Has that had any progress?

MR. DEAN. We have this panel in mind and have been getting personnel gradually. It has been hard to get the best people. On this panel we hope to have somebody who is an expert in real estate management, somebody perhaps with the experience of running a company town. The duPonts, for example, have had some bitter experiences in some large company towns and are getting rid of them. Then somebody in the insurance game, perhaps, who developed a large community with insurance company funds—somebody who has been an outstanding city manager. The man we picked, one of the outstanding men in the country, died the day we sent the invitation.

(Discussion off the record.)

MR. DEAN. I think if the Congress could know that this committee was setting itself up as a committee on communities or subcommittee on communities and really going into it, it would feel not so compelled to throw a rider on us this year, which I am afraid might have very serious results.

MR. COLE. Haven't you had a chance to present your side of this community thing to the Senate Appropriations Committee?

MR. DEAN. How long a session was that?

MR. WILSON. A couple of hours.

MR. COLE. A couple of hours on community management or the whole thing?

MR. WILSON. I would say at least an hour and a half on community management.

MR. COLE. And the effect of the House rider?

MR. WILSON. Yes.

MR. COLE. Do you feel you made any impression?

MR. DEAN. No, I don't think we made too much. I think some.

THE CHAIRMAN. There is no question about this being legislation on the appropriation bill?

MR. DEAN. I think it would depend on how it came out.

THE CHAIRMAN. Limitation on the use of funds.

MR. HINSHAW. There is no question, except we had a rule—

THE CHAIRMAN. I was thinking about the Senate where it would be subject to a point of order.

Senator BRICKER. It applies to the dollar value. It would not be subject to rule.

MR. ELSTON. It is what happens when the Appropriations Committee undertakes to legislate.

THE CHAIRMAN. What do you gentlemen think we ought to do?

How would it be if some of us went down and met with the Appropriations Committee and tried to explain this thing to them?

MR. KILDAY. Preliminary to that, how would it be to offer a bill with reference to community management that would be referred to this committee, set it for hearing here, and then go talk to the committee and tell them we have it here under consideration as a legislative matter where it belongs.

THE CHAIRMAN. How would you frame your bill?

MR. KILDAY. I would ask the Commission to do that.

MR. HINSHAW. It would be a simple bill authorizing the Commission to make contracts for community management.

Senator BRICKER. It would still have to go to the Appropriations Committee.

Mr. VAN ZANDT. I think you would get a broader hearing from it, both from this committee as well as the House and Senate in general.

The CHAIRMAN. Have you any other suggestion to make, Mr. Dean?

Mr. DEAN. No; I just have the conviction that a lot of the Members of the Congress, if they thought this committee, which is concerned with the Atomic Energy Commission's problem, was really going into it and you could say so on the floor, they would be reluctant to pass a rider which would resolve the questions you would have to study.

Senator BRICKER. Nothing was ever done about amending rule 6 in the Senate to put a couple of members of this committee on the Appropriations Committee to sit *ex officio* when matters of the Atomic Energy Commission are being considered?

The CHAIRMAN. They have been courteous enough to advise me and I have gone down there on a number of their hearings, and I advised Senator Hickenlooper of the fact that they were being heard, and he was there one time, I believe, when I was not.

Senator BRICKER. Have we any members on the Senate side who are on Appropriations?

The CHAIRMAN. Knowland and Russell.

Mr. HINSHAW. Are they on the subcommittee which handles the independent offices?

The CHAIRMAN. Knowland is. I don't believe Russell is.

Mr. DEAN. Even a report, I think, out of this committee, indicating that is the direction you were going, or something of that kind, based on today's testimony, might be helpful.

Senator BRICKER. Has Senator Knowland been briefed on this problem?

The CHAIRMAN. I don't think so.

Mr. BORDEN. No.

The CHAIRMAN. He has not.

Senator BRICKER. As a first step, we might be able—

The CHAIRMAN. How would it strike you gentlemen if I were to ask the chairman of the committee, Senator O'Mahoney, for a conference and we go down and have a talk with them about it? Perhaps the Commission could be represented in such a conference.

Mr. DEAN. We have talked to Senator O'Mahoney.

The CHAIRMAN. What is his attitude?

Mr. DEAN. His attitude, I think—perhaps Mr. Shugg had better state that.

Mr. SHUGG. He hoped that we could in a very short space of time, get out of community management entirely and turn it back to the people.

In the course of our short conversation we tried to bring out the fact that the people themselves have to be considered in that. We have 69,000 people we have to sell this thing to.

Senator BRICKER. Senator O'Mahoney is the chairman of the Subcommittee on Independent Offices?

Mr. DEAN. Yes. McKellar is the chairman.

Mr. ELSTON. This amendment itself won't accomplish that.

Senator BRICKER. It will make it more difficult.

Mr. DEAN. It is difficult to conceive how any amendment to the appropriation rider could get us out of the towns in a year, but it

might be that the worst could be this: "No funds shall be appropriated for the payment of community obligations out of this."

I can't expect anything as bad as that, but that is the only way I can see it would be tied.

Mr. HINSHAW. I would like to suggest that pending any action by this committee, if you could find the time, perhaps Senator Bricker, who sat here most of the time on the Senate side, could talk this over with O'Mahoney, and at least find out what they would do.

Senator BRICKER. Knowland should be there, too.

The CHAIRMAN. Suppose Bricker, Knowland, and I confer with O'Mahoney and then perhaps if that isn't enough, with all the members of the subcommittee. Then we could appoint a subcommittee to make a study of the situation.

I feel as though we have made enough studies of the situation, as far as this committee is concerned. We heard a lot of testimony in the hearings of last year about the state of affairs and there were some things we didn't like about the Zia management and said so in our report.

Senator BRICKER. On the other hand, you don't want to break up the progress of the development of the program at this time. It would throw confusion into it at the very best. If the Commission is going to appoint this committee of citizens to study the problem, I think the strongest argument is to wait until they report and see what their suggestions are. I think the Congress would like to get the Government out of contract management of the communities or get the communities established as municipalities, but, on the other hand, we had better get good advice.

Mr. DEAN. In setting up the panel we would make the panel come in with its final report before the first of the year.

The CHAIRMAN. You had better get that panel appointed before the appropriation bill gets on the floor.

Senator BRICKER. That would help.

Mr. PRICE. Mr. Dean, of course, we are sympathetic with you in this matter, but if I were sitting on the Appropriations Committee, I would want to know in just what way the community and the project would suffer by this language. Could you give us a picture of just what you expect to happen if this language goes in the bill?

Mr. DEAN. This language, understand me, is not the language which says get out of the towns tomorrow. That would be disastrous. This throws us into Government operation. When thrown into Government operation, in the first place, we are going to lose some personnel, some of the key people out of Roane-Anderson, maybe a few out of Zia, who will go back to the parent corporation.

Remember there were about 30 key executives that the Turner Construction Co. threw into Roane-Anderson and those people have been on the payroll, and they have 6 years' know-how. Some of those people have been with the Turner Construction Co. as long as 20 years, another man 17 years, and so forth.

The chances are, in view of the representations made to us by Roane-Anderson during our negotiations for the contract, that those men can make more for the Turner Construction Co. if they are pulled out and put on projects with the Turner Construction Co.

As a matter of fact, the figures are quite impressive. They would be three or four times the fee they are receiving. I would expect,

No. 1, we would lose some of those men. I can't say precisely how many or which ones. We would lose some.

We would have to replace those men then with people whom we put on the Government payroll. I don't know where we would get them. We could probably stumble along pretty well.

Mr. DURHAM. That is a matter of jack of all trades?

Mr. DEAN. Top people.

Mr. DURHAM. You won't lose all the way through.

Mr. DEAN. The ones you are talking about would stay on. It is the supervisorial personnel we are concerned with, who have the know-how, have done the job, and are in there doing pretty well. That is No. 1.

The second thing is we have the job of processing all the new people to fill these jobs. We are going to have to get FBI reports on every single one of them, whether they ever come in contact with a document or anything else, because they would be AEC employees. We will have to go through that mill.

The next thing is that it will cost more money to the AEC. Our estimates are that in this attempt to save the money by halving the fee, we will pay in added costs something like six or seven times what would be saved in fee reduction. We estimate the cost at Roane-Anderson would be roughly a million dollars.

Mr. DURHAM. We can solve the problem of the FBI investigations. If this is a public utility, I see no excuse for those going through FBI clearance.

Mr. DEAN. You have to have that at Los Alamos. They are in the town.

Mr. DURHAM. You would have to have it?

Mr. DEAN. Yes.

Mr. PRICE. In and out of the laboratory and technical area.

Mr. DEAN. Yes.

Mr. DURHAM. That doesn't exist at Oak Ridge?

Mr. DEAN. Less at Oak Ridge, because it is an open town. Those are the chief disruptions that I see in the Government operations, the change-over of personnel, loss of key personnel, plus the dollars that—if we are concerned with dollars—we will lose by going into it.

We will lose the dollars, as you gentleman already know from your talks on the House floor, in the overtime payments, the sick leave, and things of that kind that will run it way on up.

We will have to have at the fire department, for example, at Oak Ridge men on 8-hour shifts instead of 12-hour shifts. That means in that operation alone we will have to put on a third more men.

Mr. COLE. Why can't you do your own public works in the plant properties? Why do you have to have Roane-Anderson?

Mr. DEAN. The utilities themselves?

Mr. COLE. The paving of the streets and painting of the buildings and taking care of the electricity.

Mr. DEAN. There is no question but that we could. I couldn't argue against it.

Senator BRICKER. It will cost a great deal more.

Mr. DEAN. It will cost more and is disruptive at this time.

Mr. COLE. I don't see why it will cost more. Roane-Anderson hires an electrician to go into the plant, just like the Commission would have to.

Mr. DEAN. We have a breakdown on that as to just where the additional cost will come at Roane-Anderson by these additional people that will have to come in. It is substantial.

Mr. HINSHAW. You have civil-service rules right off the bat.

Mr. COLE. With respect to your supervisory people, maybe a half dozen of them.

Mr. HINSHAW. You have it with relation to every employee, with his 200 days of work against 250 on the outside.

Mr. COLE. The paving of streets would be under contract. The paying for engineers and electricians wouldn't be civil service.

Mr. PRICE. You mean you would have to set up a Public Works Department of your own?

Mr. DEAN. There is another angle to this matter—one which is perhaps hard to demonstrate, but it is certainly real. These contractors are somewhat of a buffer for us. I will never forget the story Franklin told me. He went down to his Oak Ridge office on a Saturday morning, figuring, "I will not get into any community problems, and I can work on the job." At 8:30 the first telephone call was from a lady who complained because the hours of the theater opening had changed. That is the way it went all day. If that is true when we have the buffer organization which takes a lot of that stuff, how much more true will it be when the AEC has all this? Tyler at Los Alamos will have time for little else without some buffer.

Mr. COLE. I was thinking along the lines of the suggestion of Mr. Kilday, giving Roane-Anderson two different contracts. Wouldn't it be proper to divide the contract? You could keep faith with them by saying, "We shan't let this work out on our own property and so we shall do it ourselves and hire Roane-Anderson to run the community."

Mr. DEAN. That would alleviate the situation certainly at Los Alamos if we could take the contractor and have him run the Tech area and then have another contractor take care of the town. That is an alternative. It has never been suggested. It is certainly not as bad as total operation, but take Los Alamos on the effects again. We have got only two men on the staff at Los Alamos who deal with Zia day in and day out and know the community operations; just two men. We just don't have the personnel in the AEC to take that over and do it smoothly and well, without making everybody in the lab mad because of the distractions involved in the changing of rents and services and houses and so on. If we had a staff built up there, that would be something else.

The CHAIRMAN. The reason for their reaction is because they think it is too much money for what they are giving. That is the basis of it. Because these men don't want a more socialistic undertaking, putting the Government further into direct operations; you might call it socialism in this enterprise.

We have based everything on the philosophy of getting contractors to work for the Government, and putting the Commission into community management is a socialistic step.

Senator BRICKER. The whole atomic energy thing is a complete socialistic set-up.

The CHAIRMAN. In a sense, that may be and that is why, because of that, we try to keep our free-enterprise concept as healthy as we

can. The basis of the objections must be that the Appropriations Committee think the community contractors are getting too much money.

Now, have you in any of your conversations with these gentlemen had them tell you where they thought the fee was excessive?

Mr. DEAN. This is arbitrary as I understand it—just cut it in half.

Senator BRICKER. You mean the committee?

The CHAIRMAN. Yes; the Appropriations Committee.

Mr. DEAN. I don't want anything I have said to indicate that Mr. Gore or members of the committee—he was acting chairman for our appropriation—haven't gone into this whole matter. They know our program quite well, and I will say he was very considerate, but I still think, in spite of all that, they are coming out with the wrong answer.

Mr. DURHAM. They wanted to cut it more than that.

Mr. DEAN. Some did; yes.

The CHAIRMAN. What you really want is some time within which to get some professional advice.

Mr. DEAN. Give us a year. Don't give us a rider. Let us look it over intelligently, either with this committee or with our panel alone, either one or both.

The CHAIRMAN. If you will appoint the right panel and bring them in here with a report and talk to us, we can adopt or reject their report, as far as our cooperation is concerned.

Mr. DEAN. We promise to have that report from the panel by January.

Senator BRICKER. It is important because you will face it next January, if we get by this year.

Mr. DEAN. We have two other items I call your attention to. One is that in the Thomas-Taber amendment, which is a rough cut of 10 percent, you will notice that the Military Establishment has certain exemptions; we have none. I submit we at least ought to be on the same plane with the military in these days.

The other is the Jensen amendment, which prevents our hiring after June 30 of this year more than one-tenth of the number of people who are turned over or let out of the program. Our turn-over is large, and it would mean in rough figures that out of a total employment of approximately 5,000 we would wind up at the end of the year with 1,000 less, or a 20-percent cut in our staff.

The CHAIRMAN. I think that is an oversight.

Mr. DURHAM. If I recall, in the debate on the floor of the House, the question was asked as to whether the Atomic Energy Commission was included.

Mr. DEAN. On the Taber amendment?

Mr. DURHAM. Yes.

Mr. DEAN. We have no exemption under it.

Mr. SHUGG. Scientific and technical is excepted in the Jensen amendment.

Mr. DEAN. On scientific and technical personnel we do have an exemption.

Mr. DURHAM. Scientific and technical personnel—how far does that extend?

Mr. DEAN. If they threw us into town management under the House committee, you can imagine how many people—we just couldn't take care of it.

Mr. DURHAM. It doesn't affect the weapons.

Mr. DEAN. It throws the load on the nonscientific, and they would have to do the paring there.

The CHAIRMAN. There is this about it: If you are allowed to keep all your technical and scientific, but have to fire your stenographers, your technical and scientific help aren't going to be able to function with full efficiency.

Mr. DEAN. It takes all the flexibility out of our program. We didn't mind too much the House cut of 10 percent, the House committee's cut of 10 percent, because we are still left with some flexibility, but the Thomas-Taber amendment will give us no flexibility, because we have to take it in the categories set forth there, some 12 categories.

We have spelled this out pretty well in the memorandum. So I won't labor the point.

The CHAIRMAN. What is the Appropriations Committee's reaction to that?

Mr. DEAN. The Bureau of the Budget is the only one doing any talking with them at this point.

The CHAIRMAN. We will have to talk about that, too. What is the other one?

Mr. DEAN. That is all.

Mr. ELSTON. If you eliminated your scientific personnel, how many persons would be affected by this amendment?

Mr. DEAN. About 500 scientific and technical.

Mr. ELSTON. The amendment exempts scientific personnel. Now, what sort of employees would be affected by the amendment?

Mr. SHUGG. All the rest, all of them, including our security forces. We have a total of 1,400 in that category.

Mr. ELSTON. Will that include your guards?

Mr. SHUGG. Yes, sir; those who are now employed, unless the amendment can be construed to exempt them as law-enforcement personnel—unless guards and couriers can be interpreted as law-enforcement personnel.

Mr. ELSTON. You don't have a tremendous number of stenographers and office assistants and that sort of thing; do you?

Mr. DEAN. Not too heavy; no. The 1,400 security people give us a problem, because I think that "law enforcement" language was used to cover such agencies as the FBI, Treasury agents, and so forth, and our security people are not quite comparable.

The CHAIRMAN. What paragraph is your exemption in on scientific personnel?

Mr. ELSTON. The Jensen amendment on page 1.

Mr. KILDAY. That is replacement and doesn't apply to the 10-percent cut.

Mr. DEAN. I think there is some confusion. There is no exemption for scientific and technical personnel in the Taber-Thomas amendment; it is only in the Jensen amendment.

Mr. KILDAY. That wouldn't relieve you from the 10-percent over-all cut. It would relieve you from the restriction of 1 out of 10, but you would still have the 10-percent over-all cut.

Mr. DEAN. That is right.

Mr. ELSTON. If you eliminated law-enforcement officers and your scientific personnel, have you figured out just how many persons you would have to let out?

Mr. DEAN. Assuming for the moment that all your security people are included under the law-enforcement exemption, which I don't think you could apply—

Mr. SHUGG. Rought figures show it would result in our losing 500. The total range that we might suffer is between 500 and 1,000—500 is the favorable figure.

Mr. COLE. Out of how many?

Mr. SHUGG. Five thousand.

Mr. COLE. Five thousand, including scientific and technical and guards?

Mr. DEAN. Including everybody.

Mr. COLE. When the community problem was up in the House, I detected some feeling of resentment on the part of the Appropriations Committee, and that may have been omitted in the printed record; so perhaps you may not have seen it. But it did appear they resented the idea that the Commission came to the joint committee to present its complaint against this rider, rather than going to the Appropriations Committee.

While I think technically you are right in coming to this committee, I suggest that it would be well to try to get an appointment with the House Appropriations people and go to them as you have with this committee with the explanation as to the adverse effect this rider would have.

Mr. DEAN. We have tried, however, to keep them as fully informed of our position—we have sent several memoranda, and we are doing the same thing now with the Senate Appropriations Committee. Senator O'Mahoney has been kept informed.

We have a letter, just prepared, ready for dispatch to him, which we will send after this afternoon's session. We might well have met with him again.

Mr. WILSON. We asked to be able to meet with them. We asked for the opportunity of discussing this community matter with the Appropriations Committee long before this got on the floor of the House. We wrote them a letter about it.

Mr. COLE. After the rider was published as part of the bill?

Mr. WILSON. Yes; we were told they were not interested in talking about it.

Mr. DURHAM. This gets back to the problem we have faced every year since 1946, and I have always felt that it was high time to have authorizing legislation for the joint committee in order to prevent other committees from doing any legislating. I thought we ought to move in that direction, but the Commission seems to have always felt heretofore that we probably shouldn't do that.

The CHAIRMAN. They have been against it when you and I have suggested it, and they "raised Cain" about it.

(Whereupon at 4:25 p. m. the meeting adjourned.)

## DEPARTMENT STORE LEASE AT OAK RIDGE, TENN.

MONDAY, MARCH 13, 1950

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE JOINT  
COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The subcommittee of the Joint Committee on Atomic Energy convened at 2 p. m., pursuant to call, in room 48-G, the Capitol, Hon. Chet Holifield (chairman of the subcommittee) presiding.

Present: Representatives Holifield, Kilday, and Elston.

Mr. HOLIFIELD. The subcommittee will come to order, please.

This special subcommittee has been appointed by Senator McMahon, the chairman of the whole committee, for the purpose of holding a hearing on the leasing of certain department store facilities in Oak Ridge, Tenn. We have had turned over to the subcommittee certain telegrams addressed to Senator Hickenlooper, Senator McMahon, and Senator Ives, and a letter addressed to Senator Lehman from parties interested at Oak Ridge, all of them asking for this hearing.

The departments of the Government concerned have been notified, and the people representing the Darling Stores and the concessionaires have been notified and, I presume, are present.

We will open the hearings by asking Mr. Stanley Levitt, whom I understand is the representative of the subconcessionaires in the Taylor Department Stores in Oak Ridge, and the complainant in this matter, to take the stand at this time.

I have just been informed by the committee staff that Mr. Roth is here representing the Darling Stores. Mr. Roth, do you have any preference as to when you should make your statement? Do you want to make your statement ahead of Mr. Levitt or after him?

Mr. ROTH. I do not think it matters except that I may lay the general background of all of the basic facts in the matter.

Mr. HOLIFIELD. Under that circumstance, and not having been informed of it before, I will ask Mr. Roth to proceed. Mr. Levitt, you may remain seated there and we will ask Mr. Roth to proceed with the first statement. Will you please give your full name and your capacity as a representative here, to the clerk?

Mr. ROTH. My name is Eugene F. Roth. I am counsel to the Darling Stores Corp., a New Jersey corporation, which is the parent corporation of Taylor's Oak Ridge Corp., and Taylor's Oak Ridge Corp. being a Tennessee corporation which is involved in this matter.

Mr. HOLIFIELD. Before you start, will you submit to an oath? Do you swear that the evidence that you are about to give and the testimony you are about to give will be the truth, the whole truth and nothing but the truth, so help you God?

Mr. ROTH. I do.

**TESTIMONY OF EUGENE F. ROTH, COUNSEL TO THE DARLING STORES CORP.**

Mr. ROTH. Taylor's Oak Ridge Corp. secured a lease on these premises in 1946, and that lease, subject to cancellation provisions, ran until the end of August 1949. It was extended to January 31, 1950, at which date according to its terms it expired. It provided for a straight percentage payable by Taylor's Oak Ridge to the Atomic Energy Commission, acting through Roane-Anderson Co. I might mention that Roane-Anderson Co. is a privately owned Tennessee corporation, a wholly owned subsidiary of Turner's Construction, a New York corporation. It acts for the Atomic Energy Commission pursuant to certain delegated powers and agreements. However, it is a private corporation.

Prior to the time that Taylor's Oak Ridge went into possession of the premises, they were occupied by Miller's Department Store of Knoxville. And for reasons that will appear in the later testimony, I believe, Miller's removed from the premises. Their volume prior to the time that we took possession in 1945, for example, was \$1,605,000. In 1946, for the first half, it was \$705,000.

At the time we entered into possession of the premises, we expended approximately \$77,000 in cash on fixtures and improvements. We also spent considerable sums of money in addition to that in getting started, sums which are truly capital items. As anyone can imagine it would take a substantial amount of money outside of ordinary expenses in getting a business of this type started. We estimated that those expenses were a minimum of some \$20,000 over and above ordinary running expenses, so that we had invested in there at least \$100,000, on the basis of what turned out to be a 3-year lease, with options on our part to get out.

A deal was negotiated with the Atomic Energy Commission, or rather Roane-Anderson, under which, if the Government exercised its option to terminate the lease at the end of any one year, Taylor's Oak Ridge would receive a rebate of certain amounts, certain unamortized amounts of the \$70,000 which was originally invested in fixtures. However, I would make it clear that we would never have gone into this proposition with the idea of putting up nearly \$100,000 of fixtures to be written off over a period of 3 years. We believe that any merchant would know that he has got to write off his fixtures, if he is going to operate profitably, over a period anywhere from 5 to 15 years, and our practice has been 10 years.

However, great stress has been laid on this amortization rebate provision which was simply a way of our recouping in case of a cancellation but had nothing to do with the real proposition of what the business amortization or the true amortization or even the tax amortization of these fixtures could possibly be. Amortization would have to be keyed to your profits and your business in a store, and we do not know of any instance where a store could be so profitable that you could successfully write off your fixtures in 3 years or should do it on that basis.

Mr. HOLIFIELD. Notwithstanding the facts which you have stated, Mr. Roth, the lease which your clients entered into did not contain any protection on that point?

Mr. ROTH. No. And all through the history of this matter there is permeated a certain atmosphere to which I cannot personally testify but which is there. We have witnesses here who will testify to it, that constant assurances were received that in dealing with this agency of the Government we would not only receive fair treatment but preferential treatment, and that we would be sure to stay in for a long, long period of time, and that the only reason we did not get a long lease right then and there was that it was contrary to the policy of the Atomic Energy Commission.

Those are facts that may or may not stand up in a court of law because they depend on oral testimony and they violate the parole evidence rule in many ways, and they are the sort of thing that a court may not be able to act on, but they are true. We have witnesses to prove them.

Mr. KILDAY. How did you get your lease? Was it negotiated or was it bid on?

Mr. ROTH. It was negotiated.

Mr. KILDAY. And it provided for only a 3-year term?

Mr. ROTH. Yes, and a percentage with no minimum, of 6 percent.

Mr. HOLIFIELD. May I ask you to clarify the term of the original lease?

Mr. ROTH. The lease ran from 1946—October 1—to August 31, 1949. That is, it may not have been that way originally but by amendment it was made that way and it was subject to cancellation from either side.

Mr. HOLIFIELD. It was a 1-year lease with the privilege of renewing it?

Mr. ROTH. It may have been in that form, or the reverse. It may have been a 2-year lease with the privilege of canceling, but I do not recall that detail at the moment. That is the substance of it.

Mr. HOLIFIELD. At this point we will enter the original lease into the record in order that the terms of it may be known.

(The lease above referred to is marked "Exhibit 1" and will be found in the appendix on p. 94.)

Mr. ELSTON. Were there any particular provisions with respect to the cancellation, any particular showing that had to be made or could either side cancel it at will?

Mr. ROTH. I think either side could cancel it at will.

Our operations in the premises were something like this in terms of profit or volume:

For the period from September 1, 1946, to January 31, 1947, we lost \$56,493.74.

From February 1, 1947, to January 31, 1948, we lost \$18,795.68.

From February 1, 1948, to January 31, 1949, we made \$13,163.37.

The only figures we now have available, from February 1, 1949, to December 24, 1949, which is not a full year, since our fiscal year begins on February 1, we made \$19,253.22.

Mr. HOLIFIELD. At this point will you give us the average investment in inventory of your department store, excluding the \$100,000?

Mr. ROTH. I do not have that figure at hand, but one of the witnesses may be able to give me a rough estimate of that. It is hard to say at the moment, but we can produce those inventory figures.

Mr. HOLIFIELD. Will you produce all of the inventory for all of the subconcessionaires as well as your original lessor?

Mr. ROTH. Would you want them, sir, as of the end of the year when?

Mr. HOLIFIELD. Not as of the end of the lease. That would not be a fair figure, because you would have sold down pretty low right after the Christmas rush. I would suggest that you give us your average inventory for the year for the different departments.

Mr. ROTH. All right.

Mr. HOLIFIELD. I think that that would be the fairest figure.

Mr. ELSTON. I would like to know if this \$100,000 entered into the profit-and-loss figures.

Mr. ROTH. Not the \$100,000, but certainly the \$74,000 did. It did enter into it. We did amortize it because we had to. Under our tax laws we would have had to amortize it over the entire period of our lease, no matter what the length of the lease is, and that is the fortuitous or the accidental thing about it, perhaps the strange thing about our tax laws. If this lease had been 10 years, we could have and would have been required to amortize it over a 10-year period.

Mr. KILDAY. You amortized it over 1 year?

Mr. ROTH. We amortized it over 3 years. The original lease is 2 years, and I would have to check the details, but based upon the fixed term of the lease, you see. Our volume including the concessionaires, and there are about 14 concessionaires, was this:

For the first 4-month period, from September 1, 1946, to January 31, 1947—and the figures are here only to the end of the calendar year, to December 31, 1946—the figures are \$613,226.

From January 1, 1947, to December 31, 1947, it is \$1,215,331.

From January 1, 1948, to December 31, 1948, it is \$1,057,870.

From January 1, 1949, through the end of our occupancy, to the end of the year, December 31, 1949, it was \$944,208.

Now, during that period of time that we were in there, as a matter of fact shortly after we got in, there began and there was consummated a series of reductions in the staff at Oak Ridge which resulted in a very, very terrible diminution of volume, dollar volume, flowing in the town. I think the population reduced; and we do not have those figures, and it would have to come from the Commission themselves, was reduced from about 80,000 to a figure that toward the end of last year we understand was probably close to 27,000 or 28,000.

A large part of the decline in volume, and there was some substantial decline in volume between the 1948 calendar year and the 1949 calendar year, was due to that trend downward in population. Also there are other factors that go into the question of dollar volume in a town. One factor would be the actual total pay roll, the amount of overtime, whether there were any strikes; and in this case particularly the significant fact was that you had a reduction of price per unit in the entire retail field as a result of which your total volume, even if you sold the same number of units, would be dollarwise less.

Now, in the summer of 1949 we were in negotiation with the Roane-Anderson people. We thought that we could do a better job in spite of the fact that a reasonably good job, or we thought an excellent job was being done there, provided they gave us a reduction in the percentage of rental. We were paying 6 percent. We would not attract the best concessionaires in all instances, although strangely enough some of the concessionaires that we had have been retained in other places by the Commission down in Oak Ridge; and we felt that it

would be a much more successful operation all around if we got a reduction in the percentage.

Now, the fact is that the percentage of 6 percent which we were paying has not been equaled in any of the bids that will be turned up here, either the one received of Loveman's or anyone else's, so it is perfectly clear on its face that that percentage we were paying was excessive. It is common knowledge in the department-store field that for this type of operation you cannot operate on a 6-percent basis, and you need a lower figure than that. As a result of the various negotiations we received a short extension of time, and at the same time we received the usual assurances of good faith, preference, priority, that we would be all right, and that extension of time went from September 1, 1949, to January 31, 1950.

It was understood that they would ask for additional bids because now they were in a position to grant a longer term of 5 or 10 years beyond the expiration of our term. But we had no doubt in our mind that our record was good, that we could offer anything that anyone else could offer, and that acting in good faith the Roane-Anderson people would see to it that we got at least a preference, if there was any parity between our bids, although we expected that our bid would be better.

They sent out a notice for bidding, and here is the advertisement.

Mr. HOLIFIELD. What date was that advertisement?

Mr. ROTH. I do not have the exact date, but it was issued sometime toward the end of October, I think, or during November, and I think that it ran on different occasions in different publications.

(The advertisement is as follows:)

AVAILABLE FOR LEASE  
DEPARTMENT STORE

*with*

\$ 2,000,000.00    P O T E N T I A L

Has 192-foot frontage—37,000 square feet, two floors—ample parking facilities—fully sprinklered and heated from central system—top location in Oak Ridge's main shopping district, which serves a population of over 32,000.

Proposals will be received until Thursday, December 15, 1949.

For complete information and inspection of premises, phone, wire, or write immediately.

Commercial Realty Division

ROANE-ANDERSON Co.

P. O. Box 456

Oak Ridge, Tenn.

Phone 5-4361, Extension 195 or 196

Mr. ROTH. I ask the members of the subcommittee to examine the advertisement and see the rather terse and limited character of the statements that they make there. They tell you nothing about the actual requirements, what they really wanted, no details and no specifications, and nothing.

Mr. HOLIFIELD. Were you furnished any additional information at the time you entered into negotiations with them as to what they wanted?

Mr. ROTH. We were not.

Mr. HOLIFIELD. How did this compare with the original negotiations, the manner in which you originally negotiated with them? Were you at that time asking for any special requirements?

Mr. ROTH. Well, there was a long complicated form that was filled out the last time, and I think that the procedure was much more complicated when we first got into it, that is our original lease in 1946. There were many more details that were examined and it was known what was required, and a great many more negotiations took place. I believe that I have a questionnaire which I will be able to produce later that would show what was required of us.

Mr. HOLIFIELD. As of the original lease?

Mr. ROTH. Yes.

Mr. HOLIFIELD. And you make the statement that no such requirement was made on the second time?

Mr. ROTH. All that happened was that you have this thing. Now, after that there were of course discussions between ourselves and Roane-Anderson. At no time did they tell us what they wanted, that they wanted anything substantially different from what we had been doing before.

Mr. HOLIFIELD. There was no indication from the Roane-Anderson people that you had not fulfilled the terms of your obligation, that you were not serving the community with the right kind of merchandise?

Mr. ROTH. Absolutely not.

Mr. HOLIFIELD. Or the right kind of service?

Mr. ROTH. No, and in fact one of our principal points here is that we were lulled into a feeling that nothing else was required to be done that was of any consequence, and nothing that we didn't know, or wanted to do, because it must be recognized that we as merchants ourselves were very anxious to increase the volume in this business as well, since we would make money.

I think that this advertisement itself shows the character of the negotiations, because that is about all that they have indicated that they wanted, just the most general statement to go in there and operate a store, and we were operating a store and we were making money in that store, and we weren't doing too bad financially or otherwise.

Mr. HOLIFIELD. I think that you should qualify that statement with the fact that in the last two lines there it says:

For complete information and inspection of premises, phone, wire, or write immediately.

And it is true that this is a general notification but they do say that they will give more complete information upon inquiry of an interested party.

Mr. ROTH. There is no question about that, and we were in touch with them and others were in touch with them. But I might just say this: It is perfectly clear from everything that has gone before that their position is that we must have known that there were additional requirements.

First of all, as will appear, nobody else offered any more requirements than we did, but we say that as a matter of fact they did not do

so. The sworn testimony will be presented and it has been testified elsewhere to the fact that we were not advised, and on the contrary we felt we were lulled into a point of security on that. We think it was done deliberately, and under the circumstances we have no other inference.

Now, we submitted a bid and a bid was submitted by an outfit called Loveman's.

Mr. HOLIFIELD. You mean another business organization?

Mr. ROTH. Another firm which operates a store in Chattanooga. We do not know the exact details of what their conversations were with Loveman's. We do know that they had negotiations with Loveman's before, and we have information that they had negotiations and discussions with Loveman's even after the bids were in. That will be a matter for testimony, but I think from the facts that are here it will be perfectly clear what happened.

First, let me compare the two bids, which is a thing that is in issue.

Mr. HOLIFIELD. Do you not think that you had better finish your testimony in regard to the manner in which you were treated, and the discrimination which you maintain was used against you, and continue that, and then get into the comparison of the bids?

Mr. ROTH. Well, the discrimination is right in the bids. We maintain that right on the face of the bids, there is no question about the fact that they took the lower of the two bids, and I want to explain that and show you just how that works out.

We have here the Loveman's bid dated December 12, 1949. It is addressed to Mr. Winfrey, the manager of the Roane-Anderson rental department, and I would like to read practically all of it, if I may, with your permission:

We propose to and submit our proposition subject to contractual negotiations in regard to leasing the department store in Oak Ridge now known as Taylor's, we propose to negotiate a contract with Roane-Anderson Co., acting as agents for the United States Atomic Energy Commission, on the basis of 4 percent of sales on the first \$1,000,000, and 3½ percent of sales between \$1,000,000 and \$2,000,000, and 3 percent of sales on over \$2,000,000.

As evidence of our good faith in this connection, we propose to pay a minimum rental of \$25,000 a year, such minimum to be charged against the percentages herein mentioned.

Further as a matter of qualifying ourselves in this connection, we consider the minimum rental as inconsequential and are only using it as evidence of good faith on our part, subject to reaching the proper contractual negotiations with you.

We would like to point out the reason we are offering such a low guaranty is due to the fact that we believe the department store which you have there now is being improperly and unsatisfactorily run for the benefit of the people of Oak Ridge. We would have to give consideration on our part, in establishing the proper facilities there, to the installation of a credit system—

We would have to give consideration to the installation of a credit system—

preferably the chargeplate system which we are using here. This one expense would cost approximately 2 percent of our sales. We would give further consideration—

and this again is consideration—

to the establishment of a delivery system, which would cost us about 1½ percent; and also, we feel that we would have to use advertising and promotion, which will approximate us between 3 and 4 percent of our sales.

I am sure that you will realize as well as we do that the above facilities are not being offered now to the people of Oak Ridge.

Further, we would have to give consideration—

again "give consideration"—

to the establishment of a proper air-conditioning system for the building. So I am sure that you and your associates can see by test figures that on the basis of such percentage, we propose to negotiate a reasonable contract.

Our proposal is made subject to our reaching an agreement on the proper terms and conditions of the lease, and further subject to our reaching some definite agreement by January 1, 1950.

Further, it is understood between us that in the event we are able to get together on the lease, we will be able to occupy the building by March 1, 1950, or sooner.

Now, let me point out these things about this bid: First of all, it merely states that they will give consideration to certain factors, nothing more. There is no commitment and no promise, or nothing. They state that it is conditioned upon reaching some definite agreement by January 1, 1950. The bids, according to our information, were not to be opened and were not opened, as far as we know, until after that; or if they were, we were only notified after January 10, 1950. So there must have been a further agreement, or if there was not, something is wrong. This bid is conditioned upon its being accepted and in force and effect by January 1, and we were notified that the bidding was not concluded until January 10, 1950.

Mr. ELSTON. Your notice is in writing?

Mr. ROTH. It is a telegraphic notice, and there is no question about the fact, we received it around the 12th, and it was issued on the 10th of January. I have the telegrams here, but I do not think that there will be any question from the Roane-Anderson people on that.

Mr. HOLIFIELD. Will you specify again that particular telegram, the purpose of it?

Mr. ROTH. Just that particular telegram, I would like to present it. It was the award, announcing the award. It simply stated:

We are advising you that your bid is not accepted, and that it has been awarded to someone else.

Mr. ELSTON. What is the date of that?

Mr. ROTH. January 10.

Mr. HOLIFIELD. The cut-off date on the applications for the lease was December 15?

Mr. ROTH. Yes, this was in by December 15, according to the testimony, and so was ours in by December 15. There is no question about that.

Now, turning to our bid, if I may I would like to take the time to read our bid, which was dated December 12, 1949:

GENTLEMEN: We are handing you herewith three alternative proposals for leasing the premises on Jackson Square now occupied by us. Our purpose in giving you three proposals from which to choose is to make it possible for you to elect that lease arrangement which will permit us to give the community the type of store which you feel is desirable.

Up to the present time our operation has been circumscribed by two factors: (1) the shortness of our lease, and (2) the high percentage rent which our lease contract called for. These factors precluded our building patronage and prestige through any long-term program, and prevented us from rendering services of the type which cost money but build good will, and further prevented us from obtaining the most desirable tenants. In the past we could have interested better subtenants to operate some of the departments, but were unable to because our lease was too short and the percentage of sales they were asked to pay was too high.

Our present proposals are designed to permit us to get better subtenants by offering lower percentage arrangements and longer leases. Even though we are

now faced with the prospect of competition from the new \$5,500,000 commercial center (we are convinced that the community will not support two department stores), each of the three alternative proposals permits us to perform in varying degree part of the following program, varying from the minimum in proposal No. 1, to the maximum in proposal No. 3, under which proposal we would give Oak Ridge, subject to the limitations imposed by the size of the community, a real community department store.

1. Install air-conditioning.
2. Replace many of the leased departments with national operators whose merchandising ability is superior and mark-up lower than that of the existing leases.
3. Install new improved lighting, both overhead and counter.
4. Revamp, refurbish, and refinish the fixtures.
5. Install a centralized charge-account system for the charge departments.
6. Arrange for limited store delivery.
7. Engage in community-service activities and make our store an integral part of the community life.

Mr. HOLIFIELD. May I just ask you for a moment if you considered these seven points which you have outlined here as being included in any one of the three proposals which you made?

Mr. ROTH. They are all included in all three proposals. It is merely a question of how much money you spend over-all on them.

Mr. HOLIFIELD. In proposal No. 1, you would do all of these things?

Mr. ROTH. We would have done all of them, except that we would have spent more or less money, depending on how much we would have net.

Mr. HOLIFIELD. There was no firm commitment as to how much money you would spend in any instance?

Mr. ROTH. In any particular instance, except under proposal No. 3, we specified, and I will come to that, a minimum of \$50,000 for all of these. That is because proposal No. 3 is, in terms of amounts, the worst one, and I will come to that, and we had taken \$50,000 out of rentals and reduced it in that way, and agreed to apply that. But I will clarify that as we go along.

Mr. HOLIFIELD. In your presentation here, are you going to pick any one of these three proposals in its entirety as being the one you wish to be considered against the Loveman's lease that was let?

Mr. ROTH. We think all three should be considered against the Loveman's lease.

Mr. HOLIFIELD. But each one will have to be considered separately.

Mr. ROTH. Each one separately?

Mr. HOLIFIELD. Each one separately; and you will not pick one thing from one proposal and tie it to something else in another proposal?

Mr. ROTH. No; each one of these proposals is separate, and we believe all three of them are better than the Loveman's proposal.

Mr. HOLIFIELD. Any one of the three is better?

Mr. ROTH. But certainly 1 and 2 are better, right on their face; and 3 requires some analysis in order to come to the conclusion that it is better. But we feel even that one is better.

The term: All of the proposals are for a 5-year term, with a 5-year option on the part of the concessionaire. All of the proposals are to embody a paragraph giving the concessionaire the right to terminate the lease in the event the operation at Oak Ridge is substantially reduced and the new projected commercial center opened.

Here are the proposals—you must bear in mind that Loveman's proposal was a minimum of \$25,000, 4 percent up to \$1,000,000, and 3½ percent on the next million. And I might mention that, according to a report filed by the Atomic Energy Commission in answer to our complaints to Members of Congress and to this joint committee, the Commission mentioned the fact that they projected a maximum potential of \$1,250,000, although the University of Tennessee report talked about the possibility of its being \$2,000,000. They based their figures on page 5 of their summary statement; that is on 1¼ million dollars.

Mr. ELSTON. Was Loveman's bid on the basis of a 5-year lease, too?

Mr. ROTH. Yes; I think it was. I am trying to check to see whether it says so. I don't think that I find in the bid a specific statement to that effect.

As a matter of fact, I think, sir, that you have covered a point there that we have overlooked, which is that the bid itself—and this bid was not made available to us until recently—the bid itself does not contain the term. In fact, we do not even find a term in the bid. It is merely subject to reaching an agreement on proper terms and conditions. There is nothing firm at all about their bid, nothing whatsoever, that is, including the term.

Mr. HOLIFIELD. That is, as far as their letter is concerned. As to what negotiations they had and what they agreed to do in negotiation, you are not, of course, saying?

Mr. ROTH. No. But we are assuming one thing, and this is one of the points at issue. We feel, from all of the facts and all of the evidence that is in there, that it is clear that we were not treated on a parity with Loveman's.

Mr. ELSTON. Your contention is that your bid was absolute and final and the mere acceptance made a contract; whereas Loveman's bid was open to further negotiation, and a contract could not be completed unless they did negotiate and finally come to an understanding?

Mr. ROTH. I do not think that that could have been done legally, but for all practical purposes that was true. Ours was a complete bid in itself, or substantially complete; and theirs was substantially incomplete, and the Government would have had to sign some formal documents, of course.

Mr. ELSTON. The mere acceptance of your bid would have constituted a contract?

Mr. ROTH. Between private parties, it probably would have.

Mr. HOLIFIELD. Mr. Levitt, did you have something to add at this point?

Mr. LEVITT. Yes, sir.

Mr. HOLIFIELD. Will you give your full name for the record, please?

Mr. LEVITT. My name is Stanley Levitt.

Mr. HOLIFIELD. Do you solemnly swear that the evidence or testimony you are about to give will be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. LEVITT. Yes.

#### TESTIMONY OF STANLEY LEVITT, REPRESENTING THE SUBCON- CESSIONAIRES OF TAYLOR'S OAK RIDGE CORP.

Mr. LEVITT. I want to interject one statement here, and I do not want to take any time from Mr. Roth's testimony.

By the sworn testimony of Mr. Winfrey, assistant manager of the commercial realty department of Roane-Anderson Co., and this was sworn testimony before the Federal court of east Tennessee district on February 20, the entire——

Mr. HOLIFIELD. What year?

Mr. LEVITT. This year. The entire Loveman's proposal was encompassed by that letter which was just read to you by Mr. Roth, dated December 12, 1949. Mr. Winfrey was asked: "Are there any side agreements?" by our counsel, and this is what he stated on the stand, and he said, "No, sir."

And he was asked, "Are there any other verbal agreements?", and he said, "No, sir."

The counsel asked him, "Is, then, the Loveman's letter their complete proposal, in fact?" And he said, "Yes, sir."

Those are sworn statements before the court.

Mr. ELSTON. Was a lease later entered into?

Mr. LEVITT. At that time there was no lease, and there had been no lease signed.

Mr. ROTH. We do not know whether one has been signed.

Mr. ELSTON. You do not know whether one has been signed yet?

Mr. ROTH. At any rate, our term is stated:

All of the proposals are for a 5-year term, with a 5-year option on the part of the concessionaire.

Now I might mention this, that, in this letter from Loveman's, they minimize the meaning of the minimum guaranty and state that it is merely an evidence of good faith, and otherwise they would not put it in.

However, our guaranty is a minimum, as it will be seen, ranging from \$25,000 to \$45,000 over a period of 5 years, and we were backing our judgment up with an absolute guaranty, with money. We were willing to do it for a 5-year term and say so, and we didn't equivocate the way the Loveman's bid did, and they didn't say anything at all about the term there.

Mr. ELSTON. Did they make any point in the Federal court that your proposal was for 5 years and they did not want to execute an agreement for that long a period of time?

Mr. ROTH. I don't think that they did; no, sir. I don't think that they were parties to the Federal court proceeding. That was handled by the Government itself.

Mr. KILDAY. Why did you make it 5 years? Was that the information that you had received in the conferences?

Mr. ROTH. We wanted 5 years and they wanted 5 years, and they were told that they could give 5 years.

Mr. KILDAY. You say that they wanted 5 years?

Mr. ROTH. And we were willing to give them 5 years.

Mr. KILDAY. In your discussions, you agreed that you were talking about a 5-year term?

Mr. ROTH. We thought that we were, anyway.

Mr. HOLIFIELD. As a matter of fact, in the negotiations between the Roane-Anderson people and the applicants for leases, that fact was made known that there was a change in policy from the 1-year leases heretofore entered into to a longer-term lease, in order to give more stability to the business people there? That statement was made; was it not?

Mr. HOLIFIELD. As a matter of fact, in the negotiations between the Roane-Anderson people and the applicants for leases, that fact was made known that there was a change in policy from the 1-year leases heretofore entered into to a longer-term lease, in order to give more stability to the business people there? That statement was made, was it not?

Mr. ROTH. Yes; we were advised, and we wanted a longer lease so that you could be more certain of your operation and make plans and expenditures. As you can see from the evidence, we were beginning to operate profitably, in spite of a decline in volume. It is that very factor that has brought this whole thing to a head. We pioneered there and put money in it and worked hard and developed the business so that it was operating profitably, and find ourselves in the position of being turned out just as it turns the corner. That is the basic inequity that is here.

But quite apart from the inequity, we would ask your committee to inquire into the nature of the discussions had between the Roane-Anderson people and Loveman's before this bid was filed. On the basis of other testimony that will be here—perhaps it is hearsay and secondary evidence of one kind or another—there is strong indication that the kind of attention that the Loveman's bid was getting before it was put in was far better than ours was, and we were being lulled into a sense of security that we would get it anyway, and they were being helped to get it. That is our theory. We feel strongly that we would like to know who even drafted the Loveman's bid, but that is a matter for your committee to decide.

Now, coming back to the matter of the bids themselves, here are the proposals:

1. We propose to pay a minimum rental of \$36,000 per annum, payable in equal monthly installments of \$3,000 per month; and, in addition thereto, 4.62 percent of the sales in the premises during each year in excess of \$800,000.

Mr. HOLIFIELD. May I ask you there if your \$36,000 applied up to the \$800,000 level, and then the 4.62 percent took over from there on?

Mr. ROTH. It works out about 4.50 up to \$800,000, and 4.62 above \$800,000. That is about the way it is.

Mr. HOLIFIELD. But your \$36,000 did not apply to 4½ percent under \$800,000?

Mr. ROTH. No. It works out as a little less than that, 4½ percent.

Mr. ELSTON. Let us compare each one as we go along.

Mr. ROTH. I have the schedule here.

Mr. ELSTON. How does it compare? It was 4 percent on the first million; was it not?

Mr. ROTH. They have 4 percent on the first million; and we have 4.50 up to \$800,000 and 4.62 above, from \$800,000 to a million, so that we are better than they are.

Mr. ELSTON. Yes; on those figures.

Mr. ROTH. Now the only comparisons that they themselves make that are worthy of making at all are up to 1¼ million dollars, so from 1 million to 1¼ million dollars we remain at 4.62, whereas they are at 3½. So that right on the face of that bid, there can be no question that as a practical matter, on this evidence right here, we are better all along the line, and there can't be anything else.

Here, for instance, is the list. That is on bid No. 1, for the first year we would have a minimum of \$36,000—and remember, their

minimum is only \$25,000—and we guarantee that, no matter what happens, under No. 1, the Government would get \$36,000; that is, in any event. If the business gets bad, the Government may get considerably more than 4.62. At \$500,000, they are paying \$25,000 and we are paying \$36,000.

At \$600,000, they are paying \$25,000 and we pay \$36,000.

At \$700,000, they would be paying \$28,000 and we would be paying \$36,000.

At \$800,000, they would be paying \$32,000 and we would be paying \$36,000.

At \$900,000, they would be paying \$36,000 and we would be paying \$40,620.

At \$1,000,000, they would be paying \$40,000 and we would be paying \$45,240.

At \$1,100,000, they would be paying \$43,500 and we would be paying \$49,860.

At \$1,200,000, they would be paying \$47,000 and we would be paying \$54,480.

At \$1,250,000, they would be paying \$48,750 and we would be paying \$56,790.

Now there just is no question about the fact that our bid No. 1 is better than theirs; and the interesting thing is that in this report prepared, there is a summary statement, and they categorically ignore our bids Nos. 1 and 2, and put a schedule only with bid No. 3 and state that those are the only bids comparable. There is no question about the fact that the comparable bid is No. 1 or No. 2. As far as we are concerned, this is the most misleading document in that respect that I have ever seen handed to a Government official, and I would think that they have got a lot to explain for it.

Now, coming down to our bid No. 2, or in the alternative proposal No. 1, we propose to pay a minimum annual rental of \$44,000, payable in equal monthly installments of \$3,666.66; and in addition thereto, by computing the rent at such a sum as shall represent 4 percent of the sales on the first \$800,000 of annual business, plus 3 percent on the next \$800,000 of annual business, plus 2½ percent on all sales above that amount.

Now here you have a minimum of \$44,000.

In this case, the way of figuring that proposal is slightly different from the way you figure proposal No. 1. Here you take these percentages and then apply all of the way up, from \$1 up, and you take those percentages and only apply the \$44,000 against it. So that you have a somewhat different technique of computing it from what you have under proposal No. 1.

You take 4 percent of the first \$800,000—\$32,000, and 3 percent on the next \$800,000, and that brings you to \$1,600,000, which is above our figures here. You apply \$44,000; but \$44,000 on the basis of 4 percent, which is Loveman's up to \$1,000,000, brings us way over \$1,000,000 already.

MR. HOLIFIELD. Let me understand you there. Notwithstanding the fact that you sold only \$800,000, you would not compute that at \$32,000, which is 4 percent, but it would go as the minimum of \$44,000, and the Government had that much protection?

Mr. ROTH. That is right, and we would give them a higher guaranty and slightly lower on percentages when it gets into the higher figures, and that is the balance that is involved.

Mr. HOLIFIELD. Have you a comparison of that as you had of the other?

Mr. ROTH. Yes; I have. Now here is the way it figures out:

At a volume of \$500,000, Loveman's would be paying \$25,000, which is their minimum, and we would be paying \$44,000.

At \$600,000, they would be paying \$25,000 and we would be paying \$44,000.

At \$700,000, Loveman's would be paying \$28,000 and we would be paying \$44,000.

At \$800,000, Loveman's would be paying \$32,000 and we would be paying \$44,000.

At \$900,000, Loveman's would be paying \$36,000 and we would be paying \$44,000.

At \$1,000,000, Loveman's would be paying \$40,000 and we would be paying \$44,000.

At \$1,100,000, Loveman's would be paying \$43,500 and we would be paying \$44,000.

At \$1,200,000, they would be paying \$47,000 and we would still be paying \$44,000.

Beginning with about around \$1,200,000—and that is their optimum figure, the maximum, according to their own statement on page 5 of their report—then they would start exceeding us. That is on No. 2, only when they get into those very high figures.

Mr. HOLIFIELD. For the purpose of refreshing my memory, will you give us the gross sales of the 3 years that Taylor's was in business there?

Mr. ROTH. Yes; I can give you that in just a second. We must remember in connection with these sales that they start off during the period of intense activity when you have a population of some 80,000, as compared to maybe 27,000 or 28,000 or 29,000 at the end of this period.

Mr. KILDAY. The advertisement said 32,000.

Mr. ROTH. We have had all sorts of figures, and I have had them as low as 27,000 and I haven't had any recently higher than 29,000. But the gentlemen are here and they will be able to enlighten you on it.

Here are the figures, though:

The first full year of January 1, 1947, that is the calendar year, to December 31, 1947, it was \$1,215,331.

In the second year, \$1,057,870.

In the third year, that is the 1949 year, it was \$844,208. During that time, of course, you not only had the decline in population, but you had the other factors that I mentioned. We do not know how much the real pay roll was in the town, and the overtime, and we understand there was a strike during some period. And again, of course, the reduction in price, the average reduction in price per unit of an article that is bought. That took place in the last 2 years.

Now those are the figures. On a basis of \$1,000,000 we would be ahead of them. Let us assume \$1,000,000. They would be paying \$40,000 and we would be paying \$44,000. It is not likely that these optimum figures are the ones that you should base your opinion on, and they themselves say that those are the highest figures.

Mr. HOLIFIELD. I think the only fair figure that we can avail ourselves of or could use at this time would be an average of those 3 years. Even that might not be fair, in view of the removal of population. That would have to be considered as against your opportunity for increased sales.

Mr. ROTH. That is why our minimum of \$36,000 is very vital.

Mr. ELSTON. In other words, they have to go to \$1,200,000 to pay more than you do?

Mr. ROTH. That is right.

Mr. ELSTON. That is on your second. Now how about your third?

Mr. ROTH. I don't know whether you gentlemen took a look at this page 5 of the report of the summary statement, which is a report that is in your records.

Now I believe that we were considering bid No. 2, and I think I pointed out that we were talking about the \$44,000 minimum and that it was not until we were getting over \$1,250,000 or thereabouts that the Loveman's bid exceeded, in terms of percentage, Taylor's bid No. 2.

And at this point I wanted to mention that this question of minimums is vital. We are in a period of declining retail volumes. There are all sorts of statistics and reports showing how that is taking place. I don't think I need to quote them to the committee, but we can submit a great deal of data on that.

For instance, there is a report that we have received recently, just from that area. There is a gentleman named Brownwell down there, who is a national authority quoted in textbooks, and it is his assertion that retail volume declined from '48 to '49 by some 13 percent.

Isn't that right?

Mr. LEVITT. In the national area.

Mr. ROTH. Now, in a period of declining volume dollarwise, your minimum is vital. It not only shows the character of the interest of the lessee, but it protects the lessor. The Government's interest certainly is going to be served by getting good substantial minimums here. It is the best proof of all of the sincerity of this man in an operation of this kind. And I don't think we can ever ignore the fact in this situation that all that you have here is a firm commitment to pay \$25,000 a year. And, according to this bid, we don't even know for how long, or what cancellation provisions there are, or what other terms there are. But the maximum is \$25,000.

Now, going to our No. 3: No. 3 reads this way:

We propose to pay a minimum rental of \$25,000 per annum for the first 3 years of the term against 2½ percent of sales in excess of \$1,200,000 and \$36,000 per annum for the remaining portion of the term against 2½ percent of sales in excess of \$1,200,000 \* \* \*. In the event said proposal is accepted, we agree to spend not less than \$50,000 for the physical improvements above outlined.

That is merely the physical improvements, air conditioning, installing new lighting, and the other things that are nonphysical in character, merely changes in operations, were general and apply to all; but this was a general guaranty of a minimum of \$50,000.

Now, here is the way that compares with the Loveman bid:

The minimum was \$25,000 for 3 years and \$36,000 for 2 years, assuming a 5-year lease. If we assume that there is a 10-year term involved, because of the option we renew, you would have 7 years at \$36,000. And for the moment ignoring completely the \$50,000, which I will return to, here is the way the figures size up.

On a volume of \$500,000, Loveman's would be paying \$25,000. We would be paying \$25,000 for the first 3 years and \$36,000 thereafter. On \$600,000, the figures are the same. On \$700,000, Loveman's would be paying \$28,000 and we would be paying \$25,000 for the first 3 years, and \$36,000 for the last 2, or \$7,000. But taking it on \$5,000, we would still be paying an average of \$32,700. On \$800,000 they would be paying \$32,000, and we would be paying again an average of \$32,700. On \$900,000, they would be paying \$36,000, and we would be paying again this \$25,000 or \$36,000, an average of \$32,700 on a 5-year basis.

In each instance, on our items, on our rental, taking 5 years, as we calculate it, we would take the \$50,000 and charge it in over the 5-year period, so that our cost would be \$50,000 more, or \$10,000 more each year. But that would be a commitment and would presumably be absolute and be returned to the community and to ourselves in terms of business and profits.

Beginning at around \$900,000 to \$1,000,000, the Loveman's bid, apart from this \$50,000 begins to rise above ours, apart from the \$50,000. If we include the \$50,000, we don't get exceeded until we get above \$1,200,000 or thereabouts.

That is the way these bids compare, as far as figures are concerned. And again I want to say that the most important factor that any businessman, any landlord, would have considered here, would be the minimums. I think that we all have enough experience in business to know that the amount of money that a man is guaranteed to pay over a period of 5 years is the very best proof of what he thinks he can do in the premises. And the minute he is not willing to give a substantial guaranty, or an adequate guaranty, that is an indication of his own qualms and weakness and fear about the proposition.

That brings us to the question of Loveman's own ability to perform.

Mr. ELSTON. Before we get to that, at what figure did you say that the third proposition became less desirable than Loveman's.

Mr. ROTH. It depends upon whether we include the \$10,000 a year.

Mr. ELSTON. Leaving that out.

Mr. ROTH. Leaving that out: At a figure of close to \$900,000, at \$900,000, for instance, Loveman's would be 4 percent. That is \$36,000. And ours would be \$25,000 for the first 3 years and \$36,000 for the last 3 years, an average of \$32,700, I believe.

Mr. ELSTON. Around \$900,000 they would exceed yours?

Mr. ROTH. Around \$900,000 they would exceed ours, at that point, if you exclude the \$50,000 item.

Now, here is an outfit called Loveman's which is a much smaller firm, I believe, than Miller's, which was there before we went into it. We did a better job dollarwise.

Mr. HOLIFIELD. Before we go into that, please, let me ask you this question: At the opening of the bids on December 15, did you at any time attempt to negotiate with the Roane-Anderson people further?

Mr. ROTH. No.

Mr. HOLIFIELD. Did they at any time indicate to you that your proposals were inadequate or that other offers had been made superior to yours?

Mr. ROTH. We didn't hear a thing.

Mr. HOLIFIELD. There were no negotiations, then, between you and Roane-Anderson from December 15 to January 10, or thereafter?

Mr. ROTH. We never heard a thing. We assumed that this bidding was being done substantially in accordance with the statutory requirements; that you had sealed bids; that there was secrecy; that there would be no further negotiations after that—no opportunity for one bidder to come in and expand his business; change it; add to it. And we just waited. That is all.

Mr. ELSTON. You do not contend there was any changing of bids, do you?

Mr. ROTH. Well, there is no question about the fact that there must have been. Because this bid that they accepted expired on January 1, 1950, by its own terms. Now, how could they accept a bid which had expired? And it wasn't even a bid.

Mr. ELSTON. I mean as far as terms are concerned.

Mr. ROTH. As far as terms are concerned, we believe they were. Because those terms are so inadequate on the face of that bid that they couldn't have accepted it. How could they accept a bid like that? There is no term in it. Somebody must have told them how long a period. Now, there it is.

Mr. KILDAY. Is this the only invitation to bid that was put out?

Mr. ROTH. The only one we know of.

Mr. KILDAY. Because it was not an invitation to bid; just an advertisement of the piece of commercial property for rent.

Mr. ROTH. Sir, they are obviously operating on the assumption that the Atomic Energy Commission is exempted from the Federal public bidding provision requirement.

Mr. KILDAY. This is not an invitation for bids. It is definitely an ad for the lease of commercial property.

Mr. ROTH. That is because they must have been operating on that assumption; and they probably were.

Mr. KILDAY. Was the contract signed by Roane-Anderson?

Mr. ROTH. No; but it was approved by the Atomic Energy Commission; and they maintain they are only an agency of the Commission.

Mr. HOLIFIELD. This is quite different, though, from an advertisement for sealed bids.

Mr. ROTH. Oh, it is. But nevertheless we assume that once the bids were in this agency was operating at least morally along the lines of bidding.

Mr. KILDAY. Is this not actually a request to enter into negotiations, just like you got your first contract?

Mr. ROTH. No. They said all bids must be in by December fifteenth.

Mr. KILDAY. Proposals were to be received until Thursday, December 15, and then it definitely states: "For complete information and inspection of premises, phone, write, or wire immediately." So the entire advertisement indicates that it is to be a negotiation to arrive at a contract rather than an invitation for bids.

Mr. ROTH. We were told that these were going to be sealed bids; that they would be kept secret.

Mr. KILDAY. That is something else. You were told that?

Mr. ROTH. We were told that in advance before we prepared our bid.

Mr. ELSTON. Who told you that?

Mr. ROTH. The representatives of Roane-Anderson told us that.

Mr. ELSTON. Who was it?

Mr. ROTH. Mr. Winfrey told us that.

Mr. ELSTON. When did he tell you that?

Mr. ROTH. This is Mr. Gluck, president of the Darling Stores Corp., and if you want to swear him in he will be glad to answer.

Mr. HOLIFIELD. Do you swear that the evidence you are about to give to this committee will be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. GLUCK. I do.

Mr. HOLIFIELD. Give your name to the clerk, Mr. Gluck, please.

### TESTIMONY OF MAX H. GLUCK, PRESIDENT, DARLING STORES CORP.

Mr. GLUCK. Max H. Gluck.

Mr. ROTH. The question is: What happened before?

Mr. GLUCK. Before we made this bid, I went down to Oak Ridge. That was early in December, some time early in December. And we were there about 2 days discussing the bids and what kind of bids we should make.

We arrived at this decision to make three bids, and the way in which we arrived at it was that after discussing it with Mr. White and Mr. Winfrey we asked them whether we were only permitted to make one bid or more, and they suggested that we make more than one bid.

They told us it was a definite bid, not an application, but a definite bid, that would be sealed and opened and decided upon then; that no further negotiations or discussions could be or would be accepted. That is why we went into this and made the bids this way.

Mr. HOLIFIELD. You were under the firm understanding, from what they said, that there would be no further negotiations after opening of the bids?

Mr. GLUCK. Yes. That is correct. Now, we were there, as I say, two full days. I know Mr. Winfrey very well. I made the original lease with Mr. Winfrey. Mr. White wasn't there then, but I met him. We went to a luncheon with him, with these two gentlemen. And we talked most of two full days, and we discussed it thoroughly. We were very much interested in trying to protect this business that we had built up, and they appeared to be sympathetic.

Mr. HOLIFIELD. Did they during those conversations criticize your operation?

Mr. GLUCK. No, sir. They didn't. On the contrary, I would say they approved of them pretty much; generally quite well.

Mr. KILDAY. Was the 5-year term discussed?

Mr. GLUCK. Oh, yes. They were the ones who made it in this form. They said that they were now permitted to give longer periods.

Mr. KILDAY. How about the 5-year option, your option?

Mr. GLUCK. Yes, they suggested we make it on that basis. When I say "they suggested," we didn't propose this without discussing it with them, and I think they said they were now able to accept bids like this, and that we should make it in this form.

Mr. KILDAY. But yours was a definite bid for 10 years at your option?

Mr. ROTH. Five years and an option.

Mr. KILDAY. At your option. So that it would tie them up for a period of 10 years.

Mr. GLUCK. For 10 years; and us for 5.

Mr. KILDAY. And there was no objection from Roane-Anderson?

Mr. GLUCK. On the contrary, that is the way it was suggested it be made.

Mr. ROTH. And I might say that is even doubly important on the question of minimums. If the Government contemplated a bid, being tied up for 10 years, with varying speculative conditions of business over the 10 years, they certainly would be most interested in the guaranteed minimum amount. So it just wouldn't be subject to all these variations on a percentage basis.

Mr. KILDAY. For what term was the Loveman bid accepted?

Mr. ROTH. There was no term.

Mr. KILDAY. Can somebody not tell us, so that we will have a basis of discussion?

Mr. ROTH. We know the bid itself contained no statement of terms. And it said that those terms and conditions are to be agreed upon.

You see, at the very end they say:

Our proposal was made subject to our reaching an agreement on the proper terms and conditions of the lease, and further subject to our reaching some definite agreement by January 1, 1950.

Mr. HOLIFIELD. Of course, that agreement might have been reached. That does not preclude the fact that they might have reached that agreement before January 1, although they did not announce it until the 10th.

Mr. ROTH. If they negotiated with these people—and they must have—in the case of our filing a sealed bid, with the understanding that this was a bidding procedure, without giving us an opportunity to come in and meet the terms, or at least present additional evidence, or anything, then certainly there was rank discrimination. And there was no bidding. The bidding was a farce.

Mr. HOLIFIELD. We will try to bring out those facts later when we get the representatives of Roane-Anderson on the stand and the Commission.

Mr. GLUCK. We did at the time tell them that now we could get a longer term—we discussed this with them very thoroughly—and that if we got a lower percentage we were certain that we could improve our operation considerably. Because we did approach National Chase as subtenants, and couldn't get them interested, because the period was too short for them. It was particularly that. Also, the percentage on sale was too high. But we know quite a number of them whom we felt we could interest in going in now, as we said, and that we could get a secure term, and we discussed that very thoroughly with them.

Mr. ELSTON. When you mailed your bid in, did you mark it a sealed bid, or did you just write a letter?

Mr. GLUCK. I don't remember that, sir.

Mr. ROTH. It is in the form of a letter, sir. It is in the form of a letter, but it was a sealed letter that was sent to them, and it was understood that it was confidential. And as a matter of fact, on a number of occasions the Commission asserts that they keep these bids confidential, that that is their policy, and it was very difficult to get at them, and we only recently were able to get information about the Loveman's bid, and only through the court proceedings.

Mr. HOLIFIELD. Did you request, at the time you were informed that the Loveman lease had been accepted, or that the Loveman proposal had been accepted, that they make known to you the terms?

Mr. ROTH. Yes; we did. We protested it, and we asked for it.

Mr. HOLIFIELD. At what date?

Mr. ROTH. We would have to get you the details of that. There were phone conversations, communications, a number of them, and we will be able to get them for you.

Mr. GLUCK. I am quite sure it was within a few days.

Mr. HOLIFIELD. Within a few days after the January 10 notification?

Mr. GLUCK. Yes, sir; within a few days.

Mr. HOLIFIELD. What was their response to that?

Mr. ROTH. We never could get the information as to what Loveman's could give us until we came down within a week or 10 days after that and arranged a meeting with Mr. Towns of the Atomic Energy Commission and were told, I think, only the percentages, nothing more. We weren't told much about it at all. We were given some indication, and that is all.

Mr. HOLIFIELD. And how did you come into possession of the facts of the proposal?

Mr. ROTH. We finally came into possession because the proposal was filed as an exhibit, I believe, in the court proceedings that took place in Tennessee.

Mr. HOLIFIELD. On what date?

Mr. ROTH. I have the exhibit here. It was in February of this year.

Mr. LEVITT. Congressman, if I may intervene there, I came to Washington representing myself and a majority of the concessionaires in the store.

Mr. HOLIFIELD. On what date?

Mr. LEVITT. It was approximately the 18th or 17th of January, somewhere along there, within a day or so. And I got into contact with the joint committee. They knew nothing of the details, and they requested a report from the Atomic Energy Commission, but also suggested that I go and talk to Mr. Towns and Commissioner Strauss.

Mr. Towns was very congenial, but absolutely refused to give me one bit of information concerning the bid. He said it wasn't within his authority. He said I had no right to the figures and that they were confidential; that the bids were absolutely confidential; and that no one had a right to know what those bids were. And I assumed by "no one" he meant everybody in the United States.

However, I didn't stop with him. I went to Mr. Shugg, who said he didn't have the file. I don't know his reasons for not having the file or not being able to get the file. Mr. Shugg is Deputy Director of the Atomic Energy Commission. It would be a very simple matter for him to get the file. He refused to give me any information regarding the Loveman bid. Our point at that time was that we felt, only felt, that we were high bidder. You recall my talking to you on that same matter.

We were pretty sure of it. You see, the facts verify what we thought.

I don't know why they withheld these figures. After all, it is public property. It is just like anything else that the Government deals with. We can't have secrecy in handling public funds. It is all right for a hydrogen bomb, but not for real estate.

I went to Senator Murray, Jim Murray, of Montana, who is a friend of mine, and Senator Murray requested over the phone from Mr. Brock the figures from the Commission, which he obtained within a matter of, I would say, a few hours, after my efforts to get them. I spent all day not getting them. Senator Murray had them, and he phoned them in to me, and I phoned them in to you, I believe. Those were not complete figures, but we did have something to work with, in that. Before that, we had nothing of the percentages.

Mr. HOLIFIELD. I might say we have a letter here from Senator Murray, in order for the record to be complete.

Mr. ELSTON. What figures were agreed on?

Mr. ROTH. The Loveman's bid is 4 percent up to a million, as it turned out later, and 3 percent on the next, with a minimum of \$25,000. Those are the Loveman figures we have been talking about.

Mr. ELSTON. Then there was not any change from the bid originally submitted by Loveman's?

Mr. ROTH. Not on percentage, no, although I might say that as we got the information orally through Mr. Levitt it was 3 percent, and we were never told what the minimum was.

Mr. HOLIFIELD. Now, when did you come into possession of the facts regarding the Loveman proposal?

Mr. ROTH. The details of the Loveman proposal?

Mr. HOLIFIELD. Yes.

Mr. ROTH. We were only able to get them—when I say “we,” this was in the possession of the Federal court down in Tennessee in a proceeding brought in the United States district court by the Atomic Energy Commission in the name of the United States against us to enjoin us from occupying the premises, and it was brought into evidence in that case. This is plaintiff's exhibit 1. It is marked as of February 6. Actually, with the mass of papers in there, that didn't get into our personal possession so that we could examine it until very recently. For instance, this file was in the hands of the counsel to the Senate investigations committee. It was sent directly up from the court, up there.

Mr. HOLIFIELD. You must have that date in your mind, and I think it is important.

Mr. ROTH. When I got this information?

Mr. HOLIFIELD. Yes.

Mr. ROTH. Actually, I only got this information this morning. Because this was sent directly from Tennessee to Mr. Adelman of the counsel to the Senate investigations committee, whom we asked to look into it. And it was sent directly up there.

Mr. HOLIFIELD. Now, you must have had the information before that, because we have letters here in the files showing that you knew what the provisions were.

Mr. ROTH. The only information we had was this type of information that came from Mr. Levitt, which was all information. On the other hand, this was filed in the court proceeding and was available within the last 2 or 3 weeks.

Mr. HOLIFIELD. On February 6, was it not?

Mr. ROTH. And it was available.

Mr. HOLIFIELD. Mr. Levitt, when did you get the terms?

Mr. LEVITT. I got the terms of \$25,000 and 4 percent from Senator Murray's office on about January 24 or 23. As a matter of fact, I

have it in my notes, here, in my notebook that I had at the time. But we had the main part of the Loveman lease at that time. We didn't have it in writing. I had it by telephone conversation with Senator Murray. Now, the papers we reserved on Taylor's Oak Ridge corporation for the proceeding in Federal court the morning of February 9.

Excuse me. The date is February 6.

Mr. ROTH. It must be February 6.

Mr. LEVITT. We were going to the other court on the sixth. That is why I got that wrong. And we were going to the Federal court on the 10th. I read the Loveman proposal in those papers on the same day, February 6, and I believe Mr. H. F. Levison read them at that time.

Mr. ROTH. These papers were in use in the litigation and didn't really come into our personal possession until this morning. But the fact of the matter is that as soon as we learned from Mr. Levitt roughly what those terms were, not the details of the full proposal itself, we continued to protest. There were wires. We communicated with the Atomic Energy Commission. We filed a reply to their statement. We filed it with them. We filed it everywhere. We protested down the line. There was nothing else for us to do.

Mr. HOLIFIELD. Now, have you substantially finished your statement?

Mr. ROTH. No; I just have a few more points to make, Congressman.

One of the points that has been made by the Commission is as to the question of the possibility of performance on the part of Loveman's.

To begin with, in their proposal they commit themselves to nothing as far as performance is concerned. They merely have a \$25,000 minimum. We do not know what the actual lease, its final terms, is at all; because, as has been pointed out, this is all subject to further negotiation on terms.

I assume that that lease, if it has been prepared and signed, will be made a part of the evidence here.

We have been in there for 3½ years, and our performance is a matter of record. At the time that we came in there, Miller's, a much larger and more successful operation than Loveman's, moved out, and they had done a maximum of \$6,600,000 at the time. We did about half of that, nearly half that much, for the first 4 months, and in the year after that, the first full year, we did \$1,215,000.

Mr. HOLIFIELD. How long was Miller's there?

Mr. ROTH. Miller's was there 2½ years and was paying a much lower percentage than we were, 2½ percent and 3½ percent, and did a volume of—its highest was \$1,600,000 and, the first year was \$1,300,000.

The argument has been made that that was due to the fact that there were some other stores, small stores, out in the camps in the neighborhood, and that there was a shortage in getting merchandise. Actually, prices were high, and while there was a shortage in getting merchandise of some kind, most stores did huge volumes in that period, because prices were high. They didn't find it expedient or profitable to stay.

Our performance was excellent in contrast to Miller's. I don't think there was any question about that. Our rental, for instance,

in the first year, in 1947, was \$72,919. The highest rental Miller's ever paid, before, was \$48,000.

Taylor's developed an average business of something over a million dollars in the period of about 3 years, starting from scratch, in a city with varying population, which is supposed to have a trading area of possibly 45,000. It is considered an isolated trading area as compared with a great city with its suburbs. Loveman's, over in Chattanooga, has retail trading area of at least 10 times the size of Oak Ridge. We don't know their exact volume, but their volume is probably somewhere around 3 or 4 million dollars.

Now, on that basis, they might do a volume of four times as much in a trading area 10 times as large.

Mr. HOLIFIELD. Well, of course, you are ignoring the point of competition in Chattanooga, where there is no competition in Oak Ridge, in the department stores.

Mr. ROTH. There is competition.

Mr. HOLIFIELD. Are there any department stores in Oak Ridge?

Mr. LEVITT. Excuse me. There is one other department store, National Department Stores. They have been operating there for 3 years.

Mr. HOLIFIELD. Of a size and inventory commensurate with the Taylor inventory?

Mr. LEVITT. No; it is a smaller store. It is a two-story store and a smaller area. However, Oak Ridge—and I want to stress this—is a suburb from the standpoint of commercial activity to Knoxville, Tenn. It is 17 miles and about 40 minutes' driving time to downtown Knoxville and being parked and out of your car. As you know, you can't go into Los Angeles in that length of time. In other words, it is no more trouble for an Oak Ridger to shop in Knoxville than it is for some one living in a suburban area or even a residential area close to town in Los Angeles to get to the downtown section.

Now, these are the facts, and they can't be overlooked. We are discussing a suburban operation. We are discussing an operation which is not in a metropolitan city. There is no traffic on the streets. The streets look deserted. They even looked deserted when there were 75,000 people and Miller's was there. And by the way, I wanted to refer again to Miller's. There were 75,000 people employed in Oak Ridge then, with a pay roll of many, many millions of dollars, and no roads to Washington, no gas, a fence around the town, and very little to buy, so that anything they did have they sold outright. Now, we cannot compare this operation to Miller's, and anybody that really brings it up from the standpoint of the comparison is talking about, say, a comparison of the Earth and Mars, because we are discussing two entirely separate times and separate business conditions. Conditions today are not what they were in 1945. We all know that. I think we should let the matter drop. Business has dropped all over the country.

Now, we are a suburban operation. And when you talk about competition, we have the competition of the Knoxville merchants. And no matter who goes into Oak Ridge, they are going to go up against the same competition. Any outlying town near any metropolitan center has exactly the same competition. The Harriman merchants and the other merchants lying within a 30- or 40-mile radius of Knoxville can tell you their experience is that a big portion

of the business goes to the metropolitan centers. So we do have—and I want to interject this—very stiff competition.

Mr. ROTH. I just want to make one point in conclusion, that I want to emphasize. As far as we were concerned, we did business with a firm called Roane-Anderson Co. It was surprising to find a privately owned corporation operating in this town in that sense. We learned afterward that they were supposed to be strictly supervised by officials of the Atomic Energy Commission, but we didn't go over their heads. We were dealing with these men at the operating level. We would have been afraid to go to their superiors. We never did, as a matter of fact. We never communicated with them at all until after our bid was turned down.

As citizens, we think that is a very extraordinary situation, that a vast business operation such as that is handed over, as far as we can see, to private individuals, not civil-service employees. No man is subject to an oath, to removal.

Mr. HOLIFIELD. If you will pardon me, I will say that we will not go into that. That is a fait accompli. That is something which has been approved by the Joint Committee on Atomic Energy, that method of handling the municipal functions of the town and the business functions of the town. There were arguments pro and con, and I do not think that point is to be decided at this time. And in order that we may go ahead, because we are on call to the floor, I think we will leave that point out at this time, if you do not mind.

Mr. ROTH. Yes; I brought that point in as a moral factor.

Mr. HOLIFIELD. Now, have you made the other points that you wanted to make?

Mr. ROTH. I think I have at the moment.

Mr. HOLIFIELD. Mr. Levitt, do you have anything substantially different to this, to offer at this time?

Mr. LEVITT. I would like to read a statement that I prepared.

Mr. HOLIFIELD. How long would it take you, please?

Mr. ROTH. I think it could be read in 10 minutes.

Mr. HOLIFIELD. All right. You may proceed.

Mr. LEVITT. Stanley Levitt owned and operated two departments in the Taylor Department Store at Oak Ridge, known as the book department and the cosmetic department.

The award of the former Taylor Store at 101 Broadway, Oak Ridge, Tenn., to Loveman, Inc., by the Atomic Energy Commission through its agent, Roane-Anderson Co., is not in the best interest or in conformance with the usual policies of the United States Government.

In the first place, Taylor's Oak Ridge Corp. was definite and absolute high bidder; in the second place, Taylor's was the tenant in possession, and had been for 3½ years. They had built-up a fine business and had certainly offered the people of Oak Ridge a very wide variety of merchandise at reasonable and honest prices. The Atomic Energy Commission, in the award of the lease to Loveman's, deprived the Government of many thousand dollars of revenue, based on the guaranteed rentals offered, and even if Loveman's should increase Taylor's volume as much as 6 or 7 percent, which would be definitely against the national trend, Taylor's guarantees and percentages would still return the Government as high as \$10,200 more than Loveman's. Should business drop considerably, and this is more likely to happen

in view of the times, Taylor's minimum guarantee of \$44,000 would enable the Government to receive considerably more than \$10,200 difference between the Taylor and Loveman proposals.

From a study of thousands of Government awards of contracts, it is readily seen that the Government, as a matter of public policy in protection of the public interest and public funds, is interested in obtaining the high dollar for itself. In running this property for a store operation, the Government should first think of getting the most revenue it can reasonably expect from the most reliable operator. The Darling Stores, Inc., owners of Taylor's Oak Ridge Corp., are rated AAA-1 in Dun & Bradstreet's and are highly successful operators of 110 stores throughout the United States. They started from "scratch" with one store in 1929, possibly the worst year in the history of the country to start in business, and from that grew through the depression to a very good position even prior to the war. This clearly demonstrates that their policy since their beginning has been to offer the public merchandise which will standup on the very competitive market place—that it has stood up successfully is clearly demonstrated by the 110 stores which in every case is a credit to the community in which they are located. The same policies which made the Darling Stores so successful were used in the merchandising and managing of Taylor's department store in Oak Ridge, Tenn.

The management of Loveman's in turn, has never operated a chain of stores and, in fact, only operates the one Chattanooga store. They have no experience in operating two or more stores.

Taylor's department store in Oak Ridge was able to do in the past 3 years over two times the volume within its trading area per capita than Loveman's did in the Chattanooga trade. From this, it is clear that Taylor's department store is a more efficient operation than Loveman's. Taylor's offered in its proposal to install a central charge-account system, delivery service, and air conditioning, and in addition to what was stated in the proposal, it is a fact that plans had already been drawn up for completely re-laying out and remodeling the entire store. In the Loveman proposal it was only stated that "consideration" would be given to installation of these services. The term "consideration" is not very binding. However, Taylor's proposal on these services are at least the equal of Loveman's. It must be remembered that the Atomic Energy Commission is giving Loveman's a 5-year lease with a 5-year option, with no cancellation clause whatsoever on the part of the Atomic Energy Commission. This means that Loveman's has a secure lease for 10 years if they want it. On the other hand, Taylor's had only a year-to-year lease from the start of its operation in Oak Ridge, which contained a 30-day cancellation clause on the part of the Atomic Energy Commission that could be invoked without cause at any time. Any thinking person knows that this is an almost insurmountable handicap to stable business dealings and to long-term planning. Certainly, it would be difficult to take on a central charge-account system and have many thousands of dollars on the books when you could be in a position of being thrown out at any moment. As a matter of fact, the AEC did attempt to throw us out on 20 days' notice.

The recommendation for awarding the lease to Loveman, of course originated with the Roane-Anderson Co. In many aspects it was a

vindictive and malicious action against Taylor's on the part of parties who are allowing personal prejudices to enter into the award of a bid on public property. Oak Ridge is not Roane-Anderson's or AEC's public property—it belongs to the United States taxpayer and no one else, and the personal prejudices of certain people in Roane-Anderson's should have no bearing on the matter whatsoever. However, this personal prejudice played a very large part in the loss of the Taylor lease.

Mr. Harold White, manager of the commercial realty division of the Roane-Anderson Co., personally stated to me in September 1949 that he did not like the actions of the real estate agent, a Mr. Hall, who was sent down from New York to represent the Darling Stores in the negotiations for a new lease. It seemed Mr. White had taken a personal dislike to Mr. Hall, and this dislike had reached such a point that Mr. White made a remark to the effect that Mr. Hall thinks he is smarter than we are, but he is overstepping himself, and so forth, and then Mr. White made the following statement, which I quote: "We are going to teach those guys a lesson." It would seem that Mr. White carried out this threat in his recommendations for awarding this lease to another party. Mr. White also told me several times during the latter months of 1949 that Taylor's did not have much of a chance to retain the lease.

The Darling Stores expended roughly \$100,000 in improvements and fixtures when they opened up the Taylor Store in Oak Ridge. Certainly this expenditure was made in good faith and with the knowledge that they would be allowed to continue in business longer than 3 years and 5 months. The store building when they took it over had never been improved and they made it into a store that was a credit to Oak Ridge.

It is not Government policy to push people around—in any case, it is certainly not good Government policy.

The Roane-Anderson and Atomic Energy Commission's action in this case is vicious, arbitrary, unjust and inequitable in its nature. The Atomic Energy Commission must have realized that their action was of this type because in their report to various congressional agencies, in answer to complaints made about the lease, they completely obscured the true facts in the Taylor proposal, and this certainly must have been done for the reason that they wished to deliberately mislead the readers of this report.

The Commission people whom I have talked to during my January trip to Washington felt quite smug about their decision and belittled any attempts to get redress through the Congress.

The Roane-Anderson Co. states that they offered Taylor's a renewal of their lease for 3 years at the present percentage, but failed to stress that they were requesting Taylor's the additional factor of \$40,000 to \$50,000 per year minimum guarantee. This request can be found in the correspondence between Roane-Anderson and the Darling Stores Corp. This offer of a new lease based on these extortionary figures, which they knew would not be accepted, was only a subterfuge in the attempt by Roane-Anderson to get Taylor's out.

"The proof of the pudding is in the eating," and the facts are that Roane-Anderson and AEC awarded the lease to Loveman's at 4-percent rental and a minimum guaranty of \$25,000, which is certainly considerably less than the exorbitant figure of \$40,000 to \$50,000

guaranty and 6 percent asked of the Darling Stores Corp. during the early negotiations. As a matter of fact, Darling Stores Corp. had in several letters during negotiations offered Roane-Anderson Co. considerably more guaranty and percentage than the award was finally made on. Roane-Anderson claimed in August that negotiations were falling through and the only way they could grant a reduction in rent in view of their "standard policy" was to advertise the store as being open to bids from the general public. Roane-Anderson and the Atomic Energy Commission have laid great stress on this "policy." In actuality, they have no policy whatsoever. They have granted reductions in rent without advertising in public for bids to other stores in Oak Ridge. Many of their leases are awarded by private negotiation and not through public bidding, and no one else is allowed a "look-in." Naturally, they claim all their leases are confidential, which may, or may not, be within the scope of the United States Code covering public properties. However, it seems to me that if all public properties and moneys were handled in this confidential manner by private negotiation, things might become very sad for the general public.

Commercial rental space in Oak Ridge is very, very scarce, and it is almost impossible to get another location in this city. It is very simple for the renting agents and AEC to freeze you out regardless of how high you bid, or how efficient and honest an operator you are. They merely state that yours is not the "most acceptable bid." This phrase can cover up a great deal, and the stock answer to a question of what is the most acceptable bid is always that all bids are confidential, and so forth, even after the location has been awarded to some other party. Roane-Anderson seems to have no consistent rental policy whatsoever and there really has been no consistent application of the "high bid" rule or the "most acceptable bid" rule. A bidder never knows which will govern and as a consequence Roane-Anderson and AEC can argue any way they wish to why they awarded any particular bid, since they seem to have no rules to go by.

As a matter of record, the Roane-Anderson attorney stated during a court action in this case at Jacksboro, Tenn., before Chancellor Joe Carden on February 9, that Roane-Anderson can award a bid on any basis it wishes, including whether or not it likes the color of a man's hair. The latter policy is certainly not a very efficient method for awarding leases on United States-owned property.

The fact that Taylor's bid was not being seriously considered, even though it was a higher bid than Loveman's, was demonstrated very forcibly to me shortly before Christmas, 1949. It should be noted that the final date for receiving bids on this store was December 15, 1949. The final decision was not made by the Atomic Energy people until around January 6, 7, or 8.

Now, as a matter of record, the letter from Roane-Anderson to the Atomic Energy Commission making the recommendations as to who the store should be awarded to was stated somewhere between the 4th and the 6th of January. Therefore, it did come after the date by which the Loveman bid technically died, January 1. That is a matter of record. You have that in your file. (Taylor's was not notified until January 10.) So, certainly before Christmas of 1949 the matter was still under advisement by Roane-Anderson, and possibly AEC.

Mr. Harold B. White, formerly referred to as manager of the commercial realty division, was at my book department at Taylor's around December 22, 1949. Knowing that the store was up for bid, and naturally being worried over the position I would be in if we lost the store, I asked Mr. White what he would do with my inventory if he were in my position, and Mr. White's answer was: "I would sell out to the bare walls." My wife also heard this statement and I have her sworn affidavit to that effect. That sworn affidavit is here, and I would like to enter it into the record.

Taylor's department store has been placed in the position of a baseball team that scored the most runs and thought it had won the game when suddenly the umpire decides that he doesn't like the color of the winning team's uniform and awards the win to the team that scored the least runs. To carry this analogy further, we are in about the same position as if we had gotten the most votes, but lost the election.

I ask that this subcommittee, in all fairness and justice, make a recommendation to the full Joint Atomic Energy Committee that the award of this lease to Loveman's be canceled and that a new lease be granted to Taylor's department store, and that very strong representatives to the Atomic Energy Commission be made so that this new lease with Taylor's can be consummated. It is to the best interests of the Government to continue to have a reputable operator like Taylor's in this store inasmuch as the Government will receive a guaranteed greater revenue than can be obtained from Loveman's. Also, Taylor's department store has served Oak Ridge for 3 years and 5 months and is in a very strong position to know just what the vast majority of Oak Ridgers want and will buy. In addition to conducting the Taylor operation on the same high plane as in the past, further improvements and services can be adopted because of having a long-term lease instead of a year-to-year lease, subject to cancellation.

I would like to make an addendum to that testimony. In the conducting of my business, I am in the store quite a lot. From the middle of December on, so many customers came to me suggesting that we were going to lose our lease. Now, I grant you, this is rumor and second-hand information, but it still is a fact that I heard these remarks made to me in my place of business, that Taylor's was going to lose the business, and the business was going to go to Loveman's of Chattanooga. I naturally gave that quite a lot of consideration. I didn't know what position I would be in if I did lose the lease, so around December 30, around the 28th to the 30th, I went to Chattanooga and discussed the possibility of entering into a lease department arrangement with Mr. Richard Moore and Mr. James Moore of Loveman's, Inc., the owners, the president and vice president of Loveman's, in Chattanooga. During the course of the conversation, they asked me several questions about what I thought of Oak Ridge as a business possibility, and they indicated to me that they were in the driver's seat with regard to this lease. Now, mind you, no decision had been made by the Atomic Energy Commission or by Roane-Anderson at that time, who make the recommendations to the AEC.

I would like to read this sworn affidavit. It will just take a couple of minutes, and it concerns these very things.

This is a sworn affidavit to the State court of Tennessee:

On several occasions from the end of August through December 1949, Mr. White stated to me that Taylor's did not have much of a chance for renewal.

I would like to omit the next, which is a repetition of what I had in my statement, here, and I would like to read this:

Shortly before Christmas 1949, not less than 100 customers informed me that it was their understanding that Taylor's had lost its lease. Many of them stated that Loveman's of Chattanooga was being given the lease on the premises.

On the morning of December 28, 1949, I called Harold White, the manager of Roane-Anderson concessions department for the purpose of further verifying whether there was any truth to the statements made to me that Taylor's would lose its lease. I asked him point-blank whether it was true that Loveman's had been awarded the lease on Taylor's premises. He evaded answering this question directly but did state that Loveman's had a "very strong proposal," and had a "strong chance of getting it."

On the basis of his remarks, and because I knew that he was in a qualified position to know what was happening, and because I was naturally concerned about my own position in the matter, on the very same day I traveled to Chattanooga for the purpose of discussing the matter with Loveman's, with the idea in mind that if it was true that Loveman's had the new lease I would attempt to negotiate a lease with them on my own behalf. I was given an audience by Mr. Richard Moore, president of Loveman's, and Mr. James Moore, vice president. I stated my case to them very clearly, stating that I had heard that Loveman's was being granted a lease at Oak Ridge on the premises occupied by Taylor's that I operated the book and cosmetics department in those premises, and that if Loveman's did have the new lease I wished to discuss the matter with them.

James Moore stated that Loveman's was in the "driver's seat" with respect to obtaining a lease on Taylor's premises, and that Loveman's felt they could get the location on its own terms. He further stated that "all we have to do is to say we want it." He advised me that Mr. Winfrey had discussed the matter with them on several occasions, and had "begged us to take the lease."

In further discussing the matter Mr. Moore stated that Loveman's had not intended putting a minimum guaranty in their bid, but were advised by the Roane-Anderson people that this was essential, and for this reason alone a minimum guaranty was set forth in its proposal. Although Mr. Moore did not commit himself to me that he did have the lease, he made the remark that he would consider leasing a few departments at the Oak Ridge operation, which indicated to me that as far as he was concerned, the lease was theirs. A further indication to me that the leasing of the premises by Loveman's was an accomplished fact was Mr. Moore's statement that it was the company's intention to use old fixtures from their Chattanooga operation in the Oak Ridge store. He further stated that for the first 6 months of their operation in Oak Ridge they intended "taking it easy" to see how the operation progressed.

I left my meeting with these gentlemen with the clear understanding that Taylor's was "out," and Loveman's was "in."

I think that is all I have to say with reference to that. I would like to read my wife's statement.

I, Hilda Simmons Levitt, do solemnly swear the following to be truthful and honest statement of facts. A few days before Christmas 1949, Mr. Harold White, manager of the commercial realty department of Roane, Anderson Co. was in the book department in Taylor's. I was standing next to him and my husband. Mr. Levitt was concerned about the continuation of his business in the Taylor location in view of the persistent rumors that Taylor's would lose its lease and in view of the fact that the store was up for bid. In the course of conversation, Mr. Levitt asked Mr. White, "What would you do if you were in my shoes with all this inventory?" Mr. White replied, "I would sell out to the bare walls."

That is sworn to by Hilda S. Levitt and witnessed by Kathryn Dodge and bears the signature of Ethel D. Glenn, notary public.

Mr. ELSTON. I would like to ask: To whom did Mr. White make the statement that "We are going to teach these guys a lesson"?

Mr. LEVITT. To me personally.

Mr. ELSTON. What date did he make that statement?

Mr. LEVITT. It was in the month of September 1949. I don't remember the exact date. It was shortly after the negotiations had reached the point where Roane-Anderson had decided to open the store for public bidding; in other words, advertising the store for public bidding.

Mr. ELSTON. Did he give any reason for that?

Mr. LEVITT. Yes, he discussed Mr. Hall, as I stated in my affidavit. He said Mr. Hall thought he was too smart for the Roane-Anderson people, and the Roane-Anderson people were taking exception to it, or something to that effect, and "we are going to teach these guys a lesson." I gathered the impression that Mr. Hall had rubbed them the wrong way, or something, during the negotiation. I know Mr. Hall, and he is a very normal individual, and very retiring sort of fellow, and still there could be a clash of personalities somewhere over some phase of the bid or lease.

Mr. ROTH. Mr. Chairman, may I just take one more minute on our case, first to insert this telegram dated January 10 advising us of the award to Loveman's? It is a very simple telegram. It says:

Award of department store location was made to Loveman's of Chattanooga. Appreciate greatly your consideration in filing application with us.

It is signed: "Roane-Anderson Co., C. M. Winfrey."

I would like also to have sworn Mr. Stanley Roth, executive vice president of Darling Stores Corp., to complete the record in connection with what happened after that, because I think the chairman is particularly interested in that.

Mr. HOLIFIELD. What would be the nature of his testimony?

Mr. ROTH. Just in connection with the discussions and what happened after January 10, after that award, because there is some indication that the members of the committee were interested in the subsequent happenings.

Mr. HOLIFIELD. All right. Take the chair, Mr. Roth.

Do you swear that the information and testimony you are going to give to this committee will be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. STANLEY ROTH. I do.

Mr. HOLIFIELD. Mr. Roth, will you please make your statement brief; because time is running on, and we want to get to the rest of these people. It may be impossible for us to hold another day's hearing.

#### **TESTIMONY OF STANLEY ROTH, EXECUTIVE VICE PRESIDENT, DARLING STORES CORP.**

Mr. STANLEY ROTH. As the record shows, I am executive vice president of Darling Stores Corp.

Mr. HOLIFIELD. Your testimony will not cover any of the testimony that has been given?

Mr. STANLEY ROTH. No, sir.

Mr. HOLIFIELD. All right.

Mr. STANLEY ROTH. In the course of the communications back and forth with the Atomic Energy Commission and the various Senators, the statement was made two or three times that opportunity was

given to me personally, Stanley Roth, to rediscuss the situation with Mr. Cook, manager of the Oak Ridge operation of the Atomic Energy Commission, subsequent to our being notified that we had lost the lease position in Oak Ridge. The Congressman has asked the question as to whether there was any subsequent conversations or negotiations. I wish to let you know what they were.

I personally called on Mr. Towne, an appointment with whom was made by Mr. Strauss of the Atomic Energy Commission. We had a long discussion. Mr. Roth was present, and also Mr. Marx, our real-estate representative. At the conclusion of that conversation, Mr. Towne told us that we would hear from Mr. Cook, who was the resident area manager for AEC. Mr. Cook, the following day, after my return to New York, did call me up. Now, Mr. Cook said that he would be willing to discuss with me, if I should come to Oak Ridge, this: namely, a possible extension of 30 days or so, to permit a more orderly liquidation of our stocks and investment in the stocks, and investments of the subconcessionaires.

Mr. HOLIFIELD. Was that after you had filed in the local court?

Mr. STANLEY ROTH. This was the 19th of January.

Mr. HOLIFIELD. Was that after you had filed for an injunction against the eviction in the local case?

Mr. STANLEY ROTH. No, sir, it was before we had filed in connection with the eviction, but after we had wired protests.

The provision, however, which Mr. Cook laid down for this conversation which might ensue in Oak Ridge, Tenn., was that we must accept the final decision of the award to Loveman's. I asked him specifically over the telephone if that decision were irrevocable, and he said yes, it was irrevocable. In other words, I was supposed to go, at his invitation, to Oak Ridge to discuss an irrevocable decision, so far as the main body of the problem was concerned, but he would be willing to explain to me why they had made the decision and possibly entertain a suggestion concerning an extension of time in which we might liquidate in a more orderly fashion.

I asked Mr. Cook to confirm his conversation by wire. This is the wire, and I should like to enter it in the record. It is dated the 20th of January and addressed to me:

Info sent to Walter J. Williams, U. S. AEC, Washington, D. C.:

In confirmation of my telephone call this afternoon I will be very glad to discuss with you your feeling that continuation in business at the Taylor location beyond January 31 is necessary for an orderly liquidation. Any agreement reached on such an extension will necessarily have to be covered by a supplement to your existing contract.

The decision on the award of space now occupied by Taylor's to Loveman's has been made and will remain firm. I regret that you have not previously availed yourself of discussions with either Mr. Leroy MacNeal, project manager for the Roane-Anderson Co., agents for the AEC, Mr. Fred Ford, director of community affairs for the AEC, or myself prior to this time.

Understand that you will call either Monday or Tuesday to arrange for a meeting early part of next week, the time being dependent upon when you can have your attorney accompany you.

R. W. Cook, *Manager, Oak Ridge Operations.*

We received another wire from Mr. Cook, dated the 24th of January, also addressed to me:

This is in confirmation of my telephone conversation this date with Mr. Stanley Roth, vice president, Darling Stores, Inc. As you know, Loveman's proposal has been accepted. However, we would be happy to have you come here to

review with us the elements of your proposal and that of Loveman's which received consideration in our decision CMA and the methods applied in the valuation of bids and in determining the proposal considered most advantageous to the Government. I can assure that I shall approach this review of the pertinent facts with an open mind. As I have already advised your Mr. Stanley Roth CMA we are always prepared to discuss with you any time prior to the expiration of your contract on January 31, 1950, the possibility of a limited extension of the terms of your occupancy to permit an orderly liquidation of your operation provided need is shown for an extension. Any agreement reached on extension will require a supplement to your contract.

My reply to that telegram, dated January 25, is as follows:

Re your wire January 24. We are not asking for an extension pending liquidation and never did. You have previously finally reaffirmed your decision with Mr. Towne and we have been so informed. Further explanation by you of your reasons for accepting Loveman's bid is not in issue. We are demanding an absolute extension of time pending full inquiry into all the facts not only as to your reasons but as to the legality, correctness, and validity of the methods which were adopted in this instance. The pertinent facts as to the reasons for the delay in opening the bids, prior communications with bidders, etc., have all been withheld and are all necessary parts of the final determination by all higher authorities interested in this case. No loss would be inflicted on any one by an extension pending a full inquiry which we have demanded from all interested authorities, whereas carrying out your arbitrary determination now can only cause irrevocable loss to Taylor's and 13 subconcessionaries.

Mr. HOLIFIELD. Will you explain, before you leave the stand, what legal steps you took to obtain additional time for the closing out of your merchandise?

Mr. STANLEY ROTH. Legal and nonlegal, if it is all right with you: Our first attempt was to go to the Atomic Energy Commission, a member thereof, Mr. Strauss, whom I happen to know personally, and appeal to him to correct what we considered a gross inequity right at the source, namely, in the Commission. Mr. Strauss was most polite, and he arranged for a meeting with Mr. Towne. Mr. Towne was met by Mr. Eugene Roth, Mr. Leonard Marx, our real-estate representative, and myself, who spent about 3 or 4 hours with him, I should say, and we were given what we considered to be, and which we told him we considered to be, a bureaucratic run-around. We were given a lot of double talk, and we were given no satisfaction as to action whatsoever, except finally, when we pressed for same, we were told that Mr. Cook would get in touch with me. The result of Mr. Cook's getting in touch with me, you have heard in these telegrams.

We then pressed further for action through the Atomic Energy Commission and were as much as told that they couldn't do anything about it.

We then pressed for action through congressional committees, particularly through your committee, and requested most urgently that we be given at least a stay subject to an open and complete investigation of the facts. All we wanted was that the facts be exposed. And at that time your committee was most profoundly engaged, and we were aware of it, on the hydrogen-bomb project, and we felt, quite rightly, that we deserved at least a secondary position to that.

However, we were not given any encouragement that we would have a hearing, and we were only urging that we get a postponement in order that there may be, at your convenience, an opportunity to expose the facts.

Having failed to do so in that matter, we then sought legal recourse, and the story of the legal recourse I should much prefer, if it is all right with you, to have presented by Mr. Eugene Roth.

Mr. EUGENE ROTH. We brought an action in the State Court of Tennessee against Roane-Anderson Co. and secured a temporary injunction.

Mr. HOLIFIELD. Restraining the Roane-Anderson Co.?

Mr. EUGENE ROTH. Restraining the Roane-Anderson Co. from taking steps to evict us. In the meantime, shortly after that, the Atomic Energy Commission brought an action in the United States district court to restrain or enjoin us from continuing in possession of the premises and to restrain us from the other action. The court held in the Government's favor on that action, and we were permanently restrained from continuing by the State action and from continuing possession of the premises, and all litigation was thereby disposed of, before the end of February.

Mr. HOLIFIELD. All right. Now, you had been informed on January 10 that the proposal of Loveman had been accepted. And you were given how many days to close out your business operation?

Mr. EUGENE ROTH. Our business operation was to terminate on January 31.

Mr. HOLIFIELD. Approximately 21 days.

Mr. EUGENE ROTH. We had 15 days more under the agreement, I believe, in which to remove; that is, to sort of liquidate, move out.

Mr. HOLIFIELD. To move out. But you had to close the business as of January 31, as I understand it.

Mr. EUGENE ROTH. Yes. And I believe the 10th was a Friday, and that communication didn't become effective until about the 13th.

Mr. HOLIFIELD. Subsequent to this notice, were you given additional time by the Roane-Anderson people?

Mr. EUGENE ROTH. We were never given one day by them. We got it from the courts.

Mr. HOLIFIELD. You got it from the local court, the Tennessee court?

Mr. EUGENE ROTH. From the Tennessee court, and also I believe the United States district judge there, both in the form of withholding his decision for a week, substantially gave us to the end of the month of February. Around the end of February, we completed our removal, and we were out. We are out.

Mr. HOLIFIELD. You are out.

Mr. EUGENE ROTH. We were out and have been since the first of March. We moved out in conformity with the court's order.

Mr. ELSTON. How much of a hearing was there in the United States court?

Mr. EUGENE ROTH. There was a full hearing, with documents such as these in evidence, and affidavits of different kinds.

Mr. ELSTON. And all the facts presented to us today were presented in that court?

Mr. EUGENE ROTH. No, not all the facts, because they couldn't be marshaled in quite the same way.

Mr. HOLIFIELD. May I ask this question: If the hearing in the Federal court was to determine whether the injunction of the lower court was valid or not? It was not on the merits of the case?

Mr. EUGENE ROTH. We don't believe it was. The main issue is very simple, that is, the right of a State court to enjoin the United States Government through an agent such as this, which, as a matter of established law, seems to be determined, that "you can't do it that way." And on top of that, we had no right to the possession of the premises. It was the only protection we had as to the continuation of business after January 31.

Mr. HOLIFIELD. In other words, your action in the Tennessee court and in the Federal court was not on the merits of the leasing act, but as to Roane-Anderson. It was strictly on the point of obtaining additional time to close out your merchandise, in the first instance, with the Tennessee court, and in the second instance it was a denial by the Federal court that the Tennessee court had the right to give you that type of an injunction?

Mr. EUGENE ROTH. I must clarify that a bit, though, Mr. Congressman. The Tennessee State action was not based merely on the idea of getting the extension in order to liquidate. It was based upon the oral assurances that were given. It was a sort of a general equity action seeking to enforce the idea that we were entitled to priority on the lease and to an extended period of time; but that we had a temporary injunction in that action, a temporary injunction pending a final hearing.

Mr. HOLIFIELD. Yes, sir. Your request to the court was on that basis, but that request was never ruled upon by the court?

Mr. EUGENE ROTH. Never ruled upon. Now, I might say one thing, so that we might have the record clear. The Federal court in the district court action did comment that it ordinarily had no power to examine into the actions of the Atomic Energy Commission. But in this case, the court felt there wasn't enough to warrant interference. There was some attempt there to make a finding, and I think that will be referred to.

Mr. ELSTON. Have you got the opinion of the court there?

Mr. EUGENE ROTH. I think I could find that.

Mr. STANLEY ROTH. May I say in the interim that as a businessman my hope was that we could circumvent this arbitrary designation of too short a time, to get enough time so that this body here might have an impartial hearing before the patient died, so to speak, rather than an autopsy, which we seem to be having at this moment. You see, we are out now. I am told that Loveman's hasn't put a hammer to a nail to get in as yet, but we are out. I hope something will come out of this more than autopsy. We hoped that we might have a review of the situation before the patient was declared dead.

Mr. EUGENE ROTH. Here is the judgment of the United States court [handing]. I do not have anything else at the moment.

(The opinion referred to is marked "Exhibit 2" and will be found in the appendix on p. 106.)

I would like to insert just one further affidavit into the record. It is the affidavit of Ira Cravens, a concessionnaire. This was filed in the State court, an affidavit sworn to on February 9, 1950, and it contains the statement that on December 5, 1949, he had a meeting with Mr. White similar to the meeting that Mr. Levitt testified to, and it was suggested to him that he go out and get himself another location, as early as December 5, even before the bids were in. And he refused to do it. I would like to put that into the evidence.

Mr. HOLIFIELD. It will be accepted.  
(The affidavit referred to is as follows:)

STATE OF TENNESSEE,  
Knox County, ss:

Taylor's Oak Ridge Corporation, Complainant, v. Roane-Anderson Company,  
Defendant. No. —

AFFIDAVIT OF IRA CRAVENS

I, Ira Cravens, do state under oath that I am the operator of the men's department at the Taylor's store in Oak Ridge.

On or about December 3, 1949, I discussed with Mr. Winfrey, the manager of the rental department of Roane-Anderson, the various rumors I had heard with respect to the renewal of Taylor's lease on the Oak Ridge store. I told him that my own lease with Taylor's expired on January 31, 1950, and since I had merchandise of the value of \$40,000 I was naturally concerned with whether or not Taylor's lease would be renewed. I specifically asked him what in his opinion was Taylor's chances of obtaining a renewal of its lease, and what would he do if he were in my shoes. He began discussing a Mr. Hall, who as I understand it, was an employee of the real-estate agents for Taylor's. Mr. Winfrey stated that Mr. Hall was a "smart aleck", and that he disliked Hall. He further stated that Mr. Hall apparently thought that the people at Roane-Anderson were "dumb yokels." He did say that he was very fond of Mr. Max Gluck, the president of Taylor's, and Mr. H. Levison, district manager of Taylor's, and it was unfortunate that one of these two gentlemen had not attempted to negotiate a renewal of the lease instead of Mr. Hall. He said that if one of them had come to Oak Ridge for this purpose instead of Mr. Hall there was no question in his mind but that a new lease would have been granted to Taylor's, and he implied that solely because of his extreme dislike for Mr. Hall, and not because of any legitimate business reason, Taylor's would not be given a new lease on the premises.

In view of my discussion with Mr. Winfrey, on Monday, December 5, I went to see Mr. White, manager of the concessions for Roane-Anderson, and asked him to give me what information he had concerning the renewal of the Taylor's lease. He was extremely evasive on the subject and would give me no information with respect to the status of the Taylor's renewal, but he did in the course of our conversation, suggest that I bid for space in other buildings at Oak Ridge operated by Roane-Anderson. I told him that until I knew I would have to leave my present location I was not interested in discussing the leasing of any other space. However, I felt that his suggestion to me with respect to making bids on space in other locations was his way of telling me that Taylor would lose their lease and that I should make plans to go elsewhere after January 31.

I have been operating the men's department in Taylor's store since September 1946. I have built up good will over the last 3½ years, and I would suffer great financial loss to give up my present operation.

In making this affidavit I understand it may be used in connection with the motion to dissolve the injunction in this case.

IRA CRAVENS.

Sworn to and subscribed before me this February 9, 1950.

WILLIE V. COOPER, Notary Public.

My commission expires October 17, 1950.

Mr. HOLIFIELD. Now, which one of you gentlemen wishes to lead off? Mr. Williams?

Mr. WILLIAMS. If I could, I would like to have Mr. Cook and Mr. Winfrey and I proceed.

I would like to make a short statement myself and then have them put their statements into the record.

Mr. HOLIFIELD. You wish to make a statement at this time?

Mr. WILLIAMS. Yes; a very short statement, just to make clear the lines of authority.

Mr. HOLIFIELD. All right, come to the stand, Mr. Williams.

Do you swear that the evidence you are about to give will be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. WILLIAMS. I do.

Mr. COOK. I do.

Mr. WINFREY. I do.

Mr. HOLIFIELD. Proceed, Mr. Williams.

### TESTIMONY OF WALTER J. WILLIAMS, DIRECTOR OF PRODUCTION, ATOMIC ENERGY COMMISSION

Mr. WILLIAMS. I am Walter J. Williams, Director of Production for the Atomic Energy Commission, and have been assigned responsibility by the General Manager for the general administration of the Oak Ridge operations.

Mr. R. W. Cook, the manager of the operation at Oak Ridge represents the Commission and has authority to carry on the business of the Commission at Oak Ridge. The Commission has decentralized its business and various managers of operations, so that they have broad authority to make decisions without reference to the Commission.

Now, in the case of the concessions, there are quite a few of these that have to be negotiated, and there are very few that ever come to the attention of Washington. They are handled by the local manager, and the contractors under the local manager.

At Oak Ridge we have, I would say, approximately 160 concession agreements that have to be managed, and then we have possibly 180 additional agreements for rental of space for offices, and so on, making a total of over 340 such agreements that have to be entered into and administered.

Mr. HOLIFIELD. Do you have a set over-all policy in regard to the negotiation of these leases, or is that left on a variable status in the hands of your agents?

Mr. WILLIAMS. We have a written long term leasing policy, which was passed on by the Commission and was sent to the managers of operations at our installation.

Mr. HOLIFIELD. Well, now, I realize you have that, but is it uniform, and do you apply the same type of negotiations to each and every concession, or is it variable?

Mr. WILLIAMS. Generally, the policy is uniform.

Now, in the negotiation of the various leases, they might vary some. A manager from Oak Ridge can answer as to any variation he might have at Oak Ridge. We state a broad policy, and expect the managers to work within certain limits without too much discussion with Washington.

I might say that this case which is under investigation by you today is the only one to my knowledge of the many that we handled at Oak Ridge that has ever come to my attention. And Mr. Cook can give you the variations, if there are any, in the leases. Of course, some of these leases run for various periods of time, and at the time of renegotiation they are either renegotiated or advertised depending upon the circumstances.

Mr. HOLIFIELD. Do you consider this a normal way of advertising?

Mr. WILLIAMS. For this type of operation, Mr. Chairman; yes, sir.

Mr. HOLIFIELD. For this type of operation?

Mr. WILLIAMS. Yes; I do.

Mr. HOLIFIELD. Do you know in this particular case whether there were any additional requirements made of the applicants; that is, as to the amount of money they should invest, the type of service they should give, or anything like that?

Mr. WILLIAMS. Well, Mr. Cook can answer in detail. I reviewed the papers which we forwarded to the joint committee, and I am informed to that extent.

Mr. HOLIFIELD. I see.

Mr. WILLIAMS. Of course, my responsibilities do not stop with town management. I am responsible for the entire production of the Commission.

Mr. HOLIFIELD. I realize that.

Mr. WILLIAMS. So that this is one of the minor things.

Mr. HOLIFIELD. Now, Mr. Cook is the next witness that you wish to have testify?

Mr. WILLIAMS. Yes.

Mr. HOLIFIELD. All right, Mr. Cook.

### TESTIMONY OF RICHARD W. COOK, MANAGER, OAK RIDGE OPERATIONS OFFICE, ATOMIC ENERGY COMMISSION

Mr. Cook. If I may, sir, I would like to read a prepared statement that covers briefly the history, and then Mr. Winfrey of Roane-Anderson has a prepared statement that covers this particular case from beginning to end, and I am sure will answer most of the questions that were raised here this afternoon.

Those that haven't been answered, we can handle separately.

I. a. The original concession agreement between Taylor's Oak Ridge Corp. and the Roane-Anderson Co., agent for the Government, as licensee and licensor, provided for an initial 1-year term and two optional 1-year periods of continued occupancy of the premises involved. These options were exercised by the licensee and approved by the licensor.

b. In an endeavor to obtain a lower rental agreement from the Roane-Anderson Co., Taylor's Oak Ridge Corp., through their agent, Marx Realty & Improvement Co., of New York, agreed to and executed a 5 months' extension modification to their expiring contract providing for further continued occupancy of the premises involved from August 31, 1949, the normal expiration date, until January 31, 1950.

c. Taylor's Oak Ridge Corp., through their agent, Marx Realty & Improvement, and by telegram direct from the Roane-Anderson Co., were fully advised and were completely aware of the reasons for granting the 5-month extension. Proposals from all interested parties for occupancy of the subject premises, for the purpose of conducting therein a high-grade department store under the terms of the recently adopted leasing policy, were advertised for and solicited by the agent, Roane-Anderson Co. Repeated requests for preferential treatment, both by the Marx Realty Co. and Mr. M. H. Gluck, of Darling Stores were denied at all times by the agent. Taylor's Oak Ridge Corp., being fully advised of the procedure to be followed, asked for and received from the agent application forms to be used in submitting a proposal for leasing the subject premises. They were fully advised of the dead line of December 15, 1949, which was established as the date

beyond which no additional proposals would be received or considered by the agent, and submitted their proposal in sufficient time to be considered.

d. As a result of the advertising for and solicitation of qualified department store operators, six firm proposals to lease the subject premises were received by the agent, Roane-Anderson Co., acting for and in behalf of the USAEC. The proposals received were submitted by the following companies or individuals, Mercantile Stores Corp., of New York; D. W. Proffitt, of Maryville, Tenn.; Shainberg Dry Goods Corp. of Memphis, Tenn.; John J. Wender of Jellico, Tenn.; Taylor's Oak Ridge Corp., a wholly owned subsidiary of Darling Stores Corp. of New York; and Loveman's Inc.; of Chattanooga, Tenn.

(The proposals referred to and related letters are marked "Exhibit 3" and will be found in the appendix at p. 109.)

Mr. Cook. e. The representative stores of each of the applicants were personally inspected by the representatives of the Roane-Anderson Co. By such inspections, a first-hand knowledge of the type of operation conducted by the applicant, the quality and price range of the merchandise handled, the approximate volume of business done, and the general reputation of the applicants company with the local banks, business concerns and public was obtained by the Roane-Anderson Co. as agent for use in proper evaluation of the proposal received as compared to others.

f. The agent then carefully analyzed the six proposals received on the following basis which had previously been explained to all applicants, that is—

1. Which proposal indicated the highest type department store operation with all of the normal department store's services to customers and community good will building programs for the residents of Oak Ridge.

2. Which proposal offered to lessor the best financial return in the form of rental to be reasonably anticipated through the conduct of the type store deemed desirable for Oak Ridge.

After a complete analysis was made by the Realty Division of Roane-Anderson Co., a joint review was made of the subject proposals between the Roane-Anderson Co. and the Oak Ridge office of the AEC.

It was the unanimous opinion of the AEC and its agent, Roane-Anderson Co., that the proposal submitted by Loveman's of Chattanooga offered:

1. A well qualified operator for the type of business desired in Oak Ridge by reason of their experience and demonstrated ability in this particular field plus their understanding of the local markets.

2. The nearest approach to a complete well-rounded department store operation, offering the services and conveniences found in such stores generally, for the residents of Oak Ridge.

3. The highest anticipated return to the Government by reason of the percentage rate and the volume potential.

After complete agreement between the AEC and its agent was reached as to the most acceptable proposal submitted, the Roane-Anderson Co. recommended the proposal of Lovemans, Inc. The AEC approved this recommendation, and the successful and unsuccessful applicants were immediately notified by telegram.

II. Upon receipt of the information that Loveman's, Inc., had been awarded the lease on the Oak Ridge Store, Messrs. Gluck and Roth of Darling Stores Corp. protested the decision of the AEC and its agent, Roane-Anderson Co., in telegrams to the agent, the AEC, and to various members of the United States Government's legislative bodies.

Every effort was made to fully explain to all interested parties the reasons for the decision reached and the methods used in the determination made by the AEC and its agent.

I personally explained the matter to Mr. Stanley Roth of the Darling Stores Corp. in several long-distance telephone calls. I further offered to meet with Mr. Roth and his associates at their convenience in order to acquaint them with the details of the proposal accepted even though such action was not in accord with general policy.

Mr. Roth did not avail himself of this offer but subsequently obtained a restraining order in chancery court to restrain the Roane-Anderson Co. from further action in recovering the premises or entering into a lease with Loveman's of Chattanooga.

After a hearing was held in chancery court, the court dissolved the injunction against Roane-Anderson Co. The United States district attorney in Knoxville filed suit in the Federal court at Knoxville to recover the premises from Taylor's Oak Ridge Corp. and to collect such moneys as were due the Government by reason of Taylor's continued illegal occupancy of the premises. Judgment was awarded the plaintiff and Taylor's Oak Ridge Corp. was ordered to vacate and return the premises.

Were you given copies of the court opinions?

Mr. ELSTON. No; I asked for the opinion and got the judgment.

Mr. COOK. I have both of them here.

Mr. ELSTON. Let me ask you this question: Was the injunction in the State court before the proceeding was instituted in the Federal court?

Mr. COOK. No; it was not.

Mr. ELSTON. I thought you made that statement.

Mr. EUGENE ROTH. He implied that, but it wasn't correct. It was after the Federal court action was on its way.

Mr. COOK. I said after a hearing was held in chancery court dissolving the injunction against Roane-Anderson Co.

Mr. ELSTON. Is that correct as to the dissolving?

Mr. COOK. The date of the dissolving in chancery court, as I understand it, was after the hearing in Federal court.

May I call on Mr. Ould for that?

Mr. J. WALLACE OULD (assistant general counsel, Oak Ridge). As I understand it, the temporary restraining order issued in the State court was without prior notice to Roane-Anderson Co. or the Government. There was a hearing on affidavits in that proceeding, and as I recall the chancery State court dismissed the Taylor suit about February 20 or 21 but continued the injunction in effect until March 2 in order to allow Taylor's time to appeal if it desired to do so. That proceeding in the State court was begun about January 25, I believe. The proceeding in the Federal court on behalf of the United States against Taylor's was brought after the end of January, about February 6, and the hearing was held about the 20th or the 21st of February. There

was testimony by witnesses, full testimony, and the court announced its opinion on February 23, which was several days after the State court had dismissed the suit that had been brought in the State court.

Mr. ELSTON. Let me ask you this question: Did not the Federal court determine the case on its merits and determine whether or not there was a binding and valid lease agreement entered into between Roane-Anderson and Loveman's?

Mr. OULD. That was my understanding, sir, and as I said there was testimony by both sides, with Taylor's having four or five more people there; although I should perhaps avoid any controversy with Taylor's counsel and direct this to the court's opinion.

Mr. ELSTON. As I remember the decision of the court, the decision of the United States court, it had nothing whatsoever to do with the State court proceeding.

Mr. EUGENE ROTH. It involved enjoining all acts which might refer to possession of the premises.

Mr. ELSTON. The Federal court simply took jurisdiction and went ahead and decided the case as though the State court never made any order at all?

Mr. OULD. That is right. And it further enjoined proceedings in the State court. But in the meantime the State court had dismissed the suit against the Roane-Anderson Co.

Mr. HOLIFIELD. Will you state your full name for the record?

Mr. OULD. J. W. Ould.

Mr. HOLIFIELD. And will you accept his statement as part of your own, Mr. Cook?

Mr. COOK. Yes, sir.

Mr. HOLIFIELD. And to the best of your knowledge, it is true, as to the dates that he gave, there?

Mr. COOK. Yes, sir; Mr. Ould is assistant general counsel for the Oak Ridge operation and attended the hearings, sir.

Mr. OULD. I might add, sir, that we have copies of the opinions.

Mr. HOLIFIELD. Copies of those opinions will be filed here?

Mr. OULD. Yes, sir.

Mr. COOK. Taylor's Oak Ridge Corp., from the very beginning of their effort to obtain a rental reduction in April of 1949, was fully aware of the necessity of placing the premises on the open market in order to determine the current market value of those premises. Furthermore, no assurance was given in any way of their becoming the selected applicant unless they submitted the most acceptable proposal in the opinion of the AEC and its agent.

After careful analysis, both the AEC and its agent considered the Loveman's proposal the best of those received.

It is our opinion that Taylor's Oak Ridge Corp. has been accorded fair and impartial consideration and treatment by the AEC and its agent, Roane-Anderson Co., throughout the entire period of their relationship.

Mr. ELSTON. Were you reading from the opinion of the court?

Mr. COOK. No, sir; the opinion of the court is attached; and I will turn that in to the committee, sir.

Mr. EUGENE ROTH. May I, at this time, call the attention of the Congressman to the opinion, at the bottom of page 8, which I have just found, which says that—

a suit adversely affecting the disposition of the property owned by the United States or in which the United States owns an interest is a suit against the United States (*U. S. v. Alabama*, 313 U. S. 274). In that situation the suit in the State court ought not to proceed.

And it acted and granted this injunction, which had the effect of terminating the suit in the State court.

Mr. ELSTON. That was not the only question before the Federal court, whether or not the State court should proceed, was it?

Mr. EUGENE ROTH. No; the question was whether or not there should be an injunction, under these conditions. And the court did hold there should be.

Mr. ELSTON. But the State court, prior to the decision of the Federal court, as I understand it, had already dissolved its injunction.

Mr. EUGENE ROTH. I think we ought to check that. It may have done that, I will have to check the facts on it.

Mr. ELSTON. What I am primarily concerned with is whether the Federal court went into the merits of the case and determined whether or not the award of the lease to Loveman's was regular or irregular.

Mr. LEVITT. May I speak on that, sir?

Mr. ELSTON. Yes.

Mr. LEVITT. The only case determined in the court was a point of law concerning whether or not we had the right to stay on the premises. There was testimony during the hearing regarding the justice or the inequity, the bad faith shown by Roane-Anderson and the Atomic Energy Commission. There were pros and cons on both sides of that argument. However, the court did not pass on the merits or the justice or the injustice of this termination of the lease. We were brought in there on strictly a show-cause order. In other words, we were asked to show cause why we should not immediately leave the premises. And it was purely a point of law and not a point of equity or justice or anything of that sort. And I would make the statement that the case was certainly not decided upon the merits of the things that we are discussing here today.

Mr. OULD. If you please, sir, at the Federal court hearing, which started about 9:30 in the morning and ended up after the intermission at about 6 o'clock that night, it was held, at the preliminary hearing on February 10—I think a show-cause order was issued to Taylor's on February 6, and then there was a preliminary hearing on February 10, at which time the court set down the case for hearing, as I understood it, on the merits, on February the 20th or 21st. And during that hearing, I am satisfied that the Federal court disposed of all questions before it. This question of whether or not the State court had jurisdiction was merely brought into the case at that time, on February 21, I think it was, by an amendment to the pleadings, but the whole purpose of the Federal court suit was to get a decision on the merits. I am quite certain that the court's opinion and decree both would indicate that that was what was done.

Mr. EUGENE ROTH. May I just interject one statement, gentlemen? The fact is that the court held in substance, regardless of its words, that it could not interfere with the administrative operations of the Atomic Energy Commission, under the facts which happened to be placed before it, which do not happen to be quite as full as we have here. It was brought on quickly, almost suddenly. And all the court

was interested in, in the last analysis, was determining its power to interfere as a Federal court in the workings of an administrative agency.

Now, it is axiomatic that the Government cannot be run if every Federal judge can interfere with the exercise of judgment. It is true, however, as we maintain, that there is not only bad judgment but circumstances of such a character as to warrant an interference by this body. The issue is not whether the court could interfere with it but whether you gentlemen could interfere with it.

Mr. HOLIFIELD. I understand the case as this last gentleman has presented it, that the action of the Federal court was an action which sustained the administrative right of the AEC and of Roane-Anderson to do what it did under the law, and did not go into the equity of the situation as far as judging as to the merits in the awarding of the lease. But it did sustain the action of eviction which was started by the Roane-Anderson and AEC group. Is that right?

Mr. EUGENE ROTH. That is our position, sir. It sustained their right. It more than sustained it. It constituted the eviction action in itself, you see.

Mr. HOLIFIELD. Yes.

Mr. EUGENE ROTH. Because we were in, and this was the order of the court under which we were pushed out.

Mr. HOLIFIELD. And if there were any criminal actions or any civil damages to be obtained by the Taylor group, they must go to the courts to determine that.

Mr. EUGENE ROTH. Yes; we concede that.

Mr. HOLIFIELD. And the fact of their coming to us is for the presentation of damages which they have incurred as the result of misuse of administrative powers. Am I stating that correctly?

Mr. EUGENE ROTH. Yes; we would be in the courts instead of here, otherwise.

Mr. HOLIFIELD. That is the point I wanted to get clear.

Mr. LEVITT. Congressman Holifield, to bear out what you said, the judge, in his memorandum issued when he made his final decision, made the statement—I don't remember the exact words; it was in the paper—that he was not determining the merits of whether we should or should not have the lease. Now, you understand that, and he used the term "fair or unfair." In other words, he was not discussing the things that we are discussing.

Mr. HOLIFIELD. That is the reason I have these two lawyers on the committee at my side.

Mr. KILDAY. The theory of the Federal court indicates that the court went into the whole thing. He recites here the number of people who advertised for bids, and that sort of thing, and then he had something to say about the defendant having no vested right to have his business accepted in preference to others, and so on.

It offered testimony which tended to show that Roane-Anderson Co. had orally promised that defendant would receive preferential treatment as to extension of its concession because of expenditures which defendant undertook to make in adding fixtures and otherwise improving the facilities to be used under the concession agreement. There is marked inconsistency between any promise of that kind and the specific language of the written concession agreement which provided for amortization of those expenditures at the expense of the Government's agent, Roane-Anderson Co. Had there been a promise to give defendant such preferential treatment as to obligate Roane-Anderson Co. to recommend acceptance of defendant's bid regardless of comparative merit, there would have been no bona fide reason for inviting bids from other firms, to say nothing of the objection to such an arrangement on grounds of public policy.

The opinion all the way through indicates that he had all of the evidence with reference to preferential treatment, the equities of improvements made, and that sort of thing.

Mr. EUGENE ROTH. I didn't maintain that that wasn't so.

Mr. HOLIFIELD. I conceive it to be the duty of this committee to proceed and find out whether the manner in which this was handled was fair. In view of that purpose, I would like to ask Mr. Cook:

Do you wish to testify on some of those points, or do you wish to have Mr. Winfrey testify?

Mr. Cook. I would like to have Mr. Winfrey go through his data, and then if there are any questions which are not answered, either he or I can answer them.

Prior to his starting, I would like to insert in the record the Policy and Procedure for Selection of Award of Commercial Leases at Oak Ridge, Tenn.

Mr. HOLIFIELD. That will be accepted and made a part of the record.

(The material referred to is marked "Exhibit 4" and will be found in the appendix at p. 119.)

Mr. HOLIFIELD. Mr. Winfrey, what is your position?

**TESTIMONY OF C. M. WINFREY, MANAGER, RENTAL DEPARTMENT, ROANE-ANDERSON CO., OAK RIDGE, TENN.**

Mr. WINFREY. My position is that of manager of the rental department of the Roane-Anderson Co., agent of the United States Atomic Energy Commission.

Mr. HOLIFIELD. Now, what relation does Mr. White bear to that? Is he your superior?

Mr. WINFREY. He is my superior.

Mr. HOLIFIELD. In the same department?

Mr. WINFREY. He is the manager of the division which handles not only rentals but subcontracts, and so forth. I have largely the rental contracts.

Mr. HOLIFIELD. Then you take full responsibility for the manner in which you handled the lease as far as the Roane-Anderson Co. is concerned?

Mr. WINFREY. I do, sir. I might point out that I originally negotiated with the Darling Stores on the first agreement, at the time it was under the administration of the USED. And I have prepared here a short résumé of the history of that entire operation, if I may read it.

Mr. HOLIFIELD. I wonder if it is entirely relevant. There has been no contest as to that. You may put it in the record, but unless my colleagues here desire to go back into the history of the original leasing I would say in order to save time you might place that in the record, unless you feel it is entirely relevant.

Mr. WINFREY. We feel it is pertinent in this respect, that it carries us through the entire negotiation. It takes up the original negotiation, where there was no inference of a long-term agreement anticipated, and brings it to date through the negotiation with their real-estate agent, the Marx Realty & Improvement Co. And furthermore, to substantiate it, the record, correspondence, and telegrams, are referenced in my statement. It is very condensed, and I believe will

answer most of the questions which you gentlemen might ask. It should not take over 5 minutes.

Mr. KILDAY. Is not the important thing the question of any negotiations and conversations leading up to the question of the renewal? The first contracts were placed in writing, and all the negotiations, of course, were merged in that. So I think you could put that into the record and get down to the matter of renewal.

Mr. HOLIFIELD. I think that is wise, because we will have trouble keeping our committee together unless we proceed rather rapidly at this point.

Mr. WINFREY. May I state this, then:

1. At all times during these negotiation proceedings, beginning as early as April 1949, the referenced concessionaire was fully advised of the procedure necessary wherein any reduced rental payment to the Government was involved in any way whatsoever.

2. The fact that anticipated volume was never reached and that each year's operation materially declined in volume was mutually recognized by both interested parties. It was Taylor's contention that this condition was primarily due to their inability to secure qualified subleases by reason of their short-term agreement. This same reason was advanced as the cause of their reluctance to promote sales and good will by proper advertising and the installation of such normal department-store conveniences as delivery service and charge accounts.

3. In order to overcome these difficulties, the agent endeavored to renew the expiring agreement under the same rental percentage but containing an acceptable minimum guaranty to the licensor for a period of 1 year only. This, in our opinion, would permit the concessionaire to continue in operation until such time as the firm leasing program was officially approved. The concessionaire, however, was insistent upon the inclusion of optional renewal privileges covering three full years for the licensee's benefit only. To this action, the agent was opposed by reason of the performance record of this operation through the preceding 3 years.

4. In August of 1949, official approval was received enabling the agent to execute firm leases under prescribed conditions. The concessionaire's agent was immediately advised of this policy and was offered an extension to his then expiring agreement for a period of 6 months under exactly the same terms and conditions of rental payment. This offer eliminated any provision for payment of a minimum guaranty or any reference to renewal beyond the extended expiration date. The agent for the concessionaire, after consultation with his client, advised this office that such an extension to January 31, 1950, of their original agreement would be acceptable. The Roane-Anderson Co. then executed such a modification with Taylor's Oak Ridge Corp.

5. The Roane-Anderson Co. advised the concessionaire's agent of its intention to advertise the subject premises publicly for rental under the terms of a lease in lieu of a concession-type agreement and to solicit qualified and recognized department-store operators to submit a proposal for entering into such a lease where possible.

6. The basic features to be considered in making a recommendation for awarding the proposed lease were as follows:

a. The general character of the operation proposed, that is, whether or not it envisioned a true department-store operation in the generally accepted sense of the definition, such as Miller's, Inc., S. H. George & Sons, Proffitt's, Loveman's, Inc., Davison Paxon's, and so forth, who operate the store in its entirety with a few subleased departments, such as shoes, photo shop or fountain, or whether it would consist almost entirely of subleased departments with the lessee directly operating only one phase, such as women's and children's ready-to-wear, or whatever it chanced to be.

b. The term of the lease proposed.

c. The percentage offered, the minimum guaranty to be made, and the relationship of these factors to reasonable assumptions of potential volume based on the applicant's past-performance record.

d. The indication of the applicant's aggressiveness in merchandising, such as, but not limited to, the installation of a charge account and daily delivery service, the installation of proper air conditioning, the willingness to promote good will and volume by extensive advertising, seasonal and promotional sales, and so forth.

(The historical résumé of department-store operation at Oak Ridge, Tenn., is marked "Exhibit 5," and will be found in the appendix on p. 126.)

Mr. HOLIFIELD. Now, may I ask you, Mr. Winfrey, if those criteria were given to the applicants?

Mr. WINFREY. To all applicants; yes, sir.

Mr. HOLIFIELD. In verbal form, or written?

Mr. WINFREY. Verbal and written.

Mr. HOLIFIELD. In other words, the criteria by which you judged the lease were given to the Taylor people?

Mr. WINFREY. Yes, sir.

Mr. HOLIFIELD. And Loveman's; the same criteria to each?

Mr. WINFREY. The same to each.

Mr. ELSTON. When were the criteria agreed upon?

Mr. WINFREY. At the time we advertised. We sent letters to 500 stores, and we interviewed them, such as R. H. Macy and Gimbels.

Mr. ELSTON. When was that?

Mr. WINFREY. In October of 1949.

Mr. HOLIFIELD. And the criteria were enclosed in those letters?

Mr. WINFREY. Basically; yes, sir.

Mr. EUGENE ROTH. Could I ask that the record show the communications to Loveman's and to Taylor's Oak Ridge with those criteria in them?

Mr. HOLIFIELD. I think it is in order that that be supplied, if you gave it to them.

Did you make the statement that you gave that in writing, or verbally?

Mr. WINFREY. No, we gave that verbally to Loveman's, because we contacted them and they came up. We gave it verbally to Darling's. We have one letter in the file which refers to that, under date of September, I believe, in which Mr. Sanford requested from Mr. White the method of operation, and that letter is a matter of record.

Mr. HOLIFIELD. And it does contain those criteria?

Mr. EUGENE ROTH. Those criteria; yes, sir.

Mr. ELSTON. You said a moment ago that you gave it substantially, or basically. Did you not have it written out so that it was in the language you have just given us?

Mr. WINFREY. Basically, we went over the entire thing verbally, with people like Mr. Moore of J. C. Penny Co., who was in charge of the real estate, and it is not their practice to put in charge accounts, and it is not their practice to have delivery. And we didn't want to eliminate people of that character who might want to bid, by making it a written part of the proposal, any more than the minimum guaranty. We desired a minimum guaranty. You could submit a proposal with or without. We would consider all proposals received.

Mr. ELSTON. Did you consider the proposals in the nature of sealed bids?

Mr. WINFREY. No, sir; we have never considered them in the nature of sealed bids. We have considered them as proposals which would be submitted to us prior to a dead-line date and reviewed in the light of what they are proposed to do. We could hardly define all of the things that we wanted in a normal form of specification.

Mr. ELSTON. Now, some figures were given to us today which would indicate that the Government is going to lose some money on this Loveman contract, as distinguished from the Taylor contract, in the event they had received it. What have you got to say about that?

Mr. WINFREY. Well, I think, there, that the accent all the way through was placed on the minimum guaranty and the percentage which the Darling Stores offered us, as being the best that we had received. In our opinion the minimum guaranty was nullified in both proposals by reason of the right to terminate, if the population should decline, or if the proposed new commercial center was built. With that right, they could terminate, and we could not, and of what value was the minimum guaranty for a period of 5 years or 10 years? The 3 years before which they increased the minimum guaranty from \$25,000 to \$36,000 is about the approximate time we figured it would take to build a new commercial center if it were to be built. In that event, they had the right of cancellation. We did not. In the event it was not built, the minimum guaranty in our opinion became inconsequential.

Mr. ELSTON. Why did you put it in the lease if it does not mean anything?

Mr. WINFREY. Simply because it has been a policy given to us by the Atomic Energy Commission that they want a minimum guaranty which, in a measure, as fully as possible, covers the Government out-of-pocket expense. By that I mean the furnishing of municipal services, because there are no taxes in Oak Ridge.

Mr. ELSTON. Then the minimum guaranty does mean something, if they are insistent?

Mr. WINFREY. It does in the matter of that coverage, and that is the reason we like to obtain the minimum guaranty.

Mr. EUGENE ROTH. Mr. Chairman?

Mr. HOLIFIELD. We will have to have some order in this hearing. You may make notations, Mr. Roth, of anything you wish to refute, and later on you will be given that opportunity; but we must have order in the way it is presented.

Mr. ELSTON. Mr. Chairman, I want to ask one more question on this. According to the testimony given to us today, Loveman's

would have to do \$1,200,000 worth of business in order to bring a greater profit to the Government than the Government could receive under the Taylor contract.

Mr. WINFREY. I think that is a reasonable assumption, sir, but there are other considerations besides the monetary return to the Government. One of them is that we are charged with the responsibility of providing such services as the AEC feels and the community feels they are entitled to.

Mr. ELSTON. Well, the Government is interested in getting all the money it can, too. It may not be as general a practice as it should be. Well, now, what services did the Taylor Co. not render that they should have rendered?

Mr. WINFREY. In our opinion, it was a lease department operation in which the Darling Stores, ladies' ready-to-wear, was largely a low-priced ready-to-wear merchandise outfit, and not a nationally advertised brand. We were aware that a great deal of volume was going elsewhere. I think it might be pointed out that the volume of \$1,600,000 that the Miller's Store did previously did not take into account any dollar volume whatever except cash purchases. If the purchaser desired to make a large purchase which would be carried over a period of several months or possibly a year, would defer the purchase of a large amount, possibly a fur coat, possibly a dining-room suite, and that was referred to their store in Knoxville and handled as a charge account, and we received nothing on it, and it was not reflected in the volume which they did.

I think it is normal to assume that at the time the Darling Stores came in and they promised us in their letter that in their estimation they should do \$3,000,000 worth of business, we felt that the store was capable of producing that. That would be roughly, I should say, about \$100 a square foot. A good department store will do \$50 a square foot to \$65 to \$70 in recent years. The department store operated there presently was doing roughly about \$28 a square foot, figured on \$840,000 worth of business. We felt that with the change in the times, for the very reasons which the gentleman enumerated before, that there was not the amount of overtime or cash, and that people were perhaps more cognizant of the conveniences of the charge account. In the survey made by the University of Tennessee that was brought out. They liked those conveniences and shopped in Knoxville. In fact, we have been advised by Mr. Clark, vice president of the Miller Store in Knoxville, that they attribute at least a million or a million and a half of their business to Oak Ridge residents, on charge accounts, and I have one myself.

Mr. HOLIFIELD. May I interrupt there, for a question? In the letter of the Taylor's Oak Ridge Corp., of December 12, they offer, in the seven items they outline there, to install a centralized charge account system.

Mr. WINFREY. That is true. They also offer to pay, if they do all of these things covered in the items, two and a half percent.

Mr. HOLIFIELD. Wait a minute. We are not going into the percentage yet on this. That comes up later. You have got their offer, here, that they would install a centralized charge account system. So wherein did that differ from the Loveman offer to do the same thing?

Mr. WINFREY. Well, basically, we feel that the third alternative, there, covers that.

Mr. COOK. May I point out, sir, that their proposal says that "each of the three alternative proposals permit us to perform, in varying degree, part of the following program, varying from the minimum in proposal 1 to the maximum in proposal 3, under which proposal we would give Oak Ridge, subject to the limitations imposed by the size of the community \* \* \*" et cetera. So that the only proposal that they have submitted, that we feel is comparable to the Loveman proposal, is their proposal No. 3, and under that proposal, if you take their volume of sales from \$625,000 up to \$1,250,000, the return from the Loveman's proposals will be greater in every respect for the first 2 years, and we have every reason to believe that they will have no difficulty in reaching a volume of sales greater than \$1,250,000, so that the return that we expect to obtain from Loveman's proposal is greater than Taylor's proposal No. 3.

Mr. HOLIFIELD. Well, that is predicated upon Loveman's doing a business greater than \$1,250,000.

Mr. COOK. No; all the way through up to \$1,250,000 for the first 3 years.

Mr. HOLIFIELD. As I understand it, up through even proposition No. 3, up to \$900,000, and excluding the \$50,000 which they promised to expend on refurnishing the store, that would equal the Loveman proposal.

Mr. COOK. No; for the first 3 years, up through a million dollars, the net rental that we receive from Taylor's proposal No. 3 is \$25,000.

Mr. HOLIFIELD. The first 3 years, \$36,000? Or the next 2?

Mr. COOK. No; the first 3, as I understand their proposal, was a minimum net rental of \$25,000, and the next 2 years \$36,000.

Mr. HOLIFIELD. And that averages around \$32,000, does it not?

Mr. ELSTON. \$29,500.

Mr. COOK. If my figures are right, it averages \$29,500.

Mr. HOLIFIELD. That is without the \$50,000?

Mr. COOK. That is right.

Mr. HOLIFIELD. Excluding the \$50,000. If you add \$10,000 a year to that \$50,000, it would run \$39,500.

Mr. COOK. Yes; but you must recall that the Loveman's are also expending sums of money in this venture equal to anything that has been indicated by the Taylor proposal.

Mr. HOLIFIELD. It does not show that in their letter, does it?

Mr. COOK. No; they state what they will do. They do not give an estimate of the cost, but the cost will be identical almost.

Mr. HOLIFIELD. They say they will give consideration to the installation of facilities for a credit system, and that they would have to give further consideration to the establishment of a delivery system. So they do not commit themselves. They say they will give consideration to it. Is that not right?

Mr. COOK. That is the way the proposal reads.

Mr. HOLIFIELD. Did they make you any subsequent proposal to firm this matter up?

Mr. COOK. We have, with the Loveman corporation a firm, long-term lease, that firms up these things.

Mr. HOLIFIELD. All right, now. When did you enter into the negotiations with them to obtain the firming up of this particular letter?

Mr. COOK. Subsequent to the removal of the restrictions by the chancery court of the State of Tennessee.

Mr. HOLIFIELD. All right. That was subsequent to December 15, when you closed your bids, was it not?

Mr. COOK. Yes, sir.

Mr. HOLIFIELD. Then, as a matter of fact, you did enter into negotiations with them after you had accepted the original proposals, which were terminated on December 15?

Mr. COOK. No, sir. We entered into discussions with them to firm up the conditions of the long-term lease, which were not all included in the proposal that was submitted. Neither proposal included all the things included in the long-term lease, sir, and we met with them to firm those things up so that we could arrive at a mutual agreement of what would be incorporated in the scope of the long-term lease.

Mr. HOLIFIELD. That is right. And did you meet with the Taylor people to give them a chance to firm up their letter after December 15?

Mr. COOK. After the analysis of the bids, a decision was made that the proposal submitted by the Loveman people was the best proposal that we received. As a result of that analysis, they were notified that they were the people that were selected.

Mr. HOLIFIELD. And then you proceeded to get down, point by point, and work out the details, which their general letter of December 12 discussed?

Mr. COOK. That is right.

Mr. HOLIFIELD. But you did not go to the Taylor people and give them the same opportunity?

Mr. COOK. No, the decision to award the facility to Loveman's was based on the information that was received and evaluated.

Mr. HOLIFIELD. But you admit that that information was not complete and that you subsequently had to tie it down?

Mr. COOK. No; I said it was not complete in the many phases and conditions that must be a part of a long-term lease. But insofar as the substance of the long-term lease was concerned, the proposal of the Loveman's as was submitted was incorporated in the long-term lease.

Mr. WILLIAMS. You see, Mr. Chairman, the proposal that was submitted is not a lease.

Mr. HOLIFIELD. I realize that.

Mr. WILLIAMS. And once you determine, by comparing these proposals, what appears to you to be the best business deal, then you must negotiate, or you must at least arrive at the terms of the lease and get it signed.

Mr. HOLIFIELD. Yes; I realize that. You made your determination originally, you tell us, on these two letters. Now, if you did that, it appears to me, as a layman, and reading the Loveman letter, and in reading the Taylor letter, that your Taylor letter was more specific, went into more detail, and made three different proposals, any one of which was just as broad, you might say, as the Loveman letter, and it would seem to me that if you were going to go beyond the Loveman letter and firm up the general statements made in there, or the statements like this, "We will have to give consideration on our part in establishing the proper facilities there for the installation of a credit system." Now, apparently you did that. You may have included that in your lease. And by the way, we would like to have a copy of

that lease for the record. If you did include that in your lease, as part of the agreement to lease, then it was the firming up of a general statement on their part, was it not?

(The Loveman lease referred to is marked "Exhibit 6" and will be found in the appendix at p. 134.)

Mr. COOK. Yes, sir; it was.

Mr. HOLIFIELD. And was it included in the lease?

Mr. COOK. Yes, sir; it was. And if in our opinion Taylor's had been the best proposal received, we would have to do the same thing with Taylor's that we did with Loveman, in arriving at a firm long-term lease.

Mr. KILDAY. In that connection, Mr. Winfrey referred to a stipulation in the Taylor letter that caused you to consider only the third proposal. He stated that "all of the proposals are for a 5-year term with a 5-year option on the part of the concessionaire. All of the proposals are to embody a paragraph giving the concessionaire the right to terminate the lease in the event the operation at Oak Ridge is substantially reduced or the new projected commercial center opened."

Now, was that qualification placed on any of the other proposals? I see it is not contained in the Loveman letter. Was it carried into the Loveman lease, or anything comparable to that? The right of the concessionaire to cancel out?

Mr. WINFREY. That is correct. That was discussed with all of the applicants, due to the very nature of Oak Ridge, whether or not they would have the right of termination in the event the operation was materially reduced, substantially reduced, or in the event that we built a new commercial center which would destroy the value of this particular location.

Mr. KILDAY. Now, as I understood you, Mr. Winfrey, you said that because of the inclusion of this statement in the Taylor proposal you did not regard the minimums provided in the first two proposals as being of any consequence or of any firm nature, because of the lack of canceling out.

Mr. WINFREY. That is correct.

Mr. KILDAY. Now, did you put in the Loveman lease anything comparable to this on cancelation?

Mr. WINFREY. Comparable to that, yes, sir.

Mr. KILDAY. In no more definite language than that?

Mr. WINFREY. In the event of a decrease in population to the extent of 25 percent, they would have the right of renegotiation or termination. In the event that we built a new commercial center and they were offered a lease or they elected to quit, they would have the right of renegotiation then.

Mr. KILDAY. Then what, in that connection, was your view as to the proposals submitted by Taylor's?

Mr. WINFREY. We considered in the proposals submitted by Taylor's that the minimum guarantee and the proposals that we elected to take were equal, that is, \$25,000 a year for the first 3 years. It would take that time for any radical difference in the commercial center to be established or discarded, as may be. In the event that the commercial center was not, then we felt that the minimum guarantee in either case was inconsequential, because they were doing a

much higher volume. We were basing that on the volume we felt a store could produce, of approximately \$50 a square foot, which is \$1,500,000.

Mr. ELSTON. Let me ask you this: Since you anticipated that Loveman's would do an increased volume of business, and you entered into the lease on the theory that they would do it, did you put any provision in the lease requiring that?

Mr. WINFREY. May I have that question again, sir?

Mr. ELSTON. Did you put any provision in the lease requiring Loveman's to do any particular amount of business a year?

Mr. WINFREY. Only the minimum guarantee of \$25,000, which would have been the case in either one.

Mr. ELSTON. I mean, did you put in a provision requiring them to do a gross business in excess of that that has previously been done by Taylor's?

Mr. WINFREY. No, sir; we did not.

Mr. ELSTON. In other words, they could do any amount of business. It does not make any difference.

Mr. WINFREY. We felt that the investment which they are making there, on the basis of spending approximately two to three hundred thousand dollars, to set up and properly equip and stock the store, install the charge account, the air-conditioning unit, and to do the things which they intend to do, would be sufficient to produce the urge on their part to recapture it as quickly as possible by the best job they could possibly do. And I think in their letter of December 12, in that third paragraph, they point that out, where they say:

We would like to point out the reason we are offering such a low guarantee is due to the fact that we believe it is inconsequential.

But they clarify their understanding of what they wanted in a department store, the same as Taylor's clarified it in their third proposal. They say not "we will," but—

we will have to give consideration on our part in establishing the proper facilities there, to the installation of a credit system, preferably the charge account plate, which we are using here. This one expense would cost us 2 percent of our sales. We would have to give further consideration to the establishment of a delivery system, which would cost us about one and a quarter percent.

Mr. ELSTON. Is there any requirement that Loveman's have to come in and spend the amount of money you have just indicated they are going to spend?

Mr. WINFREY. Those services, I believe, are provided for; yes, sir.

Mr. ELSTON. I say there is no requirement. You simply have their promise.

Mr. KILDAY. How about the lease?

Mr. WINFREY. The lease covers the department store, with charge account.

Mr. ELSTON. Does the lease require the expenditure of any amount of money in improvement?

Mr. WINFREY. Not in monetary amounts, but in the furnishing of those services.

Mr. HOLIFIELD. May we have a copy of that lease? Do you have a copy available there?

We are going to continue until 6 o'clock, and then we are going to come together at 10 o'clock in the morning.

While he is looking up the lease, Mr. Winfrey: You made the statement that you never considered the proposals which were received until Thursday, December 15, as in the nature of a sealed bid.

Mr. WINFREY. That is correct, sir.

Mr. HOLIFIELD. And did you consider them in the nature of a final proposal?

Mr. WINFREY. Yes; we did.

Mr. HOLIFIELD. You did?

Mr. WINFREY. To the extent that they knew generally the type of lease that we wanted, and we felt they covered pretty generally the outline, and that we in turn would have to write a lease which would be predicated upon their attorney's approval of that lease, upon our attorney's approval of that lease, and in fact, to that date we had not had an approved form in which the attorneys were in complete agreement. We felt that the basis of the negotiation was established there, and the lease would be written conforming to those negotiations.

That same thing, I think, holds true in the original agreement with Taylor's, in which we wrote down the basis of the contract, and on that basis of contract in which their representative and ours were in agreement, covering 15 articles, we wrote the concession agreement.

Mr. HOLIFIELD. Well, we are faced here with a situation where a business operation has occupied a certain lease for 3 years' time, where they have paid good rentals during that time, where they have made a capital investment of close to \$100,000 outside of their rentals that have been paid out in the way of fixtures and other equipment. And suddenly they are to be removed, apparently. Now, as a matter of ordinary courtesy, do you not think that you should have, after receiving a proposal from these people, indicated to them at that time that their services were inadequate and that they were not furnishing the kind of service to the community that you in your opinion thought should be furnished? And do you not think that in view of the fact that they were the occupants and had this investment and had built up a business there of their own, you owed to them the courtesy of some additional information?

Mr. WINFREY. Sir, I think the record will show all the way through, in our exchange of correspondence, and in this pamphlet, which I intend to inject, that we were well aware of that, that we discussed it with the Taylor operation, that we discussed it with the real-estate people.

Mr. HOLIFIELD. You made complaints?

Mr. WINFREY. That is correct.

Mr. HOLIFIELD. Written or oral?

Mr. WINFREY. Oral.

Mr. HOLIFIELD. They were never so serious as to cause you to write them a letter and ask them to change their operation, or to state that they were not giving you the right kind of thing?

Mr. WINFREY. Now, I am talking primarily on the negotiation of this lease. There are written complaints from the contracting officer, from this office, to the Taylor operation, on the payment of bills, contractual obligations, which are carried in this folder right up to date. And we discussed the matter with their representative, Mr. Sanford, Mr. Marx, and others. They were aware that this was going to be on a competitive proposition, for the type of service which

we wanted. They were also aware that we offered to renew that contract for a period of a year, under the same terms and conditions, without any change in rental, if they wanted to continue, and show the type of operation we were going to have, which they rejected, as they wanted two additional 1-year renewals, which we felt was not right.

We wanted a firm lease, because during the period of that negotiation in August we were authorized to enter into a firm lease. We were also segregating the utility costs, which is an entirely different type of agreement. And their contention all the way through was that they offered us the highest amount of money, which we contend is not true. We have a higher proposal from a man well qualified financially, who had had experience in small department-store operations, who at that time was doing and accounting for a large portion of the volume of the Taylor's operation, who submitted a proposal to us, which was both higher in percentage and in minimum guaranty.

Mr. HOLIFIELD. To whom do you refer?

Mr. WINFREY. I refer to Mr. J. J. Wender.

Mr. HOLIFIELD. Mr. J. J. Wender?

Mr. WINFREY. That is correct.

Mr. HOLIFIELD. But you discarded his proposal?

Mr. WINFREY. We discarded his proposal after due analysis and consideration with the representatives of the Atomic Energy Commission, for the type of department store which he had previously operated, from the fact that he would not bring, in our estimation and in their estimation, the full rounded department store that we envisioned, and we could not help but feel that it was better for the community of Oak Ridge, for the services to be offered, to have that type of store. We were not looking at it solely from the minimum guaranty or the percentage offered standpoints.

That was justified, I think, because in the well-qualified operators, such as Mercantile, such as J. C. Penney, such as Proffitt's, they offered us percentages rather lower than that. And we felt that in order to get the department-store operation which would carry on these services, the conveniences to the public, to become a civic-minded institution and develop some character in Oak Ridge, they would not pay as high as someone else.

Mr. ELSTON. In other words, I take it that down at Oak Ridge there is no such thing as a person going in and leasing a building and operating his business as he sees fit.

Mr. WINFREY. Yes, indeed, sir; there is.

Mr. ELSTON. Well, here, it seems to me you placed all kinds of restrictions on what should be kept in a store, what kind of store it should be, whether it should carry more articles, more expensive articles, and whether it should have a credit system, and a lot of other things. Now, why do you not just lease buildings to people who are in business and let them operate their business the way they see fit? After all, that is the private-enterprise system.

Mr. Cook. At the present time, sir, we have insufficient facilities, and we must to some extent make sure that the requirements of the community are met. However, with the commercial center we feel that we will be able to remove ourselves more from the picture, so that we can approach more normal free enterprise than we have had in the past.

Mr. ELSTON. Well, instead of building up a big commercial center, it seems to me it would be better if the Government got out of the business.

Mr. COOK. Sir, we don't propose to construct the commercial center. We propose to have it financed by private funds. All we are doing is the site development.

Mr. HOLIFIELD. Now, in view of that fact, you do plan to open this commercial center and allow people to come in and build their own buildings there under long-term leases. And does it not appear to you that a minimum guaranty, say, of \$44,000, as is contained in proposition No. 2, there, of the Taylor organization, and a graduated 4 percent on the first \$800,000, 3 percent on the second \$800,000, and 2½ percent on the remainder, would be a very safe operation for the Government to undertake, in view of the fact that this additional competition may be coming in there?

Mr. WINFREY. Oh, very rightly so; if it were not for the fact that they had it in their contract that they proposed to eliminate that when the commercial center was built.

Mr. HOLIFIELD. Let me understand that. You say they would have the right to eliminate it. When this competition came into being, but not before that?

Mr. WINFREY. That is right.

Mr. HOLIFIELD. Well, that is in your Loveman contract also. So we cannot use the argument one way one time, and the other way the other time. If you are going to use it against Taylor in this particular instance, you have to use it against Loveman, too, if you put it in his lease, do you not?

Mr. WINFREY. I think in the Loveman lease and in the Taylor lease, both, considering the third proposal, which was covering the type of store that we felt was needed for the community, we have a cheaper department store there at the present time, the National Stores, featuring lower priced lines. We have practically the same range of prices of Darling Stores, at Knight's, which is a competitive chain, and they operate there. We felt that in giving it, we were getting a well-rounded operation which would give us some of the better along with the lesser.

Mr. HOLIFIELD. Did you make any attempt to impress upon the Taylor people that you wanted a higher class of merchandise?

Mr. WINFREY. Very definitely, sir.

Mr. HOLIFIELD. Orally or in writing?

Mr. WINFREY. Orally, I would say. And then in writing also. To their man, Sanford, on date of about October. We told him the basis of the comparison, the quality of the merchandise, and so on.

Mr. HOLIFIELD. You told them that you wanted them to handle a higher class of merchandise; that the community needed it?

Mr. WINFREY. Not specifically in those words; no, sir.

We indicated that among the factors which would be considered would be the type of merchandise, the quality.

Mr. HOLIFIELD. Yes, but if you did not indicate to them that the type that they were handling was unsatisfactory and that you wanted a different type, how could they know but what their operation had been satisfactory to you?

Mr. WINFREY. Well, I will say that they would know of that by a statement which is a matter of a memorandum to the file from Mr. Marx, in a conversation with Mr. White, in which he stated:

I understand from discussion with Sanford that we are on the bottom of your list in quality merchandise in the operation.

We had told him definitely we wanted a better type store. We felt it would produce greater volume. The better type store had produced greater volume, was continuing to enjoy volume elsewhere, and yet this store was declining in volume each year.

Mr. HOLIFIELD. Well, of course, your decline in volume, now, is a different proposition. As a matter of fact, you know, all over the United States business has been declining in volume in the last 3 years. I operate a men's clothing store in California, and my business has been declining, and I have not changed my brands of merchandise. So you are speaking of something here which is a national trend. It is not altogether a local situation.

Mr. WINFREY. That is true, sir, to a degree.

Mr. ELSTON. If people wanted better merchandise than this store could furnish them, there is not anything wrong with their getting it in Knoxville, going into Knoxville and buying it, is there?

Mr. WINFREY. Not at all, sir. They do.

Mr. ELSTON. It seems to me, though, you are trying to indicate to a department store in Oak Ridge what they ought to handle, what kind of merchandise they ought to handle, and what kind of a system they should put into effect. Now, do you think it is your function to do that?

Mr. COOK. We do in this instance, sir, because it is the only major department store that we have, and we feel that that is what the community wants and needs, and that by putting in a first-class department store, the dollar volume of business that is being spent off the area will be spent on the area and increase the revenue to the Government.

Mr. HOLIFIELD. Mr. Kilday?

Mr. KILDAY. Just glancing through the report, which I have not read, I see that Loveman does agree to install a charge and delivery system comparable to that maintained by other similar businesses.

Mr. WINFREY. Similar to the store in Chattanooga.

Mr. KILDAY. I do not find anything in there requiring them to air-condition it, as far as I have read it. I have only glanced through it.

Mr. WINFREY. I think you will find in there their right of removal of air-conditioning.

Mr. KILDAY. That is right. I do not find that they are required to install it. I do find that if they install it, they shall have the right to remove it at the termination of the lease by placing the premises in the condition in which they were before. But there is no requirement for air-conditioning in the lease.

Mr. WINFREY. Well, no; not in the lease. Not at all.

Mr. HOLIFIELD. Is there any requirement for delivery service in the lease?

Mr. WINFREY. Yes.

Mr. KILDAY. Charge and delivery service are required?

Mr. HOLIFIELD. Charge and delivery service are both required.

Mr. KILDAY. I find that if the population falls below 24,000, then the lease is subject to renegotiation.

Mr. HOLIFIELD. That, in effect, is similar to the proposal of the Taylor people last year, where they say all the proposals embody the right to terminate the lease in the event the operation at Oak Ridge is substantially reduced or the new projected center opened.

And you have substantially that in the Loveman lease?

Mr. WINFREY. Yes, sir.

Mr. HOLIFIELD. We are going to call the meeting to a close at this time, and we will meet here in the morning at 10 o'clock.

(Whereupon, at 6:05 p. m., the committee recessed to reconvene Tuesday, March 14, 1950, at 10 a. m.)

## DEPARTMENT STORE LEASE AT OAK RIDGE, TENN.

**TUESDAY, MARCH 14, 1950**

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE JOINT  
COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The subcommittee of the Joint Committee on Atomic Energy met at 10 a. m., pursuant to recess, in room 48-G, the Capitol, Hon. Chet Holifield (chairman of the subcommittee) presiding.

Present: Representatives Holifield, Kilday, and Elston.

Mr. HOLIFIELD. The subcommittee will please come to order.

Mr. Winfrey was on the stand, I believe, when we recessed, and Mr. Cook and Mr. Williams.

**TESTIMONY OF C. M. WINFREY, MANAGER, RENTAL DEPARTMENT, ROANE-ANDERSON CO., OAK RIDGE, TENN.; RICHARD W. COOK, MANAGER, OAK RIDGE OPERATIONS OFFICE; AND W. J. WILLIAMS, DIRECTOR OF PRODUCTION, ATOMIC ENERGY COMMISSION**

Mr. Winfrey, we were discussing the lease which was signed with Loveman's at the time that we concluded our hearings yesterday afternoon. A copy of this lease has not been given to me to study until just the present moment, so I have had no chance to look over it, and we will have to explore this as best we can.

I notice in Loveman's letter they said they would consider special services such as charge accounts, and Taylor's said that it would in fact devote \$50,000 to such services.

Mr. KILDAY. Was it not physical improvements to the extent of \$50,000?

Mr. WINFREY. That is correct, the physical improvements. That was the maximum to which they would go, as stated in their letter.

Mr. HOLIFIELD. Did Loveman's agree to go that high or higher?

Mr. WINFREY. Loveman's agreed to spend more than that in the negotiations; they felt it would take at least a quarter of a million dollars for them to set up—

Mr. HOLIFIELD. Of course, you did not bind them in the lease to spend any of that, except the part that would be devoted to setting up the charge accounts and the delivery service?

Mr. WINFREY. That is true, sir; we did not bind them in the lease.

Mr. HOLIFIELD. To a specific amount.

Mr. WINFREY. We assumed, in making the lease and in making the evaluation, that they would not spend that amount of money

without going the full way to get back their investment. They gave us every assurance that they would operate the same quality and caliber of store in Oak Ridge that they did in Chattanooga, and that was the basis of our whole negotiation—handling the same line of merchandise, nationally advertised.

Mr. HOLIFIELD. Had you at any previous time requested the Taylor people to handle that type of merchandise?

Mr. WINFREY. We told the Taylor people exactly the type of store we wanted. We told them that we felt we were not getting the return on the square footage we were entitled to. We told them to submit a proposition which would as nearly envision the kind of store that we had outlined to everybody else, which was a true department store with charge accounts, because we felt that that was very important, and we have evidence that a great many dollars go off the area simply on that account.

Since our lease was a percentage lease, the volume obtained was the most important factor. We felt that in the cheaper type of operation we had a certain percentage of that volume in the National stores. We had approximately three other specialty shops. We had no true department store. Hence, that would be additional volume which we would get.

Does that answer it, sir?

Mr. HOLIFIELD. What was the purpose of having bids and a deadline date in the first place, if so many of these matters were not covered in the bids and if later negotiations were going to be necessary?

Mr. Cook. In receiving proposals for commercial activities, we try to follow the same procedure we follow in the procurement contracts or in our lump-sum contracts. We feel that by that method we can assure that everybody that is interested in submitting proposals knows what is wanted.

By setting a deadline date beyond which the receipt of proposals will not be considered, everybody has an opportunity to meet that date. Then after that date, no further negotiations are conducted with anyone, and the review and award of the successful proposal is made on the basis of the proposals we have received as of that date.

Mr. HOLIFIELD. No conferences were held with any of the applicants between the date of December 15 and the date of the award?

Mr. Cook. There were no conferences held regarding their proposals, sir, but representatives of our agency, Roane-Anderson Co., did visit the various stores of the people that submitted their proposals so that they could compare their type of operation with the other operators.

Mr. HOLIFIELD. At the time you visited these stores, did they confer with the owners or managers of these separate stores in regard to any points covered in their respective applications?

Mr. Cook. No, sir; they did not.

Mr. WINFREY. I can answer that. I want on the inspection trips. We talked to the manager of the store only as to how he operated, as to the price of the merchandise that he handled, as to whether or not he subleased all of his departments or just a small portion of them, what his general type of operation was; which was corroborated then by the banks with which he did business.

We also inquired from other merchants in the town as to the feeling of the competitive merchants as to the type of operator they were; as

to what, in their estimation, the general community feeling was; how much volume they did; and all pertinent facts as to the type of operation.

We did that in Memphis and we did that in Nashville and in Chattanooga, and in Maryville and in Jellico—all of the stores that submitted bids.

Mr. HOLIFIELD. After you made the announcement of the award on January 10, did you immediately enter into negotiations with the Loveman people as to firming up their letter of application?

Mr. WINFREY. Yes; I would say we did.

Mr. HOLIFIELD. And you continued in conference until you agreed upon the terms of the lease?

Mr. COOK. Except for that period under which we were enjoined by the State from having further negotiations or discussing it with them.

Mr. HOLIFIELD. In view of the fact that you entered into these negotiations to firm up what was, after all, a very general letter on the part of Loveman's, you felt no moral obligation at all to enter into negotiations with the occupants of the premises, the Taylor people, as to what they would do or how they would firm up their particular application?

Mr. WINFREY. If we had done that, we would have been in a position, in our opinion, of putting the thing on an auction basis, because if they had increased their proposal, then we would have gone back to Loveman's, presumably, and we would have gone back to others.

Mr. HOLIFIELD. Now, wait a minute. You cannot have a final closed-bid arrangement as of December 15, and have a bid plus negotiations afterward, in fairness to all concerned, unless you extend to all the same privilege.

Mr. COOK. That is exactly our position, sir. If we had gone back to Taylor's to see if they would meet Loveman's proposal, we would be in essence opening this thing up to an auction block, and we would have had to go back to everybody else interested, to see if they would want to increase their proposal. And if Taylor's met Loveman's proposal, we would have to go to Loveman's to see if they could increase their proposal.

We feel that we must have a closing date on the proposals that are received, and analysis and award must be based on the information submitted as of the closing date. Otherwise, if we go through a procedure like that just once, we would never be able after that date to interest anyone in coming in and submitting a proposal at Oak Ridge.

Mr. HOLIFIELD. That makes it all the more important, it seems to me, that you should have had a firm advertisement which would have delineated exactly what you wanted beforehand, or at least given that information in written form to the respective bidders and obtained their reaction on each one of these different points, before you announced the winner. It seems to me like it was all the more important that you have not such a general term of operation as you had before the December 15 deadline.

Mr. WINFREY. Now, may I point out to you, sir, that in all six of the proposals which we received, every phase of it was gone over carefully in verbal discussions with them. All were cognizant of it and all six visited the area; and a number of them visited the area and were

aware of the type of operation that we wanted, but did not submit a proposal. All six who did were fully aware, from the type of store that we wanted, of the volume expectancy that we felt could be had from it. It was established that the store had a potential volume, if properly merchandised and developed, of somewhere between \$1,500,000 and \$2,000,000. We made everyone aware of that. That is the thing which we were shooting for—it was the increased volume. And for that reason we explained to each one why we felt all of these things were necessary, but they were not obligatory to them sending in a proposal, as in the case of Mr. Moore of the Penney Co. He sent in a proposal in which he eliminated entirely any reference to delivery, any reference to charge accounts. This is against the policy of their company, and since they are recognized merchants we were very glad to have a proposal from them, even though they withdrew it at a later date prior to the 15th.

Mr. HOLIFIELD. As a matter of fact, after you had announced that the lease would be awarded to Loveman's, was there not still a possibility that your negotiations with Loveman's would fall through; that they would fail to agree to the specific terms of the lease?

Mr. WINFREY. We did not believe so; no, sir.

Mr. HOLIFIELD. You did not believe so?

Mr. WINFREY. We did not.

Mr. HOLIFIELD. But there was that possibility, of course?

Mr. WINFREY. There was that possibility.

Mr. HOLIFIELD. In other words, you could not consider their letter as a legal basis for forcing them to sign a lease with you; could you?

Mr. WINFREY. May I point out one factor to you that I think is apparent, and that is that our discussions all the way through, with the exception of Taylor's, were with the officers of the company, in which they gave us a letter of intent covering generally their understanding of the situation in Oak Ridge, and that they would be willing to pay a certain percentage, and would be willing to pay separately for electric current and water, and they would expect a certain amount of warehousing space; and they would give us, or would not, a minimum guaranty. The only proposal which was written by a real estate agent and an attorney was the proposal written by Taylor's. It was the only proposal which was submitted to us that had three alternatives. Everyone else was on the basis that we had discussed with them and on the basis that we had discussed with Taylor's. I think that there is probably some lack of clarity due to the fact that the proposal was not written by their attorney but was written by their president, with whom we had negotiated.

Mr. HOLIFIELD. You are speaking of the Taylor proposal?

Mr. WINFREY. I am speaking of the Loveman's proposal as versus the Taylor proposal; and I think that that same thing is true of all of the other proposals which were received from Proffitt, and from Mercantile, and from Shainberg.

Mr. HOLIFIELD. What is the point that you make of that?

Mr. WINFREY. The point that I am making is that the Taylor proposal was so worded that they were bidding or proposing three different types of operation.

Mr. HOLIFIELD. That was acceptable; there was no prohibition against making alternate proposals, was there?

Mr. WINFREY. There was never any suggestion of an alternate proposal. The only thing that we left open entirely was the type of operation that they were to submit.

Mr. HOLIFIELD. But it is customary, in making proposals, to submit alternate proposals, is it not, in commercial leasing?

Mr. WINFREY. Yes.

Mr. HOLIFIELD. You are not criticizing the fact that they submitted three proposals?

Mr. WINFREY. I am trying to explain the apparent lack of clarity to you gentlemen in the proposal from Loveman's as against the proposal from Taylor's, inasmuch as you had not negotiated and had the intent, or had seen the store, or had been assured that they would conduct identically the same type of store within the space limitations.

Mr. HOLIFIELD. Well, is it not true that when you are an agent for a Government operation such as this, that you would be on much safer ground if you conducted your negotiations in writing rather than in verbal exchanges and telephone conversations, of which there is no record and which later on no Government official can inspect or investigate?

Mr. WINFREY. The intent of all our telephone conversations is covered pretty well in memoranda in the file, and I think most of the letters exchanged were pretty clear.

Mr. HOLIFIELD. And you also make the statement that you made no contact with the Loveman people between the date of December 15 and the date of January 10 in regard to the terms of the lease?

Mr. WINFREY. Absolutely not.

Mr. ELSTON. What was the statement about you begging Loveman's to take over the store? The statement was made yesterday that you personally made that statement; is that correct?

Mr. WINFREY. That is incorrect, sir. I pointed out to Loveman's, and their board of directors as I pointed out to Miller's, Inc., the possibilities that we felt existed, and to Gimbel Bros., Mr. Gardner, the vice president, and to Mr. Jaeckels, the president of the Southern Division of R. H. Macy, and in fact he drove from Atlanta to Oak Ridge and spent 2 days investigating our properties, the potential that we believed existed. We said that we wanted a good store that could develop that potential, and which would pay us the proper rental.

Mr. ELSTON. You were satisfied sometime before that——

Mr. WINFREY. We were soliciting but not begging.

Mr. ELSTON. That Taylor's were not measuring up to your expectations?

Mr. WINFREY. Very definitely.

Mr. ELSTON. I am wondering why you asked them to even bid at all. You knew that you were going to get rid of them.

Mr. WINFREY. We did not ask them to bid.

Mr. ELSTON. You gave them the opportunity.

Mr. WINFREY. Certainly; we gave it to everyone, and 500 others.

Mr. ELSTON. And at the very time that you received it, you knew that you were not going to give them an extension of a lease or a new lease, did you not?

Mr. COOK. That is not right, sir.

Mr. WINFREY. Not at all.

Mr. COOK. If, in our opinion, Taylor's had submitted a proposal complying with our specifications of the type of operation that was desired, and if, in our opinion, their minimum plus their percentage of the gross would have exceeded that offered by Loveman's, we would have made the award to Taylor's.

Mr. ELSTON. I do not see anything in Loveman's lease where there is any guaranty.

Mr. COOK. There is no guaranty in the other. For instance, in our initial negotiations with Taylor's, when they first took over the operation, they estimated in their initial correspondence that they could do a gross of \$3,000,000. Later on when we arrived at a concession agreement with them, the approximate figure of \$2,000,000 was placed in the lease. You cannot hold a firm to what they estimate they will approximate in their gross volume, but you can tell by the type of operation that the person conducts whether or not there is a reasonable expectancy of him achieving that volume.

We feel that there will be no difficulty on the part of Loveman's to achieve a volume of  $1\frac{1}{4}$  million dollars, and that is the reason we used those figures in the letter that we presented previously to the joint committee.

Mr. ELSTON. They will have to achieve  $1\frac{1}{4}$  million dollars to even bring in to the Government the same amount of revenue that Taylor's agreed to bring in.

Mr. COOK. No, sir, that is not correct.

Mr. ELSTON. Well, as I understand these figures—we went over them several times yesterday, and I do not think it is necessary to repeat them—Loveman's will have to do \$1,250,000 worth of business to equal the second proposal of Taylor's, or \$900,000 to equal the third proposal.

Mr. COOK. Sir, the only proposal submitted by Taylor's that is competitive with the proposal submitted by Loveman's is their alternate No. 3.

Mr. ELSTON. Which you were privileged to accept if you wanted to?

Mr. COOK. That is right. And when you compare the revenue to the Government based on Taylor's proposal No. 3 against Loveman's, Loveman's proposal will net a higher return to the Government through \$1,250,000 estimated volume of sales. On that basis, for the first 3 years, Taylor's proposal No. 3 will net \$32,250, and Loveman's net rental on that basis will be \$48,750.

Mr. ELSTON. That is all, predicated on the theory they will do a larger volume of business, and you have no assurance whatever that they will ever do it.

Mr. COOK. On that basis, on \$900,000 volume, which can be reasonably expected, Taylor's proposal for the first 3 years is \$25,000 minimum, and the net rental from Loveman's will be \$36,000.

Mr. ELSTON. I am getting back to my other question. You have no assurance that they will ever do that volume of business?

Mr. COOK. We have no assurance.

Mr. ELSTON. And there is nothing in your lease that requires it, and you have no provision in the lease that gives you the opportunity to cancel the lease if they do not do that amount of business?

Mr. COOK. We have this assurance, sir, that we know what the volume of business has been that has been conducted in the store before, and we know the type of operation that Loveman's is operating

in Chattanooga, and we know that he would not come in there and invest the money that he is in that operation if he could not reasonably expect to attain a volume of more than 1¼ million dollars a year.

Mr. ELSTON. Now, answer this question: Did you give Taylor's the opportunity to do that same type of business that Loveman's were carrying on in Chattanooga?

Mr. COOK. Yes, they could have conducted it.

Mr. ELSTON. Did you ask them to?

Mr. COOK. In our initial concession agreement with them——

Mr. ELSTON. At any time?

Mr. WILLIAMS. Isn't it true, Mr. Elston——

Mr. ELSTON. I would like to get an answer to that.

Mr. COOK. There was no prohibition, and we desired in our original concession agreement with them that they conduct a high type of operation.

Mr. ELSTON. What specific complaints did you ever make to them?

Mr. COOK. We have a record of complaints here, sir, if you desire to go over them, or we can submit them for the record.

(The material referred to is marked "Exhibit 7" and will be found in the appendix at p. 146.)

Mr. ELSTON. Give us your best judgment about what they were, and you can put them in the record, too.

Mr. COOK. May I ask Mr. Winfrey to do that? He is more acquainted with that.

Mr. KILDAY. Do you not think it would be well if we had some of the complaints, and submit them so that we can discuss them here, and Taylor's would have an opportunity to reply here.

Mr. HOLIFIELD. All right.

What do you have prepared, Mr. Winfrey? Do you have a list of complaints which your department has made to Taylor's, and the dates that you made them, and so forth?

Mr. WINFREY. Not in that form except in written form on contractual obligations. We have had a complaint from the various sub-concessionaires there to the commanding officer at the time, and we were aware that there was a great deal of discord in the store, and we were aware that in the time they were there they had at least four managers, and we were aware that the volume tendency all of the way through was going down, and we were aware that they had not made any effort to install credit or to give people services which they normally had expected, and it was cash on the line.

Mr. HOLIFIELD. I am not interested in what you were aware of; I am interested at that time and Mr. Elston's question was as to specific complaints which you made to Taylor's regarding these things that you were aware of.

Mr. WINFREY. Yes, sir.

Mr. ELSTON. What complaints did you have, and what complaints did you transmit to them, and what did they do about it? That is simple enough.

Mr. WILLIAMS. We could enter some figures in the record while he is looking them up. We have some figures on the population and the amount of business done in the town of Oak Ridge, if it is agreeable, sir.

Mr. COOK. There were some figures quoted there on the population, sir, and we would like to put in the correct figures.

Mr. HOLIFIELD. Would you like to quote them and read them to the committee?

Mr. COOK. Yes. I will first read the population figures: January 1, 1947, 39,994; and July 1, 1947, it was 36,099. On January 1, 1948, it was 35,616; on July 1, 1948, it was 35,136. On January 1, 1949, it was 34,231; and July 1, 1949, 31,971.

Our employment figures: On January 1, 1947, it was 25,424; and on July 1, 1947, 20,351. On January 1, 1948, 21,021; on July 1, 1948, 20,850. On January 1, 1949, 19,024; on July 1, 1949, 18,777.

Now, our sales volume for the fiscal year 1947—that is the period July 1, 1946 to July 1, 1947—was \$18,595,000. For fiscal year 1948, \$15,568,000. For fiscal year 1949, \$16,975,000.

Mr. HOLIFIELD. What are you referring those figures to, the gross business of all of the businesses in the town?

Mr. COOK. Yes, sir.

Mr. HOLIFIELD. In view of that fact, that you have shown a decrease in population and a constant decrease in gross sales?

Mr. COOK. No, sir; the gross sales went up on fiscal year 1949 over 1948.

Mr. HOLIFIELD. In 1947 it was \$18,000,000, I believe, and in 1947 it was \$15,000,000, and in 1949 it was \$16,000,000, so—

Mr. COOK. It was almost \$17,000,000. So the drop is from \$18,500,000 to \$17,000,000.

Mr. HOLIFIELD. There has been a general decrease in the over-all business during that period.

Mr. COOK. That is right.

Mr. HOLIFIELD. Does it seem unreasonable, then, to suppose that Taylor's should have increased during that time rather than decreased along with the other businesses?

Mr. COOK. It doesn't seem right that they should have the drop that they did from approximately \$1,600,000 to \$844,000, which is a 50-percent drop, contrasted to this low percentage here.

Mr. HOLIFIELD. The point you make is that they decreased in their business more than the general average decreased in the community?

Mr. COOK. Yes.

Mr. HOLIFIELD. Now, is that not true throughout the Nation, in department stores and clothing stores and jewelry stores and other special types of business, that their decrease has been much greater than the average decrease?

Mr. COOK. That is true as an average, as I understand it, throughout the Nation, sir, but my understanding also is that the business in Knoxville has increased.

Mr. WINFREY. The specialty shops have been down 25 to 30 percent, but the department stores are practically level with last year and the year preceding.

Mr. KILDAY. Are those Federal Reserve figures?

Mr. WINFREY. I think so.

The question that I was asked: Under date of November 14, 1946, which was 3 months after the execution and the occupancy of the store, we wrote to Darling Stores Corp.:

The writer has attempted on numerous occasions to contact you personally, and everybody advised that you were out of the city and unavailable to be reached and whereabouts unknown.

In explaining my request to your executives, I have been advised that the signed contract was forthcoming immediately; Mr. Dorman had finally agreed and Mr. Gottfried would take it up immediately, and various and sundry promises, but to date no results have been accomplished.

Conforming a long-distance telephone conversation with your Mr. Gottfried on Wednesday, November 13, 1946, the agent now formally demands immediate compliance by you with the terms and intent of the concession agreement entered into with your company. This is to be accomplished by a date of not later than November 20, 1946, and shall cover the following items:

1. A properly executed and signed agreement returned to this office, and same having been in your possession for weeks.

2. Properly attested and sworn-to statements of the previous month's gross business delivered to this office by the 15th of the month. Repeated requests designating proper procedure have been made to your office, but statements received are still lacking proper affidavits.

3. A sworn statement covering actual net costs to you of all fixtures and fixture installations made by your company in the store presently known as Taylor's of Oak Ridge, Tenn. This statement must contain receipted invoices for materials and labor and complete inventory of all fixtures covered by the repurchase clause in the concession agreement. Ample time has elapsed for completion of this statement, and the agent has been most patient in these matters, but cannot accept further delays in the fulfillment of the United States Government contractual obligations on the part of the concessionaire. We anticipate your immediate compliance with our repeated requests, in order that administrative action may be avoided.

Mr. ELSTON. That was way back at the time the original agreement was entered into?

Mr. WINFREY. Yes.

Mr. ELSTON. And they did comply with all that you requested?

Mr. WINFREY. Eventually.

Mr. ELSTON. Well, sufficiently to warrant you in going ahead and executing a lease with them; is that right?

Mr. WINFREY. Yes; I would say so.

Mr. ELSTON. Let us have something more recent. What other complaints did you have about the operation of the store?

Mr. HOLIFIELD. May I interpose a question right there?

This complaint that you have made there is in regard to certain contractual obligations. It has nothing to do with the operation, or a complaint against the operation of the store as a merchandising venture. If you wish to be responsive to the committee's questions, it seems to me that you would bring up an instance where you have complained to them of the operation of the store from a merchandising standpoint in its relation to the community.

Mr. WINFREY. We pointed that out very clearly to their real-estate representative, Mr. Hall, to Mr. Sanford, as to the complaints originating; and Mr. White called some specific complaints of the treatment that his wife had been accorded; and we called specifically the points that the Red Cross was denied usage of a window at one time; and that they had not created goodwill, and they had taken no part in the civic administration; and that they were, as they state in their own letter, operating departments with, we would say, sub-standard leases. They were aware of that, and that was the reason for the negotiation, to try to get a proposal which would give us a regular department store which is largely an institutional set-up. They build goodwill.

Mr. ELSTON. Now, the witness is still just dealing in a lot of generalities. Now, get down to some specific complaints that you made to them, and their response to those complaints. Do you have anything there or do you not?

Mr. WINFREY. We don't have it in writing.

Mr. ELSTON. Well, what were they?

Mr. WINFREY. That the volume was going down, that they had done nothing to increase it.

Mr. ELSTON. I am wondering why you care whether the volume goes down or not, so long as they pay their rent.

Mr. WINFREY. Primarily because the return to the Government is based on the percentage of that volume, and we had no guaranty other than a percentage. We were, under the terms of their agreement, furnishing them all utilities, heat, and structural maintenance, and we were very interested.

Mr. ELSTON. They had a short-term lease, and if you were not satisfied with the terms of the lease, you could insist on other provisions in the next lease. Those were all short-term leases. If you were not satisfied, why did you not change the form of your lease?

Mr. WINFREY. We have changed the form of our lease, sir.

Mr. ELSTON. You did not change it until you executed this lease with Loveman's.

Mr. WINFREY. We had no authority to enter into long-term leases, prior to that time.

Mr. ELSTON. They were willing to enter into those or agree to those same terms and conditions, were they not?

Mr. WINFREY. Of the short-term lease, you mean?

Mr. ELSTON. When you came up to the execution of the long-term lease, Taylor's were also willing to enter into the same terms and conditions that Loveman's entered into?

Mr. WINFREY. No, sir.

Mr. ELSTON. In what respect was there any difference?

Mr. WINFREY. They offered a minimum guaranty comparable for the first 3 years, of \$25,000, and then going to \$36,000.

Mr. ELSTON. We get back to those figures, and I am not talking about the figures now; we get back to those same figures now which we have been over over time and again.

What else and what other conditions would they not agree to?

Mr. Cook. I will answer the first question, that our long-term leasing policy was not developed or approved until early this spring, I should say in August of last fall. Prior to that time we had no authority to enter into a long-term lease, and all of the arrangements made with the operators were on concession agreements.

Mr. ELSTON. You got authority to put anything you wanted in a short-term lease, did you not?

Mr. Cook. If I understand your question right, I think the answer is "Yes."

Mr. ELSTON. Well, did you change the form of their lease because of any of their deficiencies, or because of their methods of operation?

Mr. Cook. No. We had a 3-year concession agreement with their firm for 1 year, subject to renewal each year for the following 2 years, but we did not change any of the terms or conditions of their lease.

Mr. ELSTON. Let me ask you—

Mr. Cook. You can't do that unilaterally; you must have their permission.

Mr. ELSTON. What was the trouble between Mr. Winfrey, or some one else down there, and Mr. Hall, their rental agent, that the witness spoke about yesterday?

Mr. COOK. I would rather have Mr. Winfrey answer that, sir. To the best of my knowledge, there was no trouble.

Mr. ELSTON. They seem to think that it was that controversy that made you decide you would not renew their lease. Now, let us have your version of that.

Mr. WINFREY. There was no controversy with Mr. Hall by myself at any time, or with Mr. White, to my knowledge, at any time. I think that I talked to Mr. Hall all of the time Mr. White talked to him. They tried to read into the testimony in the trial, I believe, that I had said that Mr. Hall was a smart aleck. That was completely untrue. The only reference I made to Mr. Hall and to the Marx Realty Co. was in my opinion they were smart operators, and I think that they are smart operators, thoroughly versed in real estate. They endeavored to obtain a rental reduction on a negotiated basis, and we told them that we could not do that.

As far as the Marx Realty Co., Mr. Hall, Mr. Marx, or Mr. Sanford, the three men we dealt with, I have the utmost respect for them, and I have never said anything derogatory and I do not feel that way. I think that that same thing applies to Mr. White.

Mr. ELSTON. Is Mr. White here?

Mr. WINFREY. He is here. He is not in the room just now. He is out, but he will return.

Mr. ELSTON. When did you make up your mind you did not want these people to have another lease?

Mr. WINFREY. I would say we made up our mind when we made the decision after the 15th of December, and the only reason for that was that we felt the other proposal was better.

Mr. COOK. One thing I would like to point out, sir, is that the decision on the award to Loveman's was made January 10 in my office, approximately at 3:30 or 4 o'clock in the afternoon, and that the final approval was given by the Commission at that time, so that there could have been no information regarding the approval of that award prior to that time. The notices to the successful proposal and the other people that submitted proposals were made after the Roane-Anderson people left my office that afternoon.

Mr. WINFREY. I might further point out that the inference seems to be that we had some vindictiveness against the Marx Realty Co. or against the Taylor Co. We did not have. And furthermore, the award is not on the basis of any one man's decision or feeling. It is the composite picture in which our entire division goes into it, in which the project management enters into it if it is of sufficient size or there is any closeness in competitive proposals, and we make only a recommendation to the AEC, which they in turn scrutinize very carefully. So that I don't believe any personal feeling, if such personal feeling had existed, would have had any import whatever.

Mr. ELSTON. Well, there is nothing in your rules or your regulations or the law, that would preclude you from denying a lease to someone against whom you did have some personal feeling?

Mr. COOK. We have never operated that way, sir.

Mr. ELSTON. I say, there is nothing in the law or your rules or regulations that would preclude it. You have absolute discretionary authority to give a lease to anybody that you see fit, regardless of the fact that somebody else may be willing to pay the Government more money.

Mr. WINFREY. Only on the basis of the best anticipated return to the Government and the services to the community.

Mr. COOK. I would say this, that we have never operated in that way, and the basis of our authority at Oak Ridge requires us to obtain the concurrence of the Washington office prior to making an award of the type that you just mentioned; and we have never asked for that concurrence and we have never made such an award—

Mr. ELSTON. Did you submit to the Washington office the bids of all of the persons who had submitted bids to you?

Mr. COOK. Prior to the award?

Mr. ELSTON. At any time.

Mr. COOK. Yes; we did, sir, after the award but not prior to the award. The decision on the award was within my delegated authority, and it was made at Oak Ridge.

Mr. ELSTON. You had already decided to give a lease to Loveman's before you submitted it to Washington?

Mr. COOK. Oh, yes.

Mr. ELSTON. You were simply reporting to Washington what you had done?

Mr. COOK. The action that was taken.

Mr. ELSTON. The lease had already been signed by that time, had it not?

Mr. COOK. No; it had not.

Mr. ELSTON. It had been agreed upon, had it not?

Mr. COOK. That is right, sir.

Mr. HOLIFIELD. Now, on that point—

Mr. WINFREY. May I interject one thing, and I would like to have the letter, not from the agents but from the contracting officer, who is our superior under whose office we operated, directed to the Roane-Anderson Co., Box 456, attention F. W. Cook, division manager, dated February 18, 1947:

GENTLEMEN: Regarding concession agreement RA-24-C, Taylor's, Inc., in consideration of the reports and complaints originating from local creditors of the above-captioned concessionaire and the resulting time and effort imposed upon the agent and representative of the contracting officer in an attempt to require the concessionaire to pay its local obligations promptly, and with further recognition of the concessionaire's apparent disregard to meet the requirements of the agent and the Government, your office is directed to inform the concessionaire's corporate office of the undesirable conditions herein related.

You should further inform the concessionaire's corporate office that their prompt reply to the request of this office that arrangements for payment of local obligations by the local representative be supplied.

Yours very truly,

WALTER C. ROTHMER,

*Duly Authorized Representative of the Contracting Officer.*

Mr. HOLIFIELD. What local obligations were you speaking of there?

Mr. WINFREY. The telephone bills, the various contractors who supplied various things to them, and we had complaints originating to the agent at all times. This one originated through the AEC and they called it to our attention.

Mr. HOLIFIELD. You spoke of advertising previously, and one of your complaints was that the Taylor's people did not advertise in the customary manner of department stores. Will you please give us some information on that?

Mr. WINFREY. I don't believe that I quite understand that, sir. How do you mean, the customary manner of department stores?

Mr. HOLIFIELD. It is well known in the trade that department stores do quite a bit of advertising.

Mr. WINFREY. That is true.

Mr. HOLIFIELD. And I notice in the Loveman's proposal that they did propose to consider spending from 2 to 3 percent in advertising.

Mr. WINFREY. Yes.

Mr. HOLIFIELD. What was the record of the Taylor's Co. in regard to advertising?

Mr. WINFREY. I would say that their record was a very limited amount, a fractional part of 1 percent.

Mr. HOLIFIELD. Did you at any time complain to them that they were not advertising in the customary manner?

Mr. WINFREY. Yes; we discussed it with their manager.

Mr. HOLIFIELD. And what was their attitude on that?

Mr. WINFREY. That they would advertise; but they never did.

Mr. ELSTON. I would like to ask this question: Here is a company that operated 119-some-odd stores. Apparently they had to be successful to operate that many stores that long.

Now, do you not think that they are the best judges of what kind of advertising will bring business to them, and do you not think that their natural inclination would be to advertise as long as advertising would bring business to them? I have never heard of a company not wanting to advertise, if advertising would bring business to them.

Now, who in Oak Ridge is in a better position than the company itself to determine that question?

Mr. WINFREY. I think the company has determined the question by not advertising, regardless of its reason. You say that they operated 119 stores. Could we point out that there is a difference in the specialty shop operation and a department store operation, and the Taylor people, the Darling Stores, are essentially specialty shop operators. They do a minimum amount of advertising, and they try to locate in locations generally close to heavy traffic. Department stores do a maximum amount of advertising. I would say that there is a difference in the operation there, not questioning the financial ability of the company, and I don't think that that has ever come into the thing. It is just the type of operation for the amount of square footage that they were occupying, and the manner in which they were trying to run it.

I will say that the Statler Hotel chain and the Milner Hotel chain are both good chains, and both financially responsible, but there certainly is a lot of difference in their type of operation.

Mr. ELSTON. They are both pretty successful.

Mr. WINFREY. They are both successful in their fields, and our contention was that Taylor's was out of his field, and in fact —

Mr. ELSTON. What advertising did you want them to do that they did not do?

Mr. WINFREY. We wanted them to become a part of the community, to advertise daily, to put on sales, to do the usual advertising that was being blanketed over Oak Ridge by S. H. George Co., by Miller's, Inc., because they were taking business which we would like to have retained and gotten the percentage on for the Government.

Mr. ELSTON. You wanted the Government to compete a little bit more with private industry?

Mr. WINFREY. I wanted the Government to lower its subsidy on operating the store, and to reduce the expense to the minimum for the municipal operations in Oak Ridge. That is our sole interest in the thing, is to reduce that to the lowest possible cost, and we can only do that by rental.

Mr. HOLIFIELD. Mr. Winfrey, I wish to get certain dates fixed in my mind. On January 10 you announced the award of the lease?

Mr. WINFREY. That is correct, sir.

Mr. HOLIFIELD. You also served upon these people a notice to completely sell their stock out and be out of the store by January 31, is that correct?

Mr. WINFREY. On January 10 we notified all of the applicants, the Darling Stores included, all of them, and we notified Loveman's; and on the following day, I think possibly the next day or the second day, we received this long telegram in which Mr. Gluck stated that he was astounded by our announcement, and he was protesting it, and he would go to all lengths to retain it.

Then after that, we notified him that we would expect him to abide by his contractual obligations. Normally he would have had to the 31st of January and 15 days thereafter.

Mr. KILDAY. He had 15 days after the expiration of the lease?

Mr. WINFREY. That is right.

Mr. HOLIFIELD. He had to complete his sale of his merchandise by the 31st of January, and he was then given 15 additional days to remove his fixtures and other effects from the premises?

Mr. WINFREY. That is correct.

Mr. HOLIFIELD. Now, on March 7, the Commission was notified that this committee would hold hearings on this subject, and on March 11 the lease with the Loveman's was signed, although it dated from March 1; is that correct?

Mr. WINFREY. That is correct.

Mr. HOLIFIELD. Was there any causal relation between the fact that this committee had announced that it would hold hearings on the 7th, and the signing of the lease on March 11?

Mr. COOK. None whatsoever, sir. We just continued in our normal procedure to try to arrive at a definitive long-term lease as soon as possible.

Mr. HOLIFIELD. Why was there a delay of from January 10 through the balance of the month of January and all of the month of February and up to March 11?

Mr. COOK. We had a court order restraining us from further negotiations.

Mr. HOLIFIELD. When was that court order lifted?

Mr. COOK. On March 2.

Mr. HOLIFIELD. And you proceeded immediately thereafter to sign up the lease?

Mr. COOK. Yes.

Mr. HOLIFIELD. In regard to your method of handling this, I realize that you owe an obligation, certainly, to the Government to try to make the best lease possible, and there is no complaint on my part or on the part of the committee of your guarding the Government's interests. But is there any legal obligation to go through this bidding and dead-line exercise which you have used in this manner?

Mr. COOK. There is no legal obligation that we know of. We feel it is the only proper method to proceed so that we will have fair treatment of all concerned, and everybody is advised of what we want and how the procedure works; and the data on which the final analysis and award are made are factual, and we can substantiate any action that we take in this regard.

Mr. HOLIFIELD. Do you not think that your procedure is a little bit faulty, in view of the fact that your advertisement—it is a combination of so-called secret bid arrangement and a negotiation arrangement—and do you not think that you could have achieved just as good a purpose by direct negotiations with the people, without your dead-line requirement of submitting proposals?

Mr. COOK. Well, I think by the procedure that we have followed, everyone feels that they are accorded fair treatment, and the treatment is uniform; and if any question is raised on how the award was made, we have full facts to substantiate it.

I do believe, however, that in the past we have been lax in one respect, and that is that we have covered to a considerable degree the requirements of the type of operation we desired by verbal conversation.

Mr. HOLIFIELD. Are you content to let your procedure in the future rest on this type of verbal arrangement?

Mr. COOK. No, sir; we are not. We are now on all of our subsequent leases requiring that a written statement be prepared and furnished each person making the bid, so there is no doubt in anybody's mind what the conversation was about. Although we will have verbal conversations still, they will follow the pattern set up in the statement.

Mr. HOLIFIELD. In future leasing, do you intend to submit a list of minimum requirements to applicants in writing?

Mr. COOK. Yes, we do.

Mr. HOLIFIELD. Why was it that you refused to all the unsuccessful applicants access to the Loveman's proposal once the award had been made?

Mr. COOK. We feel that the people that submit proposals cover in that proposal information that is of a confidential nature. In their normal dealings with real estate operators and rental agents, they are in the habit of having that information considered as confidential for this reason, that in stores that cover several operations, they do not desire to have other real estate agents with whom they are doing business know what percentage of the gross they are paying for different facilities, and in our conversations with many of the large department stores, several of them were very pointed in their statements in that regard.

Mr. ELSTON. Do you not think any taxpayer ought to be able to come in and find out what the terms are that their Government has entered into with a lessee?

Mr. COOK. I think in this type of operation, it is quite a bit different from the normal type of operation where you can write a clean-cut specification, receive bids on that specification, and abstract and announce the award and make that information available.

Mr. ELSTON. The ordinary lease has to be recorded. Are your leases recorded?

Mr. WINFREY. They will be; yes, sir.

Mr. ELSTON. Are they recorded?

Mr. WINFREY. They are not required to be recorded under Tennessee law.

Mr. ELSTON. I want to find out if they are recorded or not.

Mr. WINFREY. I do not know of any that have been recorded to date.

Mr. ELSTON. So you are in a different position than the average lessor and lessee. Lessee's long-term leases are generally recorded at the courthouse, so that anybody can tell what the terms and the conditions of the lease are.

Mr. KILDAY. That is not true in my State.

Mr. ELSTON. It is true in some States.

Mr. HOLIFIELD. That is protection, I think, for the person making the lease, rather than the owner of the building, is it not?

Mr. ELSTON. Where the Government is a party to a lease, it seems to me that any taxpayer has the right to know what the terms and conditions of the lease may be.

Mr. WILLIAMS. I have had some experience in Government dealing. I was in the Army for a long time, about 13 years, doing contracting work on construction work, and for a while I was assigned to the Quartermaster Corps, and of course we purchased staples and items where you could put out specifications, get in a lot of bids, abstract them, have a public opening and number your bids, have the interested bidders who wanted to know the terms of the bids present at the opening, and the abstract was available if people wanted to see it, but only with the interested bidders did we discuss any of the bids. That was the general policy and still is through the Government, that you discussed with the interested bidders these contracts, but you do not discuss what the price of the bid was with any taxpayer that might want to drop in. You might have a great deal of confusion if you did so. That is not saying that the taxpayer or this Congress does not have the right to check into this, but it would create a great deal of confusion if all of our Government officers were subject to going over with any taxpayer that wanted to drop in at any bid that he wanted to look at.

Mr. HOLIFIELD. You do not have every Government department operating cities like the Atomic Energy Commission. I do not know any other that operates a city, and performs all of the functions of a city.

Mr. WILLIAMS. If I had my way, I would not be connected with the operation of a city, either.

Mr. HOLIFIELD. If I had my way, they would not be operating a city either.

Mr. WILLIAMS. The operation of this city, I would like to make clear, is one of the requirements in order to get our job done. If we can figure out any way to meet our objective, and you gentlemen are thoroughly familiar with the importance of getting this thing done, we will certainly get out of the town operation. We have devoted a great deal of study and a great deal of time to this problem. I have devoted more of my time to this particular study and to this particular problem of these town operations (I have both Hanford and Oak Ridge), trying to figure some way to get out of as much of the requirement on my time as possible.

Mr. HOLIFIELD. Do you not think you would be better off out of it, that private industry could go in and operate the stores better than this way?

Mr. WILLIAMS. If we could meet our objective of supplying homes and the accommodations for the people who are required to operate these very intricate plants that we have, and the type of people we have to have, if we could do that, I certainly would not go through this problem time after time in arguing about town operation.

Mr. HOLIFIELD. Let me ask you a question right there. Have you in your books some set-up that you can tell us whether or not the Government makes a profit on this lease, or sustains a loss? Do you have them set up that way?

Mr. WILLIAMS. On any particular lease I feel that they can. I would like for the manager to speak to that, because he has that.

Mr. COOK. The contracts are set up so that we can determine that.

Mr. HOLIFIELD. Does the Government make a profit on this lease or sustain a loss?

Mr. COOK. I would have to check that. I am not familiar with that detail.

Mr. HOLIFIELD. How about the over-all operation of Oak Ridge?

Mr. COOK. The over-all operation?

Mr. WILLIAMS. Including the schools.

Mr. COOK. Including our community services, schools, bus, our deficit for our next fiscal year is about 3½ million dollars.

Mr. ELSTON. Three and one-half million?

Mr. WINFREY. I would say that the commercial operations, if they could be taken separately, would show a handsome profit, if they could be taken separately, I repeat, and also if you could apply a normal tax rate against those properties, as against the cost and the rental return, they would show a very excellent profit.

Mr. WILLIAMS. This is shown in our budget that we submit; we show the revenue.

Mr. HOLIFIELD. We will have to move along.

I would like to return to my specific question, please, if you will answer it, and that is, why the occupants of this store, the Taylor people, having an equity in certain vested interests in their operation there, and quite an investment, why they were not immediately given the information as to why they were not the successful bidder.

Mr. WINFREY. They were given that information, with the exception that when Mr. Cook talked to Mr. Roth, we did not quote the percentage given. Then we obtained permission to do that, and Mr. Cook informed him then that we would review with him the proposals received and the basis of the award to Loveman's.

The point I wanted to bring out, if I may, sir, at this time, is quite a lengthy, rather vehement statement made by Mr. Levitt as to his contact with Mr. Moore of Loveman's, and to the fact that I had begged him to take the operation and I believe further stated that he could have it on his own terms.

We have in the file here from Loveman's a letter addressed to the Roane-Anderson, attention Mr. Winfrey:

It has come to my attention that one Mr. Stanley Levitt has gone out of his way to prevaricate and entirely distort a conversation he had in our offices the latter part of December. Mr. Levitt walked into our office unsolicited and told us that he understood we were being favorably considered and being granted the

privilege of leasing the store now being operated by Taylor's in Oak Ridge at the expiration of their lease. This was the first news that we had had to this effect. And it is my understanding that he stated this week that when he was here, we told him that we definitely had the lease, which of course was not true. In fact, we have in our files a letter from Mr. Levitt dated January 11 congratulating us on being awarded the lease and asking for permission to sublease the book department in the Taylor store. We understood that Mr. Levitt also made other statements that were without any foundation, and which we do not even feel are worthy of refuting. We did say to Mr. Levitt that if we were awarded the contract that it was our intention to give to the people of Oak Ridge a first-class department store with charge accounts, delivery facilities, and many other services, to which we felt they were entitled, and which have not been made available to them in the past.

We feel that you know also that we are not interested in any short-term gains, but want to become a part and grow with the community of Oak Ridge. We feel that our operation of this one store will justify an enlargement of our operation in the event of any new shopping centers being opened. We might add at this time that we are in possession of several hundred congratulatory letters, wires, and telephone calls, etc., welcoming us to Oak Ridge, and that we in turn are enthusiastically looking forward to becoming a part of the Oak Ridge community with a hope that it will result in a mutual benefit of all.

With kindest personal regards,

JAMES L. MOORE, *Vice President.*

Mr. ELSTON. What is the date of that?

Mr. WINFREY. January 22, 1950.

Mr. ELSTON. Is that unsolicited?

Mr. WINFREY. Unsolicited. It was in the newspaper as to the visit here.

Mr. HOLIFIELD. Do either one of you gentlemen have any additional questions of this group?

Mr. KILDAY. How many departments did Darling Stores operate in Taylor's?

Mr. WINFREY. Only one.

Mr. KILDAY. What was that?

Mr. WINFREY. The ladies' ready-to-wear, I think, the ladies' and misses' ready-to-wear.

Mr. KILDAY. The other departments were all leased?

Mr. WINFREY. Yes.

Mr. KILDAY. Were they leased to Tennessee people or New York people?

Mr. WINFREY. Mostly to Tennessee people, I would say. They were small concessionaires to whom they gave space.

Mr. HOLIFIELD. Their operation then is not that of a unified department store.

Mr. WINFREY. Not in any way; no, sir.

Mr. HOLIFIELD. It was more of a subleasing arrangement with how many concessionaries?

Mr. WINFREY. I think 14, sir.

Mr. HOLIFIELD. Fourteen?

Mr. WINFREY. It varied from time to time. They were constantly changing.

Mr. KILDAY. How about Loveman's operation in Chattanooga? Is it essentially that?

Mr. WINFREY. Essentially a wholly operated department store. The only thing I think they have under sublease at all, which is customary in most department stores, is the beauty shop, and I believe their shoe department is also subleased. I think that is true in the case of Miller's at Knoxville, and a customary practice.

Mr. HOLIFIELD. One more question I wanted to ask before you leave the stand and that is, in regard to the proposition No. 2 of the Taylor people, with \$44,000 minimum, 4 percent on the first \$800,000 gross sales, 3 percent on the second \$800,000, and 2½ percent on the remainder; the testimony that was given us by Mr. Roth was that this was a better deal for the Government up to 1¼ million dollars in gross sales. Do you disagree with that, or agree with it?

Mr. WINFREY. I disagree to this extent. There is nothing in there that states that there will be 1¼ million dollars of gross sales, and in our opinion the \$44,000—

Mr. HOLIFIELD. Wait a minute. There is nothing in Mr. Loveman's proposal that says that that guarantees that his sales will be a million and a quarter, either, is there?

Mr. WINFREY. No, but I would say that the bulk of, the preponderance of the evidence is this, that Loveman's was doing \$6,000,000 a year, and in no single store anywhere are they approaching that kind of volume. I would say that the store operated in Oak Ridge, so far as volume is concerned, in Taylor's of Darling Stores, is probably one of their largest outlets.

Mr. COOK. The only proposal submitted by Taylor's that we considered competitive with the Loveman's proposal was their proposal No. 3.

Mr. HOLIFIELD. Why did you eliminate the No. 2 which did have the highest minimum guaranty, and the highest, next to the highest range of percentages? Did you eliminate that because in your opinion the Taylor's proposal which enumerated the seven additional services did not apply to one and two; was that your thinking?

Mr. COOK. No, sir. The way Taylor's proposal reads is part of the following program varying from the minimum in proposal 1 to the maximum in proposal 3, under which proposal we would give Oak Ridge, subject to the limitations imposed by the size of the community, a real community department store.

We felt that the proposal No. 3 that offered those services was the only proposal that was responsive to the type of operation that we desired and competitive with the Loveman's proposal.

Mr. HOLIFIELD. In other words, they said themselves that their maximum offer was in proposal No. 3.

Mr. COOK. No, sir.

Mr. HOLIFIELD. Did they not?

Mr. COOK. No, sir.

Mr. HOLIFIELD. That is the way I read that.

Mr. COOK. They say the following program varying from the minimum in proposal No. 1 and the maximum in No. 3 is the seven items they have listed.

Mr. HOLIFIELD. You considered that applies only to No. 3?

Mr. COOK. No, sir. We consider that only in No. 3 will all of them apply to the extent that we will have a first-class department store, and a proposal which was competitive with proposal submitted by Loveman's. If we had been looking for the maximum guaranteed return, we would have accepted Wender's proposal that had the highest minimum guaranty and 6 percent of the gross. But we did not consider that the type of store that was proposed by Wender was a first-class department store.

Mr. WINFREY. May I add that this was developed in the Federal-court trial, that they brought as a witness Mr. James Lee Clark, who operates and is vice president of Miller's, Inc., doing an annual volume of ten to eleven million dollars, one of the outstanding stores in the South, and he testified that to the best of his knowledge he felt the store was capable of doing at least a minimum of a million and a half, and more, that their experience with that store had indicated that clearly to him, and that a minimum figure acceptable in the department-store trade was based on approximately \$50 to \$65 a square foot per annum of selling space.

We felt and the Loveman's felt that they would do that kind of a volume without any question, or they would not have been interested in coming to Oak Ridge. They are doing \$6,000,000 where they are. On the basis of square footage and return on that, on a percentage basis, the present operator is doing approximately \$26 a square foot in his total operation. For that reason we felt that monetarilywise the opportunity of return to the Government was greater by far in the Loveman's proposal and we had every reason to believe from past experience that the minimum suggested in Taylor's second proposal was also the maximum.

Mr. HOLIFIELD. If there are no further questions at this time, I would like to place in the record a telegram from quite a number of business stores in Oak Ridge, approving the decision of the Atomic Energy Commission, and their agent in the selection of the Loveman's lease, and also one from Mr. Don J. McKay, publisher of the Oak Ridge newspaper, to the same effect.

(The telegrams referred to are as follow:)

Representative CHESTER HOLIFIELD,

*Chairman, Subcommittee of Joint Atomic Energy Commission,  
House Office Building, Washington, D. C.:*

As citizens and businessmen of Oak Ridge, we want to go on record as upholding the decision of the Atomic Energy Commission and their agent in recently awarding the local department-store bid. We feel that their decision was vitally important to the commercial life and well-being of our community. The successful bidder, we believe, will perform the function so necessary in the operation of the progressive department store.

Carl M. Harmon, Owner, Williams Drug Store; C. C. Brill, Manager, M. F. Flenniken Co.; Howard Hotper; Leon Cummings, Manager, Bootery Shoe Store; Mary L. Rose, Tots to Teens Shop; Bill Pollock, Jr., Owner, Pollock Sound Service; Lois Sutton, Owner, Sutton's Sporting Goods; Stewart Seagull, Manager, Royal Jewelry, Oakridge; Phil Anderson, Manager, Midwest Dairy Products Corp.; Stanley Roberts, Owner, Pinevalley Pharmacy; J. H. McMahon, Manager, Service Drug Store; Carl Bruner, General Food Market; R. L. Smith, Quality Market; M. A. Fry, Ridge Auto & Home Supply; W. Mike Brown, Central Service Station; Mrs. T. E. Lane, Mrs. C. E. Centers, Mrs. Miles Leverett.

Hon. CHET HOLIFIELD,

*House Office Building:*

Appreciate your obligations to investigate recent Taylor-Loveman department-store deal. However, most emphatically feel agent acted in best interest of both Government and people in concluding with Loveman's. Taylor did not provide services required, did not have good will of people, had negative effect on retail business in Oak Ridge. Firmly feel Loveman's will do right job here for entire community. Their policies should result in greatly increased return to Government.

DON J. MCKAY, *Publisher, The Oak Ridger.*

Mr. ELSTON. What is his complaint, that he did not get enough advertising?

Mr. HOLIFIELD. I would not know. That will be all for the present, gentlemen.

Mr. WINFREY. May I make one more statement?

Mr. HOLIFIELD. Yes, sir.

Mr. WINFREY. In this whole hearing, it seems to me rather pertinent that the agent for Taylor's, Inc., the negotiator that conducted negotiations with us from April of 1949 on, was not represented. He has made no statement under oath as we have made as to what we told him. We feel that is very pertinent.

Mr. KILDAY. Who is that?

Mr. WINFREY. Either Mr. Leonard Marx, Mr. Sanford, or Mr. Hall, of the Marx Realty Co., who were fully authorized to act in behalf of Darling Stores Corp. and Taylor Oak Ridge Corp.

Mr. HOLIFIELD. Are any of those gentlemen present in the room?

Mr. WINFREY. I do not know.

Mr. ELSTON. What could that add that has not been testified to?

Mr. WINFREY. I think there was some lack of clarity that the Taylor operation understood the kind of store that we wanted, the volume we expected, and the type of operation which was clearly discussed with their negotiators. I think they give preface to that in their letter of intent:

We recognize that we have not had a good store. We have been circumscribed by certain conditions.

Mr. ELSTON. My complaint about that whole thing is that you did not tell them that. If you felt that way about it, you should not have let them bid at all. If they had come in with a proposition which would have been acceptable to you from the financial standpoint, you would have permitted them to go ahead with the same type of operation; would you not?

Mr. WINFREY. No, sir; we would not, because we endeavored to develop volume that would give us some return on the property.

Mr. ELSTON. In other words, you had decided before that time that you were not going to have them; is that not right?

Mr. WINFREY. Not at all. If they could give us the operation, we would have had them. We considered their proposal.

Mr. ELSTON. What assurance would you have had that they would give you that type of operation if you had given them another lease?

Mr. WINFREY. I think in their particular case we would have the assurance well written into the lease.

Mr. ELSTON. Did you write it in the Loveman's lease?

Mr. WINFREY. We did not feel that it was necessary in the Loveman's lease.

Mr. ELSTON. Although you had never done business with Loveman's before?

Mr. WINFREY. We investigated very thoroughly the banks, we investigated their competitors, we took the testimony of Mr. Clark and Mr. Jonnergan of the George Co., that they were recognized as outstanding operators in the trade. We felt that that was a very, very high testimonial.

Mr. KILDAY. How far is Oak Ridge from Chattanooga?

Mr. WINFREY. Roughly 100 miles; something like 98 miles.

Mr. ELSTON. How far from Knoxville?

Mr. WINFREY. Roughly 24 miles.

Mr. HOLIFIELD. That will be all at this time.

Mr. WINFREY. Thank you.

Mr. HOLIFIELD. We have promised Mr. Frank Wilson an opportunity to testify at this time. Is Mr. Wilson in the room?

Mr. Wilson, will you give your name to the clerk, and the people that you represent, if any.

### TESTIMONY OF FRANK W. WILSON, OAK RIDGE, TENN.

Mr. WILSON. My name is Frank W. Wilson. I am a private attorney in Oak Ridge, Tenn., and county attorney of Anderson County. I am here representing the Oak Ridger newspaper, and Mr. Carl Harmon.

Mr. HOLIFIELD. What was the last one?

Mr. WILSON. Mr. Carl Harmon, of Williams Drug Store.

Mr. HOLIFIELD. Will you be sworn?

Do you swear that the evidential testimony that you are about to give will be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. WILSON. I do.

Mr. HOLIFIELD. You may proceed.

Mr. WILSON. Gentlemen, I do not know anything about the respective merits of the proposal made by Taylor's Corp. or by Loveman's Corp., other than what I have heard in the hearing here today. I do know something about the background and the type of operation which we have had in Oak Ridge in Taylor's, and I feel if that could be made clear to you here today you would say and you would decide definitely that almost any operator that would come in there would do a better job than Taylor's have done.

Taylor's Department Store has been one of the worst types of absentee operation in ownership since they came into Oak Ridge. Let me tell you what I mean.

They came to Oak Ridge in the summer of 1946. At that time they had about 17 subdepartments. They got most of their subdepartments there locally—they were not able to get them nationally—and I think I know why they were not able to. I think you gentlemen will, too, when I explain to you what happened.

They told departments to come into the stores—the 17 subdepartments. They opened business on September 5, 1946. They said, "Now, submit us a proposal of what you will pay." Let us take, for example, the electrical department. The electrical department came in and said, "We will pay 10 percent." They said, "All right; get your merchandise in here and let us get going. We haven't time to discuss leases or anything else with you on this. You bring the department here and then we will work out the details of it."

The electrical department is only one of some 17, and all of the rest were almost identical. They came in. Those people invested their money in there, they stocked up the store, and after they got started operating, then Taylor's came out with a lease, and if you think, gentlemen, that the Government is strict in any of their leases, you should see the proposal that they made.

When the electrical department got done paying Taylor's they were paying 25 percent of gross, not 10 percent. They were not only paying the 10 percent—that was just the beginning. After that they had to pay for the fixtures, and for the bookkeeping, after that they had to pay for the cashier, after that they had to pay for the advertising, after that they had to pay for any other number of other services, and the electrical department, for example, alone, if I have those figures, and I think I do—well, I know for the month of September and the month of October of 1946, the electrical department alone paid 25 percent of gross to Taylor's, and the result was that that department went bankrupt eventually.

Gentlemen, I have here a statement signed by 10 of the subdepartments in Taylor's Department Store. There was a letter of complaint sent to Col. Philip Kromer, dated October 17, 1946, signed by 10 of the subdepartments in there, complaining about the type of operation that Taylor's was operating.

Mr. HOLIFIELD. Who is Colonel Kromer?

Mr. WILSON. He was at that time the Director of Oak Ridge under the USED. I will be glad to introduce this in the record.

(The letter is as follows:)

OCTOBER 17, 1946.

From: Concessionaires in Taylor's, Inc.

To: Col. Philip F. Kromer, Jr., through Concessionaire Division, Roane-Anderson Co., Oak Ridge, Tenn.

It is the desire of the undersigned, department heads at Taylor's Department Store, Jackson Square, Oak Ridge, Tenn., to bring to your attention a matter which not only seriously concerns us as individuals, but which we feel is prejudicial to the best interests of the entire community of Oak Ridge and highly detrimental to the interests of the United States Government. That matter relates to the conditions existing at Taylor's, Inc., and operations as presently conducted there.

The services which the store was contemplated to have rendered and which it is capable of rendering are not being rendered. We feel that the reasons causing this condition are as follows:

1. Taylor's Oak Ridge Corp. was organized as a Tennessee corporation for the sole purpose of operating a department store at Oak Ridge, Tenn. However, the major portion of all bookkeeping, accounting, office operations, and management are being conducted away from Oak Ridge and in New York City. This is resulting in great confusion and seriously delaying and hampering all business operations.

2. Many, if not the major portion of all departments operating in Taylor's, are operating under very unstable and temporary contractual arrangements. This situation is leading to endless confusion and dissension between the various departments and the management, thereby seriously impairing the operation of the store as a unit.

3. The business policies of Taylor's have thus far been such as to greatly jeopardize the continued operation of the majority of the departments in the store and to greatly restrict the services of which the departments are capable of rendering. As a result the continuance of existing conditions may cause the termination of operations of a majority of the departments.

We therefore respectfully submit that for the protection of the interests of the United States Government and of the inhabitants of Oak Ridge, this matter should be immediately investigated by your office and appropriate action taken.

Beauty Salon, Joseph Weir; Flower Shop, Josef F. Huwyler; Photo Shop, George Huyens; Town and Country, Gertrude Curtis; Electrical Department, Eva Watkins; The Hobby Shop, Louis Sochron; Cosmetic Department, C. W. Yancey; Edyth's Yarn Shop, Edyth C. Spolding; Shoe Repair, G. A. Kirk; Spears; Sport Shop, J. R. Pickering.

Mr. WILSON. It is just interesting to note that out of the 10, 6 of these departments have folded up one way or the other. Only four of them have managed to pull through.

Mr. KILDAY. What is the date?

Mr. WILSON. October 17, 1946, is the date. At that time we made every effort—I represented 17 of them at that time—to work with Taylor's to work out something.

For example, they required under their lease that every department turn in their gross receipts to Taylor's and it be sent to New York every day, and it would not be returned until the 15th day of the following month. That meant for the first 45 days they operated the departments could not get a dime back. They had to restock their complete operation. That is the reason part of them went under. That was typical of the manner in which they operated.

Mr. HOLIFIELD. You mean they sent their total gross receipts?

Mr. WILSON. Their total gross receipts.

Mr. KILDAY. The lessees did?

Mr. WILSON. They sent them to New York and they could not get a dime back. The store did advance a few of them, paid some c. o. d.'s on stuff shipped in, in order to keep them operating. That is the kind of operator you had down there. That is what we have been struggling with.

The reason I am here today is to persuade you gentlemen if we can't get a decent type operation in there in the way of a department store, then we might give up trying to operate a commercial community down there.

Their side has been this: That Taylor's Department Store has lived off the other stores that have been there. They have driven trade away from Oak Ridge, and I think I can prove that, too, by citing a few figures.

Mr. HOLIFIELD. Proceed.

Mr. WILSON. For example, the University of Tennessee came in there and made a survey in 1948. We knew we were not getting the amount of business we should get. We knew if we were going to be self-sustaining and paying for our own community, we are only getting \$17,000,000 to \$19,000,000 in retail trade, and some \$30,000,000 is going off the area, in women's clothes alone, which is supposed to be their specialty. Taylor's Department Store did only 17 percent of the retail trade in Oak Ridge. And Miller's Department Store over in Knoxville did 26.6 percent of the trade from Oak Ridge.

Gentlemen, that is where our dollars are going.

Mr. KILDAY. Where did you get the figures?

Mr. WILSON. Made by the University of Tennessee.

Mr. HOLIFIELD. What date?

Mr. WILSON. At the time I was president of the Oak Ridge Business Association, which is equivalent to the chamber of commerce.

Mr. HOLIFIELD. What date, please?

Mr. WILSON. That was made in January, along about December of 1948, when these figures were compiled, and the situation is much the same today. Over 50.2 percent of the entire trade in women's clothes was going to Knoxville and only 34 percent of it was staying in Oak Ridge.

Gentlemen, there are grocery stores on each side of Taylor's Department Store which are doing almost as large a gross business as Taylor's is doing. It is the grocery stores that are bringing in two-thirds of the traffic that comes into that community, rather than Taylor's, and we feel that is running a lot of that trade to Knoxville. When women

have to go to Knoxville to do their buying, they do much of their other shopping over there. We are losing about 50 percent of their retail trade.

For example, in men's clothing, Taylor's Department Store did only 5.6 percent of the trade in men's clothing which was done by Oak Ridge shoppers, whereas Miller's was doing 13.6 percent. They were getting that of the entire Oak Ridge trade. Sears were doing 9.2 percent. George's over in Knoxville was doing 4.6 percent, as much as Taylor's. That is where our dollars were going. That is why we could not become a self-supporting community.

For example, in furniture, another item, Taylor's was doing 2.8 percent of the gross sale of furniture in Oak Ridge. Sears, Roebuck over in Knoxville was doing 17 percent. Sterchi's, over in Knoxville, was doing 11.9 percent. The reason that I came up here was to attempt to give you some picture of the type of operation they have run down there.

Something has been said about how difficult it was to collect bills. If you could just see the court record to see how many times it has been necessary to sue them to collect their bills. They required all of the departments to pay in so much for a period of 24 months to pay for those fixtures and then the title to those fixtures remained in Taylor's Department Store.

It just so happened that Royal Jewelers were willing to buck them on it, and the filed a replevin and got the fixtures when they pulled out of there. The other departments were not that strong, and were not able to do it.

We have tried to deal with them. They have taken no interest in the community whatsoever. They have taken no part in community activities. A few of the subdepartments have. A few of them are certainly entitled to credit, but the main store itself has done nothing.

These gentlemen today from Taylor's have spent more time, and I don't think this is very much of an exaggeration, here in this committee meeting than they have spent in Oak Ridge, in the 24 hours here, than they have in 4 the years in Oak Ridge.

Mr. HOLIFIELD. You mean in the community work?

Mr. WILSON. In Oak Ridge. I have never seen one of these gentlemen except Mr. Levitt before today, and I have been there, I have been active in all of the business affairs of that community, and that is what we have had to operate with. That is the reason we can't build a town down there.

We feel it is extremely important that we get a type of operation in there which will bring business in, that will mean rental not just on the department store itself, mean an increased volume in all of the rest of the business there in Oak Ridge, because the department store is they key to the situation. If we can hold that department store trade in Oak Ridge, we can get the rest of the trade, and if we can get the rest of the trade in there, the Government, instead of drawing rent on \$17,000,000 gross down there, we will get it on \$38,000,000. Instead of a deficit of \$3,000,000 we will make up a good part of that deficit to operate the town.

That is the situation. That is as we see it down there.

Mr. HOLIFIELD. Is that all, Mr. Wilson?

Mr. WILSON. I believe that is it.

Mr. HOLIFIELD. Are there any questions?

Mr. ELSTON. Are you attorney for Loveman's?

Mr. WILSON. No, sir; I am not. The only thing I know about them is what I have read in the paper and after I came in.

Mr. ELSTON. What assurance is there that they will spend more time in Oak Ridge?

Mr. WILSON. I don't have any assurance, sir. I don't have any assurance. The only thing that I have is that I know what the Taylor's operation has been in the past, and I know what we can expect in the future. I know that practically every businessman in Oak Ridge one time or another has talked with me about the situation with reference to that.

Mr. KILDAY. You are county attorney of Anderson County. Is that the county in which Oak Ridge is located?

Mr. WILSON. Yes, sir.

Mr. KILDAY. This is election year.

Mr. WILSON. Yes, sir.

Mr. KILDAY. We run, too.

Mr. WILSON. Yes, sir.

Mr. KILDAY. I feel sure you feel you represent the majority sentiment in Oak Ridge.

Mr. WILSON. No question about it. I am running for Congress down there.

Mr. KILDAY. Against the city member?

Mr. WILSON. The city of Knoxville is involved in it, too, gentlemen. We realize that we may be taking trade away from Knoxville. What we are trying to do is to build a community that is self-supporting, 95 percent, at least that much. There is no question of the sentiment in Oak Ridge that we should and we will have to have another department store in there if we are ever going to build a commercial community that can be self-sustaining. I am a director of the chamber of commerce there. Mr. Carl Harmon is the president of the chamber of commerce.

Mr. ELSTON. If you build up business in Oak Ridge for a department store, you necessarily take it away from Knoxville, do you not?

Mr. WILSON. That is correct. We see no reason in the world why Oak Ridge should be a suburb of Knoxville, and we do not think it is. We think Oak Ridge is one of the most important cities in Tennessee, and we know that it is the fifth largest city in Tennessee, and see no reason in the world why over 50 percent of our trade should go to Knoxville.

Mr. ELSTON. It is unique because the Government runs Oak Ridge.

Mr. WILSON. We are anxious to get them out of operating.

Mr. ELSTON. The people of Knoxville run their own city.

Mr. WILSON. We are very anxious to get them out of there. We know this, that as long as it is necessary for the Government to subsidize the operation of Oak Ridge that we are not going to have free enterprise down there completely. We are as anxious to get that up to where the city supports itself as anybody.

Mr. ELSTON. You mentioned some figures a moment ago. If you got a proper department store in there, you would increase the volume of business from 17 to 38 million dollars?

Mr. WILSON. It is not at all beyond the possibility to increase the volume of business from Oak Ridge. I don't know that the department store itself will do all of that. I don't think it will. But

I do think that the department store can certainly do as much business there and draw as much traffic as a grocery store can.

Mr. ELSTON. I am interested in your method of calculation. How are you going to increase business from \$17,000,000 to \$38,000,000, if the department store comes in there, and according to their estimates only does a business of perhaps between a million and 2 million dollars a year?

Mr. WILSON. Gentlemen, if Miller's Department Store in Knoxville, 24 miles away, can do 26 percent of the business, do almost twice the amount of business that Taylor's Department Store does——

Mr. ELSTON. You have no figures on how much Miller's business comes from Oak Ridge?

Mr. WILSON. That is exactly what I am quoting.

Mr. ELSTON. How much money was spent in Miller's by the people of Oak Ridge?

Mr. WILSON. They spent almost twice as much, the people of Oak Ridge, in Miller's in Knoxville, as they spent in Taylor's.

Mr. ELSTON. Have you any assurance that all of that money will come to Oak Ridge?

Mr. WILSON. No, but we want to try to get it.

Mr. ELSTON. The people of Oak Ridge necessarily do a lot of their shopping in Knoxville because they have more of a choice of stores there.

Mr. WILSON. One reason, one big reason they gave in this survey was because they did not have a decent department store they could shop in.

Mr. ELSTON. That is the opinion of a few people. But it is obvious that if you put a department store in Oak Ridge, I do not care what type it is, there are a certain number of people that will go to Knoxville to do their shopping. That is natural and human.

Mr. WILSON. That is correct.

Mr. ELSTON. You indicate by your figures that you will increase business from \$17,000,000 to \$38,000,000, by having a department store there.

Mr. WILSON. No, no, I am sorry if I gave that impression. I did not intend to do that. That is our goal. We think we can accomplish it, and we think this is one important step toward accomplishing that, a very important step toward accomplishing it, because the department store is the key, the department store is that which attracts and draws the other trade in, and if we can get a department store there which will serve the needs of the community, then all of the other businesses in town will benefit, all of them around Jackson Square.

I do know that 90 percent of all of the Jackson Square people have talked with me, and it is their consensus of opinion that Taylor's is hurting their business by running trade to Knoxville.

Mr. ELSTON. Does not a lot of business come in from the outside into Oak Ridge?

Mr. WILSON. No.

Mr. ELSTON. Why would the people of Oak Ridge be more apt to buy from a grocery store because you have another department store there? They have the grocery stores now. They have the others.

Mr. WILSON. That is correct, sir.

Mr. ELSTON. Just explain why the addition of a department store will make them buy more groceries.

Mr. WILSON. When a woman has to go to Knoxville to buy the dress, she will buy the other things over there. She will do all of her shopping over there. And these figures show that she does. They get the furniture and men's clothing over there in Knoxville. When they go over, when it is necessary to go to Knoxville to do the department-store buying, then they do the rest of their buying in Knoxville and this is the thing that it seems to me that we need.

Mr. HOLIFIELD. Thank you, Mr. Wilson, for your testimony.

Mr. WILSON. Thank you.

Mr. HOLIFIELD. We have 20 minutes until 12, and at this time the committee will recognize Mr. Roth, to make a statement on behalf of the Taylor people, that is, to make any rebuttal that you wish to make.

Mr. ROTH. I would like Mr. Stanley Levitt to make a short partial rebuttal to Mr. Wilson, if he might.

Mr. HOLIFIELD. We will not have much time.

Mr. ROTH. You better proceed. We will put this in the evidence.

Mr. ELSTON. Before we close, I think we should have a statement from Mr. White whether he did or did not make the statement that was attributed to him.

Mr. HOLIFIELD. Is Mr. White in the room? Will you come forward at this time? Excuse me, Mr. Roth, and we will take care of this.

Mr. White, will you swear that the evidential testimony you are about to give will be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. WHITE. Yes, sir.

#### TESTIMONY OF HAROLD B. WHITE

Mr. ELSTON. I ask you whether or not you said to Mr. Levitt, "We are going to teach these guys a lesson," or words to that effect?

Mr. WHITE. I did not make that statement or words to that effect, sir.

Mr. ELSTON. That is all.

Mr. HOLIFIELD. I want to ask a question.

Do you support and subscribe to the statement which has been made by your subordinate, Mr. Winfrey, the statements which he has made before this committee?

Mr. WHITE. Yes, I do, sir.

Mr. HOLIFIELD. Do you verify that to the best of your knowledge that they are factual?

Mr. WHITE. Yes, sir; I do.

Mr. HOLIFIELD. Are there any further questions?

That is all, sir.

Did you have a statement you wished to make?

Mr. WHITE. I have a sworn statement specifically denying these points that he brought out.

Mr. HOLIFIELD. We will accept that, and it will be inserted in the record. Please give it to the clerk.

(The statement referred to is as follows:)

Mr. Stanley Levitt, former book and cosmetic subconcessionaire in Taylor's Department Store, Oak Ridge, has stated that on various occasions I have made statements expressing:

1. A personal dislike for Mr. E. L. Hall, representative of Marx Realty & Improvement Co., New York, agents for Darling Stores Corp., New York.
2. That I stated that "I wanted to teach them a lesson."

3. That I stated that they did not have much of a chance.

4. That I advised Mr. Levitt to sell to the bare walls.

I unqualifiedly deny having made any of the above statements.

It is true that on several occasions, where I was shopping in Taylor's Store, Mr. Levitt came to me and asked the status of the department-store award. In each instance I stated that no final decision had been made. It is also true that Mr. Levitt asked me on several occasions what I thought he should do under existing conditions. In each instance I told him that he would have to use his own judgment.

Regarding the statement of Mr. Ira Cravens, also a former subconcessionaire in Taylor's Department Store. It is true that Mr. Cravens came to my office in early December and asked about the status of the department-store award. As no decision had been made, I told him so. He expressed concern regarding his business future in event the award was made to a company other than Taylor's and seemed very worried. I told him that if he wished he could inspect some of our other locations and at the proper time make a proposal, in competition with others, for whichever location he desired.

HAROLD B. WHITE,  
Manager, Commercial Realty Division,  
Roane-Anderson Co., Oak Ridge, Tenn.

I hereby swear the above is a correct statement.

HAROLD B. WHITE.

WASHINGTON, D. C., March 14, 1950.

Signed and sworn to by Harold B. White.

TRUMAN WARD, Notary Public.

(Additional information furnished by Frank W. Wilson is marked "Exhibit 8" and will be found in the appendix, p. 161.)

Mr. LEVITT. May I say something?

Mr. HOLIFIELD. Mr. Levitt, for what purpose?

Mr. LEVITT. In the first place, Mr. White did make those statements to me. He absolutely and unequivocally made the statements. I want to put that in the record.

I have a telegram here. Mr. Wilson, as he says, is running for Congress, made a very fine political speech here in defense of the poor people of Oak Ridge who by some mysterious way are going to raise the volume of business from 17 to 38 million dollars. Discussing the financial responsibility of the Darling Stores Corp., which is rated AAA-1 in Dun and Bradstreet's, they are ridiculous statements, absolutely ridiculous.

Mr. HOLIFIELD. The committee will be a judge as to that, Mr. Levitt. Please have your testimony conform.

Mr. LEVITT. Mr. Wilson said he had a letter from a certain number of concessionaires to the Darling Stores. This letter was sent in 1946, that is over three years ago, Relations smoothed themselves out considerably. It was a new operation, and naturally there were some things that had to be ironed out. You can understand that. Just to show you that certain of these concessionaires that were probably signatories to that letter felt that they ought to stay in Taylor's and felt that their relations were good with Taylor's they sent this telegram to David Lillienthal, Senator McKellar, Senator Hickenlooper, the chairman of the House Business Committee, Senators McMahon and Kefauver.

We, the undersigned, are subconcessionaires in Taylor's Department Store in Oak Ridge, Tenn. Mr. Stanley Levitt is our representative before you now, If we are forced out of business we not only lose our business and means of livelihood but lose our homes as well. We only ask just and equitable treatment. Since we have been here 3½ years we feel that it is to our interest as well as the public's that renegotiations be opened with Taylor's.

That is signed by the men's department, Ira E. Cravens; greeting cards and candy, Lucille Hamrick; Town and Country, Sehlagh Nunn; yarn shop, Lysbeth Blackburn; shoe repair, M. Rains; alterations department, Ellen Crawford; books and cosmetics, Stanley and Hilda Levitt; photo shop, J. D. Foster; and jewelry department, M. Bucov.

Mr. HOLIFIELD. Will you submit that for the record also?

Mr. LEVITT. Yes, sir, that represents the majority of the concessionaires in Taylor's at the time we lost out.

Mr. HOLIFIELD. What is the date?

Mr. LEVITT. Sent January 19, 1950. That is all I have to say.

(The telegram referred to is as follows:)

OAK RIDGE, TENN., January 19, 1950.

DAVID LILIENTHAL,  
Senator KENNETH MCKELLAR,  
Senator B. HICKENLOPPER,  
*Chairman, House Small Business Committee,*  
Senator BRIEN McMAHON,  
Senator ESTES KEFAUVER,  
*Washington, D. C.:*

We, the undersigned, are subconcessionaires in Taylor's Department Store in Oak Ridge, Tenn. Mr. Stanley Levitt is our representative before you now. If we are forced out of business we not only lose our business and means of livelihood but lose our homes as well. We only ask just and equitable treatment. Since we have been here 3½ years we feel it is to our interest as well as the public's that renegotiations be opened with Taylor's.

Men's Department, Ira E. Cravens; Greeting Cards and Candy, Lucille Hamrick; Town and Country, Sehlagh Nunn; Patrick Yarn Shop, Lysbeth Blackburn; Shoe Repair, M. Rains; Alteration Department, Ellen Crawford; Books and Cosmetics, Stanley and Hilda Levitt; Photo Shop, J. D. Foster; Jewelry Department, M. Bucov.

Mr. HOLIFIELD. All right, Mr. Roth.

Mr. ROTH. I will try to be as brief as possible.

Mr. Wilson just testified rather glibly about several things, and because it is fresh, I want to refer to it.

His statement on the figures is unequivocally untrue. We don't know where he got it. We paid for the fixtures and no one has paid us for them. There is no question about that. We don't know where he got that misinformation or how he dare make it.

Here is the president of the Darling Stores and he states that as a fact. Mr. Stanley Levitt is one of the concessionaires. They were never asked to pay for fixtures. They paid the rent which was to leave them a small profit or large profit depending upon their efficiency, and the total rent we were asked to pay was 6 percent, far in excess of any figures that have been mentioned for the new lease for the longer period.

And in each case our subconcessionaires received a reasonable rental. His categorical statement as a lawyer that we asked excessive rental must be disregarded.

Mr. ELSTON. It is obviously hearsay. This committee will weigh the testimony and decide how much credence shall be given to it.

Mr. ROTH. We will be glad to show the leases and examine the rentals.

Mr. HOLIFIELD. What is the arrangement of your sublease percentages.

Mr. GLUCK. Ten percent. It may have been a little above that, at the most possibly 11, but for that we supplied all of their services, all of the porters and the maids, and window trimmers and cashiers, and

everything else, for the difference between the 6 we pay and the 8 or 9 or 10 that we receive.

Mr. KILDAY. Did that include the fixtures?

Mr. GLUCK. That included the fixtures, yes, sir, and the money was deposited in Oak Ridge.

We did have, I am not familiar enough to say we had adjustments with them, but the money was deposited in Oak Ridge, upon the payment of bills, we have a record, and there is no use of my going into that we are in business over 20 years, we are rated AAA-1, which you may know, unless we pay our bills promptly we could not have a No. 1 rating, I am sure you know that.

Mr. ROTH. Here, for instance, is a letter<sup>1</sup> from Mr. Winfrey, dated January 12, 1950, to Mr. Marx, and we will be glad to produce him:

\* \* \* sincerely feel that Mr. Gluck did an outstanding job in meeting the early emergency deadline in opening Taylor's, Inc., and presenting a very creditable appearing operation serving the purpose at the time. In the department operated by Darling a very reasonable volume has been consistently maintained. \* \* \*

Mr. HOLIFIELD. What departments have you maintained, have you operated there, Mr. Gluck?

Mr. GLUCK. We operate women's clothes, suits, dresses, sportswear, underwear, brassieres, pocketbooks, millinery.

Mr. HOLIFIELD. That is one department. You are enumerating the items?

Mr. GLUCK. It is many departments, the same as Loveman's will have. Each one of these will be a separate department. And the same with children, we operate all children's wear, coats, dresses, sportswear, and everything else for children. Most of the others I guess were subtenants, most of them local, and we did have many others, but because of the shortage we were unable to get them to come in and take over. Had they taken them, they would have been operated very professionally, and certainly as well I think as the local department store could.

Mr. ELSTON. Did you have any trouble getting concessionaires?

Mr. GLUCK. We had trouble getting the type that we would like to have gotten in there.

Mr. ELSTON. But you always were able to get people who were willing to come in and sublease?

Mr. GLUCK. Yes, sir. I was there with Mr. Marx for 2 days, one of these gentlemen asked where Mr. Marx was, I was with him for 2 days before we made our proposal, and we went over this thoroughly, with these two gentlemen, Mr. Winfrey and Mr. White.

Mr. ROTH. Did he suggest the proposal?

Mr. GLUCK. It was agreed upon more or less by consultation with these two men. He was present and had part in preparing these proposals.

Mr. ROTH. There is some reference to this University of Tennessee survey which I think had about as much credit as some of the Gallup polls we have had. So far as Miller's Department Store is concerned, the evidence is they did as much as a million six back when the population was 80,000, and you will notice in the testimony of Mr. Cook, how carefully he avoids going back to the time when the population

<sup>1</sup> The full text of the letter referred to by Mr. Roth will be found in Exhibit 7 of the appendix on p. 151.

was 80,000. He starts at the time the population was down much lower than that, in '47, but forgets entirely the population was 80,000 and under different conditions, under intense activity. And the question of pay roll is ignored.

Mr. HOLIFIELD. What was your first year's operation?

Mr. ROTH. What was the total?

Mr. HOLIFIELD. What was the gross?

Mr. GLUCK. We did about \$700,000 in 4 or 5 months.

Mr. ROTH. Our first full year was \$1,189,000, that is it—well, it was our fiscal year, little different from theirs. I have it listed as the other way as well. It was about a million two.

Mr. GLUCK. In round figures, the first year.

Mr. HOLIFIELD. In 3 years your operation has gone down from \$1,189,000 to \$850,000.

Mr. ROTH. Close to \$900,000.

Mr. HOLIFIELD. About 25 percent reduction.

Mr. GLUCK. Yes, sir; in round figures.

Mr. ELSTON. There has been a decrease of population of about 5,000?

Mr. ROTH. Yes.

Mr. GLUCK. May I mention that in the last year they removed the gates, that there was no longer an enclosed city and it attracted trade. Instead of coming into Oak Ridge, that permitted them to go out freely. That was the situation.

Mr. ROTH. You had a different situation. You didn't have the same kind of town, same restriction.

On the question of the total volumes in the town, Mr. Cook said \$18,000,000 in '47, \$15,000,000 in '48, and \$16,000,000 in 49. He forgets to mention the innumerable cars that must have been bought in that town, cars became available in that period for '47 and '48, and that has accounted for the decline, for a differential between hard goods and soft goods that every merchant understands today, and in certain places that becomes very, very marked.

Mr. ELSTON. I do not know whether it is in the record or not; what was the total pay roll in this last year?

Mr. ROTH. I think it is in the record. Mr. Cook mentioned that it was \$18,000,000.

Representative ELSTON. \$18,000,000, and then it went down to \$16,900,000, did it not?

Mr. ROTH. The last figure of pay rolls.

Mr. COOK. Those are not pay-roll figures. They are gross sales of all of the operations in the community of Oak Ridge.

Mr. ELSTON. Can you tell us what the pay roll was in Oak Ridge?

Mr. COOK. I don't happen to have them here.

Mr. ELSTON. About what were they?

Mr. HOLIFIELD. You gave the number employed in your testimony.

Mr. COOK. That is right.

Mr. HOLIFIELD. The decrease in employment.

Mr. ROTH. It was down from 19,000 to 18,000. In 1947 it was 25,000, and it is down to 18,000 now.

Mr. HOLIFIELD. So your employment decreased proportionately with the decrease in your gross sales.

Mr. ROTH. Roughly, but we had other factors, of course, unit volume, and the perimeter being gone, and things of that kind.

The most important thing to look at is to see what happened before we were in there. The maximum before we were in there with a million six, by this great department store, Miller's with a population of 80,000. By this huge department store, which is able to do the biggest job in Knoxville, is one million six. Mr. Cook very carefully when he mentioned the decline in our volume started it at a million six, and said it was a million six, and we did \$800,000 last year, forgetting that it was 80,000 population then.

Mr. KILDAY. Why did Miller's leave?

Mr. ROTH. They left because they had another nearby store and did not feel that the operation was worthwhile.

Mr. KILDAY. Did not the evidence indicate that they were shunting a good deal of business out of the Oak Ridge store into Knoxville where they would extend the credit and not pay the percentage that was due the AEC under the lease?

Mr. ROTH. They were only paying a very insignificant percentage, and we do not know what caused them to do it. They should not have been allowed to channel it out. That struck me as unauthorized and an evasion. The Government should have gotten the percentage.

Mr. KILDAY. That was my attitude also. I was wondering if that was the reason they left?

Mr. ROTH. They were not doing as well as they might have is probably the reason.

Our position, gentlemen, is simply this. You have looked at all of the facts. So far as we are concerned, we believe that the members of the AEC, at the top level, have been misled by these men who have testified here on this matter, misled on issues of fact, and that when they went ahead after January 10 and as late as March 7, and signed that document, it was after they had already informed their superiors, including Admiral Straus, and I believe Mr. Dean, as to certain facts in connection with this situation which we feel were misrepresented to the Commission.

I just want to give you an idea of some of the thoughts just as they appeared right here. For instance, when you asked Mr. Winfrey about this question of fixtures, he said, well, the maximum that we were going to spend, Taylor's, was \$50,000. Well, actually our bid says the minimum we will spend is \$50,000. If you will look at it, it says, proposal No. 3, "In the event said proposal is received, we agree to spend not less than \$50,000"—not less than \$50,000—"for the physical improvements above outlined."

Whether that was deliberate or not, I don't know. I can't imagine it could be anything else.

Take for instance the situation with respect to the \$250,000 in fixtures that Loveman's is supposed to have promised to put in here. First of all, I understand Mr. Winfrey himself testified in the Federal court that outside of this letter of intent, as he calls it, December 12, from Loveman's, which says they will consider this and consider that, outside of that, there was not one agreement with Loveman's at the time, and they said they had no negotiations between December 15 and January 10. So that that letter must stand by itself. He had no agreement with them to put up \$250,000. The facts show beyond doubt that if we were going to go in there and do the same things they were, it should cost us the same, but as a matter of fact, under these circumstances it will cost them less than us for the simple

reason they are busy buying our fixtures for some \$12,000. It is well known that they have planned to refixture their own store in Chattanooga, and use the old ones over here, and that this thing will cost them an insignificant amount of money, and that is why it is not in there.

If they were going to put up \$250,000 or \$50,000 or any other sum, they would have put it in there. They did not put anything in there. The report to the AEC so far as we are concerned is misleading, incorrect, and untrue. That report on the basis of which we were told indirectly by Mr. Dean and directly by Admiral Straus that the Loveman's bid was higher than ours, and that was the basis of it, is founded on this summary statement. This summary statement, it is in your files, and in the files of the AEC, takes the position that our proposals Nos. 1 and 2 have nothing to do with it. It puts a schedule showing only proposal No. 3. There is just no basis whatsoever in the record for saying our proposals 1 and 2 must be ignored, and not be compared to the Loveman's bid.

First of all, the Loveman's bid is no proposal at all. It has not even got a term in it. It has not a commitment of any kind. It does not tell you how long the lease will be. It does not tell which one of these services they will perform. All that happened analogously in our bid is that we said, and this is what they lay stress on, and it has the opposite effect, even though we are now faced with the prospect of competition from the new \$5,500,000 commercial center, and by the way, you will recall how difficult it was for you to extract the fact that he had originally based his opinion on the fact that we had that cancellation provision if the center is built, and then it turned out that that was also in the Loveman's lease, and yet he maintained that because of that provision in our proposal, which was not in the original Loveman's proposal, that that was why he based his opinion, that is why he said our lease was not firm, and yet he did not ask for a firm lease from Loveman's.

Each of the three alternative proposals permit us to perform in varying degree part of the following program varying from the minimum in proposal No. 1 to the maximum in proposal No. 3. The minimum and maximum refers to the degree to which over all we might be able to perform all of these things. We do not say that anyone will be selected as against the other. We merely say the degree to which they will all be performed. If there was any ambiguity in this document—

Mr. HOLIFIELD. That would be a matter of determination at the time the lease was signed, the same as the specific items were determined for the Loveman's.

Mr. ROTH. Right.

Mr. HOLIFIELD. Between the time of the award and the time of signing of the lease.

Mr. ROTH. Yes. But we were prepared, and the only reason for No. 3 is that we were prepared to specify a minimum expenditure, which apparently Loveman's was not, and for that reason we made, attached that to our worst proposal in terms of percentages, and minimums. But that did not preclude the fact that all under 1 and 2 we are to do all of those things as well, but perhaps not spend as much money. We don't know how much it took, but we said, but a commitment to spend \$50,000, and even if it takes \$250,000, is some-

thing that is very important. You put your money and promise on the line.

They misstated our bid completely, and naturally in their report to the AEC, they misstated the facts, they misstated the Loveman's bid in this report, because it is not even outlined. They merely state that they had a bid of percentages, and then concealed the fact that they had no bid and they concealed this bid from everybody practically until it got into court.

Mr. ELSTON. Did you advise the AEC to the contrary?

Mr. ROTH. When you say "to the contrary," do you mean contrary of what?

Mr. ELSTON. Contrary to their statement indicating what your version of it should be?

Mr. ROTH. We didn't know this. We never knew this until well after the court proceedings were out in February and we were lost.

Mr. ELSTON. Did you then?

Mr. ROTH. Then we were in litigation, and we were before these committees, and we tried to get this committee, and we tried to get the investigations committee to move, and we did the best we could to get this information before them and we had this sent, for instance, the only copy we got of this was sent from the court records to Mr. Adelmens of the expenditures committee, and I got this from him yesterday. I had reports of what was in it, but I was only able to get hold of it from him yesterday. This is basically our position then and I say this unequivocally, that the testimony of Mr. Winfrey as it appeared before you with all of these oral agreements, with these contradictions, with this business of a determination based on a bid that is not a bid, constituted a course of conduct that internally administratively in the AEC was misleading, and if I were to characterize it, as a lawyer, I can only say fraudulently, because his superiors don't know the facts, and Mr. Cook, insofar as he does know the facts, is a party to it.

There are a number of other things that might be brought before the committee. For instance, the simple question of the Loveman's operation as compared to ours. We had tested the demand for our merchandise in that place. We are out to make as much money, we were, as anyone could make there. We are not interested in making as little money. Our operation is as good as anybody's in the field.

Mr. KILDAY. Inasmuch as the testimony here is that they inspected other operations and commented on your operation, how many stores did you say Darling runs?

Mr. ROTH. We run about 110. He apparently depended upon this one.

Mr. KILDAY. So we may have some idea here, do you operate in Washington?

Mr. ROTH. We do not have a store in Washington.

Mr. KILDAY. Cincinnati or Los Angeles?

Mr. GLUCK. We are in Detroit, Pittsburgh, Boston, we are all throughout the South, Birmingham.

Mr. KILDAY. What I was attempting to get is one that we might be able to compare with.

Mr. GLUCK. New Orleans, Little Rock.

Mr. KILDAY. Under what names do you operate?

Mr. GLUCK. Generally the Darling Shop.

Mr. HOLIFIELD. Your operation in those places is a specialty operation and not a department store operation?

Mr. GLUCK. Generally they are specialty shops with some subtenants in them.

Mr. KILDAY. Primarily women's clothes and accessories?

Mr. GLUCK. Women's and children's. In Salt Lake City, we have a department store operation, Wallace's Department Store, in Salt Lake City, a larger operation than this one.

Mr. ROTH. We operated this for 3½ years. We did a volume that was substantial. We have subconcessionaires who are local people and the majority of them were satisfied, anxious to stay in and were making a living. This was not a case of absentee operation, and by the way, examination of Loveman's will find that they themselves are out offering about seven subconcessions in departments as well. They, too, are not a full integrated department store. There is a very serious question as to whether that kind of operation is better than this.

We know Mr. Levitt, running his book and drug department, and drug department and book will work day and night, and hire a man in his place in the department store and see whether you are sure of getting that kind of service. There is a very serious question whether our technique of concessionaires is better for the town, quite apart from fostering a good old American concept of small independent businessmen which we are interested in.

Mr. ELSTON. Mr. Wilson made the statement that you were sued a number of times down there.

Mr. ROTH. I never heard about any suit down there. I am general counsel. Why did he not produce the records? He comes in here and testifies and says the court records are full of them, and does not produce one. Is his testimony worth anything? Why didn't he bring the court record in here?

Mr. ELSTON. As counsel for your company, you have no recollection of any suits?

Mr. ROTH. Never heard of one, and it may very well be that there have been disputes of one kind. Remember, at the very beginning of this thing we were putting together a business, and it was done, and it went through a period of jelling. Maybe there were and they were paid promptly. Some delays for questioning a bill. We have had experience in outlying people where people have sued us unfairly and improperly because they could take advantage of a rich New York company.

Mr. ELSTON. That is nothing unusual but the impression he attempted to give was that the records down there were replete with suits against you.

Mr. ROTH. He is a member of the bar, and he knows better than to say that without coming here and producing 1 or 20 or 50, if he can do it. I don't know about that. I never heard of him as general counsel of the company, and I have been for 15 years.

The question boils itself down to one of action. We feel very strongly that the action of this group of men in signing this lease, this Loveman's lease, and right to this minute we have not seen it, in signing this lease on March 11, when they knew on March 7 that

there was going to be a hearing here, was not in good faith. We would have to be very naive to assume that just to say they were not in the ordinary course of business. On January 10 they made this alleged decision. That was no decision comparing these two documents, and by the way, our bid was not prepared by a lawyer, by me. Contrary to what he says, he does not know that it was prepared by a lawyer. If it was, it would be different from what it is. It was not prepared by a lawyer.

The Loveman's bid must have been prepared by a lawyer because it has all of the outs in it that a lawyer would put into it. If I had prepared it, it would be like the Loveman's periods, that we were considering this and that and the other. They were not restrained until around the 1st of February. The local court in another county issued a restraining order. It was over a week end and that was not served on them for a few days. They had 10 or 15 days, 20 days possibly in which to execute this lease. They didn't do it. All of the complaints poured in. As a matter of fact, they were not restrained from executing the lease. They were restrained from kicking us out, or agreeing on the terms.

Now, then, the restraining order was removed on March 2. Between March 2 and March 7, they could have signed the lease. I don't think that we as people of common sense have the right to assume anything but that a hurried action like that was in bad faith, and for the purpose of precluding anything on the part of this committee to take action.

We feel that these hearings should not be closed, that Loveman's should be brought here, that members of the AEC before whom we put this matter should be brought here, and that the fraud that has been perpetrated on the committee itself, on the Commission itself, should be investigated, and that on that basis, the top level members of the Commission have a right to and a duty to withdraw from this lease, throw the matter open again for reexamination and study, and let us go in there and fight it out as a matter of sound business sense.

Mr. HOLIFIELD. We are going to have to close. The House is in session at this time, and we have no authority to meet while the House is in session.

The committee will take under consideration the testimony that has been given before us the last 2 days, and will make a statement tomorrow as to whether this investigation will be closed with this meeting, or whether additional evidence is desired.

At the present time we do not have time to have an executive session and discuss this matter, but we will try to make available to you gentlemen a statement from my office by 5 o'clock this afternoon as to whether additional hearings will be held in the meantime.

Is there anyone present from Oak Ridge other than those that have testified who wishes to testify on this matter?

(No response.)

Mr. HOLIFIELD. We will consider that all that have testified at this time, and that wish to testify, have been heard, and close the hearing at this time.

(Whereupon, at 12:15 p. m., the hearing was closed.)

## APPENDIX

Concession Agreement No. RA-24C  
Dated: July 9th, 1946

## AGREEMENT FOR CONCESSION AT OAK RIDGE

Agent: Roane-Anderson Company, Oak Ridge, Tennessee.

Name and Address of Concessionaire: Taylor's Oak Ridge Corporation. Incorporated under the laws of the State of Tennessee and trading at "Taylor's", of Oak Ridge, Tennessee, a wholly owned subsidiary of Darling Stores Corporation, a New Jersey Corporation, whose address is 370 Seventh Avenue, New York City, N. Y.

Type of Concession: Department Store.

Premises: Group 2, Building No. 4, Shop No. 101 on Broadway, and warehouse space consisting of the former E. A. T. Store Building, Baltimore and Miami Avenue, Gamble Valley, Oak Ridge, Tennessee.

Consideration: Six (6%) percent of the gross receipts of all business transacted at said locations.

This agreement, made and entered into this 9th day of July, 1946, between the Roane-Anderson Company, a corporation organized and existing under the laws of the State of Tennessee, of Oak Ridge, in the State of Tennessee, hereinafter called the "Agent", executing this agreement, and Taylor's Oak Ridge Corporation, incorporated under the laws of the State of Tennessee, (with the Darling Stores Corporation, a New Jersey corporation, whose address is 370 Seventh Avenue, New York 1, N. Y., as guarantor) trading as "Taylor's" of Oak Ridge in the State of Tennessee, hereinafter called the "Concessionaire";

Witnesseth that:

Whereas the Agent has heretofore, to wit, on the 14th day of February, 1944, effective as of the 23rd day of September, 1943, entered into a contract, herein-

after called the "Principal Contract", with the United States of America, herein-after called the "Government", to grant concessions for the operation of community retail sales and service establishments, among other things, at Oak Ridge, Tennessee, for the Government, and

Whereas the Agent is authorized under the aforementioned contract to enter into this Agreement and to permit the Concessionaire to use certain part or parts of Government-owned buildings and utilities.

Now, therefore, the parties hereto do mutually covenant and agree as follows:

1. *Term of Concession.*—The Agent grants to the Concessionaire, for the period commencing on the 1st day of September, 1946, and ending on the 31st day of August, 1947, the privilege of conducting a General Retail Department Store for the sale of ready-to-wear, shoes, millinery, dry goods, notions, novelties, and such other departments for the sale of items usually sold in department stores, in the premises described as Shop 101, Building 4, Group 2 on Broadway, and the building formerly known as the E. A. T. Stores located on Baltimore and Miami Avenue, Gamble Valley, two Government buildings at Oak Ridge, Tennessee, as outlined in red on the plans attached hereto (marked "Appendix A" and "Appendix C" respectively) and made a part hereof. It is understood and agreed that the building located in Gamble Valley shall be used for warehouse space only.

2. *Consideration Statement.*—The Concessionaire agrees to pay the Agent as compensation for this concession Six (6%) percent of the gross receipts (exclusive of excise and luxury taxes), from all sources derived from the operation or maintenance of said concession, and every part thereof, at the close of business on the last day of each and every month during the term of this Contract. Gross receipts are defined to mean gross receipts less refunds to customers for merchandise returned and shall not include any luxury, excise or sales tax levied by either the Federal, State or local Government, and collected separately from the customers. The Concessionaire shall, within fifteen (15) days of the close of business on the last day of each and every month during the term thereof, state, render and deliver to the Agent a statement in writing, sworn to by the Concessionaire, showing in detail the gross receipts derived from the Concession during the month preceding the delivery of such statement. All sums due hereunder shall be paid to the Agent in the form of Cash, a United States Money Order, Certified Check, or Cashier's Check, made payable to Roane-Anderson Company.

3. *Records, Accounts, Inspection and Audit—Payment.*—The Concessionaire shall at all times during the term of this Agreement, keep at the said premises accurate books, accounts, records and receipts showing the gross sales and gross receipts of the Concessionaire's business conducted on the premises, and he shall preserve the same until final adjustment hereunder shall have been made. The Agent, the Government, or both, shall at all times have the right to inspect and audit said books, accounts, records and receipts of the concessionaire. Default on the part of the Concessionaire to state, render and deliver sworn statement of gross income, and to make payment of compensation, as herein provided, within fifteen (15) days from the date such statement and payment are due, shall be sufficient grounds for the revocation of this agreement by the Agent.

4. *No Warranty as to Profit.*—The Agent does not by this Agreement warrant or assure the Concessionaire in any way whatsoever that a profit can be made hereunder.

5. *Stock, Services and Prices Therefor.*—The Concessionaire shall keep in stock for sale sufficient quantities of merchandise used in the conduct of his business as in the opinion of the Agent shall meet the requirements of the residents of Oak Ridge, and the Agent shall have the right to regulate the quality and prices charged for the merchandise and services to such degree as may be necessary to prevent excessive charges to said residents. The Concessionaire shall submit to the Agent when requested by him, samples of the merchandise sold or to be sold and his records and accounts for examination and audit. In general, the prices charged by the Concessionaire for the various items sold or services rendered by him, shall not exceed the prices charged by similar establishments situated in Knoxville, Tennessee. The Agent shall have the right to regulate prices within the limits indicated above and shall also have the right to deny to the concessionaire the privilege of selling any specified articles whose sale is deemed inimical to the public welfare, or to restrict the classes of merchandise to be either handled or sold, or both, by the concessionaire. Failure on the part of the concessionaire to comply with the requirements as provided herein shall be sufficient grounds for the immediate termination of this Agreement by the Agent.

6. *Stock, fixtures and equipment to be installed.*—

A. The Concessionaire shall install all stocks, fixtures and equipment necessary, in the opinion of and approved by the Agent, to establish, operate and conduct the business aforementioned in the said premises, and shall operate and conduct said business at least Eight (8) Hours of and on each generally recognized business day.

B. It is understood and agreed that the Concessionaire shall install fixtures at a minimum expenditure of \$50,000. Fixtures as used herein are defined to mean show cases, racks, wall pieces, carpets, lighting fixtures (other than those installed by the Government), chairs, divans, tables, furniture and similar items usually found in department stores. The Concessionaire agrees to carpet the premises in those sections of the store specializing in women's and children's ready-to-wear, a "French Room" or salon, and a shoe department.

C. In the event that this agreement is terminated prior to the expiration of 24 months operation, for any cause beyond the control of the Concessionaire, the Agent agrees, upon request of the Concessionaire, to purchase said fixtures, in part or in whole, subject to the following terms and conditions:

1. Upon the completion of the installation of the fixtures by the Concessionaire in the premises, a sworn statement together with proper receipts shall be delivered to the Agent establishing the actual net cost of said fixtures to the Concessionaire. An inventory of the fixtures shall be attached to said statement.

2. A depreciation charge of four and one-sixth (4 $\frac{1}{6}$ %) percent of the net cost of the fixtures shall be deducted each and every calendar month up to a total of 24 months. The purchase price to be paid by the Agent for said fixtures shall be determined by multiplying four and one-sixth (4 $\frac{1}{6}$ %) percent of the net cost by the number of months required to bring the total of operating months to 24.

3. On August 30, 1948, the entire fixture cost shall be assumed to have been amortized by the Concessionaire and no further obligation to purchase shall be considered by the Agent.

7. *Insurance.*—The Concessionaire shall carry a public liability insurance policy, in such amount and with such carrier as shall be approved in writing by the Agent covering injury to person or property, or death to persons who may be injured or killed in and about the space used by the Concessionaire. The Concessionaire shall also be required to comply with the statutory requirements concerning workmen's compensation insurance. Such liability and workmen's compensation insurance policies shall not be cancellable without 10 days prior notice in writing to the Agent.

8. *Police and fire protection.*—The Government and the Agent shall use reasonable diligence in providing police and fire protection for the property of the Concessionaire, located at Oak Ridge, but shall not be liable for loss or damage to any of his property from any cause whatsoever.

9. *Sewage Disposal—Water, Heat and Electric Current.*—Subject to the limits of available supply, interruptions while making necessary repairs, changes or installations, and conditions over which the Agent has no control, the Agent shall supply to the Concessionaire necessary sewage disposal, water, heat and electric current. Heat for the premises described as the former E. A. T. Stores building, Baltimore and Miami Avenue, Gamble Valley, as used herein, is defined to mean the heating unit only. The operation of the heating unit and the furnishing of fuel for said Gamble Valley Building shall be the responsibility of the Concessionaire.

10. *Alterations, Additions and Improvements.*—

A. The Concessionaire shall make no alterations, additions and improvements in the premises without a prior written approval of the Agent. All alterations, additions and improvements which may be made by either the Concessionaire or the Agent, or other party or persons and which are in any way attached to the floors, walls, or ceilings, shall become the property of the United States, and shall remain upon and be surrendered with the premises as a part thereof without disturbance, molestation or injury at the expiration or earlier termination of this agreement.

B. An entrance door shall be placed in the northeast corner of the premises, which entrance shall conform to the present entrances of other stores on the street at no expense to the Concessionaire. The exterior of the premises shall be painted by the Agent at no expense to the Concessionaire. The interior of the premises shall be painted with one coat of white paint by the Concessionaire. The cost of such interior painting shall be credited to the rental account of the Concessionaire upon the submission of receipted bills to the Agent. In no event shall the sum credited to the rental account of the Concessionaire exceed the sum of Twenty-five Hundred (\$2,500.00) Dollars. Any other alterations shall be the responsibility of the Concessionaire.

11. *Occupancy.*—If the Concessionaire shall be unable to enter into and occupy the premises hereinbefore described, by reason of the said premises not being ready for occupancy or as a result of any cause or reason beyond the direct control of the Agent or the Government, the Agent or the Government shall not be liable in damages to the Concessionaire therefor. It is the intent and understanding of the parties hereto that should a scarcity of merchandise or other cause prohibit the prompt opening of all departments specifically stated in Section 1 hereof, on or before September 1st, time shall be granted to the Concessionaire by the Agent in which to open the said unopened departments.

12. *Concessionaire Not a Lessee.*—It is expressly agreed that said part, parcel, building, structure or space in Oak Ridge, is not leased to the Concessionaire; that he is a licensee and not a lessee thereof; that his right to occupy the same and to operate the concession hereby granted shall continue only so long as each and all the undertakings, provisions, covenants, agreements, stipulations and conditions, rules and regulations herein contained on his part are strictly and promptly complied with, in case he shall default in the performance thereof, or any of them the Agent may immediately or at any time after such default, close up and take possession of said part, parcel or space in Oak Ridge, and of any or all buildings and structures created thereon, and the concession and the license to the Concessionaire shall thereby be forfeited, together with all privileges to occupy or use any part of said part, parcel, building, structure or space in Oak Ridge.

13. *No Assignment of Rights.*

(a) The Concessionaire shall have no right, authority or power to sell, mortgage, assign or parcel out this agreement or the concession hereby granted to him, or any interest therein, nor any right, power, or authority to allow or permit any other person or party to have any interest in or use any part of the premises, building space, or spaces covered by this concession for any purpose whatsoever without the written consent of the Agent; it being the purpose and spirit of this agreement to grant said concession and privilege solely to the Concessionaire and neither directly or indirectly to any other person or party. Neither this agreement nor any interest created thereby shall pass to any trustee or receiver in bankruptcy or to any other receiver or assignee for the benefit of creditors, or to any other person or otherwise, by operation of law.

(b) Permission is hereby granted to the Concessionaire to operate or to sublet, subject to the prior written consent of the Agent, the operation of the various departments as set forth in Section 1 hereof, provided that the Concessionaire shall pay to the Agent at the time, place, and in the manner prescribed for the payment of other consideration due the Agent, an amount equivalent to six (6%) percent of the gross receipts, exclusive of excise and luxury taxes, realized from all sources by the department and/or the departments so subleased under this provision, and provided further that in the event said operations are sublet the Concessionaire will assume the responsibility for the operation in accordance with the terms and conditions of this agreement.

14. *Liens.*—In the event the Concessionaire shall grant any lien upon his or its stock of goods, fixtures, equipment or property used in connection with this concession, or in the event he or it shall suffer or permit any lien to attach or be imposed upon said stock of goods, fixtures, equipment or property, or in the event such stock of goods, fixtures, equipment or property shall be seized, levied upon or attached, or subjected to garnishment process or be imposed with or subjected to a lien of any kind, that in the opinion of the Agent is detrimental to the interests of the Agent or the Government, this Agreement and the license of the Concessionaire hereunder may immediately be terminated by written notice from the Agent.

15. *Removal on Termination of Contract.*—The Concessionaire shall within fifteen (15) days of the termination of this contract, remove from Oak Ridge all his stock, personal property, goods and effects; and on his failure or neglect to do so the same shall either become the absolute property of the Government, without liability of any kind to the Concessionaire, or the Agent, may cause such removal to be made and such stock, property, goods and effects to be stored at the cost and expense of the Concessionaire, and the Agent shall have a lien thereon for the cost and expense of such removal and the storage of such stock, property, goods and effects, and no claim for damages against the Government or any Agent or officer thereof shall be created or made on account of such removal or storage; provided, however, that the Concessionaire shall not remove from the said premises any fixtures, furnishings, stock, property, goods and effects at the expiration or termination of this agreement; until he shall have made full settlement with the Agent of all sums owing by him to the Agent and received a release therefor from the

Agent; and should he fail, refuse or neglect to make such settlement within fifteen (15) days after the expiration or termination of this agreement, then the Agent, subject to the prior approval of the Contracting Officer, may sell or otherwise dispose of such fixtures, furnishings, stock, goods and effects or so much thereof as may be necessary to discharge such indebtedness of the Concessionaire, and the Concessionaire shall have no claim or cause of action against the Government or any officer thereof, or the Agent, by reason of such sale or disposal.

16. *General Conditions, Rules and Regulations.*—The Concessionaire agrees to be bound by the general conditions, rules and regulations set forth in "Appendix B", which is annexed hereto and made a part hereof; and the Contracting Officer shall have full power to construe, amend or add to these general conditions, rules and regulations; to issue others, and any such interpretation, amendment or addition when made and brought to the notice of the Concessionaire shall be and become a part hereof in the same manner as though set forth at length herein.

17. *Inspection.*—The Contracting Officer and the Agent reserve the right to enter upon the place of business of the Concessionaire at all reasonable hours, for the purpose of inspecting the premises, the operation of the business and ascertaining the receipts therefrom.

18. *Continuity of Operation.*—In the event the Concessionaire shall fail to operate the concession for a period of three (3) consecutive days, except as herein otherwise provided or as approved by the Agent or Contracting Officer, this Agreement and all rights of the Concessionaire hereunder may, at the option of the Agent subject to the written approval of the Contracting Officer, be deemed terminated.

19. *Notices.*—All notices and orders given to the Concessionaire may be served by mailing the same to him at 370 Seventh Avenue, New York (1), New York, or by delivering a copy thereof to him in person or by leaving it, addressed to him, at his place of business in Oak Ridge, with any person then in charge of the same. Notice required to be served on the Agent shall be served in person, or by mailing same to its office.

20. *Permits and licenses.*—The Concessionaire shall be required to furnish, at no cost to the Government, or the Agent, all permits and licenses governing the operation of his concession; to obey and abide by all applicable laws, regulations, ordinances and other rules of the Government of the State, Territory, or political subdivision thereof, wherein the services contracted for are to be performed, or of any other duly constituted public authority.

21. *Renewal.*—It is the intent and understanding of the contracting parties that the Concessionaire shall have the right to continue its operations in the premises for a full term of one year and shall have the option at the expiration of said one-year term, to renew it for an additional term of one year and a further option at the expiration of the renewal term to extend this contract for one more year, provided notice of intent to renew be given in writing to the Agent at least Sixty (60) days before this agreement, or any renewal thereof, would otherwise expire.

22. *Termination.*—In the event the Government shall substantially reduce or close down entirely the project at the Clinton Engineer Works at any time prior to the expiration of this agreement, or any extension thereof, by reason of the failure of Congress to appropriate sufficient funds for its operation and maintenance, or for any other reason or cause resulting from legislative enactment, either party hereto may terminate this Concession Agreement at any time by giving sixty (60) days' prior written notice to the other party in accordance with Section 19, hereof. Such termination shall affect only the term of this concession agreement and shall otherwise be without prejudice to the right of the parties hereunder.

23. *Similar concessions.*—The Government and the Agent reserve the right to enter into additional agreements for furnishing similar business or services at the discretion of the Government or to operate such business or service itself should the facilities afforded by the Concessionaire prove inadequate to properly supply the public need.

24. *Misrepresentation in application.*—Upon proof of any misrepresentation by the Concessionaire in his application dated June 26, 1946 (No. 2640) and/or letter of intent dated June 25, 1946, which are on file in the office of the Agent and "Basis of Contract" statement dated June 28, 1946, signed by a duly authorized representative of Darling Stores Corporation, guarantor of this agreement, as attached hereto marked Appendix "D" and made a part hereof, this Agreement may be terminated by written notice to the Concessionaire.

25. *Disputes.*—All disputes concerning questions of fact which may arise under this Agreement, and which are not disposed of by mutual agreement, shall be decided by the Contracting Officer whose decision shall be final and conclusive upon the parties hereto.

26. *Officials not to benefit.*—No member of or delegate to Congress or resident commissioner shall be admitted to any share or part of this agreement or to any benefit that may arise therefrom, but this provision shall not be construed to extend to this agreement if made with a corporation for its general benefit.

27. *Covenant against contingent fees.*—The Concessionaire warrants that he has not employed any person to solicit or secure this agreement upon any agreement for a commission, percentage, brokerage or contingent fee. Breach of this warranty shall give the Government the right to annul this agreement, or in its discretion, to add to the agreed charge, or consideration of this agreement, the amount of such commission, percentage, brokerage or contingent fees. This warranty shall not apply to commissions payable by the Concessionaire upon agreements or sales secured or made with bona fide established commercial or selling agencies maintained by the Concessionaire for the purpose of securing business.

28. *Antidiscrimination.*—The Concessionaire, in performing the work required by this agreement, shall not discriminate against any employee or applicant for employment because of race, creed, color or national origin.

Note: The foregoing clause, prohibiting discrimination against workers because of "National Origin" is construed as prohibiting discrimination based on non-citizenship as well as discrimination based on country of origin.

29. *Assignment to Government.*—This agreement, and all terms and provisions hereof, is assignable to the Government at will and in the event of such assignment to the Government, this agreement shall continue in full force and effect, and the Government reserves the right to assign to others to act as Agent.

30. *Protective security.*—Concessionaires and their employees shall be required to comply with all Protective Security Regulations now in effect or as may be promulgated from time to time by the District Engineer, Manhattan District. The Concessionaire shall comply with and shall enforce compliance of employees and potential employees with the following provisions:

All employees or applicants for employment shall accomplish such forms, fingerprinting, and photographing as the Agent may direct, all expense in connection with such personnel identification to be borne by the Concessionaire.

The Agent reserves the right to refuse to allow the employment of any person, if, in its opinion such employment would be prejudicial to the Government. Should the continued employment of any person in the Concessionaire's organization be deemed by the Agent to be prejudicial to the interests of the Government, that person shall be immediately removed from the work.

31. *Approval.*—This agreement shall be subject to the written approval of the Contracting Officer, and shall not be binding until so approved.

32. *Definitions.*—The term "Contracting Officer" as used herein shall mean the Contracting Officer who executed the principal contract on behalf of the Government or his duly appointed successor or his duly authorized representative as the case may be.

33. *Hold Harmless.*—It is understood and agreed that the Concessionaire shall save harmless the Agent and/or the Government of and from any and all liability resulting from the operations under this contract. If any suit, action or legal proceedings shall be brought against the Agent or the Government on account of the operation of the Concession, the Concessionaire agrees to assume the defense thereof, pay all attorneys' fees, costs and expenses in connection therewith and satisfy any judgment that may be rendered as a result of such suit or claim.

34. *Responsibility for Maintenance.*

(a) *By the Concessionaire.*—All minor repairs and maintenance due to normal usage such as, but not limited to, repairing doors, locks, screens, replacing light bulbs, fuses, unstopping commodes, repairing leaky faucets, interior painting and similar items, and any items of repair due to negligence in use of facilities by the Concessionaire or his employees, shall be the responsibility of and at the expense of the Concessionaire.

(b) *By the Agent.*—All structural and major repairs such as but not limited to, leaks in roof, settled foundations, defective wiring and electrical installations, exterior plumbing and similar items, shall be the responsibility of and at the expense of the Government and/or its Agent.

36. *Alterations.*—The following changes were made in this agreement before it was signed by the parties hereto:

Section 35. *Government-owned Equipment*, has been deleted in its entirety.

In witness whereof, the parties hereto have executed this agreement as of the day and year above written.

Clk's No. 446, Reg. No. 632-L-8.

Commission Expires March 30, 1948.

#### APPENDIX B

##### CONDITIONS, RULES AND REGULATIONS

1. The Concessionaire shall not install any electrical equipment that overloads the lines, nor tamper with any fuse boxes, meters, or other equipment installed by the Government, in the described premises. If the Concessionaire desires to use any electrical equipment which might overload the lines in the hereinabove described premises, he shall secure the prior approval of the Agent before making any such installation, and shall at his own expense make necessary changes to comply with such specifications as the Agent may designate. If such installation be made without prior approval of the Agent, the Concessionaire may be required to remove said installation, and shall bear the entire expense of restoring the wiring and premises to their original condition. All original light bulbs will be supplied by the Agent. Replacements from time to time and the responsibility of leaving a complete set of bulbs at the expiration or earlier termination of this agreement will be at the expense of the Concessionaire.

2. The Concessionaire agrees to keep the leased premises and the walks and driveways abutting thereon in a clean, neat and sanitary condition. If in the opinion of the Agent, subject to the approval of the Government, the premises are not kept in a clean, neat and sanitary condition, and upon notice in writing directed to the Concessionaire of such condition, and the giving of twenty-four hours time to correct the condition, after which if the condition continues, the Agent will enter upon the premises, correct the condition and charge the Concessionaire for actual and supervisory cost of such work. The Agent will bill the Concessionaire for such cost which will be payable upon presentation of the bill. Repeated occurrences of the necessity for such action shall be deemed sufficient grounds for the cancellation of this agreement.

3. The Concessionaire shall display no posters or other advertising matter other than such notices or signs as may be connected with the hereinabove described business to be conducted by the Concessionaire and such permissible signs shall be neatly lettered and painted or printed and properly maintained.

4. The Concessionaire shall not use any advertising medium which may be objectionable to the Agent in newspapers, magazines, periodicals, throw-aways, canvassing, or loud speakers, phonographs and radio broadcasts in a manner to be heard on the street, or signs overhanging sidewalks.

5. The Concessionaire shall not store or keep on the said premises gasoline, gun powder, gas, dynamite, or other explosives or inflammable material unless same be necessary in the conduct of the business, and then only upon written permit from the Agent and after compliance with all regulations relating to the storage and use of such commodities.

6. The Concessionaire shall not use the premises or any of the facilities furnished by the Agent for the manufacture, sale, or storage or distribution with or without charge, of intoxicating liquors, narcotics or habit-forming drugs, except where required in the conduct of the business, and then only on prior written approval by the Agent and under such regulations as it may impose.

7. The Concessionaire shall not use for gambling, prostitution, or for the conduct of any unlawful business purpose of undertaking any of the premises or facilities made available to him by the Agent, and shall not permit the harboring, sheltering or loitering of undesirable characters upon or about said premises.

8. The Concessionaire shall keep the premises clear and free of rodents, bugs and vermin, and if necessary join with other concessionaires in the Government Building and bear his part of the expenses of a general extermination.

9. The Concessionaire shall not use the premises for sleeping apartments or for lodging rooms, or for cooking, except when, in the opinion of the Agent said cooking is a part of, and is necessary for operating and conducting the hereinabove described business.

10. The Concessionaire shall maintain and keep in repair the interior of the hereinabove specified premises, and make such repairs and alterations as may be caused or required by the use of the premises by the Concessionaire. In general, the Agent will maintain the heating equipment, the basic electrical lines, and the plumbing lines and fixtures which are provided with the building. The Concessionaire will be responsible for all other equipment attached to the basic facilities furnished by the Agent.

11. The Concessionaire shall not install any interior or exterior electrical lines or fixtures, plumbing, shades or awnings, or any interior or exterior decorations, or painting, or build any fences or anything of the above nature whatsoever without the prior written consent of the Agent.

12. The water and wash closets and urinals shall not be used for any purpose other than that for which they were constructed. The expense of any breakage, stoppage, or damage resulting from a violation of this rule shall be borne by the Concessionaire who shall, or whose employees or agents shall have caused it.

13. The Concessionaire, his employees or agents, shall not mark, paint, drill or in any way deface any walls, ceilings, partitions, floors, wood, stone or iron work, without the prior written consent of the Agent.

14. The Concessionaire, in bringing into the building, taking therefrom or moving thereon of furniture, fixtures or supplies, when of large weight or bulk, shall do or cause the same to be done at such times as the Agent shall specify. All damage to the building caused by any such taking in, removing or moving shall be repaired at the expense of the Concessionaire.

15. The Agent shall have the right to close the building whenever it may be necessary to comply with any law or regulation issued by lawfully constituted authority, or whenever, in case of public disturbance or other events, the Agent in its discretion decides the closing is for the best interests of the Government.

16. The Concessionaire and his employees shall comply with such regulations relating to parking, loading and unloading of vehicles as may be established from time to time by the Agent or the Government.

17. The Government and the Agent reserve the right at any time to build adjoining this building and reserve the right to close any skylights or windows, and to run either pipes or conduits or both through the premises.

18. In case of difference between this Appendix "B" and the Concession Agreement of which the same is a part the provisions of the Concession Agreement shall govern.

(Plans showing location of Taylor's Department Store, Oak Ridge, have been omitted and are on file in the offices of the Joint Committee on Atomic Energy.)

Principal Contract No. W-7401 eng-115  
Concession Agreement No. RA 24 C  
Modification No. 2

#### SUPPLEMENTAL AGREEMENT

This Supplemental Agreement entered into this 6th day of January 1948, by and between Roane-Anderson Company, a corporation organized and existing under the laws of the State of Tennessee (hereinafter called the "Agent"), and Taylor's Oak Ridge Corporation, incorporated under the laws of the State of Tennessee (with the Darling Stores Corporation, a New Jersey Corporation,

whose address is 370 Seventh Avenue, New York 1, N. Y., as Guarantor) trading as "Taylor's of Oak Ridge" in the State of Tennessee (hereinafter called the "Concessionaire"),

Witnesseth that:

Whereas, on the 9th day of July 1946, the parties hereto entered into Concession Agreement No. RA 24 C, under Principal Contract No. W-7401 eng-115 with the United States of America to conduct a General Retail Department Store in Oak Ridge, Tennessee; and

Whereas said Concession Agreement has been amended by Modification No. 1; and

Whereas the Concessionaire desires to exercise its option to renew for one year in accordance with Section 21, *Renewal*, of said Concession Agreement; and

Whereas the Government desires to transfer the privilege of occupying warehouse space used by the Concessionaire in the west wing of Adams Cafeteria, Adams Lane, to the building formerly known as Super Market, on Chicago Avenue Gamble Valley Section, Oak Ridge, Tennessee; and

Whereas said relocation is for the convenience of the Government, and the Concessionaire moves at the request of the Government upon shorter notice than that provided for in said Concession Agreement; and

Whereas it is found advantageous and in the best interest of the parties hereto to further modify said Concession Agreement as hereinafter provided:

Now, therefore, the parties hereto do mutually agree that the said Concession Agreement shall be and the same is hereby modified in the following particulars but in no other:

1. Section 1, *Term of Concession*, is modified by deleting the words "ending on the 31st day of August, 1947" and by substituting therefor the following; effective September 1st, 1947

"ending on the 31st day of August, 1948".

2. Section 1, *Term of Concession*, is further modified by deleting all that portion of the first sentence commencing with the words "in the premises described as" and by substituting therefor the following; effective October 20, 1947

"in the premises described as Shop 101, Building No. 4, Group No. 2 on Broadway, and the building formerly known as Super Market located on Chicago Avenue, Gamble Valley, two Government Buildings at Oak Ridge, Tennessee, as outlined in red on the plans attached to the basic Agreement, marked Appendix "A" and Appendix "C" respectively and made a part hereof. It is understood and agreed that upon proper certification the Agent and/or the Government will pay one-half of the cost of relocation namely One Hundred and Thirty-five Dollars (\$135.00)."

This Supplemental Agreement shall be subject to the written approval of the Contracting Officer defined in said Concession Agreement and shall not be binding unless so approved

In witness whereof, the parties hereto have executed this Agreement as of the day and year first above written.

Modification No. 3

#### SUPPLEMENTAL AGREEMENT

This Supplemental Agreement entered into this 6th day of July, 1948, by and between Roane-Anderson Company, a corporation organized and existing under the laws of the State of Tennessee, acting as Agent for the United States of America under Principal Contract No. W-7401 eng-115 with the United States of America (hereinafter called the "Agent") and Taylor's Oak Ridge Corporation, incorporated under the laws of the State of Tennessee (with the Darling Stores Corporation, a New Jersey Corporation, whose address is 370 Seventh Avenue, New York 1, N. Y., as Guarantor) trading as Taylor's (hereinafter called the "Concessionaire"),

Witnesseth that:

Whereas, on the 9th day of July, 1946, the parties hereto entered into Concession Agreement No. RA 24 C, to conduct a General Retail Department Store in Oak Ridge, Tennessee; and

Whereas said Concession Agreement has been amended by Modifications Nos. 1 and 2; and

Whereas the Concessionaire desires to exercise its option to renew for one year in accordance with Section 21, *Renewal*, of said Concession Agreement; and

Whereas it is found advantageous and in the best interest of the parties hereto to further modify said Concession Agreement as hereinafter provided:

Now, therefore, the parties hereto do mutually agree that the said Concession Agreement shall be and the same is hereby modified in the following particulars but in no other:

a. Section 1, *Term of Concession*, as amended, is further modified by deleting the words "ending on the 31st day of August, 1948" and substituting the following therefore:

"ending on the 31st day of August, 1949".

b. Section 6, *Stock, Fixtures and Equipment to be Installed* is modified by deleting subsection C in its entirety.

c. Section 22, *Termination* is deleted in its entirety and the following substituted therefore:

"22. *Termination*.—Either party hereto may terminate this Concession Agreement at any time by giving 90 days prior written notice to the other party in accordance with Section 19 hereof, or this Agreement may be terminated at any time upon terms mutually agreed upon by the parties."

This Supplemental Agreement shall be subject to the written approval of the Contracting Officer defined in said Concession Agreement and shall not be binding unless so approved.

In witness whereof, the parties hereto have executed this Agreement as of the day and year first above written.

ROANE-ANDERSON COMPANY,  
*As Agent for the United States of America.*  
(Signed) L. C. Macneal,  
(Typed) L. C. MACNEAL, *Project Manager.*

This instrument was executed by L. C. Macneal for and on behalf of the Roane-Anderson Company pursuant to a Power of Attorney dated August 4, 1947, effective September 1, 1947, now on file in the office of the United States Atomic Energy Commission, Oak Ridge, Tennessee.

Witnesses for Roane-Anderson Company:

DOROTHY P. RAY,  
Oak Ridge, Tenn.  
CLAIRE L. DORAN,  
Oak Ridge, Tenn.

TAYLOR'S OAK RIDGE CORPORATION,  
By STANLEY ROTH.

Witnesses for Concessionaire:

SYLVIA WEINBERG,  
New York City, N. Y.  
ARTHUR TIERNEY,  
New York City, N. Y.

I, Charles Gass, certify that I am the Assistant Secretary of the Corporation named as Concessionaire herein, that Stanley Roth, who signed this Agreement on behalf of the Concessionaire was then Vice President of said Corporation; that said Agreement was duly signed for and on behalf of said Corporation by authority of its governing body and is within the scope of its corporate powers.

In witness whereof, I have hereunto affixed my hand and the seal of said Corporation this 31st day of August 1948.

CHARLES GASS.

#### SUPPLEMENTAL AGREEMENT

This Supplemental Agreement entered into this 26th day of August, 1949, by and between Roane-Anderson Company, a corporation organized and existing under the laws of the State of Tennessee, acting as Agent for the United States of America under Principal Contract No. W-7401 eng-115 with the United States of America (hereinafter called the "Agent"), and Taylor's Oak Ridge Corporation, a corporation organized and existing under the laws of the State of Tennessee (with the Darling Stores Corporation, a New Jersey Corporation, whose address is 370 Seventh Avenue, New York 1, N. Y., as Guarantor) trading as Taylor's (hereinafter called the "Concessionaire"),

Witnesseth that:

Whereas, on the 9th day of July, 1946, the parties hereto entered into Concession Agreement No. RA 24-C, for the conducting by the Concessionaire of a General Retail Department Store in Oak Ridge, Tennessee; and

Whereas said Concession Agreement has been amended by Modifications Nos. 1, 2, and 3; and

Whereas the parties hereto desire to extend the term of said Concession Agreement; and

Whereas it is found advantageous and in the best interest of the parties hereto to further modify said Concession Agreement as hereinafter provided.

Now, therefore, the parties hereto do mutually agree that the said Concession Agreement shall be and the same is hereby further modified in the following particulars but in no other, effective September 1, 1949.

a. Section 1, *Term of Concession*, as modified, is further modified by deleting the words "ending on the 31st day of August, 1949" and substituting the following therefor:

"ending on the 31st day of January, 1950".

b. Section 21, *Renewal* is deleted in its entirety.

This Supplemental Agreement shall be subject to the written approval of the Contracting Officer defined in said Concession Agreement and shall not be binding unless so approved.

In witness whereof, the parties hereto have executed this Agreement as of the day and year first above written.

## EXHIBIT 2

(Referred to on p. 34)

## COURT OPINION IN INJUNCTION SUIT BY THE UNITED STATES AGAINST TAYLOR'S OAK RIDGE CORP.

Filed Feb. 23, 1950

IN THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF  
TENNESSEE—NORTHERN DIVISION

Civil No. 1387

*United States of America, Plaintiff, vs. Taylor's Oak Ridge Corporation, Defendant*

Suit was commenced by plaintiff to enjoin defendant from continuing an allegedly unlawful possession of certain department store facilities located at Oak Ridge, Tennessee, and to recover a balance of compensation due for the use of certain chattels and damages for unlawful retention of possession of the realty. Defenses urged are prematurity of suit, lack of jurisdiction of the subject matter, improper choice of remedy, and denial of illegal or wrongful possession.

Defendant entered into possession of the realty pursuant to a written contract executed July 9, 1946, which, after extensions, expired by its terms January 31, 1950. It provided that within 15 days after expiration, the defendant should have removed its merchandise from Oak Ridge. Defendant has insisted that the contract was one of lease, hence subject to the State law of landlord and tenant, but the instrument describes itself as a concession agreement and the defendant as a concessionaire, and the control over the business of the conces-

sionaire, and rights of entry and inspection retained by the owner of the realty are so extensive as to negative any notion that a lease of the realty was intended or effected.

In the recent case of *United States v. Allan V. Hodge et al.*, Civil Action No. 1130, this Court held that the law relating to eviction of a lessee had no application, the occupancy in that case being under a license no different in principle from the concession agreement under which defendant has held, and still retains, occupancy. Defendant's insistence that an action under State law for eviction of a hold-over tenant was the proper procedure is, therefore, rejected.

Lack of jurisdiction of the subject matter has been urged on the ground that at the time the complaint was filed here, an injunction suit was pending in a State court. Before expiration of defendant's concession, Roane-Anderson Company, the contract-agent of plaintiff at Oak Ridge, notified defendant that its concession would not be further extended, but that bids for a lease would be invited from firms engaged in mercantile businesses. About 500 firms were invited to submit bids, and six of them responded. The proposal of Loveman's of Chattanooga, Tennessee, was recommended by Roane-Anderson Company as the most acceptable, and the recommendation was approved by the Atomic Energy Commission, the Government agency which has control of the properties at Oak Ridge. Considering that its proposal should have been accepted, defendant on January 25, 1950, filed suit in the Chancery Court of Anderson County, Tennessee, to enjoin Roane-Anderson Company from disturbing its possession of the facilities covered by the concession agreement. A temporary restraining order was granted by the State court and a time set for hearing on motion to dissolve the order.

While the suit was pending there, the Government filed its complaint here. The Government's suit was commenced February 6, 1950, after expiration of the term of the concession, but before expiration of the grace period of 15 days following termination of the concession. The suit here sought to enjoin defendant from continuing its occupancy. On February 10, 1950, this Court entered an order directing defendant to show cause on February 20, 1950, why plaintiff should not be granted a restraining order. At the hearing February 20 plaintiff, before presenting its proof, was allowed to amend its complaint by praying for an order restraining defendant from proceeding in the State Court suit. Over objections as to relevancy defendant was allowed to present extensive proof respecting the merits of its case. That proof in the main had for its purpose a showing that defendant submitted the best proposal in response to the invitation to bid and that its non-acceptance was due to arbitrariness and capriciousness on the part of Roane-Anderson Company.

Counsel for defendant in essence, if not in fact, conceded at the hearing that the Court has jurisdiction to proceed, the pendency of the suit in the State court notwithstanding. Otherwise the Court would be, and is, of the opinion that it has that jurisdiction. There is no conflict between sovereignties. The State of Tennessee is not a party litigant. Nor is it a party in interest. No police power of the State is drawn into question, and no statute of the State is infringed. No question of title is involved, hence the land laws of the State are neither invoked nor sought to be by-passed. That the State of Tennessee has not granted the land to the United States by an act of cession, if such is the case, is not a reservation to private individuals or corporations of a right to ignore or usurp the interest which the United States has acquired, in this case the fee simple title and its attendant right of possession.

It cannot well be said that the suit here was premature, when defendant had already thrown down the challenge in the State court. Defendant's concession ended by its terms January 31, 1950. Its period of grace was to be used for removal of defendant's merchandise from Oak Ridge. Use of the period to defeat the necessity of removal was inconsistent with the idea of grace and in the Court's opinion was such a breach of conditions as freed the Government's hands to bring suit at once.

As to whether defendant's bid should have been accepted a preference to others is not a subject for judicial review, the decision therein being an exercise of administrative function of the Atomic Energy Commission. While the Court has not been referred to any statute which excludes the matter from judicial review, this Court over a period of several years has had many occasions to consider whether it should undertake a review of purely administrative procedures of Government agencies. Where there has been no violation of a vested right, this Court has consistently refused to intervene in such administrative affairs. See *United States ex rel. T. V. A. v. Moody*, 86 F. Supp. 694. This is in accord with the principle of separation of powers between the legislative and judicial branches

of the Government, expressed with considerable frequency in connection with the exercise of the power of eminent domain. *United States v. Carmack*, 329 U. S. 230; *United States ex rel T. V. A. v. Welch*, 327 U. S. 546. In some relations the principle has been carried to the extreme limit by statute, as in the administration of Veterans' affairs. 38 U. S. C. A., sec. 705.

Defendant had no vested right to have its bid accepted in preference to others. It offered testimony which tended to show that Roane-Anderson Company had orally promised that defendant would receive preferential treatment as to extension of its concession because of expenditures which defendant undertook to make in adding fixtures and otherwise improving the facilities to be used under the concession agreement. There is marked inconsistency between any promise of that kind and the specific language of the written concession agreement which provided for amortization of those expenditures at the expense of the Government's agent, Roane-Anderson Company. Had there been a promise to give defendant such preferential treatment as to obligate Roane-Anderson Company to recommend acceptance of defendant's bid regardless of comparative merit, there would have been no bona fide reason for inviting bids from other firms, to say nothing of the objection to such an arrangement on grounds of public policy.

A more substantial argument has been advanced in that Roane-Anderson Company allegedly acted arbitrarily and capriciously in rejecting defendant's bid. While this Court has declined to intervene in the administrative decisions of Government agencies, it has not foreclosed itself from doing so, in the event it should appear that an agency has acted arbitrarily and capriciously to the detriment of a party dealing with it. See this Court's opinion in *United States ex rel. Dugger v. T. V. A.*, Civil Action No. 346. In the present case there is no preponderance of evidence that Roane-Anderson Company acted otherwise than fairly and in good faith in accepting a proposal other than that of defendant. Hence no reason exists for a departure from precedents of the Court.

Plaintiff's remedy at law was inadequate. Following acceptance of Loveman's proposal, Roane-Anderson Company and the successful bidder agreed upon the terms of a contract for lease of the facilities under consideration, a provision of which called for delivery of possession to Loveman's on March 1, 1950. By telegram of January 10, 1950, and follow-up letter of January 12, 1950, Roane-Anderson Company notified defendant that Loveman's bid had been accepted and called upon defendant to vacate the premises by February 15, 1950. Instead of vacating, defendant by its original bill in the State court on January 25, 1950, sought and obtained an injunction restraining Roane-Anderson Company from undertaking to oust defendant and from proceeding further to enter into a concession agreement with anyone other than defendant. Had plaintiff followed legal procedure as in cases of eviction, the time lapse would have made impossible the delivery of possession to the successful bidder on March 1, 1950, or within a time even approximating that date. In this situation, plaintiff had no adequate remedy at law but was put to the necessity of summary proceedings.

Propriety of an injunction is clear, despite pendency of the suit in the State court. The rule of comity which has been made into statute (28 U. S. C. A., sec. 2283) is not applicable where the United States is complainant, for the reason that the sovereign is not included within its terms. *Dollar Savings Bank v. United States*, 86 U. S. 227, 239; *United States v. Herron*, 87 U. S. 251, 263; *Stanley v. Schwalby*, 147 U. S. 508; *United States v. Sherwood*, 312 U. S. 584, 586, 587. Plaintiff does not seek an injunction aimed directly at the State court, but one which will operate upon defendant, its officers and agents. This relief preserves only a semblance of comity, for it is immaterial whether the injunction stays proceedings in the State court by operating upon an officer of the court or upon a party, the result by either route being to stay the State court proceedings. *Oklahoma Packing Co. v. Gas Co.*, 309 U. S. 4, 9. Nevertheless, the proceedings in the State court should be stayed, though the stay is accomplished indirectly. While the suit in the State court is not expressly a suit against the United States it is, in its results, a suit against the sovereign without its consent. The buildings at Oak Ridge which are included in the subject matter of the suit are owned by the sovereign, the United States of America. A suit adversely affecting the disposition of property owned by the United States, or in which the United States owns an interest, is a suit against the United States. *United States v. Alabama*, 313 U. S. 274, 282. In that situation the suit in the State court ought not to proceed. *United States v. Cain*, 72 F. Supp. 897.

Defendant's holding of the property is wrongful, unjustified and illegal. Plaintiff, accordingly, is entitled to an order restraining defendant from continuing its possession of the facilities in suit, or of any part thereof, beyond February 28, 1950, and to an additional order restraining defendant from proceeding with the suit

in the State court. Plaintiff is also entitled to payment from defendant of the sum of \$146.97 as compensation for the use of personal property included in the concession up to and including December 31, 1949, and for such additional compensation for said use as has accrued thereafter. The Court in the absence of complete and positive proof makes no present findings of damages and, therefore, awards none in this proceeding, but the right of plaintiff to further assert its claim for damages will be reserved.

Let the necessary writs and orders be prepared.

(Signed) ROBT. L. TAYLOR, *Judge*.

### EXHIBIT 3

(Referred to on p. 38)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., January 27, 1950.

In reply refer to:

PCO:CCO

MR. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy,  
United States Congress.*

DEAR MR. BORDEN: We are attaching a copy of a letter which we are forwarding to Senator James E. Murray concerning the department store at Oak Ridge.

This information was requested by Senator Murray's office subsequent to the general information on this matter which we forwarded to his office on January 26, 1950.

Sincerely yours,

WALTER J. WILLIAMS,  
*Director of Production.*

Attachment: Copy of letter to Senator Murray.

PCO:CCO

HONORABLE JAMES E. MURRAY,  
*United States Senate.*

DEAR SENATOR MURRAY: Mr. W. G. Ragsdale of your staff asked Mr. Edward J. Bloch of this office to furnish the following information concerning the volume of business heretofore done by the department store in Oak Ridge:

#### MILLER'S INC.

Period	No. of Months	Rate	Volume of Sales	Rental Paid
4/1/44-12/31/49-----	9-----	2½%-----	\$1,318,906.63	\$32,972.68
1/1/45-12/31/45-----	1st 6 Mo-----	2½%-----	1,605,298.86	48,833.74
	2nd 6 Mo-----	3½% up to \$150,000-----		
		4% in excess of \$150,000-----		
1/1/46-6/30/46-----	6-----	3½% up to \$150,000-----	705,705.20	24,532.77
		4½% in excess of \$150,000-----		

#### TAYLOR'S

9/1/46-12/31/46-----	4-----	6%-----	\$613,226.05	\$36,793.56
1/1/47-12/31/47-----	12-----	6%-----	1,215,381.55	72,919.89
1/1/48-12/31/48-----	12-----	6%-----	1,057,870.73	63,472.24
1/1/49-12/31/49-----	12-----	6%-----	844,208.33	50,652.50

Under the above arrangements water and electricity were furnished without cost to the concessionaire. The new lease arrangement will be on the basis of the lessee paying for utilities in addition to basic rent.

The higher volume of business done by Miller's, Inc., is due in part to a higher population in Oak Ridge than there is at present. Miller's was operating the Oak Ridge store during a period when merchandise was difficult to obtain and complete stocking of the Oak Ridge store with similar merchandise as handled in the Miller's Knoxville store was difficult. There were also small stores in the construction camps selling general merchandise during the period in which Miller's was operating. However, during the past two years, the population of Oak Ridge has only dropped about 3,000 (36,000 to 33,000) while Taylor's business volume has declined about one-third.

In 1946, an attempt was made by the Manhattan Engineer District and the Roane-Anderson Company (management agent) to negotiate a higher return to the Government than was currently being paid by the concessionaire, Miller's, Inc. During the period of negotiation, Miller's, Inc., decided to withdraw from Oak Ridge. We understand that one of the considerations which led Miller's, Inc., to withdraw from Oak Ridge was the fact that postwar truck production had been resumed and they were able to obtain delivery trucks for daily deliveries of merchandise to Oak Ridge from their Knoxville store. There were probably many additional reasons why Miller's took this action of which we are not aware. It is our understanding that at all times relations between Miller's and the negotiating agents of Roane-Anderson Company and the Manhattan Engineer District were of the best.

Any additional information concerning this matter will be furnished at your request.

Sincerely yours,

WALTER J. WILLIAMS,  
*Director of Production.*

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., January 26, 1950.*

In reply refer to:  
PCO:CCO

Mr. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy,  
Congress of the United States.*

DEAR MR. BORDEN: This refers to your letter of January 19, 1950, in which you requested information concerning the recent award of the department-store lease at Oak Ridge to Loveman's of Chattanooga, Tennessee. You requested a fairly detailed report on this particular matter and, in addition, information on the policies and procedures under which leases are awarded to commercial firms at Oak Ridge.

We are enclosing a copy of the policy paper on long-term leases at Oak Ridge, a copy of the memorandum from the Deputy General Manager to the Director of Production reporting approval of this policy by the Commission subject to certain conditions, and a copy of the advertising procedure for commercial leases in effect at Oak Ridge.

The award of a five-year lease with an option to renew for five additional years was made to Loveman's of Chattanooga, Tennessee, on January 10, 1950, to be effective March 1, 1950.

The department store in Oak Ridge has been operated for approximately the last three and one-half years by Taylor's, a wholly owned subsidiary of the Darling Stores Corporation of 370 Seventh Avenue, New York, under a concession agreement. Taylor's original agreement provided for a one-year term with options to renew for two additional years. These options were exercised by Taylor's. Prior to the expiration of the third year on August 31, 1949, Taylor's requested that the rental (6% of gross sales) which they had been paying be reduced. This request was refused as not being in the best interest of the Government and our Oak Ridge Office decided to advertise for proposals on the basis of a long term lease. It was then agreed with Taylor's that their concession agreement would be extended for a period of five months to January 31, 1950. (Taylor's refused an offer of a six months' extension.)

During this interim there was extensive advertising and solicitation by direct letters, telephone calls, and personal interviews to obtain qualified operators. It was made clear to all prospective lessees that a full-scale department-store operation was desired. Six proposals, copies of which are attached to this letter were received. As an aid in analyzing these proposals, representatives of Roane-Anderson Company inspected at least one store operated by each applicant. The Roane-Anderson Company and our Oak Ridge Office considered that the needs of the community for a complete department-store operation as well as estimated financial return to the Government should control the selection of an operator under a long-term lease with no cancellation privileges by the Government.

Mercentile Stores Co., Inc., of New York, and Proffitt's Department Store of Maryville, Tennessee, are well-qualified department-store operators but offered no guaranteed minimum and the percentages of gross offered were too low. Similarly, Taylor's proposal No. 3 contemplated a well-rounded department-store operation but the percentage of gross offered was considerably less than that offered by Loveman's.

Sam Schainberg Dry Goods Company of Memphis, Tennessee, is highly competent in its field. Although offering a fair guaranteed minimum and a good percentage of gross, it was ruled out for the reason that the company is a specialty-type operator (about 15 shops in Tennessee and other Southern States) with no previous experience with respect to a full-scale department-store operation as desired in Oak Ridge. In their Memphis store all departments except two are leased to subtenants. They specialize in the low-price field.

John J. Wender, of LaFollette, Tennessee, offered the highest percentage of gross. He is a well qualified merchant, having several operations in Oak Ridge and neighboring communities but with no experience in full-scale department-store operation. He also specializes in the low-price field. In view of his high percentage of gross, his was the only proposal which was considered by the Roane-Anderson Company and our Oak Ridge Office as offering an estimated rental return comparable to Loveman's. He presently subleases Taylor's basement and his business has been steadily declining. It was believed that he might reach but could not reasonably be expected to exceed Taylor's 1949 gross of \$844,000. This would produce an estimated rental return comparable to Loveman's estimated rental return. However, the Oak Ridge management felt that the attainment of \$844,000 in volume of sales by Wender's should be considered very unlikely.

Taylor's offered three alternative rental agreements depending on the type of service selected. Taylor's present store in Oak Ridge differs considerably from that of Loveman's department store in Chattanooga. Taylor's operates only a small number of departments directly and subleases to other concessionaires about fourteen of the operations within the store. They offer no central charge accounts and no delivery service.

Experience has indicated the volume of business that can be expected of Taylor's present operation. During the past year the volume was \$844,000. The management at Oak Ridge considers it reasonable to expect that no higher volume of business would be done by Taylor's unless they were to make considerable change in facilities, merchandise and scope of operations. Therefore, in addition to being inadequate from the standpoint of quality of merchandise and service offered, Taylor's alternative proposals numbered 1 and 2 were not considered as good financially as Loveman's or Wender's proposals. Taylor's alternative proposal number 3 (which is the only one of its alternative proposals comparable to Loveman's on the basis of type of service) indicated that changes would be made in the facilities, type of merchandise, and scope of operations which would result in Taylor's operating a complete department store. One of the improvements Taylor's anticipated making if alternative proposal number 3 were acceptable would be the replacement of many of the sublessees with national operators whose merchandising ability is superior and mark-up lower than that of the existing sublessees.

Loveman's, as demonstrated in its Chattanooga store, is experienced in handling quality merchandise and operating the majority of its departments directly with a completely integrated service afforded thereby. Loveman's proposal of 4% of gross on the first \$1,000,000, 3½% on the second \$1,000,000, and 3% on anything in excess is compared to Taylor's alternative proposal number 3 of 2½% of gross. Depending on the volume of gross sales, the return to the Government would be:

Volume of Sales	Taylor's Proposal No. 3, Net Rental	Loveman's Proposal, Net Rental
\$625,000.....	*\$25,000	*\$25,000
\$900,000.....	*25,000	32,000
\$844,000.....	*25,000	33,760
\$850,000.....	*25,000	34,000
\$900,000.....	*25,000	36,000
\$1,000,000.....	*25,000	40,000
\$1,100,000.....	*27,500	43,500
\$1,250,000.....	**32,250	**48,750

\*Guaranteed minimums contained in proposals. Taylor's guaranteed minimum after three years is \$36,000.

\*\*Highest estimated returns based on volume of potential business estimated by representatives of Roane-Anderson Company and the Office of Oak Ridge Operations. On this basis, Taylor's proposal is \$32,250 (\$36,000 minimum after third year) as compared to Loveman's \$48,750. (A survey made by the University of Tennessee has indicated a potential department store business of \$2,000,000 in Oak Ridge.)

Representatives of Taylor's who have discussed this matter with representatives of the Washington staff seem to have as principal complaints:

- a. That the capital investment considered to be approximately \$100,000 made by Taylor's during the past three and a half years represents an equity which should have been recognized in making the award;
- b. That insufficient notice was given to a business of the size of Taylor's to cease operations;
- c. That Taylor's proposal was in fact better than that offered by Loveman;
- d. That there was no opportunity given Taylor's to negotiate;
- e. That the award of the lease has been done in secrecy.

The following facts are pertinent to these complaints:

It was provided in Taylor's original concession agreement that approximately \$74,000 for fixtures would be amortized during a twenty-four month period, the Government agreeing to pay the unamortized portion in the event of cancellation by the Government prior to the end of twenty-four months. Taylor's insists that this was simply protection against cancellation and that it was not regarded by them as a sound amortization. In our view, the amortization provision was part of the original consideration, the twenty-four month period has expired, and the Government should not under the circumstances give weight to this claim of equity.

When Taylor's was notified on January 10, 1950, of the award to Loveman's, they were instructed to cease business by January 31, 1950, and vacate the premises on or before February 15, 1950, in accordance with the terms of the existing concession agreement. The feasibility of extending the termination date of Taylor's is now being explored at Oak Ridge and Mr. R. W. Cook, manager of Oak Ridge Operations, has invited Mr. Stanley Roth, Vice President of Darling Stores, Inc., to come to Oak Ridge and discuss this possibility with him. Mr. Cook has also indicated that he would discuss the proposals and the analyses with Mr. Roth in order to demonstrate to him why the award was not made to Taylor's.

The foregoing comparison of Taylor's and Loveman's proposals indicates that Taylor's proposal was not as good as Loveman's proposal.

We are informed by our Oak Ridge Office that numerous discussions were had by representatives of the Roane-Anderson Company with representatives of Taylor's and that Taylor's was fully informed as to kind of operation desired and other important considerations.

It is true that the proposals were treated as confidential by Roane-Anderson Company and the Office of Oak Ridge Operations in accordance with a long-standing practice at Oak Ridge. However, as stated above, the Oak Ridge Office is prepared to discuss the merits of the award with Taylor's representatives and has so informed Mr. Stanley Roth, Vice President of Darling Stores Corporation.

The Oak Ridge Office of the Commission carefully considered and analyzed all six proposals and approved the selection of Loveman's. This decision has been reviewed in detail by appropriate members of the Washington staff. Mr. Stanley Roth and others, representing the Darling Stores Corporation, came to Washington and presented their side of the case to Mr. Carroll A. Towne, Chief of the Community Operations Branch of the Commission. We are satisfied that Taylor's proposals, as well as all the other proposals, were given full consideration and we find no basis for reversing the decision which has been made by the Oak Ridge Office.

Sincerely yours,

WALTER J. WILLIAMS,  
*Director of Production.*

#### DEPARTMENT STORE LEASE AT OAK RIDGE

##### SUMMARY STATEMENT CONCERNING THE RECENT AWARD OF THE DEPARTMENT STORE PREMISES AT OAK RIDGE TO LOVEMAN'S OF CHATTANOOGA, TENNESSEE

On January 10, 1950, the Oak Ridge Office of the Atomic Energy Commission awarded a lease of the department-store premises at Oak Ridge, Tennessee, to Loveman's of Chattanooga. The lease is for five years with an option on the part of the lessee to renew for five additional years. The lease period will begin March 1, 1950.

The department store in Oak Ridge has been operated for approximately the last three and one-half years by Taylor's, a wholly owned subsidiary of the Darling Stores Corporation of 370 Seventh Avenue, New York, under a concession agreement. Taylor's original agreement provided for a one-year term with:

option to renew for two additional years. These options were exercised by Taylor's. Prior to the expiration of the third year on August 31, 1949, Taylor's requested that the rental (6% of gross sales) which they had been paying be reduced. This request was refused as not being in the best interest of the Government and our Oak Ridge Office decided to advertise for proposals on the basis of a long-term lease. It was then agreed with Taylor's that their concession agreement would be extended for a period of five months to January 31, 1950. (Taylor's refused an offer of a six month's extension.)

During this interim there was extensive advertising and solicitation by direct letters, telephone calls, and personal interviews to obtain qualified operators. It was made clear to all prospective lessees that a full-scale department-store operation was desired. Six proposals were received. As an aid in analyzing these proposals, representatives of Roane-Anderson Company inspected at least one store operated by each applicant. The Roane-Anderson Company and our Oak Ridge Office considered that the needs of the community for a complete department-store operation as well as estimated financial return to the Government should control the selection of an operator under a long-term lease with no cancellation privileges by the Government.

Mercantile Stores Co., Inc., of New York, and Proffitt's Department Store, Maryville, Tennessee, are well-qualified department-store operators but offered no guaranteed minimum and the percentages of gross offered were too low. Similarly, Taylor's proposal No. 3 contemplated a well-rounded department-store operation but the percentage of gross offered was considerably less than that offered by Loveman's.

Sam Schainberg Dry Goods Company of Memphis, Tennessee, is highly competent in its field. Although offering a fair guaranteed minimum and a good percentage of gross, it was ruled out for the reason that the company is a specialty-type operator (about 15 shops in Tennessee and other Southern States) with no previous experience with respect to a full-scale department-store operation as desired in Oak Ridge. In their Memphis store all departments except two are leased to subtenants. They specialize in the low-price field.

John J. Wender of La Follette, Tennessee, offered the highest percentage of gross. He is a well-qualified merchant, having several operations in Oak Ridge and neighboring communities but with no experience in full-scale department-store operation. He also specializes in the low-price field. In view of his high percentage of gross his was the only proposal which was considered by the Roane-Anderson Company and our Oak Ridge Office as offering an estimated rental return comparable to Loveman's. He presently subleases Taylor's basement and his business has been steadily declining. It was believed that he might reach but could not reasonably be expected to exceed Taylor's 1949 gross of \$844,000. This would produce an estimated rental return comparable to Loveman's estimated rental return. However, the Oak Ridge management felt that the attainment of \$844,000 in volume of sales by Wender's should be considered very unlikely.

Taylor's offered three alternative rental agreements depending on the type of service selected. Taylor's present store in Oak Ridge differs considerably from that of Loveman's present department store in Chattanooga. Taylor's operates only a small number of departments directly and subleases to other concessionaires about fourteen of the operations within the store. They offer no central charge accounts and no delivery service.

Experience has indicated the volume of business that can be expected of Taylor's present operation. During the past year the volume was \$844,000. The management at Oak Ridge considers it reasonable to expect that no higher volume of business would be done by Taylor's unless they were to make considerable change in facilities, merchandise, and scope of operations. Therefore, in addition to being inadequate from the standpoint of quality of merchandise and service offered, Taylor's alternative proposals numbered 1 and 2 were not considered as good financially as Loveman's or Wender's proposal.

Taylor's alternative proposal number 3 (which is the only one of its alternative proposals comparable to Loveman's on the basis of type of service) indicated that changes would be made in the facilities, type of merchandise, and scope of operations which would result in Taylor's operating a complete department store. One of the improvements Taylor's anticipated making if alternative proposal number 3 were acceptable would be the replacement of many of the sublessees with national operators whose merchandising ability is superior and mark-up lower than that of the existing sublessees.

Loveman's, as demonstrated in its Chattanooga store, is experienced in handling quality merchandise and operating the majority of its departments directly with a completely integrated service afforded thereby. Loveman's proposal of 4% of gross on the first \$1,000,000, 3½% on the second \$1,000,000, and 3% on anything in excess is compared to Taylor's alternative proposal number 3 of 2½% gross. Depending on the volume of gross sales, the return to the Government would be:

Volume of Sales	Taylor's Proposal No. 3 Net Rental	Loveman's Proposal Net Rental
\$625,000.....	*\$25,000	*\$25,000
\$800,000.....	"25,000	32,000
\$844,000.....	"25,000	33,760
\$850,000.....	"25,000	34,000
\$900,000.....	"25,000	36,000
\$1,000,000.....	"25,000	40,000
\$1,100,000.....	"27,500	43,500
\$1,250,000.....	**32,250	**48,750

\*Guaranteed minimums contained in proposals. Taylor's guaranteed minimums after third year is \$36,000.

\*\*Highest estimated returns based on volume of potential business estimated by representatives of Roane-Anderson Company and the Office of Oak Ridge Operations. On this basis, Taylor's proposal is \$32,250 (\$36,000 minimum after third year) as compared to Loveman's \$48,750. (A survey made by the University of Tennessee has indicated a potential department store business of \$2,000,000 in Oak Ridge.)

Representatives of Taylor's who have discussed this matter with representatives of the Washington staff seem to have as principal complaints:

- a. That the capital investment considered to be approximately \$100,000 made by Taylor's during the past three and a half years represents an equity which should have been recognized in making the award;
- b. That insufficient notice was given to a business of the size of Taylor's to cease operations;
- c. That Taylor's proposal was in fact better than that offered by Loveman;
- d. That there was no opportunity given Taylor's to negotiate;
- e. That the award of the lease has been done in secrecy.

The following facts are pertinent to these complaints:

It was provided in Taylor's original concession agreement that approximately \$74,000 for fixtures would be amortized during a twenty-four-month period, the Government agreeing to pay the unamortized portion in the event of cancellation by the Government prior to the end of 24 months. Taylor's insists that this was simply protection against cancellation and that it was not regarded by them as a sound amortization. In our view, the amortization provision was part of the original consideration, the 24-month period has expired, and the Government should not under the circumstances give weight to this claim of equity.

When Taylor's was notified on January 10, 1950, of the award to Loveman's, they were instructed to cease business by January 31, 1950, and vacate the premises on or before February 15, 1950, in accordance with the terms of the existing concession agreement. The feasibility of extending the termination date of Taylor's is now being explored at Oak Ridge and Mr. R. W. Cook, Manager of Oak Ridge Operations, has invited Mr. Stanley Roth, Vice President of Darling Stores, Inc., to come to Oak Ridge and discuss this possibility with him. Mr. Cook has also indicated that he would discuss the proposals and the analysis with Mr. Roth in order to demonstrate to him why the award was not made to Taylor's.

The foregoing comparison of Taylor's and Loveman's proposals indicates that Taylor's proposal was not as good as Loveman's proposal.

We are informed by our Oak Ridge Office that numerous discussions were had by representatives of the Roane-Anderson Company with representatives of Taylor's and that Taylor's was fully informed as to kind of operation desired and other important considerations.

It is true that the proposals were treated as confidential by Roane-Anderson Company and the Office of Oak Ridge Operations in accordance with a long-standing practice at Oak Ridge. However, as stated above, the Oak Ridge Office is prepared to discuss the merits of the award with Taylor's representatives and has so informed Mr. Stanley Roth, Vice President of Darling Stores Corporation.

The Oak Ridge Office of the Commission carefully considered and analyzed all six proposals and approved the selection of Loveman's. This decision has been reviewed in detail by appropriate members of the Washington staff. Mr. Stanley Roth and others, representing the Darling Stores Corporation, came to Washington and presented their side of the case to Mr. Carroll A. Towne, Chief of the Community Operations Branch of the Commission. The Production Division is satisfied that Taylor's proposals, as well as all the other proposals, were given full consideration and that there is no basis for reversing the decision which has been made by the Oak Ridge Office.

## SIX BID PROPOSALS

### 1. Taylor's Oak Ridge Corporation

DECEMBER 12, 1949.

ROANE-ANDERSON COMPANY,  
Box 456, Oak Ridge, Tennessee.

GENTLEMEN: We are handing you herewith three alternative proposals for leasing the premises on Jackson Square now occupied by us. Our purpose in giving you three proposals from which to choose is to make it possible for you to elect that lease arrangement which will permit us to give the community the type of store which you feel is desirable. Up to the present, our operation has been circumscribed by two factors:

1. The shortness of our lease.
2. The high percentage rent which our lease contract called for.

These factors precluded our building patronage and prestige through any long-term program and prevented us from rendering services of the type which cost money but build good will and further prevented us from obtaining the most desirable subtenants. In the past, we could have interested better subtenants to operate some of the departments but were unable to because our lease was too short and the percentage of sales they were asked to pay was too high. Our present proposals are designed to permit us to get better subtenants by offering lower percentage arrangements and longer leases. Even though we are now faced with the prospect of competition from the new \$5,500,000 commercial center, we are convinced that the community will not support two department stores, each of the three alternative proposals permit us to perform, in varying degree, part of the following program varying from the minimum in Proposal No. 1 to the maximum in Proposal No. 3 under which proposal we would give Oak Ridge subject to the limitations imposed by the size of the community a real community department store.

1. Install air conditioning.
2. Replace many of the leased departments with national operators whose merchandising ability is superior and mark-up lower than that of the existing leases.
3. Install new improved lighting both overhead and counter.
4. Revamp, refurbish, and refinish the fixtures.
5. Install a centralized charge account system for the charge departments.
6. Arrange for limited store delivery.
7. Engage in community service activities and make our store an integral part of the community life.

*Term.*—All of the proposals are for a five-year term with a five-year option on the part of the concessionaire. All the proposals are to embody a paragraph giving the concessionaire the right to terminate the lease in the event that the operation at Oak Ridge is substantially reduced or the new projected commercial center opened.

#### *Rental: Proposal No. 1*

We propose to pay a minimum rental of \$36,000 per annum payable in equal monthly installments of \$3,000 per month and in addition thereto, 4.62% of the sales in the premises during each lease year in excess of \$800,000.

#### *Proposal Number 2 (or in the alternative Proposal No. 1)*

We propose to pay a minimum annual rental of \$44,000 payable in equal monthly installments of \$3,666.66 and in addition thereto, overage by computing the rent as such a sum as shall represent 4% of sales on the first \$800,000 of annual business, plus 3% on the next \$800,000 of annual business plus 2½% on all sales above that amount.

*Proposal Number 3 (or in the alternative)*

We propose to pay a minimum rental of \$25,000 per annum for the first three years of the term against 2½% of sales in excess of \$1,200,000 and \$36,000 per annum for the remaining portion of the term against 2½% of sales in excess of \$1,200,000. In the event said proposal is accepted, we agree to spend not less than \$50,000 for the physical improvements above outlined. Other new conditions: electric current and water to be paid by us at metered rates.

Respectfully submitted.

Yours very truly,

TAYLOR'S OAK RIDGE CORPORATION.  
By M. H. GLUCK.

2. Loveman's

DECEMBER 12, 1949.

C. M. WINFREY,

*Manager, Rental Department, Roane-Anderson Company,  
P. O. Box 456, Oak Ridge, Tennessee.*

DEAR MR. WINFREY: We propose to and herewith submit out proposition subject to contractual negotiations in regard to leasing the department store in Oak Ridge now known as Taylor's. We propose to negotiate a contract with Roane-Anderson Company, acting as agents for the U. S. Atomic Energy Commission, on the basis of 4% of sales on the first million dollars, 3½% of sales between one and two million dollars, and 3% of sales on all over two million dollars. As a purpose of our good faith in this connection, we propose to pay a minimum rental of \$25,000 a year, such minimum to be charged against the percentages herein mentioned.

Further, as a matter of qualifying ourselves in this connection, we consider the minimum rental as inconsequential and are only using it as evidence of good faith on our part subject to reaching the proper contractual negotiations with you. We would like to point out that the reason we are offering such a low guaranty is due to the fact that we believe that the department store which you have there now is being improperly and unsatisfactorily run for the benefit of the people of Oak Ridge. We would have to give consideration on our part in establishing the proper facilities there, to the installation of a credit system, preferably the charge-plate system, which we are using here. This one expense would cost approximately 2% of our sales. We would have to give further consideration to the establishment of a delivery system which would cost us about 1¼% to our sales. Also, we feel that we would have to use advertising and promotion which will approximate costing us between 3 and 4% to our sales.

I am sure that you realize as well as we do, that the above facilities are not being offered now to the people of Oak Ridge. Further, we would have to give consideration to the installation of a proper air conditioning system for the building. So I am sure that you and your associates can see by these figures that on the basis of such percentages, we propose to negotiate a reasonable contract. Our proposal is made subject to our reaching an agreement on the proper terms and conditions of the lease, and further subject to our reaching some definite agreement by January 1, 1950. Further, it is understood between us that in the event we are able to get together on the lease, that we would be able to occupy the building by March 1, 1950, or sooner.

Yours very truly,

RICHARD L. MOORE, Jr., *President.*

3. Proffitt's

DECEMBER 13, 1949.

MR. C. M. WINFREY,

*Care of Roane-Anderson Company,  
Oak Ridge, Tennessee*

DEAR SIR: With reference to our conversation relative to our taking a lease on the department store building in Oak Ridge, now occupied by Taylor's, we wish to submit the following bid as rental for the building, based on the net sales for a lease period of five years with an option for a five year renewal period.

Our proposition is 2½% of net sales. This rental is based on the fact that we expect to meet prices and services of other department stores in this area, whose rentals are the equivalent or lower than the one we submit, and is contingent on a satisfactory arbitration to both you and us of all details in regard to the operation of a modern department store. We are definitely not interested in the type of operation you have at present.

As to our ability to operate a department store, that would be satisfactory to your community, we refer you to the local Chamber of Commerce, the Bank of Maryville, or any of our thousands of satisfied customers here in Blount County, where we have operated for the past thirty years.

Should you look with favor on our proposition, we will be glad to hear from you.

Very truly yours,

D. W. PROFFITT.

4. *Sam Shainberg's Dry Goods Store*

NOVEMBER 28, 1949.

Mr. C. M. WINFREY,  
Roane-Anderson Company,  
Oak Ridge, Tennessee.

DEAR MR. WINFREY: Pursuant to our conversation with you this past Friday, we herewith make our proposal for lease to operate department store at Oak Ridge in the premises now occupied by Taylor Department Store. General terms of our proposal are as follows:

1. Term of Lease: Five years, with option for renewal of five additional years.

2. Rental: Four percent of sales. Guarantee \$32,000 per annum.

3. Renegotiate privileges to be guaranteed us in the event working population decreases twenty-five percent from present level of employment, and in event subsequent plans in Oak Ridge permit additional department stores to locate in Oak Ridge. We believe that we could successfully operate this store and render the kind of service that the citizens of Oak Ridge would demand and require from a department store.

We have had years of experience operating such stores, and at the present time are operating several units of a similar caliber. We would, of course, be very happy to have you come down to Memphis and inspect some of these stores.

As far as Oak Ridge is concerned, should we be successful in negotiating the lease with you, we would plan the following program for the store:

1. Expenditure of approximately \$100,000 for fixtures, which we believe would allow us to completely air condition the store.

2. Carry an inventory of approximately \$250,000.

3. Establish a pricing system that would be competitive with Knoxville and consistent with good merchandising principles, which is something the present operator is not doing.

4. Generally operate this store in the same manner as we do where competition is intense, advertising very liberally and furnishing customer services such as delivery, credit facilities and other necessary items.

We understand that you are receiving proposals for the leasing of this store up to December 15. We would like for you to advise us how soon after December 15 we can expect word from you as to whether or not you are interested in our proposal. Our reason for this is that we have several other propositions under consideration, and, of course, if we will be successful in getting this unit, it will somewhat influence our plans regarding the others.

Yours very truly,

SAM SHAINBERG DRY GOODS COMPANY,  
NATHAN SHAINBERG, *President*.

5. *Wender*

DECEMBER 14, 1949.

Mr. C. M. WINFREY,  
Concession Department, Roane-Anderson Company,  
Oak Ridge, Tennessee.

DEAR MR. WINFREY: Confirming our conversation of the 14th, we wish to place a bid for the store building now occupied by Taylor's Oak Ridge Corporation, in Jackson Square.

We will pay as rental for said building, heat, and warehousing, six percent of gross cash sales, and cash collected on accounts, and on all credit sales and audit to be made of our books at the expiration of our lease and rent to be paid on all accounts considered good. We will guarantee a minimum rental of \$40,000 per year. The lease will run for a period of five years, with an option of renewing same for five years additional, with a clause stating that if the population is substantially reduced, or the AEC should substantially reduce the employment in the plants, to such an extent that it would be impossible to operate under the minimum rental we are paying that our lease could be renegotiated. Also in case the Master Plan

is carried out and the principal trading area is moved, and Jackson Square becomes a minor trading area, that our lease could be renegotiated.

If our bid is accepted, we will install, at our own expense, an adequate air conditioning cooling system, to be installed and ready for use in year of 1950. Also we will make every effort to purchase the fixtures from Taylor's that are usable, and add additional factory built fixtures to add to the appearance of the store, but if unsuccessful in purchasing these Taylor's fixtures we will purchase and install new, up to date, factory built fixtures. We feel that the volume of this store, by proper management and adequate stocks, can be greatly increased.

We plan to utilize all the floor space of the building for displaying and selling merchandise, and in order to do this, we would, of necessity, need additional warehouse facilities, which we would expect to be furnished under this lease. Most of the departments of Taylor's are being operated under sublease; some of these departments are not selling the volume of merchandise that should be sold from the department. This is due in some respects to lack of capital, management, and business experience.

If our bid is accepted, practically all the departments will be operated by us. It is our plan to carry complete lines of merchandise, and to operate generally along the same lines as big city department stores, offering for sale merchandise of quality covering all price ranges. We would, of course, expect the interior of the building to be painted before our tenancy begins. We plan to operate under the name of Wender's Department Store, a partnership composed of J. J. Wender, Nell Perkins Wender, Mrs. Joe E. Rogers, J. J. Wender, Jr., and C. M. Wender, and will operate under the personal management of J. J. Wender.

Enclosed you will find financial statements of the above-named parties. We will furnish adequate capital to make this a successful operation.

Thanking you in advance for all past courtesies, we remain

Very truly yours,

WENDER'S DEPARTMENT STORE.  
J. J. WENDER.

#### 6. Mercantile

DECEMBER 13, 1949.

ROANE-ANDERSON COMPANY,  
Commercial Realty Building,  
P. O. Box 456, Oak Ridge, Tennessee.  
(Attention: Mr. C. M. Winfrey.)

DEAR MR. WINFREY: In accordance with our previous conversation, we understand that you are asking for bids for the operation of a department store in the premises now occupied by Taylor's in Oak Ridge, Tennessee.

We are enclosing herewith copy of our latest financial report. We would like to suggest that if a contract were awarded to us for operating a department store in Oak Ridge we would operate this store under the same policy that we operate any other of our stores. We would like to call your attention to the basic policies of our company. These are enumerated in some detail in the attached financial statement.

Our company operates quite differently from the average or typical department store and in order that you may be fully acquainted with them, we are repeating here the comments which we made in our annual statement, copy of which is attached.

First, we believe in pricing our goods to meet the competition of the stores in our localities which sell at the lowest prices for comparable values. It is our experience that generally speaking, and with some exceptions, the chain stores are the businesses which do sell at the lowest prices in our communities. The result of following this low-price policy is that the mark-up percentage for our company (mark-up percentage is meant the profit spread or difference between cost and the retail price put on goods for sale) is definitely lower than that of department stores in general as evidenced by mark-up figures published by such sources as Harvard University Graduate School of Business Administration and National Retail Dry Goods Association (NRDGA). Selling goods at low prices cannot be continued profitably unless goods are bought advantageously as is done by successful chain stores. This requires centralized buying and to a considerable extent centralized merchandising and planning. Our company has been perfecting for some years now the organization necessary to operate in this manner.

Finally, to compete in prices with chain stores, and still operate profitably, operating expenses must be kept lower than those of the average department store

(again referring to published figures from generally recognized sources). We would be interested in operating a store in Oak Ridge on the following basis:

1. Rent: 2% of sales.
2. Lease: One five-year lease and five-year options.
3. Fixtures: On a long-term lease we would be willing to install our own fixtures; in connection with the installation of any fixtures we would reserve the right to remove such fixtures at the end of the lease.
4. Taxes: We understand there are no real-estate taxes.
5. We understand there is no insurance to be carried by us on the building.
6. We understand there are no real-estate assessments against the building.
7. We understand that the owner (Government) would pay for any building alterations and any further building repairs would be made by the owner.
8. We understand the owner will furnish all utilities, including heat, light, water, and so forth.
9. We would want to reserve the right to sublease the whole or any part of the store. In this connection we might point out that it is the policy of our company to operate practically all of our own departments. The only major department which we sublease is the millinery department; in some of our stores we do have leased photo studios, jewelry repair, shoe repair, etc.
10. Fire clause if the building were damaged by fire we understand the owner will repair or rebuild. Furthermore, if more than fifty percent of the building were destroyed, we wish the privilege of cancelling the balance of the lease.

If you are interested in the above tentative proposal, we would be glad to sit down with you and discuss it in some detail.

Very truly yours,

F. K. BRADLEY, *Vice President.*

---

#### EXHIBIT 4

(Referred to on p. 43)

JANUARY 23, 1950.

To: Walter J. Williams, Director of Production, Washington.  
From: R. W. Cook, Manager, Oak Ridge.

#### POLICY AND PROCEDURE FOR SELECTION OF AWARD OF COMMERCIAL LEASES AT OAK RIDGE, TENNESSEE (EXCEPT HOUSING AND MANUFACTURING).

CS:RF

Since approval was obtained from the Commission in Washington on the Oak Ridge Office's commercial leasing program at Oak Ridge, the following policy and procedure has been used and is presently being used as a guide by the Agent and the Commission at Oak Ridge.

#### GENERAL POLICY

It will be the policy of the Oak Ridge Office to require sufficient advertising to secure the maximum practical coverage and the best possible proposal. The advertising, although designed to arouse interest on the part of persons or organizations who might be induced to submit proposals, usually will be informal in character. Formal invitations, detailed specifications, and formal bid openings are not considered necessary or practicable where building sites, buildings, or space in buildings are to be leased. Unlike the letting of construction contracts, we will have no predetermined specifications as to exactly what must be done by applicants.

The invitation will contain a brief description of the premises available and the general features of the lease form which will be acceptable to the landlord. Within this general framework, different applicants may desire to submit a wide range of proposals, adapted to the kind of business each is engaged in, and adapted to his business practices and policies. The investments to be made in buildings or improvements may vary widely between different applicants, and there is good reason for not restricting them within any narrow limits by detailed specifications. Similarly, the size of the stock of goods to be carried, the number of employees to be maintained, and other features of the business to be conducted are not susceptible of detailed specifications.

In order to be eligible, applicants may be required to show satisfactory qualifications with respect to financial ability and previous experience in the business. From those so qualifying, selections is made on the basis of the highest financial

return to the government for the type of operation best suited to meet an apparent community demand. In determining the highest financial proposal involving percentage leases, consideration will be given not only to the percentage of gross offered but also to the anticipated gross volume of business, in order to estimate the rent return in dollars. As long as there is a scarcity of available commercial buildings, it may be necessary, when leasing government-owned buildings, to consider the additional factor of community need. For example, if it were determined that for a particular kind of merchandise the community is adequately serviced by stores supplying high-priced lines, and there is a community need for a store or stores handling low-priced lines of that merchandise, we would consider only those applicants who would furnish the low-priced lines. Similarly, if there is a greater need for plumbers than electricians we would reject offers by electricians for the space involved. Where this factor of community need is considered important it will normally be taken care of by limiting the offering to the particular type of business needed. However, any person wishing to submit a proposal beyond these limits certainly has the right to do so, although at the outset the Agent, consistent with normal real estate practice, would in all probability not take this bid into final consideration unless there were extenuating circumstances.

The factor of community need will not be as significant where lessees are constructing their own building, although the choice of sites available will be limited to some extent by the requirement of the Master Plan.

1. *Solicitation of Proposals—Authorization to Lease.*—The Agent is authorized to lease government-owned land and buildings within the unrestricted area of Oak Ridge for commercial and other uses (except housing and manufacturing) subject to the approval of the Commission. The authority to arrange for leases of specific properties, for the occupancy by lessees of government-owned buildings and/or government land, is given when the specific properties, either improved or unimproved, have been assigned to the administration of the Agent by the Commission. Requests to enter into leases for premises not assigned to the Agent is made to the Commission when profitable usage is indicated.

a. The Agent clears with the Commission informally any proposed usage of government-owned premises which might conflict with the Master Plan or contemplated zoning restrictions.

b. In specific locations where a single type usage is desirable (service station, department stores, garages, hotels, theatres, etc). (The Agent advertises for and solicits proposals for this type of usage only.)

c. Where the property to be leased is suitable for varied types of usage, the Agent does not place restrictions upon usage in advertising for or solicitation of prospective tenants. The Agency may, however, direct its advertising to particular types of tenancy by using, for example, the phrase "suitable for ladies" wear, men's wear or specialty shops, etc." in the advertisement.

d. A community need for a specific type of service or merchandising may also be sufficiently urgent to limit the solicitation and advertising of the Agent to that category.

e. At the present time the Oak Ridge Office will not authorize the Agent to execute any lease without the prior approval of the Washington Staff which falls within one or more of the following categories: (1) the lease is to be awarded without advertising for competitive proposals; (2) the lease is to be awarded other than to the responsible applicant making the highest financial return to the government for the type of operation best suited to meet an apparent community demand; (3) the lease poses any significant policy questions; (4) the lease contains any terms which vary substantially from the approved lease form; and (5) a lease with federal, state, or local public agencies at nominal rental or with a nonprofit organization at reduced rental.

2. *Advertising Procedure.*—The advertising media to be used is decided upon and the copy prepared by the Agent, the following general procedure being used:

a. Newspaper advertising: Space in building, and land available for the construction of buildings, or other usage, is always advertised in one or more newspapers and notices placed in the Oak Ridge Post Office, except in unusual cases. The extent of such newspaper advertising is governed by the size and importance of the location to be leased. By way of illustration, a strategically located retail space suitable for a department store operation is advertised in at least one of the leading Knoxville newspapers. Except in unusual cases, recognized trade journals will also be used as a medium for advertising the premises to be leased. If the space is in a secondary retail category location and relatively small in size, advertising is limited to

newspapers published locally or in nearby communities. In every case, the amount of newspaper advertising is determined by weighing its advantages against the attendant expense on a sound businesslike basis. The advertisement is designed to give sufficient information regarding the premises to enable prospective applicants to determine if they desire to make further investigation of the available property.

b. Other solicitation methods: Whenever newspaper or trade journal advertising is used, this is supplemented by verbal or written solicitation of proposals from all parties known to be interested. It should be kept in mind that in accordance with customary commercial leasing practice, responsible tenants are usually obtained through direct contact and solicitation rather than through public advertising.

c. A complete confidential record of all solicitation of or inquiries from interested parties is maintained by the Agent in the form of memoranda to the files, copies of correspondence and résumés of telephone conversations, and a summary is transferred to the Commission in condensed form and/or by attachments to the final letter of recommendation from the Agent.

d. All previously interested parties, as well as those responding to the advertisements, are furnished all requested information available. This may be in verbal or written form as indicated by request for same. If more than casual interest is shown by the inquirer, special emphasis is placed by the Agent on the importance of a personal inspection of the property advertised and the Oak Ridge community in general, since the specific information usually requested is so broad in character and so diversified that it does not lend itself to a general specification sheet but must be based on the individual inquiry.

3. *Applications from Interested Parties.*—Applications are issued in triplicate to interested parties by the Agent together with an instruction sheet indicating the method of properly executing the application and the type of application required by the Agent.

a. Upon receipt of an applicant from an interested party, it is opened immediately, time stamped and processed by the Agent. The Agent then checks references, analyzes the proposal, and obtains all missing information or clarifies ambiguous statements in the application prior to the deadline established for receiving applications (in the event a deadline is established). Particular attention is given to clarification of applications, in view of the fact that the method of leasing government premises in Oak Ridge and local conditions differ substantially from those normally encountered in other communities.

b. Applications are kept in a highly confidential separate file for the particular location involved and are not available to anyone other than those responsible for the work involved including the negotiators or department head in charge of the particular negotiation.

4. *Selection of Applicant.*—As a basis for determining the most acceptable proposal received, the Agent employs the following procedure and policy:

a. All proposals are carefully analyzed in the light of the information contained therein. This includes information gathered from other sources, i. e., references, confidential bank information Dun and Bradstreet reports (special, if necessary), Chamber of Commerce reports, inspection of other operations conducted by the applicant, etc. This information is then coordinated and reduced to a comparison sheet for study by the negotiator or negotiators involved, including the rental manager and the division manager at a division staff meeting. In the event complete accord is not reached in this meeting, the entire analysis is reviewed by the Agent's Project Office prior to a final decision. The Agent recommends that the award be made to the responsible applicant whose proposal, in their expert opinion, represents the highest financial return to the government for the type of operation best suited to meet an apparent community demand. Other factors include, primarily, an evaluation of each applicant's experience, reputation, financial stability or resources, and ability to perform the tenant's obligations under the proposed lease. Consideration may also be given to an evaluation of his probable efficiency of operations and attainment of volume of sales and quality of services, amount of investment in the premises and business, extent of risk assumed, character of business, and such other factors as the public interest and fair and equitable dealing may require.

b. The recommendation of the Agent sets forth the reasoning for the selection of the most qualified applicant offering the best rental return, and is forwarded to the Commission for approval.

c. In unusual circumstances, two applicants may submit closely comparable proposals, but on different terms such as lower percentage rate with a higher guaranteed return or vice versa. In this situation, the probable expectancy of return and other factors, in each case is presented to the Commission for final determination.

d. In the remote instance that a group of two or more applications may be outstanding among the entire number of applications received, but so closely identical in their detailed proposal terms as to indicate the necessity of further negotiation with each in order to determine the best financial return, such a procedure is recommended to the Commission. If approval to this course is obtained, the Agent negotiates the best obtainable proposal from each and recommends the proposal selected.

5. *Approval of Recommendation.*—Upon receipt of notice from the Commission of approval or disapproval of a recommended applicant, the Agent notifies the interested parties of the decision reached.

a. If approved, the lease is prepared.

b. If disapproved, the negotiations are reopened in accordance with instructions received by the Agent from the Commission.

6. *Execution of Lease.*—After receipt of approval from the Commission the lease is prepared by the Agent and submitted to the Commission for review. After review, it is returned to the Agent with comments or approval for execution by the lessee and the Agent. Four copies of the lease are executed and forwarded to the Commission for approval consistent with standard practice; in some cases the Agent may require a performance bond. The original and duplicate copy are retained by the Commission, the other two copies being returned to the Agent, one for the Agent and one for the lessee. Three confirmed copies are then forwarded to the Commission for filing and necessary distribution. (In the event a performance bond is required, it will be executed on approved forms by the lessee at the time the lease is executed and the same number of copies of the bond as of the lease will be executed and distributed in the same manner.)

7. *Reasons for Not Making Public An Abstract of Commercial Proposals.*—Consistent with normal real estate practice it is necessary that the Agent treat information submitted by applicants on a confidential basis, similar to the treatment expected by a client of a licensed realtor in a normal community. We feel this is both necessary and appropriate for the following reasons:

a. In order to attract and hold the better merchants, it is necessary to treat this type of information as confidentially as they would expect in other localities.

b. In selecting the best possible proposal for a commercial facility, we consider all the steps taken leading to the final selection as a part of a negotiation. The steps we take in soliciting proposals for commercial facilities are closely parallel to standard government practice for obtaining competitive proposals on construction or procurement contracts. While this parallel procedure is practical in the solicitation of proposals, it is not practical to follow after the formal proposals are received. Unlike a construction or procurement contract, in obtaining proposals for commercial enterprise, it is not possible to define or standardize all pertinent factors considered into a standard form to obtain proposals that can be abstracted in a manner from which the proposal in the best interest of the government can be determined by an arithmetical extension. The parallel steps are taken for the purpose of insuring that a standard procedure is followed. In solicitation, all interested parties are accorded the same information and consideration, and the Agent recognizes the necessity of making clear to each that the proposals received are based on a clear knowledge of the requirements and the manner in which they will be evaluated and selection made; also that the final evaluation and selection will be based on the written formal proposals. In this manner we obviate any possible criticism of favoritism and have complete backup information to substantiate all selections made. Therefore, highly confidential business information pertaining to finances, operational recommendations, general public reputation, and the manner in which he proposes to conduct his business is asked for in lieu of detailed specifications. Public release of this type of information submitted by the applicant would deter highly qualified companies and individuals from submitting their proposals if they were aware that this information was to be made available to their competitors.

8. Rental figures, proposed amount of investment in the premises, type of operation and similar figures are the only data which might be abstracted and made public. However, a comparison of these figures alone would have no real meaning and would lend to misinterpretation by those not having access to all the confidential descriptive information which also was considered by the government and its real estate agent in making final selection.

## EXHIBIT 5

(Referred to on p. 45)

## HISTORICAL RÉSUMÉ OF DEPARTMENT STORE OPERATION

Location: Group 2, Building No. 4, Broadway, consisting of 37,000 square feet on two floors, main and basement.

The building was completed in 1943 by the USED and a concession agreement negotiated by them with Miller's, Inc., of Knoxville, to operate a department store therein. This agreement was for a period of one year, subject to renegotiation for renewal after proper indication of such intent by the licensee to the licensor. It, likewise, contained provision for termination by either party upon the party desiring to terminate first serving, 30 days prior written notice to the other of its intention to do so.

The above referenced agreement was successfully renegotiated with Miller's, Inc., prior to the negotiation period of 1946 for the year 1946-47. Volume attainments and attendant net profits indicated at this time certain inequities in rental returns to the Government existed in several concession agreements. These apparent inequities were remedied by mutual agreement of licensee and licensor for payment of the indicated proper market value rental on the part of the concessionaire involved or by the opening to competitive proposals of the concession in order to determine the actual current value of the property at the time of such negotiation.

Solicitation by the Agent during this period of negotiation with Miller's, Inc., in the year 1946 produced several proposals from interested parties for the operation of this property. On approximately June 18, 1946, the Agent was contacted by a Mr. H. A. Levison, field representative of Darling Stores Corporation, to determine if their company could submit a proposal for this location on the basis of subleasing all departments other than their own to qualified operators. They were advised to submit a proposal if they so desired which would receive full consideration by this office along with all others received. The attached correspondence, marked "Exhibit A," covers this period of negotiation and type sublessee, with forecast of expected annual volume, which Darling Stores Corporation indicated they would give to the licensor if awarded the referenced location under a concession agreement.

A complete and full discussion of the problems involved at the time of negotiation between the representatives of the Roane-Anderson Company and the USED resulted in the selection and approval of the proposal submitted by Darling Stores Corporation in preference to the other proposals received by the Agent for the occupancy of this property. (See attached letter of recommendation dated July 3, 1946, and the reply of approval to same dated October 21, 1946, included in Exhibit A.)

In accordance with the terms of the proposal submitted by the Darling Stores Corporation and consistent with the negotiations conducted between the licensee and licensor, a document in the form of a concession agreement was executed by Taylor's Oak Ridge Corporation and the Roane-Anderson Company, acting as Agent of the U. S. Government. The Darling Stores Corporation simultaneously executed an agreement with the Roane-Anderson Company in which they guaranteed to the Agent, Roane-Anderson Company, acting in behalf of the U. S. Government, the performance of all contractual obligations of the Taylor's Oak Ridge Corporation, its wholly owned subsidiary.

The above-referenced agreement, in addition to the usual provisions of the accepted form of concession agreement, provided for the following:

a. The optional right of the licensee to renew the agreement prior to the expiration date of the first year's term of occupancy for two successive one-year periods under the same terms and conditions, provided all other contractual obligations were performed in a reasonable manner.

b. A mutually acceptable safeguard for the amortization of initial fixturing expense by the licensee was agreed upon and became a part of the referenced concession agreement.

c. The right of termination was established and defined in the signed document as indicated in the negotiations for same. (See Exhibit B.)

On May 19, 1947, the Agent was notified in writing that the licensee desired to exercise the optional right contained in his agreement for an additional one-year period commencing September 1, 1947, under the same terms and conditions of the expiring agreement. This action was accomplished by modifications to the original document as covered in "Exhibit C."

On August 26, 1947, a visit from Mr. Stanley Roth indicated clearly the difficulty Taylor's were experiencing in obtaining satisfactory sublessees and

the apprehension felt by them in obtaining their anticipated volume figures. Copies of letters covering this meeting are attached as "Exhibit D" along with other correspondence pertaining to the difficulty experienced by the Agent in getting this modification executed within a reasonable length of time.

On March 20, 1948, we were again notified of the desire of the licensee to discuss the renewal of his concession agreement for the period September 1, 1948, to August 31, 1949. Correspondence covering this renewal and the request for the insertion of a new termination clause in lieu of the original one is contained in "Exhibit E."

On April 28, 1949, a Mr. E. L. Hall, representative of the Marx Realty & Improvement Company, Inc., of New York, Darling Stores Real Estate Agent, called on the Agent for the purpose of negotiating a new agreement providing for a lowered percentage of rental. (See copy of memorandum to the files dated April 29, 1949, and attached correspondence listed in chronological order under "Exhibit F.")

From the statements contained in the copies of correspondence, telegrams, and memoranda designated as "Exhibit F," the following logical conclusions in our opinion may be reasonably drawn:

1. At all times during these negotiation proceedings, beginning as early as April 1949, the referenced concessionaire was fully advised of the procedure necessary wherein any reduced rental payment to the Government was involved in any way whatsoever.

2. The fact that anticipated volume was never reached and that each year's operation materially declined in volume was mutually recognized by both interested parties. It was Taylor's contention that this condition was primarily due to their inability to secure "qualified" subleases by reason of their short-term agreement. This same reason was advanced as the cause of their reluctance to promote sales and good will by proper advertising and the installation of such normal department store conveniences as delivery service and charge accounts.

3. In order to overcome these difficulties, the Agent endeavored to renew the expiring agreement under the same rental percentage but containing an acceptable minimum guarantee to the licensor for a period of one year only. This, in our opinion, would permit the concessionaire to continue in operation until such time as the firm leasing program was officially approved. The concessionaire, however, was insistent upon the inclusion of optional renewal privileges covering three full years for the licensee's benefit only. To this action, the Agent was opposed by reason of the performance record of this operation through the preceding three years. (See attached exhibits.)

4. In August of 1949, official approval was received enabling the Agent to execute firm leases under prescribed conditions. The concessionaire's agent was immediately advised of this policy and was offered an extension to his then expiring agreement for a period of six months under exactly the same terms and conditions of rental payment. This offer eliminated any provision for payment of a minimum guarantee or any reference to renewal beyond the extended expiration date. The agent for the concessionaire, after consultation with his client, advised this office that such an extension to January 31, 1950, of their original agreement would be acceptable. The Roane-Anderson Company then executed such a modification with Taylor's Oak Ridge Corporation. (See Exhibit G.)

5. The Roane-Anderson Company advised the concessionaire's agent of its intention to advertise the subject premises publicly for rental under the terms of a lease in lieu of a concession-type agreement and to solicit qualified and recognized department store operators to submit a proposal for entering into such a lease where possible.

6. The basic features to be considered in making a recommendation for awarding the proposed lease were as follows:

- a. The general character of the operation proposed, i. e., whether or not it envisioned a true department store operation in the generally accepted sense of the definition, such as Miller's, Inc., S. H. George & Sons, Proffitt's, Loveman's, Inc., Davison Paxon's, etc., who operate the store in its entirety with a few subleased departments, such as shoes, photo shop or fountain, or whether it would consist almost entirely of subleased departments with the lessee directly operating only one phase, such as women's and childrens' ready-to-wear, or whatever it chanced to be.

- b. The term of the lease proposed.

- c. The percentage offered, the minimum guarantee to be made and the relationship of these factors to reasonable assumptions of potential volume based on the applicant's past performance record.
- d. The indication of the applicant's aggressiveness in merchandising, such as, but not limited to, the installation of a charge account and daily delivery service, the installation of proper air conditioning, the willingness to promote good will and volume by extensive advertising, seasonal and promotional sales, etc.
- e. The ability to stock, merchandise and compete successfully in the local market in all departments in order to cater properly to the needs of the community as well as produce an acceptable volume of total sales.
- f. The assumption by the proposed lessee of all maintenance and alteration costs other than those of a structural nature.
- g. The separate payment by the lessee of all utility charges other than heat.
7. These factors were verbally or in writing carefully pointed out to all prospective applicants for the subject location as well as to all representatives of Taylor's Oak Ridge Corporation, including its president, field representatives, local manager, agent, etc., by the representatives of the Roane-Anderson Company. (See Exhibit H.)
8. The statement of "preferential" treatment alleged by Taylor's is entirely untrue. However, unbiased and fair consideration of the remedial measures of operation as well as the proposed rental contained in Taylor's letter of intent was assured and fully given by the Agent in its evaluation of the said letter.
9. Taylor's Oak Ridge Corporation as well as its sublessees were fully aware of the above conditions inasmuch as nearly all had entered into discussions of the matter with the Roane-Anderson Company long before any decision in the matter was reached. A great many, including Taylor's themselves, had expressed great interest in obtaining other premises in Oak Ridge in the event Taylor's were unsuccessful in obtaining a lease.
10. The intimation of negotiations with others after the deadline established for receiving proposals is entirely untrue. Several operations were personally inspected by representatives of this office for the purpose of evaluation only, but no further negotiations of any kind whatsoever were conducted with any of the six applicants.
11. The letter of recommendation was sent to the Atomic Energy Commission's representatives only after the most exhaustive study, analysis, complete review and evaluation of the entire six applications by the Roane Anderson Company's Commercial Realty Division, Project Management and Representatives of the Commission's own Commercial Services Division. The subject letter of recommendation and the concurrence therein by the Commission's Contracting Officer's Representative is attached hereto as Exhibit I.
12. Notification of all applicants as to the decision reached by the Roane-Anderson Company and the Atomic Energy Commission was accomplished by wire on January 10, 1950. These wires with the cover letter to each applicant are contained in Exhibit J. It must be noted that to date no unfavorable comment on its recommendation has been received from any of the other applicants other than the allegations of the particular unsuccessful applicant which are attached hereto as Exhibit K.

The above is a complete and factual statement of the entire transaction to date and represents our best business judgment in the selection of a fully qualified applicant for a department store lease offering the best anticipated return from the subject premises to the Atomic Energy Commission.

Prepared by C. M. WINFREY.

## EXHIBIT I

JANUARY 4, 1950.

Subject: Recommendation for Department Store.

OFFICE OF COMMUNITY AFFAIRS,  
U. S. Atomic Energy Commission,  
Box 365, Oak Ridge, Tennessee.  
(Attention: Mr. L. Paul McDowell.)

GENTLEMEN: On May 31, 1949, the Agent was notified in writing by the present concessionaire, Taylor's, Inc., a Tennessee corporation, through their real-estate agent, Marx Realty and Improvement Co., Inc., of New York, that the concessionaire, Taylor's, Inc., desired to renew their agreement under a reduced percentage rate of rental. A copy of the referenced notification is attached for your files.

Subsequent meetings were held both in this office and the office of the Marx Realty and Improvement Co. between representatives of the Roane-Anderson Co. and the concessionaire's agent. In these meetings it was fully explained to the concessionaire's agent, by the representatives of this office, that any reduction in rental paid by their client could be accomplished only by obtaining the existing market value of this property through the advertising for and the obtaining of competitive proposals. To this method, they agreed, and the normal expiration date of August 31, 1949, was extended by modification to January 31, 1950, under the terms and conditions of the original agreement. This was done in order that the present concessionaire might be able to enjoy the expected Christmas volume and to provide additional time for the Agent to develop competitive proposals. A dead-line date of December 15, 1949, was established, beyond which no additional proposals were to be received.

Advertising, copies of which are attached, together with intensive solicitation by direct letters, long-distance telephone, and personal interviews produced a total of six bona fide proposals. These proposals are in the form of letters of intent to which are attached the Dun & Bradstreet reports and financial statements, where obtainable, for your review and analysis which are to be returned to this office after study.

It was clearly indicated in the solicitation results obtained by this office that the subject location held little or no appeal to the nationally recognized operator, i. e., Gimbel's, Macy's, Associated Dry Goods, May Stores, Interstate, Allied, J. C. Penney Co., Sears, or Montgomery Ward. Interest, however, was indicated by some in the new shopping center when built provided sufficient operational square footage space was obtainable. In general, the consensus of opinion indicated that a local operator of sufficient size to service the store out of Knoxville would be the most logical prospect if obtainable. This possibility was exhaustively explored by the Agent with the two leading department store operators in Knoxville but with negative final results. Uncertainty over the possible effects of the proposed new area, coupled with the expense of moving to same, if possible, seemed to be the principal objection together with the problems of competent personnel and their own expansion programs now in progress. We are attaching individual letters covering this subject from the two leading prospective operators in Knoxville; namely, Miller's, Inc., and S. George & Sons, which are self-explanatory.

The attached letters from Gimbel's, Macy's, and Penney's indicate the same effort expended by this office to have the complete picture of the Oak Ridge operations submitted to their respective Boards of Directors for final decision after an on-the-ground appraisal by their real estate and merchandising executives. The complete file on all contacts is also included for your review and is to be returned to this office.

The six proposals received are from one large department store chain, the Mercantile Stores Corporation, whose scope is covered thoroughly in their attached annual report, two from smaller chains, primarily specialty shop type operations with subleased departments where space permits; namely, Sam Shainberg Dry Goods Co. and the Darling Shops, and three independent operators; namely, Loveman's of Chattanooga, Proffitt's of Maryville, and John J. Wender. The latter operates a group of five smaller operations in adjacent towns as well as the major portion of the basement space in the subject location.

It is reasonable to assume that the proposals submitted by Loveman's, Mercantile Stores Corporation, and Proffitt's cover the only department-store operations of appreciable size offered where a background of years of experience in a complete department-store operation is evidenced. Mr. Wender is thoroughly experienced in the mercantile business, however he conducts his business through separate facilities in the same community, such as, a limited department-store operation plus an adjoining furniture store and a variety store. He, likewise, conducts a men's store and baby shop in Oak Ridge in addition to the several departments in the basement location of Taylor's, Inc., covering home appliances, work clothes, boys' shop, furniture and household wares. Mr. Wender has indicated his intention, if permitted to do so and should he be awarded the department-store location, of consolidating his local interests and moving here to supervise and manage personally the one large operation.

Analysis of the report and findings of the survey conducted by the University of Tennessee indicate a large dollar volume is being spent off the area in most trade lines with the exception of food, drug and service items, i. e., gasoline, motor cars, etc., where convenience and local service is an important factor. This condition is fully recognized by the Agent, and, in our opinion, is due primarily to the very close proximity of a large metropolitan shopping area in Knoxville and secondarily to the limitations of the local shopping facilities in both size and number. The primary reason, we believe, is permanent and will continue to exist while the secondary reason can be improved when larger facilities are available in greater numbers to able merchandisers of all types. This, we believe, is particularly true in the fields primarily catering to the woman buyer, i. e., the department store, ladies ready-to-wear, shoe and specialty shops. The bulk of this present off-area buying, aside from the reasons enumerated above, has been stimulated by the enticement of credit buying via the charge account or budget plan offered to the local consumer plus delivery to the door by the established stores of Knoxville when it was unobtainable in the local facilities. An established and well promoted charge account buying habit pattern is difficult to interrupt even by the most experienced and qualified merchandisers. It is, therefore, our considered opinion, based on past experience with a well qualified operator and a population figure exceeding by double the present figure, that a million and a half is about the dollar potential of the present store facility. This could, by diligent promotional effort, conceivably be boosted to a maximum figure of two million but would require the top-flight operation of \$70 per square foot while the established national average is around \$50.

Assuming your office agrees with the Agent's selection of the two most desirable proposals, which are the proposal submitted by Loveman's and the one offered by John J. Wender and associates, we wish to make the following summary:

1. The proposals of Mercantile Stores Corporation and Proffitt's can be passed over by reason of the low percentage offered and the omission of any minimum guarantee.

2. The Sam Shainberg proposal together with the Darling Shops proposal offer a reasonably good percentage and a fair minimum guarantee but, in our opinion, cannot be truly classified as recognized department store operations in the generally accepted definition. Both are exceptionally well financed operators and are A-1 in their respective fields.

3. The John J. Wender offer is by far the best guaranteed return and offers the highest percentage rate of all volume obtained. He further agrees to completely fixture and air condition the premises, install a budget account system and furnish complete delivery service. The store would be operated as a family partnership, and the lease would be guaranteed by the individual partners. Their finances appear to be ample, and Mr. Wender has an excellent reputation as a businessman.

4. The Moore brothers, operating Loveman's of Chattanooga, conduct a first-line department store in that city doing a volume of approximately six million annually. They are exceeded in volume only by Miller's of that city which has a great deal larger amount of actual selling space and a prime location. This store, as well as the others, has been personally inspected by representatives of this office and is a well-rounded operation in every way. It is well thought of by our local residents as indicated by the number of charge accounts now active in Oak Ridge. In the estimation of Mr. Moore, the president, a volume well exceeding a million dollars annually can be anticipated with a gradual increase as they become established. The sales pro-

motions on their part anticipate, as indicated in their letter of intent, a 3% plus appropriation for advertising alone. In the opinion of this office, Loveman's would give a highly creditable department store operation installing charge accounts, delivery service, and probably air conditioning. The volume would be limited only by the physical limitations of the property involved and the support the available population would give to such an institution. Naturally, it can never attain in the subject location a store comparable in selectivity to either their home store or the two major stores in Knoxville.

In analyzing the above summary which selects the two proposals which are, in our opinion, the most desirable of these offered, we have made the following table of rental returns for your information.

	Volume	Rental		Volume	Rental
Loveman's—4-3½-3%: Minimum \$25,000-----	\$666,666	\$26,666	Wender's 6%: Minimum \$40,000-----	\$666,666	\$39,999
	750,000	30,000		750,000	45,000
	850,000	34,000		850,000	51,000
	900,000	36,000		900,000	54,000
	1,000,000	40,000		1,000,000	60,000
	1,250,000	48,750		1,250,000	75,000
	1,500,000	57,500		1,500,000	90,000

From the above rental table, it is apparent that Loveman's must exceed by \$333,333 the volume required by Wender of \$666,666 annually to meet the minimum guarantee of \$40,000. This \$666,666 is a little over \$200,000 less than the subject store is currently doing in volume. Thus, it would appear that since Wender guarantees the same rental return to the landlord that Loveman's would pay on an assumed \$1,000,000 annual volume, his would be the safest anticipated return in view of the present shopping habits of the local population. Assuming Wender could increase the present volume 11% or approximately \$100,000, he would pay \$60,000 rental, whereas Loveman's would have to increase the present volume \$700,000 to equal Wender's payment of \$60,000 on the increase of only \$100,000.

It is our considered opinion, however, that Loveman's operation would consistently do a million or better annually so the rental can be reasonably anticipated to equal or exceed \$40,000 annually. We are also firmly convinced that the percentage figure offered by Loveman's is a top percentage for this type operation as indicated in the proposals submitted by Mercantile, Proffitt and Penney (later withdrawn), and in our contacts with other high-grade department store directors.

The introduction of this type operation to Oak Ridge should have a stimulating effect on the other merchants, as, in our opinion, the Moore Brothers will make a strong bid for the local market in advertising, display, and sales effort. This cannot help but have a general over-all beneficial effect. For this reason only, the Agent will recommend for your approval the Loveman proposal if you, as landlord, are willing to accept the possibility of a lower rental in exchange for the probability of a higher-grade operation generally doing an estimated higher dollar volume.

The above recommendation is in no way a reflection on the capabilities of Mr. Wender as a merchant, since, in our opinion, he might conceivably pay a better actual dollar return to the Government than Loveman's. The two types of operation are different in classification and the cost of doing business in the modern department store using every means to acquire volume prohibit the same percentage allocation to occupancy rental as is possible in a smaller type operation. The charge-a-plate, delivery and promotional costs represent a high percentage figure alone not to mention the cost of buying affiliations in the metropolitan markets.

The criticism of the local department store operation with which your office, as well as the Agent, is familiar could probably best be alleviated by the installation of the Loveman type store even though the percentage rate and minimum rental guaranteed is considerably lower than that obtainable from Mr. Wender. It should, likewise, be pointed out that due to the possibility of the new center, the tenancy of the subject premises by Loveman's would probably be shorter than would be the case with Wender for obvious reasons; however, this factor is of importance to the landlord only in the over all plan.

Due to the many details involved in executing the proposed lease with its provisions for warehousing, termination under certain conditions and renegotiation privileges, your earliest reply is respectfully requested, in order that all interested parties may be notified.

Yours very truly,

ROANE-ANDERSON COMPANY,

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Oak Ridge, Tennessee, January 10, 1950.*

Subject: Department Store.  
ROANE-ANDERSON COMPANY,  
*Post Office Box 456, Oak Ridge, Tennessee.*  
(Attention: Mr. Harold B. White.)

GENTLEMEN: Reference is made to your letter of January 4, 1950, wherein you presented a resume of your efforts to secure proposals for the operation of a department store in Oak Ridge and your conclusions reached in this regard.

This office concurs with your recommendation that Loveman's, Inc., of Chattanooga, appears the best qualified, by reason of experience and operational knowledge, of the applicants to establish and operate a modern, first-class department store in Oak Ridge. As indicated in the attached analysis, it is felt that this type of operation is needed in the community and will do a volume of business sufficient to assure an annual rental equal to or exceeding any proposed by the other applicants.

In view of the above you are authorized to enter into a lease with Loveman's, Inc., for the operation of a department store upon the terms and conditions set forth in your letter referenced above. You are also requested to immediately notify all other interested parties of the award.

Very truly yours,

L. PAUL McDOWELL,  
*Representative of the Contracting Officer.*

#### ANALYSIS: SELECTION OF DEPARTMENT STORE OPERATOR, OAK RIDGE, TENNESSEE

*Solicitation Program.*—For the past four months RACo. has engaged in an extensive program of solicitation to secure proposals for the lease and operation of a department store in the premises now occupied by Taylor's. Proposals were invited through advertisements in trade journals and newspapers, letters and personal contacts with a wide range of interest being aroused as evidenced by the files supporting this analysis.

*Results.*—Six firm proposals were produced, each described as follows:

1. Mercantile Stores Company, Inc.—New York, N. Y.  
Operation: Large department store chain featuring low-priced merchandise; cash-and-carry, lay-by accounts, etc.  
Rent: 2% of gross receipts, no minimum.
2. Proffitt's Department Store—Maryville, Tenn.  
Operation: Small, first-class department store individually owned, features usual charge account and delivery service.  
Rent: 2½% of gross receipts, no minimum.
3. Taylor's—Oak Ridge, Tenn.  
Operation: Specialty Shop chain (Darling Shops) featuring sub-leased departments.

## Rent:

- (a) 4.62% of gross receipts, \$36,000 annual minimum.
  - (b) 4% on first \$800,000 plus 3% on next \$800,000 plus 2½% on all sales in excess, \$44,000 annual minimum.
  - (c) 2½% of gross receipts, \$25,000-\$36,000 annual minimum.
4. Sam Shainberg Dry Goods Company—Memphis, Tennessee.  
Operation: Small department store chain featuring low priced merchandise.  
Rent: 4% of gross receipts, \$36,000 annual minimum.
5. Wender's—La Follette, Tennessee.  
Operation: Individual owner of several small variety stores, including basement operation in Taylor's.  
Rent: 6% of gross receipts, \$40,000 annual minimum.
6. Loveman's, Inc.—Chattanooga, Tennessee.  
Operation: Large, first-class department store individually owned, features all department store services.  
Rent: 4% on first \$1,000,000 plus 3½% on second \$1,000,000 plus 3% on all sales in excess, \$25,000 annual minimum.

Each of the above proposals are based upon a term of 5 years with option to renew for additional 5 years. Each is also qualified by a provision that upon advent of New Commercial Center the rental rates would be subject to renegotiation.

The six proposals can be classified into three categories of consideration:

1. Least: While proved department-store operators with excellent qualifications, Mercantile and Proffitt eliminate themselves by low rental offered and no guarantee.

2. Fair: Taylor's is a known quantity both as to type of operation and volume. While Shainberg appears a better-qualified operator, it would still be a "specialty type" venture with no expectation of making inroads on the business now going to the Knoxville area. The main attraction in these two proposals is the percentage and guarantee offered.

3. Most: Only on the basis of highest percentage and guarantee offered does Wender's proposal warrant serious consideration whereas Loveman's offers highest operational standards as well as highest anticipated volume of business.

*Loveman's and Wender's.*—An analysis of the two proposals most seriously considered must include the following basic comparisons:

1. Loveman's: The resources, experience, and operational knowledge of Loveman's as related to a department store are reflected in the Chattanooga store which has operated successfully for the past 75 years and is currently doing an annual volume of approximately \$8,000,000. A careful reading of the Loveman proposal indicates that they are approaching the Oak Ridge venture with the confident expectation of doubling Taylor's present volume (\$880,000) by establishing a department store in the true sense, complete with charge accounts and delivery service.

2. Wender's: Mr. Wender is a capable operator of five small variety type stores in Lake City, La Follette, and Jellico. In addition he operates the Baby Shop and Men's Shop (now on bid due to request for rental reduction) in Grove Center as well as subleasing the major portion of Taylor's basement. Mr. Wender has qualified his proposal as to services he intends to introduce and he indicates no previous experience in a department store operation of this scale.

With the above facts the following basic assumptions appear logical as related to volume and rental:

1. It is generally conceded that the present department store facility in Oak Ridge has a potential annual volume of \$2,000,000. The present operator is doing only \$880,000 annually, leaving approximately \$1,200,000 of business going into the Knoxville area and other sources of competition.

2. From the qualifications presented by each operator, Loveman's appears the only one equipped to make sizeable inroads on the Knoxville business. It is our belief, shared by RACo., that Loveman's will average an annual volume of \$1,250,000 during the first 3 years of the lease. This volume will return an average annual rental of \$48,750 for the property. Beyond actual rental received, we feel that a store of the type of Loveman's will stimulate business for other merchants in the Jackson Square area, the Government benefiting from increased volume. Another factor to be considered is the selection of a department store operator for the New Commercial Center;

we feel that an established Loveman's, offering quality service and doing a high volume, will be the natural choice by the developer of the New Center.

3. Weighing all the facts available, it cannot be readily seen where Wender's can expect to increase the present \$880,000 of Taylor's. On this basis he would pay \$52,800 rental from which must be deducted the cost of interior painting estimated at \$3,000 which he expects lessor to do. This would leave an average annual rental of \$51,800 for a three-year period. It seems a further reasonable assumption that Wender's is not likely to hold the present Taylor's volume. This assumption can be based on the fact that he has demonstrated no merchandising talents in the Taylor basement operation to offset his decreasing volume; that his previous experience is limited to variety type stores in small coal mining communities; that his proposal indicates he does not contemplate complete department store services; that the consumers in Oak Ridge will not support a mediocre or specialty type department store to any extent near its recognized potential. If Wender's drops to \$800,000 volume, which decline we feel is very probable, his rental would be \$48,000. The RACo. analysis is predicated upon Wender's increasing the present volume of Taylor's to a \$1,000,000 and paying \$60,000 rent; we take issue with this assumption inasmuch as it is supported only by that fact that Wender is a successful operator in variety type stores which parallel in no way a modern department store.

*Conclusions.*—In our best judgment we conclude that:

1. Oak Ridge can support a first-class department store.
2. Loveman's is the only applicant equipped to retain and increase sizeably the present volume.
3. Loveman's will average annually \$1,250,000 and pay a rental of \$48,750.
4. Wender's most optimistic expectation would be to retain the present \$880,000 volume with the preponderance of evidence indicating a decrease.
5. Loveman's will assure high operational standards for Oak Ridge residents with a consequent rental equal to or exceeding that which could reasonably be expected from Wender's.

#### EXHIBIT 6

(Referred to on p. 50)

#### LOVEMAN'S, INC., LEASE

Principal Contract No. W-7401 eng-115  
Roane-Anderson Co. Lease Agreement No. 12

#### LEASE AGREEMENT AT OAK RIDGE, TENNESSEE

Lessor: Roane-Anderson Company, as agent.

Lessee: Loveman's, Inc.

Term: Begins March 1, 1950. Ends February 28, 1955.

1. This Lease made in quadruplicate as of the 1st day of March 1950, between Roane-Anderson Company, a Tennessee Corporation having its principal place of business in Oak Ridge, Anderson County, Tennessee, acting in the capacity of Agent for and in behalf of the United States of America under Contract No. W-7401 eng-115 dated February 14, 1944 with the United States of America, transferred by Executive Order 9816, dated December 31, 1946 to the United States Atomic Energy Commission and authorizing said Agent, among other things, to manage, operate and/or maintain facilities, utilities, roads, services, properties and appurtenances situated within and/or outside the Oak Ridge Area in the Counties of Anderson and Roane, State of Tennessee, and to enter into agreements covering the use and occupancy of buildings and to lease property, sometimes hereinafter called "Lessor," and Loveman's, Inc., 800 Market Street, Chattanooga, Tennessee, a Tennessee Corporation, sometimes hereinafter called "Lessee,"

Witnesseth that:

2. Lessor, for and in consideration of the rents, covenants and agreements of Lessee herein contained, hereby leases unto Lessee the following described property of the United States of America situated in the aforesaid Oak Ridge Area, to wit: All those certain premises consisting of approximately 18,631 square feet of the main floor and approximately 18,075 square feet in the basement of the east portion of Building No. 1836-T located on the south side of Broadway and

east of Towne Road in Oak Ridge, Anderson County, Tennessee, more particularly described in Appendices "A" and "B" hereto attached and made a part hereof, together with the facilities, equipment, fixtures and other improvements used exclusively as a part thereof, all of which are hereinafter referred to as the "premises."

Further in consideration of said rents, covenants and agreements of Lessee, Lessor, during the term of this lease, will make available to Lessee at no additional rental approximately 9,000 square feet of storage space in the Oak Ridge Area suitable for storage in connection with the operation of Lessee's business under this lease. This space will be made available to Lessee under separate agreement to be executed by the parties. The location of such space will be determined by Lessor and may be changed from time to time at Lessor's option; provided, however, that in the event Lessor elects to change the location of such space, Lessor shall bear all reasonable moving costs and expenses incurred by Lessee.

This lease is made subject to the reservations and exceptions and upon the conditions stated herein.

3. *Term.*—To Have and to Hold said premises to Lessee for and during the term of five (5) years commencing on the 1st day of March, 1950, and ending on the 28th day of February, 1955. Lessee shall have the right, if this lease shall then be in force and Lessee is not in default hereunder, to renew this lease for an additional five (5) year period on the same terms and conditions as herein contained (except that the renewed lease shall contain no covenant for renewal) by giving written notice of his intention to renew to Lessor at least one hundred twenty (120) days prior to the expiration of the current five year term.

4. *Warranty.*—Lessor covenants with Lessee that, conditioned upon Lessee's performance and observance of all his covenants and agreements herein, and subject to the conditions and other rights herein reserved, Lessee shall have quiet and peaceable possession of the premises during said term against the claims and demands of all persons claiming or to claim by, through or under the Lessor, Commission or Government.

5. *Scope.*—Lessee covenants with Lessor that the premises shall be occupied and used solely for the following purposes and/or such other purposes, if any, as may be authorized in writing by Lessor: The operation of a retail department store.

6. *Rental; Records.*

a. Lessee agrees to pay to Lessor as rental for this lease an amount equal to four percent (4%) of the gross receipts from all sources derived from or arising out of the operation of all business conducted under this lease; provided that whenever said gross receipts exceed \$1,000,000 in any twelve month period beginning March first of any year during the term of this lease, or any renewal thereof, the percentage rate applicable to the excess of gross receipts over \$1,000,000 shall be reduced to three and one half percent (3½%) for the balance of such twelve month period; provided further that whenever said gross receipts exceed \$2,000,000 in any such twelve month period, the percentage rate applicable to the excess of gross receipts over \$2,000,000 shall be reduced to three percent (3%) for the balance of such twelve month period. As used in this lease "gross receipts" shall mean the total amounts of the sales prices, valued in money, whether collected or received in money, merchandise or services, and more particularly:

(1) Amounts collected or received on sales of all merchandise of every sort whatsoever and amounts collected or received on charges for all services afforded or performed, including sales or charges made by Lessee or any other person or persons selling merchandise or performing services of any sort in, upon or from the premises or any part thereof, and interest paid by customers on deferred payments. If lessee sublets or takes or permits any other action referred to in paragraph 8. below in accordance with that paragraph, gross receipts (although including the gross receipts of any assignee, sublessee, licensee or other person occupying or making any continuing use of the premises) shall not include any payments or other compensation due or paid by any such assignee, sublessee, licensee, or other person to Lessee for the privilege of occupying or using the premises or conducting business therein; provided, that with respect to coin operated telephones or newspaper racks from which Lessee does not collect the receipts, gross receipts shall include only such amounts, if any, as are paid Lessee by the person maintaining or using such telephones or racks.

(2) Gross receipts shall not include any amounts collected or received after the effective date of expiration or termination of this lease; provided, however, that, in lieu of such amounts, there shall be included in Lessee's

gross receipts for the final month (or portion thereof) of the lease all of Lessee's outstanding accounts receivable which arose out of the business conducted under the lease, except those upon which no payment has been received within 90 days immediately prior to the effective date or expiration or termination of the lease and which have been charged off as worthless.

(3) Gross receipts shall not include any of the following items if properly evidenced in a manner acceptable to Lessor: Cash refunds and adjustments; trade-in allowances; merchandise cancellations; trade discounts and other credits of a similar nature allowed at the time of sales; transfers of merchandise to other business establishments owned wholly or in part by the transferor (or, if the transferor is a partnership, owned wholly or in part by one or more of the partners thereof) provided, however, that this shall not be construed as permission for the transferor to maintain exclusive or substantial warehousing for any business establishment located outside the Oak Ridge Area; small transfers of merchandise to any business establishment in Oak Ridge, as a convenience to said business establishment for resale at retail; luxury, excise, sales, or use or other taxes levied by either the Federal, State or local governments or other duly constituted authority which are required by law to be separately paid by or charged to customers and remitted direct to such governmental authority.

b. Lessee shall, within twenty-five (25) days after the close of business on the last day of each and every month of the calendar during the term of this lease or any renewal thereof, (and continuing until all percentage payments accruing under this lease or any renewal thereof have been paid), state, render and deliver to Lessor a statement in writing, sworn to by Lessee (or if Lessee is a corporation or partnership, then by a duly authorized officer or partner), showing in detail the gross receipts as defined above, collected or received during such month of the calendar, and shall pay the percentage of gross receipts for that month and any other sums due hereunder to Lessor.

c. Lessee hereby unconditionally guarantees to pay Lessor a minimum annual rental of Twenty Five Thousand Dollars (\$25,000.00) for each twelve month period beginning March first of any year during the term of this lease and any renewal thereof. The amount required (if any) to make up such annual rental, after crediting Lessee with the aggregate monthly rentals paid for each such annual or twelve month period (in accordance with subparagraphs a. and b. above) shall be paid in full by Lessee within twenty-five (25) days after the last day of the last month of each twelve month period. In the event this lease is terminated for any reason whatsoever during any such twelve month period, said minimum annual rental shall be prorated for such twelve month period and any amounts due Lessor, after crediting Lessee with the aggregate monthly rentals paid for the preceding part of such twelve month period (in accordance with subparagraphs a. and b. above) shall be paid in full by Lessee within twenty-five (25) days after the effective date of termination. If said aggregate monthly rentals paid for such a twelve month period or any prorated part thereof, as the case may be, should exceed the minimum or prorated minimum annual rental, Lessee shall not be entitled to any refund of the excess of any credit therefor against annual rental for any prior or subsequent period.

d. Lessee shall at all times during the term of this lease or any renewal thereof keep or cause to be kept at the premises or other location acceptable to Lessor, accurate books, accounts, records, and receipts, showing in a manner satisfactory to the Lessor and in accordance with accepted accounting practices, the gross sales, gross income and the gross receipts of Lessee's business or any other business conducted under this lease on the premises, and preserve or cause to be preserved the same until after final adjustment after termination of this lease or any renewal thereof shall have been made, or until the expiration of four (4) years after the date of the transaction to which the same relate, whichever is sooner, unless Lessor shall give its prior written consent to the earlier disposal of same. The Lessor, Commission or Government shall at all reasonable times upon demand have the right to inspect and audit said and any other pertinent books, accounts, records and receipts, including returns and statements as may be required in the verification of said gross receipts and to make copies thereof or extracts therefrom.

e. All rental shall be paid Lessor at its office in Oak Ridge, Tennessee, or at such other place as Lessor may from time to time designate in writing, and without notice or demand therefor by Lessor.

f. In no event shall this lease be construed as creating a partnership, joint venture or principal and agent relationship between the parties hereto, the percentage basis for rental being intended merely as a method of determining the amount of rental to be paid.

### 7. Utilities.

a. The rental provided for under paragraph 6., above, includes charges for the following services to the premises:

(1) Sewage disposal, including maintenance of and unstopping of sewer lines of the community system up to the point where Lessee's branch line taps into said system.

(2) Normal refuse removal from containers, upon such schedules and in accordance with such rules and regulations (for separation of different types, compressing, storage, etc.) as may be established from time to time by Lessor or its successor furnishing this service.

(3) Heat by means of steam or such other method or system as the Lessor or Commission or their successor may elect. In the event that heat is supplied by means of steam, Lessor shall maintain the steam supply and return lines from the common or central system to the premises and shall maintain the heating system on the premises; except that Lessee shall maintain the heating coils, heating coil equipment, blower fans and motors on the premises and shall also maintain the branch supply lines serving the heating coils from but not including the first shutoff valves on said branch supply lines, and the branch return lines from the coils to but not including the first "T" connections with any return lines from other premises.

b. Lessor will endeavor to furnish continuous services (of the kinds referred to in subparagraph a., above) but Lessor cannot and does not guarantee uninterrupted service to Lessee, and neither the Lessor nor the Commission shall be liable for any damages for any interruption or disturbance of service whatsoever.

c. The Lessor or Commission or their successors may from time to time establish separate charges for any such service and fix the method of charging therefor, and/or may establish rules and regulations, which may be comparable generally with any in effect for like services in nearby communities, for the furnishing of such service in the Oak Ridge Community. In such event, Lessee will thereafter obtain such services in accordance with any such rules and regulations and for the charge or charges so established, but the rental herein provided for shall be reduced as stated below.

d. The Lessor or Commission may at any time or times hereafter transfer to a municipal corporation, utility company or other agency the respective works, system or method now in use for supplying any of the aforesaid services, or the administration thereof. Whenever any such transfer is made, Lessor shall no longer be under any obligation with respect to the furnishing of service from the works, system or method so transferred, and thereupon and thereafter Lessee's arrangements for such service shall be made by Lessee with, and his payments therefor shall be payable directly to, the agency furnishing the service, but the rental hereinabove provided for shall be adjusted as stated below, and Lessor will continue its maintenance of any portions of the lines, pipes or systems not included in such transfer.

e. Whenever any separate charge is established for any of the services referred to in subparagraph a. above, either by the Lessor or Commission or their successors, the rental payments (fixed, percentage and/or minimum) hereinbefore provided for the period to which such separate charge is applicable, shall be reduced by the amounts of the separate charges paid by Lessee to Lessor or any such successor furnishing the service, less any allowance or credit which could have been obtained for prompt payment; provided, however, that, with respect to sewage disposal and refuse removal, regardless of the amount of such separate charges, the rental reduction on account thereof shall not in any event exceed Four Dollars (\$4.00) per month, in the case of sewage disposal, or Twenty Dollars (\$20.00) per month, in the case of refuse removal.

f. Any enlargement or alteration of the facilities, capacities and/or services for sewage disposal or heat shall be subject to a separate written agreement therefor.

g. If any rental or any separate charge for the aforesaid services are not paid when due, Lessor or its successor shall have the right, without notice to Lessee, to cut off and discontinue said service.

h. Lessee agrees that during the term of this lease he will pay all charges for electricity, water, telephone service and any other utilities which are not referred to in subparagraph a. above.

### 8. Assignment, subletting, etc.

a. Lessee shall have the right to sublease to others certain operating departments customarily subleased in department stores, provided that Lessee gives Lessor advance written notice of his intention to do so, and provided further that

Lessor does not, within fifteen (15) days from the receipt of Lessee's notice by Lessor, give Lessee written notice that any such proposed sublessee is not acceptable to it. Lessee shall not otherwise have any right, authority or power to transfer this lease, any interest herein, or any rights hereunder, by way of assignment, sublease, or permission to any other person to occupy space in or make any continuing use of any part of the premises, or to mortgage or otherwise encumber the leasehold estate or Lessee's interest in any buildings, additions or improvements placed on the premises by him, without the written consent of Lessor, which consent shall not be unreasonably withheld. The preceding sentence shall not apply to any transfer by operation of law, testamentary disposition, or foreclosure of a mortgage or deed of trust given by Lessee with Lessor's written consent, but shall apply to any other or subsequent transfers by Lessee, his successors or assigns.

b. Should Lessor, or any other authority under control of the Commission, have a License Agreement with any other person giving him permission to use Government-owned premises in Oak Ridge occupied by concessionaires, lessees or others for stipulated purposes, such as but not limited to the installation and maintenance of automatic or coin-operated machines (for dispensing merchandise or products of any kind, or for furnishing music, pictures, games or other services of any kind), Lessee may permit such person to occupy space in or use the premises for the purposes stipulated in such License Agreement without Lessor's written consent. Such consent shall also not be required for the maintenance of telephones or newspaper racks from which Lessee does not collect the receipts, or for interior advertising signs or placards, or for temporary use by charitable, civic or comparable nonprofit organizations for booths and the like.

c. In the event Lessee sublets or takes or permits any action referred to in subparagraphs a. or b., above, with respect to any part of the premises, whether with or without Lessor's written consent, Lessee shall remain responsible to Lessor for such part of the premises, the use thereof, the accounting for gross receipts therefrom, and all other obligations hereunder, as if such subletting or other action had not been taken or permitted, unless specifically relieved of such responsibility in writing by Lessor.

#### 9. *Maintenance and repair.*

a. Lessee shall (except when otherwise provided in this lease) at his own expense perform all necessary maintenance, repairs and replacements to the premises and to all alterations, additions, and improvements, facilities, fixtures and equipment installed or furnished by Lessee or Lessor, including but not limited to repair or replacement of worn-out or damaged facilities, equipment and fixtures, and interior walls and wall surfaces, flooring, ceilings, exterior and interior glass, doors and door frames, screens and screen frames and window sash and frames, as needed to keep the same in good and tenantable condition and repair. All repairs and replacements shall be of a quality and appearance, both as to workmanship and material, consistent with standard practice for the type of building occupied, and shall be performed promptly as required, without any notice or request from Lessor. Before performing any such work, Lessee shall first obtain any building permits which may be required in any regulation, ordinance or other rules of the Commission or any State or local public authority.

b. Lessor shall (except when otherwise provided in this lease) perform the following items of maintenance and repair unless required due to the negligence or wilful act of Lessee, his agents or employees, or Lessee's failure to perform any obligation required of him under this lease:

(1) Painting the exterior surfaces of the building; maintenance of and repairs to foundations, supporting masonry, and structural framing; and maintenance of and repairs to roofs and roof ventilator housings, and wall siding and surfacing on the exterior of the building, but not including glass, doors and door frames, screens and screen frames, and window sash and frames.

(2) Maintenance of and repairs to elevators, and sprinkler and fire-alarm systems if initially furnished or subsequently installed by Lessor.

(3) Replacement of any major parts of the premises (such as but not limited to replacements of the complete wiring or piping systems for electric current, water, steam or sewage, or substantial portions thereof, or of major fixtures or major pieces of equipment) whether initially furnished or subsequently installed by Lessor or Lessee, if in the opinion of Lessor such part requiring replacement is a permanent part of the premises, is not of a minor character, and has become worn out due to reasonable wear and tear and depreciation while in Lessee's possession (and/or any wear and tear or other condition that occurred prior to Lessee's receipt of it, if such part was furnished by Lessor).

(4) Maintenance of and repairs to adjacent service driveways, if any, serving the premises and others.

(5) If the premises are required by the Commission or any State or other public authority to be repaired or altered due to requirements of health or safety and such action results from an inherent structural or comparable defect in the premises (such as but not limited to settlement of foundations, defective structural framing, lack of fire escapes or fire walls, or defective construction of sewer lines) and does not result from a change in the scope or volume of business or loading the floors beyond that for which the premises were suitable at the beginning of this lease, Lessee's lack of adequate and suitable equipment, or from any repairs, alterations, additions or improvements to the premises made by Lessee, then Lessor will correct such defect or deficiency (except for such maintenance, repairs or other work as Lessee is required to perform under this lease) unless the Lessor or Commission determines that it would not be economical and to the best interest of the Government to do so.

(6) If Lessee and other persons are supplied through a single valve and branch lines, maintenance of water pipes from the main shut-off valve for the building up to the point where Lessee's branch line or lines begin.

10. *Alterations, Additions and Improvements.*

1. Lessee shall make no alterations, additions, or improvements to the premises without first obtaining written approval from Lessor, and any so made shall conform with plans and specifications approved by Lessor.

b. All alterations, additions and improvements to the premises shall be made by and at the expense of Lessee, except as otherwise provided in this lease. All air conditioning units, and all facilities, equipment or other trade fixtures designed specifically for use in the types of business authorized under this lease and installed or brought on to the premises by Lessee or any sublessee, may be removed at the expiration or termination of this lease or at any time prior thereto, provided that upon such removal Lessee shall repair any material injury to the premises caused by such removal; provided further, that all alterations, additions and improvements to the premises made by Lessee or any sublessee (other than the aforesaid air conditioning units, facilities, equipment and trade fixtures) and in any way attached in a permanent manner so that they cannot be removed without material injury to the premises, shall, unless otherwise agreed in writing, become and be a part of the premises and be surrendered therewith, without disturbance, molestation, or injury to the premises, or compensation to Lessee or sublessee, at the expiration or earlier termination of this lease.

c. Lessor, at its option and expense may make (but shall be under no obligation whatsoever to Lessee for making) any alterations, additions or improvements not hereunder made the obligation of either party but which Lessor is authorized by the Commission to make in connection with any plan for improvement of the appearance, safety, sanitation, or administration of any Government-owned property in Oak Ridge (such as but not limited to the installation of fire alarm or sprinkler systems or landscaping). This subparagraph c, is not and shall not be construed as a provision relieving Lessee from making any maintenance, repairs or replacements, or any alterations, additions or improvements, for which he is obligated under any other provision of this lease.

11. *General Conditions.*

a. Lessee shall keep on the premises a normal stock of merchandise and/or make available normal services within the scope of the required business, and conduct the business in a businesslike manner consistent with good standards and practices. Lessee also agrees to establish and maintain as a part of his operations under this lease a credit system and delivery service consistent with standard practice for this type of operation.

b. Lessee shall not use the premises for sleeping apartments or for lodging rooms nor shall he cause or permit any nuisance on the premises.

c. The Lessor, Commission or Government, or any persons authorized by them, shall have the right, at any time, to build adjoining the premises herein; to close any skylight or window; to install, relocate, maintain and use electric, water, gas, steam or other utility lines or conduits over, under or through the premises; and to install, relocate, maintain and use public walks, street, highway or traffic signs or markers on that portion of the premises not occupied by buildings and lying within ten (10) feet from the boundary lines of the premises. Any such additional installations hereafter made in or on the premises shall be so located as not unnecessarily to cause unsightly conditions. The Lessor, Commission or Government, or any persons authorized by them, shall have the right to fell or trim any

trees, plants or undergrowth which may interfere with the installation, relocation, maintenance or use of such lines, conduits, walks, signs or markers.

d. Lessee shall take good care of the premises and keep them, and any adjacent service driveways, entrance walks, and public walks, in an orderly, clean, healthful and sanitary condition, remove snow and ice from all such driveways and walks, and cut the grass.

e. Lessee shall not use or permit the use of any loud speakers, phonographs or radios, in a manner that in the opinion of Lessor or the Commission is likely to disturb the peace and quiet of the neighborhood.

f. Lessee shall not store, use, or keep on the premises, gasoline, gun powder, gas, dynamite, or other explosives or inflammable materials, unless necessary in the conduct of the business, and then only upon written permit from the Lessor or Commission and after compliance with all laws and regulations relating to the storage and use of such commodities.

g. The Lessor, Commission or Government, or any persons authorized by them, shall at all reasonable times have access to the premises for the purpose of inspecting the premises, or of showing the premises, or of making any and all maintenance, repairs, replacements, alterations, additions, or improvements which Lessor is authorized to make, or of otherwise exercising any rights or remedies under this lease or conferred by law.

h. In the event Lessee fails to perform any maintenance, repairs or other work which Lessee is required to make or perform under this lease, forthwith after written notice from Lessor, Lessor may perform said work and Lessee shall pay to Lessor its proper charge for such work.

i. Except to the extent that Lessee is relieved of liability under the provisions of this lease, the premises shall be returned to Lessor upon the expiration or termination of this lease in as good condition as when received, reasonable wear and tear excepted.

#### 12. *Laws and Regulations.*

a. Lessee shall not use or suffer any person to use the premises for any purpose in violation of Federal, State or local laws or ordinances, or in violation of any health, safety, or zoning regulations issued by the Commission.

b. The Commission and/or the Government at will may maintain restrictions upon public or private access to the Oak Ridge Area, or to any part or parts thereof, or change, eliminate or reinstate such restrictions at any time; and may, but shall not be obligated to, establish, open, relocate, close, vacate, alter, widen, extend, grade, improve, repair, construct, reconstruct, maintain and regulate the use of the roads, ways, walks, and/or streets made available for travel within said Area or any parts thereof, without precluding access (except temporarily during construction or other work) to the premises from within the Oak Ridge Community by vehicles and pedestrians over such roads, ways, walks and/or streets as may from time to time be designated by the Commission for travel; and may maintain complete or partial ownership and/or control of said roads, ways, walks, and/or streets or transfer the same or any parts thereof to the State or any of the agencies or local subdivisions of the State or Federal Government, or otherwise, it being understood and agreed that nothing herein shall constitute or be deemed a dedication, offer or commitment or any specific property outside the bounds of the premises to any public or private use or purpose.

#### 13. *Excepted Perils.*

a. Lessee shall not be liable for loss or destruction of or damage to the premises, or any adjacent or nearby property of the Government when caused by any of the following excepted perils, unless due to the wilful act or wanton negligence of Lessee, his agents or employees: Fire; lightning; windstorm; cyclone; tornado; hail; explosion; riot; riot attending a strike; civil commotion; aircraft or objects falling therefrom; vehicles, excluding vehicles owned or operated by Lessee or any agent or employee of Lessee; smoke; sprinkler leakage; earthquake or volcanic eruption; flood, meaning thereby rising of rivers or streams; enemy attack or any action taken by the military, naval or air forces of the United States in resisting enemy attack.

b. In the event of damage to the premises from an excepted peril, Lessor will repair the same, unless in the opinion of the Lessor or Commission the premises are beyond economical repair or for other reasons it would not be economical and to the best interest of the Government to repair the premises.

#### 14. *Abatement of Rental, Renegotiation and/or Termination in Certain Events.*

a. If as a result of (1) a determination by the Lessor or Commission pursuant to subparagraph 9. b. (5) hereof that it would not be economical and to the best interest of the Government to correct a defect or deficiency in the premises, (2)

damage from an excepted peril, or (3) any repairs, alterations, or improvements which the Lessor is obligated or authorized to make on the premises under this lease (except maintenance, repairs or other work which the Lessor is authorized to make pursuant to subparagraph 11. h.), Lessee's possession and/or use of the premises is interfered with so substantially that he cannot carry on the business in regular course therein and he therefore discontinues the business entirely, then the fixed or guaranteed minimum rental hereunder shall abate (and if paid in advance, shall be rebated) until such time as Lessee's possession and use of the premises is no longer so interfered with; or if the premises can be used for the business but Lessee is deprived of use of any substantial or necessary part of the premises, then such rental shall equitably abate until such time as the premises are in such condition that the business can be carried on therein in regular course, although no allowance shall be made for mere inconvenience or annoyance. In no event shall the Lessor, Commission or Government be liable for any damages to Lessee arising out of any interference with Lessee's possession and/or use of the premises due to any of the above mentioned causes.

b. If Lessor or the Commission determines that it would not be economical and to the best interest of the Government to correct a deficiency in the premises as provided in subparagraph 9. b. (5), or to repair any damage from an excepted peril as provided in subparagraph 13. b., or in the event Lessor is unable to carry out its obligations due to unavailability of appropriations as explained in subparagraph 21. e., Lessor will promptly notify Lessee, and this lease may then be renegotiated after written request therefor made by Lessee within 30 days from the date of such notice. If the parties are unable to agree upon a modification of this lease within thirty (30) days thereafter, the Lessee may by ten (10) days written notice terminate this lease. If not so modified or terminated this lease shall remain in full force and effect.

c. In the event that (1) the resident population of Oak Ridge falls below twenty-four thousand (24,000) persons according to any Federal or other recognized census conducted by a governmental agency (or, at Lessee's option, according to estimates made by the Oak Ridge Office of the Commission), or (2) Lessee or any other person leases land or building space in the contemplated new commercial center in the Middletown Area in Oak Ridge for the operation of a department store substantially equal in size to or larger than the premises leased hereunder (and, at any time within three (3) months thereafter, Lessee gives Lessor written notice of his election to renegotiate this lease), the terms and conditions of this lease may be renegotiated after written request therefor made to Lessor by Lessee. If the parties are unable to agree upon a modification of this lease within thirty (30) days thereafter, Lessee may by ten (10) days written notice terminate this lease. If not so modified or terminated this lease shall remain in full force and effect.

#### 15. *Termination; Expiration.*

a. This lease is made upon condition that Lessee shall promptly and faithfully perform all the terms, covenants and conditions hereof on his part to be kept or performed and that no event occurs by reason of which the Lessor or Commission may terminate this lease as herein provided, and if Lessee shall fail so to perform or if any such event should take place, Lessor may terminate this lease under the conditions and in the manner hereafter stated and sue for and recover all rents and damages accruing hereunder, or may sue and recover without terminating this lease and, upon any such termination, the term hereof shall expire and thereupon or at any time thereafter Lessor may re-enter and take possession of the premises without compensation to Lessee:

(1) In the event Lessee (or any one or more of Lessees, if there be more than one) shall become insolvent, make an assignment for the benefit of creditors, file a petition in bankruptcy, seek the benefit of any bankruptcy, composition or insolvency law, or be adjudged bankrupt, or if a receiver or trustee of the property of any Lessee shall be appointed, such event shall constitute a default hereunder by Lessee, and Lessor may immediately or at any time thereafter, by written notice to Lessee, terminate this lease and this lease shall expire upon the date specified in such notice; provided that if such default be cured by Lessee prior to the termination date specified in such notice, this lease shall remain in full force and effect if Lessee is not otherwise in default hereunder.

(2) In the event Lessee shall (a) fail to pay rental when due or required under paragraph 6. above, repeatedly, or in any one instance for more than thirty (30) days, or (b) fail to comply with the requirements pertaining to laws and regulations referred to in paragraph 12. above for fifteen (15) days

after written notice of violation thereof has been given by Lessor to Lessee, Lessor may immediately or at any time thereafter by giving Lessee not less than fifteen (15) days written notice, terminate this lease, and this lease shall expire upon the date specified in such notice.

(3) In the event Lessee shall default in the performance of any other terms, covenants or conditions of this lease, and such default continues for sixty (60) days after written notice thereof has been given by Lessor to Lessee, Lessor may upon the expiration of said sixty (60) days or at any time thereafter, by giving Lessee not less than fifteen (15) days written notice, terminate this lease, and this lease shall expire upon the date specified in such notice.

b. Lessee shall on or before the effective date of termination or expiration of this lease, regardless of the method or cause thereof, quietly and peaceably vacate and remove from the premises all his stock, personal property, goods and effects, and surrender and yield up possession of the premises to Lessor; provided that, in the event Lessee fails to so remove said articles, they shall either become the property of Lessor, without liability of any kind to Lessee, or Lessor is hereby authorized to enter the premises and effect the removal, cooperage, cartage, and storage of such articles as agent of and at the cost and expense of Lessee, and in such event, Lessor shall have a lien thereon for such removal, cooperage, cartage, and storage or Lessor may designate others to effect such removal, cooperage, cartage, and storage and a lien shall likewise inure to them.

c. Should Lessee occupy the premises after termination or expiration, such occupancy shall in no event be construed as an extension of the term herein but shall be at the will of Lessor and in other respects on the terms and conditions herein contained. In the event Lessee fails to so vacate and remove as aforesaid, Lessee shall pay rent as provided for herein to the date of actual vacating and removal. Acceptance by Lessor of rental or any other payments under this lease before or after its expiration or termination shall not reinstate, continue or extend the term of this lease, create any new tenancy, or affect any notice given to Lessee prior to receipt of such rental or other payments, or in any manner whatever waive, modify or affect any rights or remedies which Lessor may have by virtue of this lease, or be construed as an election not to proceed with any of Lessor's remedies. It is agreed that after service or giving of any notice or the commencement of any legal proceeding or after final judgment for possession of the premises, Lessor may receive and collect any rent or other payments due without waiving or affecting any such notice, proceeding or judgment.

d. If Lessor at any time rightly seeks to recover possession of the premises, and is obstructed or restricted therein or if Lessee or any person under his control fails to give Lessor possession, and any litigation thereon ensues, Lessee shall be bound to pay Lessor or its assignee the cost and expenses thereof, including a reasonable attorney's fee and also, as actual liquidated damages and not a penalty, for each day that Lessee shall retain possession of the premises or any part thereof after termination or expiration of this lease, an amount equal to one one-hundred-twentieth (1/120) of the guaranteed minimum annual rental established under this lease; it being recognized that the actual damages caused by the failure to vacate and surrender possession when due, while real and substantial, are very difficult, if not impossible, of accurate ascertainment.

16. *Notices.*—All notices or other communications hereunder to Lessee may be given or served by mailing the same to him at his address shown in the first paragraph hereof, or by delivering a copy thereof to him in person, or by leaving it addressed to him at his place of business in Oak Ridge, with any person then in charge of the same. Notices or other communications to Lessor shall be served in person or by mailing same to its office in Oak Ridge, Tennessee, or to such other place as Lessor may from time to time designate in writing.

17. *Strikes.*—Whenever under this lease a time is stated or provided for the making of maintenance, repairs, replacements, alterations, additions or improvements by either party hereto, and during all or any part of the time so allowed any strike or work stoppage is in effect or occurs, or any other event beyond such party's power to control, causing delay, the period of such delay so caused shall be added to the time stated elsewhere in this lease for the completion of such work, and such party shall not be responsible to the other for such delay, nor shall any other of the terms and conditions of this lease be affected thereby.

18. *Lessor's rights and remedies.*—No waiver implied. All rights and remedies of Lessor under this lease shall be cumulative, and none shall exclude any other allowed Lessor by law, and the use of or resort to any one or more shall not exclude or be deemed a waiver of any other or others; nor shall any express or implied waiver of a breach of any term, covenant or condition of this lease consti-

tute or be construed as a waiver of any other breach of the same or any other term, covenant or condition.

**19. Protection Against Claims and Losses.**

a. Lessee shall at all times save and keep the Lessor, Commission and Government free and harmless from any and all liability for injury to or death of persons or loss of or damage to property arising out of or connected with the erection or removal of any building or part thereof on, or the making of any maintenance, repairs, replacements, alterations, additions or improvements to, or the use of the premises or any part thereof by Lessee or any other person holding under him or permitted by him to be on or about the premises. If any suit, action, or other legal proceeding shall be brought against the Lessor, Commission and/or Government alleging any such liability, Lessee shall upon written request from them or any of them assume the defense thereof in accordance with such request, and shall in any event pay all attorney's fees, costs and expenses in connection therewith, and satisfy any judgment that may be rendered as a result of such legal proceeding or claim.

b. Lessee shall have the right at his own expense to insure his interest or rights under this lease and in the premises against damage or loss from any excepted peril or other risks.

c. Lessee shall carry and pay the cost of the following insurance policies, in at least the amounts indicated for each, covering injury to persons or property or death to persons who may be injured or killed in or about the premises or as a result of any accident arising out of the conduct of the business under this lease:

- (1) Public Liability: \$50,000 one person, \$100,000 more than one person.
- (2) Property Damage: \$5,000 each accident.

All said policies of insurance shall contain an endorsement for ten (10) days' advance written notice to Lessor by registered mail of change or cancellation. Evidence of such insurance in the form of certificates in quadruplicate are to be sent to Lessor. In the event that Lessee fails to pay any premium for the insurance which he is required to maintain hereunder, Lessor may pay the same and shall be reimbursed therefor by Lessee.

**20. This Lease the Entire Agreement.**

1. Lessee, prior and as a condition precedent to his acceptance of the premises and execution of this lease, has carefully inspected and examined the premises and adjacent areas and knows the condition thereof; and his taking possession under this lease shall be conclusive evidence that he has received the premises in acceptable order and repair, and that no representation had been made to him as to the conclusion or repair of, or for the decoration, alteration, repair or improvement of the premises or areas except as expressly provided for herein. If Lessor is unable to give Lessee possession of the premises by the first day of the term specified in paragraph 3. above, for any cause or reason beyond the direct control of the Lessor, Commission or Government, the Lessor, Commission or Government shall not be liable for damages to the Lessee therefore, but the rental provided for hereunder shall abate (and if paid in advance shall be rebated) until such time as Lessee is able to enter into and occupy the premises.

b. This lease evidences the entire agreement between the parties, and all representations, negotiations, understandings and agreements heretofore made by the parties, their agents or representatives shall be deemed to have been and hereby are merged into and superseded by this lease and neither party shall be bound by any not herein expressly stated.

**21. Miscellaneous.**

a. Covenants run with land: All the covenants, terms and conditions herein contained shall run with the land and be binding upon Lessee's heirs, representatives, successors and assigns.

b. Taxes: Lessee agrees that during said term he will promptly pay such taxes, levies and assessments, if any, as may be lawfully imposed upon his property or interest upon or in the premises or the business conducted therein during said term by any state, county or other public authority.

3. No exclusive rights: Lessee is not granted any exclusive rights for the conduct of any activity within the Oak Ridge Area.

d. Officials not to benefit: No member of or delegate to Congress, or resident commissioner shall be admitted to any share or part of this lease or to any benefit that may arise therefrom; but this provision shall not be construed to extend to this lease if made with a corporation for its general benefit.

e. Government appropriations: It is understood and agreed that obligations of the Lessor, Commission and/or Government hereunder requiring the expenditure of money shall be subject to the availability of appropriations therefor.

f. Approval by Commission: This lease shall not become binding or effective until approved in writing by the Commission.

g. Agent not liable in own right: It is agreed that Roane-Anderson Company in executing and administering this lease is acting solely in the capacity of Agent for and in behalf of the Government under the contract referred to in the first paragraph of this lease and Lessee may look as regards all covenants, agreements and warranties herein contained to the Government and/or the Commission, or to Roane-Anderson Company only as and while it continues to act as Agent as aforesaid, and not to it in its private capacity, or its officers, agents, or representatives, as regards any matter which may arise by virtue of this lease.

h. Change of agency; assignment: It is agreed that the Commission may at any time and from time to time designate others to act hereunder as Agent and/or Lessor in the place and stead of Roane-Anderson Company, with all or such of the Lessor's powers, responsibilities, rights, or remedies under this lease, as the Commission may authorize or direct; and this lease or any of Lessor's rights and remedies hereunder, may be assigned by Lessor to the Commission, Government or any other person as authorized or directed by the Commission at will, or the premises may be so assigned subject to this lease, and any such assignee may assign or reassign to others at will without affecting the continuation of this lease in full force and effect in every other respect.

i. Paragraph headings: The headings of particular paragraphs are for convenience only and do not define, limit or construe the contents thereof.

j. Definitions: As used in this lease: (a) the word "Government" means the United States of America; (b) the word "Commission" means the United States Atomic Energy Commission, its successors and assigns, or its or their duly authorized representative or representatives; and (c) the word "Lessee" means the lessee or lessees whether there is one or more than one lessee, and includes any transferee or successor to the Lessee approved by the Lessor in accordance with subparagraph 8. a.

In witness whereof, the parties hereto have executed this lease in quadruplicate as of the day and year first above written.

ROANE-ANDERSON COMPANY,  
*As agent as aforesaid.*

(Signed) L. C. Macneal,  
(Typed) L. C. MACNEAL,

*Project Manager.*

This instrument was executed by L. C. Macneal for and on behalf of the Roane-Anderson Company pursuant to a Power of Attorney dated August 4, 1947, effective September 1, 1947, now on file in the office of the United States Atomic Energy Commission, Oak Ridge, Tennessee.

Witnesses for Roane-Anderson Company:

LOUISE E. MURPHY,  
*Oak Ridge, Tenn.*  
MARY ELLEN BROWN,  
*Oak Ridge, Tenn.*

LOVEMAN'S INC.,  
By R. L. MOORE, JR.,  
*President.*

Witnesses for Lessee:

W. E. BROWN,  
*Chattanooga, Tenn.*  
ANDREW JOHNSON,  
*Knoxville, Tennessee.*

#### CERTIFICATION

I, R. S. Porter, certify that I am the duly qualified Secretary of Loveman's, Inc., named as Lessee in the foregoing lease, that R. L. Moore, Jr., who signed the foregoing lease on behalf of the Lessee was then President of said Corporation; that said lease was duly signed for and on behalf of said Corporation by authority of its governing body and is within the scope of its corporate powers.

In witness whereof, I have hereunto affixed my hand and the seal of said Corporation this 10th day of March 1950.

R. S. PORTER, *Secretary.*

Approved:

RUSSELL FIELD,  
*Authorized Representative of the  
U. S. Atomic Energy Commission.*

Date: March 11, 1950.

(For Lessor)

STATE OF TENNESSEE,  
*County of Anderson, ss:*

Before me, Louis E. Murphy, a Notary Public of the State and County aforesaid, personally appeared L. C. Macneal, with whom I am personally acquainted, and who, upon oath, acknowledged himself to be Project Manager of Roane-Anderson Company, the within-named bargainer, a corporation, and that he as such Project Manager being authorized so to do, executed the foregoing lease for the purposes therein contained, by signing the name of the corporation by himself as Project Manager.

Witness my hand and seal, at office in Oak Ridge, Tennessee, this the 11th day of March 1950.

My commission expires the 7th day of January 1954.

LOUISE E. MURPHY, *Notary Public.*

(For Lessee)

STATE OF TENNESSEE,  
*County of Hamilton, ss:*

Before me, E. L. Pooham, a Notary Public of the State and County aforesaid, personally appeared R. L. Moore, Jr., with whom I am personally acquainted, and who, upon oath, acknowledged himself to be President of Loveman's, Inc., the within-named bargainer, a corporation, and that he as such President being authorized so to do, executed the foregoing lease for the purposes therein contained, by signing the name of the corporation by himself as President.

Witness my hand and seal, at office in Chattanooga, Tenn., this the 10th day of March 1950.

My commission expires the 18th day of October 1953.

E. L. POOHAM, *Notary Public.*

#### APPENDIX "A"

##### DESCRIPTION OF LEASED PREMISES

All those certain premises consisting of approximately 18,631 sq. ft. on the main floor and approximately 18,075 sq. ft. in the basement of the east portion of Building No. 1836-T, located on the south side of Broadway and east of Towne Road, in Oak Ridge, Anderson County, Tennessee, previously occupied by Taylor's Department Store, and being the shaded area more particularly described on Drawing No. L-1836-T (S-1), dated February 20, 1950, entitled "Loveman's, Inc.—Location Plan and Premises in Lease Agreement" attached as Appendix "B."

#### APPENDIX "B"

Location Plan and Premises—Loveman's, Inc. Drawing No. L-1836-T (S-1), dated February 20, 1950 as attached.

(Plans showing location of Loveman's Department Store, Oak Ridge, have been removed and are on file in the offices of the Joint Committee on Atomic Energy.)

## EXHIBIT 7

(Referred to on p. 63)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington, March 16, 1950.In reply refer to:  
PCO: CATHonorable CHET HOLIFIELD,  
*Chairman, Subcommittee of the Joint Committee on Atomic Energy,  
United States Congress.*

DEAR MR. HOLIFIELD: As indicated at the hearing before your subcommittee on March 14, concerning the department store lease at Oak Ridge involving Taylor's Oak Ridge Corporation and Loveman's, Inc., of Chattanooga, I wish to submit the following supplemental information for insertion in the record:

## A. Four telegrams as follows:

1. From *John Wender* relative to separate costs for fixtures, etc., paid by him to Taylor; also his lease relations with Taylor's.

2. From *Joseph Huwyler*, Flower Shop Operator, relative to payments by him to Taylor for fixtures, etc., together with offer to furnish photostatic copy of his subconcession agreement.

3. From *Joseph Weir*, Beauty Parlor Operator, relative to payments by him to Taylor for fixtures, etc., together with offer to furnish photostatic copy of his subconcession agreement.

4. From *Harry Busch*, Royal Jewelers, relative to relations with Taylor's prior to his option to retire from his contract.

B. Statement from H. B. White, Manager, Commercial Realty Division, Roane-Anderson Company, and C. M. Winfrey, Manager, Rental Department, Roane-Anderson Company, relative to discussions with Leonard Marx of Marx Realty Company, together with copy of letter, Winfrey to Marx.

C. Statement by J. Wallace Ould, Assistant General Counsel, Oak Ridge, relative to effect of State Court injunction preventing consummation of Loveman deal until lifted, together with back-up photostats.

I should also like to advise that officials of our Oak Ridge Office and of Roane-Anderson Company have clarified in several respects the leasing procedures used by them in the initial stages of the long-term leasing program.

The lease agreement made in the present case was arrived at in accordance with the original procedure developed last Fall and was one of the first few long-term leases executed under the long-term leasing policy. A copy of this procedure, dated October 27, 1949, and entitled "Policy and Procedure for Soliciting Proposals for Leases at Oak Ridge," is enclosed. You will note that this procedure is substantially in accord with that explained in the memorandum of January 23, 1950, from Mr. Cook to me, a copy of which was submitted at the hearing on March 13.

Under the original procedure, the formal lease agreement was based upon the general understandings evidenced by the advertisement for proposals, the application form given to all persons desiring to submit proposals, and reference to the standard or specimen lease form. General information was given verbally or in writing (depending on whether the applicant was available for personal contact) to interested parties (including specific information as to the kind of business operation which was considered particularly advisable from the landlord standpoint, especially in those comparatively few instances where it was considered important in order to meet a community demand for merchandise or services), the written proposal from the applicant, and the notice of the award.

This procedure has been reviewed and is being altered with the purpose of further clarification and improvement, particularly on the following points:

1. To clarify advertisements inviting proposals to indicate more clearly the premises that are available and the type of services desired in those instances where a specified type of operation is required

In those exceptional cases where proposals are desired for a particular type of business (such as a department store), proposals will continue to be solicited for this type of service or merchandising. We will modify the present practice in these exceptional cases so as to give all applicants written notice of any particular features of the proposed business which are necessary in evaluating various proposals.

To further encourage the submission of proposals which are as complete and specific as possible in all details, efforts will be made to utilize the regular appli-

cation forms in all cases and insure that the applications are clearly tied in with the standard lease form. Notices of award to the successful applicant will identify the essential terms and conditions upon which award is made.

As indicated in the attached procedural statement and as will continue to be the case, restrictions are not placed upon the type of usage or business where the property is suitable for varied types of uses, as long as any proposed business would not conflict with contemplated zoning restrictions. In such cases, specifications as to types of service will not be pertinent.

*2. To explain to interested unsuccessful applicants the reasons why some other proposal was accepted in preference to theirs*

Just how far we can go in this respect is not entirely clear to us at the moment. We feel that information of a confidential nature obtained from applicants, banks, credit agencies or others should not be made public, and may become public if made known to unsuccessful applicants. We also believe, from experience to date, that reputable firms may be reluctant to make proposals if they are required to submit such information for subsequent publication. However, some explanation of the reasons for the decision is possible, and we will try to work out a solution to this problem.

I might add that we have been fully conscious of the difficulties of conducting a leasing program in a manner which will not be too far out of line with established commercial leasing practices, yet also is as comparable as possible with the procurement procedures followed by Governmental agencies. It has been our judgment that the procedure used to date for leasing commercial premises on the basis of charging a percentage of gross receipts has produced the maximum return for the Government.

However, we recognize that this procedure inevitably requires, in the analysis of proposals, the exercise of judgment as to expectable volume of business to be enjoyed by competing applicants.

We are giving careful study to alternative procedures designed to minimize the degree to which award of leases must be determined by exercise of such judgment. One possible alternative under consideration is the award of a lease to the high bidder on a flat-rent basis.

Sincerely yours,

WALTER J. WILLIAMS,  
*Director of Production.*

**POLICY AND PROCEDURE FOR SOLICITING PROPOSALS FOR LEASES AT OAK RIDGE**

For purposes of brevity and clarity the Commercial Realty Division of the Roane-Anderson Company is identified hereafter as the "Agent" and the Commercial Services Division of the Office of Community Affairs as the "Commission."

1. *Authorization to Lease.*—The Agent is authorized to lease Government-owned land and buildings within the unrestricted area of Oak Ridge for commercial and other uses (except housing and manufacturing), subject to the approval of the Commission. The authority to arrange for lease of specific properties, whether for long or short terms for the occupancy by lessees of Government-owned buildings and/or Government land, is given when specific properties, either improved or unimproved, have been assigned to the administration of the Agent by the Commission. Request for premises not assigned to the Agent is made to the Commission when profitable usage is indicated.

a. The Agent clears with the Commission informally any proposed usage of Government-owned premises which might conflict with the Master Plan or contemplated zoning restrictions.

b. In specific locations where a single type usage is desirable (service stations, department stores, garages, hotels, theaters, etc.) the Agent advertises for and solicits proposals for this type of usage only.

c. Where the property to be leased is suitable for varied types of usage, the Agent does not place restrictions upon usage in advertising for or solicitation of prospective tenants. The Agent may, however, direct its advertising to particular types of tenancy by using the phrase, "suitable for ladies' wear, men's wear or specialty shops, etc.," in the advertisement.

d. A community need for a specific type of service or merchandising may also be sufficiently urgent to limit the solicitation and advertising of the Agent to that category.

e. The Agent will not execute any lease, without prior approval of the Commission, which falls within one or more of the following categories: (1) the lease is to be awarded without advertising for competitive proposals; (2) the lease is to be awarded other than to the responsible applicant making the best financial proposal; (3) the lease poses any significant policy questions; (4) the lease contains any terms which vary substantially from the approved lease form; and (5) a lease with federal, state, or local public agencies at nominal rental or with a nonprofit organization at reduced rental.

2. *Advertising Procedure.*—The advertising media to be used is decided upon and the copy prepared by the Agent, the following general procedure being used:

a. *Newspaper Advertising:* Space in buildings and land available for the construction of buildings, or other usage, is always advertised in one or more newspapers and notices placed in the Oak Ridge Post Office, except in unusual cases. The extent of such newspaper advertising is governed by the size and importance of the location to be leased. By way of illustration, a strategically located retail space suitable for a department-store operation is advertised in at least one of the leading Knoxville newspapers. Recognized trade journals and other newspapers may also be used. If the space is in a secondary retail category location and relatively small in size, advertising is limited to newspapers published locally or in nearby communities. In every case, the amount of newspaper advertising is determined by weighing its advantages against the attendant expense on a sound businesslike basis. The advertisement is designed to give sufficient information regarding the premises to enable prospective applicants to determine if they desire to make further investigation of the available property.

b. *Other Solicitation Methods:* Whenever newspaper and/or trade journal advertising is used, this is supplemented by verbal or written solicitation of proposals from all parties known to be interested. It should be kept in mind that in accordance with customary commercial leasing practice, responsible tenants are usually obtained through direct contact and solicitation rather than through public advertising.

c. A complete record of all solicitation of or inquiries from interested parties is maintained by the Agent in the form of memoranda to the files, copies of correspondence and résumés of telephone conversations, and a summary is transmitted to the Commission in condensed form and/or by attachments to the final letter of recommendation from the Agent.

d. All previously interested parties, as well as those responding to the advertisements, are furnished all requested information available. This may be in verbal or written form as indicated by request for same. If more than casual interest is shown by the inquirer, special emphasis is placed by the Agent on the importance of a personal inspection of the property advertised and the Oak Ridge community in general, since the specific information usually requested is so broad in character and so diversified that it does not lend itself to a general specification sheet but must be based on the individual inquiry.

3. *Applications from Interested Parties.*—Applications are issued in triplicate to interested parties by the Agent together with an instruction sheet indicating the method of properly executing the application and the type of application required by the Agent.

a. Upon receipt of an application from an interested party, it is opened immediately, time stamped and processed by the Agent. The Agent then checks references, analyzes the proposal, and obtains all missing information or clarifies ambiguous statements in the application prior to the dead-line established for receiving applications (in the event a dead-line is established). Particular attention is given to clarification of applications, in view of the fact that the method of leasing government premises in Oak Ridge and local conditions differ substantially from those normally encountered in other communities.

b. Applications are kept in a separate file for the particular location involved and are not available to anyone other than those responsible for the work involved, including the negotiators or department head in charge of the particular negotiation.

4. *The Selection of Applicants.*—To determine the most acceptable proposal received, the following procedure is used:

a. All proposals are carefully analyzed in the light of the information contained therein and that gathered from other sources, i. e., references, confidential bank information, Dun & Bradstreet reports (Special, if necessary), Chamber of Commerce reports, inspection of other operations conducted by the applicant, etc. This information is coordinated and reduced to a comparison sheet for study by the negotiator or negotiators involved, the rental manager and the division manager in a staff meeting. In the event complete accord is not reached in this meeting, the entire analysis is reviewed by the Agent's Project Office prior to a final decision. The Agent recommends that the award be made to the responsible applicant whose proposal will be most advantageous to the Commission, rental and other factors considered. Other factors will include, primarily, an evaluation of each applicant's experience, reputation, financial stability or resources, and ability to perform the tenant's obligations under the proposed lease. Consideration may also be given to an evaluation of his probable efficiency of operations and attainment of volume of sales and quality of services, amount of investment in the premises and business, extent of risk assumed, character of business, and such other factors as the public interest and fair and equitable dealing may require.

b. The recommendation of the Agent sets forth the reasoning for the selection of the most qualified applicant offering the best rental return, and is forwarded to the Commission for approval.

c. In unusual circumstances, two applicants may submit closely comparable proposals, but on different terms such as lower percentage rate with a higher guaranteed return or vice versa. In this situation, the probable expectancy of return, or other factors, in each case is presented to the Commission for final determination.

d. It is also possible that a group of two or three applications may be outstanding among the entire number of applications received, but so closely identical in their proposal terms as to indicate the necessity of individual negotiations with each in order to determine the best possible rental agreement obtainable from each. In this event, such a procedure is recommended to the Commission. If approval to this course is obtained, the Agent negotiates the best obtainable proposal from each and recommends the proposal selected.

5. *Approval of Recommendations.*—Upon receipt of notice from the Commission of approval or disapproval of a recommended applicant, the Agent notifies the interested parties of the decision reached.

a. If approved, the lease is prepared.

b. If disapproved, the negotiations are reopened in accordance with instructions received by the Agent.

6. *Preparation of Leases.*—After receipt of the approval from the Commission of a recommendation by the Agent, the lease is prepared by the Agent and submitted to the Commission for review. After this review, it is returned to the Agent with comments or approval for execution by the lessee and the Agent. Four copies of the lease and performance bond, if required, are executed and forwarded to the Commission for approval. The original and duplicate copy are retained by the Commission, the other two copies being returned to the Agent, one for the Agent and one for the lessee. Three conformed copies are then forwarded to the Commission for filing and necessary distribution.

a. In the event a performance bond is required, it will be executed on approved forms by the lessee at the time the lease is executed and the same number of copies of the bond as of the lease will be executed and distributed in the same manner.

The procedures proposed by the report of the Manager of Oak Ridge Operations, AEC, dated June 25, 1949, and appendices thereto, as modified by memorandum to the Director of Production, AEC, from the Deputy General Manager, dated August 18, 1949, will be followed in all cases.

NEW YORK, N. Y., March 14, 1950.

ROANE-ANDERSON Co.,  
*Care of Walter Williams,*  
*Atomic Energy Commission, Washington, D. C.:*

We did not sign leases offered us by Taylor's. We did sign a lease prepared by my attorney on March 28, 1947. Lease was signed for Taylor's by H. A. Levinson. We understood later he did not have power of attorney. We operated for the duration of Taylor's on our letter of intent, which required us to pay \$2,500 for fixtures over twenty-four month period. We also took over space occupied by hobby shop and paid fixture cost on fixtures used. All fixtures were retained by Taylor's and we understand were sold to Loveman's.

J. J. WENDER STORE.

OAK RIDGE, TENN., March 14, 1950.

ROANE-ANDERSON Co.,  
*Care of Walter J. Williams, AEC, Washington, D. C.:*

I have and will be glad to submit to the committee a photostatic copy of our lease with Taylor's Oak Ridge Corporation. The percentage paid was fifteen percent. And in addition to this percentage we paid for fixtures used in our department, which even after amortization remained the property of Taylor's Oak Ridge Corporation. I wish further to advise that I was charged separately and in addition to rental for telephone use, institutional advertising, in addition to a guaranteed two percent minimum, cash-register rental, store interior trimming as well as gift wrapping and other miscellaneous charges. My lease is now in the possession of John J. Winter, who is in Washington and I authorize him to have a photostatic copy made for the committee's use.

JOSEPH F. HUWYLER.

OAK RIDGE, TENN., March 14, 1950.

ROANE-ANDERSON Co.,  
*Care of Walter J. Williams, AEC, Washington, D. C.:*

I will be glad to submit to the committee a photostatic copy of lease with Taylor's Oak Ridge Corporation. Percentage paid was 15 percent of gross sales in addition to percentage charges were paid for fixtures, which were never available to our department. In addition to rental we were charged to telephone, institutional advertising, cash-register rental, store and window interior decorator, proportionate cost for maintenance of office and office help. In 1949 Christmas promotion was to have been prorated to all departments, including the department owned by Taylor's. Instead the lease department paid the entire cost of said promotion, having worked very closely in having exchanged views with the people in our department whose comments were not available to the other department head of the store. It is my firm belief that opposition was not against the store as a whole but just to the department operated by Taylor's parent company. In selling the people of this community the Government must not only consider the monetary gain but must also consider the services and satisfaction that would be afforded the residents of this area. Having been a department I was informed as early as September first by the store management that it was doubtful that the Taylor's lease would be renewed. However every effort would be made to secure its renewal. Even though I would face the possibility of having lost my entire business I am of the opinion that the decision reached by the Roane-Anderson Company is for the best interest of both the citizens of this community and the U. S. Government. Photostatic copy of lease and other incidental statements are being forwarded to you by mail.

JOSEPH WEIR.

KNOXVILLE, TENN., March 14, 1950.

MR. C. M. WINFREY,  
*Care of Walter Williams, Atomic Energy Commission,*  
*Washington, D. C.:*

Our experience during sublease period from Taylor's Department Store or Taylor's, Oak Ridge, Tenn., most unsatisfactory and distasteful arrangement

of our many years in business. Difficulty in getting our sales money returned, delayed sometimes for weeks; paid many unwarranted and unreasonable charges not in contract, which they impounded in New York office without our consent or agreement; finally had to replevin under process of law, fixtures which we had substantially paid for. Discontinued our operation in their store because of inefficient, irresponsible, unreasonable, and their tricky manner of doing business. To sum up the operation as a whole in two words "lousy and stinko."

(Exhibit B)

STATEMENT FROM ROANE-ANDERSON CO., AGENT FOR AEC, CONCERNING DISCUSSIONS WITH REPRESENTATIVES OF MARX REALTY CO., AGENTS FOR DARLING STORES CORP., AND TAYLOR'S OAK RIDGE CORP.

We, the undersigned, make the following statement regarding our conversations with representatives of the Marx Realty & Improvement Co., Inc., of New York, the authorized real-estate agents of Taylor's Oak Ridge Corp.

In the conversations with Messers. Hall, Sanford, and Marx it was continually pointed out that in our opinion the operation as currently conducted by Taylor's Oak Ridge Corp. was incapable of producing the volume reasonably to be expected from the property involved if properly merchandised as a department store. In this conclusion they agreed stating that percentage of rental paid to the licensor prohibited giving the type of operation capable of producing the optimum volume.

This fact is corroborated in the copies of correspondence between the Roane-Anderson Company and the various representatives of Taylor's agent. (See Résumé furnished for the record.)

On date of January 11, 1950, Leonard Marx called Mr. Winfrey of Roane-Anderson Company relative to the award of the contract to Loveman's. When advised that Loveman's offer was higher than Taylor's number three alternate proposal, Mr. Marx congratulated us on getting a store of the calibre of Loveman's to come to Oak Ridge. A copy of our letter to Mr. Marx (of which only an excerpt was read by Mr. Roth, attorney for Darling, in his rebuttal statement), expressing our appreciation for his personal congratulations as a Real Estate Specialist, is attached. In this letter we acknowledged the job done by Taylor's in 1946 in getting ready in a hurry to meet the opening date dead line.

In this letter we particularly emphasized the fact that Darling Stores Corp., in the field of low-priced specialty-shop operations, was in our opinion a good volume producer but could not be expected to attain the dollar volume of a store like Loveman's in the present day competition.

We further expressed our desire to work with his client in an effort to find a location suitable to their normal-type operation which Mr. Marx said would be approximately 2,500 square feet.

JANUARY 12, 1950.

MR. LEONARD MARX,  
*Marx Realty & Improvement Co., Inc.,  
20 West 23rd St., New York, New York.*

DEAR LEONARD: It was indeed a pleasure to talk with you on the telephone yesterday, and I appreciate very much your congratulations on the results obtained by this office in marketing the local department-store location.

We, of the Roane-Anderson Company, sincerely feel that Mr. Gluck did an outstanding job in meeting the early emergency dead line in opening Taylor's, Inc., and presenting a very creditable appearing operation serving the purpose at the time. In the department operated by Darling, a very reasonable volume has been consistently maintained. I am sure, however, you agree, after personally inspecting the store operation, that a true department store handling nationally advertised

brands, with charge accounts, daily deliveries, and experienced merchandising ability in all departments would serve more adequately the needs of the community under the present competition from Knoxville and the surrounding area now that the perimeter gates are removed. We feel that Loveman's can certainly be expected to give that kind of service to the community plus bringing a familiar and accredited department store name to Oak Ridge to meet off-area competition.

In its particular field, we feel that Darling Stores serve a definite merchandising need and will certainly work wholeheartedly with you and your client toward finding a suitable location for their operation. This would require, as I understand in our conversation yesterday, a minimum of approximately 2,500 sq. ft.

Permit me to express our appreciation for the cordial manner in which your office and Mr. Gluck have cooperated with the Agent in presenting your proposal to the AEC for consideration. Please be assured that it will be a pleasure to be of assistance to you in the future in any way in which we may be able.

With kindest personal regards to you and your associates, I am

Very truly yours,

ROANE-ANDERSON COMPANY,

C. M. WINFREY, *Manager, Rental Department.*

CMW:O.

(Exhibit C)

#### STATEMENT REGARDING STATE COURT INJUNCTION

At the hearing on March 14th, Mr. Roth, who testified that he was and had been General Counsel for Darling Stores Corporation for a number of years, stated that the State Court injunction order did not restrain Roane-Anderson Company from proceeding with completion of a lease with Loveman's during the period from the latter part of January 1950, until March 2, 1950. With respect to this, we submit the following documents:

(1) Copy of Taylor's bill of complaint in the State Court, containing, in the prayer for relief in VI (2), the prayer that Roane-Anderson Company be restrained "from . . . taking any further steps toward the execution of a concession agreement with anyone other than the complainant until the rights of the parties have been adjudicated, or until otherwise ordered by the Court."

(2) Copy of subpoena served on Roane-Anderson Company in January 1950 in the State Court suit.

(3) Copy of answer filed by Roane-Anderson Company in the same suit.

It will be noted that page 6 of Taylor's bill contains an order, signed by Thomas A. Shriver, Chancellor, 7th Chancery Division, directing issuance of the injunction "as prayed," upon filing of the bill and execution of an injunction bond; also, that the opinion of Joe M. Carden, Chancellor, in the Chancery Court of Anderson County, copy of which was submitted in evidence by Mr. Cook, states: "A temporary injunction issued upon fiat of Chancellor Thomas A. Shriver, as prayed for in the bill."

(Prepared by J. Wallace Ould, Assistant General Counsel)

*the Honorable Joe M. Carden, Chancellor, Holding the Chancery Court for Anderson County at Clinton, Tennessee:*

#### THE BILL OF COMPLAINT OF

*Taylor's Oak Ridge Corporation, a Tennessee corporation having an office and place of business in Oak Ridge, Tennessee, Complainant, vs. Roane-Anderson Company, a Tennessee corporation having an office and place of business in Oak Ridge, Tennessee, Defendant*

Complainant respectfully states to the Court as follows:

#### I

The parties and their residences are as stated in the caption. Complainant has since 1946 operated a department store in the premises known as Shop 101, Building 4, Group 2, on Broadway and the building formerly known as the E. A. T. Stores located on Baltimore and Miami Avenue, Gamble Valley, two Government buildings at Oak Ridge, Tennessee. Said occupancy has been under the terms of a concession agreement dated July 9, 1946, between the complainant and the defendant and a supplemental agreement extending the term of the concession to

January 31, 1950. Said agreement (including the supplemental agreement) will be filed in this cause on or before the hearing. Under the terms of the agreement, the complainant agreed to pay the defendant as compensation for the concession granted 6% of its gross receipts, exclusive of excise and luxury taxes, from all sources derived from the operation or maintenance of the concession.

## II

In the agreement between the parties hereto, above referred to, the defendant is referred to as the "Agent" and it is recited that the Agent entered into an agreement on the 14th day of February, 1944, effective as of the 23rd day of September, 1943, with the United States of America, referred to as the "Government," to grant concessions for the operation of community retail sales and service establishments, among other things, at Oak Ridge, Tennessee, for the Government. Complainant calls upon the defendant to produce and file such agreement, and if it has been superseded, the current agreement.

## III

Both before and after the execution of the concession agreement between the complainant and the defendant the parties, through their respective representatives, have had conversations in which the complainant made it plain to the defendant that it would not be interested in the concession unless it could be assured that it would have the refusal after the expiration of the original agreement for a renewal or extension of the concession for a substantial period of time; and the defendant repeatedly assured the complainant that not only would it have the refusal but that complainant would in all events and at all times receive preferential treatment as the party in possession, and that in no event would the defendant grant the concession and the use of the premises to anyone else unless the complainant was unable to meet competition. In reliance upon these repeated assurances the complainant expended large sums of money for fixtures, in addition to the requirements under the agreement, and spent large additional sums for special overhead, executives' and employees' time and salaries, etc., resulting in a net loss for complainant's period of occupancy up to the time of the filing of this bill. In recent months, however, complainant has been operating at a profit; it has built up a large volume of business; and from here on out the prospects are that its business will be extremely profitable if permitted to continue the concession and occupancy of the premises.

## IV

In the fall of 1949 the defendant issued an invitation to complainant and others to make bids for the concession for a period of years commencing February 1, 1950. Under date of December 12, 1949, complainant submitted three alternative bids, giving the defendant the choice of these bids. Complainant on information and belief alleges that each of these three alternative bids was higher than any bid received from any competitor. Notwithstanding this fact complainant received from the defendant, on or about January 10, 1950, a notice to quit the premises for the reason that an oral agreement had been made between defendant and Loveman's of Chattanooga, a concern engaged in the department store business, pursuant to which Loveman's of Chattanooga will be given the concession and occupancy of the premises commencing February 1, 1950. Complainant on information and belief alleges that the bid made by Loveman's of Chattanooga was less favorable to the defendant than any of the bids made by complainant and that said action on the part of the defendant in making such agreement with Loveman's of Chattanooga under these circumstances was in bad faith and a breach of its agreement with complainant. Complainant alleges that the defendant as the Agent of the United States is obligated to act impartially and on a business basis in the granting of concessions for the use of Government-owned property and that such action of the defendant is not only a breach of its agreement with complainant but is a breach of its duty to grant the concession to the highest bidder.

## V

Complainant is advised that under the facts hereinbefore alleged it is entitled to injunctive relief to prevent the defendant from taking any steps to oust complainant pursuant to the notice to quit heretofore given and to a decree requiring the defendant to comply with its agreement with complainant and with its legal duty to grant the concession to the highest bidder as hereinbefore alleged. If complainant is incorrect in this contention, then it is entitled to damages.

## VI

The Premises Considered, Complainant Prays:

(1) That copy of this bill with subpoena to answer be issued and served upon the defendant requiring it to appear and answer at an early rule day but the oath to its answer is waived.

(2) That a temporary injunction issue and be made permanent at the hearing, enjoining and restraining the defendant, its agents and servants, from taking any steps to oust complainant from the enjoyment of the concession and use of the premises described in the bill, and from taking any further steps toward the execution of a concession agreement with anyone other than the complainant until the rights of the parties have been adjudicated, or until otherwise ordered by the court.

(3) That a decree be entered requiring defendant to enter into a new concession agreement with the complainant pursuant to one of the alternative bids made by complainant or, in the alternative, on not less favorable terms and conditions than those embodied in the bid by Loveman's of Chattanooga.

(4) That if complainant be not granted the relief above sought, then that damages be awarded it.

(5) For general relief.

This is the first application for an injunction or other extraordinary process in this cause.

ARMISTEAD, WALLER, DAVIS & LANSDEN,

## SUBPOENA TO ANSWER AT RULES

STATE OF TENNESSEE, CHANCERY COURT AT CLINTON

*To the Sheriff of Anderson County, Greeting:*

Summon: Roane-Anderson Company, Inc., Oak Ridge, Tenn., to appear in person or by attorney before the Chancery Court at Clinton, Tennessee, on or before the 6th day of February, 1950, next, it being the First Monday in February, to answer the Original Bill which Taylor's Oak Ridge, Inc., has filed in said Court against It and have you then and there this writ.

Witness H. C. Scruggs, Clerk and Master of said Court, at Office in Clinton, Tennessee this 27th day of January 1950.

H. C. SCRUGGS,  
Clerk and Master.

By \_\_\_\_\_,  
Deputy Clerk and Master.

## NOTICE

*To the Above Named Defendant Roane-Anderson Company, Inc.:*

You are hereby notified that you are required to make defense in this case on or before the First Monday of February, or judgment pro confesso will be entered against you on the Third Monday of February, 1950.

H. C. SCRUGGS,  
Clerk and Master.

By \_\_\_\_\_,  
Deputy Clerk and Master.

IN THE CHANCERY COURT OF ANDERSON COUNTY, AT CLINTON, TENNESSEE

No. \_\_\_\_\_

*Taylor's Oak Ridge Corporation vs. Roane-Anderson Company*

ANSWER OF DEFENDANT, ROANE-ANDERSON COMPANY

The defendant, Roane-Anderson Company, for answer to the bill filed against it in the above-entitled cause, says:

## I

That it admits that the parties and their places of residence are as stated in the caption of the original bill.

## II

That on February 14, 1944, it entered into a contract with the United States of America, effective as of September 23, 1943, under which it agreed to act as agent for the United States of America in the negotiation and entering into of concession agreements and/or leases for the use and occupancy of residences, buildings or portions of buildings situated within what was known as the Clinton Engineer Works Area in the State of Tennessee. The defendant's said contract provides, however, that the defendant shall, "prior to entering into any concession agreement with third parties for the conduct of any sales or service establishment submit the same to the Contracting Officer for his approval." The Contracting Officer as thus referred to in the defendant's said contract is identified and designated by the provisions of the contract.

Various supplemental agreements to or modifications of said contract have been made thereto from time to time since the execution of said original agreement.

A copy of said original agreement, which is designated as Contract W-7401-eng-115, with all supplemental agreements thereto and modifications thereof is filed as Exhibit 1 to this answer.

## III

This defendant admits that under date of July 9, 1946, it as agent for the United States of America entered into a concession agreement with the complainant, Taylor's Oak Ridge Corporation, a wholly owned subsidiary of Darling Stores Corporation of New Jersey, which concession agreement bears No. RA-24C. Under this concession agreement this defendant as such agent granted to the complainant as concessionaire the privilege of conducting a general retail department store in the premises described as "Shop 101, Building 4, Group 2 on Broad-

way, and the building formerly known as the E. A. T. Stores, located on Baltimore and Miami Avenues, Gamble Valley" in Oak Ridge, Tennessee, for the period commencing on the 1st day of September, 1946, and ending on the 31st day of August, 1947.

Copy of this concession agreement, with its letter of transmittal dated June 28, 1946, and all modification of said agreement, are filed as Exhibit 2 to this answer.

The said Concession Agreement, by virtue of paragraph 21 thereof, granted unto the complainant the option to renew this Concession Agreement "for an additional term of one year and a further option at the expiration of the renewal term to extend this contract for one more year," provided notice of the intent to renew be given in writing to this defendant as agent at least sixty (60) days before the original agreement, or any renewal thereof, would expire.

Defendant admits that pursuant to the terms of said Concession Agreement the complainant entered into possession of said premises on or about September 3, 1946, and on or about that date began the operation of a retail store therein.

#### IV

Complainant gave defendant notice that it desired to exercise the option contained in said Agreement No. RA-24C to extend this Concession Agreement for the additional year from September 1, 1947, to August 31, 1948, and accordingly Supplemental Agreement or Modification No. 2 to said Agreement was executed by complainant and defendant.

In the summer of 1948 complainant likewise gave defendant notice that it desired to exercise the option contained in said Agreement No. RA-24C to extend this Concession Agreement for the second additional year, being the period from September 1, 1948, to August 31, 1949, and accordingly Supplemental Agreement or Modification No. 3 to said Agreement was executed by complainant and defendant.

By this same Supplemental Agreement or Modification the termination provision contained in the original Concession Agreement, being Section 22 of said Agreement, was amended so as to read as follows:

"*Termination.*—Either party hereto may terminate this Concession Agreement at any time by giving 90 days prior written notice to the other party in accordance with Section 19 hereof, or this Agreement may be terminated at any time upon terms mutually agreed upon by the parties."

#### V

Defendant would further show to the court that in the latter part of April, 1949, or early in May, 1949, the complainant began negotiations with defendant for a new rental or concession agreement to become effective upon the termination of said Concession Agreement No. RA-24C, as extended under its options, and under which new concession or lease agreement complainant could continue to carry on its retail merchandising operations in the premises it was then occupying at Oak Ridge. In connection therewith complainant advised defendant that the Marx Realty and Improvement Company, Inc., of 20 West Forty-third Street, New York City, was its authorized agent in the negotiations for this new agreement.

Photostatic copy of the telegram advising defendant of the agent's authority to conduct such negotiations is filed as Exhibit 3 to this answer.

Negotiations for such extension or for the execution of a new agreement under which complainant could continue to occupy said premises, were carried on between complainant and defendant largely through said Marx Realty and Improvement Company until August 26, 1949, and resulted in an extension of Agreement No. RA-24C as set forth in Supplemental Agreement or Modification No. 4 to said Concession Agreement, and under which the term of the concession granted to the complainant was extended to January 31, 1950.

#### VI

This defendant would show to the court that by consent, and with the full agreement of both complainant and defendant, the warehouse space, the use of which was granted to complainant as concessionaire under said Concession Agreement No. RA-24C, was changed from the location specified in said original agreement, to-wit, "the E. A. T. Stores located on Baltimore and Miami Avenues, Gamble Valley," first, to the "west wing of the building known as Adams Cafeteria, Adams Lane," and, later, to the building "formerly known as Super Market

located on Chicago Avenue, Gamble Valley," and still later to Bays "Nos. 1 through 8, inclusive, of M-1 Warehouse located on the north side of Midway Lane." It is this latter described building that complainant was using as warehouse space upon the expiration of its concession agreement on January 31, 1950.

The complainant entered into possession of the premises referred to in said Concession Agreement and the modifications thereof, and continued to occupy said space through itself and subconcessionaires for the purpose of conducting the retail department store therein and for warehouse space until January 31, 1950. In fact, as of this date (February 3, 1950) it still continues to occupy said space and continues to conduct therein a retail store, although all right to conduct said store expired as of January 31, 1950, and its sole right to any further occupancy thereof is for the purpose of an orderly removal of its stock, fixtures, and equipment therefrom, which removal, according to the terms of the Concession Agreement, as extended, is to be completed on or before February 15, 1950.

#### VII

This defendant emphatically denies that either before or after the execution of said Concession Agreement and/or before or after the execution of any modification thereof, it assured the complainant that it would have the refusal of occupancy of the premises covered by said agreement for any additional period except that provided for in the written agreement.

The defendant most emphatically denies that it at any time informed the complainant that complainant would have preferential treatment in any renewal or extension of said Concession Agreement.

The defendant further denies that complainant was ever informed by it or any of its agents that defendant would not grant the concession and use of the premises here involved to anyone else unless complainant was unable to meet competition.

This defendant denies that any assurances were given to complainant by any of the officers or agents of the defendant, which assurances would lead the complainant to believe that it was being granted any rights whatsoever for possession of the premises covered by the Concession Agreement beyond the periods specified in the written agreement which is filed as Exhibit 2 to this answer.

This defendant further denies that the complainant or any of its officers or agents "made it plain to the defendant," either before or after the execution of the Concession Agreement, that complainant "would not be interested in the concession unless it could be assured that it would have the refusal after the expiration of the original agreement for a renewal or any extension of the concession for a substantial period of time." The only assurance for renewal or extension of the Concession Agreement given to complainant was that plainly and expressly written into the Concession Agreement itself.

#### VIII

This defendant would show to the court that as early as May, 1949, when complainant first began negotiating for possession beyond August 31, 1949, of the premises here involved, complainant was advised that changes in the amount of rental to be paid after August 31, 1949, or other changes which would grant a more favorable concession agreement to complainant could not be made except upon advertisement and submission for competitive bids on the occupation of the premises involved, and that upon such submission complainant would have an equal opportunity with all other bidders.

During the period of negotiations between May, 1949 and the execution of the extension agreement of August 26, 1949, complainant's requests for favored consideration were consistently declined and it was repeatedly advised that no preference could be granted to it in consideration of bids submitted for occupancy beyond January 31, 1950. It was consistently advised that it would have equal opportunity with other interested parties to submit a proposal for leasing the subject premises. This information was given to complainant orally, by telegram and by letter. No other assurance was given to it. Furthermore, complainant during this period never asserted that it had been assured such preferential treatment. There was no mention made in either the verbal discussions or in the written communications of such alleged assurances on the part of defendant. In corroboration of this defendant files as Exhibits 4 to 11, inclusive, to this answer copies of correspondence between complainant and defendant. These communications do show that the complainant was attempting during this period of time to obtain from defendant a commitment for such preferential treatment,

but at no time in such correspondence or negotiations was the claim made that such commitment for preferential treatment had ever been made to it by the defendant.

### IX

The defendant denies that complainant relied upon any assurances from the defendant outside of the assurances contained in the Concession Agreement itself, in the expenditure of "large sums of money for fixtures, in addition to the requirements under the agreement."

It will be noted that under Section 6 of the Agreement concessionaire agreed to install fixtures, and that under Subsection (C) Paragraphs (1), (2), and (3) of said section, provision is made for the amortization of the net cost of the fixtures so installed and for due credit to be given complainant for such amortization in the event of cancellation of the Concession Agreement prior to the expiration of twenty-four months' operation by complainant.

### X

Defendant is not advised concerning the accuracy of the allegations made by complainant about the profits that it may have received or losses it incurred as a result of its occupancy and use of the premises here involved. However, this defendant would show to the court that according to the reports on gross receipts made to it by complainant, there has been a very substantial decline in sales volume during complainant's period of occupancy. The volume of sales was substantially less than Fifty-eight Thousand Dollars (\$58,000) per month during three of the last five months in the year 1949, while in only one prior month during complainant's forty months of operation had the volume of sales been less than Sixty-three Thousand Dollars (\$63,000).

Statements showing volume of complainant's gross sales during its entire period of occupancy up to January 1, 1950, are filed as Exhibit 12 to this answer.

### XI

This defendant would further show to the court that after the Supplemental Agreement or Modification No. 4 of August 26, 1949, entered into between complainant and defendant for the extension of Concession Agreement No. RA-24C for the period from September 1, 1949, through January 31, 1950, the defendant advertised through the Press and by mail that it had available for lease for use as a department store the 37,000 square feet of building located in Oak Ridge's main shopping district which was occupied at the time by the complainant. However, in said advertisement no reference was made to the present tenant or its occupancy. The advertisements stated that bids or applications if to be considered must be received by defendant by December 15, 1949, and that occupancy of the premises might be expected by March 1, 1950.

As a result of this advertisement defendant received numerous bids from a number of department store owners and other merchants located in various parts of the United States for the occupancy of these premises.

Under date of September 15, 1949, the complainant, through its agent, Marx Realty and Improvement Company, Inc., stated its desire to submit a bid "for the present Taylor's Store" and asked that the required forms for submission of such bid be forwarded to it. This request was complied with in letter written to the real estate agent by this defendant under date of September 19, 1949.

Photostatic copy of complainant's letter of September 15, 1949, of defendant's reply dated September 19, 1949, and of mimeographed copy of the bid form as furnished complainant, are filed as Exhibits Nos. 13, 14, and 15.

Under date of December 12, 1949, complainant submitted a bid for the occupancy of these premises for a term of five years but the bid was not submitted on the bid form, this form not being deemed necessary because defendant was familiar with the financial ability, standing, etc. of complainant.

Photostatic copy of this bid as submitted is filed as Exhibit No. 16 to this answer.

### XII

This defendant would further show to the court that after the date fixed as the final one for the receipt of bids or proposals for the use of said department store space defendant opened said bids or proposals and made thorough study and analysis of each and every one thereof, including the three alternate proposals submitted by complainant. Upon the completion of this analysis the complete file containing the analyses of all bids received, together with the bids themselves,

was submitted by the defendant to the Contracting Officer for his examination and approval as required by the defendant's contract. Upon examination of the bids submitted, and after completion of his own analysis thereof, the Contracting Officer, under date of January 10, 1950, in the exercise of his discretion, authorized this defendant to enter into a lease with Loveman's, Inc., of Chattanooga, Tennessee, for the operation of a department store in the premises covered by the Concession Agreement of complainant, and which was to expire on January 31, 1950. Copy of the Contracting Officer's authorization is filed as Exhibit 17 to this answer.

Accordingly, this defendant immediately advised the complainant and its realty agent, Marx Realty & Improvement Company, Inc., as well as all other unsuccessful bidders, by telegram that the award of the department store location here involved had been made to Loveman's, Inc., of Chattanooga.

On the same date advice was given by this defendant to Loveman's, Inc., of Chattanooga, that its application had been awarded the store location.

Under date of January 13, 1950, this defendant confirmed by letter to the Darling Stores Corporation, which is the parent corporation of the complainant, that it and its subsidiary had not been the successful bidder or applicant for the occupancy of this department store location.

### XIII

The defendant denies that the application or bid of Loveman's, Inc., of Chattanooga, was less favorable to the defendant as agent, and to its principal, the United States of America, than the bid or bids submitted by the complainant, and it further and most emphatically denies that the Contracting Officer in authorizing the award of said space to Loveman's, Inc., of Chattanooga, was acting in bad faith.

This defendant further and most emphatically denies that its action in following out the authorization of the Contracting Officer in making the award of said space to Loveman's, Inc., of Chattanooga, was in bad faith, and denies that said award was in breach of any agreement whatsoever existing between complainant and defendant.

This defendant further denies that the bid of complainant was the highest bid received from the bidders or applicants for the store space here involved. However, this defendant further denies that either it or the Government was under any duty to make the award of said space to the highest bidder. The bid form or application (Exhibit 15) expressly stated that Roane-Anderson Company reserved the right to reject any and all applications when it is deemed advisable in the interest of the Government or the Agent.

However, regardless of this express reservation the only duty involved upon this defendant or the Government was that the award should be made by the Contracting Officer and the Agent to the bidder whose bid, in the discretion of the Contracting Officer and the Agent, was to the best interest of the Government. This defendant shows to the court that, in its judgment and also in the judgment of the Contracting Officer, the acceptance of the bid of Loveman's, Inc., was to the best interest of the Government under all the circumstances involved, and hence the Contracting Officer and this defendant were authorized under the law to award the space to said corporation. Under long established legal principles the exercise of this discretion is not subject to review or control by the courts.

This defendant therefore denies that complainant has any right by injunction or otherwise to restrain, prevent, or in any manner interfere with this defendant in going forward with the completion of the concession or lease agreement with Loveman's, Inc., and that complainant has any right whatsoever or standing in this court to prevent Loveman's, Inc., from now entering into full possession of said premises under the award heretofore made to that company.

### XIV

This defendant would further show to the court that in all negotiations leading up to the execution of the Concession Agreement with the complainant, which agreement was entered into on July 9, 1946, and in the execution of that agreement itself, in the making of all modifications thereof, as well as in the taking of bids for the leasehold agreement which is to be effective as of March 1, 1950, and in the awarding of the lease to Loveman's, Inc., under its application or bid, this defendant was acting as the agent of and for the United States of America. The complainant's Concession Agreement was, in effect, a concession agreement with the United States of America and the awarding of the lease or possession of the

store premises to Loveman's, Inc., was in effect an award made by the United States of America.

This defendant therefore alleges complainant in the present action is attempting to enjoin the United States of America, through its agent, from the exercise of one of its governmental functions. Hence this defendant denies the right of the complainant to any relief herein and alleges that this court has no jurisdiction to grant any of the relief prayed for in the original bill inasmuch as the relief sought is being sought against the United States of America.

### XV

Any and all allegations of the original bill not hereinbefore admitted, explained and denied are here and now fully and completely denied.

This defendant has filed as exhibits to the answer photostatic copies of certain letters, telegrams, and papers. The originals of any of these which are in the possession of complainant will be filed upon the hearing. Complainant is called upon to file the original of such of said letters, telegrams, or papers as are in its possession and upon its failure to do so the defendant will rely upon its copies thereof upon the hearing.

And now having fully answered complainant's bill, this defendant prays to be hence dismissed with its reasonable costs.

ROANE-ANDERSON COMPANY

By (signed) R. R. KRAMER, *Solicitor*.

KRAMER, McNABB & GREENWOOD,  
*Solicitors.*

STATE OF TENNESSEE,  
*County of Knox, ss;*

Personally appeared before me the undersigned authority, C. M. Winfrey, who made oath in due form of law that he was Assistant Manager of the Division of Concessions of Roane-Anderson Company in June, 1946, and in that position handled most of the negotiations between Roane-Anderson Company and Darling Stores Corporation, which resulted in the execution of the Concession Agreement dated July 9, 1946, between Taylor's Oak Ridge Corporation and Roane-Anderson Company, and that he later became Manager of the Rental Department of the Commercial Realty Division of Roane-Anderson Company, which latter position he holds at the present time.

Affiant further states that he has handled most of the correspondence and participated in nearly all of the personal conferences and interviews with reference not only to the execution of the original Concession Agreement, but also with reference to the extensions and modifications thereof, and that he is thoroughly familiar with all of the negotiations had between the Darling Stores Corporation and Taylor's Oak Ridge Corporation.

Affiant further states that he has read the foregoing answer, is familiar with the contents thereof, and that the statements contained therein are of his own knowledge true and correct.

(Signed) C. M. WINFREY.

Sworn to and subscribed before me this 4th day of February 1950.

(Signed) GRACE L. MEEK, *Notary Public*.

My commission expires July 16, 1950.

### EXHIBIT 8

(Referred to on p. 85)

FRANK W. WILSON, ATTORNEY

ARCADE BUILDING, OAK RIDGE, TENNESSEE

Subject: Oak Ridge Department Store Lease Investigation.

MARCH 14, 1950.

Honorable CHET HOLIFIELD,  
*Chairman, Subcommittee, Joint Committee on Atomic Energy,  
Congress of the United States.*

DEAR MR. HOLIFIELD: I wish to submit this written statement for consideration in connection with the investigation by this Subcommittee of the action of the

Atomic Energy Commission and the Roane-Anderson Company in granting a lease for the operation of a department store at Oak Ridge, Tennessee.

I understand that after my testimony and after my departure, statements were made by the counsel for Taylor's Department Store denying certain statements which I had made. In the first place, I am informed that my statement that it was a part of Taylor's record of performance that it had been necessary to sue them many times for the collection of ordinary debts was denied. It so happens that I have in my possession, and am filing as an exhibit to this statement, copies of two such suits. One was by a local window cleaner who was compelled to sue to collect his account, and another was by a jewelry operator who formerly conducted the jewelry department in Taylor's, and was compelled to replevin the fixtures for which he had paid Taylor's by monthly deductions: I specifically recall the Taylor's manager at Oak Ridge calling the New York office when I went to the store with the replevin papers, and placing me on the line with a person purporting to be the Darling Stores counsel, who attempted to advise me that we could not replevin the fixtures. The fixtures were successfully replevined. Instances of numerous other suits can be verified by the court records of the Trial Justice Court of Anderson County, and I shall be happy to provide certified copies of these suits and judgments if so requested. I recall the judge of the local court recently remarking to me that it was unusual that a store of the size of Taylor's had been sued so many times for unpaid bills.

In further rebuttal, a representative of the Darling Corporation denied my description of leasing arrangements between the main store and the departments. I am attaching herewith copies of correspondence carried on with Taylor's, which specifically cited and quoted from the contract which the departments were compelled to execute after having been induced into the store on a letter of intent which completely differed from the contract proposed by Taylor's. This correspondence will verify that the departments were compelled to turn in gross receipts daily to the main store, to be held for forty-five days and then returned after all deductions to the main store had been made, to pay for all fixtures and improvements of the premises over a period of twenty-four months, but title to the fixtures was to remain with Taylor's, and numerous other deductions and restrictions. For example, the total deductions by the main store from the electrical department amounted to 25% of gross sales by the department. In September and October 1946 the electrical department had gross sales of \$10,133.80, and Taylor's withheld \$2,534.17 as their rental and fees charged to the department. As a result, the department shortly went bankrupt. There have been at least three electrical-department operators at Taylor's, and none have been able to operate successfully, with the result that the last few months of Taylor's operation was without an electrical department. Similar conditions forced the shoe-repair department out, the toy department out, the sporting-goods department out, and others, none of which were successfully replaced.

As further illustration of the type of business operated by Taylor's and the ill-will created by the store, Taylor's promised employees overtime for working ten and twelve hours per day at the beginning of operations, and then refused to pay the promised overtime, with the result that the majority of the clerks terminated and spread a virtual boycott in Oak Ridge upon Taylor's. Taylor's failed and refused to take a part in the civic affairs or improvement of the community. For example, the business association put on a sales promotion program during Christmas of 1948, in which all Oak Ridge merchants agreed to participate, including Taylor's. After benefiting from the sales promotion and advertising done by the association and all other merchants, Taylor's refused to pay their portion of the costs as they had promised. They were the only merchants who thus failed to live up to their agreement.

Many other instances of abuse of customers, disregard of civic responsibility and other actions creating ill will among both merchants and residents of Oak Ridge could be cited. The amount of ill will and public resentment created by Taylor's during their operation can scarcely be exaggerated. Neither can its adverse effect upon the community be exaggerated. A strong and genuine department store is a major key to greatly increasing the total retail sales of all commercial business in Oak Ridge and is a necessary step toward placing the community upon a self-supporting basis.

Very truly yours,

FRANK W. WILSON.

OCTOBER 26, 1946.

Mr. F. J. SKURKA,  
*Taylor's, Inc.,*  
*Oak Ridge, Tennessee.*

DEAR SIR: As suggested by Mr. Levison, this is written to confirm our conversations of the past week and the recommendations that I made at that time.

On October 16, 1946, I was engaged by the heads of ten departments in Taylor's to assist in clearing up grievances and problems which they felt were affecting their businesses individually and the business of the store as a whole. After carefully going over the problems of each department, I was of the opinion that while some of the grievances were not real or substantial, several substantial complaints did exist.

With the knowledge that unfounded rumors, fears and anxieties can be equally as harmful to business as well-founded complaints, I presented the entire matter to you in our conference on October 18. In general the complaints were as follows:

1. A lack of an accounting was causing serious anxiety and uncertainty. After over a month and a half of operation, no one had an idea of where he stood. The apportioned costs of advertising, fixtures, cashiers, etc., were completely unknown. Since our conference some of the accountings have come in, but I understand that even these accountings are not complete and some of the costs still remain unknown.

2. The long period provided in the contract for withholding gross proceeds was seriously hampering operations. While it was true that the provisions of the contract in this respect were not strictly enforced by the main store and some departments had received funds back from the main store by way of paid outs or cash, there was no uniformity as to this and there was no uniform system of obtaining funds upon which they could base their business operations. This was requiring a double and some times triple investment of capital over that which had been anticipated by the departments, a curtailment or discouragement of stocking up by many departments, and a loss of cash purchase discounts by some departments.

3. The incurring of expenses by the main store which were chargeable to the department without consultation with or advice of the department. This was especially true in regard to advertisement expenses and fixture charges.

4. Uncertainty in several departments because of the unstable contract relations existing between the department and the main store. Changes negotiated in contracts at this office had been rejected by the New York office. There existed a general lack of confidence among all departments in the management, that is the entire management, not just the local management because they felt that the local management was not given sufficient authority by the New York offices to make binding commitments and because the commitments and assurances of the local management were too often not being backed up by the New York office.

5. A general feeling that the draft of the lease as submitted by the main store departed very materially from the proposals and letters of intent under which the departments came into the store. This was especially true in regard to the provisions for withholding gross receipts for so long a period and in regard to the numerous expenses tacked on as chargeable to the departments in addition to the percentage of gross rental. The departments entered the store and began operations under the provisions of the letters of intent, and the presentment of the contract in terms which varied so materially from the letters of intent was taking an unfair advantage of the situation.

6. A general feeling among the departments that they had entered a losing bargain under the extremely one-sided terms of the lease submitted by the main store.

7. Rumors of changes in business policies such as future refusal of C. O. D. acceptances by the main store, without a definite report pro or con from the management.

In the interest of clearing up the real and supposed complaints and grievances outlined above, I made three recommendations:

1. The primary management, office operations, bookkeeping and accounting should be conducted at the Oak Ridge office. This appears reasonable in view of the fact that Taylor's Oak Ridge Corporation was a Tennessee corporation organized solely for the purpose of operating a department store in Oak Ridge. This would enable direct negotiation and immediate settlement of problems, thereby avoiding the uncertainties and delays of absentee management. The doing of the primary bookkeeping and accounting at this office, I felt, would enable the main store to greatly speed up the accounting and return of funds to the depart-

ments. It was also my understanding that the keeping of records locally would be necessary to satisfy the terms of the agreement between the main store and the government. You explained that the present method of handling the office work through the New York offices was more economical but that you would investigate the expense and possibility of conducting the primary operations locally.

2. A definite plan for return of funds at least weekly to the departments should be adopted immediately, and this concession should be granted even to the departments who had executed contracts for return of funds on a monthly basis. Realizing that many expenses chargeable to the departments accrued on a monthly basis and that therefore a final accounting would necessarily have to be on a monthly basis, if the main store could not see fit to make a weekly accounting and return of gross receipts. I suggested two plans whereby the main store might make this concession and still adequately protect its interests. One plan was that 15%, 20%, or 25% of the gross receipts be withheld by the main store in weekly settlements to assure adequate funds in their hands to cover all obligations due by the departments at the end of the month. The other plan was that the departments could deposit a bond to assure the main store of receiving all amounts due on any final accounting and then weekly settlements be made of gross receipts less paid cuts and rental. In this connection you stated that as a matter of policy the main store already made advancements to the departments, but that the main store would agree to provide in the contracts a definite plan for weekly return of funds to the departments.

3. Direct negotiation of individual problems with each department, including the execution of contracts remaining unexecuted either because unsigned or because materially altered in New York after execution by the department. Some plan for closer cooperation between the main store and the departments should be worked out, so that the departments would either have some voice in the incurring of expenses chargeable to the department or that they might have a rough approximation in advance of what their proportionate share of such expenses would be.

Yours very truly,

LOWE & WILSON,  
FRANK W. WILSON.

SPEARS ELECTRIC SUPPLY

P. O. Box 115, Oak Ridge, Tennessee

AUGUST 23, 1946.

Mr. F. J. SKURKA,  
Taylor's, Inc.  
Oak Ridge, Tennessee.

DEAR SIR: This is written in regard to the proposed contract to be entered into by Taylor's Oak Ridge Corporation and myself, pertaining to the operation of the electrical-appliance department in Taylor's. I feel that the draft of the contract submitted by you varies in several important respects from our previous understandings, as evidenced in my letter dated July 18, 1946, and your response of July 27, 1946, and other discussions had between us. In the interest of devising a more satisfactory agreement and one more in line with our general understanding, I wish to submit for your consideration the following changes to the draft as submitted by you. All references are to the numbered paragraphs of the draft.

1. The first paragraph provides that sales may only be for cash. To limit the sale of the more expensive electrical appliances to cash sales would unduly restrict sales. General Electric provides a plan whereby they finance credit purchases. To permit operation of this plan would increase rather than decrease the immediate gross sales intake.

2. The thirteenth paragraph permits the Main Store to terminate the agreement should a default on the part of the Department, of which it has been duly notified, not be rectified within ten days. No reciprocal right of termination is granted the Department. The thirteenth paragraph should either be eliminated or made reciprocal.

3. The sixteenth paragraph gives the Main Store the option of terminating the agreement in event of enumerated acts of insolvency upon the part of the Department. A reciprocal right should be granted the Department in event of insolvency

upon the part of the Main Store. In view of the fact that gross sales are deposited with the Main Store, the Department should not be required to run the risk of having to continue such deposits in event of insolvency of the Main Store and thereby risk becoming general creditors as to such deposits. To provide for this, the fifteenth paragraph, which has been eliminated in the draft, should be restored.

4. It was our understanding to have a permanent window display and window display service. No assurance of any window display is given by the draft. The seventeenth paragraph, which has been eliminated, would provide assurance of window displays while leaving overall control of window displays with the Main Store. This paragraph should be restored.

5. The twentieth paragraph provides for the exclusive use of the name Taylor's. The undersigned has established considerable business good will in past business operations on the area and should be permitted to capitalize upon this for the benefit of both the Main Store and the Department. Permission to announce and use the department manager's name, as manager, should be provided for.

6. The twenty-sixth paragraph provides for the remitting by the Main Store of gross receipts, after proper deductions, by the fifteenth day following the end of the fiscal month. This would require operation by the Department for a minimum of forty-five days without one cent in the way of return and in effect would be a compulsory loan of a sizable fund to the Main Store for its use and benefit over an unjustifiably long period of time, while at the same time severely penalizing and hamstringing the department. No such long period of retention of gross receipts is in any way needed or justified. The last sentence of the eighth paragraph originally provided for a daily return of receipts, but this was eliminated in the draft. A daily remittance by the Main Store to the Department should be restored as a one day retention permits the necessary accounting by the Main Store. At the very most the retention of gross receipts for a maximum of a week would permit all necessary accounting, with remittance being made not later than the third day of the following week. While being retained, gross receipts should be held in a separate fund and not mixed with the Main Store's general funds.

7. The thirty-second paragraph requires the Main Store to install appropriate fixtures but the cost to be borne by the Department in twenty-four installments. The fixtures are to remain the property of the Main Store. This places the Department in the position of purchasing the fixtures, yet obtaining no title. The installment payments are therefore in effect, a devious manner of increasing the basic ten percent of gross agreement. By rights, payment for fixtures should be considered as included in the ten percent of gross sales rental, but at the very least, title to the removable fixtures should pass to the Department upon payment of the total cost of installation.

8. The first part of the thirty-third paragraph by placing the entire control of employees etc. in the Main Store, in effect, eliminates the undersigned from all management and control of the Department. This paragraph should be eliminated and the ninth paragraph, originally eliminated, should be restored. This would place the department head in control of management but subject to approval of the Main Store.

The second part of the thirty-third paragraph provides for the Department's paying a proportionate share of the cashier's salary. The cashier is solely responsible to and employed by the Main Store and to shift his salary to the Department by this means is to increase the ten percent gross agreement. The original understanding was that the ten percent would cover all these incidental items.

The third part of the thirty-third paragraph, relating to advertising, should be eliminated. This provision of the draft amends the fifth paragraph to such an extent that the entire control over advertising would be placed in the Main Store, with the Main Store having the right to spend an unlimited amount for advertising and charge it to the Department. The fifth paragraph fully assures adequate advertising and gives the Main Store adequate control over the matter. Moreover the two percent of gross required to be spent for advertising by the fifth paragraph is excessive. No more than one percent should be required as the Department's contribution.

9. The thirty-fourth paragraph permits the management in its sole discretion to permit direct competition in the same line by other departments. This is grossly unfair to the contracting Department. Adequate safeguards are included elsewhere in the agreement to assure the Main Store of having the Department carry a full and complete line. Some incidental competition and overlapping among departments is doubtless unavoidable, but the first sentence of the thirty-fourth paragraph is adequate to cover this and the remainder should be eliminated.

The provision stricken from the first paragraph which reads "The Main Store will not permit the conduct of such business in its store by any other person, firm, or corporation," should be restored.

Yours very truly,

EVA WATKINS SPEARS,  
*Spears Electric Supply.*

BOND

\$3.00 cash deposit.

### REPLEVIN—TRIAL JUSTICE COURT

THE STATE OF TENNESSEE, ANDERSON COUNTY

I, Royal Jewelers, plaintiff(s), plaintiff's agent, or attorney, do hereby make oath that according to the affiant's information and belief, the plaintiff, Royal Jewelers, is entitled to the possession of the property proposed to be repleveid, which property is described as follows, to-wit: Nine glass show cases each approximately three feet high and five feet long, located in the jewelry department of Taylor's Department Store, Oak Ridge, Anderson County, Tennessee, including lighting fixtures within the said cases.

That Taylor's Oak Ridge Corporation has seized said property or detains the same and that said property was not subject to such seizure, detention, or execution, wherefore plaintiff demands the writ of replevin.

Sworn to and subscribed before me this the 28th day of February 1948.

Deputy Clerk of Trial Justice Court.

BOND

We, Royal Jewelers, Principal, and Steuart Seagull, Surety, do hereby bind ourselves, our heirs and assigns to Taylor's Oak Ridge Corporation, defendant(s), in the penal sum of Nine Hundred Dollars, being double the value of the property above described, this obligation to be void, should the plaintiff(s) abide by and perform the judgment of the Court in the premises.

This 28th day of February 1948.

Approved:

\_\_\_\_\_, Principal.  
\_\_\_\_\_, Surety.

\_\_\_\_\_, Judge, Clerk, Sheriff.

### WRIT OF REPLEVIN

STATE OF TENNESSEE,  
County of Anderson.

*To the Sheriff or any Constable of said County:*

Summon Taylors Oak Ridge Corporation, defendant(s), to appear before the Trial Justice Court of Anderson County, Tennessee, to be held at the Courtrooms of said Court in the town of Clinton—Oak Ridge on the 5th day of March 1948,

at 2 o'clock P. M., to answer the complaint of Royal Jewelers, for unlawfully taking out of his possession and detaining from him the property of the said plaintiff(s), as follows: Nine glass show cases, each approximately three feet high and five feet long, located in the jewelry department of Taylor's Department Store, Oak Ridge, Anderson County, Tennessee, including lighting fixtures within the said cases.

And I also command you to take said property out of the possession of the said Taylor's Oak Ridge Corporation, defendant(s), and deliver the same to the said Royal Jewelers, plaintiff(s), he having given bond and security as required by law.

This 28th day of February 1948.

By \_\_\_\_\_, Judge.  
 \_\_\_\_\_, Deputy Clerk  
 Trial Justice Court.

(The following letter was received after the hearing and is incorporated herein:)

OAK RIDGE, TENN., March 18, 1950.

Congressman CHET HOLIFIELD,  
 Senate Office Building, Washington, D. C.

DEAR SIR: I have some further comment regarding the Taylor department store lease matter as follows:

The question remains, Why was the lease given to a firm that offered a far lower rental than we did, that offered less services in its proposal than we did, that had no experience in operating another store other than its present one, that was not the tenant in possession as we were, and that does one-half the business per capita in its trade area that we did in our trade area. Roane Anderson denies that it acted in a vindictive and malicious manner against Taylors. If this was not the reason for their decision, what was the reason?

The falaciousness and ridiculousness of the University of Tennessee retail survey of Oak Ridge quoted by Wilson at your hearing is very easily proven when you take just one of the percentages that Wilson referred to. He stated that Taylors did only 5 percent of the potential men's business in Oak Ridge. The 1949 sales of men's clothing and furnishings in the United States was \$17 per capita. The 1949 gross sales of the men's department in Taylors were approximately \$150,000, which represents, \$5 per capita of Oak Ridge population. If as stated, the men's department only did 5 percent of the business, that would represent a total sale in Oak Ridge of \$100 per capita for men's wear or about six times the national average. As Oak Ridge is a small town, the matter of dress is not important and it can easily be determined that the potential would be nearer the national average and not six times as great. All the figures quoted in this report are likewise subject to grave doubt as to their reliability. In addition, this witness, Wilson, represented the Oak Ridge newspaper and I question the moral right of this paper to take an active part in fighting against Taylors as I understand they are receiving a subsidy from the AEC.

Taylors operated a well-rounded department store containing many more departments than is usually found in a city of 30,000. Actual drop in population from 1946 figures at time we started at Taylors store to now is 50 percent and our sales dropped only 30 percent. We certainly did more than hold our own considering the drop in population.

I feel that you and your committee are fully convinced of the justice of our case and that the figures themselves show the truth of the fact that our bid was higher and a more lucrative arrangement for the Government than that of Lovemans. Also please remember that Roane Anderson could not produce at your hearing one letter from them to Taylors complaining about the Taylor operation.

I want to thank you and your colleagues, Congressman Elston and Congressman Kilday, for conducting a very fair hearing in regard to the loss of the Taylor Department Store lease. In view of the bad faith and poor judgment shown by Roane Anderson and the Atomic Energy Commission from beginning to end of the negotiations regarding the lease, I respectfully ask that your committee make a recommendation that any lease granted to Lovemans be canceled and the whole matter be thrown open to renegotiation with Taylors.

Yours very truly,

STANLEY LEVITT.

# CONFIRMATION OF THOMAS KEITH GLENNAN TO BE A MEMBER OF THE ATOMIC ENERGY COMMISSION

WEDNESDAY, AUGUST 16, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met at 10:30 a. m., pursuant to call, in room 48-G of the Capitol, Senator Brien McMahon (chairman of the joint committee) presiding.

Present: Senators McMahon (chairman), Hickenlooper, Millikin, Knowland, Bricker; and Representatives Durham (vice chairman), Price, and Elston.

The CHAIRMAN. Gentlemen, the committee will be in order.

Gentlemen, we have with us this morning Dr. Thomas Keith Glennan. Dr. Glennan has been nominated by the President for the vacancy on the Atomic Energy Commission, and I believe you have before you, gentlemen of the committee, a list of his experience and directorships.

Now, Dr. Glennan, will you make a brief statement about your past work and education?

## STATEMENT OF DR. THOMAS KEITH GLENNAN, CLEVELAND HEIGHTS 6, OHIO

Dr. GLENNAN. I think, Senator McMahon, it is set forth pretty accurately on this paper. I would be glad to answer any specific questions that you might have.

I would say only that my activities for the past 20 years have been principally in administrative and management or executive work in enterprises which have been based largely on science and engineering.

The CHAIRMAN. From 1927 to 1935, when you started with Electrical Research Products, were you in the laboratory or in the business end?

Dr. GLENNAN. I was in the business field almost entirely. As a matter of fact, a couple of those years were spent abroad in London and on the Continent, and that was in the installation and operation and servicing of sound motion picture equipment in the early days of sound motion pictures.

The CHAIRMAN. That is what led into the active participation in the motion-picture business? Was that in California?

Dr. GLENNAN. That is quite right, sir.

Senator KNOWLAND. Mr. Chairman, I suggest that the memorandum which we have before us be included as a part of the record at this point, if that is agreeable.

The CHAIRMAN. That will be done.

(The statement of qualifications referred to follows:)

## THOMAS KEITH GLENNAN (EDUCATOR)

Born: Enderlin, N. Dak.; September 8, 1905.

Address: Home, 2530 Fairmount Boulevard, Cleveland Heights 6, Ohio.

## Degrees:

1927: Bachelor of science, Yale University.

1947: Doctor of science, Clarkson College.

1950: Doctor of science, Oberlin College.

## Experience:

1927-35: With Electrical Research Products, Inc.

1935-39: Operations manager, Paramount Pictures, Inc.

1939-41: Studio manager.

1941-42: Studio manager, Samuel Goldwyn Studios.

1942-45: Director, United States Navy Underwater Sound Laboratory of Columbia University.

1945-47: Executive, Ansco (General Aniline & Film Co.), Binghamton, N. Y.

Since 1947: President, Case Institute of Technology, Cleveland, Ohio.

## Directorships:

Deputy Chairman of Committee on Ordnance, Research and Development Board, National Military Establishment.

Member, board of directors, Cleveland Electric Illuminating Co.

Member, board of directors, Equity Savings & Loan Co. of Cleveland.

Member, board of trustees, Cleveland Clinic Foundation.

Awards: Medal of Merit by United States Government for services at Underwater Sound Laboratory.

The CHAIRMAN. This Directorship of the United States Navy Underwater Sound Laboratory of Columbia University; I believe that is at New London, Conn.?

Dr. GLENNAN. That is quite right.

The CHAIRMAN. And you spent 3 years there?

Dr. GLENNAN. That is right.

The CHAIRMAN. Did that require active scientific work, or was that in a managerial capacity?

Dr. GLENNAN. I would say it was a combination of both. Perhaps I can best describe it as requiring intuitive scientific or engineering judgment. That is a round term, but it is a very accurate one in a situation such as that.

The CHAIRMAN. And from 1945 to 1947, I notice you were an executive in General Aniline & Film Co. What position did you fill?

Dr. GLENNAN. I was assistant production manager at the Ansco Division in Binghamton for about 6 months, and then became manager of administrative services, which included quite a variety of the engineering, service and industrial relations functions.

The CHAIRMAN. Then I notice you went to Case.

Dr. GLENNAN. That is right.

The CHAIRMAN. I have no other questions.

Senator BRICKER. I would like to say for the record that when I heard of Dr. Glennan's appointment, I was pleased, coming from my State. He has been a resident there for some little time.

I called some of my friends in Ohio, members of the board of Case, whom I happened to know well, as the doctor knows. I got two reactions. The first was that they were sorry to lose him at Case; and the second, that they were glad that the Atomic Energy Commission was getting a man of his sturdy Americanism, patriotism, and ability.

So I just wanted that to go in the record as a matter of approval of men who have known you and worked with you and at one time employed you.

The CHAIRMAN. I think that is a very fine tribute, and I am delighted to hear it, Senator.

With the appointment of Dr. Glennan, the Commission comes up to full strength, and I think we will be in excellent shape as far as the Commission is concerned, and I am quite happy about it.

Dr. GLENNAN. Thank you, sir.

I should tell you, Senator McMahon, that I will find it difficult if not impossible to come to Washington until October 1, until I get this school launched on another school year and wind up some of my family affairs in Cleveland. I intend to be here October 1, if confirmed.

The CHAIRMAN. If we confirm you, as I assume the Senate will, you will have an opportunity in the interim, I assume, to make some trips in here and take home some work, in which you can familiarize yourself with this work.

Dr. GLENNAN. I suspect the midnight oil will be burned.

The CHAIRMAN. If there are no further questions, Doctor, thank you very much, indeed. We will be reporting the nomination to the Senate.

Senator KNOWLAND. There is just one question that I would like to ask.

I subscribe to what the Senator has said. All of the reports I have had are of the very high standing of the doctor.

On this work that you were doing from 1942 to 1945, with the United States Navy Underwater Sound Laboratory at Columbia, just as a matter of information, did that job require the handling of classified information?

Dr. GLENNAN. Very much so; yes, sir.

Senator KNOWLAND. Thank you.

The CHAIRMAN. Thank you, Doctor.

(Thereupon, at 10:45, the hearing was adjourned.)

REPRODUCED FROM THE  
OFFICIAL RECORDS OF THE  
JOINT COMMITTEE ON ATOMIC ENERGY

# HANFORD SCHOOL FACILITIES

FRIDAY, MARCH 3, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
SUBCOMMITTEE ON HANFORD SCHOOL FACILITIES,  
*Washington, D. C.*

The subcommittee met, pursuant to call, at 3:45 p. m., in room 48-G, the Capitol, the Honorable Henry M. Jackson (chairman of the subcommittee) presiding.

Present: Representatives Jackson (chairman of the subcommittee) and Cole.

Also present: Clarence Ohlke, Carleton Shugg, and Mr. Harold L. Price, Atomic Energy Commission; E. S. Black, superintendent of Kennewick school district, on behalf of the following school districts: Benton City, Grandview, Kiona, Pasco, Prosser, and Sunnyside; representing the committee staff: William L. Borden, executive director, and Edward Heller.

Mr. JACKSON. The committee will come to order.

When we completed the hearings last fall, I think it was quite clear that there was definite need for some assistance to the public schools in the Hanford area. The committee took a considerable amount of testimony, and I believe a formula was worked out that seemed pretty satisfactory.

As a result of that hearing, the subcommittee was advised that the Commission was going to request funds of the Bureau of the Budget in connection with their budget for the fiscal year 1951 to take care of the urgent school situation in the area.

I understand the request was made of the Bureau of the Budget. Subsequently, the Bureau of the Budget turned down this item.

The reason apparently given at the time was that there was pending in the House a bill which had previously passed the Senate, providing for assistance in those areas in which there was a burdensome condition resulting from Federal activity. That bill was brought up in the House in the closing days of the session, was objected to, and as a result, no action was taken.

It is my understanding that the Bureau of the Budget apparently turned down the request on the assumption that this bill would pass and that it would be better to handle this problem by general legislation that would be applicable to all departments of the Government and that it should not be the responsibility of the Commission alone.

I think there is general agreement, certainly in the subcommittee, that it ought to be handled that way. The only problem is, What are you going to do if the legislation is not enacted?

We have with us today Mr. Black, who is here at my request, to outline to the committee for the record the situation as it exists at

the moment in the area, and more particularly with reference to the Kennewick school system.

Mr. COLE. May we have the amount of money requested from the Bureau of the Budget that was turned down?

Mr. SHUGG. \$3,210,698.

Mr. COLE. Was that exclusively for operation or for capital?

Mr. SHUGG. That was capital expenditure for construction of the permanent facilities.

Mr. COLE. All of the \$3,210,698 was for capital?

Mr. SHUGG. Yes, sir. We have in that same budget the smaller sum, actually \$36,000, for the estimated need to cover the \$240 per year for first-year students.

Mr. COLE. That was approved by the Budget?

Mr. SHUGG. That is still in there.

Mr. COLE. At least, it wasn't rejected by the Budget.

Mr. JACKSON. How much are the temporary funds you requested annually for temporary purposes?

Mr. SHUGG. That is based on the estimated number of new first-year students. In the 1951 budget the amount is \$36,000.

Mr. JACKSON. Mr. Shugg, did my opening statement substantially describe the situation as it exists now? I was going to call on Mr. Black to explain the problem.

Mr. SHUGG. Yes, sir, it does.

Mr. JACKSON. If there is no objection, we will hear from Mr. Black at this time.

First, Mr. Black, we don't want to be repetitious here this afternoon. The general situation, as it existed up until September or August, when we held the last hearing, is pretty well established. I think it would be helpful to the committee if you could advise us what the current situation is now and what you anticipate the situation to be next September, assuming now, as I was advised recently, that there will be at Hanford, I think, some 10,000 construction workers, new workers, in September, with a peak of about 13,000 in January, and that is the current program.

#### STATEMENT OF E. S. BLACK

Mr. BLACK. Mr. Chairman, we are not in a position to cope with any new ones. We have more than we can cope with, with what we have. We have a building, which was built in 1936, for a junior-senior high-school building, built to house 500 students. We now have operating in that building and surrounding makeshifts about 1,290 students enrolled in the junior-senior high organization, and the move-up alone from the lower, coupled with the graduations, brings the two organizations to over 1,500 in September.

We are so far beyond our ability to handle it that there isn't anything we can do about it. We don't like to get into these situations, but we are there. It isn't exactly our fault, and we have made every effort possible to try and solve it for the good of the youth of our community and our Nation.

We brought the problem up, as you have recited, where it is, and the money was dropped out of the budget. We do not feel, from talking to a number of Congressmen, that over-all legislation will be in time to help us. It throws us in this position: In September, as

far as any new students are concerned, the only thing we can do is fulfill the law, enroll them, and tell them we will have to notify them when and if facilities are available.

Then we would notify the Atomic Energy at Richland, and if we can bus them in to the schools, they can do that for the good of their children. That is a much more expensive proposition than to educate them in Kennewick. The question has been raised here on first year students that brings up another question.

When Hanford increases, we increase. When they terminate, we increase, for the simple reason that there are rules and regulations there that children can only live on the project so long a time after termination. They are entitled to a certain amount of unemployment pay and social security. They stay in the State and collect it in our area.

Last spring, when the big termination took place, we drew the terminated people. We have many people in our community going to school, who are terminees, who were terminated prior to the entrance of our school year. So we are discussing that problem not with the Richland officials regarding the acceptance of those terminees who moved into our area to finish off the collection of their funds, and I am sure it will bring up quite a problem.

Of course, our main difficulty of my school district and the other five school districts is the matter of facilities.

Mr. JACKSON. How many children would be denied an opportunity to go to school if no assistance is provided? That is, bearing in mind that which is now in the budget—namely, \$36,000.

Mr. BLACK. All I can speak for is my district, and without anything new, we would probably be faced with not having at all facilities for from three to four hundred, and if there are new ones, I don't know what we would be faced with.

Mr. JACKSON. That is, without any increase, you would be faced with an impossible situation with reference to three or four hundred students?

Mr. BLACK. Junior-senior high school.

Mr. JACKSON. That is in your area?

Mr. BLACK. Yes, sir.

Mr. JACKSON. You don't know what the situation is in the other districts?

Mr. BLACK. No. The only thing I can say is Kennewick has gone ahead, we have an architect, we have plans and specifications for a high school, the bidding is being done now. The architect's estimate on that building is \$2,200,000 for 800 students.

The way building has been going in the State recently, probably a decided saving could be made over that figure. But at the present time with all funds that we have anywhere near us, we have a total of \$808,000.

Mr. JACKSON. The amount needed is how much?

Mr. BLACK. According to the architect's estimate, it is \$2,200,000. It would be according to the bid when it came in.

Mr. JACKSON. That is the shortage?

Mr. BLACK. Yes, that building would be ready to start construction on within 5 weeks if we had funds, and we could meet the bottleneck and carry on and save these problems. But the funds aren't available.

Mr. JACKSON. Will that school be ready next fall?

Mr. BLACK. Yes, sir.

Mr. JACKSON. Can anyone answer the question as to, approximately at least, the number of students that could be expected with a construction force of 10,000 workers by next fall? Is there any rule of thumb or any past history to go by?

Mr. SHUGG. Not that I know of, Mr. Chairman. Of course, the bulk of that construction camp is now empty, and again it remains to be seen of the new force picked up how many take up trailer space or barrack space in the present camp, where there is a school for them, or how many elect to reside outside.

Mr. COLE. How long will they be on, that additional 10,000?

Mr. JACKSON. It will reach a peak, I understand from the information given by Mr. Williams, of 13,000 in January, and then it will taper off—January 1951, will be the peak—and it will taper off gradually throughout 1951 and terminate in the early part of 1952.

Mr. SHUGG. That is a good estimate.

Mr. JACKSON. No one can predict as to the exact number of workers that will be on the project?

Mr. SHUGG. All we can say is there will be a substantial force by next fall at the time school opens.

Mr. COLE. What fraction of them will live on the station?

Mr. SHUGG. That is the difficult thing to guess, sir. There is plenty of room up in the camp now.

Mr. JACKSON. That is, for them to live, but how many more students could they take in the Richland School?

Mr. SHUGG. They are obligated, I believe, to take care of all of the children who come in with parents to live in the camp itself.

Mr. COLE. If there is room enough in the camp to take care of these new temporary construction employees, the problem of additional children will not face Mr. Black's district nor any of the outlying districts. That will be a problem for the Commission at Richland; is that correct?

Mr. SHUGG. The bulk of it will be, though I believe, as Mr. Black has said, that an unknown number of those new workers will elect to live out of Richland, out in Kennewick and the outlying towns, regardless of space being available in the camp.

Mr. COLE. But not regardless of space being available in these other towns. Is there space available for them in the other towns?

Mr. BLACK. There is housing but not schools.

Mr. COLE. I am talking about housing.

Mr. JACKSON. As I understand the testimony, even if you didn't bring in any more workers, next fall there will be turned away some 400 students approximately, without any increase in the force at Hanford, not a question of turning them away, but you will not have the facilities; is that right?

Mr. BLACK. That is right.

Mr. COLE. Where are they coming from?

Mr. BLACK. I would say we have an increase of about 300 percent due entirely to the Hanford project.

Mr. COLE. Let me ask you differently. Have you had to turn away any school children yet?

Mr. BLACK. We have not.

Mr. COLE. You expect that next fall you will have to turn away three to four hundred?

Mr. BLACK. That is right.

Mr. COLE. And there will be that many, not taking into consideration the additional number of construction employees?

Mr. BLACK. That is right.

Mr. COLE. Does that mean that the normal operation at Hanford is going to be increased to the extent that it will provide 300 more children for you to take care of?

Mr. BLACK. They wouldn't have to increase any operation to increase us.

Mr. COLE. You haven't turned anybody back yet, you are not taking into consideration added employees at this atomic project, and yet you say you expect to turn 300 away.

Mr. JACKSON. The answer, I think, is that our school population throughout the country is going up and the number that you have, roughly 8,000, of production employees at Hanford and children in schools now, and they will have more children in schools, not all of them are in this area, but some of them, and a portion of this 400 will be attributable to Hanford but not all of the 400.

Mr. BLACK. Our lower grades represent 400 enrollment per grade, and we graduated last year 103 seniors. That influx is into junior high now, and we are graduating small classes, and those big classes are coming in.

Mr. COLE. It isn't new children coming into the school district, it isn't youngsters coming into the first grade, but the large crowd of war children moving into high school?

Mr. BLACK. That is right.

Mr. COLE. And is it that large?

Mr. BLACK. About 300.

Mr. COLE. About 25 percent increase over what you have now?

Mr. BLACK. We are graduating a class of a hundred and we have classes of 400 taking their place.

Mr. JACKSON. How many in the school system?

Mr. BLACK. Thirty-three hundred.

Mr. COLE. In the high school?

Mr. BLACK. One thousand two hundred and eighty we now have enrolled, and we will have approximately a 200 increase in the junior-senior high organization.

Mr. JACKSON. How many additional students can be accommodated at Richland at the present time?

Mr. BLACK. The past experience has been that the schools outside of the district have handled about 60 percent as many children as they have handled in Richland, and that is pay-roll attachees only, not including the service workers.

Mr. JACKSON. You mean the indirect?

Mr. BLACK. The indirect people.

Mr. JACKSON. Indirect workers?

Mr. BLACK. At Richland they handled production workers plus service people. Outside we only count those that are directly connected with production pay roll.

Mr. COLE. I still don't understand why the added increase. These children coming into your high school in the fall are not wartime children.

Mr. BLACK. They are mostly brought in by production workers.

Mr. COLE. Where are they now?

Mr. BLACK. Originally we only had an 800 enrollment, and we now have 3,300. Most of the people in Richland brought in their young children, and they are moving up.

Mr. JACKSON. Wouldn't the increase be in the lower grades? In other words, these 8,000 employees that work at Hanford are subject to the same general trend as that throughout the country—that is, upward, as far as school population is concerned. Isn't that the point? As Mr. Cole mentioned, I don't see how it affects the high school population, because it will be possibly 5 or 6 years before that.

Mr. BLACK. We are already handling around 1,700 AEC children now that are chargeable to them for some type or other for construction. When they originally came in there, we did everything to meet it, but can't go that far. If there is any increase, it will be added to that.

Mr. JACKSON. The increase, as far as you are concerned, won't make any difference whether it is AEC or non-AEC. The point is you have been carrying this heavy AEC load, and this new influx is the thing that is really going to put you into what is almost an impossible situation, not taking into consideration that which may or may not be in store for you when the construction force is brought into the area.

Of course, it might be said, too, that you have a substantial part of that construction force there now, a lot of people in the area that are drawing unemployment compensation that are waiting to go back to work, so it wouldn't be fair to say that you have only, say, 2,000 people working at Hanford today on construction, you are going to have 10,000 in September, that there will be 8,000 new workers coming into the area. We don't know how many.

Mr. BLACK. The last employment service report was there were still 4,000 unemployed in the area.

Mr. JACKSON. There will be some increase, but I don't think it will be in direct relation to the number of projected employees on the construction work. That is probably correct, isn't it, Mr. Shugg? Assuming that these people are there, I assume that is a fair assumption.

Mr. SHUGG. I certainly believe that a good many of the people that are there and not employed now are waiting for construction to pick up and probably a good many of those, if they are living outside now, will continue to live outside and then, as I say, it is only a guess as to the new people who come there as to what proportion will go into the camp and what proportion will elect to go to the outside towns.

Mr. JACKSON. I would like to say I think the Commission has done everything possible to take care of this matter that has been presented to the Bureau of the Budget, and the bureau has turned it down. I think, however, that the Bureau of the Budget should be apprised by this committee of what the facts are, and it is going to be their responsibility, if there is a real problem next fall.

Mr. COLE. Did the Budget Bureau have any criticism of the formula by which this \$3,210,000 was determined?

Mr. SHUGG. Not that I heard.

Mr. JACKSON. Am I correct in understanding that the main reason given for the denial of the request was the assumption that this legislation would pass or that it should be handled by general legislation pending in the Congress?

Mr. SHUGG. I am not sure of the particular bill, whether they based their case on any one bill, but their over-all reason for deleting it, as I understand it, was that they did not feel it would be in keeping with over-all executive department policy that this permanent construction should be financed by a particular agency.

Mr. COLE. They didn't question the authority of the Commission to spend this money, did they?

Mr. SHUGG. No, sir; I don't think that came up.

Mr. JACKSON. I think they should have looked a little closer and checked the appropriation bill for the Department of the Interior, and they would have found in there two schools that are being built, permanent construction, in the Columbia Basin area.

The committee will present a report to the full committee, with the request that a letter be sent to the Bureau of the Budget outlining the situation as it was contemplated at the last meeting of the subcommittee in August, as it exists now, and what the addition will be in the Hanford School area beginning in September of this year.

(Whereupon, at 4:20 p. m., the hearing was adjourned.)

# CONFIRMATION OF THOMAS E. MURRAY TO BE A MEMBER OF THE ATOMIC ENERGY COMMISSION

---

WEDNESDAY, MARCH 29, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met at 10:30 a. m., pursuant to call, in room 48-G, the Capitol, Senator Brien McMahon (chairman), presiding.

Present: Senators McMahon and Bricker, and Representative Price.

The CHAIRMAN. The joint committee will be in order.

We are meeting this morning to consider the nomination of Mr. Thomas E. Murray, of New York, to be a member of the Atomic Energy Commission for the term expiring June 30, 1950.

Mr. Murray, will you come forward, please.

## STATEMENT OF THOMAS E. MURRAY, OF NEW YORK, NOMINATED TO BE A MEMBER OF THE ATOMIC ENERGY COMMISSION

The CHAIRMAN. Mr. Murray, will you give your name to the stenographer, please, in full?

Mr. MURRAY. Thomas Edward Murray.

The CHAIRMAN. And you reside at 686 Park Avenue, New York City?

Mr. MURRAY. That is right.

The CHAIRMAN. Mr. Murray, the President, as is required of him under the law, has submitted to us a biographical sketch which is in the hands of the committee.

Mr. Stenographer, I wish you would insert it at this point in the record.

(The biographical sketch of Mr. Murray follows:)

### THOMAS E. MURRAY

Residence: 686 Park Avenue, New York City.

Born: June 20, 1891, Albany, N. Y.

Parents: Thomas E. Murray and Catherine Bradley Murray.

Education:

Our Lady of Victory School, Brooklyn, N. Y.

St. Francis Xavier's Grammar School, New York City.

St. Francis Xavier's High School, New York City.

Yale University, Sheffield Scientific School with bachelor of science degree in mechanical engineering, 1911.

**Professional memberships:**

Professional engineer's license, 1930.  
 Member of the American Society of Mechanical Engineers, 1932.  
 Fellow of the American Society of Mechanical Engineers, 1947.  
 Fellow of the American Institute of Electrical Engineers, 1933.

**Honorary degrees:**

St. John's University, 1937.  
 Georgetown University, 1939.  
 Fordham University, 1940.

**Experience:**

1907-11: During college course worked during summer with Consolidated Edison Co.  
 1911-12: Worked as engineer with Consolidated Edison Co.  
 1912-15: Served in various capacities as research engineer with Metropolitan Engineering Co., founded by his father in 1900.  
 1915-49: President of Metropolitan Engineering Co., until its merger with Murray Manufacturing Corp. in October 1949.  
 1932-40: Sole Federal receiver of the \$500,000,000 properties of the Interborough Rapid Transit. His term of office was not marred by a single serious labor difficulty.  
 1941: Impartial arbitrator in settling the important Bell Aircraft labor controversy.

**Experience:**

1942-49: President of Murray Manufacturing Corp., founded in 1942. Resigned as president in October 1949.  
 1943: Won a special award from the United States Government for inventing new method of manufacturing shells which saved tons of strategic materials and accounted for 25 percent of all World War II trench mortar shell production.  
 1946: Appointed by President Truman as first impartial chairman of the United Mine Workers welfare and retirement fund.  
 1947:

Also served as impartial representative of the 1947 United Mine Workers welfare and retirement fund.

Granted approximately 200 patents in electrical and welding research.

**Directorships:**

Director of American Radiator and Standard Sanitary Co., 1930-39.  
 Director of Bank of New York and Fifth Avenue Bank, 1933 to date.  
 Director and member of finance committee of Chrysler Corp., 1935 to date.  
 Trustee, Manhattanville College, 1945 to date.

**Family:** Married Marie Brady of Brooklyn, January 4, 1917. Eleven children: Thomas E. Murray, Jr., Mrs. Basil Harris, Jr., James B., Mr. D. Bradley, S. J., Paul, Anne, Jane, Frank, Mr. Joseph G., S. J., Peter, and Margot.

The CHAIRMAN. Mr. Murray, I presume that you have given some thought and consideration to the Commission and to its activities.

Mr. MURRAY. I have.

The CHAIRMAN. Your educational background and experience, I notice, has been in the engineering field for the most part.

Mr. MURRAY. It has been; yes, sir.

The CHAIRMAN. Would you wish to elaborate for us, please, on the engineering work in which you have been engaged?

Mr. MURRAY. You mean other than as covered by this particular record here?

The CHAIRMAN. Yes, if you would. I notice in 1943 you won a special award for inventing a new method of manufacturing shells. Would you care to go into that with us?

Mr. MURRAY. Well, during the beginning of the last war, the Government was facing quite a problem in the manufacture of all kinds of shells, particularly trench mortar shells. There was a great shortage of equipment for making shells out of forgings, and the problem was presented to me by General Campbell, who later became Chief of

Ordinance, to see if we could get up a method to do away with forging.

So I invented a process where rolled sheet could be used and formed up in two halves and welded, which gave the same results as a forging but at the same time not only eliminated the necessity of using forgings but saved a great deal of strategic metal. It was a saving of about 20 percent in the manufacture of shells by this method over ordinary forging methods.

There is one thing I noticed in this report. It does not state the engineering organization of Thomas E. Murray, Inc., which my father organized many years ago. That company carried on an organization that built power plants. At the time of his death, I think that he had installed more horsepower than any other engineering concern in the country.

I was associated with father in that activity for a great many years, along with my work in the manufacturing field.

That is the only thing, Senator, that I notice as not being covered here.

The CHAIRMAN. This record discloses you were granted approximately 200 patents in electrical and welding research. Were those patents granted on your inventions?

Mr. MURRAY. Yes, sir.

The CHAIRMAN. You realize, Mr. Murray, that under the requirements of the act, which are very stringent, you cannot have any outside interests.

Mr. MURRAY. I understand that.

The CHAIRMAN. Therefore, it may be regrettable but necessary for you to resign, for instance, from Chrysler, and as a director of the Bank of New York, and the Fifth Avenue Bank. I would say that as trustee of the college you would not come within the prohibition in the act.

I think that is true; is it not, Senator Bricker?

Senator BRICKER. That would be my impression.

The CHAIRMAN. And I see that you are no longer a director of the American Radiator & Standard Sanitary Co.

Mr. MURRAY. I am no longer a director.

The CHAIRMAN. You and Mrs. Murray have 11 children.

Mr. MURRAY. Yes.

The CHAIRMAN. Senator Bricker, have you any questions?

Senator BRICKER. No. I am very favorably impressed with the experience and the qualifications of Mr. Murray, and I think he is exactly the type of man that is needed at this time in this field; and, from his experience, I am quite confident that he will thoroughly appreciate the opportunities that he has. He has been not only in the professional field but in the public field as well.

This is only as a matter of interest, but what is the nature of Manhattanville College?

Mr. MURRAY. It is a college run by the Sisters of the Sacred Heart.

Senator BRICKER. It is a religious school?

Mr. MURRAY. Yes. It is a nonsectarian school, but run by a religious order.

Senator BRICKER. I happen to be a member of the board of one or two colleges of similar character in Ohio, and I was just interested in it.

Mr. MURRAY. It is located at One hundred and thirty-third Street, and it is about 100 years old.

Senator BRICKER. Those schools have done a great job; I know that.

Mr. MURRAY. Yes; it is a fine school.

Senator BRICKER. There is nothing in here that I can see, Mr. Chairman, that would in any way require his severance from the school.

The CHAIRMAN. The intent of the act was not against charitable and eleemosynary institutions.

Mr. MURRAY. I was making a point that that could be done.

The CHAIRMAN. I would not want you to do it if you did not have to. I sometimes think that that restriction we wrote in there was perhaps too stringent.

Mr. MURRAY. If it was tied in or connected with some of the universities associated with the Atomic Energy Commission, perhaps there might be some point in it; but I cannot foresee any case where Manhattanville College would participate in any way with this particular program.

Senator BRICKER. It is not a business, vocation, or employment.

Mr. MURRAY. No, sir.

The CHAIRMAN. Mr. Murray, your confirmation, of course, rests with the Senate, but this is a joint committee and we have a most pleasant relationship on it. Mr. Price is representing the House here; and if you have any questions, Congressman Price, we will be glad if you would feel free to ask them.

Representative PRICE. I have no questions.

The CHAIRMAN. If there are no further questions, Senator, we will adjourn the meeting, and I shall poll the Senate members of the committee.

Senator BRICKER. You can poll me favorably.

The CHAIRMAN. I would appreciate it if you would tell the Senate members your attitude so that we can have it reported. Mr. Murray is going to Rome tonight and will be back within 2 to 3 weeks. It is a trip that he has planned for the past 4 months, with his family, and he will enter upon his duties when he returns, provided the Senate, of course, in the interim has confirmed him.

Senator BRICKER. This is the appointment to succeed Mr. Lilienthal; is it?

The CHAIRMAN. That is right.

Senator BRICKER. There will be one other vacancy as of the 1st of next month, will there not?

The CHAIRMAN. That is right.

All right, gentlemen, the meeting is adjourned.

(The following letter was received by the committee and is incorporated as part of this hearing:)

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
March 29, 1950.

HON. BRIEN MCMAHON,  
Chairman, Joint Atomic Energy Committee,  
United States Senate, Washington, D. C.

DEAR SENATOR MCMAHON: I understand that your committee is to consider the nomination of Mr. Thomas E. Murray, of New York, as a member of the Atomic Energy Commission.

I should like to submit to you the following statement of my own views as to the qualifications and suitability of Mr. Murray for the post for which he has been nominated :

"I consider President Truman's nomination of Mr. Thomas E. Murray to the Atomic Energy Commission an excellent choice of a man who will, when he is confirmed, perform great service to his country. Mr. Murray has a wide background in industrial and engineering matters, combined with a devotion to the public interest. I have known him and his family for many years. I have followed his many activities in the industrial world and his many services to the State, local, and Federal Government with interest and appreciation through the years. He will bring to the Atomic Energy Commission a fine mind, sharpened by a rich experience in the field in which his new authority will be concentrated, that of applying atomic energy to both the industrial field and the field of national defense."

Very sincerely yours,

HERBERT H. LEHMAN.

(Thereupon, at 11 a. m., the hearing was adjourned.)

# PATENT ASPECTS OF THE ATOMIC ENERGY ACT

FRIDAY, MARCH 31, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The joint committee met in executive session, pursuant to notice, at 2:05 p. m., in room G-48, Capitol Building, Washington, D. C., Senator Brien McMahon (chairman) presiding.

(The following statements were presented to the Joint Committee on Atomic Energy. They have been edited so as to exclude all classified information.)

Present: Senators McMahon (chairman), Hickenlooper, Millikin, and Bricker; Representative Durham.

Members of the committee staff present: William L. Borden, executive director; Messrs. Heller, Brobeck, and Hamilton.

Representing the Atomic Energy Commission: Commissioners Pike, Strauss, Dean, and Smyth; and Messrs. Volpe, Hollis, Boskey, and Trapnell.

\* \* \* \* \*

The CHAIRMAN. Gentlemen, the Commission recommends to us and has cleared it with the Bureau of the Budget and with the Department of Justice, an amendment to the act, which would provide at the end of the provision, section 12 (c), certain additional language. The recommendation came in the form of a letter which reads as follows:

ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., February 28, 1950.*

HON. BRIEN MCMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR MCMAHON: In connection with certain claims against the Government based on alleged inventions in the field of atomic energy, there has arisen an important problem which the Commission recommends should be resolved by legislative clarification. The problem relates to the possible disqualification of members of the General Advisory Committee to the Atomic Energy Commission, as well as members of advisory boards designated by the Commission, and their assignees, from asserting claims against the Government based on inventions made by them during the period prior to the date on which such membership was assumed. If such a disqualification exists—and the Department of Justice has indicated a view that under existing statutory provisions it does—it means that by accepting membership on the General Advisory Committee a scientist would be compelled to forego, during his entire term of office, the assertion of any claim against the Government for compensation based on past inventions in which he has retained ownership rights. This places a high penalty upon accepting service on the General Advisory Committee. It thus might seriously impair the ability of the Government to induce persons of outstanding technical qualifications in the field to serve on the General Advisory Committee, or similarly to serve on the advisory boards which the Commission from time to time establishes pursuant to section 12 (a) (1) of the Atomic Energy Act of 1946.

The possibility of such a result, which would be so clearly detrimental to the interests of the atomic-energy program, should be removed by clarifying legislation at the earliest practicable date. The Commission accordingly recommends to the Congress that prompt legislative action be taken which will make it clear that the possibility of any such disqualification has been eliminated.

The problem to which we refer has arisen in the following manner: There is now pending before the Patent Compensation Board of the Atomic Energy Commission, in Docket No. 2, an application filed by G. M. Giannini & Co., Inc. for just compensation and reasonable royalty fee. This application is based on United States Patent No. 2,206,634, entitled "Process for the Production of Radioactive Substances," issued by the United States Patent Office on July 2, 1940, to Enrico Fermi, Edoardo Amaldi, Bruno Pontecorvo, Franco Rasetti, and Emilio Segre, as assignors to G. M. Giannini & Co., Inc., under an assignment dated September 30, 1935, and recorded in the United States Patent Office on January 22, 1936. Under an agreement dated October 7, 1935, G. M. Giannini & Co., Inc., as assignee obtained a one-eighth beneficial interest in the patent and Enrico Fermi, Edoardo Amaldi, Oscar d'Agostino, Bruno Pontecorvo, Franco Rasetti, Giulio Cesare Trabacchi, and Emilio Segre had a seven-eighths beneficial interest therein.

Pursuant to the rules of procedure which the Commission had adopted to carry out the direction of section 11 (e) of the Atomic Energy Act, G. M. Giannini & Co., Inc., filed its application before the Patent Compensation Board on October 26, 1948. At that time, Dr. Fermi, who as noted above retains a beneficial interest in the patent, was a member of the General Advisory Committee, having been appointed to such position by the President on December 12, 1946, pursuant to section 2 (b) of the Atomic Energy Act.

In the response filed before the Patent Compensation Board by the Commission's Office of the General Counsel, which under the rules of procedure becomes a party in cases before the Board, the Board's attention was invited to the fact that Dr. Fermi was a member of the General Advisory Committee and it was suggested that the Board consider the question of the possible applicability to the case of section 1498 of the Judicial Code, revised (28 U. S. C., sec. 1498), which reads as follows:

"The Court of Claims shall have jurisdiction to render judgment upon any claim against the United States for the recovery of the reasonable and entire compensation for the use or manufacture of an invention covered by a patent of the United States which has been used or manufactured by or for the United States without license of the owner thereof or lawful right to use or manufacture the same.

"The court shall not award compensation under this section if the claim is based on the use or manufacture by or for the United States of any article owned, leased, used by, or in the possession of the United States prior to July 1, 1918.

"This section shall not confer a right of action on any patentee who, when he makes such a claim, is in the employment or service of the United States, or any assignee of such patentee, and shall not apply to any device discovered or invented by an employee during the time of such employment or service."

It will be noted that this section relates to the jurisdiction of the Court of Claims in actions brought against the United States for infringement of patents, and that it creates certain disabilities against claimants in the employment or service of the United States and their assignees. The possibility that it might be interpreted to apply not only to Court of Claims proceedings but also to proceedings filed before the Commission's Patent Compensation Board was raised in the response, particularly in view of the provision in section 11 (e) (3) of the Atomic Energy Act directing that there be taken into consideration in proceedings before the Board "any defense, general or special, that might be pleaded by a defendant in an action for infringement." In carrying out its responsibilities to bring to the Board's attention possible issues in the case, the Office of the General Counsel identified this possible disqualification as a matter which the Board might wish to consider.

After this response had been filed, Dr. Fermi raised the question whether it would not be desirable to obtain a definitive interpretation as to the limitations which were placed upon the members of the General Advisory Committee, insofar as they relate to the presentation of claims of this nature. Dr. Fermi was informed that the matter would be explored with the Department of Justice, and Commission representatives subsequently brought it to the attention of the Department of Justice for consideration. As a result of informal discussions with the Department of Justice, we were advised that in the proceedings which are now pending before the Patent Compensation Board in Docket No. 2, the Department of Justice would have to take the position that by reason of Dr. Fermi's current

service as a member of the General Advisory Committee, both Dr. Fermi and his assignee, G. M. Giannini & Co., Inc., were disabled by section 1498 of the Judicial Code, revised, from maintaining the application before the Patent Compensation Board at the present time.

The Patent Compensation Board was informed of this development at a hearing on January 10, 1950. The Board requested that a brief relating to this question of statutory interpretation be submitted by counsel for the applicant, and that a statement be requested from the Department of Justice as to the basis for the position they had taken. At the same time the Board was advised that the question of obtaining legislative clarification was being actively considered. The Board expressed the view that this avenue should be pursued in order to eliminate from the case at the outset, if at all possible, this question of possible disqualification.

A similar problem is raised by an application filed before the Patent Compensation Board on January 9, 1950, in Docket No. 7. This is an application for just compensation and/or an award, in which the applicants are Glenn T. Seaborg, Joseph W. Kennedy, Arthur C. Wahl, and Emilio G. Segre. Dr. Seaborg, like Dr. Fermi, is presently a member of the General Advisory Committee, and Dr. Kennedy is presently a member of the Reactor Safeguard Committee, which is an advisory board the Commission has established pursuant to section 12 (a) (1) of the Atomic Energy Act. The application filed before the Patent Compensation Board in Docket No. 7 is based on certain alleged inventions, relating largely to plutonium and plutonium separation, which it is stated were invented prior to April 1, 1941.

As you know, section 12 (c) of the Atomic Energy Act of 1946 already contains certain provisions relieving members of the General Advisory Committee and of the Commission's advisory boards against certain disabilities imposed by law. In order to remove this possible disqualification relating to claims for past inventions, the Commission recommends that section 12 (c) of the Atomic Energy Act be amended by adding at the end a new sentence (italicized below), so that as revised it would read as follows:

"(c) ADVISORY COMMITTEES: The members of the General Advisory Committee established pursuant to section 2 (b) and the members of advisory boards established pursuant to subsection (a) (1) of this section may serve as such without regard to the provisions of sections 109 and 113 of the Criminal Code (18 U. S. C., secs. 198 and 203) or section 19 (e) of the Contract Settlement Act of 1944, except insofar as such sections may prohibit any such member from receiving compensation in respect of any particular matter which directly involves the Commission or in which the Commission is directly interested. *The provisions of the last sentence of section 1498 of the Judicial Code, revised (28 U. S. C., sec. 1498), shall not be applicable to the members of the General Advisory Committee or of such advisory boards, or the assignee of any such member, with respect to any invention or discovery made while such member was not in the employment or service of the United States.*"

It will be noted that this proposed amendment would remove any question of disqualification, arising out of membership on the General Advisory Committee or an advisory board of the Commission, with respect to claims—whether asserted before the Patent Compensation Board or in the courts—which are based on inventions made prior to the time membership on the General Advisory Committee or the advisory board was assumed. It would not, however, make any change in existing law with respect to claims based on inventions made during the period while the individual concerned was in the employment or service of the Government, and would leave the interpretation of existing law on that subject open for future consideration if it should arise.

The particular cases now pending before the Patent Compensation Board to which this amendment would be applicable are complex in nature, as will appear from an examination of the pleadings. The purpose of the proposed legislation would not be to prejudice in any way the merits of the claims, or of the defenses which might be available. It is intended merely to remove at the outset a possible disqualification arising from membership on the General Advisory Committee or on the Commission's advisory boards—a disqualification which, if not removed, would be most inequitable in its consequences and would bring serious disadvantages to the atomic energy program.

The Commission has consulted with the Department of Justice concerning this proposed amendment. From such consultation it has appeared that, in the view of the Department of Justice, the amendment is not regarded as contrary to the general purposes which section 1498 of the Judicial Code, revised, was intended to serve and that the Department of Justice agrees with our view that enactment of the legislation would be desirable.

We have also been advised by the Bureau of the Budget that this proposed legislation is in accordance with the program of the President.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
SUMNER T. PIKE, *Acting Chairman*.

If you will turn to the copy of the act—

Mr. BOSKEY. That is on page 19.

The CHAIRMAN. The provision sets up advisory committees:

The members of the General Advisory Committee established pursuant to section 2 (b) and the members of advisory boards established pursuant to subsection (a) (1) of this section may serve as such without regard to the provisions of sections 109 and 113 of the Criminal Code \* \* \*

Now, as I remember 109 and 113, that exempts from the provision of the criminal statutes which prohibits their maintaining any claims against the Government; is that not right?

Mr. VOLPE. That is right, sir.

The CHAIRMAN (reading):

\* \* \* except insofar as such sections may prohibit any such member from receiving compensation in respect of any particular matter which directly involves the Commission or in which the Commission is directly interested.

What they want to add is this:

The provisions of the last sentence of section 1498 of the Judicial Code, Revised, shall not be applicable to the members of the General Advisory Committee or of such advisory boards, or the assignee of any such member, with respect to any invention or discovery made while such member was not in the employment or service of the United States.

It seems that Dr. Fermi, who is a member of the General Advisory Committee, before he became a member of the General Advisory Committee, made an invention. He assigned this invention, or at least a portion of it, called process for the production of radioactive substances, to Giannini & Co., Inc., and there is now a suit pending. Am I correct?

Mr. VOLPE. A claim before the Commission.

The CHAIRMAN. A claim before the Commission's Patent Board?

Mr. VOLPE. That is right.

The CHAIRMAN. You will remember we set up a Patent Board to hear any claims of inventors. Now, this would remove the disqualification of Dr. Fermi and people in like status from maintaining a claim. The claim of the invention, however, must have been before he was in the employment, meaning before he was a member of the Advisory Committee.

Mr. VOLPE. That is right.

The CHAIRMAN. In other words, if today while a member of the Advisory Committee he makes an invention, then this exemption would not apply.

Mr. VOLPE. It would not apply.

Mr. STRAUSS. He actually made this invention while he was in Italy before he came to this country.

The CHAIRMAN. It would seem to be an act of fairness to permit him to maintain his rights and not disqualify him because he is serving on our Advisory Committee.

Mr. STRAUSS. One consequence might be to force his resignation from the Committee.

he is a member of the Advisory Committee at the present time. I do not understand the purpose of that.

Mr. VOLPE. The matter of legal interpretation is not free from doubt. The Justice Department has taken a position.

Senator BRICKER. You have a legal opinion from the Justice Department?

Mr. VOLPE. We have, and in view of their having taken a position that this particular section does apply in this case, we felt because of the impact this has on the General Advisory Committee, we had better remove the doubt by amending this section.

The CHAIRMAN. I will put it in and we will have to come up for a vote on it.

Senator BRICKER. I do not understand how, if he can not process a claim at the present time—if he has no valid claim against the Government if we do not amend the act—I do not see how his resigning would do any good.

Mr. VOLPE. The only disability is that he is a member of the General Advisory Committee.

Senator BRICKER. That would be removed by his resigning.

Mr. VOLPE. Or by this provision, which would exempt him.

Senator BRICKER. I have no objection.

Senator MILLIKIN. Under the law at the present time can a man who is working in, say, Los Alamos get an invention and patent it?

Mr. VOLPE. Under the law, Senator, there are certain circumstances under which individuals might get patents. There are circumstances under which even if he does get a patent, the patent is of no effect; so that it is merely going through motions.

But we have contracts with all of our technical people, with our contractors, and our contractors in turn with their employees, under which inventions or discoveries are assigned to the United States Government.

Senator MILLIKIN. How about after their services are terminated? Suppose a fellow loads himself up with information on which he makes an invention. Do we have any reach over that?

Mr. VOLPE. We have reach over that under the law, under the common law, in that in the event an attempt is made to prosecute such a claim or seek compensation for such a claim, all of the defenses we would have would be made at that time.

Senator BRICKER. Is there not a statute on that, that such a patent would belong to the Government if the information he secured, upon which a patent was based, was secured in his employment by the Government? I know that is true of a company. You cannot take a job with a company and get the information by which you later premise a patent.

Mr. VOLPE. That is true, but that would be by way of defense to any claim that was made. I do not know of any statute which would prohibit an individual from attempting to prosecute such a patent or prosecute his claim, but obviously if someone would leave our project and use information obtained in our project for making application for a patent and then seek compensation from the Commission, we would, of course, use his employment in the project and his having obtained the information on the project as a defense to any claim he might make.

Senator MILLIKIN. Supposing he uses his patent to start an infringement suit or suit for royalties against a private person. John

Doe leaves Los Alamos, uses information to get an invention. Somebody else has a similar invention or assume no one has a similar invention; assuming he tries to collect royalties from somebody using his invention, is there any stoppage against that?

Mr. VOLPE. The individual against whom he seeks to obtain royalties or seeks to enjoin would have the defense just as the United States Government would have the defense.

Senator MILLIKIN. Out of what does that defense arise? What is the basic authority for that defense? How could a private citizen urge that kind of defense? I can see where the Government could urge it. How could a private citizen urge it?

Mr. VOLPE. I want to be sure I have the same set of facts you are considering.

Senator MILLIKIN. I will state them again. John Doe leaves Los Alamos; out of information he derived there he gets an invention. Let's assume he gets a patent. Supposing I infringe his patent, or supposing I use his patent without paying him anything for it. He comes after me for royalties. On what theory could I plead that this person got his information while working with the Government? Is there a general statutory basis for that?

Mr. VOLPE. There is not. As a matter of fact, I had misunderstood your question. My off-the-cuff view is that he might not have available to him the same defense that the Government might.

Senator MILLIKIN. I can see the defense of the Government. What I was really driving at is, you do not know of any provision of general law that would keep a fellow from coming out of Los Alamos, using his information, and getting himself a patent?

Mr. VOLPE. I do not know of any unless he attempts to use it in order to obtain compensation from the Government.

Senator BRICKER. I think there is a statute.

Mr. VOLPE. That may be true.

Senator HICKENLOOPER. What about the statute in industry?

Senator BRICKER. I have that in mind. I think there is one protecting the Government also.

Senator HICKENLOOPER. Patents where you may quit your job, but have developed the idea while under the employment of somebody.

Mr. VOLPE. I have always thought that the rights that are involved between, let us say, employer and employee in industry are rights that arise out of the employer-employee relationship or contract, as, for example, within the project we have contracts under which our employees pledge and agree not to use information acquired in the program—

Senator BRICKER. There is a statute covering patents in industry, I am confident of that.

Mr. VOLPE. I will check it.

Senator HICKENLOOPER. I think there is a statute covering that employer-employee relationship and what an employee can quit his job and do, based upon what he learned while an employee.

Senator BRICKER. There is such a statute. I wish you would get me a copy of the Attorney General's opinion on this, upon which you premise this.

# CONFIRMATION OF SUMNER T. PIKE TO BE A MEMBER OF THE ATOMIC ENERGY COMMISSION

THURSDAY, JUNE 29, 1950

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The Senate section of the joint committee met, pursuant to call, at 10:40 a. m., in room 48-G, the Capitol, Senator Brien McMahon (chairman of the joint committee), presiding.

Present: Senators McMahon, Connally, Tydings, Hickenlooper, and Knowland; Representatives Price, Jackson (Washington), Cole (New York), and Van Zandt.

Also present: Gordon E. Dean, Sumner T. Pike, Henry D. Smyth, and Thomas E. Murray, Commissioners, Atomic Energy Commission; William L. Borden, executive director, Edward Heller, Kenneth Mansfield, and Walter Hamilton, of the committee staff.

The CHAIRMAN. Come to order, please.

As the committee knows, we have been considering the nomination of Mr. Sumner Pike, who was appointed to the Atomic Energy Commission for a period of 4 years. We discussed the nomination the other day, but took no vote, came to no conclusion on it, and agreed to meet this morning.

Dr. Smyth, a member of the Commission, has written me under date of June 28, as follows:

DEAR SENATOR MCMAHON: Confirming my telephone call of this noon, I should like to request that I be allowed to testify before the joint committee tomorrow morning on behalf of Mr. Pike. I should also like to request that the session be open to the public.

I am asking for this opportunity to appear before the committee because I feel strongly that Sumner Pike deserves the committee's confidence and, as I told you yesterday, I am surprised that there is any doubt as to his confirmation.

Sincerely yours,

HENRY DEWOLF SMYTH.

In pursuance to that request, I advised Dr. Smyth to be present this morning, and here we are. Now, Doctor, if no other member of the committee has any objection, you may proceed.

## STATEMENT OF HENRY D. SMYTH, COMMISSIONER, UNITED STATES ATOMIC ENERGY COMMISSION

Mr. SMYTH. Mr. Chairman and gentlemen, I have asked permission to testify before the members of the joint committee with reference to the nomination of Mr. Pike for a new term as a member of the Atomic Energy Commission. I made this request because I feel that it is difficult for the members of the committee, burdened as they

are with manifold duties and responsibilities, to appreciate fully the importance of Mr. Pike's continuance on the Commission to the country's atomic energy program. In giving testimony, I have no personal motive; I had never met Mr. Pike but once, before I joined the Commission, and my association with him has been almost entirely professional although always entirely agreeable. I specifically asked the President to nominate me for only 1 year more on the Commission and you have done me the honor to recommend my confirmation. I believe these facts are relevant to the impartiality of my testimony, and I state them for that reason.

The period during which I have been intimately familiar with the work of the Commission—from June 1, 1949, to the present—has been a turbulent one. At its beginning, there was the investigation by this committee of the past actions of the Commission. In the fall, the question of the hydrogen bomb arose and has continued of major importance throughout the year. Also in the fall, Mr. Lilienthal announced his intention to resign which became effective February 15; his resignation was followed by that of Mr. Strauss, on April 15. Thus, in effect, the Commission has been operating for the past 6 months below full strength and without a Chairman. Since February 15, Mr. Pike has been Acting Chairman, never knowing from day to day how long he would continue in this office. I consider this a very difficult position for any man. In spite of this, I believe that the Commission has functioned with increasing effectiveness, particularly during the last few months. Great steps have been made to push forward the expanded program decided on last July and to carry out the President's order of January 31, 1950, on the H-bomb. Credit for these advances is in considerable measure due to Mr. Pike.

There is no doubt in my mind of Mr. Pike's intelligence, integrity, and complete devotion to the national welfare. In my 13 months' association with him on the Commission, I have never detected in his judgments and statements any trace of personal ambition, or vanity, or spite. He has a penetrating understanding of the motives that guide men, and he has the kind of tolerance that arises from such an understanding. He also has a remarkable capacity to grasp the scientific and technical features of our program and appreciate their significance. He is forthright and outspoken. This trait brings vigor to the operation of the great industrial enterprise for which the Atomic Energy Commission is responsible. Such vigor is particularly valuable when it is backed by the wide experience and knowledge he has.

I would like to point out the evident difficulty of finding competent men to serve on this Commission. It has been known since last December that we were losing our Chairman and another one of the original members of the Commission. In spite of that, only one new member has been added to the Commission since May 1949. Rejection of Mr. Pike will not make it easier to find a new member of the Commission, much less the two new members who would then be required. Of course, the three of us whose nominations have been confirmed by the Senate will do our best to continue and make more effective the work of the Commission. The task will be made specifically more difficult by the absence of Mr. Pike with his great ability and long familiarity with the project, and generally more difficult by the lack of a full complement of Commissioners.

I have tried to make clear to you why I believe Mr. Pike's confirmation is of great importance to the atomic energy program for which you share responsibility with the Commission. Such a sharing of responsibility is always difficult. Yet in many fields of government in this country we have done it successfully for a century and a half and it is inherent in the democratic process. In the atomic energy program we have been trying a new experiment in the field of democratic government, while at the same time we were developing a new industry. Of course there have been differences of opinion between the men who shared the responsibility—differences within the committee, differences within the Commission, differences between the Commission and the committee, such differences as occur between honest, conscientious men trying to solve pressing problems. There has been plenty of irritation, too, as we all know. Yet there are times when we put aside such differences and irritations, as the Nation has put them aside during this week. I believe that the greatest effectiveness in the atomic energy program in the coming months will be achieved only if we all remember constantly with respect to these differences, that neither my feelings, nor yours, nor those of anyone else in the Government are of real importance compared to the interests of our country which we are all trying to serve.

This concludes my formal statement. I shall, of course, be glad to answer any questions to the best of my ability. I cannot emphasize too strongly the importance of the decision you are about to make. If you feel there is any substantial question concerning Mr. Pike's qualifications, then I urge you most seriously to call other witnesses who are familiar with Sumner Pike's work and ability.

Thank you very much.

The CHAIRMAN. Are there any questions, gentlemen?

Senator CONNALLY. I would like to ask Mr. Smyth one question. What are the complaints that these folks have who oppose Mr. Pike's confirmation? What do they say about him?

Mr. SMYTH. Senator Connally, I only know of things I read in the papers. I do not know what their complaints are. That is the reason I have to make this statement rather general.

Senator CONNALLY. You think he is honest?

Mr. SMYTH. I do.

Senator CONNALLY. You think he is qualified?

Mr. SMYTH. I do.

Senator CONNALLY. You think he has served well?

Mr. SMYTH. I do.

Senator CONNALLY. And you think he will serve well?

Mr. SMYTH. I do.

Senator CONNALLY. That ought to cover the case.

Senator TYDINGS. If you had the appointing power to designate a man on this Commission at this critical time in the affairs of nations, particularly our own, would you without hesitation select Mr. Pike as one of the Commissioners on this Atomic Energy Commission?

Mr. SMYTH. If he had never been on, Senator Tydings?

Senator TYDINGS. Yes.

Mr. SMYTH. That is a hypothetical question which would be difficult for me to answer. I believe I would, but I would not have known him.

Senator TYDINGS. To take the other handle of the plow, supposing he had been on, with his experience, and you had the chance of re-appointing him or appointing someone else that you might think of who you feel would serve well, would you appoint Mr. Pike?

Mr. SMYTH. Yes; because the continuity is so important.

Senator TYDINGS. No other questions, Mr. Chairman, for me.

Senator HICKENLOOPER. Dr. Smyth, we are all familiar with the Atomic Energy Act and the unique position in which the joint committee finds itself under the law and, therefore, the position which the Senate members who are responsible for confirmation find themselves.

I think it is fair to state that it is a unique committee-administrative relationship and establishes affirmatively under the law some very important responsibilities, especially on the joint committee of which the Senate members are a part.

Do you agree generally with that statement?

Mr. SMYTH. I agree generally with that statement.

Senator HICKENLOOPER. I would not expect you to specifically agree with every word.

Now, I think many of us have conceived the atomic energy program as being one of uniqueness—I mean, it is new in government, the type of legislation is new, the type of governmental operation is new, and most of us have considered it to be a very vital and moving thing in our American security and our American economics perhaps in the future, and in the whole public set-up.

Do you agree that it is of very great importance?

Mr. SMYTH. I do.

Senator HICKENLOOPER. I anticipated that you would agree to that.

Do you agree, Dr. Smyth, that continuity and vigor in this atomic energy program is of importance?

Mr. SMYTH. Yes.

Senator HICKENLOOPER. And of vital importance to our country and perhaps to the world?

Mr. SMYTH. Yes.

Senator HICKENLOOPER. One other question along that line: Do you believe or agree that this committee has a very substantial responsibility in connection with the confirmation of Commissioners?

Mr. SMYTH. Certainly.

Senator HICKENLOOPER. And do you think I am making a fair statement when I say it is a rather unique responsibility as compared to perhaps other administrative agencies or departments because of the provisions of the law, the affirmative mandates of the law?

In other words, we are charged with the responsibility of making continuous studies and being informed and informing ourselves, et cetera, which is an affirmative charge seldom contained in legislation with regard to committee responsibility.

Mr. SMYTH. I am not sufficiently familiar with the various other acts and set-ups in the Government to speak from knowledge, but I would assume that that statement is correct.

Senator HICKENLOOPER. Do you agree that this committee and especially the Senate section, which constitutes the committee on confirmation, has not only the full right, but an important duty to examine carefully into confirmations because of the vital nature and importance of this Commission?

Mr. SMYTH. It was because I thought that it was my duty to help in that task that I asked to appear here this morning.

Senator HICKENLOOPER. Now, Dr. Smyth, I notice that you refer to the continuity and going ahead with the work of the program and that you are short-handed.

That is, it has no Chairman. Mr. Pike has been Acting Chairman. I take it that you place some emphasis on that particular line of discussion in your testimony. Is that correct?

Mr. SMYTH. I am not sure I follow you entirely.

Senator HICKENLOOPER. You called attention in your testimony to the fact that there should be continuity in operation here, and that there had been some handicaps because of uncertainty as to tenure and who was going to be on the Commission. Also, that you called attention to the fact that there is no Chairman and that Mr. Pike has been the Acting Chairman, and I take it that you attached importance to that line of discussion in your testimony.

Mr. SMYTH. I cited that particularly to suggest that I thought it was remarkable how effective Mr. Pike had been in so difficult a position.

Senator HICKENLOOPER. Now, Dr. Smyth, when Mr. Lilienthal announced his resignation, I believe about the 1st of last November, and it was well known he was terminating his services with the Commission, he eventually did terminate them, I believe, in February, he was Chairman of the Commission, appointed in accordance with the provisions of law.

A little later—and I believe in December, the last part of December—Admiral Strauss announced his determination to resign, I believe in April, or some place along in there.

Therefore, the absence of those two Commissioners and the absence of a Chairman on the Commission especially was known to the country and the world early in last November.

Up to this time the President has not seen fit to appoint or send up to the Congress the name of anyone for Chairman of the Commission. I feel that the responsibility for the chairmanship of the Commission rests, of course, in the Executive because the law so puts it. But we have had all this period of time since November, when the absence of a Chairman was well known, and yet no Chairman has been sent up, and these terms are all expiring under the law within a day or so, perhaps on Friday.

I want to call your attention also to the fact that you three gentlemen who have been confirmed—no objection was raised to you. I take it that you were not put in any distress or concern because your confirmation was rapid and without objection.

Mr. SMYTH. That did not distress me.

Senator HICKENLOOPER. Certainly that indicates that this committee can act in confirmations and just because a person is appointed to the Atomic Energy Commission does not mean per se this committee is going to get the hounds out and pursue him. It seems to me that is proof that this committee is not just after anyone who is appointed to the Atomic Energy Commission, because I think we had three confirmations here put through with rapidity and satisfaction, so far as I know, to all members of the committee. I think Mr. Dean was appointed and confirmed here a short time ago without anyone getting

the dogs of war after him, and Mr. Murray was appointed and confirmed. Both of them are able men, I believe. I do not believe that there was any dispute just because they were appointed to the Commission or that there would be a hue and cry raised against them.

Knowing these terms expire the 30th of June, realizing the importance of continuity and tenure and all those things that go into the operation of the Atomic Energy Commission, would you say that it is this committee's fault at all in any way that the names of the appointees for these staggered terms did not come to the Senate of the United States until a very few days ago, approximately a week ago? Approximately a week and a half before the terms themselves expired.

Senator CONNALLY. Mr. Chairman, I do not think this is a fair question to call on Dr. Smyth to answer.

Senator HICKENLOOPER. I will not ask him.

Senator CONNALLY. I am glad I convinced you.

Senator HICKENLOOPER. Your argument is so forceful that I am convinced.

I can answer the question so far as my own view is concerned. I feel the nominations for the staggered terms now under the law should have been in long ago in order to give this committee ample opportunity to discharge its obligations in examining into this chairmanship.

Senator KNOWLAND. Would the Senator yield for interruption?

Senator HICKENLOOPER. Yes.

Senator KNOWLAND. Might we have just for the record at this point the day on which the nominations came to the Senate, and when they were reported by the committee so that the record will be complete.

The CHAIRMAN. The nominations were received in the Senate on June 19, reported June 23.

Senator KNOWLAND. Received June 19 and report on the 23d?

The CHAIRMAN. The three that were confirmed.

Senator HICKENLOOPER. These questions, Dr. Smyth, in the nature of them, should perhaps be better called observations of mine. In certain quarters there has been criticism directed at this committee because we dare to exercise the responsibility that we have in examining into instances where we may think we should look a little further. I merely point out that sufficient time, in my judgment, was not given from the time the nominations were sent in, about 12 days prior to the expiration of the terms in this important case.

• While we did confirm without objection three of the members, I feel there is no reasonable ground for the rather explosive and caustic criticisms that are directed from certain quarters because we dare exercise the responsibility we are charged with under the law in one instance.

The CHAIRMAN. I have not heard it, Senator. I have not heard this caustic criticism you are talking about. There has been a surprising lack of any comment on it one way or the other.

Senator HICKENLOOPER. There is some, which, of course, considering the source, is not surprising, but there is some.

I merely make that observation, that we have had a comparatively few days on a very vital appointment to a very vital Commission in this country, and I feel that this committee has a right to give it such due consideration as this committee believes it merits.

The President has had since last November to send up the name of a Chairman, and he has not sent the name of the Chairman up yet. I am quite of the opinion that there is a substantial number of able men in this country who could be impelled to accept the chairmanship. I am not limiting that to members on or off the Commission. I am saying there are a great many able men who could grace the chairmanship of this Commission with ability and with vigor, but since last November—

Senator TYDINGS. Would you mind designating a half dozen of those you have in mind?

Senator HICKENLOOPER. That is not my province. That is the province of the Executive to designate.

Senator CONNALLY. Have you got a candidate?

The CHAIRMAN. Senator, there was no reason why the nominations of the three gentlemen whom we have confirmed could not have been delayed for another week if there was the slightest objection to their confirmation. There was none and, of course, the rapidity with which they were confirmed indicated the satisfaction of the committee with the nominations—and we have a quorum, three of the Commission of five.

I wish, too, the Chairman had been appointed before this, but I have some appreciation of the difficulties of getting men to serve today in the United States Government in positions of great responsibility, when you have a crew of "tomahawkers" who are taking out after their reputations, with little or no excuse and little or no provocation.

Senator CONNALLY. May I intervene?

The CHAIRMAN. Yes, sir.

Senator CONNALLY. I agree with Senator Hickenlooper that this committee has a right to pass on this and go into it and get the facts. That is what I am here for. If there is any reason why Mr. Pike should not be confirmed, I would like to know it from people who know, and not spend the morning in just lecturing everybody about our duties and what we can do. Everbody knows what we can do. If there is anything wrong with Mr. Pike, I have not seen it yet, but if there is anything wrong with him, it should be shown up. He is right here now. Let his accusers face him. I do not know of anything that has been brought out against him.

Senator HICKENLOOPER. I have nothing further.

The CHAIRMAN. Are we through with Dr. Smyth? All right, Dr. Smyth, you can remove yourself from the place of inquisition. Mr. Pike, I note that you are here. You are the subject of the session today. Have you got anything to say for yourself?

Mr. PIKE. No, sir; I do not know—

Senator CONNALLY. I do not think Mr. Pike ought to be put in the position of appearing as an advocate of himself, in the absence of any charges.

Mr. PIKE. I will be glad to answer questions.

The CHAIRMAN. That was probably an attempt at a little heavy-handed humor. I meant he was here and I know he is ready to answer questions.

Mr. PIKE. Mr. Borden called my office and asked me to come.

The CHAIRMAN. Yes; I asked him to do so. I felt somebody might want to ask Mr. Pike questions.

Are there any questions to be directed to Mr. Pike?

Senator KNOWLAND. Mr. Chairman, I think there possibly might be some questions to be directed to Mr. Pike, but it seems to me some of them possibly are in the field of high security that could not be properly directed in open session, and I would think that he should hold himself in readiness to answer such questions as the committee might desire to propound in executive session.

The CHAIRMAN. Are there any questions to be asked of Mr. Pike in this session?

Senator TYDINGS. No questions.

Senator CONNALLY. No questions.

The CHAIRMAN. Senator Hickenlooper?

Senator HICKENLOOPER. No questions.

Senator CONNALLY. I might ask this general question. Are you aware, Mr. Pike, of the supposed charges that are being leveled against you? You need not answer in detail.

Mr. PIKE. I read in the paper, Senator, that it was general incompetence.

Senator CONNALLY. General incompetence?

Mr. PIKE. Yes, sir.

Senator CONNALLY. If we established that rule, I am afraid we would have to call on the Civil Service Commission to give us a lot of new employees around Washington.

Mr. PIKE. I find it a very difficult charge to answer.

Senator CONNALLY. That is a sort of a shotgun charge. I want to say that I have observed Mr. Pike here before this committee with regard to all these matters, and now these terrible charges have been filed against him. I had a very high opinion of his efficiency and his fidelity and his vigor and all those things. I was pleased to see he was nominated again.

Senator TYDINGS. The people who have made this charge, as far as you know, have they had any access to a vantage point from which they could view whether your work was good or bad?

Mr. PIKE. I really do not know. I just read this in the paper.

Senator TYDINGS. I wonder how old Dick Tracy is getting along this morning.

Representative VAN ZANDT. Have we any official charges or are we talking about a newspaper story?

Senator HICKENLOOPER. As far as I know, no formal charges have been filed.

Senator KNOWLAND. I think, Mr. Chairman, it ought to be clearly understood that this is purely a proceeding of the joint committee, the Senate section of it really, in passing upon a Presidential nomination, to get such information as they feel they should have in order to discharge their constitutional responsibility.

So far as I know, Mr. Pike is not the subject of any formal charges and I do not think it should be in that atmosphere when the situation is discussed, either in open or executive session.

Senator CONNALLY. Mr. Chairman, of course, I agree that the confirmation is solely within the Members of the Senate who are members of this committee, but still I think the Representatives from the House, if they have any information or want to make any comment about this matter, I think we ought to hear them.

Senator KNOWLAND. I might say also, the other day in the session, I think the public should be informed that the Senate members said by all means the House members of the joint committee should sit in and should be invited to sit in, and we feel in the close relationships we have had over the years, although they do not have the constitutional responsibility in the House of passing on confirmations, we have worked closely together and they were entitled to all the information that we were entitled to.

The CHAIRMAN. Do any of the members of the committee from the House desire to make any statement or ask any questions of Mr. Pike?

Representative PRICE. Mr. Chairman, I find myself in the same position as the Senator from Texas. I have the highest esteem for Mr. Pike. This action comes as a complete surprise to me. I knew nothing of it until 2 days ago.

Senator TYDINGS. Mr. Chairman, if it does not meet with the disapproval of anyone here, I move we go into executive session and proceed to vote on the matter before us.

Senator KNOWLAND. Mr. Chairman, would you mind amending that to move that we go into executive session for such questions as the committee might desire to ask and then proceed to vote.

Senator TYDINGS. That is all right.

The CHAIRMAN. All right, gentlemen.

Senator CONNALLY. Aren't the other members of the Commission here?

Mr. DEAN. Yes, sir.

Senator CONNALLY. Does the committee want to hear from the other Commission members?

Mr. DEAN. I just returned from Berkeley a few hours ago, and I had not had an opportunity to read Dr. Smyth's statement until just a few moments ago. I will say I subscribe to what he has stated in that statement so far as Mr. Pike is concerned.

Mr. MURRAY. Mr. Chairman, I have only been an active member of this Commission for the last 60 days, and in that length of time I would subscribe to what Dr. Smyth had to say about Sumner Pike.

Senator TYDINGS. I renew my motion, as amended by Senator Knowland.

The CHAIRMAN. All right, ladies and gentlemen, will you betake yourselves.

(Whereupon, at 11:15 a. m., the committee recessed to reconvene immediately in executive session.)

## APPENDIX

---

The following telegram which was received from Dr. Robert F. Bacher, a former member of the Atomic Energy Commission, is incorporated as part of this hearing.

PASADENA, CALIF.,  
June 29, 1950.

Senator BRIEN McMAHON,  
*Senate Office Building, Washington, D. C.*

This telegram is occasioned by the news report that while favorable action on three appointees for the Atomic Energy Commission has been taken by your committee, Sumner Pike's name has been withheld for further consideration. As a former colleague of Sumner Pike, I would like to say that his quick understanding of difficult situations, his objectivity, and his complete integrity were very important to the Atomic Energy Commission. He has been a loyal and tireless public servant and has acquired a thorough understanding of the problems of atomic energy. I hope very much that the Senate members of the joint congressional committee will lend their support to his appointment.

ROBERT F. BACHER.
